MANNSCHAFTSSTAMMLAGER (STALAG) 348

The Wehrmacht established Stalag 348 on April 8, 1941, in Defense District (*Wehrkreis*) VIII in Katscher (today Kietrz, Poland) (map 4e). Shortly thereafter, it was deployed to Reichshof (Polish: Rzeszów) (5), in the Generalgouvernement. In September 1941, the camp redeployed to Dnepropetrovsk (today Dnipro, Ukraine) (9f). The camp staff arrived in Dnepropetrovsk in the second half of October 1941 and took over the site of Dulag 180, in the former city jail. By December 1941, subcamps existed in Pavlograd and Zaporozh'e. These subcamps were closed in early February 1943 as the Red Army advanced westward, and the prisoners were transferred to the main camp in Dnepropetrovsk. Several days later, the camp in Dnepropetrovsk, was also liquidated, and from there the prisoners were sent westward. In March 1943, the camp staff took over a small camp in Gaisin (today Haisyn, Ukraine) (9e), which held 700–800 prisoners.¹

Stalag 348 was initially subordinate to the Commander of the Rear Area of Army Group South (*Befehlshaber Heeresgebiet Süd*). As of November 15, 1941, the camp was under the authority of the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*).² The camp received field post number (*Feldpostnummer*) 11 098 between February 1 and July 11, 1941. The number was struck between January 25 and July 31, 1943.

The camp commandants were Oberst Vasquez (until October 6, 1941), Major Hellmich (from October 6, 1941, to July 31, 1942), and Major Viehof (starting on July 31, 1942). The adjutants were Hauptmann Fiedler (until July 1942) and Hauptmann von Prondzynski (starting in August 1942). The counterintelligence (*Abwehr*) officer, as of July 12, 1942, was Hauptmann Lorenz. The camp officers were Hauptmann Schulz (from the fall of 1941 on) and Hauptmann Bachstein.³

Stalag 348 held Soviet prisoners of war (POWs). The camp population reached a maximum of 36,581 prisoners in October 1942 but had decreased to only 1,026 by August 1943.⁴ The branch camp in Pavlograd held an average of 2,000–3,000 prisoners, and the subcamp in Zaporozh'e held 500–1,000.⁵

The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, malnutrition, disease, and deliberate abuse by the guards led to a high mortality rate. Newly arrived prisoners were screened on a regular basis to separate out “undesirables,” such as Jews and Communists, whom the camp guards or Security Service (*Sicherheitsdienst*) details shot.⁶ The exact number of prisoners who died in the camp is unknown. According to the Soviet Extraordinary State Commission (ChGK), 30,000 prisoners died in the camp in Dnepropetrovsk; however, casualty figures from the ChGK are often significantly inflated and should be viewed accordingly.⁷

Stalag 348 was disbanded on August 21, 1943. In 1969, the chief prosecutor’s office in Dortmund opened an investigation of former staff members of Stalag 348, including Major Viehof, Hauptmann Lorenz, and Hauptmann Schulz for their participation in the murder of Jews and Communists. The investigation was closed in 1972 due to a lack of evidence.

MANNSCHAFTSSTAMMLAGER (STALAG) 349

The Wehrmacht established Stalag 349 on April 10, 1941, in Defense District (*Wehrkreis*) IX. From September 1941 until October 1943, the camp was located in Uman' (map 9e), in the USSR.¹ Beginning on August 16, 1941, the camp was subordinate to the Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) in the Generalgouvernement of Poland. As of August 22, 1941, the camp was temporarily under the authority of the Commander of Prisoners of War with the Commander of the Army Group South Rear Area (*Kommandeur der Kriegsgefangenen beim Befehlshaber des Heeresgebiets Süd*).² Effective on October 20, 1941, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*).³ On March 19, 1943, the camp was once again subordinate to the Commander of Prisoners of War with the Commander of the Army Group South Rear Area.⁴ Stalag 349 received field post number (*Feldpostnummer*) 47 316 between July 30, 1941, and February 28, 1942. The number was struck on January 20, 1944.

The camp commandant was Major der Reserve Hans Koch (1880–1948). The counterintelligence (*Abwehr*) officer was Hauptmann der Reserve Otto Dyroff. The camp was guarded (as of November 1942) by the 1st Company of the 783rd Reserve Battalion (*Landesschützenbataillon*).⁵

Stalag 349 held Soviet prisoners of war (POWs). The camp population varied from a minimum of 7,187 prisoners in February 1942 to a maximum of 16,184 in October 1942.⁶ The camp occupied the site of a poultry farm. Barbed wire surrounded the campgrounds, and metal mesh divided the interior into sections, although it was possible to move freely between the sections. Guard towers with machine guns, flanked by antitank weapons and mortars, were located

around the perimeter of the farm. The camp also included a clay pit located near the farm, part of a brickyard, which had open-sided sheds for drying the bricks. The prisoners jumped into the pit in search of water.⁷ Over the course of six years, clay had been extracted from the pit to make bricks and tiles. By the summer of 1941, the area of this pit was more than 10 hectares (24.7 acres). The depth of the pit was 6–15 meters (about 20–50 feet). The Germans surrounded the pit with two rows of barbed wire and built 11 watchtowers. The deepest spot in the pit was also surrounded with barbed wire; Communists and Jews were held in this area.⁸ The local residents' name for the camp, the "Uman' pit," was derived from this area.

The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, malnutrition, disease, and deliberate abuse by the guards led to a high mortality rate. For example, in November and December 1941, 948 of the 2,317 men in Infirmary (*Revier*) No. 3 died.⁹ Former Oberleutnant Erwin Bingel, commander of the 2nd Company of the 783rd Reserve Battalion, gave the following testimony regarding the conditions in Stalag 349 on December 27, 1945, during a preliminary Soviet investigation of German war crimes in the camp:

In one of my reports I made a statement concerning the regime inside the prisoner-of-war camp at Uman. . . . This camp was guarded by a company of our subsection of the 783rd Battalion, and I was therefore familiar with everything which occurred in the camp. It was the task of this battalion to guard the prisoners of war and to control the highways and railroads. . . . This camp was calculated to hold, under normal conditions, from 6,000 to 7,000 men; at that time, however, it housed 74,000 men. . . . The regime in that camp was definitely peculiar. The existing conditions gave one the impression that the camp commander, Captain Becker, was quite unable

to handle and feed so large a number of men. There were two kitchens in the camp, although they could hardly be called kitchens. Iron barrels had been placed on stone and concrete floors, and the food for the prisoners was prepared in these barrels. But the kitchens, even if operating for 24 hours on end, could only prepare food for approximately 2,000 people daily. The usual diet for the prisoner was very insufficient. The daily ration for six men consisted of one loaf of bread which, again, could scarcely be described as bread. Disturbances frequently arose during the distribution of the hot food, for the prisoners—and there were 70,000 of them in the camp—struggled to get at the victuals. In cases like these the guards resorted to clubs—a usual procedure in the camp, I obtained the general impression that in all the camps the club was inevitably the foundation of all things.¹⁰

On February 26, 1946, at the International Military Tribunal in Nürnberg, former prisoner Eugene Kivelisha corroborated Bingel's statements:

There were about 15,000 to 20,000 wounded in Uman Camp where I found myself on the second day after my arrival in Tarnovka. They were all lying in the open, dressed in their summer uniforms, and a great many of them were incapable of moving. Food and water were supplied to them in the same way as to the other captives in the camp. There they lay, without any medical attention, their dust-covered dressings soaked in blood, often in pus. Dressings, surgical instruments, equipment for an operating theater just did not exist in the camp at Uman'. . . . Almost all the captives in the camp were kept in the open air. The food was extremely bad. In the grounds of the Uman' Camp, where I spent 8 days, twice a day a few fires would be lit out of doors and a thin pea soup was cooked in vats over these fires. There was no special routine for distributing food to the prisoners of war, and the boiled soup would then be set down amongst the whole mass of people. No control whatsoever was exercised over the distribution. The starving prisoners rushed up in the hope of obtaining even a minute portion of this thin, unsalted soup, cooked without fat and served without bread. Disorder and crowding arose. The German guards, all armed with clubs as well as with rifles and automatic guns, beat up all the prisoners of war within range of their blows for the purpose of maintaining order. The Germans would often intentionally set down a small barrel of soup among a great number of people, and once again, to restore order, they would beat up the absolutely innocent people with laughter, oaths, insults, and threats.¹¹

As in other camps, the prisoners were screened to separate out Jews and Communists, who were then shot by the Security Service (*Sicherheitsdienst*) or camp guards. For example, on October 8, 1941, the 304th Police Battalion, commanded by Police Major Kurt Deckert, shot 600 Jewish prisoners from the camp, along with 5,400 Jewish civilians from Uman'.¹² The total number of prisoners who died in the camp is unknown. According to the Soviet Extraordinary State Commission (ChGK), more than 15,000 prisoners of war died in Stalag 349; however, casualty figures from the ChGK are often significantly exaggerated and should be viewed accordingly. Stalag 349 was dissolved on October 4, 1943.

MANNSCHAFTSSTAMMLAGER (STALAG) 350

The Wehrmacht established Stalag 350 on April 15, 1941, in Defense District (*Wehrkreis*) X.¹ From August 1941 until the Germans disbanded it on April 21, 1944, Stalag 350 was located in Riga (map 9b). Stalag 350 received field post number (*Feldpostnummer*) 11 135 between February 1 and July 11, 1941; the number was struck on August 26, 1943, reissued on January 21, 1944, and then permanently struck on November 9, 1944. Stalag 350 had subcamps (*Zweiglager*) in Salaspils and Mitau (Jelgava). A number of labor detachments (*Arbeitskommandos*) from the main camp were deployed in various locations in Riga.²

Beginning on July 25, 1941, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ostland and Prisoner of War District H (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ostland* and *Kriegsgefangenen-Bezirk H*). Beginning on November 20, 1943, the camp was subordinate to the Commander of Prisoners of War in Operational Area IV (*Operationsgebiet IV*).

The camp commandants were Major Sulzberger and Oberst Wuelfert. The camp adjutant was Hauptmann Osswald and the counterintelligence (*Abwehr*) officer was Hauptmann Walter Wagner. The camp officers (*Lageroffizier*) were Hauptmann Zierold, Oberleutnant Reuter, Oberleutnant Hendrichs, and Oberleutnant Rick. The commandant of the subcamp at Mitau was, from January 1943, Hauptmann der Reserve Ehrnsperger. The camp was guarded (as of January 15, 1943) by the 529th Reserve Battalion (*Landesschützenbataillon*). The battalion commander was Major Schorn, his deputy was Hauptmann Schneider, the commander of the 1st Company was Oberleutnant Dornberger, and the commander of the 2nd Company was Hauptmann Bux.³ Latvian police also helped guard the camp.

Stalag 350 held Soviet prisoners of war (POWs). Between February 1942 and September 1943, the camp held between 20,000 and 30,000 prisoners.⁴ Stalag 350 was located on Pernavas Street, at the intersection with the street known to the Germans as the Rudolfstrasse, in the former barracks of the 5th Sessiskii Regiment. The conditions created here were intolerable. In the late summer of 1941, the prisoners lived in two barracks: the former officers' club and a stable. There was not enough space in these makeshift barracks for all of the prisoners, and many had to sleep under the open sky. Seeking

refuge from the cold and rain, the prisoners used whatever objects came to hand to dig shallow pits, where they lived until winter. When the cold weather set in, the Germans hastily constructed 10 additional barracks, but they lacked windows and heat, and the roofs were full of holes. Inside the barracks, there were long rows of plank beds in three and five tiers, which nonetheless were insufficient in number.

The prisoners were made to work 12–14 hours a day, and the daily rations consisted of 150–200 grams (5.3–7 ounces) of bread and a thick soup made of food scraps. According to survivor testimony, the Germans shot prisoners who were not able to work or were ill. The Germans also beat and tortured prisoners for no reason. In February 1942, instances of cannibalism were recorded on several occasions, as numerous witnesses confirmed.⁵ For example, former POW P. F. Iakovenko testified that "they gave us 180 grams (6.3 ounces) of bread, half of which was sawdust and straw, and one liter (one quart) of soup without any salt, made from unpeeled, rotten potatoes. We slept right on the ground, and were plagued with lice. From December 1941 to May 1942, 30,000 POWs died in the camp of starvation, cold, beatings, or typhus, or were shot."⁶

The largest work detachments (*Arbeitskommandos*) was located at 62 Slokas Street, in the former barracks of a motorized regiment of the Latvian Army. The conditions were as dreadful there as in the other subcamps. The prisoners had to work primarily at the nearby Spilve Airport, where they repaired the ruined airfield. Some dead prisoners were buried on the grounds of the airport; after the war, the area covered by the mass graves was calculated as 1,486 square meters (almost 16,000 square feet). The Germans buried others in a cemetery near the camp, across the road facing Kukushkin Hill, and in the area of the barracks.⁷ According to the Soviet Extraordinary State Commission (ChGK), between September 1941 and April 1942, 19,000 persons starved to death in this work detachment; however, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly.

The "hospital" for the prisoners was at 1 Gimnasticheskia Street, in a five-story brick building (a former almshouse) surrounded by two rows of barbed wire. A branch of the hospital was located on the Jelgava highway, in six two-story buildings (a former psychiatric hospital). As many as 17,000 prisoners were "treated" at this hospital between July 1941 and September 1943; the majority of them died of malnutrition or because the medical care they received was inadequate. There was no bedding and most of the prisoners did not have proper clothing. Lice were rampant in the hospital, as there were no disinfection facilities until 1942. Emma Mikelevna Fausts, a junior nurse at the hospital, testified that "wards were overfilled with sick and injured men, and often beds were placed in the corridors . . . many of the buildings had broken windows, and therefore in some buildings there was constantly a draft, and it was cold." The death rate in the hospital was sometimes as high as 60–70 men per day according to the ChGK (however, the standard cautions about ChGK figures apply).⁸

As many as 2,000 prisoners worked in the work detachment at 130 Kr. Barona Street. The conditions there were also inhumane, and it was often a destination for sick or weakened prisoners whom the Germans wished to allow to die.⁹ The work detachment at 139 Bruņinieku Street held Soviet officers, with an average population of about 500 men and similarly poor conditions and high mortality rates.¹⁰ The conditions in the branch of the subcamp at Salaspils were no better. The Germans neither registered nor counted the prisoners. The “camp” consisted of three open areas, fenced in but with no permanent structures. Prisoners who were unfit to work received no food and were thus starved to death. The prisoners had already been without food for a week or more during their transport from the main camp; often, half of the men were already dead by the time they arrived at Salaspils. Those who jumped out of the trains and attempted to get water upon arrival were shot. On September 25, 1944, all of the sick prisoners at Salaspils were taken to the woods and shot.¹¹ After nine months, of several tens of thousands of inmates, only 3,434 were still alive.¹²

The ChGK, which investigated the Germans’ crimes in Stalag 350 after the liberation of Riga in October 1944, established that more than 130,000 POWs perished in this camp complex.¹³ As in other camps, prisoners were screened to separate out “undesirables,” such as Jews and Communist Party members, who were shot by the guards or a Security Service (*Sicherheitsdienst*) detachment.¹⁴

MANNSCHAFTSSTAMMLAGER (STALAG) 351

The Wehrmacht established Stalag 351 on April 7, 1941, in Defense District (*Wehrkreis*) X, from a Frontstalag.¹ In September 1941, the camp deployed to the village of Berezvech’e (today part of Hlybokae, or Glubokoe, Belarus) (map 9b). At the end of March 1942, the camp was redeployed to Walk (today Valga, Estonia) (9a). From January 12 to March 22, 1944, the camp was located in Leobschütz (today Głubczyce, Poland) (4e). Finally, from June 9 to December 14, 1944, it was deployed in Barkenbrügge (today Barkniewko, Poland) (4b).² The camp was subordinate to the Armed Forces Commander Ostland (*Wehrmachtbefehlshaber Ostland*). Stalag 351 received field post number (*Feldpostnummer*) 11 548 between February 1 and July 11, 1941. The number was struck on August 26, 1943.

The commandant of Stalag 351 was Major Josef Franz Jarzebecki. His deputies were Friedrich Hanke and Gerhard Wahn. The counterintelligence (*Abwehr*) officer was Dr. Erich Kummer. The camp doctors were Dr. Heinz Haselhorst, Dr. Hans Köbele, and Dr. Walter Leonhard.³ While it was located in Berezvech’e, the camp was guarded by personnel from the 366th Reserve Battalion (*Landesschützenbataillon*).⁴ After it relocated to Walk, the camp was guarded by the 2nd Company of the 584th Reserve Battalion.

Stalag 351 held Soviet prisoners of war (POWs). From mid-1942 to the fall of 1943, the camp population remained relatively stable at around 5,000 prisoners.⁵ The camp in Berezvech’e was located near a monastery. Aside from a two-story stone building on the grounds of the camp, there were no other structures. The Germans built several wooden barracks, but the vast majority of the prisoners slept under the open sky where they dug holes in the ground to get at least some protection from snow and freezing temperatures. The prisoners were constantly malnourished, leading some of them to resort to cannibalism.⁶ Outbreaks of infectious diseases were common due to inadequate medical care. In addition, the prisoners suffered from frequent beatings at the hands of the guards. As a result of these terrible conditions, the death rate in the camp was very high; between September and November 1941, there were reportedly 200–500 deaths

per day in the camp. On February 1, 1942, only 1,142 prisoners remained alive in the camp, while in September 1941 the camp had contained around 25,000 prisoners.⁷ Conditions did not improve after the relocation of the camp; the prisoners held in Walk continued to suffer due to hunger, disease, and abuse. As in other camps for Soviet POWs, prisoners arriving in the camp were screened by the counterintelligence (*Abwehr*) officer to separate out any “undesirables,” such as Jews and political commissars, whom the Security Service (*Sicherheitsdienst*, SD) executed near the camp.⁸

After the camp was liberated in 1944, the Soviet investigative commission found 56 mass graves of 5 by 12 meters (16 by 39 feet) in Berezvech'e; 12 additional burial pits of the same size were located nearby. Nine rows of corpses were found in each grave. The investigators estimated that each grave contained approximately 400 corpses, which is also confirmed by the testimony of former prisoner Vasilii Podol'skii, who worked filling the graves.⁹ Around 22,000 persons were buried in these mass graves. The camp was dissolved in December 1944.

MANNSCHAFTSSTAMMLAGER (STALAG) 352

The Germans established Stalag 352 from Stalag XII A on April 26, 1941, in Defense District (*Wehrkreis*) XII. As of August 26, 1941, the camp deployed to Minsk (map 9b), in the USSR.¹ In 1943 and 1944, the camp had a subcamp in the town of Molodechno. At the end of June 1944, as a result of the Red Army's advance on Minsk, the Germans evacuated the camp westward, and then officially disbanded it on August 20.

The camp was subordinate to the Commander of Prisoners of War (POWs) in the General District White Ruthenia (*Kommandeur der Kriegsgefangenen im Generalbezirk Weissruthenien*). From December 1941 to June 1943, Oberst Oskar Karkowski held this position. As of November 17, 1943, the camp was subordinate to the General Quartermaster (*Generalquartiermeister*) of the ground forces.²

Stalag 352 received field post number (*Feldpostnummer*) 39 306 between February 28 and July 29, 1941. That number was struck between April 23 and November 24, 1944. A second number, 33 909, was assigned on August 8, 1944, and struck on January 25, 1945.

The camp commandants were Major Maximilian Ossfeld (August 20 to December 1941), Major Hans Linsbauer, Gerald Jouin (as of October 1942), Oberst Maximilian Pöncke, and Oberst Sibrand Siegert. The deputy commandants were Hauptmann Heinrich Lipp (from April 1942 to June 1944; died in 1948), Rudolf Klaeber, and Hauptmann Dr. Kurt Uecker (from September to October 1942, he was acting commandant of the camp). The head of the secondary camp in the “Pushkin barracks” was Hauptmann Prob (or Prieb).

The 332nd Reserve Battalion (*Landesschützenbataillon*) guarded the camp.³ This battalion deployed to the east on July 20, 1941, and went to Minsk via East Prussia and Lithuania. In Minsk, it guarded the main camp (the so-called forest camp) and the branch of the camp at the Pushkin barracks. Until June 1943, the battalion commander was Hauptmann Patscheck, whom Hauptmann Dammer replaced. To maintain internal order, the Germans also formed a camp police force, made up of Ukrainian and Lithuanian POWs and local ethnic Germans (*Volksdeutsche*).⁴

The camp was located near the city of Minsk, in the village of Masiukovshchina (the forest camp; now part of Minsk) and in the town itself, in the so-called Pushkin barracks (the “town camp”). The forest camp was the main camp; it

consisted of 21 wooden barracks, intended to accommodate 9,500 prisoners, and contained automotive workshops and garages. The Germans enclosed the entire territory of the camp with several rows of barbed wire, fixed to heavy concrete pillars, 3 meters (almost 10 feet) in height. The space between the rows of wire barriers was also interwoven with barbed wire. At night the wires were electrically charged. Along the line of the wire barriers and in the corners, the Germans erected guard towers with searchlights. In addition, sentry posts were set up along the fence.

The camp held Soviet POWs. From December 1943 to June 1944, the camp also held 3,500 Italian military prisoners.⁵ The prisoners lived in barracks, stables, half-destroyed barns, and, frequently, particularly in the fall and winter of 1941–1942, simply out in the open. The Germans placed the prisoners in barracks without any preliminary medical processing. There was no general provision for bathing; when they could, the prisoners washed themselves in cold, dirty water. Their underwear was not washed and not changed. Any light inside the barracks at night was prohibited. If the guards noticed a fire anywhere in the barracks, they immediately opened fire on the windows. The prisoners lacked such necessary items as spoons and mess tins. To hold the thin soup, they used tin cans and broken pieces of crockery.

The Germans quartered the prisoners in separate groups. There were barracks for Russians, Ukrainians, Jews, and prisoners from Central Asia. Those with no documents in their possession when they were taken prisoner were kept together. Periodically, the Germans shot them, along with the other “undesirables” such as Jews and political commissars, in places not far from the camp: in the village cemetery, along the roads, in ditches, and in ravines.⁶ Around 8,000 prisoners identified as political commissars were shot in October 1941 alone.⁷

The Germans set up an infirmary in a three-story stone building, where the sick and injured were not so much treated as “helped” to die. Death rates there ranged from over 10 percent to more than 27 percent. A post-liberation report by forensic medical experts provided information on conditions in the infirmary, as part of a larger investigation into the Germans’ treatment of the prisoners in Stalag 352. The document specifically notes that 80.6 percent of the deaths were due to emaciation and colitis . . . the daily food ration received by the POWs consisted of an insignificant amount of bread—100 to 200 grams [3.5 to 7 ounces], containing 50 percent sawdust—and 1 liter [1 quart] of warm water with an admixture of potato peels or rotten potatoes or musty flour . . . extraordinary overcrowding in cold, dirty barracks; development of lice due to the lack of baths and the overcrowding; withholding of food as a means of punishment; back-breaking work, accompanied by exhausting marches and systematic beatings. . . . Living conditions in the camp were such

that they even caused POWs to commit suicide. [These conditions] explain with comprehensive persuasiveness the origin, next to Stalag 352, of a separate cemetery with its 197 graves and the 80,000 corpses of Soviet POWs buried in them.⁸

Starting in the spring of 1942, the situation in the camp changed as a result of the fact that Soviet POWs, as a workforce, began to have great significance for Germany’s war economy. By the summer of 1942, they all were housed in barracks and there was some improvement in the way they were treated. At the forest camp, a hospital, a disinfection station, and a bathhouse were placed in operation. To boost the prisoners’ productivity, the Germans increased the daily bread ration to 270 grams (9.5 ounces). The number of prisoners had also decreased significantly owing to the enormous death rate in the winter of 1941–1942 and the shipment of large contingents to other camps. In addition, far fewer new prisoners were arriving now, as a result of the altered situation at the front. At the same time, requests for workers were increasing, both from the Wehrmacht structures in the rear area of Army Group Center (*Heeresgruppe mitte*) and from the civilian administration.

From the moment of the camp’s creation, prisoners who were fit for work were placed in work detachments (*Arbeitskommandos*) for tasks both inside the camp and outside its boundaries. Inside the camp, the work included making repairs, doing construction, stockpiling firewood, tidying up the grounds, and carrying water. Prisoners worked in the garage and at the sawmill. Starting in 1942, workshops began to be set up for carpentry, shoemaking, and sewing and tailoring.

On the basis of applications from local enterprises, the Germans formed parties for work outside the boundaries of the camp. The largest source of requests for workers was Organisation Todt, a German civil and military engineering group. It used POWs for a wide variety of tasks, such as at factories and construction sites and in the dismantling of ruins in the city. A large contingent of prisoners worked at the railroad in connection with requests from the Main Railroad Management Office in Minsk. The camp headquarters put together and placed at that office’s disposal work parties positioned at more than 90 railroad stations in Belorussia. These work parties had the status of subcamps, each with its own number. For example, the Mikhanovichi Station and Section 7 were operated by Kommando 2016. The number of prisoners in the various work parties was different and varied within a rather broad range—from a few dozen to 150. Their labor was used for unloading and loading freight cars, repairing and cleaning the roadbed and the spur tracks for the stations, cutting down trees along the railroad lines, transporting gravel, laying railroad ties, and so on.⁹

Mass killings of POWs also took place. According to the verdict in the case of the former commander of the 2nd Lithuanian Auxiliary Police Battalion, Major Antanas Impulevičius, this battalion shot around 9,000 POWs in Minsk, in the

fall of 1941.¹⁰ In February 1942, a total of 925 prisoners at the camp were shot. In August 1942, 600 prisoners were shot.¹¹ According to the testimony of Alois Hetterich, a former private in the 12th Company, 3rd Battalion, 375th Regiment, 327th Infantry Division, his battalion shot about 10,000 men near the Minsk-Tovarnaia Freight Station between January 28 and 31, 1943. The victims were mostly prisoners who were emaciated and unfit for work; Hetterich's platoon alone is said to have shot 1,500 prisoners.¹²

There was a resistance movement in the camp. By November 1941, an underground group was formed in the camp; its plans included freeing all the prisoners (19,000 persons), seizing the airfield, at which Soviet parachutists were supposed to land, and—taking into account the advance of Soviet forces and retreat of German forces after the defeat at Moscow—breaking through to the front line. However, the German Security Police, with the help of prisoners turned informers, found out about this underground group and wiped it out in early January 1942. In *Ereignismeldung UdSSR*, no. 154, dated January 12, 1942, it states: "January 4. Discovery of an insurgent organization in the POW camp. Thus far, a total of 315 arrests."¹³

Prisoners also tried to escape at every opportunity, and local residents often helped them in these attempts. For example, in *Ereignismeldung UdSSR*, no. 172, dated February 23, 1942, it states: "In Minsk . . . were caught . . . 2 Russians who helped 12 Russian POWs to escape. Owing to poor guarding, on February 17, 1942, alone, 15 POWs escaped from the camp in Minsk."¹⁴ According to the Soviet Extraordinary State Commission (ChGK), approximately 119,000 Soviet prisoners died at Stalag 352; however, it is likely that this figure is well in excess of the actual death toll, as casualty figures from the ChGK are often significantly inflated.¹⁵

10. The trial of Antanas Impulevicius and others took place in Kaunas from October 10 to October 20, 1962. See Gerlach, *Kalkulierte Morde*, p. 851. In October 1941, from 2,000 to 8,000 prisoners were shot.
11. Gerlach, *Kalkulierte Morde*, p. 851.
12. *Sudebnyi protsess*, p. 255; Gerlach, *Kalkulierte Morde*, pp. 852–853. After his liberation from Soviet captivity (at the trial in Minsk in January 1946, Hetterich was sentenced to 15 years of penal servitude), Hetterich declared that he gave this testimony "under torture" and it was not in conformity with reality. Streim also asserts that such an action did not take place, because in late January and early February the 327th Infantry Division was still in France. However, the transferring of the division from France through Minsk to the North Caucasus was not reconstructed in its entirety. Parts of the division, including, most likely, the 3rd Battalion, actually had an unplanned stop in Minsk, though it was two weeks later than stated in Hetterich's testimony (cf. Gerlach, *Kalkulierte Morde*, p. 853n415).

MANNSCHAFTSSTAMMLAGER (STALAG) 353

The Wehrmacht established Stalag 353 on April 30, 1941, in Defense District (Wehrkreis) III.¹ From August to December

1941, the camp was located about 5 kilometers (3.1 miles) west of Grodno (today in Belarus) (map 4c), in an area the Germans annexed. In January 1942, the camp was deployed to Orsha (9b), in Soviet Belorussia, where it took over the former site of Dulag 127; the former site of Stalag 353 near Grodno was then occupied by Stalag 324. The camp was subordinate to the 286th Security Division (*Sicherungsdivision*) and the Prisoner of War District Commandant K (*Kriegsgefangenen-Bezirkskommandant K*). The camp commandant was Oberstleutnant Wild. The camp was guarded by the 1st Company of the 531st Reserve Battalion (*Landesschützenbataillon*). Stalag 353 received field post number (*Feldpostnummer*) 15 392 between February 1 and July 11, 1941. The number was struck on October 22, 1944.

Stalag 353 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Severe overcrowding, malnutrition, and inadequate medical care led to widespread death from starvation and disease. Deliberate mistreatment by the guards further exacerbated these conditions, and the death rate in the camp was extremely high, particularly in the winter of 1941–1942. In January 1942, 100–120 prisoners were dying in the camp each day.² The postwar investigation by the Soviet Extraordinary State Commission (ChGK) calculated a death toll of 14,000 at the camp in Orsha; however, casualty figures reported by the ChGK are often significantly overstated, and this number should be viewed accordingly.³ As in other camps, newly arrived prisoners were screened to separate out “undesirables,” such as Jews and political commissars, that a detachment of the Security Service (*Sicherheitsdienst*) or the guards then shot near the camp.⁴ The date of the camp’s dissolution is unknown; it was still in service as of September 10, 1943.

SOURCES Primary source material about Stalag 353 is located in BA-MA (RW 6: Allgemeines Wehrmachtamt/Chef des Kriegsgefangenenwesens); GARF (file 7021-84-10); NARB (file 4683-3-917); and BArch B 162/21206–21208 (“Aussonderung” von Kriegsgefangenen im Stalag 353 zu Orscha).

Additional information about Stalag 353 can be found in the following publications: V. I. Adamuschko et al., *Soviet Prisoners of War Camp in Belarus, 1941–1944* (Minsk: NARB, 2004), pp. 84–85; G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. MANNSCHAFTSSTAMMLAGER (STALAG) 354

The Wehrmacht established Stalag 354 on April 28, 1941, in Defense District (*Wehrkreis*) IV.¹ In October 1941, the camp deployed to the former Red Army post at Borovukha 1 (today Baravukha 1, Belarus) (map 9b), where it took over the site of Dulag 155.² Initially, the camp was subordinate to the 403rd Security Division (*Sicherungsdivision*) and then to the 201st Security Brigade (*Sicherungsbrigade*) and the Prisoner of War District Commandant K (*Kriegsgefangenen-Bezirkskommandant K*). Stalag 354 received field post number (*Feldpostnummer*) 46 979 between July 30, 1941, and February 28, 1942. The number was struck on April 26, 1944.

The first commandant of Stalag 354 was Major Paul Kuhn; his successor was Major Hans Menz. The deputy commanders were Hauptmann Fritz Weber and Hauptmann Friedrich Lohrisch. The counterintelligence (*Abwehr*) officer was Hauptmann Ferdinand Krems. The camp doctor was Dr. Horst Felgenhauer. The camp was guarded by the 1st Company of the 894th Reserve Battalion (*Landesschützenbataillon*).³

Stalag 354 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. The camp was badly overcrowded, the prisoners were malnourished, and virtually no medical care was provided. The guards added to their misery with beatings and abuse. As in other camps, newly arrived prisoners were screened to separate out “undesirables,” such as Jews and political commissars, who were then shot near the camp by a Security Service (*Sicherheitsdienst*) detachment or the camp guards.⁴

Because of the terrible conditions in the camp and deliberate mistreatment of the prisoners, the death rate in Stalag 354 was very high. On the basis of reports from partisans, in the winter of 1941–1942, the death rate in the camp was as high as 200 prisoners per day, and, in total, as many as 20,000 prisoners died that winter.⁵ According to the testimony of witness Andrei Semenov, who worked as an electrician at the military post, in the winter of 1941–1942 the death rate even rose as high as 250–300 prisoners per day, and a total of 25,000 persons perished during that winter.⁶ In January 1943, when the camp held around 2,400 prisoners, there were 122 deaths (5%) per day, and the prisoners who were ill or unfit for work numbered 1,090 (46%).⁷ In total, according to the Soviet Extraordinary State Commission (ChGK), 29,000 persons are reported to have died in the camp; however, casualty figures from the ChGK are often substantially inflated and should be viewed accordingly.⁸ The date of the camp’s dissolution is unknown; it was still in operation as of October 10, 1943.⁹

MANNSCHAFTSSTAMMLAGER (STALAG) 355

The Wehrmacht established Stalag 355 on April 30, 1941, in Defense District (*Wehrkreis*) V.¹ From June to August 1941, the camp was located in Neusiedl am See (map 4f), in present-day Austria. From September 1941 until the end of 1943, the camp was located in Proskurov (today Khmel’nyts’kyi, Ukraine) (9e). From September 1941 to July 1943, Stalag 355 had a subcamp (*Zweiglager*) in the barracks of a military post in Starokonstantinov. From January 12 to March 22, 1944, the camp was located in Düren, Germany (Defense District VI) (4a), and from March 22 to June 9, 1944, it was in Oerbke, Germany (Defense District XI) (4a).² While deployed in

Ukraine, the camp was subordinated to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ukraine*).

Stalag 355 received field post number (*Feldpostnummer*) 09240 between February 1 and July 11, 1941. The number was struck between January 25 and July 31, 1943, renewed on November 11, 1943, and struck for good on May 18, 1944.

Stalag 355 held Soviet prisoners of war (POWs). The population reached a peak of 20,800 in October 1942 before declining to 2,600 in October 1943.³ The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, malnutrition, disease, and deliberate abuse by the guards led to a high mortality rate. The prisoners were so badly malnourished that they resorted to eating grass and leaves. Former prisoner Dmitrii Nebol’sin, who was held in the camp in 1942, stated that

on the grounds of the camp, everything remained as it was before the war: good, sound barracks, neat walks, paths, areas with horizontal bars and parallel bars, suspended washbasins intended for use by dozens of people at one time—only there was no grass, it had vanished; the prisoners had torn it out all the way down to the rootlets, even including the roots, and eaten it, thus exposing the soil, which had been pounded flat by thousands of feet. A day in the camp seemed like a year, and our thoughts were occupied the whole time with hopes of changes and grub. From early morning everyone was on the move, looking for food, tobacco, and people from the same part of the country. In the common zone, to which we were moved, it was possible to wander freely about the area and drop into barracks to see “old” prisoners. Getting some extra grub “on the side” was almost impossible, and only those who had managed to save some valuables, watches, knives, and the like succeeded in bartering with the *politsais* [police], medical orderlies, and guard squad for a piece of bread or a twist of *makborka* [tobacco]. In the morning, for our so-called breakfast, we each were issued 100 grams [3.5 ounces] of ersatz bread, which immediately vanished into our empty bellies; for the midday meal, a ladle of *balanda* [weak soup]; and for supper, nothing. On the other hand, we could drink our fill of water—as much as we wanted. People wasted away before our eyes. Soon, even in us “fresh ones,” gauntness began to become evident; the furrows on our foreheads were more sharply outlined; our backs became hunched. The cruel cold deprived people of all common sense—they cut and chopped up their belts into very tiny pieces, moistened the crumbs with water, chewed and swallowed. I saw Uzbeks drink clay dissolved in water, and then, the next day, they were rolling on the ground,

writhing with agonizing pain in their abdomens, caused by extreme constipation, and they died in unbearable torment. Every day, a wagon drawn by horses drove around the camp and took away the corpses of the prisoners.⁴

As in other camps, the prisoners were screened to separate out Jews and Communists, who were then shot near the camp by a Security Service (*Sicherheitsdienst*) detachment or the camp guards.⁵ The exact number of prisoners who died in the camp in Proskurov is unknown. According to Soviet Extraordinary State Commission (ChGK) materials, 65,000 prisoners died in the camp.⁶ From November 1941 to January 1942 alone, 40,000 prisoners reportedly died.⁷ At the branch camp in Starokonstantinov, another 3,300 perished.⁸ However, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly. The camp was dissolved on October 1, 1944.

MANNSCHAFTSSTAMMLAGER (STALAG) 357

The Wehrmacht established Stalag 357 on June 23, 1941, in Neusiedl am See (map 4f), in Defense District (*Wehrkreis*) XVII.¹ From September 1941 until December 1943, the camp deployed to various locations in occupied Ukraine. From September 1941 to November 1942, it was in Shepetovka (9e); from November 1942 to March 1943, it was in Poltava (9f), with a subcamp (*Zweiglager*) in Romodan (Poltav’s’ka oblast’); and from March to December 1943, it was in Slavuta (9e). From February to September 1944, the camp was stationed in Thorn (Defense District XX) (today Toruń, Poland) (4c). Finally, from September 1944 to April 1945, it was located in Oerbke (Defense District XI) (4a). Stalag 357 received field post number (*Feldpostnummer*) 09 908 between February 1 and July 11, 1941; the number was struck between January 25 and July 31, 1943, but was reissued on November 30, 1943.

While it was deployed in Ukraine, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). During the deployment in Thorn, the camp was under the authority of the Commander of Prisoners of War in Defense District XX (*Kommandeur der Kriegsgefangenen im Wehrkreis XX*). While the camp was stationed in Oerbke, it was subordinate to the Commander of Prisoners of War in Defense District XI.

The camp commandant was Oberstleutnant Westphal. From September to November 1941, Feldwebel Hans Rosenthal was responsible for the prisoners’ provisions and forced labor. In Shepetovka, the 3rd Company of the 351st Reserve Battalion (*Landesschützenbataillon*) guarded the camp. While the camp was deployed in Poltava, it was guarded by the 2nd Company of the 842nd Reserve Battalion.²

While it was deployed in Ukraine, Stalag 357 held Soviet prisoners of war (POWs). The camp population peaked at 19,958 prisoners in April 1943.³ The conditions were similar to those in other camps for Soviet POWs. Overcrowding, malnutrition, disease, and abuse led to a high mortality rate. The prisoners’ hunger caused them to resort to eating grass and leaves. By October 1941, there were also instances of cannibalism. Former prisoner Sergey Chekanov recalled the conditions in the camp:

The camp was housed in four-story barracks not far from the railroad station. It was surrounded by two rows of barbed wire, and at the corners were towers with machine guns. Only after three days was a kitchen set up. Many who had become enfeebled did not leave the barracks, and others stayed outside in the square to sleep at night, so that the next morning they would be the first to get in line for the *balanda* [a thin soup]. For several days in a row, the commandant [*sic*], Rosenthal, brought in a wagon with bread

for the prisoners and circled it around the square for a long time, and the people were reaching for it, but then he took it away. He wasn't satisfied with that: every day he arranged for pogroms in the barracks, looking for commissars [communists] and Jews . . . In November, Rosenthal was sent to the front. In parting, he got drunk, and the prisoners took him around camp on a cart. His replacement as commandant was Kovarin, an Austrian by nationality and a musician by profession. He ordered the broken windows to be blocked up with bricks, and it got warm in the barracks. The barracks had numbers: Blocks A, B, C, and D. For each prisoner, they introduced cards with a thumbprint, and tokens. When someone died, they broke the token, and one half was thrown into the grave, while the other half was sent to the commandant's office.⁴

While the camp was deployed in Shepetovka, the Germans conducted screenings to separate out "undesirable" prisoners, such as Jews and Communists, who were executed by the Security Service (*Sicherheitsdienst*) or camp guards. The exact number of prisoners who died in the camp at Shepetovka is unknown. According to the Soviet Extraordinary State Commission (ChGK), 13,500 prisoners died in Shepetovka, the majority of them in 1941 and 1942; however, casualty figures from the ChGK are often significantly exaggerated and should be viewed accordingly.⁵ While the camp was deployed in Slavuta, 6,000–7,000 prisoners perished there. The death rate was very high; 1,368 prisoners died in March 1943 alone.⁶

While the camp was located in Thorn and Oerbke, it held British, French, Polish, Dutch, Norwegian, and American POWs. As of November 9, 1944, the camp held 7,538 prisoners: 7,432 British (3,000 of whom were noncommissioned officers), 33 French, 62 Poles, 7 Norwegians, 3 Dutch, and an American. Many of the British prisoners had been transferred there from Stalag XX A and Stalag Luft VI. Their man of confidence was Regimental Sergeant Major Frederic Turner.⁷

Stalag 357 in Oerbke was located on the site of the former Stalag XI D, 5 kilometers (3.1 miles) south of the town. The camp consisted of 16 wooden and stone barracks of varying sizes, with an average of 72 prisoners confined to each room, leading to serious overcrowding. The men slept in double-bunk beds. The barracks were heated by small stoves, which the men also used to prepare the food they received in their Red Cross parcels; however, fuel was only distributed to the central kitchen, so the men had to go into the woods and gather their own logs for the barrack stoves. Thus, the supply of fuel for heating was insufficient for the prisoners' needs and they were always cold.⁸

The wooden barracks were generally well lit, but the electric lights in the stone barracks were insufficient. In the stone barracks, each room had only four 25-watt bulbs, along with four windows. Running water was supplied by faucets in the washrooms of each barrack, except for the three barracks in

Block B. Hot showers were only infrequently available to the prisoners because of the lack of fuel; men reported waiting as long as five weeks between showers. However, the sanitary facilities at the camp were generally adequate, and no vermin were present in the barracks. The camp hospital was well equipped and staffed by 9 medical officers, 12 medical aides, and 37 additional sanitary personnel. The prisoners' health was generally good; in November 1944, there was a prisoner being treated for tuberculosis and four being treated for pleurisy.⁹

For recreational purposes, the prisoners had access to a large sports field, 800 by 250 meters (875 by 273 yards) in area, as well as a variety of sports equipment; the prisoners played soccer, volleyball, rugby, basketball, softball, and cricket. There was a small library; however, there was no reading room or study area available to the prisoners. Courses were taught in the barracks, with 18 teachers for 440 students. A small orchestra was established, mainly consisting of prisoners transferred from Stalag XX A who had brought their instruments with them from that camp. Three chaplains conducted religious services in the camp in a makeshift chapel; the capacity of this building was 400 men, but attendance was frequently higher.¹⁰

By early 1945, the conditions at the camp had deteriorated badly. The number of prisoners in the camp had swelled with Americans captured in the Battle of the Bulge, and the camp's food and medical supplies were inadequate to provide for all of them. Since the barracks were already overcrowded, the newly arrived Americans had to sleep in tents.¹¹ British forces liberated the camp on April 13, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) 358

The Wehrmacht established Stalag 358 from Frontstalag 358 on October 25, 1942. From September 15, 1941, until November 26, 1943, the camp was located near Zhitomir, in Ukraine (map 9e), where it replaced Dulag 201. The camp had one sub-camp (*Zweiglager*), Stalag 358/Z, which was located in Berdichev until April 1943, when it was taken over by Stalag 339 from Kiev-Darnitsa. The Prisoner of War Camp Hospital (*Kriegsgefangenen-Lazarett*) Bohunia (disbanded in October 1943) was also subordinated to the camp. By order of the Armed Forces High Command (OKW) on October 19, 1943, the staff of Stalag 358 was transferred to Tost (today Toszek, Poland), where it took over Ilag VIII H, which was converted into Oflag 6.¹

During its time in the USSR, Stalag 358 was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). Stalag 358 received field post number (*Feldpostnummer*) 23 656 between February 16 and July 18, 1941. The number was struck between July 31, 1942, and February 9, 1943.

The camp commandants were Majors Hagedorn, Pawliska, and Max Schroeter (from the fall of 1942 to November 25, 1943). Their deputies were Hauptmann Schmidt and Hauptmann Zander. The administrative section was headed by Oberzahlmeister Hans Messerschmitt and Oberzahlmeister Bernhard Kamps. The camp was guarded by the 2nd Company of the 351st Reserve Battalion (*Landesschützenbataillon*).²

Stalag 358 held Soviet prisoners of war (POWs). The camp population peaked at 21,533 in October 1942, before falling to just over 3,000 shortly before the camp in Zhitomir was closed.³ The camp was located near the village of Bogunia (today the Bohuns'kyi District). The conditions in the camp were similar to those in other camps for Soviet POWs. Malnutrition, disease, and abuse led to a high mortality rate. The prisoners' daily food ration consisted of about 4 grams (0.14 ounces) of fat and 250 grams (almost 9 ounces) of bread, largely made of substitutes; no one received sugar. However, even these meager rations were rarely given in full, as the German noncommissioned officers in the camp stole from the rations to send packages home to Germany.⁴ The prisoners received little medical care and lived in crowded, unsanitary conditions, which facilitated the spread of infectious disease. In July 1942, an epidemic of typhus spread through the camp, killing hundreds of prisoners.⁵

New arrivals were screened to separate out Jews and Communists, which a Security Service (*Sicherheitsdienst*, SD) detachment then shot in a forest near the camp. Friedrich Buck, who served as a driver at the camp for several months starting in the fall of 1941, stated that during his service in the camp, he, together with five or six other drivers, on 8 to 10 occasions took Jewish prisoners to be shot in a nearby forest. In total, he said, 1,200–1,400 prisoners were taken away.⁶

It is not possible to determine with accuracy the total number of prisoners who lost their lives in Stalag 358. According to Soviet Extraordinary State Commission (ChGK) materials, more than 65,000 prisoners died of starvation and disease in the camp in Zhitomir and were buried in 28 graves. In addition, 2,150 more prisoners were shot and buried in two ditches.⁷ The ChGK stated that an additional 7,590 prisoners died in the branch camp in Berdichev.⁸ However, casualty figures from the ChGK are often significantly inflated and should be viewed accordingly.

At the end of October 1942, the camp handed over a number of prisoners who were not fit for work to the Security Police (*Sicherheitspolizei*, Sipo), expecting that the Sipo would shoot them. However, SS-Sturmbannführer Dr. Franz Rzesberger, at that time the commander of the Sipo and SD in

Zhitomir, was unwilling to carry out this “dirty” job for the Wehrmacht. On his orders, a small number of prisoners who were marginally fit for work were selected from among the prisoners handed over at Zhitomir, while the remaining 78 were moved to an educational and labor camp run by the Sipo in Berdichev.⁹

The prisoners sent to Berdichev had all been severely wounded in battle. Some were missing both legs, others both hands or arms, and others just one limb. A few had all their limbs but had other injuries and could not work. During an inspection of the educational and labor camp on December 23, 1942, SS-Hauptsturmführer Friedrich Kallbach, Dr. Rzesberger’s successor, ordered the 68 or 70 prisoners who were still alive to be shot immediately. On December 24, members of the SD office in Berdichev (Paal, Vollprecht, Hesselbach, and Schäfer) first shot 18 prisoners, almost all of whom had no legs. During the shooting of a second group of 28 prisoners, many of whom lacked one or even both hands or arms, these prisoners attacked the two SS men (Paal and Vollprecht) who were guarding them (the other two SS men at this time were carrying out the execution in a pit), managed to take away their weapons, fired the weapons at these SS men, and ran away. Searches for the escaped prisoners were quickly initiated but were unsuccessful. The 20 remaining prisoners were shot the following day.¹⁰

Stalag 358 was formally disbanded on November 26, 1943. In 1969, the central prosecutor’s office in Dortmund began a preliminary investigation into the matter of former personnel at the camp headquarters (also among them was the last camp commandant, Schroeter) and former members of the guard company. The investigation was closed on November 13, 1973, due to lack of evidence. The case of the former driver at the camp, Friedrich Buck, was transferred to the prosecutor’s office in Osnabrück. Although Buck admitted that he repeatedly drove prisoners to an execution site, the prosecutor’s office nonetheless declined to prosecute him.

SOURCES Primary source material about Stalag 358 is located in BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens), GARF (file 7021-60-294), DAZhO, USHMM, and BArch B 162/8514–8519 (Ermittlungen gg. MANNSCHAFTSSTAMMLAGER (STALAG) 359

The Wehrmacht established Stalag 359 on April 30, 1941, in Defense District (*Wehrkreis*) XIII.¹ The camp was initially deployed to Falkenau an der Eger (today Sokolov, Czech Republic) (map 4d).² From September 1941 to the spring of 1942, the camp was deployed to Poniatowa (5), in the Generalgouvernement, Poland. From the spring to the fall of 1942, the camp was deployed just to the south in Sandomierz (5). While deployed in Sandomierz, on June 1, 1942, the camp held 601 prisoners (including 207 officers) and, on August 1, 1,759 prisoners.³ In the spring of 1943, the camp was deployed to Znamenka (today Znamianka, Ukraine) (9f), and in July 1943 it was located in the village of Borisovka (today Borysivka, Bobrynets’kyi raion, Kirovohrads’ka oblast’, Ukraine) (9g).⁴ The camp was also briefly deployed in Russia, in the present-day Belgorodskaya oblast’. The Germans disbanded the camp on November 19, 1943.⁵

From April to September 1941, the camp was subordinate to the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*). From September 29, 1941, to October 10, 1942, it was subordinate to the Commander of Prisoners of War in the Generalgouvernement, Poland (*Kommandeur der Kriegsgefangenen*

im Generalgouvernement Polen), and from October 10, 1942 until its dissolution, it was subordinate to Army Group South (*Heeresgruppe Süd*) and the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*).⁶ While it was located in Poniatowa, the camp was guarded by the 709th Reserve Battalion (*Landesschützenbataillon*). Stalag 359 received field post number (*Feldpostnummer*) 12 552 between February 1 and July 11, 1941.

The first camp commandant was Oberstleutnant Richard von Gossmann (1876–1949). In May 1942, von Gossmann was discharged from military service as a result of heart disease and was replaced by Major Freyber, who committed suicide shortly thereafter. As of July 21, 1943, the camp personnel consisted of 126 Wehrmacht members (9 officers, 7 civil servants, 29 noncommissioned officers, and 81 enlisted men), as well as 80 nonmilitary personnel. The camp guards included 77 Germans and 149 Soviet Volunteers (*Hilfswillige*).⁷

During the deployment in Poniatowa, conditions in the camp were similar to those in other camps for Soviet prisoners of war. The camp was severely overcrowded and the prisoners did not receive adequate food or medical care, leading to widespread malnutrition and disease and a high mortality rate. The prisoners' plight was exacerbated by deliberate abuse from the guards. Of the approximately 24,000 prisoners who were sent to the camp before the end of 1941, around 20,000 died and were buried in 32 mass graves.⁸

During the deployment in Sandomierz, the conditions were somewhat better. The camp commandant arranged for disinfection, medical aid, and regular food.⁹

MANNSCHAFTSSTAMMLAGER (STALAG) 360

The Wehrmacht established Stalag 360 on April 8, 1941, in Nürnberg-Langwasser, in Defense District (*Wehrkreis*) XIII (map 4d). From August 1941 to October 1943, the camp was located in the town of Rovno (today Rivne, Ukraine) (9e), and then, until February 1944, it was in the village of Velikii Zhitin (9e), 6 kilometers (3.7 miles) northeast of Rovno. There were three subcamps, located in Zdolbunov, Dubno, and Lutsk; the subcamps in Zdolbunov and Lutsk were later relocated to Brest and Kovel'. Stalag 360 received field post number (*Feldpostnummer*) 13 143 between February 1 and July 11, 1941. The number was struck between January 25 and July 31, 1942, renewed on November 30, 1943, and struck again for good on March 28, 1944.

While deployed in Rovno, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). Starting in the fall of 1943, the camp was subordinate to the Commander of Prisoners of War with the Commander of the Rear Area of Army Group South (*Kommandeur der Kriegsgefangenen beim Befehlshaber des Heeresgebiets Süd*). The first commandant was Major der Reserve Carl Gerber, and his adjutant was Hauptmann der Reserve Ferdinand Wild. The officer for assignments was Hauptmann der Reserve Christian Hermann, the camp doctor was Dr. Josef Prost, and the camp doctor's assistants were Wilhelm Müller and Dr. Johann Linnemann.¹ The last commandant of the camp (from October 1943) was Oberstleutnant Otto Kadelke. In January 1944, he moved the camp headquarters through Dubno into Tarnopol. The exact date of the camp's disbandment is unknown, but records indicate that it was still in operation on March 10, 1944.

Stalag 360 held Soviet prisoners of war (POWs). The maximum population of the camp was 12,916 in October 1942. Many of the prisoners were assigned to work details (*Arbeitskommandos*) outside the camp.² The camp in Rovno consisted

Stalag 360 at Rowno. Soviet POWs in the camp, date unknown.
USHMM WS #50155

of three parts. Camp 1 served as a hospital for sick prisoners. The camp physician, Dr. Prost, was in charge of this camp. The largest section was Camp 3, located in the area of the military post on Belaia Street. Alfred Kühn was the commandant of this camp, which held 15,000 prisoners by November 1941. The conditions were similar to those in other camps for Soviet POWs. The prisoners suffered due to extreme overcrowding, food that was inadequate in both quantity and quality, lack of medical care, forced labor, and abuse by the guards. Malnutrition, exhaustion, and disease led to a high mortality rate.³ The prisoners were often reduced to eating grass and leaves.

The number of prisoners who died in the camp is not known with certainty. According to Soviet Extraordinary State Commission (ChGK) materials, more than 30,000 POWs lost their lives in Rovno between 1941 and 1943.⁴ The number of POWs that perished in the subcamp in Lutsk is 10,530;⁵ in Dubno, more than 3,000;⁶ and in Zdolbunov, 300.⁷ It should be noted that casualty figures from the ChGK are often substantially inflated and should therefore be viewed accordingly.

MANNSCHAFTSSTAMMLAGER (STALAG) 361

From August 1941 until February 1942, the prisoner of war (POW) camp in Šiauliai (map 9b) was a subcamp (*Zweiglager*) of Stalag 336 in Kaunas. Starting in February 1942, the camp was managed by the headquarters of Oflag V B (previously located in Biberach an der Riss), which was renamed Stalag 361 on April 17, 1942. The camp was subordinate to the Commander of Prisoners of War with the Military Commander Ostland (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ostland*). Its field post number (*Feldpostnummer*) was 16 510, issued sometime between February 15 and July 30, 1942, and struck on August 27, 1943.¹

Stalag 361 held Soviet POWs. The camp population as of April 1, 1942, was 10,557; as of May 1, it was 10,330; as of June 1, it was 10,051; as of August 1 (after the transport of about 3,000 prisoners to Germany), it was 7,102; as of September 1 (after 3,000 more prisoners were transferred out), it was 4,098; as of October 1, it was 3,791; as of November 1, it was 4,102; and as of December 1, it was 4,188.²

The first commandant of Stalag 361 was Oberstleutnant Eduard Eitner. He was succeeded by Oberstleutnant Karl Meinel, who remained commandant until August 1, 1942. His replacement, Oberst Karl Sieber, served until February 4, 1943. His successor, Oberst Maximilian Pönische was commandant until August 14, 1943. Oberst Kurt Sieber then served a brief term as commandant until August 20, 1943. The adjutant was Oberleutnant Greiner and the counterintelligence (*Abwehr*) officer in the camp was Hauptmann Seyfried. Stalag 361 was guarded by personnel from Reserve Battalions (*Landesschützenbataillone*) 405 and 530.³

The camp complex consisted of three sections: Lager 1, which had six barracks; Lager 2, composed of new barracks built by the Reich Labor Service (*Reichsarbeitsdienst*); and another section inside a leather factory where POWs were presumably employed.⁴ The conditions in Stalag 361 were similar

to those in other camps for Soviet POWs. Severe overcrowding, insufficient food supplies and medical care, and deliberate abuse by the German camp personnel led to a very high mortality rate. In the winter of 1941–1942 and the spring of 1942, there was an outbreak of typhus in the camp, which led to its quarantine. Witnesses stated that many prisoners died of typhus, as well as malnutrition, during this time.⁵ As in other camps for Soviet prisoners, the Germans conducted “selections” (*Aussonderungen*) to separate out “undesirable” prisoners (such as political commissars and Jews), who were subsequently executed by Security Service (*Sicherheitsdienst*) personnel. According to Soviet Extraordinary State Commission (ChGK) documents, a total of 22,560 prisoners died in the camp; however, casualty figures from the ChGK are often significantly inflated and should be viewed accordingly.⁶ On January 18, 1944, Stalag 361 was dissolved and the camp was taken over by Oflag 65, which was subsequently transferred to the Western Front.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 362

The Wehrmacht established Stalag 362 from the staff of Oflag X A on April 17, 1942. In July 1941, the camp deployed to Slutsk, Belarus (map 9b), about 98 kilometers (61 miles) south of Minsk.¹ The camp was subordinate to the Armed Forces Commander Ostland (*Wehrmachtbefehlshaber Ostland*). Stalag 362 received field post number (*Feldpostnummer*) 05 956 between January 27 and July 14, 1942; the number was struck between July 15, 1942, and June 24, 1943.

The commandant of Stalag 362 was Oberst Otto Witt (1871–1952) and his deputy was Major Ernst Herrschel (b. 1874). The adjutants were Hauptmann Otto Machledt (b. 1890) and Hauptmann Friedrich Vogelsang (1895–1961). The counterintelligence (*Abwehr*) officer was Hauptmann Ramm. The camp doctor was Dr. Wilhelm-Heiner Brandt (1900–1970). The camp was guarded by personnel from the 551st, 624th, 861st, and 959th Reserve Battalions (*Landesschützenbataillone*).² They were assisted by Russian and Ukrainian POW volunteers (*Hilfswillige*, Hiwis), who served as guards in the camp in exchange for improved food rations and living conditions.

Stalag 362 held Soviet prisoners of war (POWs). The camp consisted of a number of wooden barracks surrounded by barbed wire. The conditions were similar to those in other camps for Soviet POWs. The camp was severely overcrowded, the prisoners did not receive adequate food rations, and little medical care was provided, as the camp’s medical personnel were given almost no supplies. The prisoners were also expected to perform hard manual labor in the camp’s work detachments (*Arbeitskommandos*), despite the fact that they were already suffering from malnutrition and exhaustion. As a result, the death rate from starvation and disease was very high. One witness estimated that between 6 and 10 prisoners were dying every day in the fall and winter of 1941. The Soviet Extraordinary State Commission (ChGK) estimated that in total, about 14,000 prisoners perished in Slutsk.³ New arrivals in the camp were screened by counterintelligence personnel to separate out “undesirables,” such as Jews and political commissars, that the guards or Security Service (*Sicherheitsdienst*) personnel then shot near the camp.⁴

Witness testimony indicates that, when Stalag 362 was initially deployed to Slutsk, there were about 12,000 prisoners in the camp and that the camp population soon thereafter swelled to nearly 25,000. However, this number was substantially reduced during the winter as thousands of prisoners died from starvation and disease.⁵ Thus, by the spring of 1942, the population of the camp was significantly smaller

than it had been during the previous fall. In 1942, the number of POWs in the camp ranged from a little over 2,800 to just over 3,900.⁶ Stalag 362 was disbanded by an order dated October 27, 1942.⁷

SOURCES Primary source material about Stalag 362 is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Stalag 362); and BArch B 162/9259–9262 (Beteiligung an der Aussonderung sogenannter untragbarer russischer Kriegsgefangener im Stalag 362 in Sluzk zwischen April und November 1942).

Additional information about Stalag 362 is available in the following publications: V. I. Adamuschko et al., *Soviet Prisoners of War Camp in Belarus, 1941–1944* (Minsk: NARB, 2004), pp. 86–87; G. MANNSCHAFTSSTAMMLAGER (STALAG) 363

The Wehrmacht established Stalag 363, from Frontstalag 363, on November 1, 1941, in Defense District (*Wehrkreis*) XXI.¹ The date of its redesignation as a Stalag is unknown. Initially, it deployed to a forest camp near Posen (today Poznań, Poland) (map 4c). On December 2, 1941, the headquarters (*Kommandantur*) of the camp transferred to Reichshof (today Rzeszów, Poland) (5) in the Generalgouvernement, but, before mid-1942, it was not used. On June 12, 1942, the camp was moved to Khar'kov (9f), where the camp headquarters took over from Dulag 171.² The camp was located in Khar'kov until February 5, 1943, when the Germans

evacuated the prisoners (around 18,000) westward. The camp headquarters took over Stalag 346 in Kremenchug (9f) on February 20, 1943, where it remained until June 20, 1943.³ The camp was then relocated to Plauen (4e), where it was dissolved on July 27, 1943.⁴

As of December 1941, the camp was subordinate to the Commander of Prisoners of War in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*). Starting on April 15, 1942, it was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). As of June 10, 1942, it was subordinated to Army Group South (*Heeresgruppe Süd*), and as of September 25, 1942, to the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*) and Commander of Prisoners of War with the Army Group B Rear Area Command (*Kommandeur der Kriegsgefangenen beim Befehlshaber des Heeresgebiets B*). Starting on March 14, 1943, it was subordinated to Army Detachment (*Armeeabteilung*) Kempf.⁵ Stalag 363 received field post number (*Feldpostnummer*) 41 755 between July 30, 1941, and February 28, 1942. The number was struck between March 12 and September 7, 1943.

The camp commandant was Major (later Oberstleutnant) Wilhelm Gottschalk until January 31, 1943, when Oberstleutnant Dr. Franz Knoll succeeded him. The deputy camp commandant was Major Mann, the first camp officer (*Lageroffizier 1*) was Hauptmann Rudolf Utz; the counterintelligence (*Abwehr*) officer was Hauptmann Wilke, as well as Rittmeister Arndt. The adjutant was Oberleutnant August Müller, and the officer for assignments was Oberleutnant Heilgemeyer. The Soviet volunteers (*Hilfswillige, Hiwi*) company that guarded the camp was headed by Oberleutnant Stüwe. The camp doctors were Oberarzt Dr. Gatting, who was succeeded by Stabsarzt Dr. Quante. The prisoner hospital was headed by Unterarzt Dr. Hans Stappert.⁶

Stalag 363 held Soviet prisoners of war (POWs). In Khar'kov, the camp was located on the grounds of the former Correctional Colony No. 18 (Khodnogorskaia Prison) near a fireman's watchtower on Sverdlov Street. In October 1942, the camp held 21,000 prisoners.⁷ The conditions were similar to those in other camps for Soviet POWs. The camp was severely overcrowded, the food was inadequate in both quality and quantity, the prisoners had to perform heavy labor, the guards were abusive, and the prisoners received minimal medical care. As a result, the death rate was high. According to former Generalleutnant Kurt von Österreich, who served as Commander of Prisoners of War with the Army Group B Rear Area Command in 1942, "when visiting the hospital for Russian POWs in Khar'kov, I saw how gravely ill men were placed in accommodations where there was no heating and all the windows were broken, and the sick men had no clothing or shoes. As a result, 200–300 people died in this hospital each day from exhaustion and epidemic diseases."⁸

The prisoners' constant hunger led to desperation and violence during the distribution of food. A former prisoner, B. Vitman, says in his memoirs,

In one of the enclosures at the camp, the Germans set up three big cauldrons in which asphalt is made. Using carbines, the guards shot the horses used for bringing in the wounded. They chopped the carcasses into pieces and threw them into the cauldrons. The water started to boil. Thousands of hungry eyes watched this procedure. The Germans went out of the enclosure, and the only people remaining near the cauldrons were cooks who also were prisoners. That, apparently, was all the enormous crowd of people was waiting for. In an instant the crowd got through the barriers between the enclosures and rushed toward the cauldrons. Those who were running ahead of the others succeeded in snatching still-raw pieces of horseflesh out of the boiling water. But the people farther back immediately crushed underfoot the ones who were ahead of them. In a few seconds, the cauldrons were concealed from sight by the people swarming all over them. Blood-curdling shrieks were heard, they came from the stupefied guards, who fired several shots into the air. This did not stop anyone. People continued to clamber over the fallen bodies to get to the cauldrons. Those at the back pushed those in front into the boiling water. Only after the guard opened fire on the people and felled several individuals did the wave of human beings fall back. Before distribution of the soup began, it was necessary to fish the boiled corpses out of the cauldrons.⁹

Many prisoners also died during transport to the camp. For example, according to von Österreich, "in October 1942 a special train carrying Russian POWs came to Khar'kov. In Khar'kov it appeared that about 150 of the 1,500 people on this train were missing. Upon clarification, it turned out that 75 people had died of starvation en route, and their corpses were found in the cars of the train. The remaining 75 had tried to escape, but were caught by the guards and shot on the spot."¹⁰

As in other camps, the Germans screened newly arrived prisoners to separate out Jews and political commissars, who were then shot by the guards or Security Service (*Sicherheitsdienst*) near the camp.¹¹

MANNSCHAFTSSTAMMLAGER (STALAG) 364

The Wehrmacht established Stalag 364 on November 1, 1941, in Defense District (*Wehrkreis*) IV, from Stalag IV B. On November 15, 1941, the camp was subordinated to the Commander of Prisoners of War in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*), and on November 29, 1941, it was transferred to Reichshof (today Rzeszów, Poland) (map 5). In the second half of April 1942, the camp was redeployed to Nikolaev (today Mykolaiv, Ukraine) (9g), where it was located until the Germans disbanded it on December 13, 1943. From July 15, 1942, until April 9, 1943, Stalag 364 had a subcamp (*Zweiglager*) in Kherson.¹

Starting on April 15, 1942, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). As of February 24, 1943, the camp was subordinate to the Commander of Prisoners of War with the Army Group South Rear Area Command (*Kommandeur der Kriegsgefangenen beim Befehlshaber des Heeresgebiets Süd*). Starting on September 21, 1943, it was subordinate to the Commander of Prisoners of War in Operations Area I (*Kommandeur der Kriegsgefangenen im Operationsgebiet I*).² Stalag 364 received field post number (*Feldpostnummer*) 42 189 between July 30, 1941, and February 28, 1942. The number was struck between September 8, 1942, and March 11, 1943.

Stalag 364 held Soviet prisoners of war (POWs). In May 1942, there were 17,200 POWs in the camp. In September

1942, there were 45,000; in December 1942, 27,000; and in February 1943, 20,300.³ In Nikolaev, the camp was located on the right bank of the Ingul River in the settlement of Temvod. The first prisoners were POWs transferred from the camp at the Greigovo railroad station, 30 kilometers (18.6 miles) northeast of Nikolaev. These were mainly former soldiers and officers of the Eighteenth and Nineteenth Armies of the Southern Front; they had been taken captive as early as the fall of 1941. In August 1942, soldiers and officers captured at Sevastopol', in Crimea, were also placed in the camp. In 1943, the Germans also used the camp as a transit camp for civilians whom the authorities were sending to work in Germany. Stalag 364's prisoners were supposed to be the principal workforce for the 61 Communards shipbuilding factory, which was renamed the Southern Shipyard immediately after the German occupation of Nikolaev. On the basis of the Southern Shipyard, the Germans created a headquarters for managing the building of warships and submarines.

Gefreiter Erwin Maier, who served at the camp from September 22, 1942, until November 9, 1943, gave the following description of the camp in his testimony on January 23, 1967:⁴

Stalag Nikolajew [Nikolaev] was located outside of town, specifically at the edge of the town, in the immediate vicinity of the Bug River. Next to the Stalag was the Nikolaev airfield. Stalag N. had previously been a monastery. The Stalag was surrounded by walls, and inside the monastery were various sturdy buildings, in which the prisoners of war and the permanent staff lived. A guard unit also was stationed inside the Stalag itself. This was approximately a company-strength unit. The Stalag personnel and the guard forces were separate from one another, in terms of their provisions and the table of organization.

Upon questioning, I must state that I cannot give any detailed information about the guard company.

I do recall, however, that the prisoners of war were taken out of the Stalag in groups of 10 for deployment at labor and were guarded by guard personnel.

The camp commandant during my time there was Oberstleutnant Strohbach. While I was there, there was no replacement of the commandant. I am unable to provide further details regarding Strohbach. In this connection, it comes to mind that the Stalag personnel came from Saxony, specifically from Löbau. I also remember Hauptmann Staudt and Hauptmann Kühn. What functions these two captains performed, I am unable to say. In total, there were 22 officers in Stalag 364.

I can no longer remember the names of counterintelligence officers, camp physicians, interpreters, and orderly-room personnel. I believe that two physicians worked in Stalag 364. I no longer recall their names, however.

Regarding the counterintelligence section, I wish to state that it included around 10 to 12 persons.

The conditions in the camp were similar to those in other camps for Soviet POWs. The housing, food, and medical care was inadequate, the prisoners had to perform forced labor, and the guards abused them. Malnutrition, exhaustion, and disease led to a high death rate.

The daily rations were very meager: a small amount of soup made from rotten cabbage and wheat chaff, smelling of kerosene, and often containing no salt, and in addition a little "substitute bread" (*Ersatzbrot*). Almost unclothed, with torn shoes on their feet, or simply wrapped in rags, as thin as skeletons, prisoners walked around the grounds of the camp searching for some kind of food. Often, the exhausted prisoners simply fell to the ground and died on the spot. Many others died of dysentery, typhus, dystrophy, and other illnesses. Typhus Block 25 was always filled to overcrowding. The "burial teams" frequently did not bury the bodies promptly, and they often piled up near Block 26, the "infirmary." At times the mortality rate reached 100 men per day. Many hospitalized prisoners suffering from limb amputations died a slow death. Deep pits were dug near the hospital, and the corpses of the deceased were then thrown into them.

In the hospital, the wounded and sick had to sleep on the floor, and their food was substantially worse than that received by the other prisoners. Many only survived through the selfless help of the Soviet prisoner-physicians. With great difficulty, the prisoner-physicians obtained the medications so necessary to the gravely ill and wounded. They concealed many Soviet prisoners and kept them from being sent away in prisoner transports. Without the necessary surgical instruments, they performed serious operations and also helped with food, instilled faith in people, and did diligent patriotic work among the camp's prisoners.

A strict system of regulations was in effect in the camp, and prisoners received 21 days in a punishment cell for any violation. In the punishment cell, food was provided only every other day, and then in a small amount. Others were confined in a small cage made of barbed wire, intended to hold several persons, located inside a former stadium. Prisoners stayed in the uncovered cage regardless of weather and received food every other day.

Three underground groups were active in the camp: one in the hospital, one among the captive airmen, housed in Blocks 1 and 3, and one within the work squad in the warehouse of the prisoner kitchen. The members of these groups encouraged POWs not to join various German units, supplied the POWs with Soviet literature and newspapers, and organized escapes from the camp, mainly for the officers.⁵

As in other camps, the Germans screened newly arrived prisoners to separate out Jews and Communists, whom a Security Service (*Sicherheitsdienst*) detachment or the guards then shot near the camp.⁶ According to Soviet Extraordinary State Commission (ChGK) materials, 30,000 POWs perished

in the camp at Nikolaev between 1942 and 1943; however, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 365

The Wehrmacht established Stalag 365 on April 17, 1942, from the staff of Oflag XI A, which had been deployed in Vladimir-Volynskii (today Volodymyr-Volyns’kyi, Ukraine) (map 9e) since September 9, 1941. Stalag 365 had a subcamp (*Zweiglager*) in Lutsk. Stalag 365 remained in Vladimir-Volynskii until September 1943, when it was redeployed to Novara, Italy (6). The Germans disbanded the camp on March 14, 1944.¹ Stalag 365 received field post number (*Feldpostnummer*) 08 453 between January 27 and July 14, 1942. The number was struck between January 25 and July 31, 1943, issued again on October 5, 1943, and then permanently struck on April 3, 1944.

While it was located in Vladimir-Volynskii, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). During this time, the camp was guarded by the 2nd Company of the 303rd Reserve Battalion (*Landesschützenbataillon*).² While it was deployed in Italy, the camp was subordinate to the Prisoner of War Regional Command K (*Kriegsgefangenen-Bezirkskommandant K*).

In Vladimir-Volynskii, Stalag 365 held Soviet prisoners of war (POWs). In June 1942, there were 6,200 POWs in the camp; in August, 4,600; in December, 8,500; in February 1943, 8,700; in June, 5,800; and in September, 6,300.³ The camp was located in the former Red Army barracks on Kovel’skaia Street. Conditions in the camp were similar to those in other camps for Soviet POWs. The camp was severely overcrowded, and many prisoners were without shelter of any kind. The food was lacking in both quantity and quality, to the point that prisoners ate grass and leaves, and even engaged in cannibalism. The prisoners had to perform forced labor, which further exhausted them, and the guards were abusive. Disease was widespread and very little medical care was provided. These terrible conditions led to a high mortality rate. It is quite difficult to determine exactly how many prisoners perished in the camp. According to Soviet Extraordinary State Commission (ChGK) materials, about 25,000 POWs died there.⁴ However, casualty figures from the ChGK are often significantly exaggerated and should be viewed accordingly; in addition, these figures may include deaths in the Oflag that preceded Stalag 365.

There were some attempts at organized resistance in the camp. On July 17, 1942, the German authorities reported that

in . . . Vladimir-Volynskii, a partisan group was successfully rendered harmless. The group was preparing for an uprising in the town and for the freeing of 8,000 imprisoned Soviet officers from the Oflag located there. The initiative was supposed to be carried out with the help of the ghetto (about 15,000 Jews) and several Bolshevik agents who were present in the town. A great part of the officer POWs had already made sharp knives for this purpose, out of broken helmets. In the course of the security measures taken by the police, 36 communist functionaries were brought to light, as well as 76 Jewish-Bolshevik officers including several political commissars, as instigators. The communist agents, as well as the 76 Jewish officers, were subject[ed] to *Sonderbehandlung* (“special treatment,” i.e., execution).⁵

Former POW Viktor Kolmakov described this escape attempt in a letter addressed to the first deputy of the Soviet People’s Commissariat for Foreign Affairs, Andrei Vyshinskii, on December 28, 1943:

In July [1942] the Germans shot Captain Comrade Viktor Zakharovich Vlasov, the former senior

interpreter for the headquarters of the Southwestern Front and a former [NKVD] worker (residing in Moscow, Kuibyshev raion, 3 Moshkov Square, Apt. #3). Comrade Vlasov, who was adept at foreign languages, assisted the prisoners. Finally, having created a group of 30 persons, on June 1, 1942, he was at work in the cemetery burying graves [*sic*], in which dead bodies were visible. After killing one soldier and tying up the others, the prisoners escaped, and the Germans pursued them. Four comrades—Colonel Starostin, Major Neverov, and two others—covered the departure of the remaining group; they had four rifles and grenades. When all the ammunition was gone, Comrade Starostin rushed to engage in hand-to-hand combat, but the forces were unequal. The butchers brought into the camp four corpses, or more precisely, not corpses but pieces of human flesh, laid them on tables in the middle of the camp, and the entire POW camp filed past the tables. The next day two more individuals were brought in and shot immediately. In all, 16 of the men who escaped were caught, and all were killed (and 300 more in an example of “collective responsibility”). Finally, on July 18, 1942, they brought in Comrade Vlasov, too; he had been caught near Kiev by police. On July 18, they brought Comrade Vlasov to be shot and put him against the wall of the former garrison club. The commandant gave the order to fire, and Comrade Vlasov proclaimed (the entire camp was assembled in formation): “I am not a thug, I am a Red Army soldier! Down with Hitler! Long live the Soviet Union! Long live Comrade Stalin! Hurrah!”⁶

Former prisoner Aleksandr Kuznetsov also gave testimony about the escape attempt, stating that

[the Germans] brought us to the town of Vladimir-Volynsk, to the camp for officers. . . . In addition to the officers’ camp, another camp for the rank-and-file was located there, and in it they almost all died. But from our camp [to there] regularly went a team of about 27 to 30 people for the purpose of clearing up the corpses. This team was headed by the interpreter, a native of Moscow, the former sailor Vlasov. We were always wary of him, considering that he was connected with the Gestapo. But we were profoundly mistaken in this, and on one of the days when the group of officer POWs went to the Red Army camp to work on clearing away corpses, he organized the escape of this entire group. But there was one *politsai* traitor, [who] went to our camp, to headquarters, and reported [on the escape]. Then the Germans organized a pursuit here with dogs, and on this day they caught a great part and shot them all before the eyes of all the prisoners, giving them to understand that the very same fate lay in store for anyone who dared

to carry this [an escape] out. But the interpreter Vlasov was caught somewhere far on the other side of Kiev, and was brought here once again, to the camp. The entire camp was made to line up in formation, around 11,000 [men], and he was shot. Before execution he dared to say a few words, which even today are impossible to forget: “Long live the Soviet Union! Long live Soviet Germany! [*sic*] Down with Hitler! We will be victorious!” And with such words on his lips, Comrade Vlasov, former sailor and senior lieutenant, was executed.⁷

While it was deployed in Italy, Stalag 365 held Italian military prisoners. Specific information on the conditions in the camp at this time is not available, but, in general, the Germans treated Italian military internees very poorly, and it is likely that this was the case in Stalag 365 as well.

MANNSCHAFTSSTAMMLAGER (STALAG) 366

The Wehrmacht established Stalag 366 (map 5) on October 28, 1941, from the staff of Oflag 58. It was located in Siedlce.

The main camp in Siedlce was known as Camp Section (*Teillager*) A, while the section near the village of Suchożebry, 12 kilometers (7.5 miles) north of Siedlce, was known as Camp Section B. In 1943, a subcamp (*Zweiglager*) was created in Biała Podlaska. The camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber im Generalgouvernement Polen*).¹ Stalag 366 received field post number (*Feldpostnummer*) 08 529 between July 12, 1941, and January 26, 1942.

The first commandant of Stalag 366 was Oberst Weber. He was succeeded in the fall of 1941 by Oberstleutnant Hermann Jansen. Jansen was succeeded in the fall of 1942 by Oberstleutnant von Braun, who was in turn followed by Oberst Willi Liesmann. The last commandant, who took over around mid-1943, was Hauptmann Weiss. The camp was guarded by the 3rd Company of the 874th Reserve Battalion (*Landesschützenbataillon*).²

Stalag 366 mainly held Soviet prisoners of war (POWs). The camp also held prisoners from France (August 1942 to January 1943) and Italy (November 1943 to March 1944), as well as a small number of Poles. The camp reached a maximum population of 20,175 in December 1942.³ Starting in the spring of 1942, the camp held men serving in the Eastern Legions (*Ostlegionen*), units made up of non-Russian Soviet POWs who volunteered for service or were conscripted into the Wehrmacht. On October 1, 1942, Camp A held 12,000 men from the Volga-Tatar Legion, while Camp B held 6,000 additional legion soldiers.⁴ By an order of the Armed Forces Commander in the Generalgouvernement dated September 1, 1943, from September 15, 1943, onward, all members of Eastern Legions who had committed crimes were also sent to the camp. By this same order, all prisoners from the penal camp for legion soldiers at Ostrów Mazowiecka and from the special camps for legion soldiers at Ostrów Mazowiecka and Małkinia Góra were transferred to this camp or to Stalag 307.⁵

The prisoners worked in a gravel quarry, on road work, chopping wood, and unloading freight at a railroad station, as well as on earthworks. In the camp, the prisoners wove straw matting and made wooden shoes. The conditions in the camp were similar to those in other camps for Soviet prisoners of war. Overcrowding, malnutrition, inadequate medical care, and deliberate abuse led to a high mortality rate, especially in the winter of 1941–1942. The total number of prisoners who perished is estimated at 9,000–12,000.⁶ In the camp, there were regular screenings to separate out “undesirable” prisoners, such as political commissars and Jews, who then were shot by Security Service (*Sicherheitsdienst*) personnel or the camp guards.⁷

In July 1944, the majority of the prisoners were evacuated to Garwolin. Several hundred who were unfit to move remained in the camp, only a few of whom survived until the Red Army liberated Siedlce. The camp was officially disbanded on September 14, 1944, in Jakobsdorf, Upper Silesia (today Jakubowice, Poland).

Stalag 366 at Siedlce. Corpses of Soviet POWs shot during an attempt to escape, date unknown.

MANNSCHAFTSSTAMMLAGER (STALAG) 367

The Wehrmacht established Stalag 367 (map 5) on October 17, 1941, in Defense District (*Wehrkreis*) VIII, from the staff of Oflag VIII B in Silberberg.¹ From November 1941 to July 1944, the camp was located in Tschenstochau (today Częstochowa, Poland), in the Generalgouvernement. Stalag 367 had two sub-camps (*Zweiglager*). The first, known as Stalag 367/Z, was established on September 2, 1942, on the site of the former Stalag 237 in Petrikau (today Piotrków Trybunalski, Poland). The second, in Kielce was transferred from Stalag 319 to Stalag 367 in April 1944.² In August 1944, the main camp of Stalag 367 was relocated to Tillowitz (today Tułowice, Poland) in Upper Silesia.³ While deployed in Tschenstochau, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander, Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Generalgouvernement Polen*). Stalag 367 received the field post number (*Feldpostnummer*) 18 392 between July 19, 1941, and February 14, 1942. The number was struck on October 6, 1944.

The first commandant of Stalag 367 was Major Kubalek, who was previously the commandant of Oflag VIII B. His successor was Oberstleutnant Hugo von der Marwitz, who was in turn followed by Oberstleutnant Hölzinger. The counterintelligence (*Abwehr*) officer in the camp was Hauptmann Jankowski. The adjutant was Hauptmann Lang and his deputy was Oberleutnant Zwinger. The camp staff comprised about 60 men in total. The camp was guarded by about 100 men from the 561st Reserve Battalion (*Landesschützenbataillon*).

From November 1941 to August 1943, Stalag 367 held only Soviet prisoners of war (POWs). In September 1943, Italian military prisoners were sent to the camp. The maximum population of the camp was 10,468 prisoners in April 1944.⁴ Stalag 367 consisted of two separate camp facilities: the “northern camp” (*Nordlager*), which was located near the city, and the “Warthe camp” (*Warthelager*)—named for the Warta River (German: Warthe), which flows through Tschenstochau—located about 4 or 5 kilometers (2.5–3 miles) outside the city. The northern camp, established on the site of the former Zawady barracks, had stone buildings, while the Warthe camp was composed of wooden barracks.⁵

The conditions in both sections of the camp were similar to those in other camps for Soviet POWs. The camp was badly overcrowded and the prisoners faced malnutrition and disease due to inadequate food supplies and medical care. In addition, they had to perform forced labor and were abused by the guards. The terrible conditions in the camp resulted in a high mortality rate, mainly due to starvation and diseases such as typhus and dysentery, particularly in the winter of 1941–1942.⁶ As in other camps for Soviet POWs, newly arrived Soviet prisoners were screened to separate out “undesirables,” such as Jews and political commissars, who were executed near the camp by a Security Service (*Sicherheitsdienst*, SD) commando led by Kriminal-Oberassistent Othmar Fleckl.⁷ According to a Polish commission for investigation of

Nazi crimes, 16,393 Soviet prisoners and 20 Italian prisoners perished in the camp at Tschenstachau.⁸ The same Polish commission estimated that about 11,200 prisoners died in the subcamp in Kielce, although this figure includes deaths at the camp prior to its incorporation into the Stalag 367 complex.⁹ The camp was dissolved shortly after its relocation to Tillowitz, on August 17, 1944.¹⁰

SOURCES Primary source material about Stalag 367 is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Stalag 367); and BArch B 162/8307-8308 (copies at USHMM, RG 14.101M, Reel 2740).

MANNSCHAFTSSTAMMLAGER (STALAG) 368

The Wehrmacht established Stalag 368 on November 1, 1941, in Görlitz (map 4e), in Defense District (*Wehrkreis*) VIII,

from a Frontstalag. From March to November 1942, the camp deployed to a site in the Generalgouvernement near Beniaminów (Województwo Mazowieckie, Poland) (5).¹ In 1942, the camp deployed first to the Army Group South Rear Area (*Heeresgebiet Süd*),² and then to the Army Group Center Rear Area (*Heeresgebiet Mitte*) from May 1943 onward (replacing Stalag 397).³ Specifically, in May 1943, the camp was deployed in the village of Saburovets (9c), just to the southwest of Orël.⁴ It had a subcamp (*Zweiglager*) in Mariupol' during this time.

While deployed in Poland, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber im Generalgouvernement Polen*).⁵ In 1943, the camp was first subordinate to the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*), and then to the Commander of the Ninth Army Rear Area (*Kommandant rückwärtiges Armeegebiet, Korück, 532*) and the Prisoner of War District Commandant A (*Kriegsgefangenen-Bezirkskommandant A*).

The commandant of Stalag 368 was Major Oskar Wilke. His deputy was Major Herring and his adjutant was Oberleutnant Fritz Jakobsa. The first counterintelligence (*Abwehr*) officer was Hauptmann Arthur Schulz, who was succeeded by Oberleutnant Willi Schubert in December 1941. The camp was guarded by the 1st Company of the 268th Reserve Battalion (*Landesschützenbataillon*).⁶

Stalag 368 held Soviet prisoners of war (POWs). In 1941 and 1942, the number of prisoners in the camp vastly exceeded its capacity, which one former officer estimated as about 5,000. The camp covered an area of about 1 square kilometer (0.4 square miles) and there were only four wooden barracks; thus, many prisoners were forced to sleep in holes in the ground until additional barracks were constructed. As it held a high proportion of prisoners of non-Russian ethnicity (Georgians, Belarusians, Uzbeks, Mongols, etc.), Stalag 368 was also used as a camp for soldiers of the Eastern Legions (*Ostlegionen*), units made up of non-Russian Soviet prisoners who volunteered for service or were conscripted into the Wehrmacht. In August 1942, the camp held 11,305 prisoners,⁷ and on October 10, 1942, it held 10,000 men serving in the "Turkestan and North Caucasus Legions."⁸

The conditions in the camp were similar to those in other camps for Soviet POWs. Severe overcrowding, malnutrition, and disease, exacerbated by a lack of medical care and deliberate abuse from the guards, were the rule. These conditions resulted in a high death rate, particularly in the winter of 1941–1942, when as many as 100–150 prisoners were dying in the camp every day (primarily due to a typhus epidemic), according to a former guard.⁹ Newly arrived prisoners were regularly screened to separate out "undesirables," such as Communists and Jews, who then were shot by the Security Service (*Sicherheitsdienst*) or the camp guards.¹⁰ The Soviet Extraordinary State Commission (ChGK) reported

that 10,000 prisoners died at Beniaminów (including totals from both Stalag 368 and Stalag 333); however, as with all figures reported by the ChGK, this estimate should be viewed with caution as it may be substantially exaggerated.¹¹ The camp was dissolved on February 19, 1944.¹² The former commandant, Major Wilke, was never brought to justice for his crimes, as he died in 1947.

SOURCES Primary source material about Stalag 368 is located in BA-MA (RW 6: 450–453); WASt Berlin (Stammtafel Stalag 368); and BArch B 162: 6583–6586 ("Aussonderung" von Kriegsgefangenen im Bereich des KdS Warschau, u.a. in Ostrow-Mazowiecka [Stalag 324 bzw. Stalag 333], Siedlce [Stalag 316 bzw. Stalag 366] und Benjaminow [Stalag 368]); 16805, 16807, and 15159 ("Aussonderung" von Kriegsgefangenen im Stalag 368 in Mariupol [Ukraine]); 15156–15158 ("Aussonderung" von Kriegsgefangenen im Stalag 368 in Benjaminow bei Legionowo [Polen] durch Angehörige des SD und der Gestapo in Legionowo); and 30868 (Überprüfung des zum Stalag 368 gehörenden Kriegsgefangenenlagers Bialobrzegi bei Zegrze nördlich Warschau).

MANNSCHAFTSSTAMMLAGER (STALAG) 369

The Wehrmacht established Stalag 369 (map 5) on May 3, 1942, in Kobierzyn from Oflag XIII A. The original camp, in the barracks of the former Polish 8th Cavalry Regiment in Kobierzyn, held Soviet prisoners of war (POWs). In June 1942, the Germans also added a penal camp under Stalag 369's administration in the area of Borek Fałęcki. This camp held French and Belgian junior officers whom the Germans were punishing for refusing to work for Germany.

Stalag 369 was subordinate to the Commander of Prisoner of War District Kraków (*Kommandeur der Kriegsgefangenenbezirk Krakau*). The camp commandant was Oberstleutnant Groest, the deputy commandant was Hauptmann Binder, the camp officer was Hauptmann Wagner, the adjutant was Hauptmann der Reserve Wohlrap, the counterintelligence (*Abwehr*) officer was Hauptmann der Reserve Blaurock, and the postal censorship officer (*Postüberwachungsoffizier*) was Hauptmann der Reserve Ziefreund. The camp was guarded by two companies of the 820th Reserve Battalion (*Landesschützenbataillon*). The battalion commander was Major der Reserve Merdes.¹

The number of French and Belgian officers in the penal camp was much greater than the number of Soviet POWs in the main camp. There were more than 5,000 French prisoners in the penal camp, while the Soviet camp held fewer than 1,000 men. The French prisoners occupied three blocks, each with a capacity to house about 1,500. The blocks were separated with barbed wire, but as time went on the French prisoners were allowed to make contact with each other on Sundays. The French prisoners organized underground classes, university courses, and language courses, a literary circle, handicraft workshops, and even an underground theater. An underground newspaper, "*Le Crack*," edited by Pierre Lardin and Gaston Foulland-Buyet, was published (21 issues in total) from July 1942 until February 1944.²

The prisoners' rations in the camp were "deficient" during the summer and early fall of 1942, consisting of only 200 grams (7 ounces) of bread along with a thin soup each day.³ During the period from June to October 1942, Stalag 369 was referred to by the prisoners as the "hunger camp."⁴ The camp's water supply was also inadequate. Many prisoners became ill with dysentery shortly after their arrival due to contaminated water.

The conditions in the main camp were similar to those in other camps for Soviet POWs. The harsh climate and brutal treatment of the prisoners by the guards exacerbated their suffering. During the winter, prisoners were forced to stand outside for hours while temperatures fell below -20°C (-4°F).⁵ Even during the warmer months of the year, the near-constant wind kicked up large amounts of dust due to the sandy soil on which the camp was built. The prisoners were

Stalag 369 at Kobierzyn. French POWs playing soccer, 1943–1944. USHMM, COURTESY OF IPN, WS #50246

frequently beaten by the guards, and prisoners were occasionally shot for minor violations of camp rules. The Germans regularly screened the Soviet prisoners in the camp to separate out "undesirables," such as Jews and commissars, who were shot by the guards or Security Service (*Sicherheitsdienst*, SD) personnel near the camp.⁶ The Germans closed the camp on September 15, 1944, sending the prisoners to camps within the Reich, including Stalag VIII C in Sagan, Stalag IX A in Ziegenhain, and Stalag XVIII C in Markt Pongau.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 370

The Wehrmacht established Stalag 370 on November 4, 1941, in Defense District (*Wehrkreis*) X.¹ The camp deployed initially to Reichshof (Polish: Rzeszów) (map 5), in the Generalgouvernement. In April 1942, the camp relocated to Kherson, Ukraine (9g), where it took over the site of Dulag 120. In July 1942, the camp moved to Simferopol' (9h), in Crimea, where it occupied the former site of Dulag 241. While it was located in Simferopol', the camp had subcamps in Sevastopol', Dzhankoi, and Kerch.² While it was located in Ukraine, Stalag 370 was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlhaber Ukraine*). After it relocated to Crimea, the camp was subordinate to the Commander Crimea (*Befehlshaber Krim*). Stalag 370 received field post number (*Feldpostnummer*) 42 082 between July 30, 1941, and February 28, 1942. The number was struck on November 22, 1943.

The commandant of Stalag 370 was Oberstleutnant Gürtner and his deputy was Major Müller-Jürgens. The adjutant was Hauptmann Laube. The counterintelligence (*Abwehr*) officer was Hauptmann Schwinck.³ The camp doctor was Dr. Adam. The staff of the camp consisted of about 110 people. During the deployment in Simferopol', the camp was guarded by personnel from the 3rd Company of the 623rd Reserve Battalion (*Landesschützenbataillon*).⁴

While it was deployed in Ukraine and Crimea, Stalag 370 held Soviet prisoners of war (POWs). The camp in Kherson held 9,034 prisoners on May 1, 1942, and 8,258 prisoners on June 1, 1942.⁵ One witness estimated the population of the branch camp in Dzhankoi at around 600–700 prisoners. The conditions in Kherson and in Simferopol' were similar to those in other camps for Soviet prisoners. The prisoners faced severe overcrowding, malnutrition, and inadequate medical care as well as deliberate mistreatment by the guards. The prisoners were also required to work in labor detachments (*Arbeitskommandos*) near the camp. Because of the terrible living conditions, mistreatment, and hard labor, the death rate in Stalag 370 was very high. As in other camps for Soviet prisoners, moreover, new arrivals in the camp were screened to separate out "undesirable" prisoners, such as Jews and political commissars, who were then executed by the guards or

Security Service (*Sicherheitsdienst*) personnel near the camp; these actions also took place at the subcamps.⁶

The number of prisoners who died in Stalag 370 during its deployments in Kherson and Simferopol' is unknown because the reports of the camp commandant's office were not preserved. The Soviet Extraordinary State Commission (ChGK) documents regarding Kherson and Simferopol' simply refer to deaths during the entire period of occupation in these areas and do not distinguish deaths in Stalag 370 from those in other camps. Stalag 370 was disbanded on October 10, 1943.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 371

The Wehrmacht established Stalag 371 (map 5), through the reorganization of Oflag VII D, on April 17, 1942. It was located in Stanislau (Polish: Stanisławów; today Ivano-Frankivs'k, Ukraine) in the Generalgouvernement.¹ A subcamp (*Nebenlager*) was established in Stryj (today Stryi, Ukraine) on May 28, 1943. There may have been an additional subcamp in Tarnopol (today Ternopil', Ukraine). The camp was subordinate to the Commander of Prisoners of War with the Armed Forces

Commander for the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber im Generalgouvernement Polen*). Stalag 371 received field post number (*Feldpostnummer*) 45 667 between March 1 and September 7, 1942. The number was struck on November 24, 1944.

The camp commandant was Major (later Oberstleutnant) Wilhelm Schimmer (b. 1889 in Munich). He was replaced as commandant in September 1942 by Oberstleutnant Adolf Rengert. Rengert, formerly the commandant of Stalag 237 in Petrikau (today Piotrków Trybunalski, Poland), was succeeded by Oberst Karl Blomeyer in May 1943. In September 1943, Oberst Dr. Hans Aichholz became commandant, and he remained in the position until the relocation of the camp in January 1944. One former camp staff member recalled that Schimmer was not a dedicated adherent of National Socialism and that he treated the men under his command harshly, factors which led to his eventual replacement. The deputy commandant was Hauptmann Alexander Faber du Faur. The counterintelligence (*Abwehr*) officer in the camp was Hauptmann Konrad von Kaas and the camp officer (*Lageroffizier*) was Hauptmann Rudolf Vogl. The camp doctor was Stabsarzt Dr. Wilhelm Berghoff. The camp was guarded by the 2nd Company and the 3rd Company of the 405th Reserve Battalion (*Landesschützenbataillon*); there were about 30 guards in total.² The commandant of the 3rd Company was Hauptmann Lindenberger.

In the first half of 1942, the camp held only Soviet prisoners of war (POWs). However, despite its nominal status as an enlisted men's camp (Stalag), from August 1942, it held mainly Dutch officers, who were put in the camp as punishment. Most of the Soviet prisoners were transferred to other camps; fewer than 400 remained in Stalag 371. From May to October 1943, there were also some Serbian prisoners in the camp. Stalag 371 was a relatively small camp, with a maximum population of just over 3,000 prisoners in September 1943.³

While the treatment of the Dutch and Serbian prisoners generally conformed to the standards of the 1929 Geneva Convention on the Treatment of Prisoners of War, the treatment of Soviet prisoners often did not. Former staff members insisted after the war that the Dutch prisoners had been treated well in the camp and that they were not subject to any forms of abuse, while acknowledging that the conditions faced by Soviet prisoners were significantly worse. As in other camps for Soviet prisoners of war (POWs), malnourishment, disease, and poor sanitary conditions were the rule. At least 25 Soviet POWs died of typhus in April 1942, prior to the arrival of Dutch prisoners.⁴ At least one Dutch prisoner was shot by the guards while attempting to escape, but deaths among the Dutch prisoners were otherwise rare, as they were provided with adequate nutrition and medical care.⁵

Upon their arrival in the camp, the Soviet POWs were interrogated by the Germans regarding their background and knowledge of military operations (although, under the Geneva Convention, the prisoners were required to give only their name, rank, and serial number, German interrogators frequently tried to extract additional information). The Soviet

prisoners were expected to work on tasks such as the expansion of the camp and construction of new barracks, as well as in the camp kitchen and undesirable duties such as cleaning the latrines. The Dutch prisoners were not required to work, as officers could not be compelled to work under the Geneva Convention. It is unclear whether the Serbian prisoners were required to work. The prisoners were segregated by nationality and the quarters of the different national groups were separated by barbed wire.⁶ Although conditions in the Soviet section of the camp were harsh and the prisoners were subject to mistreatment, witness testimony suggests that the "weeding out" (*Aussonderung*) of "undesirable" Soviet prisoners, such as Jews and political commissars, was done in the transit camps (*Durchgangslager*) prior to their arrival at Stalag 371. On January 20, 1944, the Germans reorganized Stalag 371 and it once again became an officers' camp, designated as Oflag 67.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 372

The Wehrmacht formed Stalag 372 on May 1, 1942, from the staff of Oflag VI E,¹ in Pleskau (Russian: Pskov) (map 9a), in the rear area of Army Group North.² The camp was subordinate to the Rear Area Commander of Army Group North (*Befehlshaber des rückwärtigen Heeresgebiets Nord*), the 207th and 285th Security Divisions (*Sicherungsdivisionen*), and the Commander of Prisoners of War in Operations Area IV (*Kommandeur der Kriegsgefangenen im Operationsgebiet IV*). Stalag 372 received field post number (*Feldpostnummer*) 45 195 between March 1 and September 7, 1942. The number was struck on November 9, 1943.

The first commandant of Stalag 372 was Oberstleutnant Freiherr von Beverforde. He was succeeded by Major Wilhelm Hirtz. The deputy commandant was Major August Lentz and the adjutants were Hauptmann Hermann Lakenbrink, Oberleutnant Dr. Klaus Holthusen, and Rittmeister Bernhard Deffte. The counterintelligence (*Abwehr*) officers were Hauptmann Fritz Hirzebruch, Hauptmann Paul Müller, and Oberleutnant Kaspar Bauer.³ The camp was guarded by personnel from Company 2 of the 853rd Reserve Battalion (*Landesschützenbataillon*).⁴

Stalag 372 held Soviet prisoners of war (POWs). Little specific information on the conditions in the camp during its deployment in Pleskau is available, but they were likely similar to those in other camps for Soviet POWs. Although conditions had improved somewhat by the spring of 1942, the prisoners continued to experience overcrowding, inadequate food, hard labor, nearly nonexistent medical care, and abuse by the guards. The mortality rate was not as high as it was during the winter of 1941–1942, but it remained significantly higher than the mortality rates in camps for Western Allied prisoners. The counterintelligence (*Abwehr*) officer screened newly arrived prisoners to separate out “undesirables,” such as Jews and political commissars, who were executed by the guards or Security Service (*Sicherheitsdienst*).⁵ The camp was disbanded on May 15, 1943.⁶

MANNSCHAFTSSTAMMLAGER (STALAG) 373

The Wehrmacht established Stalag 373 from the staff of Oflag XXI A on April 17, 1942, in Bobruisk (map 9b). The Germans disbanded the camp on October 15, 1943, then reestablished it on May 9, 1944, from the staff of Stalag I F/Z in Prostken (today Prostki, Poland) (4c).¹ The camp was permanently disbanded on December 14, 1944.² While deployed in Bobruisk, the camp was subordinate to the Army Group Center Rear Area Command (*Befehlshaber des rückwärtigen Heeresgebiets Mitte*), in support of the 203rd Security Brigade (*Sicherungsbrigade*).³ During the deployment in Prostken, the camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen in Wehrkreis I*). Stalag 373 received field post number (*Feldpostnummer*) 47 486 between March 1 and September 7, 1942. The number was struck on November 5, 1943.

The first commandant of Stalag 373 was Oberstleutnant (later Oberst) Ignaz Kloimüller. He was succeeded by Major Wilhelm Lindenau, who was followed in early 1943 by

Oberstleutnant Walter Däublin. The deputy commandant was Major Hubert Brandt. The counterintelligence (*Abwehr*) officer was Hauptmann Harry Stieger.⁴ While it was deployed in Bobruisk, the camp was guarded by personnel from the 2nd Company of the 825th Reserve Battalion (*Landesschützenbataillon*).⁵

While deployed in Bobruisk, the camp held Soviet prisoners of war (POWs) and interned civilians. It was also used as a penal camp (*Straflager*) at this time, both for Soviet prisoners who broke the law (including former volunteer concentration camp guards, or *Hilfswillige*) and for civilians accused of collaborating with partisans or other crimes.⁶ During the deployment in Prostken, the camp held Italian military prisoners.⁷ Conditions in Stalag 373 during its deployment in Bobruisk were similar to those in other camps for Soviet POWs. The camp was overcrowded and the prisoners received little food or medical care. Newly arrived prisoners were screened by the counterintelligence officer to separate out “undesirables,” such as Jews and political commissars, who were executed by Security Service (*Sicherheitsdienst*) personnel near the camp.⁸ Little information is available about the camp in Prostken, although it is likely that conditions there were poor as well.

SOURCES Primary source material about Stalag 373 is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Stalag 373); and BArch B 162/9358–9361 (copies at USHMM, RG-14.101M, Reel 2811).

MANNSCHAFTSSTAMMLAGER (STALAG) 378

The Wehrmacht established Stalag 378 on May 26, 1942, in the Wahn district of Köln (Cologne) (map 4a), in Defense District (*Wehrkreis*) VI. In July 1942, the camp was deployed to Gorlovka (today Horlivka, Ukraine) (9f). While it was located in Gorlovka, Stalag 378 had several subcamps (*Nebenlager*), which were located in Novoekonomiceskii (today Novoekonomichne), Grishino (today Pokrovs'k), Grodovka (today Hrodivka), Dzerzhinsk (today Torets'k), and Nikitovka. After the German defeat at Stalingrad in February 1943, the camp staff withdrew through Krivoi Rog (today Kryvyi Rih) (9g), Zaporozh'e (today Zaporizhzhia) (9f), Dnepropetrovsk (today Dnipro) (9f), and Khorol (9f), where the Wehrmacht ordered it disbanded on August 26, 1943.¹ Stalag 378 received field post number (*Feldpostnummer*) 13 799 between January 27 and July 14, 1942. The number was struck on October 7, 1943.

In 1942, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). In 1943, the camp was subordinate to the Rear Area Commander of Army Group South (*Kommandeur der Kriegsgefangenen beim Befehlshaber des rückwärtigen Heeresgebiets Süd*). The commandant of Stalag 378 was Oberstleutnant Johannes von Zerboni di Sposetti, and his deputy was Major Hans Edelmann. The counterintelligence (*Abwehr*) officer was Hauptmann Dr. Julius Trumpp.² The staff of the main camp totaled about 100 men.

Stalag 378 held Soviet prisoners of war (POWs). The main camp consisted of a number of two-story stone barracks surrounded by barbed wire. One witness estimated that there were between 2,000 and 3,000 prisoners in the camp at a time during its deployment in Gorlovka. The subcamp in Novoekonomiceskii held about 10,000 prisoners, the subcamp in Grishino about 1,800, the subcamp in Grodovka about 1,000, and the subcamp in Dzerzhinsk between 500 and 800.³ The conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners faced severe overcrowding, minimal food supplies and medical care, and deliberate abuse by the guards. They were also forced to perform

hard labor in the numerous work detachments (*Arbeitskommandos*) that were dispatched from the camp. For example, prisoners at the main camp in Gorlovka worked in the iron-works in the city and at a nearby military airfield, and the prisoners in the subcamp in Novoekonomicheskii worked in coal mines as well as on repairing and building roads. The combination of malnutrition, disease, and exhaustion produced a high mortality rate. At least 2,500 bodies were found in 150 graves near the camp in Gorlovka. According to Soviet Extraordinary State Commission (ChGK) documents, about 2,000 prisoners perished in the camp at Novoekonomicheskii; however, casualty figures from the ChGK are often significantly inflated and should be viewed accordingly.⁴ As in other camps, prisoners arriving at Stalag 378 were screened to separate out Jews and political commissars, who were executed near the camp by Security Service (*Sicherheitsdienst*) personnel or camp guards.⁵

During the westward retreat, the 2,000–3,000 remaining prisoners were left at Stalag 348 in Dnepropetrovsk. The staff of Stalag 378 continued on to Khorol, where the unit was dissolved and its personnel distributed to other units.

SOURCES Primary source material about Stalag 378 is located in BA-MA (RW 6); DADoO (file r1838-1-52); and BArch B 162/9803–9804 (copies at USHMM, RG-14.101M, Reel 2839).

MANNSCHAFTSSTAMMLAGER (STALAG) 380

The Wehrmacht established Stalag 380 (maps 3 and 5) from Stalag XII C on April 17, 1942.¹ Stalag 380 was deployed to Skarżysko-Kamienna, in the Radom District of the Generalgouvernement. On June 1, 1942, there were 1,750 prisoners (including 285 officers) in the camp, and on August 1, there were 5,722 prisoners.² While it was deployed in Poland, the camp was subordinate to the Commander of Prisoners of War in the Generalgouvernement Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*).

No specific information on conditions in Stalag 380 is available, but, in general, Soviet prisoners of war (POWs) were treated terribly. Camps for Soviet POWs were usually overcrowded and the prisoners did not receive adequate food and medical care. Conditions in Stalag 380 were probably better than the conditions in other camps in the winter of 1941–1942, but housing, food, and medical care were likely still far below the standards of the Geneva Convention of 1929. The prisoners were probably required to perform forced labor, and it is likely that prisoner transports arriving at Stalag 380 were screened to separate out Jews and Communists, who would have been executed near the camp by the guards or Security Service (*Sicherheitsdienst*).

In the fall of 1942, Stalag 380 was transferred from Poland to Norway and deployed in Oppdal and Dombas, with subcamps (*Zweiglager*) in Drevja and Mirvan. It also held Soviet prisoners at this time. During the deployment in Norway, the prisoners were distributed among 76 work detachments (*Arbeitskommandos*).³ During the deployment in Norway, the camp was subordinate to the Prisoner of War Regional Commandant with the Armed Forces Commander Norway (*Kriegsgefangenen-Bezirkskommandant beim Wehrmachtbefehlshaber Norwegen*).

Stalag 380 and its subcamps received separate field post numbers (*Feldpostnummern*); an unusual practice. The main camp received the number 42 709 between March 1 and September 7, 1942. Dombas received number 20 735 W between October 20, 1942, and January 9, 1943. Mirvan received number 21 851 AC on November 4, 1943; that number was struck on January 17, 1945. Oppdal received number 20 735 AF on December 1, 1943. Drevja received number 44 749 W on January 17, 1945. Stalag 380 remained in operation until the capitulation on May 8, 1945.

SOURCES Primary source material about Stalag 380 is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Stalag 380); and BArch B 162/8081–8087 (Aussonderung von Kriegsgefangenen im Stalag 380 [bis 17.4.1942: Stalag XII c] bei Skarżysko-Kamienna in der Kreishauptmannschaft Kielce/Distrikt Radom [Polen]).

MANNSCHAFTSSTAMMLAGER (STALAG) 381

The Wehrmacht established Stalag 381 on April 28, 1942, from the staff of Stalag XXI B.¹ The camp was deployed in the town of Taps (Estonian: Tapa) (map 9a).² While it was deployed in Taps, Stalag 381 had a subcamp (*Zweiglager*) in Reval (Estonian: Tallinn). The Germans disbanded the camp on May 15, 1943.³ The camp was subordinate to Security Division (*Sicherungsdivision*) 207, under the Rear Area Commander of Army Group North (*Befehlshaber des rückwärtigen Heeresgebiets Nord*). Stalag 381 received field post number (*Feldpostnummer*) 46 105 between March 1 and September 7, 1943. The number was struck on February 9, 1944.

The commandant of the main camp in Taps was Hauptmann Walter Hühn, and the commandant of the branch camp in Reval was Hauptmann Hitzigrad. The deputy commandant was Oberleutnant Max Heinzl. The counterintelligence (*Abwehr*) officer was Hauptmann Fritz Birkhoff. The camp doctor was Dr. Walter Mühlbacher.⁴ The camp was guarded by personnel from the 1st Company of the 275th Reserve Battalion (*Landesschützenbataillon*) and the 1st Company of the 683rd Reserve Battalion.⁵

Stalag 381 held Soviet prisoners of war (POWs). The main camp consisted of about 20 wooden barracks with a total capacity of about 1,000 prisoners; one witness estimated that the average population of the camp was around 500.⁶ The camp in Tallinn was located in a former Estonian army barracks. The conditions in the main camp were similar to those in other camps for Soviet POWs. The camp was severely

overcrowded and the prisoners received minimal food and medical care. In addition, they had to perform forced labor and were subject to deliberate abuse by the guards, which exacerbated an already high death rate. As in other camps, the Germans screened the prisoners to separate out Jews and political commissars, who were executed near the camp by Security Service (*Sicherheitsdienst*) personnel or camp guards.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 382

The Wehrmacht established Stalag 382 through the redesignation of Stalag VI H on April 29, 1942. Stalag 382 was located in Borisov (today Barysaw, Belarus; 71 kilometers [44 miles] northeast of Minsk) (map 9b).¹ The camp operated

under the authority of Security Division (*Sicherungsdivision*) 286 and was formally subordinate to the Prisoner of War District Commanders K and P (*Kriegsgefangenen-Bezirkskommandanten* K and P). Stalag 382 received field post number (*Feldpostnummer*) 46 256 between March 1 and September 7, 1943. The number was struck on October 13, 1944.

The commandant of Stalag 382 was Oberst Wolff Graf von Metternich. He was succeeded by Oberstleutnant Max Keyser. The deputy commandant was a naval officer, Kapitänleutnant Dürselen. The counterintelligence (*Abwehr*) officers were Hauptmann Erwin Müller and Hauptmann Paul Käuffer. The camp doctor was Dr. Franz Weiser.² The camp was guarded by 100–120 men from the 2nd Company of the 495th Reserve Battalion (*Landesschützenbataillon*) and Ukrainian volunteers (*Hilfswillige*).³

Stalag 382 held Soviet prisoners of war (POWs). It was a large camp, with witnesses estimating a population from 30,000 to as many as 50,000 prisoners. The POWs lived in barracks that had formerly been used by a Soviet armored division.⁴ The conditions in Stalag 382 were similar to those in other camps for Soviet POWs. The camp was severely overcrowded and the prisoners received minimal food and medical care. Malnutrition, epidemics of diseases such as typhus, and deliberate abuse led to a high death rate; one former camp officer reported that in 1942, as many as 60 prisoners were dying every day.⁵ As in other camps, prisoners arriving in the camp were screened to separate out “undesirables,” such as Jews and political commissars, whom a Security Service (*Sicherheitsdienst*) detachment or camp guards shot near the camp.⁶ The camp was dissolved on September 25, 1943.⁷ The camp staff was then transferred to Dulag 110.⁸

MANNSCHAFTSSTAMMLAGER (STALAG) 383

The Wehrmacht established Stalag 383 (map 4d) on February 18, 1943, by converting Oflag III C Hohenfels into a Stalag. In 1944 and 1945, the camp had a subcamp (*Zweiglager*) in Steinburg (also known by the names Bogen and Parsberg). Although Hohenfels was located in Defense District (*Wehrkreis*) XIII, Stalag 383 was subordinate to the Commander of Prisoners of War in Defense District VII (*Kommandeur der Kriegsgefangenen im Wehrkreis VII*).

The prisoners in the camp were noncommissioned officers from Great Britain, Australia, and New Zealand. In April 1943, the camp held more than 4,000 prisoners of war (POWs). In early 1944, there were approximately 5,000 prisoners in the camp, and in early April 1945, there were about 7,000.¹ Stalag 383 was a camp for troublesome prisoners who refused to work. Nonetheless, they enjoyed considerable freedom and comforts. The men lived in small dormitory huts (400 in total), each holding no more than 14 prisoners. The huts (“snug billets,” as one prisoner described them) had stove heating, for which coal and wood were used; the prisoners were allowed to gather the wood in a nearby forest. The prisoners regularly received food parcels from the International Red Cross and also could prepare food for themselves (food shortages did not become a problem until late 1944 and early 1945).

Opportunities for recreational activities in the camp were abundant thanks to the intervention of the Red Cross and YMCA. The prisoners had many musical instruments, and they organized 15 musical groups and orchestras as well as a chorus with 500 participants. The prisoners also created two theaters, in which various shows were regularly offered. The prisoners created dozens of groups and clubs reflecting different interests, arranged sports competitions, grew vegetables, raised rabbits, and even kept bees. The camp had athletic fields as well as places for relaxing and taking walks. There was also a swimming pool, which in winter was converted into an ice-skating rink; 100 pairs of skates were supplied by the Swedish Red Cross.

The camp had substantial opportunities for activities of an intellectual nature, including a library with 10,000 books and

a school with the capacity for 2,000 men, which the prisoners made out of the old horse stables, with separate classrooms and a reading room. Though it was officially prohibited, the prisoners had radio receivers, cameras, watches, and other such items. The prisoners had pocket money, which they could use at 22 exchange points to acquire practically whatever they liked—ranging all the way from little powder puffs to false teeth. If they were unable to acquire something by legitimate means, they obtained these items through the German guards in the black market, in exchange for cigarettes.²

There were some Jewish prisoners in the camp. Unlike at some other camps, they were not subjected to discrimination or special restrictions. Jewish prisoners who were athletes and participated in the camp's sports competitions on a separate team even obtained the right to hoist the national blue and white flag with a six-pointed star. On April 25, 1944, when this camp, like others where Western prisoners were in captivity, held a regular sports festival for POWs of all nationalities, each team marched to the tune of its own national music. The Jewish athletes sang "The Company Song" in Hebrew.³

The camp was evacuated on April 28, 1945. Of the prisoners held in the camp at that time, around 5,500 were evacuated on foot, while more than 1,000 men who were not healthy enough to march were moved in vehicles and several hundred others hid, awaiting the arrival of the American forces.⁴

MANNSCHAFTSSTAMMLAGER (STALAG) 384

The Wehrmacht established Stalag 384 from Stalag IV E on June 1, 1942.¹ In the second half of 1942, the camp deployed

to Kursk (map 9d). Beginning on August 24, 1942, the headquarters of Stalag 384 also ran a camp for civilian prisoners (*Zivilgefangenenlager*) in the town of Shchigry (Kurskaia oblast').² In the first half of 1943, Stalag 384 deployed to Konotop and Romny (9f), and, in June and July 1943, it was in Darnitsa, just east of Kiev (9e).³ On July 19, 1943, the headquarters of Stalag 384 took over the camp at Belaia Tserkov' (today Bila Tserkva) (9e) from Stalag 334.⁴ Stalag 384 received field post number (*Feldpostnummer*) 36 222 between March 1 and September 7, 1942. The number was struck on May 4, 1944.

The camp was initially subordinate to the Commander of the Second Army Rear Area (*Kommandant rückwärtiges Armeegebiet*, Korück, 580), and then to the Commander of the Army Group South Rear Area (*Befehlshaber des rückwärtigen Heeresgebiets Süd*). The camp commandant was Oberstleutnant Möller. On October 1, 1943, the camp's personnel consisted of 185 people: 18 officers, 10 civil servants, 74 noncommissioned officers, and 83 enlisted men. The camp was guarded by 165 Soviet volunteers (*Hilfswillige*, Hiwis).⁵ As of October 10, 1943, the guard company consisted of 157 Germans and 188 Hiwis.⁶

Stalag 384 held Soviet prisoners of war (POWs). In the second half of September 1943, a small number of Italian military prisoners were also held in the camp.⁷ The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, insufficient food, and inadequate medical care led to widespread malnutrition and disease, resulting in a high mortality rate. As in other camps, the Germans screened the prisoners to separate out Jews and political commissars, who were shot by the guards or Security Service (*Sicherheitsdienst*) personnel near the camp.⁸ The Germans dissolved Stalag 384 in December 1943; records indicate that a liquidation detachment was still active on December 28.

SOURCES Primary source material about Stalag 384 is located in BA-MA (RW 6) and BArch B 162/16642–16645 (Aussonderung von Kriegsgefangenen im Stalag 384).

MANNSCHAFTSSTAMMLAGER (STALAG) 385

The Wehrmacht established Stalag 385 from Stalag V D Strassburg on May 30, 1942 (map 4f).¹ In 1942 and 1943, the camp was deployed in various localities in occupied Ukraine, including, in 1942, Chistiakovo (today Torez, Donets'ka oblast') (9d) and, in 1943, Nikopol' and Marganets (9h). The Germans disbanded the camp on September 5, 1943, under an order of the General Army Office (*Allgemeines Heeresamt*) issued on August 26, 1943.² Stalag 385 received field post number (*Feldpostnummer*) 12 120 between July 15, 1942, and January 24, 1943. The number was struck on December 17, 1943.

The camp was subordinate to the Army Group South Rear Area Command (*Befehlshaber des rückwärtigen Heeresgebietes Süd*) and the Commander of Prisoners of War in Operational Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*). Stalag 385 held Soviet prisoners of war (POWs). While the camp was deployed in various localities in the Ukraine, the conditions were similar to those in other camps for Soviet POWs. Camps were typically overcrowded, the housing inadequate or nonexistent. The food was insufficient in both quantity and quality, and there was little or no medical care. Prisoners had to perform hard labor, and the guards were abusive. The resulting exhaustion, malnutrition, and disease led to a high mortality rate.

During the deployment in Chistiakovo, the prisoners had to work in mines. According to Soviet Extraordinary State Commission (ChGK) documents, more than 40,000 prisoners passed through Chistiakovo, and more than 5,000 of these POWs perished; however, casualty figures from the ChGK are often substantially exaggerated and should be treated with caution.³ As in other camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*).⁴

SOURCES Primary source material about Stalag 385 is located in BA-MA (RW 6: 450–453); WASt Berlin (Stammtafel Stalag 385); and BArch B 162/16785–16787 (“Aussonderung” von Kriegsgefangenen im Stalag 385).

Additional information about Stalag 385 can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. MANNSCHAFTSSTAMMLAGER (STALAG) 386

The Wehrmacht established Stalag 386, from part of the staffs of Stalag VI B and Stalag VI C, on June 10, 1942, in Defense District (*Wehrkreis*) VI. In July 1942, the camp was deployed to Stalino (today Donets'k, Ukraine) (map 9f), and in late August or early September 1942, it was re-located to Shakhty, near Rostov (9i). Stalag 386 received field post number (*Feldpostnummer*) 41 250 between March 1 and September 7, 1942; the number was struck on May 4, 1944.

The commander of Stalag 386 was Major Rudolf Villinger, his deputy was Rittmeister Heinrich Auerbach, and the counterintelligence (*Abwehr*) officers were Hauptmann Paul Dörr and Hauptmann Andreas Hürtgen.¹ The camp was guarded by German soldiers from the camp staff, assisted by two companies of Soviet prisoner volunteers (*Hilfswillige*, Hiwis). The camp medical staff consisted of two Soviet prisoners who were doctors.²

Stalag 386 held Soviet prisoners of war (POWs). Conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners did not receive adequate food, shelter, or medical care. The poor conditions in the camp led to an outbreak of typhus in the fall of 1942. The prisoners worked in the coal mines near Shakhty and built antitank ditches. As in other camps, the Germans screened the prisoners to separate out “undesirables,” such as Jews and political commissars, who were executed by the Security Service (*Sicherheitsdienst*).³

The camp was evacuated in January 1943 as the Red Army recaptured Rostov and the surrounding area. It relocated to the Mius Front, a line of German fortifications along the

Mius River in the Donbass region. In September 1943, when the Soviets broke through the Mius Front, the camp headquarters was transferred to Zaporozh'e (today Zaporizhzhia, Ukraine) (9f), where it was in the process of being disbanded as of October 1, 1943.⁴ The camp staff was transferred to another camp, possibly Stalag 387.⁵ An investigation into the camp staff was opened in 1972; however, the commandant, deputy commandant, and counterintelligence officers had all died by that time, so no charges were brought against them.

SOURCES Primary source information about Stalag 386 is located in BArch B 162/9961–9963 (copies at USHMMMA, RG-14.101M.2848.00001515–00001975).

MANNSCHAFTSSTAMMLAGER (STALAG) 387

The Wehrmacht established Stalag 387 from Oflag 57 on May 26, 1942, in Defense District (*Wehrkreis*) I.¹ In 1942 and 1943, the camp deployed to various towns in occupied Ukraine, including Stalino (today Donets'k) and Dnepropetrovsk (today Dnipro) (map 9f). The Germans disbanded the camp in early 1944 (the exact date is unknown, but the camp was still in the process of being disbanded as of February 28). Stalag 387 received field post number (*Feldpostnummer*) 42 764 between March 1 and September 7, 1942. The number was struck on February 14, 1944.

While deployed in Ukraine, the camp was subordinate to the Rear Area Commander, Army Group A (*Befehlshaber des rückwärtigen Heeresgebiets* A) in 1942, and then to the Rear Area Commanders, Army Group South (*Befehlshaber des rückwärtigen Heeresgebiets Süd*) in 1943.

Stalag 387 held Soviet prisoners of war (POWs). The conditions were similar to those in other camps for Soviet POWs. Camps were overcrowded and unsanitary; housing, rations, and medical care were severely inadequate; prisoners were forced to perform hard labor; and the guards were abusive. The resulting exhaustion, malnutrition, and disease led to a high mortality rate. As in other camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*).²

MANNSCHAFTSSTAMMLAGER (STALAG) 388

The Wehrmacht formed Stalag 388 from the staff of Oflag XII A on June 20, 1942, in Hadamar, in Defense District (*Wehrkreis*) XII (map 4d). From July to September 1942, the camp was deployed to Khorol, where it took over the site of Dulag 160 (9f). On September 6, 1942, the Germans converted the camp into a base for Eastern Legions (*Ostlegionen*)—designated as *Legionär-Sammellager II*—and ceased using it as a prisoner of war (POW) camp.¹ Stalag 388 received field post number (*Feldpostnummer*) 06 088 between January 27 and July 14, 1942. The number was struck on February 2, 1944.

While deployed in Khorol, the camp was subordinate first to the Rear Area Commander, Army Group B (*Befehlshaber des rückwärtigen Heeresgebiets* B), and then to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*).² The command personnel of the camp were quartered about 5 kilometers (3 miles) away from the camp itself, on the eastern side of Khorol. The camp commandant was Oberst Kurt Eder, and his deputy was Major Bernhard Deffte. The counterintelligence (*Abwehr*) officer was Hauptmann Josef Vogt.³

Stalag 388 held Soviet POWs. About 10,000 POWs were confined in the camp. The conditions were similar to those in other camps for Soviet POWs. The prisoners faced severe overcrowding, inadequate nutrition and medical care, forced labor, and deliberate abuse from the guards. The terrible conditions in the camp produced a high death rate, primarily due to malnutrition and disease. As in other camps, the camp staff

screened newly arrived prisoners to separate out Jews and political commissars, who were executed near the camp by Security Service (*Sicherheitsdienst*) personnel or camp guards.⁴

A German guard in the camp, Arnold Kostrowski, was tried and convicted in East Germany in 1975 for authorizing the shooting of five Soviet prisoners of war from Stalag 388 who were accused of partisan activity in August 1942.⁵ He was given a life sentence.⁶

MANNSCHAFTSSTAMMLAGER (STALAG) 391

The Wehrmacht established Stalag 391 from Stalag I D on September 3, 1943. The camp was deployed to Copenhagen, Denmark (map 3). The exact location of the main camp is unknown; however, the return addresses on prisoner postcards indicate that it may have been located in the Skydeskolen on Christianshavns Voldgade, part of the ring of fortifications in the Christianshavn neighborhood of Copenhagen. It had 19 subcamps. The Germans disbanded the camp on November 8, 1943. The camp was subordinate to the Armed Forces Commander Denmark (*Wehrmachtbefehlshaber Dänemark*).

Stalag 391 held Danish military personnel. The conditions were generally satisfactory and in compliance with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). The camp administration and guards treated the prisoners decently.

SOURCES Primary source material about Stalag 391 is located in BA-MA (RW 6) and BArch B 162/16648–16650, 16721 (“Aussonderung” von Kriegsgefangenen im Stalag 391).

MANNSCHAFTSSTAMMLAGER (STALAG) 397

The Wehrmacht established Stalag 397 from Stalag 237 on September 2, 1942.¹ In the fall of 1942, the camp was stationed in Iasinovataia (today Iasynuvata, Ukraine) (map 9d), where it replaced Dulag 182.² It was later deployed to the following places: Stalino (today Donets’k, Ukraine) (9f), Krasnaia Zvezda (Donets’k oblast’) (9f), then, from March to April 1943, Zaporozh’e (today Zaporizhia, Ukraine) (9f), Krivoi Rog (today Kryvyi Rih, Ukraine) (9g), Orel (9c), and, in May 1943, Kromy (Orlovskaia oblast’) (9d). After the decisive Soviet breakthrough at Orel in October 1943, the camp’s personnel were evacuated westward to Gomel’ (9c), Bobruisk (9b), Białystok (4c), and finally to Brest (9e).³ The unit received field post number (*Feldpostnummer*) 41 235 between March 12 and September 7, 1943; the unit was disbanded and later the number was struck on February 2, 1944.

From September 5, 1942, the camp was subordinate to the Commander in Operations Area (*Operationsgebiet*) II; from November 20, 1942, to the Higher Field Command (*Oberfeldkommandantur*) Donets; from March 21, 1943, to the Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) in Operations Area II; from April 18, 1943 to the Commander of Prisoners of War in Operations Area III and the Commander of the Ninth Army Rear Area (*Kommandant rückwärtiges Armeegebiet*, Korück, 582); and from September 1943 to the Commander of the Prisoners of War in Operations Area III and the Commander of the Second Army Rear Area (Korück, 580).⁴

The first commandant of the camp was Oberstleutnant Adolf Rengert, who had formerly been the commandant of Stalag 371 in Stanislau (today Ivano-Frankivs’k, Ukraine) and

Stalag 237 in Petrikau (today Piotrków Trybunalski, Poland). On September 11, 1942, he was replaced by Oberstleutnant Wilhelm Schimmer, also a former commandant of Stalag 371. The final commandant was Oberstleutnant Josef Starzinski, who took over Schimmer's position on April 21, 1943.⁵ The counterintelligence (*Abwehr*) officer in the camp was Hauptmann (later Major) Richard Grabner.

Stalag 397 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners faced poor housing conditions, malnutrition, inadequate medical care, and deliberate mistreatment by the camp personnel. Upon arrival, the prisoners went through a selection to identify "undesirables," such as Communists, Jews, and the terminally ill, who were then shot by the camp guards or the Security Service (*Sicherheitsdienst*). While the camp was in Iasinovataia, it was referred to as the "typhus camp" and "cholera camp." The prisoners lived in unheated stables and disease was rampant. Plans to build a permanent camp in Iasinovataia never materialized as Stalag 397 was soon redeployed to Stalino. In October 1942, when there were 2,295 prisoners in the camp at Iasinovataia, 80–90 men were dying every day (a death rate of nearly 4%).⁶ During the liquidation of the camp on November 30, 1942, the Security Services killed 77 disabled or incurably ill prisoners, probably using a gas van.⁷

While the camp was in Stalino, it held around 1,000 prisoners in a more developed camp facility. In Krasnaia Zvezda, it held about 4,000–5,000 Soviet prisoners. As the camp was repeatedly relocated westward, all prisoners who were capable of marching were brought along. The camp at Kromy held between 300 and 600 prisoners. The last remaining prisoners were deposited in another camp in the vicinity of Bobruisk shortly before the dissolution of Stalag 397 at Brest on December 17, 1943.⁸

MANNSCHAFTSSTAMMLAGER (STALAG) 398

The Wehrmacht established Stalag 398 (map 4f) on February 27, 1943. It operated until May 4, 1945, when American forces liberated it. The camp was located between Pupping and Hartkirchen (Oberösterreich, Bezirk Eferding, Austria), and it consisted of 15 wooden barracks.

Most of the prisoners of war (POWs) who passed through Stalag 398 were French. Second in terms of numbers were Italian POWs, followed by Soviet prisoners. The fourth-largest group was Serbian prisoners. Stalag 398 was a relatively large camp, with a population that varied between approximately 23,000 and 35,000 prisoners in 1943 and 1944.¹ The conditions in the camp differed according to nationality. The Western prisoners' conditions were more or less tolerable. American and British prisoners occupied a camp in good condition with above average rations. International observers found little to criticize about the circumstances of the Western POWs in the camp during their visit in August 1944.² Hygiene and sanitation facilities were adequate, as were the heating, ventilation, and arrangements of the barracks. Medical personnel displayed overall competence and treatment facilities were adequate despite some problems with fleas. At the canteen, prisoners could purchase "as much beer as they wish" but little else. Overall, the POW leadership expressed satisfaction on all fronts with treatment and conditions in the camp.³

The conditions for the Soviet POWs were substantially worse, which led to a higher mortality rate.⁴ In total, 1,032 Soviet prisoners died in the camp. Most of the prisoners, however, died in 1941–1942, that is, during the period when the camp in Pupping was a subcamp (*Zweiglager*) to Stalag XVII B, Stalag XVII B/Z. In addition, one French POW and one Romanian POW died in the camp.⁵

Reserve Hospital (*Reserve Lazarett*) Haid bei Linz was subordinate to Stalag 398. The hospital complex consisted of several barracks in a compound that chiefly functioned as a civilian labor camp at a nearby ironworks. In addition to

treating prisoners from work detachments in Stalag 398 who had fallen ill, the hospital treated injured Allied soldiers from the Italian front and airmen shot down over Germany. Most of the treatment was done by interned Italian medical officers. Because the camp was subordinate to Stalag 398, prisoners were treated as nonworking POWs and given the lowest possible rations. The prisoners were fed a soup made from grass, a “half-cooked mush made out of an unknown grain which caused nausea” and other similarly inedible fare; as a result of the poor rations, the prisoners in the hospital depended almost entirely on Red Cross parcels for their nutrition.

The hospital was located in a wooden barrack. The medical care provided there was very poor due to a lack of equipment and supplies, and an “almost . . . total absence of any kind of medication,” as noted by American first lieutenant Paul Scully, who was a patient at the hospital from May to September 1944.⁶ Furthermore, the camp was infested with bugs and flies. The commander of the hospital delayed sending patients to the hospital in Linz for X-rays (the hospital at Haid did not have its own X-ray facilities), even when he was informed by the doctors that they were medically necessary. This treatment, along with the poor food and supplies, exacerbated the prisoners’ suffering rather than healing them.

Stalag 398 was subordinate to the Commander of Prisoners of War in Defense District XVII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVII*). From September 4, 1941 to May 20, 1944, the camp commandant was Generalleutnant Hugo Schäfer; Schäfer was convicted of war crimes by a Soviet military tribunal and executed on November 12, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) I A

The Wehrmacht established Stalag I A (map 4c) on September 6, 1939, in Stablaek (today Dolgorukovo, Kaliningradskaja oblast’, Russia), in Defense District (*Wehrkreis*) I. Stalag I A was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*). The camp was closed on January 25, 1945, when the Germans evacuated the prisoners to the west.¹

Stalag I A was located on the Military Exercise Ground (*Truppenübungsplatz*) Stablaek. The camp complex comprised two sections: Camp North (*Lager Nord*) in Stablaek-Nord (today Dolgorukovo), and Camp South (*Lager Süd*) in Stablaek-Süd (today Kamińsk, Warmian-Masurian Voivodeship, Poland). The camp facilities were located near the rail line to Zinten (today Kornevo, Russia), which passes through the Stablaek rail station, and the road from Stablaek (today Dolgorukovo, Russia) to Görken (today Górki, Gmina Stary Dzierżgoń, Pomeranian Voivodeship, Poland). In addition, Stalag I A was responsible for at least 21 prisoner labor detachments (*Arbeitskommandos*) outside the camp. The first commander of the camp was Oberstleutnant Karl Schulz. He was succeeded by Oberst Hartmann. The last-known commandant was Oberst von Pirsch, who held the position from 1942 to 1944.

The first prisoners of war (POWs) to arrive in Stalag I A were Polish prisoners captured during the German invasion in September 1939, including those from the Pomorze (Pomeranian) Army and others captured in the Polish Corridor and the vicinity of Warsaw. The prisoners in the camp initially included not only enlisted men and noncommissioned officers but also officers and Jewish civilians.² Stalag I A was the only POW camp in East Prussia until the establishment of Stalag I B on October 10, 1939. After the German invasion of Western Europe in the spring of 1940, French and Belgian prisoners arrived in the camp. In 1941, Soviet prisoners captured during Operation Barbarossa were brought to the

camp. Finally, in late 1943, Italian military prisoners were sent to Stalag I A. Small numbers of British and Serbian prisoners were also present for a short time. Stalag I A was one of the largest POW camps in the Reich, with a population that remained around or above 60,000 prisoners for most of the war. The maximum population of the camp was 69,292 prisoners in December 1943.³

When the first prisoners arrived, the camp did not have any barracks or other permanent structures for their use. Upon arrival, the prisoners were taken to Camp South, where they were registered and then selected for either internment in the main camp or work in a work detail.⁴ They were held in an open field surrounded by barbed wire, which was divided into two sections: one for POWs and the other for Jewish civilians.⁵ One Polish prisoner who was in an early transport to the camp described the experience: "After a half-hour march from the railway station we were led to a camp fenced in with barbed wire. Inside the camp were 12 tents each of which held about 100 people. . . . We were not allowed to enter those tents. After two days of living on water, sleeping outside, we waited for allocation. . . . After 8 days in the camp the divisions were formed and escorted to a neighbouring camp located close to the railway line."⁶ Once the prisoners reached the main camp, they slept in tents with only straw or wood shavings for bedding.⁷ Jewish POWs were kept in a separate section of the main camp and were not allowed any contact with the non-Jewish prisoners. The Jewish prisoners were also singled out for harassment by the guards.⁸ About 800 Jewish prisoners were transferred to the Biała Podlaska concentration camp in October 1940; those who were still alive were transferred to the camp at Końskowola in May 1941.

The construction of the prisoner barracks began at the end of 1939 and continued into early 1940. Each wooden barrack was built to accommodate between 300 and 400 men, who slept on large wooden bunks that held 6–10 people. The barracks were arranged on either side of the street that ran through the camp (*Lagerstrasse*), with an open area in the center where roll call was held. In addition to living quarters, the prisoners also built the administration buildings, as well as the camp kitchen, bathing facilities, latrines, and a building that became the prisoners' chapel.⁹

Conditions in the camp during this time were poor, as they were in most camps for Polish prisoners early in the war. Arriving prisoners were required to bathe and undergo delousing. As one survivor recalled:

We had to completely undress in the courtyard, and tie all our clothes with our underwear. The bundles were then thrown into a large vessel in the shape of a cylinder. While the clothes were being steamed we went in groups of 20–25 to the baths, where under [streams of] cold water and a bit of soap we quickly washed ourselves so as to make place for the next group. Before we left the baths we were smeared with a bunch of cotton wool, affixed to a long rod,

soaked in some black-brown grease, across parts of the body, with the exception of our heads.¹⁰

The camp infirmary comprised seven barracks. It was staffed by Polish (and later French) doctors and medical orderlies under the supervision of German doctors. However, hygienic and sanitary conditions in the camp remained poor, and infectious diseases—such as typhus and gastrointestinal illnesses—were common.¹¹ The delousing measures were ineffective, and lice and other vermin were abundant. One witness recalled that in 1939, there were 10 full tents (out of about 100 total) that held typhus victims,¹² and another noted that deaths due to illness were commonplace during this time.¹³ Food rations were also inadequate; the prisoners received black ersatz coffee and a small piece of bread in the morning, half a liter of watery soup with cabbage or potatoes at lunch, and another small piece of bread and cup of coffee in the evenings, along with a small amount of butter or margarine.¹⁴ Most of the prisoners did not have winter clothing and their uniforms became worn from continuous wear and work. The Germans replaced their worn-out clothes from surplus stock, including French uniforms from World War I.¹⁵

The first French and Belgian prisoners arrived in the camp in May 1940. The treatment of Western Allied prisoners in the camp was generally satisfactory and in compliance with the requirements of the Geneva Convention relative to the Treatment of Prisoners of War (1929). Red Cross observers noted that their barracks were clean during a visit in September 1941; by this time, the conditions for the Polish prisoners had also improved compared to the first months of the war.¹⁶ Both Western Allied and Polish prisoners had access to religious, cultural, and other recreational activities. They held religious services in their own chapels, kept libraries of books in various languages (the Belgians had more than 2,500 and the Poles had over 700 when the Red Cross visited in late October 1942), held classes in languages and other subjects, played board and card games, and held sporting events and competitions. These competitions included a football championship between the various national groups of prisoners in 1942, which was won by the Belgians. At one point, the camp had three separate orchestral groups, with between 10 and 22 members in each.¹⁷

After the Axis invasion of the Soviet Union in June 1941, Soviet POWs were brought to Stalag I A. They were kept in a separate section of the camp, away from the Polish and Western Allied prisoners. As in other camps for Soviet POWs, the conditions they experienced in Stalag I A were terrible, with inadequate housing, food, and medical care, leading to a high mortality rate, particularly in the fall of 1941 and the winter of 1941–1942. Soviet prisoners arriving in the camp went through selections (*Aussonderungen*) by the camp guards or Gestapo personnel, which were intended to separate out prisoners who belonged to "undesirable" groups, such as Jews and political commissars. Prisoners identified as such were executed by the guards in the woods near the camp. The Italian military prisoners who arrived in the camp in late 1943 also experienced

poor conditions, as was the case in other camps. Soviet survivor Iurii Apel' described the conditions experienced by Soviet and Italian prisoners in Stalag I A in 1944, which, although difficult, were somewhat better than they had been in this and other camps earlier in the war. As Apel' recalled:

The food in the camp was significantly better than that in all my previous camps. It was impossible, of course, to put on weight and get out of the *dokhodiaga* ("goner") category, but there was practically no threat of starving to death here either. The food was simple and, in comparison with other camps, of good quality, but it was not very nutritious, and there was not enough of it . . . [the Germans] fed [the Western prisoners] better than the Russian and Italian ones. They had a separate kitchen. They got just as much bread as we did, their *balanda* [soup] was higher in quality, and in addition, every day they were given one boiled potato, which they didn't eat, and *shlaim* [a substance derived from processing animal intestines in meat-packing plants], which they apparently didn't touch at all. *Shlaim* was a paste-like food, yellow-orange in color, without sugar and salt, completely tasteless; I don't know what it was made from and whether it contained anything of nutritive value. But this was not what ensured [Western Allied prisoners] a comfortable and well-fed existence. Every month, each of the [Western] Europeans received a large parcel from the International Red Cross, containing such a lot of things: tinned butter, meat, fish, cheese, flour, all kinds of cakes, cookies, condensed and powdered milk, sugar, cigarettes, wool sweaters, pullovers, socks, and many, many other items. Before the landing in Brittany and the occupation of Western Europe by the Allies, our neighbors received each month, in addition, one or two packages from home with all kinds of home-cooked foods. I don't mean that our food simply couldn't be compared with the food of our Western neighbors: I'm certain that even ordinary Germans, both civilians and military, in those days did not have foodstuffs in such variety, of such high quality, or in such abundance. Only the Italians from Badoglio's army and the Soviet POWs never received anything, either from the Red Cross or from anybody else.¹⁸

Prisoners of all nationalities in Stalag I A were required to work in the camp or labor detachments, as permitted by the Geneva Convention. They were used primarily as agricultural laborers throughout East Prussia, particularly in the Sambia and Memel regions. They also worked in industry, including the Schichau shipyard in Elbing (today Elbląg, Poland); the railway workshops in Memel (today Klaipėda, Lithuania) and Königsberg (today Kaliningrad, Russia); the flax factories in Schippenbeil (today Sępopol, Poland); and the sawmill in Tilsit

(today Sovetsk, Kaliningradskia oblast', Russia). Others were used as manual laborers, clearing forests, building and paving roads, and digging anti-tank ditches. Those who worked a large distance from the main camp were quartered at their work sites—in barns, cellars, annexes, stables and other farm buildings, or provisional barracks on factory grounds.¹⁹ Others worked in the main camp, performing maintenance tasks, such as removing snow; administrative jobs in the camp offices; unloading rail wagons; assisting in the camp hospital; and burying dead bodies.²⁰ Prisoners worked an average of nine hours per day, with most receiving Sundays off; however, men working in the factories were often required to work on Sundays as well.²¹

The Germans evacuated the prisoners from the camp on January 25, 1945, as the Red Army approached from the east. They were marched westward along the road paralleling the shore of the Vistula Lagoon (Polish: Zalew Wiślany). Prisoners who could not march—including 160 Soviet prisoners and about 80 Polish and French prisoners—were left behind in the camp.²²

The number of prisoners who died in the camp is uncertain. Several thousand prisoners are known to have died there, the majority of them Soviets. More than a quarter of a million prisoners may have passed through the camp during the course of the war.

MANNSCHAFTSSTAMMLAGER (STALAG) I B

The Wehrmacht established Stalag I B (map 4c) from Dulag Hohenstein on October 10, 1939, in Defense District (*Wehrkreis*) I and deployed it near the town of Hohenstein (today Olsztynek, Poland).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis* I). Reserve Battalion (*Landesschützenbataillon*) 201 and Reserve Battalion 224 (among others) guarded the camp.

The first prisoners were Polish military personnel who had been captured in September 1939, as well as interned Polish civilians. On October 30, 1939, the camp held 18,276 Polish enlisted personnel and 11 officers, as well as 1,143 civilians.² Between 1940 and 1941, the Polish prisoners were administratively transferred to forced laborer status, set free, or transferred to other camps. Their place in Stalag I B was taken by French prisoners of war (POWs). Between 1941 and 1945, the French prisoners constituted the majority. Soviet POWs made up the second-largest group between 1942 and 1945, and Italian military personnel were in third in late 1943 and 1944. Most of the prisoners were distributed among the numerous work details (*Arbeitskommandos*); 80 percent of these labor details were used in agriculture and forestry.³ Stalag I B was a large camp, with a maximum population of 55,172 in October 1943.⁴

Stalag I B at Hohenstein. Soviet POWs behind the barbed wire enclosure, date unknown.

USHMM, COURTESY OF IPN, WS #50208.

Conditions for the POWs varied according to nationality. Western prisoners enjoyed more or less tolerable conditions, while the Soviet POWs' conditions were inhumane. For the latter, enormous overcrowding, unhealthy food in small quantities, and lack of proper medical aid resulted in mass starvation, exhaustion, and illnesses, which in turn produced a high mortality rate. Mistreatment by the guards added to the misery and number of deaths.

In January 1945, as the Red Army approached, the Germans evacuated prisoners who could walk to Stalag II A in Neubrandenburg.⁵ During this process, the camp guards shot prisoners who were not able to continue. More than 10,000 prisoners perished. In the camp cemetery, there are 380 mass graves and 303 individual graves. The remaining survivors at Stalag II A were liberated by the Red Army on January 23, 1945. After the war, the remains of the French and Belgian prisoners who died in the camp were moved to France and Belgium, respectively, while the remains of deceased Italian prisoners were reinterred in the Italian cemetery in Warsaw.⁶

An estimated 650,000 prisoners passed through Stalag I B and its subcamps and work details, of whom between 50,000 and 55,000 (mostly Soviet POWs) died and were buried in a mass grave in the nearby Sudwa cemetery. Perhaps as many as 25,000 prisoners (mostly Soviet) died in the winter of 1941–1942 alone, due to mistreatment, malnutrition, and typhoid.⁷

SOURCES Primary source material about Stalag I B is located in the BA-MA (RW 6: 450–453; RH 53-1/18) and in the WASt Berlin (Stammtafel Stalag I B).

MANNSCHAFTSSTAMMLAGER (STALAG) I D

The Wehrmacht established Stalag I D (map 4c) on July 1, 1942, in Defense District (*Wehrkreis*) I from two disbanded camps, Oflag 52 and 60. From July to October 1942, the camp deployed to Ebenrode (today Nesterov, Kaliningrad oblast, Russia), and from November 1942, it was in Heydekrug (today Šilutė, Lithuania).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis* I). The camp was guarded by personnel from the 469th Reserve Battalion (*Landesschützenbataillon*).

Stalag I D held Soviet prisoners of war (POWs). It was a relatively small camp; the prisoner population peaked at 1,348 in October 1942.² Specific information about the conditions in the camp is not available; however, conditions in camps for Soviet POWs were generally poor, with inadequate food, shelter, and medical care, and it is likely that the conditions in Stalag I D were similar. The camp was reorganized as Stalag 391 on September 3, 1943.

SOURCES Primary source material about Stalag I D is located in BA-MA (RW 6: 451–453) and WASt Berlin (Stammtafel Stalag I D).

Additional information about Stalag I D can be found in the following publications: Zygmunt Lietz, *Obozy jenieckie w Prusach Wschodnich 1939–1945* (Warsaw: MON, 1982); and G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 1 (Koblenz: self-published, 1986), p. 9.

MANNSCHAFTSSTAMMLAGER (STALAG) I E

The Wehrmacht established Stalag I E (map 4c) from the disbanded Oflag 56 on June 5, 1942, in Defense District (*Wehrkreis*) I. From July to September 1942, the camp deployed to Prostken (now Prostki, Poland), and in October 1942, it was located in Sudauen (today Suwałki, Poland).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis* I). The camp was guarded by personnel from the 555th Reserve Battalion (*Landesschützenbataillon*).

Stalag I E held Soviet prisoners of war (POWs). It was a relatively small camp; the prisoner population peaked at 966 in October 1942.² Specific information about the conditions in Stalag I E is not available; however, conditions in camps for Soviet POWs were generally poor, with inadequate food, shelter, and medical care, and it is likely that the conditions in Stalag I E were similar. The camp was dissolved in October 1942 due to a typhus epidemic.

SOURCES Primary source material about Stalag I E is located in BA-MA (RW 6: 451–452); WASt Berlin (Stammtafel Stalag I E); and BArch B 162/6582 (Aussonderung von Kriegsgefangenen im Oflag 56 bzw. Stalag I E in Prostken [Wehrkreis I]).

MANNSCHAFTSSTAMMLAGER (STALAG) I F

The Wehrmacht created Stalag I F (map 4c) from Oflag 68 on June 5, 1942, in Defense District (*Wehrkreis*) I. The camp was deployed to Sudauen (today Suwałki, Poland), with subcamps (*Zweiglager*) in Prostken (today Prostki, Poland), Fischborn (today Dłutowo, Poland), Liese über Mischienitz (today Łyse, Poland), Schützenort (today Prigorodnoe, Kaliningradskia oblast', Russia), and Prökuls (today Priekulė, Lithuania).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

Stalag I F occupied an area of approximately 50 hectares (120 acres), surrounded by a barbed wire fence and guard towers. The camp facilities included a kitchen, bakery, latrines, and bathhouse. The camp held Soviet prisoners of war (POWs). The population fluctuated markedly, from a low of about 470 to a high of over 7,100. The prisoners lived outdoors in dugouts until 1943, when 43 barrack huts were built; however, because the camp was severely overcrowded, many prisoners were still forced to live underground.

Additional details about the conditions in Stalag I F are not available, but given the high death rate and existing information about the conditions in its predecessor camp, Oflag 68, it can safely be assumed that conditions were harsh. More than 100,000 POWs (the vast majority of them Soviets) passed through Stalag I F, of whom over 50,000 died, mostly from malnutrition, exposure, and typhus. The camp was disbanded by November 9, 1944, as the Red Army approached.

SOURCES Primary source material about Stalag I F is located in BA-MA (RW 6: 450–453); WASt Berlin (Stammtafel Stalag I F); and BArch B 162/16382: *Tötung sowjetischer Kriegsgefangener im Kriegsgefangenenlager Suwalki (Oflag 68 bzw. Stalag I F) zwischen Juni 1941 und Ende 1944*.

MANNSCHAFTSSTAMMLAGER (STALAG) II A

The Wehrmacht established Stalag II A (map 4b) on September 1, 1939, in Neubrandenburg, in Defense District (*Wehrkreis*) II. It was located on the grounds of the Fünfeichen estate and is sometimes referred to as “Camp Fünfeichen.” The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*).¹ On September 23, 1940, a separate officers’ camp (*Offizierslager*), Oflag II E, was established nearby; this camp was later redesignated as Oflag 67 and was eventually reintegrated into Stalag II A as “Subcamp Oflag” (*Teillager Oflag*) on December 1, 1944.²

The first commandant of Stalag II A was Oberst Neumann; his successor, in 1941 or 1942, was Kapitän zur See Max Fischer. The final commandant was Oberstleutnant Wuttke, who became commandant in 1943.³ The counterintelligence (*Abwehr*) officer was Hauptmann Frankowski. The head of the camp infirmary (*Lazarett*) was Oberstabsarzt Dr. Hartmann.⁴ The camp was guarded by personnel from the 281st Reserve Battalion (*Landesschützenbataillon*).⁵

Stalag II A was a very large camp, with a population that peaked at 48,536 prisoners and never fell below 25,000 after the first months of the war, although the majority of the prisoners were assigned to labor detachments (*Arbeitskommandos*) outside the camp.⁶ The camp originally held Polish prisoners of war (POWs) captured during the German invasion of Poland. The first transport of prisoners arrived in the camp on September 12, 1939. The camp’s structures were primitive at this time, and most of the prisoners lived in tents for the first months of its existence. Many of them were subsequently transferred out of the camp to work, primarily as agricultural laborers, while others remained in the camp to construct the barracks and other camp buildings. After Germany invaded the Low Countries and France in the spring of 1940, prisoners from Belgium, the Netherlands, and France (including colonial troops) arrived in the camp; all of the Belgian prisoners were subsequently transferred to other camps. The next to arrive were Serbian prisoners, along with a small number of Greek prisoners from the Axis campaigns in Southeastern Europe. Soviet prisoners captured during Operation Barbarossa arrived in the summer of 1941; they were confined in a separate camp (*Russenlager*) located south of the main camp. After the Italian capitulation in September 1943, some Italian military internees were sent to the camp. Finally, after the Allied landings in France in 1944, British and American prisoners were brought to the camp.⁷

The Polish POWs faced harsh conditions in the camp’s early months; in addition to a lack of permanent housing,

their food rations were also insufficient, consisting of a small piece of bread with marmalade, margarine, or sausage and a thin vegetable soup and a few small potatoes once a day, with ersatz tea in the mornings and evenings. Jewish prisoners were kept in a separate section of the camp, away from the non-Jewish Poles. One former Jewish prisoner, Adam Szus (born Schüss), recalled that the conditions for the “few hundred” Jews in this section of the camp were “very bad” and that they were prohibited from interacting with the non-Jewish prisoners. In early 1940, the Jewish prisoners were taken out of the camp and sent to forced labor camps near Lublin, in the Generalgouvernement.⁸ The conditions improved after the first months of the war, and the remaining Polish, Serbian, and Western Allied POWs enjoyed better treatment, generally conforming to the requirements of the Geneva Convention of 1929. However, even in 1943, some of the barracks were overcrowded and recreational activities were poorer than those in other camps.

Religious services were available for the Polish and Serbian prisoners, although they were not held consistently, to the consternation of both the prisoners and international observers.⁹ There was a library with about 1,100 books in Polish, though visitors from the YMCA noted in early 1943 that books for the Serbian prisoners were lacking; the book situation apparently improved later on, and with the addition of books in Serbian and French, the total number of volumes in the library increased to over 16,000. The prisoners organized courses on various subjects, including foreign languages (such as English, French, and German), and there was a small Serbian orchestra. The prisoners had to fit these activities in around a daily work schedule that began with morning roll call at 6:30 a.m. and concluded with evening roll call at 7:00 p.m.¹⁰

As in other camps, Soviet POWs in the separate camps experienced the worst conditions, including inadequate housing, minimal food rations and medical care, and deliberate abuse by the guards. Mortality was high among the Soviet prisoners; at least 6,000 are known to have died in the camp, compared with approximately 500 prisoners of other nationalities. Newly arrived Soviet prisoners were screened to separate out “undesirables,” such as Jews and political commissars, who were transferred to concentration camps, including Gross-Rosen, for execution; for example, on October 22, 1941, a group of 20 Soviet prisoners from Stalag II A was executed and cremated at Gross-Rosen.¹¹ The Germans evacuated the camp in late April 1945, shortly before the Red Army liberated it on the night of April 29–30.

SOURCES Primary source information about Stalag II A is located in BArch B 162/15625–15626 (copy at USHMM RG-14.101M.2892.00000555–00000983); ITS Digital Archive; USHMM (RG-15.079M, Konspiracyjne archiwum getta Warszawskiego: Archiwum Ringelbluma, Reel 24 and RG-30.007M, Miscellaneous Records Relating to Prisoner of War Camps in Germany, 1940–1945, Reel 2); and WAST Berlin.

MANNSCHAFTSSTAMMLAGER (STALAG) II B

The Wehrmacht established Stalag II B (map 4b) on September 15, 1939, in Hammerstein (today Czarne, Poland).¹ The camp was subordinated to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*).

The camp commandants were, in turn, Oberstleutnant von Bernuth and Oberst von Keppler. The Camp Officer

Stalag II B at Hammerstein. Camp entrance, November 1942.
COURTESY OF ICRC.

(*Lageroffizier*) was Hauptmann Springer, the counterintelligence (*Abwehr*) officer was Hauptmann Giesel, and the camp doctor was Hauptmann Wagner.

The camp deployed on the grounds of a former military firing range and was divided into two parts: North Camp (*Nordlager*) and East Camp (*Ostlager*). North Camp held Polish, French, Belgian, Serbian, and American prisoners, while East Camp held Soviet and Italian prisoners. From October 1939 until the summer of 1940, the camp held Polish prisoners exclusively. Because there were no barracks as yet, they lived in tents, even in the winter of 1939–1940. The majority of those prisoners worked inside the camp, where they constructed barracks; some of the prisoners were located in work details (*Arbeitskommandos*) outside the boundaries of the camp.

By mid-1940, the Germans had moved most of the Polish prisoners to other camps (on December 31, 1940, 1,691 Polish prisoners remained) and, starting in May–June 1940, new prisoners arrived: French and Belgians first, followed by Serbs in April 1941. Among the French prisoners from the colonial forces (Morocco, Algeria, Tunisia, Senegal, Sudan, Madagascar, and Indochina), there was a high mortality rate, caused by the lack of warm clothing and by malnutrition. In November

1941, Stalag II B took over the former site of Stalag 315 (II F), about 1.5 kilometer (0.9 miles) away, as Ostlager. As of August 1943, the camp also held American prisoners, and, starting in September 1943, Italian prisoners as well.²

The table below lists the number of prisoners in the camp on the given dates and their distribution by nationality.³

The Polish prisoners, who were among the first to arrive in the camp, endured harsh conditions, including extremely sparse quarters and poor sanitary conditions. As former prisoner Jan Kwiatkowski noted: “The entire winter [1939–1940], we slept on straw, which became very muddy due to condensation. The rations were also bad and insufficient. These bad conditions caused many prisoners to become infected with dysentery, which, for many, ended in death.”⁴ Many of the Polish prisoners were transferred to the labor details, where conditions were little better; the Germans attempted to coerce them to “voluntarily” surrender their status as prisoners of war (POWs) and become civilian laborers, which would have allowed the Germans to ignore the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). In November 1940, Jewish-Polish POWs from Stalag II B were sent to a forced labor camp for Jews at Biała Podlaska, where they were treated horribly and many died from hunger and disease. The survivors remained at Biała Podlaska until the camp in which they lived was closed on May 15, 1941; they were subsequently transferred to the Końskowola forced labor camp.

The treatment of the Western Allied prisoners was within the bounds of the Geneva Conventions; however, they too had to deal with harsh living conditions, albeit better than those experienced by the Polish POWs in 1939–1940. The men lived in small, damp, overcrowded rooms that left no room for storage or seating. They slept in triple bunk beds on mattresses filled with straw or wood shavings. International observers regarded these conditions as “primitive” and “dirty.”⁵ The barracks had electric lights and were heated; however, the electric current was often weak, and the heating was generally insufficient, due to inadequate supplies of coal for the barrack stoves. Thus, the barracks were often “extremely cold,” and many men suffered from frostbite in the winter.⁶

	February 28, 1941	July 1, 1941	September 1, 1941	October 1, 1941	October 1, 1942	October 1, 1943	October 1, 1944

Food in the camp generally gave the men enough nutrition to survive, but little more. American private first class Nicklas Betters, who was at Stalag II B in October and November 1943, reported that the daily ration was a fifth of a loaf of bread, a small amount of soup, and a small amount of margarine, with two ounces of meat twice a week and a small amount of sugar once a week.⁷ Reports from American prisoners repatriated to the United States in May 1944 indicated that rations remained similar in early 1944. They were given hot water for ersatz coffee or tea in the morning and a barley and turnip soup with black bread for lunch and dinner; they received a small piece of sausage and some margarine three times a week.⁸

Private Frank R. Trocino, who was an inmate at Hammerstein from May through November 1944, stated that the food he was given was insufficient, consisting of ersatz coffee in the morning, a soup made with carrots or potatoes, a small portion of bread, and margarine or meat every three to four days.⁹ By the latter stages of the war, the American medical officers in the prison believed that the men were being fed less than 500 calories a day.¹⁰ The prisoners depended upon the parcels provided to them by the Red Cross for supplemental nutrition. Many men became weak and sick due to hunger, and some lost a considerable amount of weight.

Illnesses among the prisoners were treated at the camp hospital. This facility had sufficient beds and excellent heating and was highly regarded by international observers until late in the war.¹¹ By the end of the war, however, the sanitary conditions in the camp had deteriorated to the point where the medical facilities were considered by the American observers to be "totally inadequate."¹² This situation was in no small part due to the arrival of 650 chronically ill men from Stalag III B and Stalag VII A, which placed enormous stress on the hospital resources.

Within the camp, precautionary health measures were standard. While typhus was allowed to ravage Soviet POWs in the winter of 1941–1942, an outbreak in the American camp in February 1944 led to swift action. Sixty American POWs were placed in a quarantine zone to prevent the spread of an epidemic.¹³ The men were able to take a hot shower once a week. However, the open pit latrines in the camp were unsanitary. Furthermore, despite the Germans' efforts to de-louse the prisoners and their living quarters, lice and fleas remained in the barracks.

Western and Polish POWs were allowed to publish their own handwritten newspapers. For example, the Polish prisoners published a daily paper, *Gazeta Ilustrowana*, the Belgian prisoners had a monthly, *L'Hirondelle*, and the Americans had *The Yanks and POW—Prisoner of War*. A later edition of the American prisoner paper was called *Barbs and Gripes* (a play on the US soldiers' paper, *Stars and Stripes*). They also received the English-language German propaganda newspaper for POWs, *Okay*, which was largely ignored. In 1944, a French-language nightly radio news program was broadcast in the camp.

Western, Polish, and Serbian prisoners also had access to other intellectual and recreational activities. There were libraries for each nationality with varying numbers of books in their respective languages; a German Red Cross representative noted in late May 1943 that the Belgians and French had significantly more books than did the Serbs.¹⁴ All prisoners also had access to sporting goods (provided by the YMCA) and facilities; common activities included football and table tennis. Most prisoners also had access to religious services. Early in their time in the camp, the Serbian prisoners had no priest who could conduct Orthodox mass for them and were thus without spiritual support.¹⁵ However, by 1943, priests of all nationalities were present in the camp, and Serbian Orthodox and French and Belgian Catholic and Protestant services were held in the camp every Sunday.

Most able-bodied prisoners were put to work in the work details. As of December 1944, there were 233 work commandos for American prisoners alone.¹⁶ Conditions in the work details varied greatly. In some cases, the men were given decent housing and good food; in others, they lived in pigsties and were fed very poorly. For example, American private Olin R. Sanders reported that in Kommando 1560 in Stolp, the prisoners were quartered in small houses with 11 men in one room; they only had one small washbasin.¹⁷ Private O. T. Morgan lived in a farm building while working at Kommando 1562 in Budow.¹⁸ William D. Zartman experienced even worse living conditions in his commando on a farm near Raffenburg, where the men lived in a cow barn and slept on piles of straw on the barn floor.¹⁹

Food supplies in the commandos were often no better than in the main camp. Zartman noted that he and the other prisoners in his commando did not receive food between 6:00 a.m. and 8:00 p.m.; sometimes, they were not fed until as late as 10:00 p.m.²⁰ However, in some cases, the food provided represented a slight improvement over the normal rations. Private Sanders stated that he received ersatz coffee in the morning, potato soup and a quarter of a loaf of bread at lunch, and boiled potatoes in the evening with a quart of skim milk.²¹

Many men in the work details reported being abused by the Germans supervising them. Private Morgan, for example, was beaten with a rifle butt by Obergefreiter Herman Geise; Morgan believed that he had been beaten for no reason, and reported that Geise frequently abused his fellow POWs.²² Private Sanders reported that a German guard shot an American private and beat another with his rifle.²³ Even when they were not being deliberately abused, the men working in the commandos were nonetheless subjected to difficult working conditions. Zartman said that the men in his commando performed back-breaking agricultural labor for 14 hours a day, after walking between 5 and 6 kilometers (3.1–3.7 miles) from their quarters to their work site.²⁴

The treatment of the Soviet POWs, as in other camps, was inhumane. Not until late November and early December 1941 were the last of them resettled from dugouts into

unheated barracks with no windows or flooring. The prisoners were fed soup made from rutabagas and were given one tinned loaf of bread to share among 10 persons. Basic sanitary conditions were absent. Prisoners also lacked medical aid. All this led to a typhus epidemic, which lasted from November 1941 until March 1942. In this period, thousands of Soviet prisoners died in Ostlager. In the winter of 1941–1942, on some days as many as 200 prisoners died.

Only when the epidemic ceased to be an internal matter in Ostlager (when cases of typhus began to occur among the German personnel and the French and Belgian prisoners who worked at disinfection sites for Soviet prisoners) did the camp administration involve Polish doctors in the struggle against typhus. In April 1942, the camp administration finally wiped out the epidemic by shooting the remaining patients. The prisoners who survived the epidemic were put into the “sick battalion,” from which very few returned.

Surviving prisoners and newly arrived prisoners were used for slave labor in the numerous work details on farms, in the forestry industry, on the railroad, and in construction of the highway from Stettin to Danzig. In these detachments, many prisoners also died of malnutrition and inhumane treatment. In total, between 1941 and 1945, around 64,000 Soviet POWs are said to have perished in the camp.²⁵ On January 29, 1945, the prisoners in Stalag II B were evacuated to the west due to the approach of the Red Army, which liberated the camp on February 26, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) II C

The Wehrmacht established Stalag II C (map 4b) on September 28, 1939, in Woldenberg (today Dobiegniew, Poland), in Defense District (*Wehrkreis*) II. Starting on May 20, 1940, the camp was deployed in Greifswald, Germany, and the campsite in Woldenberg became Oflag II C.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*).

Stalag II C initially held Polish prisoners of war (POWs). The first Polish prisoners lived in tents while they built the camp barracks. In early 1940, the camp held about 15,000 Polish POWs, of whom 14,500 worked in various agricultural labor detachments (*Arbeitskommandos*).² After the redeployment of the camp to Greifswald, the Polish prisoners were transferred to another camp and replaced by Belgian and French prisoners. In 1941, they were joined by Serbian and Soviet POWs. In September 1942, the camp contained approximately 5,000 Belgian and French prisoners and about 5,000 Soviet prisoners. Almost all the Soviet POWs were in labor detachments outside of the camp, working in agriculture, industrial concerns, and railway construction. About 1,000 French and Belgian prisoners were also in labor detachments, while around 4,000 were in the main camp and did not work. There were two special camp sections within Stalag II C, one for Red Army political personnel and one for Belgian and French prisoners who violated the camp rules.

According to the periodical published by the Serbian prisoners in the camp, on August 29, 1943, the camp authorities granted them permission to hold a funeral service for their compatriots who had died and were buried at Greifswald. The Serbian man of confidence, Tihomir Lukić, made a record of all of the prisoners who were buried in the graves and their locations, so that the families of the deceased could be told where their relatives were buried. The bereaved were to be informed by letters from the Serbian Red Cross based on information provided by Lukić.³

Stalag II C at Greifswald. Prisoners at evening roll call, June 1942.
COURTESY OF ICRC.

On September 25, 1944, the camp held 9,461 French prisoners and 5,573 Belgian prisoners.⁴ The Belgian and French prisoners were treated decently and their living conditions were generally satisfactory. The International Red Cross had a permanent office within the camp that monitored the status of the Belgian and French prisoners and the Germans' compliance with the terms of the Geneva Convention relative to the Treatment of Prisoners of War (1929).

Western and Serbian prisoners had access to cultural and recreational activities in the camp and, to a limited extent, in the labor detachments. The French and Belgian prisoners held both Catholic and Protestant services together, as there were several priests and a Belgian Evangelical minister in the camp. Serbian Orthodox services were conducted by a theology student.⁵ The camp had collections of books in the languages spoken by the prisoners, provided by the Red Cross and YMCA; however, the French and Belgian prisoners had far more books available to them than did the Serbs. The French and Belgians also had a small orchestra and a theater troupe. Opportunities to play sports in the camp were limited because the camp was located on a damp, soft patch of ground that was often unusable for such activities.⁶

By contrast, the living conditions for the Soviet POWs were inhumane. Their housing, food rations, sanitation, and medical care were all inadequate, resulting in a high death rate from malnutrition and disease. As many as 768 Soviet prisoners from Stalag II C are buried in the new city cemetery in Greifswald. The names of 638 of these prisoners are known, while the other 130 remain unknown.

On February 8, 1945, prisoners from other camps further east were evacuated to Greifswald via Stargard. Of these prisoners, 90 were either sick or considered to be dangerous and were brought by train instead of on foot. The camp was used as a transit point for prisoners being sent to the west.⁷ The prisoners of Stalag II C were themselves evacuated a few weeks later. The Red Army liberated the camp on April 30, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) II D

The Wehrmacht established Stalag II D (map 4b) on September 20, 1939, in Stargard in Pommern (today Stargard, Poland), in Defense District (*Wehrkreis*) II, on the site of the former Dulag L (also known as Dulag Stargard).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis* II). The Germans evacuated the camp on February 25, 1945, as the Red Army approached from the east. Soviet forces liberated the campsite sometime between March 4 and March 6, 1945.

Stalag II D was divided into three sections: the main camp (*Hauptlager*), and two "forecamps" (*Vorlager*), known as Vorlager I and II. The first commander of Stalag II D was Oberst Dommerget.² By January 1940, he had been replaced by Major Wilhelm Diemer.³ He was succeeded by Oberst May sometime in mid-1940.⁴ May was replaced by Generalmajor Hans Henke at an unknown date.⁵ Henke left the position in mid-1942 and was succeeded by Generalmajor Adolf Plammer, who remained at the camp until at least May 30, 1944.⁶ The final commandant of the camp was likely SS-Obersturmführer Karl-Heinz Müller.⁷ The deputy commandant for at least some of the camp's operation was Major Kröplin. The adjutants were Hauptmann Bertram and Hauptmann Simon. The counterintelligence (*Abwehr*) officer was Hauptmann Johannes Boldt.⁸ The camp was guarded by

personnel from the 269th, 271st, 978th, and 980th Reserve Battalions (*Landesschützenbataillone*).⁹

The first prisoners to arrive at Stalag II D were Polish prisoners of war (POWs) who were captured during the German invasion of September 1939. In late 1939 and early 1940, the Polish prisoners were gradually transferred to other camps. After the German invasion of Western Europe, French and Belgian POWs were brought to the camp; the French would remain the largest group of prisoners in the camp throughout the war. In April 1941, Serbian prisoners were brought to the camp, followed in the summer of 1941 by Soviet POWs, after the German attack on the Soviet Union. In late 1943, Italian military prisoners were brought to the camp, along with small numbers of Dutch prisoners. Finally, British and Canadian prisoners captured during the Dieppe Raid were brought to the camp in January 1944. Stalag II D was a large camp, with a population that remained well over 30,000 throughout the war; the maximum recorded camp population was 39,991 in October 1941.¹⁰ However, the majority of the prisoners (at times as many as 96 percent of them) worked outside the camp in labor detachments (*Arbeitskommandos*). Stalag II D was responsible for more than 1,500 such detachments.¹¹

A POW hospital, *Reserve Lazarett* II, was attached to Stalag II D. Germans ran the hospital as part of Stalag II D, though it treated prisoners from nearby camps, including Stalag II B and Stalag Luft 4.¹² The hospital held several hundred prisoners in a large three-story former school building. Individual wards held between 4 and 30 men, each in a single well-constructed bed with adequate bedding. The hospital was well built and was heated during the winter months. A garden behind the hospital allowed opportunities for patients to take walks or to otherwise pass time outdoors.¹³ However, the hospital suffered from chronic shortages of medical supplies, which was a common problem in POW hospitals. By 1945, regular access to basic medicines and supplies became unreliable. This compounded the limitations of the hospital, which had only a basic operating room and laboratory. As a result, any serious cases of illness or injury were transferred to the larger prisoner hospital in Elsterhorst.¹⁴

When prisoners arrived in the camp, they were taken to one of the Vorlager where they registered and deloused before being allowed into the main camp. For the first few months of the war, there were no permanent structures in Stalag II D; during this time, it was a "tent camp" (*Zeltlager*). The Polish POWs built their own barracks, as well as other camp buildings, such as the kitchen, showers, and infirmary, in late 1939 and early 1940. Each section of the camp was surrounded by two rows of barbed wire, with a paved street passing between the rows of brick and wooden barracks. By January 1941, there were 46 barracks in the camp, each of which had a capacity of between 250 and 300 men.¹⁵ Within the camp, the prisoners were segregated by nationality.

As in other camps, the conditions endured by the Polish prisoners during the first months of the war were difficult. In addition to the poor housing situation, their food rations were

entirely insufficient, particularly for prisoners who were expected to do difficult manual labor. For breakfast and dinner, the prisoners received 150 grams (5.3 ounces) of bread and half a liter (1 pint) of ersatz coffee, and at lunch, they were fed a watery soup made from cabbage or beets. Some of the Polish prisoners lost nearly 40 kilograms (88 pounds) of body weight during their time in the camp.¹⁶ For some prisoners in the work details, food supply was even worse, consisting mostly of rotten potatoes and cabbage. While delousing procedures in the camp prevented the spread of typhus, such protections were not afforded to the prisoners in the work details, many of whom were infected during the winter of 1939–1940. Mortality rates among these prisoners were as high as 50 percent, with higher mortality rates generally concentrated in work details in the eastern and southeastern parts of Pomerania.¹⁷ Jewish prisoners were subject to especially harsh discipline. They were later transferred to concentration camps, such as the Lipowa Street camp in Lublin and the camp in Biała Podlaska. Many of them would later perish when those camps were liquidated. There were still 112 Jewish prisoners in Stalag II D in May 1940.¹⁸

The Western Allied and Serbian POWs experienced better conditions and were generally treated according to the requirements of the Geneva Convention relative to the Treatment of Prisoners of War (1929). Their section of the camp was visited on several occasions by international observers, including the Scapini Mission and the Red Cross. These prisoners had access to some cultural and recreational activities within the camp.¹⁹ Most prisoners were able to attend religious services in their language; the exceptions were the Muslim Yugoslavian prisoners and Catholic Canadians, for whom no clergymen were available.²⁰ In terms of recreational activities, the prisoners had libraries of books available to them, and some national groups, such as the Serbs, had small musical and theater groups. The Serbian camp also had a swimming pool, which was built by the prisoners in the summer of 1943.²¹

The first transport of Soviet POWs arrived at Stalag II D on October 1, 1941. As in other camps, the conditions endured by the Soviet prisoners were terrible and in violation of all standards of international law regarding the treatment of POWs. Their food rations were inadequate and their barracks were severely overcrowded, which, combined with minimal medical care, allowed diseases to spread rapidly. The mortality rate for Soviet prisoners was very high, primarily due to malnutrition and disease. Conditions were especially harsh in 1941 and early 1942 but improved somewhat later in the war. Soviet prisoners were also subject to “weeding out” (*Aussonderung*) operations conducted by the Gestapo, which identified “undesirable” prisoners (such as Jews and political commissars) who were sent to concentration camps, mainly Sachsenhausen, for execution.²²

The first Italian military prisoners arrived on September 15, 1943. By October of that year, there were more than 6,400 Italian prisoners in the camp. They were also treated poorly by the Germans, as was the case in other camps. British and

Canadian prisoners were brought to the camp in January 1944. Though the Germans treated them according to the requirements of the Geneva Convention, by the last months of the war, the conditions in German POW camps had worsened for all prisoner groups. Canadian prisoner Bill Larin, who was captured at Dieppe, described his experience in the camp:

We . . . arrived at [Stalag] II D on January 29, 1944. I was the only one with a beard when we arrived. I got orders to shave it off by the Germans, which I did, pronto. . . . We were there about five days, when 30 of us were sent on a work party, to a place called Rensin. It was a large state potato farm, with a Nazi civilian in charge. We did all kinds of farming jobs, including planting, hoeing, and grading seed potatoes. We had a few problems here. The Germans got a bit rough with the guys. One day, while planting potatoes, the Germans wanted more speed, and walked behind the boys with bayonets on their rifles. It didn't work, as the boys stuck together. It took a bit of courage, believe me. We also had a bed bug infestation one night. They sure knew how to bite. Our quarters were fumigated, and that took care of the bugs. We got word of a Second Front here, and the next day after that, hundreds of American Flying Fortresses [B-17 bombers] came over us. The German fighters tried to get at them, but were held off by armed B-29 [sic] bombers. What a racket they made. At night, we heard the British and Canadian planes bombing Stettin [Szczecin], it was very loud and the ground was trembling. One day, the Gestapo called, and just about tore the place apart. They were evidently looking for maps and compasses. I don't know if they found anything. We had some Poles working on the farm and living next to us. They took two of them away with them, a man and a woman, reputed to be brother and sister. God knows what happened to them, but we suspected the worst. If any of their people got caught out of their area, they were hanged at a crossroads as a warning. The Germans didn't like the way we worked, so we were replaced by some Italians. We were sent to a saw mill at Plathe [today Płoty, West Pomeranian Voivodeship, Poland] on June 24, 1944. We made rough lumber, peeled logs, etc. While here, a couple of our guys escaped. We never heard what happened to them. It was a dangerous time to be on the loose. The Germans were getting nervous, as the Russians were coming from the east. We weren't getting much food at this time. We lived on potatoes, but they didn't stay with you for long.²³

As Larin noted, escape attempts were common both in the work details and in the main camp. However, most of those who escaped were recaptured and several prisoners were shot

during their flights.²⁴ The Germans began evacuating the prisoners to the west on February 25, 1945. Some were taken by sea to Flensburg, while others were marched to Sassenitz, Jarmen, and Friedland (Mecklenburg-Vorpommern). The Canadian prisoners were sent to Stalag XI B in Fallingbostel.²⁵ Larin recalled of the evacuation:

We packed what we could carry, and dressed warmly, took a blanket each, and on February 25, 1945, we headed out. It wasn't too warm. We marched toward Stettin, but before crossing the bridge, we met some German troops going east toward the Russians. They looked like boys 15–16 years old, and very scared. I felt sorry for them. We could hear the Russian guns in the distance. We marched all day, every day, and stayed over on farms at night. We didn't get much food from the Germans, and scrounged and stole what we could. The Germans hollered loud and long. We ran into other groups from the east, crossed the Oder and Elbe rivers, and went past Rostock, a port on the Baltic, around Berlin, past Hamburg and Bremen. We finally crossed the Elbe River again near Brunswick [Braunschweig], headed south, and all the roads were packed with POWs. Some columns were strafed by our own planes, with some casualties. We bumped into the Russians, gave them what we could, and they gave us lice—not a good experience. They were in very bad shape, wore rags, and some had no shoes. We couldn't do much for them, as we had to move on.²⁶

The Red Army arrived a week later and liberated the former site of the camp, along with approximately 300 prisoners who had been left behind because they were unable to march.²⁷ The Soviets used the site as a field hospital, and after the war it was turned over to the Polish army. The number of prisoners who died in Stalag II D is uncertain. The former commandant, Generalmajor Henke, died in 1956 without facing trial.²⁸ In 1965, the West German government opened an investigation into crimes committed at Stalag II D, with the aim of prosecuting the former Commandant of Prisoners of War in Defense District II, Generalleutnant Josef Lehmann. However, the investigation was dropped in 1976, as Lehmann had died in the intervening time.²⁹

MANNSCHAFTSSTAMMLAGER (STALAG) II E

The Wehrmacht established Stalag II E (map 4b) from Dulag Gross Born on November 9, 1939, in Gross Born (today Borne-Sulinowo, Poland), in Defense District (*Wehrkreis*) II. On June 1, 1940, the camp was converted into Oflag II D. On August 14, 1941, Stalag II E was reestablished in the town of Schwerin.¹ The camp was subordinated to the Commander of

Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*).

The first commandant of Stalag II E in Schwerin was Hauptmann Dr. Franzen. His successor was Major Oberhausen. The camp in Schwerin was located in a clearing in a wooded area near Schwerin Lake (Schweriner Innensee). The prisoners lived in wooden barracks that, shortly after their construction, were described as clean and “modern” by observers from the YMCA. A small garden was planted near the camp.²

While the camp was deployed in Gross Born in 1939 and 1940, it held Polish prisoners of war (POWs). When the camp was deployed in Schwerin, it held Polish, French, Serbian, and Soviet POWs. The number of prisoners in the camp rose as high as 15,000, including 10,000 French prisoners and 4,000 Soviet prisoners. The treatment of the Polish, French, and Serbian prisoners and the conditions in their sections of the camp were generally satisfactory and in compliance with the Geneva Convention relative to the Treatment of Prisoners of War (1929).

The prisoners had access to some cultural and recreational activities, although these took some months to develop after the reestablishment of the camp in Schwerin. By August 1942, the Serbian prisoners had organized a small theater group and performed shows every fourth Sunday. Other cultural offerings, such as the library, however, were minimal at that time (only 20 books were available for 400 Polish prisoners).³ More books for these prisoners arrived later, though, from the YMCA. No religious services were available for the Polish or Serbian prisoners, but the French prisoners held Catholic mass in their chapel every Sunday. While the Polish and Serbian POWs did not have time to organize educational courses for themselves, they did find the time to partake in some sports, including football and table tennis.⁴

The conditions for Soviet POWs were harsh. They faced severe overcrowding, malnutrition, and inadequate sanitation and medical care, which contributed to a high mortality rate.⁵ In 1981, a mass grave containing about 500 Soviet POWs was discovered near the former site of Stalag II E; another such mass grave containing between 450 and 500 bodies had been unearthed 20 years earlier during the initial investigation into crimes committed at the camp.⁶

SOURCES Primary source material about Stalag II E is located in BA-MA (RW 6: 450–453; RH 53-2/16); WASt Berlin (Stammtafel Stalag II E); and BArch B 162/25985 (Ermittlungen infolge der Entdeckung eines Gräberfeldes nahe Schwerin/Mecklenburg mit mutmasslichen Opfern aus den Lagern Stern-Buchholz und Zippendorf des Stalag II E).

MANNSCHAFTSSTAMMLAGER (STALAG) III A

The Wehrmacht established Stalag III A on September 28, 1939, in Luckenwalde (map 4b), about 50 kilometers (32 miles) south of Berlin, in Defense District (*Wehrkreis*) III. On April 30, 1941, part of the staff of Stalag III A was used to create the headquarters of Stalag 333. On December 31, 1941, Oflag III A (also located in Luckenwalde) was dissolved and converted into a subcamp (*Zweiglager*) of Stalag III A. Additional subcamps were located in Brandenburg, Pritzwalk, and Wustrau.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*).

Stalag III A comprised several compounds. All were enclosed within a larger outer camp (*Aussenlager*), which held administrative buildings and the canteen. Prisoners rarely entered the outer camp and, even then, only with special permission. The prisoners lived in about 40 stone barracks in the inner camp (*Innenlager*), which was further subdivided into several smaller sections. Additional German barracks, offices, and storage facilities were located in the forecamp (*Vorlager*). The main camp (*Hauptlager*) was the largest compound, which was divided into sections by nationality. Additional compounds for prisoners of war (POWs) included the East, West, Middle, and South Camps (*Ostlager*, *Westlager*, *Mittel-lager*; and *Südlager*).² The kitchen, infirmary, and quarantine barracks were located in the northern part of the camp. Most

of the prisoners were concentrated in the southwestern part of the camp compound, but Soviet prisoners were confined to the northwestern part of the camp.³

The first commandant of Stalag III A was Oberst Bruno von Westernhagen. In October 1941, he was replaced by Oberst Carl Sturm. Sturm was succeeded by Oberst Georg Treiter in January 1943. In August 1944, Treiter was replaced by Oberst Julius Wolff. The final commandant was Oberst Alfred Lutter, who took over from Wolff in November 1944.⁴ The adjutant was Hauptmann Erich Haack and the counter-intelligence (*Abwehr*) officers were Hauptmann Erwin Heuser and Hauptmann Dr. Werner Kieljahn.⁵ The first camp doctor (*Lagerarzt*) was Dr. Karl-Wilhelm Clauberg, who was succeeded in 1940 by Dr. Friedrich Heuer.⁶ The camp infirmary was led by Oberarzt Dr. Popovic, who was assisted by 12 British and 8 Serbian doctors.⁷ The camp was guarded by personnel from Reserve Battalions (*Landesschützenbataillone*) 303, 305, 307, 316, 326, 333, and 334.⁸ They were assisted by auxiliary police (*Hilfspolizei*) personnel, recruited from local civilians (who guarded Polish, Serbian, and Western Allied prisoners) and regular Wehrmacht personnel (who guarded the Soviet prisoners).⁹ In total, there were about 130 permanent staff and 1,000 guards employed at the camp.¹⁰

Stalag III A held American, Belgian, British, French, Polish, Romanian, Serbian, and Soviet POWs as well as Italian military prisoners. It was a large camp—the largest in Wehrkreis III and one of the largest in the entire Reich, with a constant population of more than 38,000 prisoners and maximum population of 53,617 prisoners in September 1944. Although the number of prisoners registered in Stalag III A was large, the majority of the prisoners did not live within the main camp and were instead deployed outside the camp in the numerous work details (*Arbeitskommandos*) that were subordinate to the camp.¹¹ Most of the Polish prisoners in the camp were employed in the agricultural and forestry sectors in the relatively rural areas surrounding the camp, while many prisoners of other nationalities were employed in various industrial concerns in Luckenwalde.¹² Their deployment outside the camp often brought them into contact with German civilians, with whom relations were mixed; French prisoners recalled that some civilians resented them and expressed a hatred for the French, while other prisoners were able to get along well with the civilian population.¹³

Special labor units (*Sonderarbeitskommandos*) were created for prisoners who had committed violations within the camp or who had attempted to escape. A select unit of guards worked with these units to maintain order within the camp.¹⁴ Serbian officers were for some time put to work in labor details—in contravention of the provision of the Geneva Convention that excepts officers from forced labor—until early 1945 when they were extended privileges under the convention.¹⁵

The first prisoners brought to Stalag III A were Polish prisoners captured during the invasion of Poland in September 1939. When they arrived, the permanent barracks had not been built yet and the prisoners slept in tents. By December

Stalag III A at Luckenwalde. Prisoners on kitchen duty, October 1940.

COURTESY OF ICRC.

1939, there were 19,337 Poles in the camp. The Poles were gradually transferred out to other camps or reclassified as civilian laborers. The first French and British soldiers arrived in the camp in the spring of 1940. The French became and would remain the largest prisoner group in the camp; as of September 10, 1940, there were 41,682 French prisoners, 77 British prisoners, and 1,284 Polish prisoners. Small numbers of Belgian prisoners were also intermittently present in the camp. In April 1941, Serbian prisoners who had been captured during the Axis invasion of Yugoslavia were brought to the camp; there were 4,451 Serbian prisoners in the camp by May 1941. The first Soviet prisoners were brought to the camp in November 1941. After the Italian capitulation, Italian military prisoners were brought to the camp in September 1943.¹⁶ A small number of Romanian prisoners were brought to the camp in November 1944. In January 1945, a group of about 1,500 Americans was transferred to Stalag III A from other camps in the Reich.¹⁷

The prisoners in Stalag III A experienced conditions that varied by nationality. The Polish prisoners who arrived early in the war did not have adequate housing due to the lack of permanent buildings, and their food rations were usually insufficient. The Germans tended to treat Western Allied prisoners well, and their living conditions generally conformed to the requirements of the Geneva Convention. As of August 1940, food rations for the French prisoners consisted of coffee and bread with either marmalade or a piece of sausage at breakfast, lunch at their work site (provided by their employer), and soup and a piece of bread at dinner.¹⁸ The prisoners worked from 7:00 a.m. to 5:00 p.m., with an hour-long break for lunch.¹⁹ There were approximately 4,000 French colonial prisoners from various parts of Africa in the camp.

Health problems such as tuberculosis were common among these prisoners, who were not accustomed to the colder climate of northern Germany, and most of them were sent back to France in the fall of 1940. However, during their time in the camp, they were used as subjects for Max Kimmich's propaganda film *Germanin*, which documented German doctors' efforts to create a treatment for African trypanosomiasis (sleeping sickness).²⁰

The Polish, Western Allied, and Serbian prisoners in the camp had access to some cultural and recreational activities. Religious services for Catholic, Protestant, and Serbian Orthodox prisoners were provided by clergy within the camp. There was a small camp library and the prisoners organized educational courses on various subjects. A small theater troupe and orchestra were created, although their ability to perform together was limited by the distribution of most of the prisoners to work details.²¹ Prisoners also had access to a large sports ground, which was jointly shared: French prisoners had access four days a week, Serbians three days, Italians three days, and British four days.²² There was a French-language camp newspaper entitled *La Double Gamelle (The double mess tin)*.²³ The American prisoners managed to hide two radios in their barracks, which they used to access Allied news sources, such as the BBC; this practice was officially forbidden and highly risky.²⁴

Unlike the Western Allied prisoners, the Soviet prisoners were treated terribly. Their quarters were overcrowded and they received minimal food and medical care. The poor living conditions and lack of proper hygiene and sanitary facilities led to an outbreak of typhus in November in which large numbers of Soviet prisoners died and that resulted in their section of the camp being quarantined.²⁵ As in other camps for Soviet prisoners, the counterintelligence personnel in the camp performed selections (*Aussonderungen*) to separate out "undesirable" prisoners, such as Jews and political commissars, who were taken out of the camp by the Gestapo, SS, or Security Service (*Sicherheitsdienst*) and executed.²⁶ Approximately 5,000 prisoners are known to have died in Stalag III A. More than 4,000 of the dead were Soviets, the majority of whom died in the fall of 1941 and the winter of 1941–1942 and whom the Germans buried in mass graves near the camp.²⁷

In addition to the mistreatment of Soviet prisoners, Nazi racial ideology manifested itself in the treatment of Jewish prisoners in Stalag III A. In late October 1944, camp officials discovered 12 Jews among French prisoners that had recently been transferred to the camp from Stalag I A in Stabæk. They were immediately transferred to Stalag II E in Schwerin, which had been officially designated as the primary site of confinement for French Jewish prisoners.²⁸ American Jews who arrived in the camp from Stalag XII A in Limburg in January 1945 were segregated from the other prisoners in a separate barrack. One of these prisoners, Private Jacob Blumenfeld, recalled that there were between 20 and 30 prisoners, some of whom were not actually Jewish but had Jewish-sounding surnames. Ironically, their segregation led to better living conditions, as the barrack to

which they were confined was less crowded than the main barracks and had radiators for heating, rather than stoves.²⁹ Another Jewish American soldier, Harry First, was not discovered as a Jew until early March 1945. He was held in solitary confinement for four or five days before the camp was evacuated.³⁰

As in most other camps, Italian military prisoners in Stalag III A were also treated poorly, as the Germans viewed them as traitors after Italy's capitulation to the Allies in September 1943. The approximately 16,000 Italians in the camp lived in crowded barracks or in tents, where their living conditions were very primitive. The food and medical care they received was little better than that afforded the Soviets. The best chance for survival among these prisoners was to "volunteer" for service in the special Italian units created by the Wehrmacht, which promised better living conditions and rations than those they experienced in the POW camps. However, despite this incentive to collaborate with the Germans, some Italian prisoners remained defiant and organized a resistance movement within the camp.³¹

Late in the war, conditions deteriorated for all prisoners in the camp regardless of national groups. Prisoners from camps farther to the east, such as Stalag III B in Fürstenberg an der Oder and Oflag 64 in Schubin, were evacuated to Stalag III A.³² This influx of new prisoners resulted in significant overcrowding in the camp; in some places, barracks that had been intended to hold 200 men held as many as 400; other prisoners were forced to live in tents with only straw for bedding. The sanitary conditions in the camp became a serious problem. Food rations also decreased as the camp administration had to feed larger numbers of prisoners with the same amount of food supplies as they had received before the evacuations. Many prisoners bartered with others to obtain additional food. Harry First recalled that he traded his cigarette rations to other prisoners for bread.³³

In late February and early March 1945, as Soviet forces approached from the east, the Germans evacuated the prisoners in Stalag III A westward to Stalag XI A in Altengrabow.³⁴ The Red Army liberated Stalag III A on April 24, 1945.³⁵

MANNSCHAFTSSTAMMLAGER (STALAG) III B

The Wehrmacht established Stalag III B on December 6, 1939, by converting Dulag D in Amtitz into a Stalag. The camp relocated to Fürstenberg an der Oder (today part of Eisenhüttenstadt) (map 4b), in Defense District (*Wehrkreis*) III. On May 15, 1941, Stalag 343 was established using part of the staff of Stalag III B. On June 4, 1942, Stalag III E in Kirchhain became a subcamp (*Zweiglager*) of Stalag III B; from September 25 to December 14, 1944, the camp in Kirchhain operated as a subcamp of Stalag III D in Berlin-Lichterfelde before being returned to Stalag III B. Stalag III B was subordinate to the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis* III). Although it remained within the Reich throughout its deployment, Stalag III B received field post number (*Feldpostnummer*) 02 972 between January 2 and April 27, 1940; the number was struck between January 25 and July 31, 1943.¹

Although Stalag III B officially opened on December 6, 1939, there were no permanent structures at the campsite at that time. The Polish prisoners who were the first to arrive in the camp lived in tents and at a glass factory in Fürstenberg. Even after the first Western Allied prisoners arrived in May 1940, the permanent barracks were not complete, and the prisoners had to live in tents or sleep under the open sky for several months, until the barracks were finally finished in mid-August 1940. There were 40 barracks in the main camp (*Hauptlager*), which was divided into 10 equal sections (four barracks each with a capacity of 1,000 prisoners). The entire main camp was surrounded by two rows of barbed wire. The prisoners' kitchen and canteen were also located in the main camp. Most of the structures used by the camp staff (including the commandant's office, the post office, and the counter-intelligence [*Abwehr*] and guards' offices), as well as the camp infirmary and the arrest barrack were located in the forecamp (*Vorlager*).² The guards lived in barracks in a separate section of the camp about 300 meters (984 feet) south of the main camp; the staff office was also located in this section.³

The main camp was divided in two by the camp street (*Lagerstrasse*). The barracks in the five sections to the east of the

Stalag III B at Fürstenberg an der Oder. American section of the camp, February 1944.

COURTESY OF ICRC.

Lagerstrasse were primarily occupied by French prisoners, while the barracks to the west held prisoners of other nationalities. The Serbian prisoners lived in the barracks previously occupied by the Poles, while the Soviets used the former Dutch barracks. After most of the Serbs were repatriated, their section was used by Italian military prisoners. The Americans initially had three sections in the western part of the camp to themselves; however, they were later given only two sections. French Jews were kept in their own separate barrack. Barrack 6, in the western section of the camp, was a "special" barrack that held prisoners in transit to the Armed Forces Prison (*Wehrmachtgefängnis*, WG) in Graudenz (today Grudziądz, Poland). The Americans later had their own infirmary within their section of the camp. A camp hospital (*Lagerlazarett*) was established in August 1944 after the closure of the Prisoner of War Reserve Hospital (*Kriegsgefangenen-Reservelazarett*) in Guben, about 25 kilometers (15.5 miles) from the camp.⁴

The first commandant of Stalag III B was Oberstleutnant May, who had also been the commandant of Dulag D prior to its dissolution. He was succeeded by Oberst Fritz Steindamm in 1940. On April 15, 1943, Steindamm was replaced by Oberst Dr. Ing. Albrecht Blau. The final commandant of the camp, who took over the position on February 25, 1945, just before the evacuation of the camp, was Oberst Erich Wagner. The deputy commandants, in order, were Korvettenkapitän Dr. Kurt Oberüber, Oberst Karl-Friedrich von Houwald, and Oberstleutnant Richard Ballas. The adjutant was Hauptmann Richard Schmidt, and the counterintelligence officer was Hauptmann Ernst Torgau.⁵

Stalag III B held American, Belgian, British, Dutch, French, Polish, Serbian, and Soviet prisoners of war (POWs) as well as Italian military prisoners. It was a relatively large camp, with a population that remained above 22,000 throughout the war and a maximum population of 52,434 in December 1941. However, the majority of the prisoners registered in

the main camp were not housed there but were instead deployed in the numerous work details (*Arbeitskommandos*) in the area surrounding the camp.⁶ The prisoners who remained in the camp were mainly noncommissioned officers (NCOs), who could not be compelled to work under the Geneva Convention, and those who were unfit to work (*Arbeitsunfähige*). Most of the prisoners in Stalag III B worked in agriculture, forestry, mining, or industry (e.g., for IG Farben) in Fürstenberg and nearby towns. Conditions were generally better in the agricultural work details than those employed in industry, where the food was worse, the labor was more exhausting, and the discipline was stricter.⁷

Maurice Buisson, a French prisoner who arrived at Stalag III B in August 1940, worked in several different work details; his experiences in these different units demonstrate the diversity of conditions even within the work details of a single Stalag. At Kommando 590 in Gallinchen (near Cottbus), he worked on excavation at a shooting range. He recalled that many of the prisoners in this unit were ill with dysentery and malnourished but were nonetheless berated by the commandant of the unit if they were unable to work. In November 1940, Buisson was transferred to Kommando 696 in Hammermühle (near Senftenberg), where he worked on construction projects for the city of Senftenberg. His commander there, an Alsatian named Kieffer, treated the prisoners well and requested additional food for them.⁸

The first prisoners in the camp were Polish prisoners who had originally been held at Dulag D in Amtitz (today Gębice Gubinskie, Poland). As of December 13, 1939, there were 11,922 Polish prisoners in Stalag III B. French and Belgian prisoners arrived from the western front in the spring of 1940, and French prisoners became the largest national group in the camp (and remained so throughout the war); as of September 10, 1940, there were 25,146 French, 509 Polish, and 148 Belgian prisoners in the camp.⁹ The first Serbian prisoners arrived in the camp in the spring of 1941 after the Axis invasion of Yugoslavia that April. The first Soviet prisoners arrived in September 1941. American prisoners were first brought to Stalag III B in the spring of 1943, and, in the summer of that year, 100 Dutch prisoners arrived in the camp. Italian military prisoners were brought to Stalag III B after the Italian capitulation in the fall of 1943; 13,500 Italians had been brought to the camp by October 1943. Small numbers of Belgian, British, and Polish prisoners were intermittently present in the camp between mid-1942 and early 1945.¹⁰

Conditions in Stalag III B varied based on the prisoners' nationalities. The Polish prisoners who made up the original population of the camp were generally treated reasonably well, in contrast to many other camps in the Reich. However, there were several instances in which Polish prisoners were abused and mistreated, including prisoners being tortured and killed by the guards in the camp.¹¹ The Germans generally observed the requirements of the Geneva Convention in their treatment of Western Allied and Serbian prisoners. The sections of the camp where these prisoners lived were

regularly visited by inspectors from the International Committee of the Red Cross and the protecting powers of the respective nationalities.¹² However, at least one incident was reported by a witness at a postwar trial in which two French colonial prisoners were shot and killed in 1940 for stealing food.¹³ Some prisoners who violated camp rules—for example, American prisoners who bartered with French farm laborers for additional food—were locked in the arrest barrack, where their food rations consisted of two pieces of bread and a cup of tea per day.¹⁴

The Polish, Serbian, and Western Allied prisoners had access to some recreational and cultural activities within the camp. The French man of confidence (*homme de confiance*) was a professor who organized the sports, theater, and educational activities for the French prisoners.¹⁵ Religious services were conducted for Catholic, Protestant, and Serbian Orthodox prisoners by clergymen within the camp.¹⁶ In addition to the educational courses and theater, there was also a camp library with 6,200 volumes and a 21-man orchestra.¹⁷ Prisoners attempted to create a cultural life in some of the work details as well. Buisson recalled that while he was working in Kommando 406 near Welzow, the prisoners established a small theater troupe.¹⁸ There was a French-language camp newspaper called *Espoir (Hope)*.¹⁹

As in other camps, the Soviet POWs in Stalag III B were treated horribly, in a manner that violated international law regarding the treatment of POWs. The Soviet prisoners' quarters were overcrowded and unsanitary and they received minimal food and medical care. These terrible conditions led to a high death rate, mainly as a result of malnutrition and diseases such as typhus and dysentery, particularly in the winter of 1941–1942, when more than 1,000 Soviet prisoners died in the space of less than six months. A special Gestapo detachment (*Einsatzkommando*) from Frankfurt an der Oder (commanded by SS-Hauptscharführer und Kriminalsekretär Willi Rüdiger) carried out selections (*Aussonderungen*) of the Soviet prisoners, with the assistance of the Torgau, to identify "undesirable" prisoners, such as Jews and political commissars, who were then sent to concentration camps such as Gross-Rosen and Sachsenhausen and executed.²⁰

In the later years of the war, the conditions in Stalag III B and other camps deteriorated for all groups of prisoners. The Americans who arrived in 1943 were among the first prisoners to experience these worsening conditions and were heavily dependent on outside help in the form of Red Cross food parcels to stave off malnutrition.²¹ Their rations in the last months of the war consisted of a cup of tea in the morning, a bowl of rutabaga soup (sometimes with potatoes) and another cup of tea at lunch, and a cup of tea and four pieces of bread at dinner (earlier they had received a spoonful of jam or butter, but this was discontinued).²²

Conditions for American prisoners in the work details were generally better than those in the main camp; the prisoners' meals were prepared by German civilians and were often more varied and more substantial than the rations they received in the camp. However, the work the prisoners

performed was difficult, with days beginning at 6:30 a.m. and lasting until sundown. A number of Americans working at a nearby coal-fired power plant suffered from both the difficulty of the work and the health hazards from the sooty air.²³ By May 1944, many Americans in the main camp chose to remain there and await assignment to one of the agricultural details rather than engage in that industrial labor.²⁴ Some American prisoners reported abuse from the German guards in the work details. Private Floyd D. Pilcher recalled that he worked the night shift in a detachment unloading railcars in Fürstenberg, and the guards used their rifle butts to hit prisoners who worked too slowly.²⁵

The Americans in the main camp were primarily NCOs who refused to volunteer for work duty (they could not be compelled to work under the Geneva Convention). At first, camp leadership regarded this as evidence that the men were “lax in their military manner” and preferred to spend their time “loafing, doing nothing.”²⁶ By May 1944, however, it had become clear that this was in fact evidence of “passive resistance” among the men.²⁷ Resistance within the camp also took more active forms, as demonstrated by a notable incident in February 1944, when 10 Americans were caught and taken under guard after throwing food to Soviet prisoners in the neighboring camp.²⁸ This behavior was not isolated, as the Americans developed a system for smuggling food to the starving Soviet prisoners. In response, German authorities subjected the American prisoners to reduced rations and random inspections and seizures of goods.²⁹ The Soviet prisoners also attempted their own resistance activities. The Soviet camp doctor organized contacts with the German Communist Party via a confederate German officer.³⁰

In February 1945, the prisoners from Stalag III B were evacuated westward to Stalag III A in Luckenwalde. In at least one instance, a straggling American prisoner, Sergeant Johnson, was shot by the Germans.³¹ In late February and early March 1945, they were evacuated westward once again, toward Stalag XI A in Altengrabow. The Red Army liberated Stalag III B on April 24, 1945, and on April 28 the Soviets also caught up with the marching column that included the former prisoners from the Stalag.³²

COURTESY OF ICRC.

Italians, and 1,120 Americans.³ On December 1, 1944, the camp contained 38,017 prisoners: 2,036 Americans, 631 Belgians, 1,416 British, 17,568 French, 1,046 Italians, 2 Poles, 1,591 Serbs, and 13,727 Soviets. The majority of the prisoners were in labor detachments.

The Western Allied prisoners were treated decently and the conditions in their camp were generally in keeping with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). However, in late 1944 and early 1945, their situation deteriorated rapidly, as Germany's fortunes sank. The treatment of Soviet POWs, by contrast, was inhumane from the outset. A former Soviet prisoner, Il'ia Erenburg, recalled:

In December 1941 I was taken to Germany to the town of Küstrin, to Camp III C, where they hung badge number 15624 on my chest and sent me to the so-called *Lazarett* [sick quarters], located inside the camp and fenced off from the other blocks with two rows of barbed wire. In the *Lazarett* there were eight barracks: two barracks for servicing the infirmary and six for housing the patients, each one holding 250 men. They put me in Barracks C, where men with infectious diseases and wounded men were placed together. No medical aid was provided. They experimented on us. They injected preparations of some kind into the muscle on the left side of the chest and into the vein. Every week we gave two or three test tubes of blood apiece, and once a week they drew a cup of blood from us. During my time

MANNSCHAFTSSTAMMLAGER (STALAG) III C

The Wehrmacht established Stalag III C (map 4b) on June 12, 1940, in Alt-Drewitz (today Drzewice, Poland), in Defense District (*Wehrkreis*) III.¹ Apparently, the Germans used Polish prisoners of war (POWs) to construct the camp, but it is unclear whether they were part of a work detail (*Arbeitskommando*) or an established camp. The camp was subordinate to the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*).

Stalag III C held Polish, French, Serbian (as of May 1941), Soviet (as of September 1941), Italian, British, American (as of September 1944), and Belgian prisoners. The maximum number of prisoners was close to 40,000.² In February 1941, the camp held 19,393 French prisoners, and on July 1, 1941, there were 21,295 prisoners (18,808 French, 2,467 Serbs, and 20 Poles). Beginning in 1942, the number of Serbian prisoners decreased: on June 1, 1942, there were 1,253 Serbs; on October 1, 1943, there were 849; and on October 1, 1944, there were 753. There were 5,923 Soviet prisoners in the camp on April 1, 1942, and 13,455 on October 1, 1942. Starting in the fall of 1943, the camp also held Italian military internees (14,578 on October 1, 1943). On October 1, 1944, the camp had a prisoner population of 31,303: 16,013 French, 1,001 British, 8 Belgians, 1 Pole, 753 Serbs, 10,958 Soviets, 1,449

in the *Lazarett*, I endured typhoid fever and typhus. Cold (closing the windows was forbidden, and every day the floor got damp) and hunger (in the morning they gave us acorn coffee, and for dinner “soup” consisting of unwashed rutabagas in water) reigned in the *Lazarett*. The bread ration was one tinned loaf per 12 persons per day. At night, two German guards behaved with brutality. For farfetched infractions, they beat sick prisoners whom they singled out for punishment, and in the morning the orderlies carried out the dead bodies. With the objective of further increasing the already-high mortality rate in the *Lazarett*, they equipped a special room where “prisoners being punished” who were still alive were frozen to death. The mortality rate in the *Lazarett* was very high. Finally, in March 1942 the discharge of invalids who had “convalesced,” or more simply put, who had survived, was begun. On our left arm they tattooed a number corresponding to the chest badge, and we joined the camp’s *Arbeitskommandos*. I was assigned to work in the bathhouse. The bathhouse served as a decontamination station for newly arriving prisoners, and it always handled both the prisoners who constantly lived in the camp and the labor details that were attached to the camp, made up of prisoners who worked in factories and plants and on farms. I was supposed to operate the shower room, with disinfection/decontamination following. The shower room and the room for disinfection treatment were in a small building, in which for 16 to 18 hours a day, sometimes even 24 hours a day, it was necessary to breathe the heavy steam that came from the filthy bodies and acrid disinfectant solutions. In addition, I, like the other bathhouse workers, was forbidden to leave my workplace for the duration of the whole shift, and even forbidden to enter into conversation with prisoners who did not work in the bathhouse. And thus I worked until September 1944. In September 1944 they arrested me and my fellow worker for having entered into an unlawful conversation with prisoners who had come from the punishment barracks, and we were sent to a rock quarry that was located near Berlin, in the village of Rüdersdorf. Few were able to withstand this punishment and survive. With a pick, I had to break off boulders from the cliff, reduce them to fragments, load them onto a trolley with a capacity of 0.75 cubic meters (26.5 cubic feet), and take the trolley to the lift. Our quota was 35 trolleys per two men per shift. For failure to meet the quota, we were punished, beaten with canes. By the end of November 1944, reduced to the point of complete exhaustion, I ought to have died. But two men saved me. A Russian POW, Dr. Georgii Fedorovich Siniakov, who had started working in the infirmary, and a German interpreter, Corporal Helmut Tschacher.

Thanks to them, I was taken back to the camp and put in a separate cubicle for TB patients, which the German personnel tried to avoid. All this became possible because the situation at the front lines had changed by the end of 1944, and some leniency was shown to us prisoners. For example, the first Russian doctors, drawn from among the prisoners, made an appearance, and the Germans started increasing the bread ration to one tinned loaf per six men per day, and other things. In March 1945 I escaped and joined the forward units of the Soviet Army.⁴

As a result of the inhumane conditions, there was a high mortality rate among the Soviet POWs. According to the Soviet Extraordinary State Commission (ChGK), around 12,000 Soviet prisoners perished; however, casualty figures from the ChGK are often significantly exaggerated and should be viewed accordingly.⁵ In 1941 and 1942, a Gestapo team from Frankfurt an der Oder regularly conducted screenings of the Soviet prisoners to separate out “undesirables,” such as Communists and Jews, who were then sent to Sachsenhausen concentration camp, where they were usually executed upon arrival.⁶ For example, on October 8, 1941, 25 prisoners from the camp were taken to the Sachsenhausen concentration camp and executed.⁷

On March 12, 1945, the camp was liberated by the Red Army. Prior to the arrival of Soviet troops, the Germans tried to evacuate the prisoners to the west. At this time, several dozen American prisoners were killed by Soviet soldiers who did not realize that they were POWs, rather than enemy combatants.⁸

MANNSCHAFTSSTAMMLAGER (STALAG) III D

The Wehrmacht established Stalag III D (map 4b) on August 14, 1940, on the corner of Landweg and Osdorfer Streets in Berlin-Lichterfelde. The existing prisoner of war (POW) labor units in the area, which had previously been subordinate to Stalag III A in Luckenwalde, were reorganized and subordinated to Stalag III D. The new guard units arrived at Stalag III D on August 28, 1940.¹

Stalag III D was the only main POW camp located in a major German city, Berlin. Most POW camps had been built on military exercise grounds or near villages or small cities. Its existence there is somewhat surprising, given the priorities for Polish and French POW labor in 1940: agriculture, first and foremost, followed by forestry, industry (mining, railway construction, the synthetic chemical industry, road construction, and quarries), and state cultural activities.² The camp in Berlin was established for a different reason: to support the Reichsbahn's need to expand the thoroughfares in and around Berlin, which was of particular interest to the General Construction Inspector for the Reich Capital City (GBI), Albert Speer. Following a decree that Hitler issued on June 25, 1940, Speer announced the need for 180,000 laborers to redevelop the capital, of whom 30,000 were to be POWs.

Stalag III D at Berlin-Lichterfelde. Prisoners exercising in the camp, February 1944.

COURTESY OF ICRC.

This order was the catalyst for the construction of a Stalag in Berlin.³

Stalag III D was not a reception and holding camp but a “shadow camp” (*Schattenlager*), as Rolf Keller referred to it;⁴ however, the term “administrative camp” (*Verwaltungslager*) is probably more appropriate. Very few POWs were held in the main camp; instead, as was true of most main POW camps eventually, it provided the infrastructure for the administration of at least 120 labor details (*Arbeitskommandos*) that were distributed across Berlin. The command office of the camps as well as the Labor Office Action Offices were located at 10608 Belle-Alliance Street in Kreuzberg (today Blücherplatz 1/AGB) until the spring of 1942. It was relocated to Tempelhof Ufer 2 no later than 1944.

Stalag III D did not have its own hospital. Ill prisoners were transferred to the Camp Hospitals (*Reserve Lazarets*) 119 (Neukolln) and 128 (Biesdorf). The hospital in Neukolln (at Donau Street 122/27), with 400 beds, was established on October 1, 1940, to treat POWs. The hospital in Biesdorf was established a month later with the same capacity.

Since Polish prisoners were working primarily in agriculture in 1940, most of the prisoners in the main camp at Stalag III D were French. Of the 18,172 prisoners present in the camp in January 1941, 18,160 were French.⁵ Almost all the POWs were working in the labor details, with only a small percentage working within the camp and few unable to work for health reasons. In April 1941, 20,686 of the 21,370 POWs (97 percent) were deployed as laborers and only 684 remained in the camp.⁶ In June 1941, there were 21,322 POWs from the Stalag in labor service with almost exactly half (10,562) doing forced labor for the GBI in Berlin.⁷

The national composition of Stalag III D's population changed in 1942. In 1941, relatively few Soviet POWs were brought to Berlin. However, in August 1941, Speer was informed that he would be able to use 10,000 Soviet prisoners as laborers in the city.⁸ The first transport of Soviet POWs arrived on October 8, 1941, and were sent to Lager

Friedrichsfelde-Ost to work for the Berlin railway directorate (Arbeitskommando 21). Other Soviet prisoners worked at Marienfelde and Grossbeeren. Most of the Soviet POWs who arrived in 1941 came from Defense District VIII (Upper Silesia). In September 1941, they were frequently registered in the camps at Neuhammer (VIII/308) and Lamsdorf (VIII/318). Because, initially, Soviet POWs could only be held and registered in so-called Russian camps (*Russenlager*), in which there were no POWs of any other nationality, and because there was no such Russian camp in Defense District (*Wehrkreis*) III, Soviet POWs who arrived in Berlin in 1941 had always been registered in another Defense District. At the beginning of December, there were still only 58 Soviet POWs in Stalag III D. Only that month did extensive transports of Soviet prisoners arrive in Berlin, and by January 1, 1943, there were 3,703 Soviet POWs.⁹ French prisoners remained the largest group in the camp, however, even as more Soviet POWs were transported to the capital. French and Soviet prisoners comprised more than 90 percent of the population of Stalag III D. However, based on the data from three available overviews, one can see that the largest national group that existed in Stalag III D at that time has disappeared from the statistics. This comprised the Italian military prisoners from January to July 1944. In mid-1943, Italian military prisoners arrived in the camp, and, by January 1944, there were 31,738 registered in Stalag III D; however, their number declined substantially by the end of 1944, and there were no Italian prisoners in the camp by January 1945.¹⁰

Stalag III D also became the site of solemn and propagandistic celebrations as Italian military prisoners made the transition into the civilian workforce. On August 20, 1944, 6,000 Italian military prisoners were released from POW status.¹¹

Little is known about the commanders of the Stalag. Until February 1944, the commanding officer was Oberstleutnant Kleffel; he was followed by Oberst Hans-Joachim Breyer, the former head of the OKW General Department for POWs.¹² Breyer, who had been part of General Hermann Reinecke's General Army Office (*Allgemeines Wehrmachtaamt*) since 1939, may have been removed for expressing concerns about adherence to the Geneva Convention in the camp.¹³ His deputy in 1940 was Major Kühn. Hauptmann Heinevetter was responsible for the allocation of prisoner labor from 1940 to at least 1943. Other officers in the camp were Hauptmann Eichertopf and Hauptmann Paschke. The medical officer in 1941 was Stabsarzt Dr. Wieck.

The guards were primarily members of the 334th and 344th Reserve Battalions (*Landesschützenbataillone*), consisting mostly of elderly soldiers or soldiers who were no longer fit for active service. There were also civilian guards who were appointed as auxiliary police as well as members of the factory guards or private security guards. The French prisoners were generally treated decently by the guards. However, employers complained that French and Soviet POWs were not sufficiently motivated for work and that the guards prevented harsh measures.¹⁴ Even the camp commandant was forced to state that the companies did not have internal

control over the prisoners and threatened civil consequences if they acted to the contrary: "Neither employers nor their employees or any other member of staff have the right to punish the POWs. . . . The main camp can automatically terminate the deployment of the entire labor detail without replacement if the firm or any of its members imposes any punishment [on the laborers]."¹⁵

By contrast, the Italian military prisoners, who were often regarded as traitors, were treated poorly. The commander of a Reserve Battalion forwarded a telegram from the Commander of POWs in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*) to the guards: "The Führer, as a result of many complaints about the laziness of the Italian military prisoners, orders that the guards ensure through sharp measures that they are the most diligent workers and that any negligence is dealt with by harsh measures."¹⁶ The Italian prisoners at Heinrich List KG were treated so poorly that the company complained to the commandant at the main camp. The commander there, a noncommissioned officer named Schulz, beat the Italians several times and took away their warm coats. Additionally, the guards spread rumors about the laziness of the Italians and partly out of self-interest demanded that the company confirm this: "The management is required to provide an immediate assessment of the prisoners' output in the work stations. The management is reminded that such assessment should not be too favourable so as to prevent a withdrawal of the guards."¹⁷ The company replied that the output of the majority of the Italians was satisfactory.

There are very few surviving documents relating to the Stalag command. Files from the companies as well as the Reichsbahn and the GBI are dispersed and rarely give a comprehensive view of the labor details. One of the better documented cases was Arbeitskommando 861, consisting of Soviet POWs, which was deployed primarily at the Bergmann Electrical Plant in Berlin-Wilhelmsruh. In January 1942, there is evidence of a transfer of 75 prisoners and 5 German guards to the work detail.¹⁸ The detail grew constantly until the end of 1942, and by Christmas 1942 consisted of 1,237 Soviet POWs. There were 26 guards, of whom one was an officer and two were NCOs.¹⁹ Sick prisoners were transferred to Camp Hospital 128.²⁰ In the spring of 1942, many of the prisoners were weak, undernourished, and sick because the Wehrmacht let them starve in camps close to the front before they arrived at Stalag III D. The situation improved that summer because of improved weather, better basic rations, and the increasing use of supplementary rations for those prisoners doing heavy labor. As a result, the number of sick prisoners in Kommando 861 from the fall of 1942 was less than in the other company camps, consistently about 15–45 percent lower.²¹

The output of Soviet POW laborers from Stalag III D improved from the summer of 1942. Complaints from the companies only began to increase in the spring of 1944, after the situation at the front began to deteriorate. A report from July 1944 noted that "the labor output of the Soviets in the last few

months, especially since June, has markedly declined. There are an increasing number of cases of refusal to work, escape and supposed ‘illness.’”²² The camp was disbanded no later than early April 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) III E

The Wehrmacht established Stalag III E (map 4b) on February 1, 1941, in Kirchhain, in Defense District (*Wehrkreis*) III. On June 4, 1942, the camp was reorganized as a subcamp (*Zweiglager*) of Stalag III B.¹ The camp was subordinated to the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*).

Stalag III E held American, British, and Commonwealth prisoners of war (POWs), including noncommissioned officers of the Royal Air Force. It was a small camp; the population never exceeded 200 prisoners.² The Germans treated the prisoners decently and the conditions in the camp were in compliance with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929); however, at least one prisoner was shot while trying to escape from the camp.

According to YMCA representatives who visited the camp in March 1942, the camp buildings were well built and in good shape. The men had minimal opportunities for recreational and educational activities due to the small size of the camp; only a few musical instruments were available to the prisoners. Spiritual guidance and religious services were conducted by a theology student, Sergeant N. D. Hennesy, and a small choir was set up.³

SOURCES Primary source material about Stalag III E is located in BA-MA (RW 6: 450–452; RH 53-3/22: Kriegsgefangenenlager/Mannschaftsstammlager III A-E); WASt Berlin (Stammtafel Stalag III E); TNA (TS 26/469: Stalag III E general; WO 309/1999: Shooting of escaped prisoner of war, Stalag III E, Priestwich near Dresden, Germany, 19 May 1942; AIR 40/1911: Camp history: Stalag III/E (Dobriluck-Kirchhain)—Air Force N.C.O.’s July 1941–May 1942); USHMM; and BArch B 162/17759–17760 (Überprüfung des Stalag III E).

Stalag IV A at Elsterhorst. Group of British POWs, date unknown. USHMM, COURTESY OF ABRAHAM LEVI, WS #37233.

MANNSCHAFTSSTAMMLAGER (STALAG) IV A

The Wehrmacht established Stalag IV A (map 4e) on August 26, 1939, in Hoyerswerda, in Defense District (*Wehrkreis*) IV. Starting on September 10, 1939, it was in Elsterhorst, and as of February 1, 1941, it was in Hohnstein.¹ Soviet troops liberated the camp on April 20, 1945. The camp was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

The camp held Polish, French, Belgian, British, Serbian, Yugoslav, Soviet, Dutch, Italian (as of fall 1943), American (as of October 1944), Slovak (as of October 1944), Czech, and Bulgarian prisoners of war (POWs). Stalag IV A was a large camp, with a maximum population of 41,685 in December 1944.² Like most of the larger camps for enlisted men, Stalag IV A consisted of a small main camp and many smaller work detachments (*Arbeitskommandos*) dispersed throughout the nearby region. When the camp relocated to Hohnstein in 1941, it took over an old castle on a hill. As a result, the main campgrounds were more confined than newer purpose-built camps. There were never outdoor recreation facilities sufficient for the prisoners, though for a while the internal barrack situation was sufficient.

Up through 1944 and into early 1945, conditions remained generally adequate for the majority of the prisoners. In April 1944, the International Committee of the Red Cross review assessed clothing, food, and living quarters to be satisfactory. Rooms were regarded as “light and spacious” for Western POWs.³ Some cultural, recreational, and educational activities were available in the camp, despite the fact that most of the prisoners were outside the camp in the labor details. For example, when a representative from the German YMCA visited the camp in June 1942, there were 14 educational courses underway among the French and Belgian prisoners. However, opportunities for religious and spiritual enrichment were limited in the camp (and almost nonexistent in the labor details) due to the lack of clergymen and liturgical materials.⁴ In late 1944 and early 1945, their situation sharply deteriorated.

On the other hand, from the moment of their arrival, the Soviet POWs received treatment that was much worse than Western prisoners received, and in fact it violated all

standards of international law. They were given minimal amounts of poor-quality food and little to no medical care, and they lived in dirty barracks that allowed diseases to spread easily. These conditions resulted in a high mortality rate.

As of October 1944, the majority of the POWs worked on details tasked with duties such as timber work, railway repair and construction, building construction, factory production, and surface mining.⁵ These details were organized into 11 districts and then subdivided into particular work units, which ranged in size from fewer than 10 to over 100 POWs each. Conditions in the work units varied considerably, though in January 1945 overall conditions were still found to be satisfactory to good by international observers.⁶

The situation changed considerably for the worse for the 4,210 British and 2,207 American POWs in the camp just a month later. Visiting the camp at the end of February 1945, the International Red Cross concluded that “the Commandant is prejudiced against the Americans and British.” The report went on, “all the Americans who, only a few months ago, were young men full of strength, have today become physical wrecks.”⁷

The apparent cause of this dramatic decline in health and conditions appears to have been the ongoing Allied air war against Germany, which culminated in the destruction of nearby Dresden during the middle of February 1945. Hundreds of POWs themselves had been in Dresden on work details during the bombing. In response to the unprecedented destruction of the city, the German leadership and guards at the camp sharply reduced rations for American and British POWs and refused to distribute Red Cross parcels to these prisoners.

The POWs began to fall ill at alarming rates, unable to fend off both the cold and the hunger. In one work district, 400 of the 900 Americans were unable to even walk the several miles to their work sites each day. In the span of just a week, three more had died from pneumonia. Prisoners complained of being beaten and kicked by guards when they collapsed from exhaustion. In response to international pressure, the hours worked per day were reduced from 7–10 to just 4.⁸

MANNSCHAFTSSTAMMLAGER (STALAG) IV B

The Wehrmacht established Stalag IV B (map 4e) on September 29, 1939, in Mühlberg, in Defense District (*Wehrkreis*) IV.¹ From September 1942 to February 1, 1943, Stalag IV B had a subcamp (*Zweiglager*) in Zeithain, designated Stalag IV B/Z. The camp was subordinated to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*). The camp commandant in 1941 was Oberstleutnant Sperl, and the chief camp physician was Oberstabsarzt Dr. Krusche.

Stalag IV B initially held Polish prisoners of war (POWs). When the first Polish prisoners arrived in October 1939, there were no buildings in the camp. The prisoners built the first stone barracks, followed by a kitchen and a storeroom; construction of camp facilities by Polish prisoners continued until the spring of 1940. While the camp buildings were constructed, the prisoners lived in the so-called tent camp, composed of tents that were 35 meters long, 12 meters wide, and as high as 3.3 meters tall (115 by 39 by 11 feet). Both the tents and the newly constructed barracks were infested with fleas and other parasites.²

From October to December 1939, more than 17,000 Polish prisoners were registered in Stalag IV B. However, the number of prisoners who passed through the camp is much higher, because some prisoners already registered in other camps were brought through Stalag IV B without being reregistered. Thus, by the spring of 1940, as many as 30,000 Polish prisoners may have passed through the camp.

In the spring of 1940, most of the Polish prisoners were transferred to different camps and were replaced by French and Belgian prisoners. By June 16, 1940, the camp already held 26,000 French prisoners and about 1,000 Belgian prisoners. In 1940, in total, about 60,000 French and Belgian prisoners were registered in the camp, and most of them were transferred to different camps. In April 1941, the first Serbian prisoners were brought to the camp. By May 1, 1941, more than 6,100 Serbians had been registered, although most of them were subsequently transferred to different camps.³

On May 14, 1941, Stalag IV B held 5,885 prisoners: 4,714 French, 962 Serbs, 39 Belgians, 97 Poles, 52 Ukrainians, and

21 Belarusians.⁴ In July 1941, the first British and Soviet POWs were brought to the camp. In mid-1943, Dutch POWs were brought to the camp, followed by Italian military internees in September 1943, American POWs in August 1944, and prisoners from the Warsaw Uprising and Slovak National Uprising in the fall of 1944.

Upon arrival in the camp, all new prisoners were subjected to the same procedure, referred to as “intake” (*Annahme*). All of their personal possessions were taken and inspected while the prisoners themselves underwent a medical examination and were checked for parasites. They then received inoculations against smallpox, typhus, and typhoid fever, after which their heads were shaved to prevent the spread of lice. They were given an opportunity to shower while their clothing was disinfected.⁵ Despite these efforts, the poor hygienic conditions in the camp led to frequent infestations of lice, pubic lice, and fleas, which rendered the barracks “unlivable” at times.⁶

Food was scarce in the camp, and what food was available was often of poor quality. The rations provided were so inadequate that prisoners often resorted to scrounging in garbage bins, hunting for discarded bits of food.⁷ The prisoners who worked in the camp kitchen brazenly stole food and sold it on what became a flourishing black market. While goods such as potatoes were relatively cheap (25 cooked potatoes fetched about 1.7 Reichsmark), items like bread (5–6 Reichsmark for a 1.4 kilogram [3-pound] loaf) and chocolate (10 Reichsmark for 250 grams [almost 9 ounces]) were quite steep. Goods such as soap, which were always in high demand, were also at a premium (3.5 Reichsmark for a small piece).⁸

Despite the problems with vermin and food, the conditions experienced by the Western Allied POWs in Stalag IV B were generally tolerable.⁹ The prisoners had reasonable opportunities for recreation and cultural activities. For example, the prisoners were allowed to build a pool where they could swim by permission of the camp commandant.¹⁰ Prisoners also published handwritten newspapers and magazines. For example, the British prisoners published the handwritten magazine *Cymro*.¹¹

As of March 1943, there were a total of 14 French-speaking clergymen in the camp (13 French and 1 Belgian) who held mass every Sunday. There was no Polish priest in the camp at that time, so the Poles attended the French services. The Yugoslav prisoners had a priest of their own, who held services in the reserve hospital (*Reserve Lazarett*) outside the camp. The library facilities were somewhat limited, with only 4,000 books available in the French language, less than one for every two Francophone prisoners. The library held 315 Polish books, more than enough for the camp’s small Polish population at that time, but only 20 books in Serbo-Croatian. Because few of the prisoners were in labor detachments (*Arbeitskommandos*), many courses were taught in the camp, especially by the French prisoners, who counted many teachers among their ranks. The French prisoners also led a camp orchestra, choir, and theater group. The prisoners had ample access to sports facilities; they played football and volleyball

and held boxing matches, in addition to swimming in the aforementioned pool.¹²

The International Committee of the Red Cross considered the treatment of Western prisoners adequate as late as August 1944, with a good infirmary, regular supply of clothing, and sufficient rations. Although discipline in the camp was considered harsher than others, Western Allied prisoners continued to have significant privileges and facilities not provided to Soviet prisoners.¹³

As events on the western front continued to develop, conditions changed for newly captured troops. The Stalag also began to serve as a transit camp in all but name, for Allied troops only. Between August and November 1944, an estimated 10,000 British and American troops passed through the camp.¹⁴ In January 1945 alone, 8,000 American prisoners were processed through Stalag IV B.¹⁵ Thousands of other captured troops were sent there prior to being reassigned to other camps. Most of the remaining British and American prisoners were noncommissioned officers who did not work.¹⁶ As a result, Stalag IV B was highly centralized and did not have significant numbers of work detachments and subcamps in the surrounding area, unlike many other camps with Western prisoners.

This shift in the nature of the camp had profound consequences for the prisoners’ living conditions. Between July 1944 and February 1945, overcrowding went from episodic to endemic. Prisoners slept two to a bed, with many others on floors and any open space. Barracks quickly fell into disarray, with broken windows, unstable bunks, and poor hygiene. Overcrowding led to a rise in disease and infection in the camp, with many of the men falling ill with diphtheria. Clothing and food supplies were quickly exhausted by new arrivals.

American prisoners were particularly affected by the declining circumstances in the camp, as they often arrived in weakened states. Men recounted forced marches of up to 20 miles per day with only a single loaf of bread for the entire journey from the front lines to the camp. Others arrived after several days in crowded, unsanitary boxcars. In many cases, no medical treatment was offered between capture and arrival at the camp. Given their weakened condition, they were particularly susceptible to problems stemming from overcrowding, with several dying from pneumonia and diphtheria shortly after arrival.¹⁷

As in other camps, the conditions for Soviet POWs were terrible from the start. Their section of the camp was overcrowded, and they were provided little food and medical care, which, combined with deliberate mistreatment, led to a high death rate. Of the 3,026 prisoners known to have died in the camp, 2,368 (78%) were from the Soviet Union.

Stalag IV B was liberated by the Red Army on April 23, 1945. About 30,000 prisoners remained in the camp at that time.

MANNSCHAFTSSTAMMLAGER (STALAG) IV B/Z

The Wehrmacht established Stalag IV B/Z on September 1, 1942, in Zeithain, in Defense District (*Wehrkreis*) IV (map 4e). The camp was located on the former site of Stalag 304 (IV H), which was transferred to Leuven, in Belgium, at the beginning of September 1942. Stalag IV B/Z was not an independent camp but rather a subcamp (*Zweiglager*) of Stalag IV B in Mühlberg (also referred to as Stalag IV B/H, for *Hauptlager*, or main camp).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

Like its predecessor, Stalag IV B/Z held Soviet prisoners of war (POWs), with a maximum population of about 6,600 prisoners.² After the redesignation of the camp as Stalag IV B/Z, the camp in Zeithain also became the site of the main POW hospital in Defense District IV, which was known as Kriegsgefangenen-Reservelazarett IV. Most of the prisoners in the camp at this time were sick prisoners who were sent to the hospital for treatment; healthy prisoners who arrived at Zeithain were either sent to the work details or transferred to Stalag IV B/H, and the prisoners from Stalag 304 who were capable of working had been transferred to Belgium with the camp staff, where they primarily worked in that region's coal mines.³ Only a small percentage of the prisoners who remained in Stalag IV B/Z were healthy enough to be sent out to work; for example, in the population report from January 1, 1943, only 552 of the 3,765 prisoners in the camp (less than 15%) were assigned to work details, a much smaller proportion than in most other camps at that time.⁴

The hospital was divided into two sections: a tuberculosis ward with a capacity of 3,000 prisoners and a "therapeutic section" with a surgical ward, an ophthalmological clinic, and a dental clinic. The hospital eventually reached a capacity of almost 8,000 beds. The hospital was overseen by Wehrmacht doctors, but most of the day-to-day care for the patients was performed by Russian doctors and nurses. Prisoners who were

in the camp during its transition from a regular POW camp to a POW hospital recalled that the conditions improved somewhat during this time, relative to the horrible conditions that had characterized life in Stalag 304; survivors particularly noticed an increase in food rations. However, the hospital often found itself short of medication and the doctors and nurses often provided prisoners with little more than moral support.⁵ It is not known how many prisoners died in Stalag IV B/Z while it operated under this designation; witnesses reported that about two to three people died each day (though this number rose as high as 35 on some days), primarily due to diseases, with smaller numbers of deaths due to hunger and exposure to cold weather.⁶ Stalag IV B/Z was dissolved on February 1, 1943, but the POW hospital continued to function until April 23, 1945, when it was liberated by the Red Army.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) IV C

The Wehrmacht established Stalag IV C (map 4e) on August 1, 1940, in Defense District (*Wehrkreis*) IV and deployed it to

Wistritz bei Teplitz (today Bystrice, district of Dubí, Czech Republic). The reserve hospital (*Reserve Lazarett*) at Bilin (today Bílina, Czech Republic) was subordinate to the camp.¹ Stalag IV C was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

The camp held French, Belgian, British, Serbian, Soviet (from March 1942), Dutch (from July 1943), Slovak (from November 1944), and Romanian (from October 1944) prisoners of war (POWs) as well as Italian military prisoners (from September 1943). It was a large camp, with a maximum population of 47,488 in July 1944.² However, the actual population of the main camp was much smaller than the number of prisoners registered there, because most of the prisoners were assigned to work details (*Arbeitskommandos*).

The Western Allied and non-Soviet Eastern European prisoners were treated decently by the German guards and administrators, and the conditions in their section of the camp were generally satisfactory and in compliance with the Geneva Convention relative to the Treatment of Prisoners of War (1929). However, their situation deteriorated markedly in late 1944 and early 1945, as the circumstances of the war interfered with supply deliveries.

Prisoners in the main camp (*Hauptlager*) had access to some recreational and cultural activities, while limited access to such activities was also available to the prisoners in the work details. Two French priests held mass for the French and Belgian prisoners; the Serbian, British, and Commonwealth prisoners were without religious guidance. There was a library in the camp as well, from which prisoners in both the main camp and the work details could check out books. The French and Belgian prisoners in the camp organized classes in German, French, and Spanish as well as philosophy and other subjects; they also established a small orchestra and theater group. Sporting activities available to the prisoners were limited.³

The treatment of the Soviet POWs was inhumane and in violation of international law regarding the treatment of POWs. They received little food or medical care and lived in squalid conditions with frequent outbreaks of disease, which led to a high mortality rate. The camp was liberated by Soviet troops on May 8, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) IV D

The Wehrmacht established Stalag IV D (map 4e) on August 5, 1940, in Defense District (*Wehrkreis*) IV. The camp was deployed in Neuburxdorf until July 1, 1941, when it relocated to Torgau. On June 1, 1942, Oflag 54 (IV E) in Annaburg was converted into a subcamp (*Zweiglager*) of Stalag IV D, designated as Stalag IV D/Z. In the spring of 1944, Stalag IV D was converted into a returnee camp (*Heimkehrerlager*).¹ Stalag IV D was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*). The last commandant of the camp was Oberst Richter.

Stalag IV D held French, British, Belgian, Polish, Serbian, Soviet, American, Slovak, and Dutch prisoners of war (POWs) as well as Italian military prisoners. It was a large camp, with a maximum population of 52,291 in February 1944.² Observers from the International Committee of the Red Cross (ICRC) visited the camp in late November 1944, at which time it held a nominal prisoner population of 48,630 men. However, only a fraction of these lived in the camp itself; most were assigned to work details (*Arbeitskommandos*) in the area around the camp. For example, of the 5,728 British POWs on the camp roll, only 21 were in the main camp, and of the 320 listed American prisoners, only 1 was in the main camp.³

Nonetheless, the observers found the main camp's quarters to be overcrowded, with excessive numbers of prisoners crammed into the large rooms of the barracks. The supply of coal for the stoves in the barracks was inadequate, meaning that the prisoners were frequently without heat. The prisoners' rations were also regarded as insufficient, both in the main camp and the work details; this situation was particularly hard

Stalag IV D at Torgau. Group of Soviet prisoners of war, date unknown.
COURTESY OF ICRC.

on those in the work details, as they received fewer Red Cross food parcels than prisoners in the main camp. The medical staff of the camp, led by Major Otto of the German Medical Corps, lacked necessary supplies, especially bandages. Furthermore, the prisoners in the main camp were without proper air-raid shelters. The treatment of the prisoners by the guards, however, was generally regarded as within the norms of the Geneva Conventions.⁴

By March 1945, the situation had improved. Six hundred new American prisoners had recently arrived in the camp, of whom 106 remained in the camp, performing maintenance and construction work. These prisoners' efforts included the construction of new latrines, as the old facilities had become inadequate for the number of prisoners in the camp. The supply of coal to the prisoners in the camp had been increased, allowing for proper heating of the barracks. Food rations were in line with expectations. The prisoners prepared their own meals in the camp's kitchen. The prisoners' health was generally good, and the medical staff had been furnished with additional medical supplies, according to a member of the American Army Medical Corps.⁵

The prisoners in the main camp could engage in some recreational and cultural activities, but access to these activities was more limited for the prisoners in the work details. The Serbian and French prisoners had priests available to them in the camp, and the Polish prisoners attended the French Catholic mass. British prisoners were without any clergy and were left to their own devices in spiritual matters. The prisoners had a library that held 1,200 Serbo-Croatian, 1,000 English, and 400 Polish books. Some musical instruments, provided by the YMCA, were available to the prisoners as well. The prisoners in the main camp were allowed to play football twice a week.⁶

The work details ranged in size from fewer than 10 men to several hundred. The type of work was varied, with a mix of agricultural and industrial labor. Those engaged in agriculture typically were in smaller units and assigned to specific farms. Prisoners working in industry were involved in

activities including brick production, steelwork, railway construction, air-raid construction, automotive repair, and sugar refining.⁷

Conditions also differed between the work details. In unit L25 in Lauchhammer, 400 prisoners lived in well-heated and -ventilated wooden barracks and had positive relations with the Germans. By contrast, the smaller Camp 97 in Helmsdorf, which held only 81 prisoners, had hastily constructed buildings and unsanitary washrooms. Men at Helmsdorf also reported being struck by German supervisors for failing to understand instructions that were given only in German.⁸ Such complaints were not uncommon; American private Edward P. Faulkner, who worked as an electrical wireman at the headquarters of the 423rd Infantry Regiment, reported that a German corporal beat another American prisoner for failing to understand his instructions, even though the prisoner did not speak German.⁹ Private First Class Richard M. Stanley, who worked at a sandpit near Heiligenthal, saw a German officer beat a fellow prisoner. Stanley stated that this officer, a disabled veteran of World War I, was regarded by the prisoners as “more or less a sadist.”¹⁰

In most cases, the work was difficult and demanding. In November 1944, British and American prisoners were expected to work 12 hours per day. Increasing work demands did not entail increased rations, however, and the prisoners relied heavily on ICRC food parcels to stave off malnutrition.¹¹ The prisoners’ diet consisted primarily of bread, soup, and potatoes, supplemented with vegetables such as carrots and cabbage, along with small portions of margarine, sausage, and cheese.¹²

Late in the war, prisoners in the work details, particularly those working as industrial laborers or in rail yards, were exposed to American and British aerial bombardments. American private first class Joseph DeFilippo, who worked at the Kuhn and Company lumber factory in Halle, reported that an American private, George Miller, was killed during an air raid on February 24, 1945.¹³ The air-raid shelters offered to the men in the detachments were often inadequate, and they frequently resorted to taking cover in ditches and foxholes or simply scattered into the countryside rather than using the shelter provided by the Germans.¹⁴ In many cases, the men faced this danger because they were working in military-related production or transporting military goods, in violation of the Geneva Conventions. For example, the American prisoners working in Kommando 119 in Halle complained to the Red Cross that they had been unloading rail cars transporting tank and submarine parts. The camp was liberated on April 26, 1945, by the 69th Infantry Division of the American First Army.

(*Wehrkreis*) IV. The camp was under the authority of the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*). On June 1, 1942, the camp was reorganized as Stalag 384.¹

Stalag IV E held mostly Polish, French, Belgian, Serbian, and Soviet prisoners of war (POWs). It was a large camp, with a population of more than 18,000 prisoners and approaching 20,000 prisoners in December 1941 and January 1942.² The guards treated the Western Allied POWs decently, and the conditions in their sections of the camp were generally satisfactory and in accordance with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).

The prisoners had some access to recreational and cultural activities. The French prisoners held mass every Sunday with a French priest; the Polish prisoners had no priest of their own, so they attended the French mass. The Serbian prisoners, the majority of whom were Orthodox, had no religious services of their own. There was a camp orchestra for a brief time; however, it was disbanded when most of its musicians were sent to labor detachments (*Arbeitskommandos*). A small library held about 250 Polish-language books.³

By contrast, the treatment of the Soviet prisoners was inhumane and in violation of the standards of international law concerning the treatment of POWs. They received very little food or medical care and lived in filthy conditions that enabled the spread of diseases, leading to a higher mortality rate than the other POWs experienced.

MANNSCHAFTSSTAMMLAGER (STALAG) IV F

The Wehrmacht established Stalag IV F (map 4e) on February 1, 1941, in Hartmannsdorf, in Defense District (*Wehrkreis*) IV. The camp was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*). There was one subcamp (*Zweiglager*) in Altenburg, which was still operating as of December 4, 1944.¹

Stalag IV F was a large prisoner of war (POW) camp, particularly late in the war, with a maximum population of 48,115 in June 1944. It held predominantly French prisoners captured during the German invasion and, from the fall of 1941, a large number of Soviet prisoners as well.² An influx of over 4,000 British soldiers arrived from the Italian front in October 1943. By February 1945, the camp had over 25,000 prisoners, about half of whom were French. In addition to the French and British, the camp by 1945 had 3,200 Serbian, 2,400 American, and 1,400 Slovak prisoners. Smaller numbers of Belgians, Dutch, Poles, Commonwealth, Soviet, Serbian, Czechoslovak, and Romanian POWs, as well as Italian military internees, were also held at Stalag IV F.³

The main camp structures were large administrative buildings from an old mechanical laundry, which provided much of the prisoner housing. The majority of prisoners were deployed in numerous work details (*Arbeitskommandos*) scattered throughout the region around the camp. By April 1944, there were 790 such work details, which ranged in size from 9 to 200 prisoners. Work and facilities at these details varied considerably, though most of the prisoners performed manual labor. Groups were assigned to railway construction, ditchdigging for air-raid shelters, machine work in a paper factory, and bricklaying.

Conditions in the main camp were generally adequate and conformed to international standards for treatment of POWs. Bomb shelters were available, and one infirmary served the

Stalag IV F at Hartmannsdorf. Prisoners playing soccer, date unknown.
COURTESY OF ICRC.

main camp with 15 additional infirmaries throughout the wider camp system. Camp leaders had their own offices, prisoners their own personal lockers, and despite the size of the camp, facilities were seen as sufficient and not overcrowded. The prisoners slept 18–20 men to a room in double or triple bunks. The main camp had a large sports field, and, while there was no theater as some other camps had, the Western Allied prisoners had access to a movie once a week.

Conditions in the work details were often much worse than those in the main camp. Prisoner representatives for the varying nationalities had limited access to these sites, and in many cases there was little direct oversight or intervention from the German camp authorities. As a result, the conditions in the work details depended on the leadership of the individual units. In some cases, good leadership produced decent conditions, such as in Kommando 9 in Chemnitz, which the International Committee of the Red Cross described as “the best camp the delegate has ever seen.”⁴ However, conditions in most work details were significantly worse. Work hours at camps regularly exceeded 60 hours per week. Due to “exhaustion, pneumonia, and undernourishment” in Kommando G 124, seven prisoners died in a three-week span in the winter of 1944–1945 and 68 percent of the unit was unable to continue working.⁵ Prisoners were routinely beaten and struck by the director of the rubber factory where Kommando 57 worked. Dutch railway workers complained of “meanness” from overseers and Belgian coal miners described dire circumstances.⁶ Particularly toward war’s end, the overcrowding in the main camp coupled with less frequent oversight and fewer supplies led to deteriorating conditions in the work details.

Conditions also varied considerably based on nationality. Western Allied prisoners generally experienced better treatment than their Eastern European counterparts. British and American prisoners received regular Red Cross shipments, and generally the German staff proved more responsive to their complaints. After complaints about the facilities in several work details for American and British prisoners, either

the work details in question were dissolved or the issues corrected. By contrast, Serbian prisoners went months without receiving Red Cross packages and complained that they were treated worse than prisoners of other nationalities.

In the wake of the Warsaw Uprising, several hundred Poles arrived at the camp. The German authorities regarded them as they did Russian prisoners “to whom the Geneva Convention does not apply.”⁷ The maltreatment was particularly pronounced for a group of 191 Polish women who had fought in Warsaw. They were beaten and “not treated like prisoners of war, but like convicts.”

Toward the end of the war, overall camp conditions steadily deteriorated, as there were frequent movements of prisoners into and out of the camp and supply lines and Red Cross parcels became less dependable. American prisoner Sidney Cole stated that he lost about 50 pounds during his time in the camp in late 1944 and early 1945.⁸ American forces liberated Stalag IV F on April 14, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) IV G

The Wehrmacht established Stalag IV G (map 4e) on February 1, 1941, in Oschatz, in Defense District (*Wehrkreis*) IV.¹ The camp was subordinate to the Commander of Prisoners of

War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

Stalag IV G initially held primarily French prisoners of war (POWs) whom the Germans captured in the spring of 1940, along with a few Poles and Belgians. Yugoslavs began arriving in the spring, and Soviets in the summer, of 1941; eventually the Soviets constituted the second-largest group, after the French. British, Dutch, and Italians arrived in 1943, and Americans arrived in the autumn of 1944. On January 1, 1945, Stalag IV G and its subcamps held 15,462 French; 1,476 Poles; 1,308 Yugoslavs; 10,982 Soviets; 4,168 British and Commonwealth prisoners; 3 Belgians; 984 Dutch; 138 Italians; 41 Americans; and 80 Czechs. Stalag IV G counted among the large camps, with a maximum prisoner population of 39,607 in June 1944; however, the actual population in the main camp was very small.² The majority of the prisoners (34,946 in June 1944) were deployed in work details (*Arbeitskommandos*) in the area surrounding the camp. The details ranged in size from 10 to several hundred prisoners.

Because of the highly decentralized nature of the camp, it is difficult to make general remarks about the conditions. The work details were deployed in settings as varied as stone quarries, paper factories, construction sites, and coal mines. Prisoners worked from 8 to 13 hours per day, 6 days a week. The larger units tended to have better access to recreation facilities and doctors, though they were also subject to reduced rations and insufficient supplies at times.

Location also affected the conditions in the work details. Some were assigned to small towns and rural areas, which generally provided safety from Allied bombing operations. Others, however, were located near military installations or other potential targets. On February 27, 1944, an entire 24-man detail of British prisoners was killed by a direct hit during an air raid on Leipzig.

The four hospitals in which Stalag IV G's prisoners were treated also varied in quality. Lazarett Wahren in Leipzig had the best facilities with beds for up to 80 prisoners; it became the designated hospital for any prisoners needing extensive treatment or surgery. By contrast, the Gneisenstrasse hospital in Leipzig had only 25 beds and limited medical supplies and was located half a kilometer (one-third of a mile) from the central train station, which was a primary target for Allied bombers. The other hospitals were located closer to Oschatz in Bad Lausick and Wurzen.

Circumstances changed considerably in the camp with the addition of 700 American prisoners during the early months of 1945. Forced to march long distances from the western front, the prisoners arrived at the camp in horrible condition. They suffered from severe malnourishment and required increased rations and acute medical attention. As an International Committee of the Red Cross official reported after a visit to the camp, "The Delegate met prisoners of war with legs like those of children of 10 years, who were nothing but skin and bones and absolutely unfit for work."³ Despite their condition, the Americans were assigned to 12 work details. At Kommando 204 only 18 of the 45 American prisoners were

able to work. American forces liberated Stalag IV G on April 26, 1945.

SOURCES Primary source material about Stalag IV G can be found in NARA (RG 389).

MANNSCHAFTSSTAMMLAGER (STALAG) V A

The Wehrmacht established Stalag V A (map 4f) from Dulag H on October 16, 1939, in Ludwigsburg, in Defense District (*Wehrkreis*) V. Until the beginning of 1944, the camp had a subcamp (*Zweiglager*) in Münsingen. French troops liberated the camp on April 21, 1945.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*).

Stalag V A initially held Polish prisoners of war (POWs). In 1940, the Polish POWs were transferred to other camps; French and Belgian POWs replaced them. In 1941, Serbian and Soviet prisoners arrived in the camp. In May 1943, Dutch prisoners arrived, and in September 1943, Italian military internees were brought to the camp.

Stalag V A was one of the largest POW camps in Germany, with an average population of over 30,000 prisoners (the majority of them French), and a peak population of 39,460 in September 1944.² The majority of the prisoners worked in labor detachments (*Arbeitskommandos*), deployed throughout the region in locations such as Rosswalden, Salach, Göppingen, and Steinkirch.³ Factories that employed prisoners from Stalag V A included Daimler-Benz A.G. Stuttgart-Untertürkheim⁴ and Deutsche Gelatine Fabrik A.G.⁵

The German guards treated the Western Allied prisoners decently and the conditions in their sections of the camp were generally satisfactory and in compliance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929). They had some access to recreational and cultural activities in the camp. The Catholic prisoners had the opportunity to

attend daily mass and two services on Sunday, provided by a French Catholic priest. Similarly, Protestant prisoners could attend daily evening prayers and a Sunday service led by an Evangelical minister. The camp had a large library with several thousand volumes. Football games were organized twice a week in both the main camp and the labor detachments.⁶

By contrast, the Soviet prisoners were treated very poorly and faced terrible living conditions. Overcrowding, malnutrition, and disease led to a high mortality rate. In September and October 1941, a Gestapo squad screened the Soviet prisoners to separate out “undesirables,” such as political commissars and Jews, who were sent to a concentration camp for execution.⁷

Beginning in November 1944, the camp authorities converted two large horse stables within the main camp into barracks for a Dulag for newly captured Western Allied prisoners. The first prisoners to arrive were Americans captured in late October of that year. The first 200 arrived on November 9 and an additional 150 arrived the following day. Initially, conditions within this Dulag were harsh. The men were kept inside the unlit, vermin-infested stables for days at a time in deplorable hygienic conditions.⁸ However, the conditions soon improved. By February, the stables had been cleaned considerably and overall hygiene and sanitation facilities were satisfactory. Since many of the prisoners in the Dulag had come straight from the front, a doctor from the neighboring POW hospital visited them daily. Prisoners stayed at the Dulag an average of two to six weeks. The facilities were considered adequate for up to 500 men but could quickly become overcrowded, as happened in late January 1945 when over 1,700 were held there.⁹

MANNSCHAFTSSTAMMLAGER (STALAG) V B

The Wehrmacht established Stalag V B on March 28, 1940, on the outskirts of Villingen, Germany, in Defense District (*Wehrkreis*) V (map 4f).¹ The camp was under the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis* V).

Stalag V B held Polish, French, British, Serbian, Soviet (from September 1941), Belgian (from March 1943), and American (from April 1943) prisoners of war (POWs), and (from October 1943) Italian military internees.² Stalag V B was a relatively large camp, with a population that averaged well over 20,000 prisoners and reached a peak of 29,350 prisoners in May 1944.

The camp was divided into separate sections, according to prisoner nationality. Rows of barbed wire separated the sections. The prisoners lived in wooden barracks, or, in the case of the American prisoners, in large wooden huts. These huts were divided into five to seven rooms, each of which housed 20 prisoners. The prisoners slept in double bunk beds, on burlap mattresses filled with wood shavings or straw. The barracks and huts had electric lighting and were generally well ventilated; however, the heating, provided by coal or wood-fired stoves, was poor.³ Some fleas and bedbugs were present. By 1944, the housing in the camp had become slightly overcrowded due to the influx of prisoners, including Americans and Italian internees.

The food, which was prepared by French kitchen personnel, was generally of poor quality; prisoners’ complaints

particularly focused on the potatoes they received, which were often rotten. American first lieutenant John C. Crown stated that in December 1944, the prisoners were fed one-sixth of a loaf of bread and one pint of soup per day. These rations were insufficient to sustain the men, and they suffered from malnutrition and experienced significant weight loss.⁴

The prisoners in the main camp had access to many forms of recreational activities, both physical and intellectual. A French Catholic priest held daily mass in a small chapel and a larger mass on Sunday, which was also attended by Belgian and Polish Catholics. There was also a small contingent of French Protestants. The Serbian prisoners had an Orthodox priest who lived in the Lazarett and came to the camp to lead services on Sunday.⁵ There was a small library in the American section of the camp, which held about 200 books, and a larger library in the Serbian camp. The prisoners also organized a prison orchestra and a theater troupe. The camp had a small athletic field on which the prisoners could play sports like soccer, volleyball, and handball; however, prisoners of different nationalities were generally not allowed to play together.⁶

The sanitary facilities at the camp were generally adequate. New arrivals were taken for showers and delousing in order to prevent the transmission of typhus. There were washrooms with running cold water next to each barrack; the prisoners were given the opportunity to take a hot shower once every two weeks.⁷ The camp infirmary was located in two wooden huts; new huts were built specifically for this purpose in 1944. The new infirmary facilities had a capacity of between 100 and 250 patients, with 10 to 15 patient beds in each room.⁸

Prisoners with more serious illnesses or injuries were taken to the nearby prisoner hospital (*Reservelazarett Rottenmünster*), which was housed in a former hotel. The hospital had a capacity of 550 beds. Part of the hospital was utilized by the Wehrmacht, while the other portion was for POWs. The two sides remained strictly divided.⁹ Because the facility had been in use as a hospital for decades, facilities were on the whole better than the more hastily assembled camp hospitals that serviced most of the other Stalags. Prisoners stayed in smaller wards that held between 4 and 10 patients. They had regular access to hot water and showers. Food was well prepared, and, although it was sometimes low in quality, the German authorities increased the quantity over time. Those who were able had opportunities to walk in designated areas of the grounds. As a result, morale among the prisoners remained high in the hospital.¹⁰ Because of its large size and comparatively modern facilities, by 1944, the hospital also held men from Oflag VIII F, Oflag 64, Stalag II B, Stalag VII A and Stalag Luft I.¹¹

While the conditions and treatment of the Western and Polish POWs was generally in accordance with the Geneva Conventions, treatment of Soviet prisoners was inhumane and contrary to all norms of international law concerning the treatment of POWs; this led to high mortality rates. Gestapo detachments regularly conducted selections (*Aussonderungen*) of "undesirables" (Jews, political commissars, and members

of the Communist Party, as well as any other soldiers deemed to have been "thoroughly Bolshevized") among the Soviet prisoners, who were sent to concentration camps and shot.

Large numbers of prisoners were assigned to work details (*Arbeitskommandos*). The prisoners worked in a number of locations in the area around the camp, performing various types of work, including agricultural and industrial labor, as well as construction. Some prisoners, however, were skeptical of the nature of the work they were asked to perform, believing that it was possibly of a military nature, which would have violated the Geneva Convention. For example, American private Kenneth E. Harsley was part of a work detail that built an electrical facility, which he later told American war crimes investigators he believed was used to build V-1 flying bombs and V-2 rockets.¹²

Late in the war, the prisoners in the main camp faced an additional hazard from American and British aerial attacks. The camp was located in close proximity to a training facility for German ski troops as well as to a factory that constructed aircraft engines. American sergeant William O. Frederick reported that in January 1945, American aircraft bombed and strafed the factory. He did not know whether any prisoners had been wounded or killed as a result, but they had been exposed to the attack.¹³ Similar experiences befell prisoners in the work details who were assigned to industrial labor. Private John J. Urden testified that the men in his work detail were exposed to bombing and strafing on multiple occasions between late May and early July 1944.¹⁴

Stalag V B was liberated by American forces on April 20, 1945. Most of the German camp personnel fled before the Americans arrived.

MANNSCHAFTSSTAMMLAGER (STALAG) V C

The Wehrmacht established Stalag V C (map 4f) on March 28, 1940, in Malschbach, near Baden-Baden, in Defense District (*Wehrkreis*) V. In February 1942, it relocated to Offenburg. Stalag V C had several subcamps (*Zweiglager*), including locations in Malschbach (after the relocation to Offenburg) and Strasbourg (disbanded in early 1944), and probably others in Wildbad and Wildberg.¹ The camp was under the authority of the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*). Beginning on April 14, 1940, Stalag V C had field post number (*Feldpostnummer*) 31 886.

Stalag V C held Polish, French, Belgian, British, Serbian, Soviet, and American prisoners of war (POWs); from the fall of 1943, it also held Italian military internees. The maximum prisoner population in the camp was 30,000.² The camp held significant numbers of Allied colonial troops, including Indians and South Africans, along with a large population of

French colonial prisoners.³ Many of these prisoners were captured in the North African campaign and arrived at Stalag V C via Italian transit camps.⁴ Most of the prisoners were assigned to labor detachments (*Arbeitskommandos*).⁵

The camp at Offenburg consisted of between 20 and 30 wooden barracks, surrounded by barbed wire. Some prisoners worked in the camp workshop building wooden toys.⁶ The men in the labor detachments worked in factories, on railroads, fortifications, and trenches, and in the nearby forests cutting wood.⁷

The Western Allied prisoners were treated decently by the guards for most of the camp's existence. Conditions were generally satisfactory and in accordance with the Geneva Convention relative to the Treatment of Prisoners of War (1929), but from late 1944 through early 1945 conditions deteriorated seriously, in parallel to Germany's military and supply situation. The prisoners had access to some recreational and cultural activities in the camp. There was a Catholic mass every morning and a prayer service every evening, with a larger mass on Sundays. There were also Protestant services on Sundays. The camp library held around 5,000 French books and 115 Polish books. The camp had a 22-man orchestra and a 24-man theater troupe.⁸

By contrast, the conditions experienced by the Soviet POWs were harsh. Their section of the camp was overcrowded and malnutrition and disease were rampant, leading to a high mortality rate. Gestapo detachments regularly conducted selections (*Aussonderungen*) of "undesirables," such as political commissars and Jews, among the Soviet prisoners, who were then sent to concentration camps for execution.

A serious Allied bombing raid on November 27, 1944, led to the evacuation of many prisoners to Stalag V B in Villingen. The raid destroyed many of the camp structures and supply stores. The subsequent evacuation led to a decline in the conditions at Villingen, as overcrowding exacerbated the already increasingly difficult conditions in that camp toward the end of the war.⁹ Other prisoners were evacuated to Stalag V A in Ludwigsburg. Those who were in the labor detachments stayed in their respective locations.¹⁰ American troops liberated Stalag V C on April 20, 1945.

SOURCES Primary source material about Stalag V C is located in BA-MA (RW 6: 450–453; RH 53-5/18: Mannschaftsstammlager V A-D); WASt Berlin (Stammtafel Stalag V C); NARA (RG 389: Records of World War II Prisoners of War); BArch B 162/17644, 17646–17647 (Überprüfung des Stalag V C); USHMM (RG-30.007M, Reel 2); and IWM.

MANNSCHAFTSSTAMMLAGER (STALAG) V D

The Wehrmacht established Stalag V D (map 4f) from Front-stalag 210 on November 29, 1940, in Strasbourg, in Defense District (*Wehrkreis*) V. On March 19, 1942, the camp absorbed Stalag V E in Mühlhausen (today Mulhouse, France).¹ On May 30, 1942, the camp was redesignated Stalag 385.² The camp was subordinate to the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*).

Stalag V D held French, Polish, Serbian, and Soviet prisoners of war. The maximum number of prisoners was 7,300.³ The Germans treated the Western Allied prisoners decently and the conditions in their sections of the camp were generally satisfactory and in compliance with the Geneva Convention on the Treatment of Prisoners of War (1929). However, the treatment of Soviet prisoners was inhumane and their living conditions were harsh, leading to a high mortality rate.⁴

MANNSCHAFTSSTAMMLAGER (STALAG) V E

The Wehrmacht established Stalag V E (map 4f) from Front-stalag 213 on December 1, 1940, in Mühlhausen (today

Mulhouse, France), in Defense District (*Wehrkreis*) V. On March 19, 1942, Stalag V E ceased to be an independent camp and was redesignated as a subcamp (*Zweiglager*) of Stalag V D in Strasbourg.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*). Despite being a permanent camp in Germany, Stalag V E had field post number (*Feldpostnummer*) 11 463, issued between July 12, 1941, and January 26, 1942, and struck on March 1, 1945.

Stalag V E held French, Polish, and British prisoners of war. The maximum number of prisoners was 4,300.² The Germans treated the prisoners decently and the conditions in the camp were generally satisfactory and in compliance with the Geneva Convention relative to the Treatment of Prisoners of War (1929).

SOURCES Primary source material about the Stalag V E is located in BA-MA (RW 6: 450–453) and WASt Berlin (Stammtafel Stalag V E).

Additional information about Stalag V E can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. MANNSCHAFTSSTAMMLAGER (STALAG) VI A

The Wehrmacht established Stalag VI A (map 4a) on October 10, 1939, in Hemer, in Defense District (*Wehrkreis*) VI.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*). The camp commandant was Major Naendrup and his deputy was Major Welker.²

Stalag VI A was one of the largest prisoner of war (POW) camps in Germany, with a maximum population of 106,811 in July 1944; the camp population remained above 100,000 from December 1943 to at least January 1945. The first Polish prisoners arrived in the camp in October 1939. French and Belgian POWs were brought to the camp after the German campaign in Western Europe in the spring of 1940, along with a small number of British prisoners. French prisoners comprised the largest national group in the camp until the

end of 1942. The first Serbian prisoners arrived in the camp in June 1941. Soviet prisoners began to arrive from the eastern front in September 1941, and, from January 1943 on, they were the largest prisoner group. Italian military prisoners were also sent to the camp beginning in December 1943 and thereafter made up the second-largest national group. Although the population of Stalag VI A was very large, only a fraction of the prisoners actually resided in the main camp; the vast majority were assigned to labor details (*Arbeitskommandos*) outside the camp.³ Prisoners in these labor details worked 9–10 hours a day, except those in industry, who worked 12–14 hours; they were allowed two Sundays off work per month.⁴ There was also a hospital (*Lazarett*) within the camp, which had a capacity of 1,000 prisoners.⁵

Stalag VI A was located in barracks that had originally been built for the city garrison of Hemer in 1934, although the buildings were still unfinished when the first prisoners arrived. The Polish prisoners briefly lived in tents in the forecamp (*Vorlager*) before they were allowed into the main camp. At this time, the Jewish prisoners were separated from the other Poles. For the first few months, the Polish prisoners had to sleep on the floor until the wooden plank beds were built. Most Polish prisoners worked outside the camp in the labor details, with the exception of noncommissioned officers and craftsmen. Jews were sent to the hardest work, such as repairing streets in Hemer. Conditions in the camp during this time were poor, as they were in other camps for Polish POWs. Roman Curtis, a Polish prisoner who had concealed the fact that he was a Jew, recalled that the food was very bad until the first Western European prisoners arrived, when conditions improved dramatically. In 1940, the Germans transferred the Jewish prisoners to Stalag VIII A in Görlitz. The other Polish prisoners were also gradually transferred to other camps.⁶

The Germans generally treated the Western Allied prisoners decently and observed the requirements of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). The prisoners' food rations, which were prepared in a large kitchen, were adequate according to a Red Cross observer who visited the camp on July 24, 1944. The observer reported that the sanitary facilities were decent and that the prisoners had the opportunity to take a hot shower once a week. He concluded that the conditions in the camp were "not bad, on the whole."⁷

However, by the last months of the war, conditions had deteriorated. US Army Air Force Flight Officer Robert Thomas, who arrived in Stalag VI A on April 9, 1945, a few days before the camp's liberation, testified that he had not received adequate food or medical care during his time there. He recalled that the prisoners' quarters were very crowded and that vermin were present. The sanitary facilities were inadequate for the number of prisoners, and they were only fed two bowls of watery soup and an eighth of a loaf of black bread each day. Water was also limited. He received only a fourth of a Red Cross parcel and noted that the German guards helped themselves to the food and cigarettes in the parcels.⁸

Western Allied prisoners had access to some recreational and cultural activities within the camp, as a YMCA observer documented during a visit on March 22, 1944. There was a French Catholic priest as well as a Serbian Orthodox priest. The Polish and Belgian prisoners did not have their own religious leaders and instead attended the French mass. Some labor details had their own chaplains, while others received visits from priests who rotated among details during the week. There was a library with about 8,000 volumes, with about 6,500 volumes distributed among the prisoners in the labor details. There was a theater troupe consisting of between 16 and 20 men, with an eight-man orchestra; these groups performed in a theater hall that seated about 300. The prisoners played sports such as football and table tennis with equipment that the YMCA provided. These activities contributed to improved prisoner morale, despite the fact that some prisoners had been in the camp for several years by the time the YMCA observer visited.⁹

As in other camps, conditions for the Soviet prisoners in Stalag VI A were terrible; their treatment violated the established norms of international law regarding POWs. Their barracks were overcrowded, and they received insufficient food and medical care, which led to a high death rate due to malnutrition and disease. The hard labor the prisoners were expected to perform in the coal mines and industrial concerns of the Ruhr region further taxed their already weakened bodies. In January 1945, a coal mining company in Essen reported that at least 32 Soviet prisoners had fled from a labor detail subordinate to Stalag VI in the preceding month alone, primarily to escape from Allied bombing attacks.¹⁰ According to the Stalag VI A Memorial, about 23,900 prisoners are believed to have died in the camp, the vast majority of whom were Soviet. Robert Thomas estimated that about 60 Soviet prisoners died each day during his stay in the camp in mid-April 1945.¹¹

The American Seventh Armored Division liberated Stalag VI A on April 14, 1945. Some of the prisoners had been evacuated to Stalag VI B in Neu Versen earlier that month (including wounded prisoners who were force-marched along with healthy men), but about 20,000 prisoners remained in the camp until it was liberated.¹²

MANNSCHAFTSSTAMMLAGER (STALAG) VI B

The Wehrmacht established Stalag VI B (map 4a) on September 28, 1939, in Neu Versen, near Meppen, in Defense District (*Wehrkreis*) VI. It had three subcamps (*Zweiglager*), located in Oberlangen, Fullen, and Wesuwe. On June 10, 1942, Stalag VI B ceased to be an independent camp and became a subcamp of Stalag VI C.¹ The camp was under the authority of the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*).

Stalag VI B initially held Polish prisoners of war (POWs), who arrived in late September and early October 1939. In 1940, French and Belgian POWs were placed in the camp, and, in 1941, Serbian and Soviet prisoners were added. The camp population reached a maximum of 21,632 in September 1941 but had declined to between 12,000 and 13,000 by the following spring.²

The Germans treated the Western Allied and Serbian prisoners decently and the conditions they experienced were generally satisfactory and in compliance with the Geneva Convention relative to the Treatment of Prisoners of War (1929). However, the treatment of Soviet POWs and their living conditions were inhumane, and they experienced a high mortality rate, mainly from malnutrition and disease. From December 1, 1941, to April 1, 1942, the number of Soviet prisoners in the camp decreased by 1,869. Because the camp was in quarantine during this period due to a typhus epidemic and no prisoners were transferred in or out, it can be inferred that this decrease in population was entirely due to prisoner deaths.

MANNSCHAFTSSTAMMLAGER (STALAG) VI C

The Wehrmacht established Stalag VI C on September 25, 1939, in Bathorn (today part of the municipality of Hoogstede), in Defense District (*Wehrkreis*) VI. The camp headquarters was relocated to Münster in October 1944. The camp was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*). The camp in Bathorn originated as one of the penal camps in the network of camps known as the Emslandlager; within that system, it was designated as Lager XIV. Bathorn, along with eight other Emsland camps, was handed over to the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) in September 1939.¹ The Wehrmacht initially anticipated that these camps would hold about 16,000 prisoners.² Stalag VI C had several subcamps—collectively designated Stalag VI C/Z—all of which had also been part of the Emslandlager system. The original Stalag VI C/Z camps were located at Alexisdorf (Lager XV), Dalum (Lager XII), Gross Hesepe (Lager XI), and Wietmarschen (Lager XIII). On May 13, 1942, Stalag VI C absorbed Stalag VI B in Neu Versen (formerly Lager IX), along with its subcamps at Fullen (Lager X), Oberlangen (Lager VI), and Wesuwe (Lager VIII).³

Stalag VI C was a large camp. It maintained a population of more than 20,000 prisoners for most of the war and reached its maximum population of 28,791 in October 1943. However, more than half of the prisoners registered in the camp were deployed outside the camp in labor details (*Arbeitskommandos*)

and the total population figure reflects the population of the entire Stalag VI C complex, rather than that of the Bathorn camp by itself.⁴ There were around 300 work details in the Emsland region, which were initially divided between Stalags VI B and VI C; when Stalag VI B was folded into Stalag VI C in May 1942, its work details were also transferred to Stalag VI C.⁵ The prisoners in the camp were initially employed in the conversion of the moors of the Emsland region into arable land, as were the prisoners in the northern Emsland camps, which remained under the control of the Reich Justice Ministry (*Reichsjustizministerium*). However, in 1941, there was a reorientation of the labor of the prisoners in the Emsland region in general. In the northern camps, about 80 percent of the prisoners were shifted to work in the defense industry in the Papenburg area and the remaining 20 percent were sent to work on the already-existing agricultural land in the region. However, in the camps in the Stalag VI C complex, this proportion was reversed: more than 80 percent of the prisoners were sent to agricultural labor and the remaining 20 percent to war-related industries or construction projects.⁶

The first prisoners in Stalag VI C were Polish prisoners of war (POWs) who arrived in the camp in October 1939. At the end of 1939, there were 4,886 Polish prisoners in the camp. After the German campaigns in Western Europe in 1940, French, Belgian, and (briefly) British POWs were brought to Stalag VI C. By September 1940, French prisoners were by far the largest group in the camp; there were 13,060 French prisoners, compared to only 2,206 Poles, 943 Belgians, and 343 British. In May 1941, Serbian prisoners captured during the German operations in the Balkans arrived at the camp. The first Soviet prisoners arrived in August 1941; thereafter, they were generally the second-largest population group in the camp after the French, before becoming the predominant prisoner group in the fall of 1944.⁷ Most of the Soviet prisoners were kept in the subcamps (specifically, Alexisdorf, Dalum, Fullen, Oberlangen, Wesuwe, and Wietmarschen) rather than at the main camp in Bathorn.⁸ On September 12, 1943, the first of more than 11,000 Italian military prisoners were brought to the camp, although some were subsequently transferred to other camps.⁹ Finally, on October 2, 1944, about 3,000 women of the Polish Home Army (*Armia Krajowa*, AK), who had been captured during the Warsaw Uprising, were brought to Oberlangen, making that subcamp the only camp in Nazi Germany that exclusively held female POWs.¹⁰

As in other camps, the Polish prisoners whom the Germans captured early in the war lived in poor conditions. Most of the Polish prisoners were sent to work cultivating the moorlands. These included officers, whom the Germans forced to work, despite the stipulation in the Geneva Convention of 1929 that only enlisted men can be required to work. The Polish prisoners held at Stalag VI C were not subsequently reclassified as civilians and converted into forced laborers as Polish POWs in other camps were.¹¹

The French, Belgian, and British prisoners in the camp fared somewhat better. The Germans generally observed the

requirements of the Geneva Convention in their treatment of Western Allied prisoners. The French prisoners created a lively cultural environment in the camp, including an orchestra and a theater troupe.¹² The French and Belgian prisoners were also quickly sent to work as agricultural laborers. Little information is available about the Serbian prisoners who were held at Stalag VI C; Serbian prisoners were generally treated better than Polish and Soviet POWs but usually not as well as Western Allied prisoners.

The Polish, Western Allied, and Serbian POWs had access to recreational, cultural, and religious activities within the camp and in some of the work details. There was a Catholic priest and a Protestant minister in the camp, both of whom conducted services in French; the Polish Catholic prisoners attended the French-language services. By October 1942, there was also a Serbian Orthodox priest in the camp.¹³ There was a camp library with approximately 5,500 books as of May 1942, the majority of which were in French. By April 1943, the number of books had increased to more than 14,000, including more than 800 in Polish and almost 900 in Serbian.¹⁴ Teachers and professionals among the prisoners taught courses on various subjects, including languages, geography, history, mathematics, and technical subjects. There was a 25-man orchestra as well as a 17-man theater troupe that provided entertainment for the other prisoners. These activities were generally performed in French, but Polish prisoners nonetheless attended the shows. There was also a French-language camp newspaper, called *Le Canard en barbelé* (*The barbed duck*). The prisoners also had opportunities to play sports; as of mid-May 1942, there were 12 soccer teams, 14 volleyball teams, and 13 basketball teams in the camp. Other physical activities included boxing and discus throwing. Sports equipment was provided primarily by the YMCA.¹⁵

As in other camps, Soviet POWs received the worst treatment, in violation of the norms established by the Geneva Conventions. In the Stalag VI C system, Alexisdorf, Dalum, Gross Hesepe, and Wietmarschen functioned as "Russian camps" (*Russenlager*, a term used for camps reserved solely for Soviet prisoners), where prisoners were kept under horrible conditions.¹⁶ Because of the length of the trip from the Soviet Union to Stalag VI C in Western Germany, many of the Soviet prisoners were already in very poor shape when they arrived at the camp and died shortly thereafter. Those who reached the camp alive faced extremely harsh conditions, including insufficient food rations (mostly consisting of watery soup and ersatz bread), minimal medical care, and overcrowded housing, which facilitated the spread of diseases such as typhus and dysentery. By September 1941, there were 22,461 Soviet prisoners in the two Emsland Stalags. Thousands of Soviet prisoners died in Stalag VI C between the fall of 1941 and the spring of 1942, mainly due to malnutrition and disease. There is no information indicating that the "weeding out" operations (in which Jews and political commissars were identified and executed or sent to concentration camps and killed) that were performed at other camps for Soviet POWs were carried out at Stalag VI C.¹⁷

After the spring of 1942, conditions improved somewhat as Soviet prisoners began to be used as forced laborers, although the prisoners continued to die at a high rate due to exhaustion and malnutrition. Unlike the Polish and Western Allied prisoners, the Soviet prisoners were primarily sent to work on infrastructure construction and maintenance projects in the nearby area. Between 14,250 and 26,250 Soviet POWs died in Stalag VI B and VI C (existing statistics do not indicate the death tolls for Soviet prisoners in each camp individually).¹⁸ Dead Soviet prisoners from the Emsland Stalags were buried in mass graves near Alexisdorf, Dalum, Fullen, Oberlangen, Wesuwe, and Wietmarschen.¹⁹

The first Italian military prisoners were brought to Stalag VI C in September 1943. As of October 1, 1943, there were more than 11,000 of them in the camp. There were 5,000 Italian officers confined in the Oberlangen camp alone as of March 1944. The Germans generally treated Italian prisoners quite poorly, giving them smaller food rations than Western Allied prisoners and keeping them in overcrowded conditions. In January 1944, the Germans offered increased food rations to Italian prisoners who were willing to work. There were 872 Italian prisoners who died in Stalag VI C, at least 404 of them in Fullen in 1944 alone. These prisoners were buried in the Gross Fullen cemetery.²⁰

The final group of prisoners brought to the camp were Polish women who had fought with the Home Army during the Warsaw Uprising between August and October 1944. The first prisoners arrived at Stalag VI C on December 18 of that year. There were about 3,000 Polish women who were taken prisoner during the uprising, of whom over half were sent to Stalag VI C. The Polish women, confined to the camp in Oberlangen, created a very organized camp structure, led by Lieutenant Irena Mileska (aka Jaga). They set up a system of religious and intellectual activities in the camp to maintain morale and solidarity against the Germans. One barrack within the camp was converted into a chapel, and, in another, lessons were taught on a variety of academic subjects. The cultural activities in the Polish women's camp at Oberlangen were some of the most organized within the entire Emsland POW camp system.²¹

In January 1944, Stalag VI C was dissolved and folded into Stalag VI F in Münster.²² The Oberlangen camp was liberated by the Polish 1st Armored Division on April 12, 1945. The 1,728 female Polish prisoners in the camp were transferred to the abandoned camp at Neusuistrum, northwest of Oberlangen, where they could be kept in better conditions.²³

MANNSCHAFTSSTAMMLAGER (STALAG) VI D

The Wehrmacht established Stalag VI D (map 4a) on September 30, 1939, in Dortmund, in Defense District (*Wehrkreis*)

VI.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*).

The five camp commandants of Stalag VI D were officers from World War I. Their average age was 53. They were Oberstleutnant Kurt Vilmar (b. 1882), from September 29, 1939, to April 14, 1940; Oberst Wilhelm Eck (b. 1870), from April 15, 1940, to June 21, 1942; Oberstleutnant Otto Rotenberg (b. 1883), from June 22, 1942, to March 31, 1943; Oberst Erich Steiniger (b. 1889), from April 1, 1943, to September 24, 1944; and Oberst Ernst Schmidt-Vogelsang (b. 1894) from November 15, 1944, to the end of March 1945.² The prisoners were guarded by personnel from Reserve Battalion (*Landeschützenbataillon*) 468. It was composed of older men and men who were only partially fit for military service, and it was subordinate to the 406th Division z.b.V. from the summer of 1940.³ In January 1940, 350 members of the battalion were quartered in the Catholic Church School and 250 more were quartered in the Vereinshaus Hospice in the city center of Dortmund.

The first prisoners in Stalag VI D were Polish prisoners of war (POWs) whom the Germans captured in the campaign in Poland in September 1939. In 1940, French, Belgian, and British prisoners arrived at the camp. In April 1941, Serbs joined the population. In August 1941, the first Soviet prisoners arrived. Finally, in the fall of 1943, Italian military prisoners were brought to the camp. On October 1, 1944, there were 62,125 POWs in the camp, including 24,162 French, 664 Belgians, 473 Poles, 1,427 Serbs, 30,926 Soviets, and 4,473 Italians.⁴ The maximum prisoner population in the camp was 77,700.⁵

From September 1939 to August 1941, Stalag VI D was located in the largest multipurpose hall in the Ruhr area, the Westfalenhalle. The interior room covered an area of almost 10,000 square meters (108,000 square feet). In the first two years of the war, the number of prisoners quartered in the hall varied from about 3,000 to 5,000. In June 1940, the army began to expand Stalag VI D into the neighboring property of the former Volkspark. Gradually, wooden barracks were constructed there, in which a core workforce of about 10,000 prisoners lived. Eventually, the barracks covered an area of about 17 hectares (42 acres).

For most of the prisoners, Stalag VI D was essentially a transit camp. The State Labor Office of Westfalen (*Landesarbeitsamt Westfalen*), located in Dortmund, was responsible for their distribution to various employers. In Dortmund alone, there were approximately 300 labor details (*Arbeitskommandos*) that Stalag VI D supervised. Almost every industrial concern, colliery, private business, farm, and craftsman, as well as the city and regional governments, employed POW forced laborers from Stalag VI D. The largest employers of prisoners from Stalag VI D built their own camps near their plants, in which their laborers lived. These included the Gelsenkirchener Bergwerks AG, Hoesch AG, and Dortmund-Hölder Hüttensverein in Dortmund. Other employers of POWs included the Zollern Colliery, Minister

Achenbach, Hansa/Westhausen, Minister Stein, and Fürst Hardenberg. The city of Dortmund used POW labor to clean up bombing debris after Allied air raids from September 1944 to March 1945.⁶ The prisoners who were not immediately sent to a labor detail made up the permanent camp population. They were mainly enlisted men, with only a few officers among them. They worked on maintaining the infrastructure of the camp; as doctors, nurses, or barbers; in the German soldiers' canteen; or in the prisoners' kitchen.

The treatment of the Western prisoners by the German administrators and guards was proper, and conditions for these prisoners were generally satisfactory and in keeping with the provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). However, the treatment of the Soviet prisoners was inhumane and violated the standards established by the Geneva Convention. They faced overcrowding, malnutrition, and disease, which led to a high mortality rate. The Germans conducted selections of the newly arrived Soviet prisoners to separate out "undesirables" (such as Jews and political commissars) who were sent to the nearest concentration camp for execution.⁷ Exact figures for the number of deaths in Stalag VI D are not available. It is assumed that more than 6,000 prisoners died as a result of abuse, hunger, sickness, exhaustion, and Allied bombings. Reports of POW killings are scarce. However, some isolated incidents of shootings of Soviet prisoners (in uncertain circumstances) are known.⁸

The French prisoners carried out daily gymnastic exercises to maintain physical fitness and regularly played football. For cultural activities, the prisoners had a library, an orchestra, and a theater group.⁹ There were no labor details as such in the camp itself. The prisoners were strictly forbidden from having social contacts with German civilians, although they were allowed relative freedom of movement within the camp.¹⁰ Illegal contacts occurred, though, such as under-the-table exchanges of goods between prisoners and civilians.¹¹

Beginning in the winter of 1943, there were illegal resistance groups among the prisoners. The resistance groups united prisoners of various nationalities, namely French, Serbian, Belgian, Soviet, and Italian; even some Germans were persuaded to support the resistance. Their activities included, among others, the distribution of leaflets. The purposes of these leaflets included providing information about the war on the eastern front, counteracting German propaganda, calling for acts of sabotage in industrial concerns, and establishing ground rules for conducting illegal activities. The infirmary of Stalag VI D functioned as the center from which the resistance groups in the various labor details could be organized and controlled.¹² A testimony to the organized labor resistance is the paper "Friends on the Ruhr and Rhine," which was published by the Soviet prisoners and distributed by German resistance groups.¹³ This example also demonstrates that there were solidarity actions between the prisoners and civilians.

In view of the extremely difficult living conditions experienced by the Soviet prisoners, in particular, as well as the Italian military prisoners, it is unsurprising that many prisoners attempted to flee from Stalag VI D. However, very few of these attempts were successful; most of the escapees were thwarted or killed.¹⁴ One hundred and six prisoners attempted to flee from the main camp at Stalag VI D in February 1942; in March 1942, this number climbed to 383.¹⁵ Since the number of prisoners in the main camp at this time was only 1,632, the number of prisoners who attempted to escape increased from 6.5 percent to 23.5 percent; that is, almost every fourth prisoner attempted to escape.¹⁶

Many of the flights from the labor details occurred with the support of civilian forced laborers and also with the help of German laborers. At times, civilian laborers provided the POWs with tickets (sometimes traded for chocolate or cigarettes) or allowed them to use their passports, or even provided them with money. In addition, Germans traded primarily with French prisoners for chocolate, cigarettes, and preserves from the prisoners' food parcels, which were provided by the International Red Cross. Through "this black market of goods in short supply," the prisoners supported their escapes, along with the cooperation of shopkeepers who ignored the prohibition for POWs to possess German money.¹⁷ One should note that Soviet POWs generally did not have these options, however.

Among the French prisoners in Stalag VI D was the well-known French writer Robert Merle, who went on to win the highest French literary honor, the Prix Goncourt, in 1949. After the German invasion of France in May 1940, he was brought to Dortmund and forced to work in a factory. With the support of laborers who opposed the Nazi regime, he was able to learn German. However, his escape attempt failed, and he spent three years in German captivity.¹⁸

On the night of May 22–23, 1944, the Westfalenhalle—which, since January 1943, was once again used as an event hall—was bombed, and the neighboring barracks were severely damaged. Another bombing on February 20–21, 1945, completely destroyed the camp. Some of the prisoners remained, totally in shock as a result of the bombardment, while others used the chaotic situation as an opportunity to escape; an unknown number of prisoners were killed. On April 3, 1945, the prisoners from Stalag VI D were transferred to Stalag VI A in Hemer, where tents had been erected for them after the destruction of the main camp; however, the camp command personnel remained at Dortmund.¹⁹ The prisoners were liberated shortly after their arrival at Stalag VI A, on April 14, 1945.

The first criminal proceedings connected with Stalag VI D, regarding the *Aussonderung* ("weeding out") of Soviet POWs of Jewish ancestry and other so-called undesirables by the Gestapo office in Münster, were undertaken by the Central Office of the State Justice Administration for the Investigation of National Socialist Crimes in Ludwigsburg in 1965 and 1966. The witnesses in this case stated that there had been no *Aussonderungen* in Stalag VI D.²⁰ In January 1992,

two former Wehrmacht soldiers were prosecuted for the murder of prisoners in March 1945. Since there was no information about the accused available in Ludwigsburg, the matter was passed on to the Central Office of the State of Nordrhein-Westfalen for the Processing of Criminal Proceedings for National Socialist Mass Crimes at the Public Prosecutor's Office in Dortmund. It opened an investigation of a captain and a sergeant in the camp for murder or aiding and abetting murder, because they had built neither air-raid shelters nor ditches for the prisoners. In addition, they had forbidden the prisoners to leave the barracks during the air raids, causing the deaths of about 245 men. The investigation was closed in November 1992 because the perpetrators could not be found.²¹

MANNSCHAFTSSTAMMLAGER (STALAG) VI E

The Wehrmacht established Stalag VI E (map 4a) on November 15, 1939, in Soest, in Defense District (*Wehrkreis*) VI.¹ The camp was redesignated as Offizierslager VI A on June 5, 1940. Stalag VI E was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*).

Stalag VI E initially held Polish prisoners of war (POWs). In 1940, French, Belgian, and British POWs were sent to the camp. The Germans treated the prisoners decently and the conditions in the camp were generally satisfactory and in compliance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929).

SOURCES Primary source material about the Stalag VI E is located in BA-MA (RW 6: 450–453); in WASt Berlin (Stammtafel Stalag VI E); and TNA (WO 309/1982).

Additional information about Stalag VI E can be found in the following publication: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 1 (Koblenz: self-published, 1986), p. 17.

MANNSCHAFTSSTAMMLAGER (STALAG) VI F

The Wehrmacht issued the order to establish Stalag VI F from Dulag F in Köln-Deutz on October 3, 1939. On November 5, it was ordered to move to a location near Bocholt, in Defense District (*Wehrkreis*) VI, as soon as facilities there were ready. The actual move and designation change took place sometime after December 1. In September 1944, the camp was transferred to Münster (map 4a). Stalag VI F had a subcamp (*Zweiglager*) in Dorsten, which was designated Stalag VI F/Z. In October 1944, the camp also took over Stalag VI C and its subcamps in Alexisdorf, Wietmarschen, Gross Hesepe, Neu Versen, and Fullen.¹ American forces liberated the camp on April 2, 1945.

The camp was under the authority of the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*). From May 1942 until September 1944, the camp commandant was Oberst Hans Jauch

Stalag VI F at Bocholt. Camp entrance, September 1942.
COURTESY OF ICRC.

(1883–1965). The last camp commander was Obersleutnant Simon.²

The first prisoners in Stalag VI F were Polish prisoners of war (POWs) who arrived in the fall of 1939. They were followed by French, Belgians, and British in 1940, Serbs and Greeks in April 1941, Soviets in October 1941, Italian military internees in the fall of 1943, and Americans and Romanians in 1944. The maximum camp population was 36,200.³ At the time of its liberation, the camp held a variety of prisoners including: 1,738 Soviets, 499 Italians, 176 Serbs, 143 Greeks, 106 Romanians, 29 Belgians, and 10 Poles.⁴

The majority of prisoners were assigned to work detachments (*Arbeitskommandos*).⁵ Among the main tasks the prisoners performed were clearing land and digging trenches approximately 5–6 kilometers (3.1–3.7 miles) from the camp.⁶ Some Soviet POWs were sent to a work detachment in Düsseldorf-Reisholz. As in many other such detachments for Soviet prisoners, the men were kept in horrible conditions. German records indicate that numerous prisoners in this work detail died from malnutrition-related conditions⁷ as well as diseases such as tuberculosis.⁸

The camp at Bocholt comprised five blocks of four barracks each, separated by barbed wire; it was enclosed by two rows of barbed wire approximately 2.5 meters (8.2 feet) high with four guard towers.⁹ The facilities at Bocholt were generally adequate. This was not the case after the camp moved to Münster. There, food preparation facilities were inadequate and the water supply was nonfunctional. Sanitary facilities were virtually nonexistent. Living space was badly overcrowded due to an inadequate number of barracks; while the buildings themselves were in decent shape, the conditions within them were filthy. There was no electricity in the camp for several months prior to liberation, nor were there any supplies in the camp canteen.¹⁰

Western Allied prisoners were treated decently by the German guards and administrators. Conditions were generally satisfactory and in accordance with the Geneva

Convention Relative to the Treatment of Prisoners of War (1929). The prisoners in the camp at Bocholt had access to recreational and cultural activities. The camp had a Catholic chapel, which was described by observers as being very well built and ornate. Daily morning mass and larger Sunday services were held; around 100 men could attend each service. The masses were conducted in French, although Dutch-speaking Belgian and Polish prisoners also participated. The camp library had over 9,000 volumes in French and more than 1,500 in Serbo-Croatian. There was a “very good” orchestra and a theater group performed plays and other shows weekly.¹¹ The prisoners had the opportunity to participate in sports, the most popular of which was football.

By contrast, the Soviet POWs were treated very poorly and lived in squalid conditions even before the move to Münster. There were at least 1,736 deaths among the Soviet prisoners; the names of 403 of these prisoners are unknown.¹² Regular selections (*Aussonderungen*) of “undesirables,” such as Jews and political commissars, were conducted; those selected were taken to nearby concentration camps for execution.¹³

In the months prior to the camp’s liberation, particularly after its relocation to Münster, conditions for all prisoners deteriorated badly. Prisoners’ food supplies were inadequate, consisting mostly of soup and turnips; the men received on average around 1,200 calories a day, well below the daily caloric needs of an adult. When the Americans arrived, they found around 1,500 sick prisoners, nearly half the camp population; the majority of the illnesses were cases of tuberculosis, of which 50 were in the contagious stage. There had been 226 deaths among the prisoners (mostly Soviets) in the three months prior to the arrival of American forces. The prisoners had not received parcels from the Red Cross, which were a vital lifeline for prisoners late in the war, since June 1944.¹⁴

The liberated prisoners accused the camp doctor, Georg Hollstein, of allowing Soviet inmates to die of malnutrition and treatable medical conditions. The German camp personnel fled the camp about an hour before the arrival of the Americans, evacuating about 1,500 prisoners with them, at least 26 of whom were Americans.¹⁵ Orders from the Allied forces to the newly liberated prisoners to stay put in the camp were not heeded; as many as 1,000 Russian POWs left the camp.¹⁶

MANNSCHAFTSSTAMMLAGER (STALAG) VI G

The Wehrmacht established Stalag VI G (map 4a) in September 1939 in Bergisch-Gladbach, in Defense District (*Wehrkreis*) VI. On September 15, 1941, it relocated to Bonn-Duisdorf. The camp was under the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*). The camp commandant

was Leopold Crede.¹ Stalag VI G was liberated by American forces on April 10, 1945.

The first prisoners in Stalag VI G were Polish prisoners of war (POWs). In 1940, French, Belgian, and British POWs arrived, followed by Serbians in April 1941, Soviets in August 1941, and Italian military internees in the fall of 1943. On October 1, 1944, the camp held 14,934 French, 10 British, 29 Belgian, 2,179 Polish, 1,112 Serbian, 12,672 Soviet, and 362 Italian prisoners, for a total of 31,298.²

Stalag VI G had a subcamp (*Zweiglager*) in Arnoldswaile, near Düren (relocated to Bergneustadt on December 1, 1944).³ At its largest, the subcamp in Arnoldswaile had several compounds. The largest, for Russian POWs, consisted of 16 large barracks and two washrooms. A smaller compound held French POWs in 5 barracks. The French prisoners had their own camp hospital as well as access to various workstations for mending clothing or repairing shoes.⁴

The camp had two additional subcamps in Hardthöhe and Waldbröl. Hardthöhe, the larger of the two, served as the principal headquarters for the Stalag VI G administrative staff. This area of the camp held barracks for administration and guards as well as a small economic sector. The remainder of the camp consisted of the POW camp hospital and, by late 1944, an expanded set of barracks for POWs. This camp also served as a transit camp (*Auffanglager*) for POWs from the western front.

The second camp, in Waldbröl, provided operational support for the principal Stalag VI G camp. This subcamp consisted primarily of a large stone four-story building. The building contained offices for camp leadership as well as a small prison.⁵

The nearby military hospital at Lingen-Thuin tended to medical cases from Stalag VI G. This hospital comprised three sections: a surgical ward, isolation unit, and general infirmary. While many camp hospitals were hastily constructed and frequently unsanitary units, the Lingen-Thuin complex was modern and more than sufficient for tending to the sick and wounded. International observers regarded the facilities as "perfect." Prisoners had regular access to baths, sheets and clothing were changed frequently, and dressings were cleaned and sterilized as needed. In July 1944, the camp still had excellent reserves of medicine and treatments and remained in many respects a model camp hospital.⁶

Even with the overall high quality of the hospital itself, prisoners still suffered from having insufficient clothing and food. Particularly since ill POWs were expected to receive a higher food ration than others, the lack of food within the camp made them ever more reliant on supplemental nutrition from Red Cross parcels. As for clothing, though undergarments were routinely cleaned, prisoners received only a single hospital gown upon entering the facility and no clothing reserves existed within the hospital.⁷

The majority of prisoners worked outside the camp in labor detachments (*Arbeitskommandos*).⁸ Many of the prisoners in the camp's labor detachments were employed in agriculture; however, some Polish, French, and Soviet prisoners were

employed by various industrial firms in the area, including Massey Harris and Gebrüder Faber in the Ensen district of Köln.⁹

British and American POWs began arriving in Stalag VI G in mid-1943. The camp, however, was never primarily intended for American and British POWs. Instead, they were treated at the camp hospital before being relocated to nearby POW camps.¹⁰ Their treatment was considered correct and better than many comparable hospitals.¹¹ Not until late 1944 did overcrowding present a problem in the camp hospitals.¹²

Western Allied prisoners were treated decently by the guards. Conditions in the camp were generally satisfactory and in accordance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929). Western prisoners had access to some cultural and recreational activities in the camp. There were two churches located on the campgrounds: one in the main camp and one in the infirmary (*Lazarett*). While the French prisoners had a large library available to them, only a small number of Polish and Serbo-Croatian books were available. There was a 25-man orchestra and a theater group, although the latter was no longer active by the spring of 1944. Prisoners participated in a wide range of physical activities; among the most popular were football, boxing, and table tennis.¹³

The Soviet prisoners, by contrast, were treated poorly and lived in terrible conditions. The death rate among the Soviets in the camp was high, mainly due to malnutrition and disease. A former German civilian worker at Stalag VI G reported that the camp was quarantined due to a typhus epidemic between early November and mid-December 1941; this epidemic claimed the lives of a large number of Soviet prisoners.¹⁴

SOURCES Primary source material on Stalag VI G is located in BA-MA (RW 6: 450–453, RH49/125 and RH49/142); WASt Berlin (Stammtafel Stalag VI G); NARA (RG 389: Records of World War II Prisoners of War); USHMM (RG-30.007M, Reel 2); and TNA (World War II Prisoner of War Camps, Code 11: Stalag 6G Bonn Rheinland, Prussia 50-07).

MANNSCHAFTSSTAMMLAGER (STALAG) VI H

The Wehrmacht established Stalag VI H (map 4a) on March 28, 1940, in Arnoldsweiler, in Defense District (*Wehrkreis*) VI. On October 16, 1941, the camp was redeployed to Borisov, in occupied Belorussia. On April 29, 1942, it was redesignated as Stalag 382.¹ Stalag VI H received field post number (*Feldpostnummer*) 08 116 between April 28 and September 14, 1940. That number was struck between September 15, 1940, and January 31, 1941. The camp received a new number, 46 256, between July 30, 1941, and February 28, 1942. That number was struck between March 1 and September 7, 1942.

While it was deployed in Germany, the camp was under the authority of the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*), and, while it was deployed in occupied Belorussia, it was subordinate to the Prisoner of War District Commanders K and P (*Kriegsgefangenen-Bezirkskommandanten K and P*). The camp commandant was Major Wolff Graf von Metternich.

While it was located in Arnoldsweiler, Stalag VI H held Polish, French, British, Belgian, and Serbian prisoners of war (POWs). On September 1, 1941, there were 7,876 prisoners in the camp: 6,326 French, 972 Polish, and 578 Serbian.² While it was deployed in occupied Belorussia, the camp held Soviet POWs.

Stalag VI H was located west of Arnoldsweiler, about 4 kilometers (2.5 miles) from the rail station. The camp was divided between the Polish and Serbian camp to the north and the French and Belgian camp and camp hospital to the south.³ The northern section of the camp was the largest. It was a large open area with eight barracks and a single wash unit on either side. To the east were several air raid ditches.

Across the camp road to the south was the French and Belgian camp. The French prisoners lived in five wooden barracks, larger and older than those in the northern section, and had access to a large wash unit. There were originally only four barracks in the French and Belgian camp, with the remaining prisoners quartered in two large tents until the construction of the fifth barrack was completed in late 1940. Between 12 and 24 men slept in each room, on wooden double bunk beds. The unfortunate prisoners who lived in the tents in 1940 had to sleep on the ground, with only straw provided for bedding. The southern section of the camp had a small vegetable garden, as well as a facility used for breeding rabbits early in the war. Several open areas were used as recreation yards. In addition, there was a small library with 34 French and around 200 Polish books. Three Catholic priests read mass in both French and Polish.⁴

The southwest corner of the camp held several hospital units. New prisoners arriving at the camp were taken to the delousing station. The hospital itself was led by a German doctor named Heisler. There were originally four German doctors and two French doctors, along with four medical assistants. More seriously ill prisoners were sent to the reserve hospital in the city.⁵

Most of the prisoners in the camp during its deployment in Germany were assigned to work details (*Arbeitskommandos*). For example, in October 1940, nearly 10,000 prisoners, the large majority of them French, were in work details, while only 582 French and 181 Polish prisoners occupied the camp itself.⁶

The treatment of the Western prisoners by the German administrators and guards was decent and the conditions were in compliance with the Geneva Convention relative to the Treatment of Prisoners of War (1929). However, the treatment of the Soviet prisoners in the camp in Borisov was inhumane, leading to a high mortality rate, primarily due to malnutrition and disease.

SOURCES Primary source material about Stalag VI H is located in BA-MA (RW 6: 450–452; RH 53-6/19; RH 22, 23); WASt Berlin (Stammtafel Stalag VI H); NARA (RG 59, Box 91); and TNA (FO 916/22).

**MANNSCHAFTSSTAMMLAGER
(STALAG) VI J**

The Wehrmacht established Stalag VI J (map 4a) in August 1940, in Krefeld-Fichtenhain, in Defense District (*Wehrkreis*) VI. In September 1944, the main camp was transferred to Dorsten, which had formerly been a subcamp (*Zweiglager*).¹ The camp was under the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*). Even though it was a permanent camp on German soil, Stalag VI J did have a field post number (*Feldpostnummer*) for a brief time, 09 222, issued between April 28 and September 14, 1940, and struck between September 15, 1940, and January 31, 1941.

Stalag VI J held French, Belgian, British, Serbian, Soviet, and American prisoners of war (POWs) as well as Italian military internees. The largest number of prisoners held at one time was 72,000.² Most prisoners were assigned to the more than 2,000 labor detachments (*Arbeitskommandos*).³ The Germans treated the Western Allied prisoners decently and the conditions were generally satisfactory and in compliance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929).

The camp occupied a roughly triangular patch of land east of Dorsten, bounded to the north by the Lippe River and to the south by a canal.⁴ The camp storage, administrative units, a German infirmary, and a small jail cell were located at the western end of the camp. To the south, off the main road to Dorsten, was the main entrance to the camp. While the entire camp was surrounded with barbed wire, a second row of fencing and wire further divided and secured the prisoners' living quarters, at the eastern end of the complex. Guard towers stood beyond the fencing. Within the prisoner complex, prisoners were divided into subunits by nationality. Prisoners lived in large barracks. By the end of November 1944, the main camp had 18 prisoner barracks. A large recreation area was located in the center of the prisoner compound. Several rows of ditches for air-raid protection were located along the southern edge of this field.

During the last years of the war, conditions deteriorated sharply. By the time the first American prisoners arrived in the camp in 1944, the living conditions were quite poor. The

American prisoners' barracks were of poor construction and allowed cold air to blow in from the outside. The heating stoves functioned properly, but the prisoners were not given sufficient fuel to keep them lit. They slept in wooden bunks with burlap mattresses filled with straw. The barracks were filled with lice, fleas, bedbugs, and other vermin, which multiple attempts by the Germans to fumigate the barracks failed to eradicate.⁵

The prisoners' food rations were also poor. They received a cup or two of ersatz coffee in the morning, a bowl of soup at noon, and one-seventh of a loaf of bread in the evenings. Occasionally, they received some margarine or molasses. The Germans sold the potatoes that were sent to the camp rather than distributing them to the prisoners. To get the potatoes, prisoners had to resort to selling clothing and jewelry to the Germans; Russian prisoners acted as intermediaries for these sales, in order to procure some potatoes for themselves.⁶ American prisoners received half of a Red Cross food parcel every two weeks.

The camp hospital was one of the largest in the German POW camp system. Established in large stone barracks, the hospital had a 1,200-bed capacity. The hospital was divided between two barracks, one for prisoners with minor injuries and illnesses and another for more severe cases. Overcrowding, however, led to a patient load of as many as 1,600 by May 1944.⁷ The majority of beds were two-tiered wooden bunks, while severely ill cases had single metal beds. Individual sections were allocated for treatment of dermatology and otolaryngology cases. The hospital also included an X-ray room and laboratory for analysis.

While facilities were generally above average in the early years of war, the hospital was characteristically undersupplied with medicine.⁸ Moreover, as in the main camp, conditions deteriorated significantly later in the war. Food became a problem in the hospital by late July 1944 because it remained dependent on the main Stalag for rations. The food rations were similar to those in the main camp: ersatz coffee in the morning, soup at noon, and bread in the evening. The water at the camp hospital was sufficient in quantity but had to be boiled prior to consumption. The prisoners' beds were infested with lice and bedbugs.⁹

The doctors at the camp were mainly French and Russian. The Germans gave them virtually no supplies; almost everything they had came from the French Red Cross. The German sergeant in charge of the hospital was described as an enormous man whom the prisoners called "The Pig" due to both his size and his cruel treatment of the prisoners.¹⁰ After the liberation of the camp, he was shot by American soldiers.

Soviet POWs, by contrast, were treated horribly throughout the entire war. They received only minimal food rations and lived in extremely unsanitary conditions. Thousands of Soviet prisoners died from malnutrition,¹¹ from diseases such as tuberculosis and meningitis,¹² and at the hands of the camp guards.¹³ American prisoners in the camp reported that the Soviet prisoners frequently died of starvation and that bodies were carried out of the Soviet section of the camp to be buried

on a daily basis late in the war.¹⁴ Soviet prisoners in the work details in the Düsseldorf area also occasionally fell victim to Allied bombing raids on or near their work sites, such as the attack on Stockum on January 11, 1943; by the last months of the war, even Western prisoners were not immune to the same fate.¹⁵ Regular selections (*Aussonderungen*) were made from among Soviet POWs of "undesirables" (Jews and Communists), who were put to death in a nearby concentration camp.¹⁶

On February 20, 1945, a number of the wounded prisoners in the camp were evacuated to Stalag XI B in Fallingbostel; these men were driven nearly 10 kilometers (6.2 miles) to Düsseldorf in an open truck in the rain, despite the fact that many of them had open wounds or had had limbs amputated.¹⁷ Allied forces liberated Stalag VI J on March 28, 1945.

MANNSCHAFTSSTAMMLAGER **[STALAG] VII A**

The Wehrmacht established Stalag VII A (map 4f) on September 22, 1939, in Landeshut, Germany, in Defense District (*Wehrkreis*) VII, and deployed it to Moosburg an der Isar. It was subordinate to the Commander of Prisoners of War in Defense District VII (*Kommandeur der Kriegsgefangenen im Wehrkreis VII*).¹

The first commandant of the camp was Oberst Hans Nepf. He was succeeded by Oberst Franz Winniwarter on January 5, 1943. The third and final commandant was Oberst Otto Bürger, who took over on October 21, 1943. The camp was guarded by men from the 435th, 436th, 438th, 439th, 440th, 441st, 445th, 506th, 512th, 529th, 530th, and 531st Reserve Battalions (*Landesschützenbataillone*) as well as personnel from Reserve Battalions VI, XII, and XIX/VII.²

Stalag VII A was originally established to hold Polish prisoners of war (POWs) captured during the invasion of Poland in 1939; until December 1939, it also held a few hundred Polish civilians. British and French POWs began to arrive in 1940, followed by Yugoslav prisoners in the spring of 1941. Soviet prisoners entered the camp in the summer of 1941, Americans in 1942; more American and British prisoners passed through the camp in the fall of 1943, as it became a transit camp for prisoners being transferred from POW camps in Italy to camps in the Reich. Italian, Greek, Romanian, Bulgarian, and Slovakian prisoners also joined the camp population, in addition to small numbers of Brazilians, British Indians, and Hungarians.

Stalag VII A was one of the largest POW camps in Germany; the maximum population was approximately 78,900 prisoners, the majority of whom were French.³ However, the actual number of prisoners in the camp at a given time was much lower than the listed population, as most of the prisoners were sent out to the hundreds of work details (*Arbeitskommandos*) subordinate to the camp.

The first commandant, Oberst Nepf, was 63 years old when he took charge of the camp. He was a veteran of World War I and not a member of the Nazi Party.⁴ During his

Stalag VII A at Moosburg. Prisoners walking to the camp kitchen, November 1939.

COURTESY OF ICRC.

tenure, from 1939 to 1943, he generally treated the prisoners well and tried to prevent mistreatment by his subordinates and other German authorities, including the Security Service (*Sicherheitsdienst*) and Gestapo. Nepf expressed an unfavorable opinion of the final commander of the camp Oberst Bürger. He blamed Bürger for the poor reputation the camp acquired later in the war, although he acknowledged that some of the circumstances Bürger faced (particularly the extreme over-crowding of the camp late in the war) were beyond his control.

The conditions faced by Polish POWs in 1939 and 1940 were difficult. In the first months of the camp's existence, the prisoners lived in tents while they built the camp facilities. Prisoners from the Western Allied nations, as well as Yugoslavia, were generally treated in a manner that followed the protocols laid out by the Geneva Conventions of 1929. They were housed in decent conditions and given sufficient food, and the behavior of the guards toward them was mostly civil. However, late in the war, as the camp became more and more crowded, conditions began to deteriorate. In the final months of the war, when evacuees from the camps in the east and prisoners from the battles on the western front arrived, there was a sharp decline in conditions in the camp, which badly affected the welfare of the prisoners.

The prisoners lived in wooden barracks of various sizes, segregated by nationality into compounds that were separated with barbed wire. The barracks were initially sufficient for the camp's population, but after the invasion of the Soviet Union, and particularly after the Italian campaign, the camp became overcrowded. The men slept in wooden bunks with straw mattresses; later, as overcrowding in the camp worsened, some prisoners were forced to sleep on piles of straw on the floor, while others were forced to live in tents.⁵ Heat was provided by wood or coal-fired stoves. Despite German attempts to fumigate the barracks, the prisoners' quarters were usually filled with lice, fleas, and other vermin. Water was supplied by pumps located throughout the

camp and was generally adequate in quantity until the last part of the war.

The rations the Western prisoners received were generally sufficient in quality and quantity early in the war. Even in 1943, when American prisoners arrived in the camp, rations were still at an acceptable level. However, by January 1945, the decline in quantity and quality of food threatened the prisoners' health. American private Herbert Abraham noted that the food he received was insufficient in quantity, consisting of 250 grams (almost 9 ounces) of bread and a cup of soup a day, supplemented with a little bit of cheese or margarine and a little bit of meat once a week.⁶ Malnutrition and intestinal problems related to the poor quality of the food (including moldy bread and sausage) took its toll on the prisoners. American second lieutenant Robin E. Hill testified that he lost about 35 pounds in a span of just over 10 weeks.⁷

The sanitary facilities, like the housing and food situations, were initially adequate for the prisoners in the camp. Enough water was available for them to wash outside their barracks, though lice remained a problem. However, American prisoners arriving at the camp in 1944 and 1945 noted that the water supply at the camp had become so strained that they barely had enough water to drink, much less wash themselves or their clothes.⁸ The prisoners were deloused upon arrival, but the effect was minimal.

The camp had a hospital, staffed mostly by prisoner doctors with a German commanding officer. By 1945, the hospital was badly lacking in medical supplies; its pharmacy had fared slightly better and decent stocks of basic medications were maintained, though the doctors were almost entirely dependent on the Red Cross for medications. The hospital barracks were poorly heated, due to a shortage of coal, and the food there was reported by international observers to be even worse than that provided in the main camp. The hospital was badly overcrowded, with 1,150 prisoners present as of January 27, 1945, several times its intended capacity. Nonetheless, the general state of health of the prisoners was reported to be satisfactory, though the pressures of overcrowding, inadequate sanitary conditions, and poor diet were felt; among the most seriously ill were 15 Yugoslav prisoners suffering from tuberculosis.⁹ Separate hospital facilities existed for the men in the work details. These were located at Landshut, Mühldorf, and Munich; more serious cases were taken to the Reserve Hospital (*Reserve Lazarett*) for POWs in Freising.

Although Allied prisoners were generally treated decently by the Germans, numerous Allied soldiers reported mistreatment by camp personnel at Stalag VII A. Several former prisoners testified that the guards had used police dogs to rouse sleeping prisoners from their beds or to punish them for unruly behavior.¹⁰ Another frequent subject of complaint was the German Sonderführer Krüger, who was in charge of the American camp; he was notorious for allowing his subordinates to beat American prisoners and for taking part in the beatings himself. Other incidents of a more serious nature were also reported. Private William J. Harrington stated that he met an English soldier who had been shot in the back by a

German guard after he had protested the beating of a Soviet prisoner.¹¹

Western Allied prisoners belonging to racial or religious minorities were subject to harsher treatment than their compatriots. Jewish prisoners in the camp were placed in separate barracks; the Germans claimed that their separation from the other prisoners was in accordance with the provisions of the Geneva Conventions that prisoners of different races and nationalities be housed in separate areas. This practice was ended, at least in the American sector of the camp, after a complaint by the American man of confidence to the Red Cross. One hundred and fifty French Jews were not as fortunate, as they were sent to Stalag 383 in Hohenfels in late 1944 or early 1945.¹² In March 1945, American 1st lieutenant Stephen H. Wurtz saw a German guard randomly shoot an African American private. The man had been mending the wire in a fence under the supervision of a German guard when another shot him in the back of the head with a rifle at close range.¹³

The prisoners at Stalag VII A were put to work on a variety of tasks by the German authorities. The work to which these men were assigned was frequently very hard, including agricultural labor and unloading supplies from railcars. The men were often beaten and prodded with rifle butts by the German guards if they did not work quickly enough or follow instructions given only in German. Officers who exercised their right, under the Geneva Conventions, not to work were sometimes beaten for this “offense” as well.¹⁴ Furthermore, men in the work details faced hazards not experienced by those prisoners living in the main camp, such as exposure to air raids.

As in other camps, Soviet POWs were treated cruelly, with no regard for the Geneva Conventions. They were subjected to deliberate starvation, given virtually no medical care, and often beaten or shot by German camp personnel for no reason. Many starved, froze to death, or died of diseases such as typhus during the winter of 1941–1942. Even after this most lethal phase of the war for Soviet prisoners, the Soviets in Stalag VII A still faced awful conditions. They lived in unheated, severely overcrowded barracks (300 men in a barrack intended for 65) and were practically starved to death.¹⁵ The inhumane treatment they received resulted in a high mortality rate relative to other prisoners; of the approximately 1,000 prisoners who died at Stalag VII A during the war, 800 of them were Soviets.

The Munich Gestapo was responsible for selecting “undesirable” Soviet prisoners, including Jews, political commissars, and members of the Communist Party. As of November 26, 1941, 3,578 Soviet POWs had been inspected and 455 had been taken out of the camp. Of these, 267 were sent to Dachau and 188 were sent to Buchenwald, where they were executed immediately upon arrival.¹⁶ In late November 1941, Oberst Nepf attempted to have the selections stopped, but the effect was short lived. He testified after the war that the Gestapo may have taken as many as 1,500 Soviet prisoners to Dachau and Buchenwald by the end of the war.¹⁷

Late in the war, Stalag VII A became a “dumping ground” for prisoners of various nationalities whom the Germans had evacuated from other camps farther east. Then, on April 20, 1945, as American forces approached from the west, the Germans began evacuating the prisoners from Stalag VII A. They marched in the direction of Munich in columns of 500 to 600 men; their likely destination was Dachau, along with a number of prisoners who were being marched in that direction from Buchenwald and Flossenbürg.¹⁸ An untold number died along the way. The American 14th Armored Division liberated Stalag VII A on April 29, 1945.

Stalag VII B at Memmingen. Camp buildings with prisoners in foreground, date unknown.

COURTESY OF ICRC.

MANNSCHAFTSSTAMMLAGER (STALAG) VII B

The Wehrmacht established Stalag VII B (map 4f) on July 25, 1940, in Memmingen, in Defense District (*Wehrkreis*) VII.¹ The camp was under the Commander of Prisoners of War in Defense District VII (*Kommandeur der Kriegsgefangenen im Wehrkreis* VII). The camp commandant was Oberst Franz Winniwarter. His deputy was Oberstleutnant Erich Wöhler.²

Stalag VII B initially held French prisoners of war (POWs). Serbian prisoners arrived in April 1941, followed by Soviet POWs in 1942, American prisoners in 1943, and Italian military internees in October 1943. On October 1, 1943, the camp held 9,295 French, 2,628 Serbian, 4,834 Soviet, 527 Italian, and 918 American prisoners, a total of 18,202 men.³ On January 29, 1945, French prisoners were replaced by Hungarians.⁴ The majority of prisoners (as many as 90 percent) were assigned to numerous labor detachments (*Arbeitskommandos*).

Observers from the International Committee of the Red Cross inspected the camp in August 1944. They reported that the prisoners' living situation was very bad, with up to a quarter of the prisoners (particularly the Americans and Italians who had arrived more recently) living in tents, in an area of approximately 91 by 18 meters (300 by 60 feet). These prisoners slept on the floor, with only bug-ridden straw for bedding. They had no bathing facilities.⁵ The construction of new barracks by the Germans was progressing slowly. The electric lights and plumbing were defective in many of the existing barracks.⁶

The kitchen in which the prisoners prepared their food, by contrast, was clean and well equipped. However, the quality of the food was inconsistent, as the potatoes were sometimes rotten and the bread was often moldy during the summer; however, the men ate it anyway, as it was necessary for their survival. The prisoners received ersatz tea or coffee for breakfast, 8 ounces (0.5 pints) of soup (containing vegetables, potatoes, and sometimes corned beef) for lunch, and three slices of bread and 5 ounces (0.3 pints) of the same soup for dinner. American private Robert W. Lockling believed that food was available and the Germans were allowing them to starve on purpose; he noted that potatoes were rotting in nearby fields in July 1944 while the prisoners received such minimal rations.⁷

The sanitary conditions in the camp were generally good, aside from the tent camp in which the American prisoners lived. The camp infirmary and hospital were very well equipped, with 104 beds available for patients; the hospital impressed international visitors as "up to the requirements of a modern hospital."⁸ Such comments are particularly notable as they came in mid-1944 at a time when many camp hospitals struggled to maintain adequate supplies and medicines. Doctors from the prison population attended to the sick. There was a separate ward with 84 additional beds for patients with contagious diseases. The most common illnesses (for Western prisoners) were gastritis and rheumatism. Infectious diseases were relatively rare.⁹

The Western prisoners had the opportunity to participate in cultural and recreational activities within the camp. Religious services in the French camp and work details were led by 12 Catholic priests. The French prisoners also had access to a library with more than 5,000 books, an orchestra, and a theater troupe, which gave weekly performances. Sporting goods were supplied by the Red Cross, allowing the prisoners to play football and volleyball in their spare time.¹⁰

The treatment of Soviet prisoners was inhumane. They were fed insufficient rations, which led to malnutrition and starvation. They received no medical care and were often subjected to deliberate abuse by the German guards. They were all emaciated and weak, and many of them died from infectious diseases, such as tuberculosis.¹¹ American corporal James E. Witherington witnessed one remarkable incident that is illustrative of the cruelty inflicted on the Soviet POWs by the Germans. In February 1945, more than 100 Soviet prisoners who had been captured near Vienna were brought to the camp. Almost all of them had frostbitten hands and feet. They were herded into a shower room by a German Obergefreiter who ran behind the column of men and kicked them, leaving trails of blood across the floor. Eight of the prisoners died in the shower, either from the Obergefreiter's abuse or from the shock of being thrust into a hot shower after days of suffering from exposure in the freezing cold. Witherington stated that one of the German officers most notorious for abusing Soviet prisoners, Hauptmann Reid, was shot by the Americans after the camp was liberated.¹²

Most of the prisoners who passed through Stalag VII B, regardless of nationality, were sent to one of the numerous work details scattered throughout the area around the camp. They performed a variety of agricultural and industrial tasks for the Germans. However, in some cases, they were assigned to military tasks, in violation of the Geneva Conventions. One such case was reported by American sergeant Alvie J. Cobb, who was sent with about 100 other Americans to camouflage a German military airfield by painting over the runway. They were also forced to dig placements for antiaircraft guns. Cobb knew that it was a military airfield because he had seen bomber aircraft landing there.¹³ The American Seventh Army liberated the camp on April 26, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) VIII A

The Wehrmacht established Stalag VIII A on September 23, 1939, from Dulag VIII A. The camp was located in Görlitz-Ost (today Zgorzelec, Poland) (map 4e), in Defense District (*Wehrkreis*) VIII.¹ Stalag VIII A was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

The original command of Stalag VIII A was located in the Coubiere barracks in Görlitz, and the original Polish prisoner population was quartered in a tent camp (*Zeltlager*) on this site while they built the structures that would become the permanent camp on the military exercise ground in the district of Moys (today the Ujezd district of Zgorzelec, south of the city center). The commandant's office was later relocated to the police barracks in Moys.² The first commandant of Stalag VIII A was Oberst Georg von Kranold, who remained at the camp until July 16, 1940. He was replaced by Oberst Alois Bielas, who held the position until July 2, 1943, when he was replaced by the final commandant, Oberst Rudolf Teichmann. The camp was guarded by personnel from Reserve Battalions (*Landesschützenbataillone* 554 and 590).³

By the time it was completed in late 1940, the main camp of Stalag VIII A consisted of barracks—40 for prisoner housing (20 on each side of the camp street or *Lagerstrasse*), 12 for guard housing, 2 for administrative use, and 2 for kitchens—that were 56,500 square meters (5,380 square feet) in size.

444 MANNSCHAFTSSTAMMLAGER (STALAG) VIII A

Some of the buildings were repurposed for other uses, for example, as canteens, a chapel (one-third of which was used for the camp library), and a theater. Two rows of barbed wire surrounded the camp, with 10 watchtowers spaced along the perimeter. The 20 barracks that eventually became the Soviet prisoners' section of the camp were separated from the other prisoners' barracks with two additional rows of barbed wire. The prisoners' quarters had triple bunk beds along with long wooden benches and tables, and stoves for heating. Each barrack had a 9.3 square meter (100 square foot) washroom in the middle, which had running water and flush toilets (additional latrines were located outside).⁴

Stalag VIII A held American, Belgian, British, French, Polish, Serbian, Soviet, and Slovak prisoners of war (POWs) as well as Italian military prisoners. It was a relatively large camp, with a population that remained above 22,000 throughout most of the war and a maximum population of 47,328 in September 1944. However, most of the prisoners registered in the main camp were not actually housed there but instead distributed in the numerous work details (*Arbeitskommandos*) that were scattered in the area around the camp.⁵ In the early years of the war, there were often as few as 1,000 prisoners in the main camp.⁶ The labor performed in the work details varied considerably and conditions often depended on the character of the German overseer, often a factory manager. In most instances, prisoners registered few complaints about their treatment, but others found themselves forced to work seven days per week. Others worked less but faced difficult conditions. In general, rations were not adjusted to match the nature of the work that the prisoners had to perform.⁷

The first prisoners to arrive in Stalag VIII A were Polish POWs captured during the German invasion of Poland in September 1939. As of December 13, 1939, there were 10,119 Polish prisoners in the camp. Most of these prisoners were transferred to other camps or had their status converted into civilian laborers prior to the arrival of the first French and Belgian troops in the camp in June 1940. As of September 10, 1940, there were 11,603 Belgian, 9,232 French, and 1,402 Polish prisoners in the camp. After the Flemish-speaking Belgian prisoners were repatriated to Belgium, the French prisoners became the largest national group in the camp, and would remain so until 1943; however, Stalag VIII A continued to have a very large population of French-speaking Belgian (Walloon) prisoners relative to other Stalags in Germany. The first Serbian prisoners arrived in the camp on May 5, 1941, after the Axis invasion of Yugoslavia in April of that year. The first Soviet prisoners (a small group, 149 men) arrived in the camp on January 5, 1942; however, they did not remain in the camp, and a permanent population of Soviet prisoners was not present until August 1942. Their numbers continued to increase—partially due to the arrival of prisoners transferred from Stalag 308 (VIII E) in Neuhammer-West (today Świętoszów, Poland) after it relocated to the eastern front—and by September 1943, they had become the largest prisoner group in the camp. The first British prisoners arrived in the camp in the fall of 1943. The Italian military

COURTESY OF ICRC.

prisoners also arrived during this time. Slovak prisoners were brought to the camp after the Slovak National Uprising in the late summer and early fall of 1944.⁸ The final prisoners to arrive in Stalag VIII A were Americans captured during the Battle of the Bulge, who were sent to the camp in December 1944.

Treatment for Western Allied prisoners was generally decent and usually conformed to the requirements of the Geneva Convention of 1929. However, early in the war, the influx of large numbers of French prisoners led to overcrowding in the barracks and shortages of food, with the prisoners depending heavily on Red Cross packages for subsistence.⁹ These prisoners had access to some recreational and cultural activities in the camp. Religious services were provided by Catholic, Orthodox, and Protestant clergy within the camp, and priests traveled to minister to the prisoners in some of the work details as well. There was a camp library, which eventually totaled around 10,000 books, and a field where the prisoners could play soccer, volleyball, and other sports. The prisoners organized educational courses and even cultivated a small garden.¹⁰ A camp theater was established in the summer of 1940 at the insistence of the French and Belgian prisoners. It performed both classical and modern pieces (mostly in French). The first performance was on November 24, 1940, with the camp commandant and several officers in attendance. By 1943, the theater held six to eight performances a month, although the number of shows was curtailed in the winter months to save on heating and electricity costs, and the theater was closed altogether in the fall of 1944.¹¹ One of the most famous cultural events in the camp was the composition and premiere of French composer Olivier Messiaen's *Quatuor pour la fin du temps*.¹²

Medical care in Stalag VIII A was provided by three French and Belgian doctors, supervised by a German chief doctor. The camp infirmary was located in the administrative section of the camp, set apart from the prisoners' quarters. Initially,

the quality of medical care provided was poor due to a lack of supplies, but shipments of medications and equipment from France and the International Committee of the Red Cross ameliorated this situation. By the end of 1941, with assistance from the French government, a separate camp hospital was established, with a larger operating room, an isolation ward for infectious diseases, and a psychiatric counseling station.¹³

As in other camps, Soviet POWs in Stalag VIII A received the worst treatment, and the conditions in which they lived violated the requirements of the Geneva Convention. They lived in overcrowded and unsanitary quarters that were infested with disease-carrying lice, and they received minimal food rations and medical care. The death rate among Soviet prisoners was very high, due to a combination of malnutrition and the rapid spread of diseases, such as typhus and dysentery, through their section of the camp. The Soviet prisoners were completely isolated from the other prisoners, and they had no opportunity to participate in the recreational activities enjoyed by the other prisoners. After early 1942, many of them were sent to work in heavy industry and mining work details in Silesia.¹⁴ The Gestapo conducted selections (*Aussonderungen*) of Soviet prisoners in the camp to separate out "undesirables," such as Jews and political commissars, who were then sent to concentration camps (mainly Gross-Rosen) and executed.¹⁵

Late in the war, the conditions in Stalag VIII A deteriorated for all prisoner groups, including the previously relatively privileged British. Of the 2,918 British prisoners at Stalag VIII A at the end of May 1944, 1,047 were in the main camp.¹⁶ There, prisoners lived in adequate shelters and ate proper rations. The camp infirmary, which treated minor cases, was well equipped and had beds for several hundred patients. The larger camp hospital had full operation facilities and lacked only medication, as was typical throughout the POW camp system. Prisoners had access to a theater, library, and sports ground, with a full selection of games, activities, and musical instruments. Although there were issues regarding heating and infestations, the camp overall was regarded as up to international standards. The primary complaint in the main camp concerned a special barrack (*Sonderbaracke*) that held men who were either on trial or already convicted and awaiting transfer. This barrack had vermin infestations, was overcrowded, and lacked lighting and proper sanitation.¹⁷

By January 1945, the conditions in Stalag VIII A had become more severe. American Sergeant Harold P. White, who was imprisoned in the camp at that time, recalled that the American prisoners' barracks were very crowded and poorly heated and that the prisoners received very poor food rations—a quarter of a ration cup of vegetable soup, two or three potatoes, and between a fifth and a sixth of a loaf of bread.¹⁸ Sergeant Frank A. Reeder, who was also in the camp at that time, stated that several wounded prisoners did not receive adequate medical care; although there were still medical personnel in the camp, they were not provided with medications or even such basic supplies as bandages. Sergeant Reeder also noted that the prisoners slept two men to a bunk because they had to share blankets, as the Germans did not provide

enough bedding for each prisoner.¹⁹ Sergeant Alvin W. Eaton testified that sanitary conditions in the American section of the camp were poor and that lice were rampant in the American prisoners' barracks.²⁰ Master Sergeant Paul McMillan recalled that there was no hot water in the camp and the prisoners were only able to shower twice a month. However, Master Sergeant McMillan also stated that he thought the leading German officer in the American section of the camp "did everything in his power to improve conditions for the Americans."²¹

As the Red Army advanced westward through Poland in late 1944, the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) began planning the evacuation of the Stalags in Defense District VIII. By January 1945, the prisoners in Stalag VIII A were aware the evacuation was imminent. The evacuation marches began on February 16, 1945, when there were 43,958 prisoners remaining in the camp. The first column of prisoners, about 30,000 men in total, marched for about two weeks until it reached the town of Meissen, where it was divided into two groups. The first, larger group was sent westward to Bad Sulza, and eventually arrived at Stalag XI A in Altengrabow on March 25. The second, smaller group was marched through the Sudetenland to Bavaria, a total distance of more than 360 kilometers (224 miles). The conditions experienced by the prisoners on the forced marches westward were terrible, and many prisoners suffered from dysentery, hunger edema, and frostbite. They also became severely malnourished as they were fed little more than thin soup, raw potatoes, and crusts of bread.²² Both of the prisoner columns were eventually liberated by American and British forces.²³ The Red Army liberated the abandoned camp site of Stalag VIII A on May 8, 1945.²⁴

MANNSCHAFTSSTAMMLAGER (STALAG) VIII B

The Wehrmacht established Stalag VIII B (map 4e) from Dulag VIII B on October 4, 1939, in Lamsdorf, Oberschlesien,

Germany (today Łambinowice, Poland). On September 17, 1942, a subcamp (*Zweiglager*), designated Stalag VIII B/Z, was created in Teschen (today Český Těšín, Czech Republic); this camp was dissolved on November 18, 1943. On December 2, 1943, the headquarters of Stalag VIII B were transferred to the camp at Teschen and the camp at Lamsdorf was redesignated as Stalag 344. Reserve Hospital (*Reserve Lazarett*) Cosel was also subordinate to Stalag VIII B.¹

Stalag VIII B was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). The first commandant of the camp was Oberstleutnant Castell-Castell; he was succeeded shortly thereafter by Oberstleutnant Nickisch von Rosenegk. Nickisch von Rosenegk was only the commandant for a short time and was replaced on September 9, 1940, by Oberst Dr. Bornemann. Bornemann left the position on January 25, 1941; it is unclear who was in command immediately after his departure, but, by March 1941, Major Trenka had been installed as the new commandant. After May 8, 1941, he was replaced by Oberstleutnant Hedicke, who remained until August 1, 1941. He was then succeeded by Oberstleutnant Minzinger, who was succeeded by Oberst Ritter von Poschinger on October 25, 1941. Ritter von Poschinger remained the commandant until September 11, 1942, when the camp's longest-serving commandant, Kapitän zur See Gylek, took over. The final commandant of Stalag VIII B was Oberst Thielebein, who succeeded Gylek on December 5, 1944. The camp was guarded by personnel from the 337th, 398th, 427th, 438th, 439th, 515th, 559th, 561st, 565th, 586th, 590th, and 749th Reserve Battalions (*Landesschützenbataillone*).²

Stalag VIII B held prisoners of war (POWs) from Poland, Belgium, France, Britain, Yugoslavia, Greece, the Soviet Union, the United States, and Romania as well as Italian military internees. The maximum camp population was 97,646, and as of mid-1943, it was the largest POW camp in Germany.³ However, the official camp population figures are generally much higher than the number of prisoners who were detained in the camp at any given time, since most prisoners were sent to work details (*Arbeitskommandos*) in the surrounding area.

On August 26, 1939, the Wehrmacht created a transit camp (Dulag) on the site for the expected influx of Polish POWs. The first prisoners arrived on September 5. On October 4, 1939, the Germans redesignated the camp as a Stalag. By this time, 43,000 prisoners had already passed through the camp, and a total of 270 work details had been created, employing 6,669 prisoners, primarily in agriculture.⁴ Conditions in these work details were generally poor. Regulations on working hours were often ignored and prisoners regularly died of exhaustion. The poor sanitary conditions in the work details led to additional deaths from diseases such as typhus and typhoid fever. The men's rations were barely sufficient to keep them alive and working, generally consisting of ersatz coffee or tea and between 100 and 250 grams (3.5–8.8 ounces) of bread in the morning, a liter (1 quart) of watery soup for lunch, and two or three small potatoes for dinner.⁵

In March 1940, the Wehrmacht began transferring Polish prisoners to camps in other parts of Germany to make room for expected prisoners from the western front. The first British and French prisoners arrived the next month and were soon sent out on work details. The largest group in the camp were British prisoners, many of whom were British Palestinians or Cypriots, who arrived from transit camps in South-eastern Europe or other Stalags further to the south, including Stalag XVIII D in Marburg (today Maribor, Slovenia) and Stalag XVII A in Kaisersteinbruch. For example, on June 30, 1941, a transport of 692 British prisoners departed Dulag 183 in Salonika (today Thessaloniki, Greece) for Stalag VIII B.⁶

When the camp was first established, the prisoners slept in tents or in the headquarters building of the old firing range, as no barracks were constructed prior to the invasion of Poland.⁷ Between the fall of 1939 and fall of 1940, the prisoners built the camp facilities. While the prisoners were living in the tent camp, the German camp personnel conducted selections to remove Jewish prisoners as well as those who were sick or otherwise unable to work.

Once the prisoners' quarters and other camp facilities were constructed, British and other Western Allied prisoners generally experienced adequate conditions in Stalag VIII B, at least through 1942. Prisoners lived in large whitewashed brick barracks, which were solidly constructed, each with stoves and basic latrines and bathing facilities.⁸ However, there were reports of mistreatment of Western Allied prisoners, including beatings, solitary confinement, and shootings.

The hospital (*Lazarett*) facilities at Stalag VIII B Lamsdorf were among the best and most modern in the German POW camp system. The hospital comprised 11 buildings with a capacity of over 600 prisoners. It also had its own X-ray and laboratory facilities, a separate morgue, and quarters for medical staff. However, the conditions in the hospital deteriorated as the camp became increasingly overcrowded during the middle years of the war.

Between September 1942 and October 1943, the British camp nearly quadrupled in size from 8,000 to over 30,000 prisoners. This rapid expansion placed further strain on the camp's already limited resources. By late 1942, the prisoners faced overcrowding and chronic water shortages. The lack of reliable water meant that latrines were rarely emptied and showers were infrequent. Rations were reduced to around 1,500 calories per day.⁹

The British and other Western Allied prisoners had access to some recreational and cultural activities within the camp at Lamsdorf. The Anglican chapel held two Sunday services; the morning service attendance was usually around 700, while that of the evening service was usually around 400. A small theological study group consisting of eight men was formed, three of whom were preparing for ordination on their return to England. There was also a Methodist minister in the British camp. Twenty-four hundred men participated in a total of 83 courses in subjects such as English, German, French, history, geography, and mathematics. The camp orchestra had

Stalag VIII B at Lamsdorf. Prisoners at a class outside the barracks, August 1940.

COURTESY OF ICRC.

28 regular members, while the choir had 50. Concerts and theater productions were performed weekly, and sometimes more frequently. The prisoners also participated in sports, including football and volleyball; the YMCA delegate who visited the camp on March 17, 1943, noted that the American and Canadian soldiers wanted equipment to play softball and basketball as well.¹⁰

By October 1943, the rapid expansion of the camp population coupled with the failure to expand the camp itself or address its infrastructural problems made conditions in Stalag VIII B very poor. These conditions were further exacerbated by the influx of Italian military internees during the last months of 1943. Third beds were added to all the bunks, but this measure failed to provide sufficient quarters for the growing population, so the Germans converted all available recreational areas (including the school, theater, and other social spaces) to makeshift barracks.¹¹ These new barracks lacked beds and, by November, nearly 1,500 prisoners were sleeping and eating on the floor.¹² Obtaining water required constant effort on the part of the prisoners, who had to fill buckets from a source about 180 meters (200 yards) from the camp and carry them back. They could only shower once per month and faced severe hygiene problems stemming from their inability to clean the latrines. Similar overcrowding and water shortages affected the camp infirmary and hospital, both of which lacked beds for all the patients. Fears of epidemics spread throughout the camp.¹³

There were between 600 and 700 work details subordinate to Stalag VIII B. They were spread throughout much of Upper Silesia and other parts of present-day southwestern Poland. Among them was the infamous Kommando E715, whose 1,200 (mostly British) prisoners were deployed to the IG Farben synthetic rubber factory (Buna Werke) at Auschwitz III-Monowitz. Many of them remained under the control of Stalag VIII B after it was transferred to Teschen at the end of 1943.

While they were not subject to the same level of mistreatment as the Polish POWs and civilian laborers had been early in the war, the Western Allied prisoners in the work details nonetheless faced difficult conditions. This was especially true of those prisoners who were sent to work in the numerous coal mines of Upper Silesia; this fate was particularly common for Jewish prisoners. One British Palestinian prisoner, Mosche (Ernest) Brauner, was sent to work in a coal mine after he was brought to Stalag VIII B in late April 1941. He reported that the Jewish and Gentile prisoners were separated, though British prisoners of both groups worked in the same mine near Bismarckhütte (today Chorzów Batory, Poland) in a detail of about 400 men. They worked in two 12-hour shifts in the mine along with Polish civilian workers. They were guarded by a German officer who was armed with a pistol. In early 1943, two of his fellow prisoners (both Jewish) were shot by the German officer in unclear circumstances; it was alleged by the German authorities that they had attempted to escape, but Brauner had no way to confirm their story.¹⁴

In January 1945, as the Red Army closed in on Teschen, the Germans began to evacuate the prisoners at Stalag VIII B to Stalag XIII D in Nürnberg-Langwasser. Two of the largest groups were marched out of the camp in early March. The first, which left on March 7, was taken in the direction of Karlsbad, in the Sudetenland (today Karlovy Vary, Czech Republic); it remained there for five days before resuming its march toward Germany. The second, which departed two days later, was sent toward Marienbad (today Mariánské Lázně, Czech Republic); it remained there for a few days before continuing onward.¹⁵ The camp at Teschen was liberated on May 3, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) VIII C

The Wehrmacht established Stalag VIII C (map 4e) on October 4, 1939, in Sagan (today Żagań, Poland), in Defense District (*Wehrkreis*) VIII, from Dulag A. The camp had two subcamps (*Zweiglager*), one in Neuhammer (today Świętoszów, Poland), which until the end of June 1942 was an independent camp (Stalag VIII E), and one in Krünzburg, which during the autumn of 1944 was converted into an Ilag.¹ Between February 8 and February 12, 1945, with the approach of the Red Army, Stalag VIII C was evacuated to Stalag IX A in Ziegenhain and Stalag III A in Luckenwalde. The Red Army liberated the camp on April 16, 1945. The camp carried field post number

(*Feldpostnummer*) 11 936, which was both issued and struck between February 1 and July 11, 1941.

Stalag VIII C was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). The first commandant of the camp was Oberst Paterman.

The main camp occupied a large area surrounded by a pine forest outside of Sagan. Stalag Luft 3 was adjacent to the main camp and occasionally prisoners there were treated in the Stalag VIII C hospital.² Within the main camp, nationalities were strictly divided into separate compounds and as much as possible the Germans sought to prevent communication between groups.³

In 1939 and 1940, the camp held Polish prisoners of war (POWs), who built the camp facilities. At the end of 1940, there were 4,800 Poles in the camp. As in many other camps during this time, the conditions at Stalag VIII C were very difficult for the Polish POWs. They spent most of the winter of 1939–1940 in tents. Their food rations were also poor: approximately 100 grams (3.5 ounces) of bread along with thin, watery soup from frozen potatoes and a cup of ersatz tea comprised the prisoners' entire daily nourishment, leading to widespread malnutrition. Furthermore, hygienic conditions in the camp were poor, allowing infectious diseases to spread. In 1940, some of the Polish prisoners were transferred to another camp while the rest were stripped of their POW status and sent to Germany as forced laborers.⁴ French and Belgian prisoners arrived in 1940 and Serbians in 1941. In 1942, Soviet prisoners arrived, followed by British prisoners and Italian military internees in 1943. The first British troops arrived following the Allied armistice with Italy in September 1943. They arrived in a single group of 2,809 on September 20 following a route that took them from their initial camp in Italy and through Stalag VII A before reaching Stalag VIII C.⁵ Additional British prisoners arrived after the Allied landings in Western Europe in 1944. In November 1944, about 100 Poles, captured during the suppression of the Warsaw Uprising, and about 900 Slovaks, captured during the suppression of the Slovak National Uprising, arrived in the camp. The camp reached a maximum population of 48,308 prisoners in January 1945.⁶

As was the case in many Stalags, the Western Allied prisoners lived and spent their days primarily in work camps outside the main compound. Of the 2,809 British POWs in the camp in late October 1943, only 456 lived in the main camp. The remaining 2,353 were divided into 18 work details (*Arbeitskommandos*) in the surrounding area. The majority of the men worked in sugar factories, with smaller numbers engaged in agriculture and coal mining. Those in the main camp were chiefly noncommissioned officers who occupied three large one-story brick barracks. Overall, rations and conditions in the camp were satisfactory, at least for Western Allied prisoners.⁷

However, Block B, the disciplinary block at the camp in which prisoners of many nationalities were placed together late in the war, was an exception. On August 30, 1944, a large

Stalag VIII C at Sagan. Dr. Marti of the ICRC visits French POWs, date unknown.

COURTESY OF ICRC.

number of Belgian prisoners arrived at Stalag VIII C via Stalag 304 in Leuven and Stalag IX A in Ziegenhain. They were sent to Block B, where they joined prisoners from France and Britain as well as Poles, Czechs, Slovaks, Romanians, and Hungarians.⁸ Block B consisted of five barracks near the western edge of the camp, enclosed by barbed wire. In the fall of 1944, two of these barracks were for Western prisoners (mainly French and Belgian) who had refused to work or violated the rules while at work, one was a transit barrack for those being transferred through the camp or being released from the camp, and two were for British prisoners. Each of these sections was separated from the others by an additional row of barbed wire.⁹

The prisoners in Block B were denied rights usually granted to other Western Allied POWs. They were not allowed to approach the gate of the main camp, nor were they allowed to enter the main camp to visit the canteen, library, or theater. They were also sometimes denied access to the Red Cross food packages that supplemented the prisoners' rations.¹⁰

The worst treatment, however, was reserved for Soviet POWs. According to the Belgian authorities, they were subject to "a very severe regime from the point of view of food and poor treatment."¹¹ In addition to receiving less and poorer quality food than other prisoners, the Soviet POWs were given harder labor to do in the work detachments as well as within the camp. The vast majority of the approximately 10,000 prisoners who died in Stalag VIII C were from the Soviet Union.¹²

The hospital facilities of Stalag VIII C were very good compared to those in other camps. They consisted of six large well-built barracks. One was designated as a tuberculosis ward, two as general medical wards, two as surgical facilities, and one as the operating room. Facilities were considered more than adequate for at least 350 patients. A prison doctor ran the hospital with complete freedom.¹³ Conditions in the hospital deteriorated quickly following the Allied landings in Western Europe in 1944. In late May, international observers regarded the hospital as excellent, with very good facilities,

care, and medical supplies.¹⁴ By November, the same observers described the facility as poorly heated due to broken windows. Patients lacked straw for beds and utensils for food. The medical supplies considered adequate only a few months prior had now been depleted.¹⁵

The evacuation of the camp took place in three separate columns, which were sent to Stalag III A in Luckenwalde and Stalag IX A in Ziegenhain via Stalag IX C in Bad Sulza. The first of these columns, which included the prisoners from Block B, left on February 8, 1945; the second and third columns left on February 11 and February 12, respectively. Those who were too sick to march were left in Sagan, where they were liberated by the Red Army.¹⁶ The men who were sent toward Ziegenhain arrived there on March 7, after nearly a month of marching. Those who were sent out in the columns (about 23,000 men in total) were liberated by the American forces that liberated Ziegenhain in late March 1945 (or by the Western Allies soon afterward), or by the Red Army as their forces overran the evacuation routes of the later columns.¹⁷

MANNSCHAFTSSTAMMLAGER (STALAG) VIII D

The Wehrmacht established Stalag VIII D (map 4e) on May 5, 1941, in Defense District (*Wehrkreis*) VIII, and deployed it to Teschen (today Český Těšín, Czech Republic).¹ The camp was under the authority of the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

Stalag VIII D held Polish, French, Belgian, British, and Serbian prisoners of war (POWs). Most of the prisoners worked outside the camp in work details (*Arbeitskommandos*) and the population inside the main camp was relatively small, reaching a peak of 7,020 in December 1941 and remaining between 5,500 and 7,000 in 1942.² The prisoners were treated decently by the guards and the conditions in the camp were generally satisfactory and in compliance with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).

The prisoners had some access to cultural and recreational activities, though the French had far more opportunities to participate in such activities than prisoners of other nationalities. The French prisoners had a total of 50 clergymen among them, who traveled among the various work details; the Poles and Serbs, meanwhile, had no spiritual guidance. There was a

prison library from which books could be circulated to the work details. While there were nearly 3,000 volumes in French, there were only 116 Polish books and a small number of instructional and religious books in Serbo-Croatian. The French had a program of educational courses, while no such program existed among the Poles and Serbs. All prisoners were offered the chance to watch German "cultural films" (i.e., propaganda) in the main camp and the work details. The sports field in the main camp was partially covered by a vegetable garden and was therefore too small for playing football; as a result, volleyball became the prisoners' sport of choice.³ On September 11, 1942, the Germans converted Stalag VIII D into a subcamp (*Zweiglager*) of Stalag VIII B.

MANNSCHAFTSSTAMMLAGER (STALAG) IX A

The Wehrmacht established Stalag IX A on September 26, 1939, in Ziegenhain (today part of the municipality of Schwalmstadt), in Defense District (*Wehrkreis*) IX.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District IX (*Kommandeur der Kriegsgefangenen im Wehrkreis IX*).

Stalag IX A was located southeast of the town of Ziegenhain. When the first prisoners arrived, there were no permanent structures at the campsite and the prisoners were forced to sleep in tents. Later, the tents were replaced by wooden

Stalag IX A at Ziegenhain. General view of the camp with prisoners in the foreground, October 1940.

COURTESY OF ICRC.

barracks measuring 12 meters by 60 meters (39 by 197 feet). The first-known commandant was Oberst Carl Sturm, who held the position from January to June 1940. He was succeeded by Oberst Erich Hiltorp, who was in turn replaced by Oberst Wilhelm Lincke (formerly the commandant of Stalag IX C in Bad Sulza) in September 1940. Lincke was the longest-serving of the camp's commandants, remaining there until January 1943, when he was replaced by Oberst Willy Stenzel. The final commandant was Oberst Hermann Mangelsdorf, who succeeded Stenzel in July 1944.²

Stalag IX A held Belgian, British, French, Soviet, and Serbian prisoners of war (POWs) as well as Italian military prisoners. It was a large camp, with a population of more than 35,000 throughout most of the war and a maximum population of 53,408 prisoners in September 1944. However, most of the prisoners registered in the main camp did not live there but were instead deployed in the numerous work details (*Arbeitskommandos*) in the area surrounding the camp.³ Many of the prisoners were employed in the arms industry in Kassel, in violation of the Geneva Convention's prohibition on the use of prisoner labor for war-related work.

The first prisoners to arrive in the camp were Polish POWs captured during the German invasion of Poland in September 1939. As of December 13, 1939, there were 9,901 Polish POWs in the camp (including 56 officers). Most of the Polish prisoners were transferred out to other camps in the Reich by the spring of 1940, when the first French, Belgian, and British prisoners arrived from the western front. The French prisoners became the largest national group in the camp and remained so throughout the rest of the war. As of September 10, 1940, there were 35,784 French prisoners in the camp, compared to 3,935 Belgians, 220 Poles, and 2 British. One of the most notable French prisoners was François Mitterrand, later the president of France, who was held in the camp from June 1940 until he managed to escape in December 1941. The first Serbian prisoners arrived in the camp in April 1941, after the Axis invasion of Yugoslavia. The first Soviet prisoners were brought to the camp in the early fall of

1941. Finally, Italian military prisoners were brought to the camp in September 1943 after the Italian capitulation.⁴

The Germans generally treated the Western Allied and Serbian prisoners well, and their living conditions were mostly in keeping with the provisions of the Geneva Convention of 1929. These prisoners had some access to recreational and cultural activities within the camp. There was a camp library and a large sports field where the prisoners played soccer and other games. A French Catholic priest held services for the Catholic prisoners of all nationalities; however, as of March 1943, there was no Orthodox minister for the Serbian prisoners in the camp.⁵

As in other camps, the Germans treated Soviet POWs in Stalag IX A very poorly and in fact ignored the requirements of the Geneva Convention when it came to them. The Soviet prisoners lived in crowded quarters and received little food or medical care. These conditions led to widespread malnutrition and disease, resulting in a high death rate. Gestapo personnel also conducted selections of the Soviet prisoners to separate out “undesirables,” such as Jews and political commissars. Most of the Soviet prisoners who were selected in camps in Wehrkreis IX were taken to the Buchenwald concentration camp, where they were executed using the infamous *Genickschussanlage* (neck-shot installation).⁶ Although there is little specific information available about the experiences of Italian military prisoners in Stalag IX A, it is likely that the Germans treated them poorly as well, as was generally the case in other camps where they were held.

During the final months of the war, conditions in Stalag IX A deteriorated for all prisoners, regardless of national group. American prisoner Sergeant James F. Harding, who arrived in the camp in late January 1945, described the barracks as “dirty, lice-infested and cold,” noting that there were heating stoves but they were not supplied with any fuel. The prisoners’ quarters were also overcrowded; Harding’s 2,700-square-foot barrack held 270 men. Their rations consisted of three-quarters of a cup of vegetable soup and a sixth of a loaf of bread a day. With no Red Cross food parcels to supplement their diets, the prisoners rapidly lost weight; Harding stated that he had lost about 30 pounds in just over two months in Stalag IX A and that his weight loss was typical for the American prisoners in the camp at that time.⁷ Another American prisoner, Sergeant Philip J. W. Glaessner, stated that the prisoners received almost no medical care because the American and French prisoner-doctors were given no medical supplies.⁸ As a result, according to American corporal Donald Wesley Canfield, the majority of the American prisoners were sick with dysentery.⁹

On January 26, 1945, a group of 1,292 American noncommissioned officers arrived at Stalag IX A from Stalag IX B in Wegscheide, near Bad Orb. The following day, the camp commandant ordered all of the American Jewish prisoners to line up in front of their barracks. Fearing that these prisoners were going to be executed, the highest-ranking American

officer in the camp, Master Sergeant Roddie Edmonds, ordered all of the American prisoners, Jewish or non-Jewish to line up outside the barracks. When the commandant demanded that Edmonds give up the names of the Jewish prisoners, he informed the commandant that “we [the Americans] are all Jews here” and repeated this statement even after the commandant put his pistol to Edmonds’s head and threatened to shoot him. In the end, none of the approximately 200 American Jewish prisoners was harmed in this incident. In 2015, 30 years after his death, Master Sergeant Edmonds was recognized by Yad Vashem as one of the Righteous Among the Nations. He is one of only five Americans to receive the honor and the only American soldier recognized as such; his citation is also the only one awarded for saving the lives of American Jews.¹⁰ Stalag IX A was liberated by the American 6th Armored Division on March 30, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) IX B

The Wehrmacht established Stalag IX B (map 4d) on December 1, 1939, in Defense District (*Wehrkreis*) IX and deployed it to Wegscheide, near Bad Orb.¹ The camp was liberated by American troops on March 30, 1945. The camp was subordinate to the Commander of Prisoners of War in Defense District IX (*Kommandeur der Kriegsgefangenen im Wehrkreis IX*). The camp commandant at the end of the war was Oberst Karl Sieber, and his deputy was Oberstleutnant Albert Wodarg.²

Stalag IX B held Polish, French, Belgian, Czech, British, Serbian, and Soviet prisoners of war (POWs) as of December 1941, and Italian military prisoners as of the fall of 1943. In late December 1944, 985 American prisoners captured during the German offensive in the Ardennes were placed in the camp. By the spring of 1945, there were 4,700 American prisoners in the camp. The maximum camp population was 25,000.³

The first prisoners to arrive at the camp were 14,000 Frenchmen. Most of them were immediately assigned to labor details (*Arbeitskommandos*), as were most prisoners of other nationalities. Many of the prisoners were employed in agricultural and forest labor (particularly Soviet prisoners), while others were employed at factories or by local government authorities (such as the City Construction Office, *Stadtbauamt*).⁴

Medical cases at Stalag IX B were treated at the camp hospital in Bad-Soden, which operated independently of the Stalag itself. This facility had a capacity of 300 beds and consisted of two separate buildings. The lower building was primarily for prisoners from Stalag IX B. The wards held up to 25 patients each. The upper building, by contrast, focused on eye care and the Bad-Soden hospital became the central hospital for optometry for POWs in Germany. The optometry building occupied a former rheumatism clinic, and so the facility was well equipped and suited for medical use, unlike many of the more hastily constructed camp hospitals.

Overall conditions within the two camp hospital units were generally superior to those elsewhere in the German prison camp system. The facilities were well constructed and food quality and quantity was satisfactory, owing to a convent attached to the units, whose nuns provided all the meals. Patients were fed one of three menus based on their health. Prisoners had access to a library, and a camp theater was installed in one of the dining rooms.

Early on, the German administrators and guards from Reserve Battalion (*Landesschützenbataillon*) 621, under the command of Hauptmann Ludwig Merz treated the French and Belgian prisoners decently. Conditions in the camp were generally satisfactory and in compliance with the main provisions

Stalag IX B at Wegscheide. Aerial photograph of the camp, 1944-1945.

USHMM, COURTESY OF NARA, WS #88907.

of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). In late 1944 and early 1945, however, conditions deteriorated significantly, because of the increasing disruption that Germany's military situation engendered.⁵ Moreover, the conditions for Soviet prisoners in Stalag IX B were similar to those in other camps for Soviet POWs, and the inhumane treatment they received resulted in a high death rate; for example, in 1942, 1,430 Soviet prisoners died in the camp.⁶ A cemetery containing the bodies of 1,433 dead Soviet prisoners was located in a forested area about a kilometer (0.6 miles) from the camp; these prisoners were buried in 12 mass graves, marked with an Orthodox cross.⁷ A Gestapo team regularly screened the Soviet prisoners in the camp to separate out "undesirables," such as Jews and Communists, who were then sent to a concentration camp (such as Buchenwald or Sachsenhausen), where they were executed on arrival.⁸

For British and American prisoners, Stalag IX B was one of the worst camps in Germany. Conditions were appalling from the time the prisoners arrived and continued to deteriorate as the war progressed. The first transport of American prisoners arrived in late December 1944. By January 24, the camp had 4,075 Americans, held in 16 barracks. The compound had formerly accommodated Soviet prisoners, and almost no changes to the facilities had been made prior to the arrival of prisoners from the western front. According to the commandant, the camp personnel had received little to no notice that these prisoners would be arriving, so they had made no preparations.⁹

The facilities would have been inadequate for even half the number of American prisoners they were expected to accommodate. Nearly 1,500 men slept on the bare floor, many without blankets, in mostly unheated rooms. Of the 16 barracks, 3 lacked beds, and several others had fewer than half the beds needed. The few rooms that were heated had small stoves, and prisoners were given supplies of wood barely sufficient to heat the room for more than a few hours. As a result of the poor heating, ceilings and walls were frequently damp and at risk of collapsing. German authorities provided little more than

cardboard for repairs. Prisoners had no cleaning supplies, primitive toilet facilities, and no way to wash their clothes. Though food rations were decent, the majority of prisoners had to use their helmets as bowls.¹⁰

Conditions continued to deteriorate throughout the winter and into the spring. International observers described Stalags IX A, B, and C as “situation critical” following an inspection of the camps in March 1945.¹¹ Hygiene in the camp became “nonexistent” and food rations declined. Poor sanitation and inadequate shelter had contributed to widespread cases of dysentery and pneumonia. The camp became infested with vermin. Overcrowding worsened with the arrival of 2,000 British prisoners.¹² Observers warned of the “grave danger of epidemics” such as typhus breaking out in the camp.¹³ In Stalag IX B, in particular, the German authorities exacerbated the problems by harassing international observers and failing to make any efforts to provide needed supplies and repairs for the collapsing camp infrastructure.¹⁴

The increase in the number of American prisoners toward the end of the war further burdened the already overcrowded camp. The scarcity of building materials made it nearly impossible for the camp leadership to address the problems within the camp. The water supply in the camp was heavily strained. The camp needed to provide water to an estimated 10,000 more prisoners than initially intended, overburdening the capacity of the existing water pumps. There were chronic shortages of medical supplies, clothing, and food.¹⁵

One series of events made even life at Stalag IX B seem relatively benign, because of the cruelty to which the Germans subjected one group of American POWs. In late January 1945, the camp administration received an order to supply 350 POWs for a labor detail. They went after the Jewish-American prisoners first. There was some resistance, and there were only 80 Jews among the Americans in any case, so eventually the Germans rounded out the group with men they labeled troublemakers, and some with Jewish-sounding names, or who looked Jewish, and some they simply chose at random. Once the prisoners had been selected and segregated, the Germans sent them to Kommando 625, near the town of Berga, where there was already a subcamp of Buchenwald.

The prisoners arrived at Berga on February 13 and moved into barracks near the camp perimeter. Their detachment was responsible for digging tunnels for an underground ammunition factory; because this work was of a military nature, it constituted a violation of the Geneva Convention. The prisoners’ treatment was little better than that of the Buchenwald inmates. Former prisoner Alan Reyner stated that “if we took one minute’s rest, we were beaten with a shovel or spiked with a pick. All the foremen carried rubber hoses which they didn’t mind using.”¹⁶ Prisoners frequently suffered from lung ailments due to the white dust churned up during their work. Medic William Shapiro recalled seeing bodies dangling from the gallows in Berga as he retrieved the prisoners’ meals from the camp kitchen.¹⁷ Unteroffizier Erwin Metz, the guard company commander, repeatedly sent severely ill prisoners to

work, despite their condition, and also abused his charges at every opportunity, sometimes to the point of death.

Food supplies at Berga were grossly inadequate. On March 21, 1945, Red Cross parcels sent to Berga from Stalag IX C in Bad Sulza arrived, but Metz withheld them for days, at one point insisting that he would not hand them out until the prisoners had made themselves presentable—an impossibility in the environment of the camp.¹⁸ Reyner recalled of himself and his fellow prisoners that “we had reached the stage of animals. . . . [E]ven sick men had their food stolen from them before they could even get it.”¹⁹ On April 3, 1945, the day after the main camp of Stalag IX B was liberated, Metz marched the American prisoners at Berga southward toward Bavaria. Their route took them through the towns of Hof and Fuchsmühl before coming to an end at Rötz, where they were liberated by the US Army.

The total number of Americans who died at Berga and on the death march remains uncertain. The circumstances were chaotic, especially on the march, and some men’s deaths were not recorded. Research at the United States Holocaust Memorial Museum continues. At the time of printing, that research has yielded information on 201 of the original 350 POWs. Of those, 65 are confirmed to have died, and another three probably died. If that proportion holds for the entire group, then perhaps as many as 118 American servicemen sent to Berga died as a result of their treatment in German captivity.

Erwin Metz and Ludwig Merz were put on trial by the US Army at Dachau in September 1946. Both were found guilty and sentenced to death by hanging. The sentences were reviewed, however, and despite vigorous protestations from survivors and victims’ families, the sentences were commuted: Metz’s to life imprisonment; Merz’s to five years. In the end, Merz served three years, Metz nine.

MANNSCHAFTSSTAMMLAGER (STALAG) IX C

The Wehrmacht established Stalag IX C on February 3, 1940, in Bad Sulza, in Defense District (*Wehrkreis*) IX. The reserve hospitals (*Reserve Lazarette*) in Egendorf and Obermassfeld (the latter also designated Reservelazarett IX C) were subordinate to the camp.¹ In 1944 and 1945, Stalag IX C also had a subcamp (*Nebenlager*) located in Meiningen, which served as a hospital for British prisoners. Stalag IX C was subordinate to the Commander of Prisoners of War in Defense District IX (*Kommandeur der Kriegsgefangenen im Wehrkreis IX*).

Stalag IX C was located along the River Ilm in the northern part of the town of Bad Sulza, near the border between the present-day states of Thuringia and Saxony-Anhalt. The first commandant of Stalag IX C was Oberst Wilhelm Lincke, who was in charge for the first three months of the camp’s existence. He was replaced by Oberst Ludwig von Hoesslin, who served as commandant until September 19, 1941. His successor was Oberst Richard Weber, who remained until June 10, 1942, when he was replaced by Oberst August Horschelt. Horschelt was replaced by Oberst Ulrich Bernet on August 31, 1942. After Bernet’s period as commandant ended on January 5, 1943, Lincke returned to the camp and once again served as commandant until July 31, 1943, when he was replaced by Oberst Wilhelm Schaal. Schaal was succeeded by the final commandant, Oberst Ernst Trefz, on December 10, 1944. The deputy commandants were Major Karl Hutter, Major Herbert Macholz, Major Richard Frankenberg, and Oberstleutnant Karl Findeisen. The counterintelligence (*Abwehr*) officer was Hauptmann Ernst Greiner.²

Stalag IX C held American, Belgian, British, French, Polish, Serbian, and Soviet prisoners of war (POWs) as well as Italian military prisoners. It was a large camp, with a population that remained above 30,000 throughout the war and a maximum population of 55,669 in June 1944. However, the majority of the prisoners registered in the main camp were not actually housed there but were instead deployed in the numerous work details (*Arbeitskommandos*) in the area surrounding the camp.³ Conditions in the work details varied considerably. In some cases, prisoners were treated well, but, in others, the prisoners were forced to work beyond their capacity; as the French man of confidence in the camp noted, “The main principle was to exploit prisoners like machines . . . everything was subordinate to productivity.”⁴

As of September 10, 1940, there were 23,328 French, 4,225 Polish, 2,016 British, and 219 Belgian prisoners in Stalag IX C.

French prisoners made up the majority of the camp population throughout the war. The first Serbian prisoners arrived in the spring of 1941, after the Axis invasion of Yugoslavia. As of May 1, 1941, there were 4,756 Serbian prisoners in the camp. Soviet prisoners arrived in the camp in the early fall of 1941; there were 1,605 Soviet prisoners in the camp as of November 1, 1941, and, by the next month, their number had grown to 4,195. The first American prisoners arrived in the summer of 1943, but their numbers remained relatively small until the following summer. Finally, in the fall of 1943, Italian military prisoners were brought to the camp. As of October 1, 1943, there were 2,285 Italian prisoners in the camp, but their numbers grew rapidly—by December 1, 1943, there were 9,225 Italians in the camp, and, by the following month, that figure had increased to 15,500.⁵

The Germans generally treated the Western Allied prisoners in Stalag IX C well, and their living conditions were mostly in keeping with the requirements of the Geneva Convention of 1929. The prisoners resided mainly in wooden barracks, although some prisoners slept in old, abandoned brick buildings that had previously been part of a factory. The conditions in these older buildings were somewhat worse: some prisoners slept directly on the floor due to the lack of beds and there were large numbers of rodents.⁶ Red Cross inspectors also remarked in March 1944 that the conditions in the wooden barracks were better than in the brick barracks, although there were problems with heating and vermin in most of the buildings regardless of construction.⁷ In both cases, the barracks were divided into two sections of prisoner quarters, separated by a washroom in the center of the building. The prisoners slept on triple bunk beds. Two Red Cross delegates who visited the camp on August 30, 1944, noted that the conditions in the British section of the camp were mostly satisfactory, with the prisoners' housing, food, medical care, and clothing meeting regulations; however, the delegates did note the lack of goods available in the camp canteen.⁸

These prisoners had access to some cultural and recreational activities within the camp. Religious services were

conducted by Catholic, Protestant, and Orthodox clergy among the prisoners. There was a relatively large camp library with about 12,500 books. The prisoners were able to partake in a variety of sports, including table tennis, volleyball, and soccer. The prisoners also organized a theater troupe and the Belgian prisoners created a small orchestra.⁹ By February 1943, the British prisoners had also created their own orchestra with the assistance of the YMCA. At that time, the commandant informed a visiting YMCA delegate that there were plans to hold monthly screenings of films through the Regional Film Bureau in Weimar, although it is unclear whether these plans ever came to fruition.¹⁰

The Soviet prisoners in Stalag IX C were treated terribly, in a manner that completely disregarded the requirements of the Geneva Convention. They lived in overcrowded quarters and received little food or medical care. Malnutrition and disease were rampant among these prisoners, leading to a high death rate. The Soviet section of the camp (known as the *Russ-enlager*, or “Russian camp”) was quarantined during the winter of 1941–1942 due to outbreaks of typhus and dysentery.¹¹ As in other camps for Soviet POWs, a special Gestapo detachment (in this case, from the Weimar office) conducted selections (*Aussonderungen*) to separate out “undesirable” prisoners, such as Jews and political commissars, who were then turned over to the Security Service (*Sicherheitsdienst*) for execution. Most of the Soviet prisoners who were selected in camps in Wehrkreis IX were taken to the Buchenwald concentration camp, where they were executed using the infamous *Genickschussanlage* (neck-shot installation).¹² Although there is little specific information available about the experiences of Italian military prisoners in Stalag IX C, it is likely that the Germans treated them poorly too, as was generally the case in other camps where they were held.

Many of the prisoners in Stalag IX C were evacuated from the camp on March 29, 1945, as Allied forces approached from the west. The camp was liberated by the American Third Army on April 11, 1945.¹³ The German staff fled the camp at around 3:30 p.m., and the Americans arrived about an hour and a half later to an enthusiastic reception from the remaining prisoners.¹⁴

MANNSCHAFTSSTAMMLAGER (STALAG) X A

The Wehrmacht established Stalag X A on September 30, 1939, in Schleswig, in Defense District (*Wehrkreis*) X (map 4a). Until June 30, 1940, the deployment of prisoners of war (POWs) in Defense District X was carried out through Gruppe Ic of the deputy Generalkommando of the X Army Corps. In 1939, there were only a few POWs to administer. In a December 14, 1939 report, the Kiel Gestapo noted that 2,575 Polish POWs had been sent to Defense District X.

Schleswig-Holstein and Hamburg belonged to Defense District X. Stalag X A in Schleswig was originally designated as Stalag X B, as the designation Stalag X A had already been

given to the first POW camp in the district, in Sandbostel. The two camps later switched designations.

Stalag X A held French, British, Polish, Serbian, Soviet, Dutch, British, American, and Czechoslovak POWs as well as Italian military prisoners.¹ The camp consisted of a collection of different large camps and work details (*Arbeitskommandos*), which were widely scattered throughout the area, and the number of which frequently changed. The geographic designation Schleswig indicates the area in which the system was located. The commandant of the camp was responsible for the welfare of the prisoners, adherence to the Geneva Convention, contact with the International Committee of the Red Cross (ICRC), the regulation of the labor service, the registration of prisoners, and the accounting of wages.

From May 1, 1940, the administrative center of the camp was located at the site of the former Youth Reform School in Hesterberg. The buildings were gradually freed up for camp use by the relocation of the residents. After Camp Hospital (*Reservelazarett*) III was also moved to the site, it was used only for military purposes. The area of Stalag X A was north of the Elbe, including Greater Hamburg, up to the Danish border. Most of the work details for prisoners within Hamburg proper were subordinate to Stalag X B. In April 1943, they were returned and the subcamp (*Zweiglager*) in Fuhlsbüttel was established.

This change explains the sharp decrease in the number of prisoners in 1941 (from about 55,000 in September to around 40,000 in December) and for the sudden increase from 8,500 to 45,923 in April 1943. A second explanation for the change lies in the often-forced conversion of Polish POWs to “civilian laborer” status. They then passed from the Wehrmacht’s hands and could not be returned home; instead, they were subject to the discriminatory labor service for Poles. In Schleswig-Holstein, these measures were only begun in the fall of 1941, not in 1940 as they had been in the rest of the Reich. Large variations in the population in 1943 and 1944 were also caused by the arrival of Italian military prisoners, who were also later converted to “civilian laborers.” The maximum prisoner population was 72,131 in March 1944, of whom 64,928 were performing labor. The addition of numerous prisoners from different nations resulted in a total of at least 102,592 prisoners who passed through the camp during the war.

The most concrete numbers for the prisoners in the labor service come from February 15, 1944. As of that date, 37,892 POWs in Schleswig-Holstein had been assigned to work through the Labor Office (*Arbeitsamt*). The majority of them (21,912) worked in agriculture. In the Hamburg Labor Office’s area, there were 26,081 prisoners working. The construction industry and related trades employed 9,093 and 6,575 prisoners, respectively, and the machine, boiler, equipment, and vehicle manufacturing industries employed 2,946.

The Geneva Convention prohibited the use of POWs in war-related production, particularly in the manufacture and transport of weapons and munitions. Nevertheless, there were complaints about prisoners having to work on airfields,

fortifications, and weapons production; for example, Kommando 1092 in Kiel worked in war production, Kommando 878 in Neumünster worked in an aircraft factory, and Kommando 329 in Pinneberg manufactured bombs.

The prisoners were guarded by Reserve Battalions (*Landesschützenbataillonen*). Initially, five such units were involved, which gives an idea of the camp's importance. At first, the number of work details varied regularly between 3,000 and 4,000.² Through the merger of smaller units over time, the number was reduced to between 1,000 and 2,000. In addition, certain groups of prisoners were eventually released from the work details (including Flemish Belgians, Poles, and Soviet prisoners from Galicia).

The allocation of prisoners was much sought after, and not every request could be met. For example, the local alderman (*Gemeindevorsteher*) in Büdelsdorf pressed the German Communities Council (*Gemeindetag*) with the Reich Labor Ministry for prisoner labor, without success. In order to obtain as many POWs as possible, communities began an intensive effort to find accommodations: guesthouses, schools, gatehouses, wooden barracks, sheds, pigsties, garages, barns, factory buildings, and the like were requisitioned to quarter prisoners. The hygienic conditions in these makeshift facilities often did not conform to the requirements of the Geneva Convention. Prisoners often complained about the bathing facilities, the presence of vermin, and the lack of heating. These spaces were often overcrowded and rain leaked through their roofs.

The complex in Heidkaten (33 kilometers [21 miles] north of Hamburg, in Kreis Segeberg) played a notable role. The fate of the Soviet prisoners in Stalag X A was reflected with its own infirmary in Heidkaten; there was also a very early work detail for Soviet prisoners (established on August 1, 1941). Otherwise, Heidkaten was the location of a large subcamp (*Teilstammlager*).

From October 1941 on, Soviet prisoners arriving in Stalag X A were often severely ill, especially with typhus. Due to fear of infection of the German civilian population, many of the prisoners were sent to the "Expanded Infirmary Heidkaten" (*Erweiterter Krankenrevier Heidkaten*). More than 400 Soviet prisoners died there by 1944. Not all of the sick went to Heidkaten, however; others died in other parts of the province, for example, in Flensburg and Alt Duvenstadt (Kreis Rendsburg). In addition to Heidkaten, the detachment in Broweg had a particularly high death rate due to typhus. More than 100 prisoners died in the Broweg subcamp in 1941 and 1942.

The poor health of incoming Soviet prisoners in the camp explains the difference between the number of prisoners in the camp and the number of prisoners performing labor. On September 1, 1941, the difference was about 1,900; by December 1, it was 7,200. However, it must be noted that not all of this difference was due to illness; some prisoners worked within the camp itself and others were still waiting for their assignments from the Labor Office. In 1943 and 1944, there were also Italian military prisoners in Heidkaten, of whom 37

died between November 1943 and May 1944. The Soviet section of the infirmary and the main camp were transferred to Gudendorf (80 kilometers [50 miles] northwest of Hamburg, in Kreis Süderdithmarschen) in 1944.

The Germans intended that the prisoners would be granted their right to free medical care (under Article 18 of the Geneva Convention) in clinics, infirmaries, or nearby hospitals, if the camp clinic was not adequately equipped for this purpose. Camp Hospital II in Schleswig, expanded through the establishment of an additional hospital in Hamburg-Wandsbek, was responsible for the most severe cases in Stalag X A. In addition to Heidkaten and Gudendorf, there were also infirmaries in Elmschenhagen, Hamburg-Veddel, Neumünster, and Elmshorn. Additional infirmaries were located in Rendsburg, Marne, and Hamburg-Barmbek.

Clear violations of the Geneva Convention (particularly the right of repatriation for the severely ill or wounded) occurred throughout the war. Instead of being repatriated, the prisoners were sent back to work and their release from the detachments was prevented or delayed by their employers or the Labor Office. Reports from the ICRC and the Scapini Mission, as well as the ever-increasing death rate, indicate that medical care, which was never of high quality, deteriorated throughout the war. There were shortages of personnel, medication, and transportation, which were especially severe in the rural work detachments.

There were also repeated violations of the prohibition against corporal punishment (Article 46 of the Geneva Convention). There were penal detachments for escape attempts and unruly prisoners, such as No. 823 in Glashütte (Kreis Segeberg) and No. 1646 in Väalermoor (Kreis Rendsburg). Noncommissioned officers who refused to work (as was their right pursuant to Article 27 of the Geneva Convention) were sent to work detachment No. 1023 in Broweg. The "brutality of the overseer . . . is known to all of the prisoners and instills deep fear," as one prisoner noted of the detachment in Broweg.³

For Soviet POWs, there were Reich-wide special rules, for example, with respect to the use of firearms. Many such cases are known from the area of the main camp. Incidents in Neumünster, Plön, and near Sülfeld (Kreis Segeberg) serve as examples of the immediate use of weapons and the resulting deaths. In a strikingly different case, a combined English-German task force hunted down and killed five escaped Soviet POWs in Hartenholm on May 8, 1945, after the partial capitulation of northern Germany on May 5.

The Geneva Convention also regulated the procedures for the handling of prisoners of war who attempted to escape. The punishments for such attempts are regulated by Article 93. However, prisoners were taken for different reasons to jail or prison. The right to due process and legal representation was not respected in many cases. Polish and Soviet prisoners were, for the same incidents, given over to the Gestapo, sent to concentration camps, or publicly executed.

A particular danger existed for the prisoners, especially in Hamburg, with the Allies' increasing air superiority, combined

with forced labor on airfields and in the armaments industry. Prisoners were forced to continue working even when the air-raid sirens sounded, there were often no air-raid shelters available, entry to bunkers was often refused, or they were even expelled from shelters. On August 4, 1944, 16 French and Belgian POWs who were quartered near the Blohm and Voss firm were killed in a bombing raid on Hamburg. On April 26, 1945, a bomb hit a barrack for Soviet POWs at the Eggebek airfield, killing many; some dazed prisoners who were wandering about in the village after the bombing were shot, so that a total of 74 POWs "passed away."

These examples should demonstrate that there were numerous violations of the regulations of the Geneva Convention by the authorities at Stalag X A. This noncompliance led to daily hardships and illnesses and exacerbated the death rate among the prisoners. The camp was liberated by British forces between May 5 and May 9, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) X B

The Wehrmacht established Stalag X B in September 1939 in Sandbostel, in Defense District (*Wehrkreis*) X (map 4a). Until June 30, 1940, the camp was subordinate to Gruppe Ic of the Deputy General Command of the X Army Corps (*Stellvertretendes Generalkommando / X Armeekorps*); thereafter, the camp was subordinate to the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*). The practical effect of this transfer of power was minimal.¹ In August 1942, Stalag X B took over the site of the former Stalag 310 (X D) in Wietzendorf, which became a subcamp (*Zweiglager*) known as Stalag X B/Z; this camp was later converted into Oflag 83.²

The first commandant of Stalag X B, from September 1939 to January 1940, was Oberst Büttner. He was succeeded by Oberst Arnold von Engelbrechten, who remained at the camp until May 1941. Von Engelbrechten was replaced by Oberstleutnant Gerhard von Hirsch in June 1941. In April 1942 von Hirsch was succeeded by Major (later Oberstleutnant) Kurt-Hermann Lefevre, who remained the commandant through March 1944. He was replaced by Oberstleutnant (later Oberst) Bernhard Karl Waldemar von Foris, who remained the commandant until January 1945. The next commandant of Stalag X B was Oberst Lühe, who remained at the camp until April 20, 1945. The commandant for the final days before the camp's liberation was Oberstleutnant Heinrich Ferdinand Westphal. The camp was guarded by four (later six) companies of Reserve Battalion (*Landesschützenbataillon*) personnel.³

Stalag X B was originally constructed in 1932 as a camp for civilian laborers who had lost their jobs due to the Great Depression. It was taken over by the Reich Labor Service (*Reichsarbeitsdienst*) in 1933. In 1939, it was turned over to the Wehrmacht for use as a prisoner of war (POW) camp.⁴ As the first POW camp in Defense District X, it was originally designated Stalag X A; however, it later switched designations with the Stalag in Schleswig and became Stalag X B. It was part of a larger camp complex that also included an officers' camp (Oflag X B) and a camp for interned naval and merchant marine personnel (Marlag-Milag Sandbostel). The Marlag-Milag was relocated to Westertimke, about 20 kilometers (12.4 miles) south of Sandbostel, at the end of 1941.⁵ The entire complex covered 35 hectares (86.5 acres) and consisted of more than 150 buildings. The Stalag was located in the north-eastern quadrant of the complex.⁶

Stalag X B was one of the largest POW camps in Nazi Germany. More than 300,000 prisoners from 55 countries are estimated to have passed through the camp during the war.⁷ The largest prisoner groups were Soviet and French

POWs, with large numbers of British, Polish, and Serbian prisoners and small numbers of Romanian and Czechoslovak prisoners, as well as other nationalities, also present. The camp also held Italian military prisoners. Stalag X B reached a maximum population of 50,697 in November 1944.⁸ Many of the prisoners in Stalag X B were assigned to one of the hundreds of work details (*Arbeitskommandos*) that were subordinate to the main camp. Many of the French and Belgian prisoners worked as laborers in the numerous industries located in the area around Hamburg—including some who were forced to work on military production, in violation of the Geneva Convention. Soviet POWs were primarily used as agricultural laborers.⁹

The first prisoners to arrive in Stalag X B were Polish POWs whom the Germans captured during their invasion of Poland in September 1939. As in other camps for Polish prisoners during this time, there were no permanent buildings in the camp yet, and the prisoners slept in tents while they built the camp structures. The original intended capacity of the camp was 10,000 prisoners in 40 barracks, but it was expanded to hold 30,000 in the spring of 1940.¹⁰ In July 1940, the first French and Belgian prisoners arrived at the camp. In the spring of 1941, Serbian prisoners captured during the German invasion of Yugoslavia were brought to the camp, followed a few months later by Soviet prisoners from the eastern front. In September 1943, the first Italian military prisoners arrived at Stalag X B.¹¹ Many other nationalities were represented in smaller numbers in the camp's population.

The Germans generally observed the provisions of the Geneva Convention relative to the Treatment of Prisoners of War in their treatment of Western Allied POWs. However, conditions in the first year of the camp's existence, before the completion of construction on the camp facilities, were difficult, as they were in most camps for Polish prisoners in the early stages of the war. For example, there were no permanent sanitary facilities available to the prisoners. By the time the first Western Allied prisoners arrived, conditions had improved and were generally decent for most of the war.

The prisoners slept in large wooden barracks with a capacity of 240 men per barrack. Each barrack was divided into two main halls, which were further subdivided into four rooms each, with a capacity of 30 men per room. The men slept on wooden double bunk beds. Between the two halls of each barrack was a washroom, which had running hot and cold water. Latrines and bathing facilities were located outside the barracks, and the prisoners had opportunities to take hot showers, a luxury not available in many other camps. Stalag X B also had its own delousing facilities, which had a capacity of between 700 and 1,000 prisoners per day.¹² Food supplies were generally adequate during this period. In the final months of the war, the conditions in Stalag X B deteriorated once again, as was the case in most camps in the Reich, due to the supply difficulties Germany was facing. Food decreased in quality and quantity and sanitary conditions worsened due to increasing overcrowding in the camp, which resulted from the evacuation of prisoners from camps farther to the east to

Stalag X B at Sandbostel. General view of the camp, March 1944.
COURTESY OF ICRC.

Stalag X B. Prisoners relied heavily on Red Cross food parcels to maintain adequate nutrition during this period.¹³

The prisoners in Stalag X B were allowed to engage in a variety of sports and cultural activities. Catholic and Protestant chaplains provided religious services for the prisoners; a daily Catholic mass and three or four services on Sundays were held. Most large work details had their own chaplains, while smaller units were visited by chaplains from other details. There was a 20-man theater troupe, which put on performances two to three times a week, as well as a 25-man orchestra with instruments provided by the YMCA and a choir that performed religious music. The prisoners had access to a library that had approximately 8,000 volumes; however, most of these volumes were in French, with comparatively small numbers of books in other languages, such as Polish and Serbian. The prisoners played a variety of sports, including basketball, football, and volleyball, on a large sports field in the northern section of the camp.¹⁴ The prisoners organized courses in a variety of fields of study, including languages, mathematics, physics, theology, history, and technical subjects.¹⁵ The camp leadership saw cultural and sports activities as a valuable asset, both because they would help maintain prisoner morale (and therefore discipline) and because they would help them project a positive image of life in the camp to their superiors and international observers.¹⁶

As in other camps, the treatment of Soviet POWs in Stalag X B was harsh and in violation of the norms established by the Geneva Convention. The Soviet POWs lived in crowded conditions and received minimal food supplies and medical care. As a result, they experienced a high death rate, primarily due to malnutrition, exhaustion, and diseases such as typhus. The death rate was particularly high in the winter of 1941–1942, when epidemics were rampant among the Soviet prisoners.¹⁷ The death toll in Stalag X B is not known with certainty. Several thousand prisoners, the vast majority of them Soviet, are known to have died in the camp; at least 4,697 of them are known by name, and it is likely that thousands more died and were buried in mass graves without record.¹⁸

POW hospital (*Lazarett*) Sandbostel, was attached to Stalag XB. The hospital had a capacity of more than 1,000 patients. In early 1944, the hospital became an independent unit with its own administration, separate from Stalag XB. Shipments of supplies from the Red Cross could be sent directly to the hospital instead of having to pass through the Stalag first. As of 1944, the Sandbostel hospital was the only POW hospital in Defense District X. It handled all serious and chronic medical cases from the nearby Stalags and Oflags.¹⁹ The medical facilities were adequate, with well-constructed operating rooms and a dedicated, highly regarded team of medical officials. However, the facilities in the rest of the hospital were lacking. Linens and dressings were not cleaned properly due to a lack of laundry facilities. Low coal rations meant that the hospital was not heated sufficiently, which was exacerbated by a lack of extra warm clothing for the patients. The patients slept on hastily built and uncomfortable wooden beds. Nonetheless, Red Cross observers who visited the camp in April 1944 declared the Sandbostel hospital to be “one of the best [hospitals] for prisoners of war.”²⁰

Late in the war, concentration camp prisoners who had been evacuated due to the advance of Allied troops were brought to Stalag XB by the SS. They were housed in a separate compound, away from the POWs. These prisoners arrived in several transports during the last weeks of the war. On April 8, 1945, a transport of 2,500 prisoners from the Neuengamme concentration camp departed for Sandbostel, about 72 kilometers (44.7 miles) to the west. An additional 2,500 prisoners were picked up along the way in Schneverdingen. Hundreds of prisoners died en route to Sandbostel on the severely overcrowded train and were either buried in mass graves near the rail line or removed on arrival and buried in the Stalag XB cemetery. On April 18, as the Germans prepared to evacuate Stalag XB, 400 of the former Neuengamme prisoners were marched out of the camp in the direction of Flensburg via Bremervörde. It is unknown how many of these prisoners died on this forced march. The survivors were liberated by British troops on May 8, 1945.²¹

Stalag XB was liberated by British forces on April 29, 1945.²² There were about 25,000 POWs and 8,000 former concentration camp prisoners remaining in the camp at the time of its liberation. The POWs were generally in good shape, although there were 122 typhus cases reported by the French doctor attending to them in the camp infirmary. Captain R. Barer, who was part of the British unit that liberated the camp, reported that the POW camp was “well-run,” but that food was scarce (although Red Cross parcels remained plentiful) and that sanitary facilities were “poor but passable.” However, even the deteriorated conditions in the POW camp were much better than those in the compound in which the SS had kept the concentration camp prisoners.²³

MANNSCHAFTSSTAMMLAGER (STALAG) X C

The Wehrmacht established Stalag X C in Nienburg, in Defense District (*Wehrkreis*) X (map 4a), by an order of the General Army Office (*Allgemeines Heeresamt*, AHA) dated July 17, 1940.¹ Stalag X C remained in Nienburg until the end of the war, in an area directly next to Oflag X B (Mudra Barracks). When the first prisoners of war (POWs) arrived in July 1940, the construction of housing (wooden barracks) was continued. The camp was subordinate to the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*).

No field post number (*Feldpostnummer*) was assigned, since the camp remained within Germany. The following officers served as camp commandant:²

Oberstleutnant z.V. Gebhard von Kotze	July 25–September 12, 1940
Oberstleutnant z.V. Beelitz	September 13–December 17, 1940
Major z.V. Dr. Willi Anschütz	December 20, 1940–April 11, 1941
Oberst Curt von Zimmermann	May 9, 1941–July 31, 1942
Oberstleutnant d.R. Ernst Bischoff	August 1, 1942–January 31, 1944
Oberst Ernst von Koss	from February 1, 1944
Oberst Steininger	from March 25, 1944

The campgrounds and the work detachments (*Arbeitskommandos*) were guarded by the 2nd Company of the Home Guard Battalion 325 (*Heimatschutzbataillon* 325, later Reserve Battalion 233) and by Reserve Battalions (*Landesschützenbataillone*) 660, 670, 675, and 680. Stalag X C temporarily supported POW Construction and Labor Battalions 2 and 22, respectively (*Kriegsgefangen Bau- und Arbeits-Bataillon* 2 bzw. 22) during their deployment in the region. This support consisted of, among other things, handling administrative matters, providing medical care, passing on shipments of charitable gifts, and providing support services to the POWs. On November 4, 1941, Stalag X C detailed personnel for the organization of Stalag 370 in Nienburg, by order of the Deputy Corps Headquarters for XII Army Corps (*Stellvertretende Generalkommando XII. Armeekorps*).³

In July 1943, Stalag X C had a special feature. It served as the central collection camp for POWs who had worked for the Wehrmacht as *Geheimnisträger*; persons entrusted with confidential information (confidential informants, radio operators, etc.), but who could no longer do so. Usually, the reason for this was that the individual had been exposed or unmasked or that there were security concerns about him.

Stalag X C had a subcamp in Rohrsen, in an area with wooden barracks in the communal district of the

Stalag X C at Nienburg. Group portrait of Belgian POWs, 1940–1941. USHMM, COURTESY OF MYRIAM SANFuentes, WS #98117

municipality of Heemsen. It was established in September 1942 and admitted the separatist French POWs from Corsica on October 20, 1942, prisoners who previously had been housed in Oflag V C. The Germans continued their efforts to use this group of POWs for political purposes. The poor conditions in Rohrsen, however, caused the Corsicans to feel as if they were in a penal camp, and their interest in collaboration with the Germans gradually faded away. Then the project was abandoned by the Germans, and the Corsicans were assigned to other camps. From then on, the Rohrsen camp was used only as accommodation facilities for Soviet POWs. Finally, by order of the AHA on May 15, 1944,⁴ it was disbanded and turned into a camp hospital (*Lazarett*) for around 500 Soviet POWs who had contracted tuberculosis. The conditions there were very poor and in no way justified the designation of “hospital.” More than 700 Soviet soldiers lost their lives there.

Stalag X C was a fairly large camp with an average of around 30,000 prisoners, reaching maximum occupancy in June 1941 with a prisoner population of approximately 45,000.⁵ The French constituted the largest group. The second-largest group varied, at different times being made up of Belgians, Poles, Yugoslavs, Italians, or, perhaps most often, Soviets. Additional countries were also represented in the camp in smaller numbers, ranging from 5 to 100 prisoners at various times: Great Britain, Romania, Greece, and Crete. Stalag X C thus had the full range of possible prisoners in its area. Until June 1941, the camp also held a total of 100 civilians from France, Belgium, Poland, and Yugoslavia.

The treatment of the POWs depended on their nationality. Those receiving the best treatment were the Belgians, the British, and, in particular, the French, who received strong support from the pro-Pétain movement in Vichy France. The POWs from Western nations received substantial deliveries of foodstuffs and other materials from relief organizations.

A library (around 20,000 books) was available to the prisoners, and they had orchestras and theater ensembles. These opportunities were also provided to the work detachments, which enjoyed performances and received regular shipments of crates of books. The French published several camp newspapers for their own group: *Le Mois*, *Entre Nous*, *Servir*; and *La Françisque*. Numerous courses on all kinds of topics functioned for the prisoners as a sort of camp university.

The Poles and Yugoslavs received somewhat worse treatment. On the lowest rung of the ladder were the Italians and, especially, the Soviets, who were provided insufficient rations and inadequate medical care and often had to perform very hard work. Clergymen of various faiths who were members of the prisoner population held religious services on a regular basis.

Between 85 and 95 percent of the camp was deployed in more than 1,000 work detachments, dispersed among nine district sites. The support area of Stalag X C was essentially the area of the Lower Saxony Regional Employment Office (*Landesarbeitsamt*) (provided that the places were located in Defense District X). The main emphasis of labor deployment was on agriculture and drainage projects. In the Bremen area, deployment in industry was the general rule.

The medical care provided to the POWs usually began in the camp's medical clinic, which was operated by physicians and personnel drawn from the POW population, under German supervision. Because of the distance from the camp to the work detachments deployed in the Bremen area, Stalag X C operated a medical clinic there. The more seriously ill were referred to hospitals outside the combat zone (with POW wards) or to POW hospitals, such as those in Sandbostel and Rohrsen (here, for Soviet POWs).

Stalag X C received numerous visits from a variety of delegations. In addition to the main camp, the visitors very often went to the labor detachments. The following visit reports are known: US Embassy—November 18, 1940; February 20, March 12, May 9, June 17, and September 1941; YMCA—April 24, June 25, September 16, 1941; September 18, 1942; February 23, and February 26, 1944; ICRC—November 13–19, 1940; March 6, July 7, July 10, August 2, November 24, and November 29, 1941; January 9, August 3, November 10, and November 26, 1942; July 29, and August 9, 1943; February 23, March 25, July 29, and October 13, 1944; March 16, 1945; Scapini Mission—March 8, July 14, and August 2–8, 1941; January 8–9, 1942; February 7, and July 29–30, 1944; DSLP—September 13, 1942 and March 25, 1944; Swiss Legation—February 7, 1944.

Some reports contain overall assessments. For the main camp in Nienburg, these assessments generally were in the “good” to “very good” range. For the labor detachments, the assessments varied quite widely. The evaluation result depended on the nature of the work, the housing, and the degree to which the regulations were observed by the employer in question. The assessments covered the entire spectrum from “not acceptable” to “very good.” The Rohrsen subcamp, like the camp hospital into which it was converted, received uniformly negative evaluations.

The end of the deployment period of Stalag X C began in March 1945. Numerous prisoners were admitted in the wake of evacuations from other camps. This inevitably led to problems in the distribution of scarce resources.

Beginning on April 5, 1945, the POWs who were fit to march were evacuated from the camp and forced to walk in a northerly direction. The first work detachments were liberated in their deployment locations by the Allies. On April 9, 1945, the US Army liberated the Nienburg permanent camp area (with the approximately 15,000 prisoners still remaining there).

MANNSCHAFTSSTAMMLAGER (STALAG) XI A

The Wehrmacht established Stalag XI A on September 20, 1939, in Altengrabow, in Defense District (*Wehrkreis*) XI (map 4a); until November 1939, the camp was officially known only as Stalag XI. It was subordinate to the Commander of Prisoners of War in Defense District XI (*Kommandeur der Kriegsgefangenen im Wehrkreis XI*). The camp was liberated by the Red Army on May 3, 1945.

The camp was located near a military parade ground and a munitions depot. The site had functioned as a prisoner of war (POW) camp during World War I as well, holding about 12,000 French prisoners, who worked in nearby farmers' fields. At the start of World War II, Stalag XI A had 15 multi-story masonry buildings, 35 masonry barracks, 25 wooden barracks, and 25 horse stables. The camp was guarded by personnel from the 718th, 720th, 740th, and 741st Reserve Battalions (*Landesschützenbataillone*).

The first prisoners to arrive at Stalag XI A were Polish, but the majority of the prisoners in the camp in the first years of the war were French. Most of them were sent to work in industrial concerns in the region, mainly in Stendal, Magdeburg, and Dessau. After the invasion of the Soviet Union in June 1941, the prisoner population of the camp increased substantially. Despite the large number of structures on the grounds, the camp became severely overcrowded, as 49,500 prisoners were crammed into it; as a result, many of the Soviet POWs had to sleep in the stables. About 70–80 percent of the prisoners were assigned to one of the camp's approximately 1,600 work detachments (*Arbeitskommandos*), most of which were located in the eastern part of Defense District XI. Most of the prisoners who remained in the camp were not physically capable of agricultural or industrial labor, whether through weakness induced by the conditions in the camp or through combat injuries.

Forced labor by POWs was generally administered along the same lines in each Defense District, but the types of work the prisoners performed took on a local character unique to each region, based on the interests of the organizations that were concerned with POWs. In Defense District XI, many of the POWs were sent to the industrial center of Magdeburg, where they worked for companies such as Krupp, Wolf, and Strube producing goods that were important for the war effort. Approximately 4,500 prisoners worked in 30 work detachments in Magdeburg's industrial area. Even in early 1942, observers from the International Committee of the Red Cross decried the conditions for the work detachments in Magdeburg, including the poor quality of the housing and food provided to the prisoners. The situation became much worse as work detachments for Soviet POWs were created;

these prisoners were afforded essentially no rights and lived in atrocious conditions. At least 3,229 Soviet POWs are known to have died in Stalag XI A and its associated work detachments.

The large number of work detachments from Stalag XI A virtually ensured that restrictions on "forbidden relationships" between prisoners and the German civilian population would be violated, particularly in areas where women were also working in the war-related industries.

The prisoners' cultural and recreational activities in the camp were mainly possible because of the intervention of the YMCA, which provided them with books, films, and sports equipment. Polish and Western Allied POWs were able to celebrate holidays and hold religious services. French painters received preferential treatment and were allowed to create an "artists' workshop" in which they produced artworks; 38 caricatures produced by the prisoners in the camp have survived. There was a Dutch-language Protestant Church in the camp, which operated from 1943 to 1945.

Western Allied prisoners had access to the large camp hospital, which had a capacity of over 1,200 beds. This hospital primarily dealt with more severe ailments requiring surgery, with lesser cases handled in smaller medical wards in the camp. The hospital was generally adequately supplied; patients received sufficient food rations, medications, and dressings. By contrast, the facilities within the camp clinics were old and insufficient for the number of patients. International observers characterized the hospital as overcrowded and in need of cleaning. Patients were kept in bunk beds with older straw mattresses. As late as mid-1944, there were no separate facilities for prisoners with communicable diseases such as tuberculosis.¹

As of January 1, 1945, there were 62,300 prisoners in Stalag XI A, including Americans, British, Poles, Belgians, French, Dutch, and Soviets. On April 25, 1945, some Western Allied prisoners were evacuated from the camp by British, French, and American commandos led by Major Philip Worrall, in an action code-named "Operation Violet."

In the 1960s, the prosecutor's office in Hamburg began an investigation of "weeding out" operations (*Aussonderungen*) performed by camp personnel in collaboration with the SS.

MANNSCHAFTSSTAMMLAGER (STALAG) XI B

The Wehrmacht established Stalag XI B on September 24, 1939, in Fallingbostel (map 4a), in Defense District (*Wehrkreis*) XI. On March 6, 1942, Stalag XI B took over the former Stalag 321 (XI D) in Oerbke (located about 1 kilometer [0.6 miles] from the main camp in Fallingbostel), which became known as Teillager Oerbke. On October 10, 1943, Stalag XI B also took over part of the former Stalag 311 (XI C) in Bergen-Belsen, which became a subcamp (*Zweiglager*) known as ZL Bergen-Belsen. Stalag XI B was subordinate to the Commander of Prisoners of War in Defense District XI (*Kommandeur der Kriegsgefangenen im Wehrkreis XI*).¹

Stalag XI B was located on a former training ground of the German army (*Heer*), where barracks had been constructed in 1935. Additional wooden barracks that had been used by workers on this site prior to the war were fenced in and used as housing for prisoners of war (POWs) after September 1939. There were seven separate compounds within the camp, each of which housed a different national group (although American and British prisoners were kept together in one compound late in the war). A separate camp for Soviet prisoners was located one kilometer north of the main camp in Fallingbostel; it was originally the independent Stalag 321 (XI D), later incorporated into Stalag XI B. The commandant of Stalag XI B was Oberst Ostmann.² The camp was guarded by personnel from Reserve Battalion (*Landesschützenbataillon*) 461.

Stalag XI B held American, Belgian, British, Dutch, French, Polish, Serbian, Slovak, and Soviet POWs, as well as Italian military prisoners. It was one of the largest POW camps in Germany, with a population well above 50,000 for most of the war and a maximum population of 95,294 on September 1, 1944. However, the majority of the prisoners registered in the camp were not housed within the main camp itself but were instead working outside the camp in one of the many work details (*Arbeitskommandos*) that were distributed throughout the surrounding area.³ The labor performed by the prisoners in Stalag XI B was controlled by the State Labor

Office of Lower Saxony (*Landesarbeitsamt Niedersachsen*). Most of the prisoners in the camps in Wehrkreis XI were employed in the defense industry near the city of Hannover, including the Hermann Göring Werke.⁴ Other prisoners worked on nearby farms and in forestry.⁵ The prisoners working in Hannover were quartered in a number of small camps throughout the city that were operated by the German Labor Front (*Deutsche Arbeitsfront*, DAF), while the city administration of Hannover operated an additional 21 camps, which held approximately 7,000 prisoner-laborers from camps in Wehrkreis XI, primarily Stalag XI B.⁶

The first prisoners to arrive in Stalag XI B were Polish POWs captured during the German invasion of Poland in September 1939. By December 13, 1939, there were 7,958 Polish prisoners in the camp. The next prisoners brought to the camp were French, British, and Belgian prisoners who arrived in the spring of 1940, following the German campaign in Western Europe. As of September 10, 1940, there were 17,416 Belgian prisoners, 13,062 French prisoners, 2,180 Polish prisoners, and 1 British prisoner in the camp. The French soon became the largest national group in the camp and would remain so throughout the war; however, the camp continued to have a relatively large number of Belgian prisoners. Serbian prisoners were brought to the camp in the spring of 1941 after the Axis invasion of Yugoslavia in April of that year. As of May 1, 1941, there were 5,213 Serbian prisoners in the camp. The first Soviet prisoners arrived in the late fall of 1941 and soon became the second-largest prisoner group in the camp. By December of that year, there were 11,785 Soviet POWs in the camp. A small number of Dutch prisoners were brought to the camp in the summer of 1943, followed by Italian military prisoners in the fall of that year. The Italian contingent in the camp was also quite large, with 13,561 Italians in the camp by October 1943. American prisoners arrived in the late fall of 1943, although there was not a permanent American population until the fall of 1944; as of December 1, 1944, there were 378 Americans in the camp. The final prisoners to arrive in Stalag XI B were Slovak prisoners captured during the Slovak National Uprising in the late summer and early fall of 1944. On December 1, 1944, there were 2,751 Slovaks in the camp.⁷

The conditions experienced by Polish, Serbian, and Western Allied prisoners in the camp varied over time. The Germans generally treated these prisoners well and observed the requirements of the Geneva Convention of 1929 in their accommodation of these prisoners. However, early in the war, the influx of large numbers of prisoners strained the camp's resources and led to overcrowding and poor hygienic conditions; an outbreak of typhoid fever occurred in 1940. These problems repeated throughout the war as large numbers of prisoners continued to arrive in the camp.⁸ The efforts of the prisoner-doctors to provide medical care in the camp were often hampered by the lack of medical supplies, particularly during the final months of the war.⁹ American corporal Albert Smith stated that lice were omnipresent, even in the infirmary, and that the sick prisoners who were inpatients there slept on straw mattresses with only a single blanket.¹⁰

These prisoners had some access to recreational and cultural activities in the camp, including a camp library, a theater troupe, an orchestra, and sports fields. Religious services were provided by clergy within the camp.¹¹ The French prisoners published two newspapers, one entitled *Les Temps Perdu* (*The lost times*) and the other called *Unir (Unite)*.¹² A British paratroop officer, Regimental Sergeant Major John Clifford Lord, took on a leadership role within the British section of the camp after he arrived following his capture at Arnhem in September 1944. He demanded discipline and good hygiene from the prisoners as though they were in a regular army camp rather than a POW camp.¹³

As in other camps, the Germans treated Soviet prisoners of war horribly, in flagrant violation of the terms of the Geneva Convention. The prisoners lived in severely overcrowded quarters and received minimal food and medical care. As a result, diseases such as typhus and dysentery spread rapidly through the Soviet prisoner population and, in combination with chronic malnutrition and exhaustion, produced a very high death rate. After the closure of Stalag 321 (XI D), the surviving Soviet prisoners from that camp were transferred to Stalag XI B, where the conditions were little better than they had been in the former Russian camp (*Russenlager*).¹⁴ Even in the final months of the war, the death rate among the Soviet prisoners remained high. American private first class Robert G. Noble recalled that during his time in the camp, between late February and mid-April 1945, the Soviet prisoners were dying at a rate of almost 20 men a day due to malnutrition, pneumonia, typhus, and tuberculosis.¹⁵

Although the Germans were initially hesitant to use Soviet POWs for forced labor in the work details for ideological and security reasons, after the first winter, they relented and began to employ large numbers of Soviet laborers. Even the officers (exempted from working by the Geneva Convention, which the Germans routinely ignored) were put to work in their own “special” work details; a total of 44 such kommandos were created.¹⁶ As in other camps, the Germans—in this case, a special unit (*Einsatzkommando*) of the Hamburg Gestapo—conducted selections (*Aussonderungen*) of the Soviet prisoners to separate out “undesirables,” such as Jews and political commissars, who were sent to concentration camps and executed.¹⁷ Most of the Soviet prisoners who were selected in the Stalags in Wehrkreis XI were sent to Sachsenhausen, but a few were sent to Neuengamme.¹⁸

The Germans also treated Italian military prisoners poorly in Stalag XI B, as was generally the case in other camps as well. The Italian prisoners’ section of the camp was overcrowded and sanitary conditions were inadequate. Dysentery and other infectious diseases, including influenza and tuberculosis, were widespread. Their food rations consisted of two bowls of soup per day. Since the Italian prisoners were sent to hard labor (for example, in a nearby Volkswagen factory), these meager rations quickly led to malnutrition. Once it became clear that the inadequate food rations were depleting the working strength of the Italian prisoners, the Germans decided to add a third bowl of soup and a piece of bread to

their diets. Nonetheless, the rates of disease and mortality among the Italian prisoners remained high.¹⁹

In September 1944, the Germans reestablished the camp at Oerbke, now designated as Stalag 357. Some of the prisoners from the severely overcrowded Stalag XI B as well as some new arrivals—mainly American and British prisoners from Stalag Luft 4 and Stalag XX A, who had marched hundreds of kilometers to Fallingbostel along the “northern route”—were transferred to that camp.²⁰ However, by the final months of the war, conditions had severely deteriorated in both camps due to overcrowding and shortages of supplies.

New American prisoners arriving in the camp after the Battle of the Bulge were forced to live in tents, as there was no room left for them in the barracks.²¹ These tents were often filled well beyond their capacity—as many as 150 men in a space intended to hold 70–75—and had no furnishings or bedding; the prisoners slept on straw on the ground. The tents were also not heated.²² Those who were fortunate enough to live in the barracks found them to be severely overcrowded and poorly heated—American private first class Paul C. Denning recalled that there were 234 men in his barrack.²³ Although the sanitary facilities were still maintained, American prisoners noted that the camp’s drinking water had a very high sulfur content, which induced gastrointestinal illnesses among the prisoners. The decreased food rations, mainly consisting of soup, during the last weeks of the war caused many prisoners to suffer from malnutrition and lose significant amounts of weight; they depended heavily on Red Cross parcels for supplementary food, but only two shipments of these parcels arrived in the final eight weeks of the operation of Stalag XI B.²⁴

Around 12,000 prisoners from Stalag XI B and Stalag 357 were evacuated to the northeast toward Lübeck and Schleswig beginning on April 6, 1945.²⁵ Stalag XI B was liberated by the 7th Division of the British Second Army on April 16, 1945.²⁶ The final columns of prisoners evacuated from the camp were liberated on May 8, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) XII A

The Wehrmacht established Stalag XII A on January 23, 1940, by order of the Deputy Corps Headquarters of XII Army Corps in Defense District (*Wehrkreis*) XII, by reorganizing Dulag G, which was already located at the site in question.¹ The site of the camp remained unchanged until liberation, in an area at the western edge of Limburg an der Lahn (map 4d). Today the area is part of the district of the neighboring town, Diez. The prisoners were housed in wooden barracks. Stalag XII A was the first one organized in Defense District XII. Over the long term, it played a special role, as reflected, in particular, in its numerous special tasks.

From the outset, the Stalag was under the sole control of the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

Five officers are known to have served as camp commandants:²

Generalmajor Victor Geissert	April 10, 1940–June 30, 1940
Oberst Swoboda	July 1, 1940–May 8, 1941

Oberst Hubert Borck	May 8, 1941–October 6, 1942
Oberst Hilmar von der Recke	October 7, 1942–January 18, 1945
Oberst Franz Mensing	from January 20, 1945

The campgrounds and the labor detachments were guarded during the first few months by Reserve Battalions (*Landesschützenbataillone*) XV/XII and IX/XVII, then by Reserve Battalions 776, 785, 861, 874, and 876.

Limburg was a medium-sized camp in the territory of the Reich, with occupancy figures between approximately 23,700 (on September 10, 1940) and approximately 42,200 (on January 1, 1945), according to the monthly reports of the Armed Forces High Command (OKW) to the International Committee of the Red Cross (ICRC).³ The prisoners of war (POWs) came from many different countries, and they varied in number and by time period. There were French, Belgian, Polish, Serbian, Soviet, British, Italian, American, and also a small number of Dutch and Bulgarian POWs. Individuals of other nationalities may indeed also have been in the camp, as the reports of the OKW were not complete.

Around 85 percent of the POWs were not in the main camp itself but rather were deployed in one of the approximately 800 work detachments (*Arbeitskommandos*), which, in some cases, were more than 100 kilometers (60 miles) from the main camp. The area of responsibility of Stalag XII A encompassed several regional employment-office (*Arbeitsamt*) districts but was subject to frequent organizational changes. For example, there was a big change in 1942, when control over the work detachments of the regional employment-office district of the Rhineland was surrendered to Stalag XII D. In exchange, the work detachments of Stalag XII B were taken over from the employment-office districts of Mannheim, Heidelberg, and Mosbach. In the deployment of work detachments, the main emphasis was on agriculture, with midsized industries also playing a large role.

In Stalag XII A, the treatment of the POWs did not differ from the conditions in other Stalags within the territory of the Reich. Those who came off best, in terms of food, labor deployment, support, care packages, and so on, were the POWs from Western Europe and the United States. This was largely due to the substantial support this group received from international relief organizations. These POWs had, especially in the main camp, a library, educational classes, a theater group, and an orchestra. The French published their own camp newspaper, *Demain (Tomorrow)*.⁴ Also in Stalag XII A, the “Mouvement Pétain,” a propaganda organization of the Vichy regime, sought to induce the French prisoners en masse to collaborate with the Germans.

Next in the prisoner hierarchy were the Poles and the POWs from the Balkans. On the lowest rungs and receiving the worst treatment in every respect were the Italians, followed by the Soviets.

The Germans provided medical care to the POWs at several levels. Treatment always began in the camp's medical

Stalag XII A at Limburg an der Lahn. Indian POWs carrying food, October 1943.

COURTESY OF ICRC.

facility, where POW personnel worked under German command. The more serious cases were referred to a reserve hospital (*Reserve Lazarett*) with a POW ward. Depending on the patient's location—in a work detachment or in the main camp—the hospitals in question were those in Hadamar, Limburg, Koblenz, Wiesloch, Bad Kreuznach, Trier, Maria Laach, Heppenheim, and Bad Ems.

If the distance to the main camp was too great, larger medical facilities for work detachments, like the one in Wiesbaden, were interposed. These were run by Stalag XII A with its own personnel,⁵ and they operated like the medical clinic in Limburg. Another special feature of the camp was the central dental lab that made dentures for POWs in Defense District XII.

The camp and the labor detachments were frequently visited by delegations from various institutions. Their visit reports often give a detailed picture of life in the camp.⁶ The following visit reports are known:

US Embassy: November 1940, May 1941

ICRC: October 18, 1940; February 5 and September 23, 1941; August 28–29, 1942; March 5 and October 30, 1943; August 7 and November 24, 1944; February 11, 1945

YMCA: December 1940; April 19, July 10, and September 9, 1941; June 30, August 1, and September 30, 1942, March 5, 1943

Scapini Mission: June 27, July 18, August 18, and October 11, 1941; April 11, 1942; July 7, 1943

Belgian POW delegation: July 18, 1942; January 25, 1943

Swiss Legation: July 28 and November 15, 1944.

Stalag XII A had numerous special tasks and special functions. For a short time in February 1940, it continued to perform the tasks of Dulag G, which was closed down. Also in February 1940, it admitted Polish POWs whom the Germans had previously interned in Slovakia. On November 26, 1940,

Defense District XII issued an order for Stalag XII A to organize the staffs of POW Construction and Labor Battalions (*Kriegsgefangenen Bau- und Arbeitsbataillonen*) 36, 39, and 42.

On April 26, 1941, the General Army Office (*Allgemeines Heeresamt*, AHA) ordered Stalag XII A to organize the headquarters of Stalag 312, Frontstalag 322 and 352, using its own personnel. When Stalag XII C was closed (October 1941), Stalag XII A took over its POWs, the labor detachments, and some of the buildings. During the intermittent deployment of parts of POW Glazier Battalion XIII and POW Construction and Labor Battalions 13 and 39 in the region, these battalions received organizational support from Stalag XII A.

In 1942, Stalag XII A functioned as a central assembly camp in Defense District XII for French POWs involved in the "Relève" system of prisoner exchange. In addition, in its capacity as the central reception camp for the northern part of Defense District XII, it admitted and redirected POWs when other camps were being reorganized.

From October 1943 on, by an order of the OKW dated October 29, 1943, Stalag XII A served as the reception camp for all Soviet volunteers (Hiwis)/Legion members from the West who were excluded from the Wehrmacht, before their further transport to various destinations, including the Mauthausen concentration camp.⁷ From October 1944, British and US POWs who were part of the enemy paratroops, antiaircraft artillery troops, and air landing troops from the West were placed in the central camp in Limburg before being sent on to Dulag West in Wetzlar.

In 1944, the "army interrogation center," with administrative headquarters in Oranienstein Castle in Diez, was affiliated with Stalag XII. The end for Stalag XII A loomed as early as December 23, 1944, when large parts of the camp facilities were destroyed in an Allied air raid and 80 American POWs were killed.

In February 1945, the American POWs were evacuated by train, headed in the direction of Berlin. The camp area in Limburg was liberated by the US Army on March 26–27, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) XII B

The Wehrmacht established Stalag XII B in Frankenthal, in the Palatinate (map 4d), by an order of the Deputy Corps Headquarters (*Stellvertretende Kommandantur*) for the XII Army Corps, in Defense District (*Wehrkreis*) XII, dated April 1, 1940.¹ The camp was deployed in Frankenthal throughout the war.

A unique feature of the camp was its very small camp area, which was gradually improved and enlarged. The camp was located on a small site surrounding the "Pfistersche Festhalle" (Pfister's or Pfisters' Banquet Hall), with a large room serving as the main lodging for around 2,000 prisoners. Later, wooden barracks were added. The commandant's office, however, was separated from the camp area and divided among various buildings spread throughout the surrounding urban area. The main task of the commandant's office was to control and manage the large number of work detachments (*Arbeitskommandos*).

470 MANNSCHAFTSSTAMMLAGER (STALAG) XII B

The camp was under the control of the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

The following camp commandants are known:²

Oberst Schönpflug	until August 11, 1940
Major z.V. Friedrich Ernst	August 12–December 8, 1940
Oberstleutnant z.V. Johann Dulnig	December 9, 1940–April 12, 1941
Major z.V. Theodor Wussow	April 13–November 5, 1941
Oberst Max Emmerling	May 9, 1941–March 24, 1942

The campgrounds in Frankenthal and the work detachments were guarded by Reserve Battalions (*Landesschützenbataillonen*) 433, 434, 776, 785, and 861. During its deployment in the region, Stalag XII B occasionally provided organizational support (medical care, delivery of charitable donations, etc.) for Prisoner of War (POW) Glazier Battalion XII (*Kriegsgefangenen Glaserbataillon XII*) and POW Construction and Labor Battalion 42 (*Kriegsgefangenen Bau- und Arbeitsbataillon 42*).

No field post number (*Feldpostnummer*) was assigned to the camp, since Stalag XII B never deployed outside the Reich.

The Stalag was a relatively large camp, with up to 44,000 prisoners registered there.³ With respect to nationality, the French were the largest group (on average, 30,000), followed by the Poles (between 5,000 and 10,000). Citizens of other nations, such as Belgians, Serbians, and Soviets, were present there in smaller numbers. A special feature was the presence of a Chinese prisoner, mentioned in some sources, though no additional information about him is available.

The main task of the camp was the deployment of approximately 900 work detachments, where more than 90 percent of the prisoners were located. The deployment area included the Palatinate, southern Hesse, Rhenish Hesse, and northern Baden. The main emphasis was on work in agriculture; POWs were only used in industry in the Mannheim-Ludwigshafen area.

For the purpose of organization, so-called control districts (*Kontrollbezirke*) were inserted between the level of the commandant's office and the labor detachments. In each case, they were run by companies of the Reserve Battalions, which were also responsible for guarding the POWs. The control districts were tasked with the direct deployment of the work detachments and with supervision of the conditions there. In addition, the heads of the control districts had disciplinary authority over the POWs. What is astonishing is the large number of control districts: 55. Other Stalags managed with approximately 10.

Even before the organization of Stalag XII B, there were Polish POWs in the region, deployed as a labor force. They had been allocated by the employment office in Ludwigshafen, and they were quartered in village halls in the

Stalag XII B at Frankenthal. Prisoners behind a barbed wire fence, November 1940.

COURTESY OF ICRC.

surrounding area. Their assignment within the POW system cannot be conclusively determined, but there is much evidence that indicates that they belonged to Stalag XII A at this time. Stalag XII B then took over these POWs.

With regard to the treatment of the POWs, different nationalities experienced different conditions. The French and Belgians were generally well treated, and they also received sizable deliveries of foodstuffs and other items from relief organizations. The treatment of the Poles and Serbians was somewhat worse but tolerable in general. The Soviets suffered the most from shortages of rations and inadequate medical care.

A distinction must also be made between the main camp and the work detachments. The situation in the labor detachments was not uniform; there were repeatedly instances in which regulations were not complied with. It was the responsibility of the Stalag to take corrective action through administrative supervision and by exerting influence on the employers.

The prisoners had a library available. They operated an orchestra and a theater ensemble, which also gave performances in the camp and for larger work detachments. Clergymen, who were POWs themselves, held religious services on a regular basis.

Medical treatment of the POWs usually began in the camp's medical facility, which was run by physicians and personnel who were POWs, under the supervision of the Germans. In the early period of the camp's existence, the medical facility was very small. At the beginning of 1941, it was transferred to the nearby civilian mental hospital and expanded there. After additional barracks were erected, part of the operation returned to the campgrounds. On the basis of the size of the facilities, the term *Kriegsgefangenlazarett Frankenthal* (Frankenthal military hospital for POWs) was also in use.

The more serious cases were referred to military hospitals with POW wards, such as those in Bad Kreuznach, Trier, Wiensloch, and, for tuberculosis patients, Saarburg (today Sarrebourg, France).

Stalag XII B received numerous visits from foreign delegations, which also visited the work detachments. The following visit reports are known: the US (protecting power) delegation—October 21, 1940 and May 1941; the Scapini Mission—May 13, July 19, August 11, October 9, and November 10–11, 1941; the ICRC—November 5, 1940, and September 5 and 29, 1941; and the YMCA—December 19, 1940 and April 24, August 6, September 24, and November 26, 1941. The overall assessment was that the camp, even considering the small camp area and shortcomings in individual labor detachments, was “attractive and good.”⁴

In the spring of 1942, Stalag XII B ceased to exist. By order of the General Army Office (*Allgemeines Heeresamt*, AHA) dated March 13, 1942, Stalag XII B was terminated and made into a subcamp of Stalag XII F. The work detachments were distributed among Stalags XII A, XII D, and XII F. The process of closing down the camp was concluded on April 20, 1942.

SOURCES Primary source information about Stalag XII B is located in BA-MA (RH 49/21, RH 53-12/19, RW 6/483, RW 48/12, RW 59/2128, MSg 200/810); BArch B 162/15404; PAAA (R 40705, 40706a, 40770, 40973, 40974, 40975, 40977, 40988, 40989, 40990, 40991, 67011, 67033); Archiv Landeswohlfahrtsverband Hessen (B 14, No. 247/2); TsAMO (500-14250-41); AN (F 9-2879, 2880; ICRC: G 10/17/17.13/b5); NARA (RG 424, T 84, Roll 464); and Staatsarchiv Ludwigsburg (EL 48/2 I Bü 1699).

MANNSCHAFTSSTAMMLAGER (STALAG) XII C

The Wehrmacht established Stalag XII C in Defense District (*Wehrkreis*) XII, by an order of the General Army Office (*Allgemeines Heeresamt*, AHA), dated March 20, 1940. It began operation on April 1, 1940.¹ It was deployed in Wiebelsheim (map 4d) and the Generalgouvernement. The camp was initially subordinate to the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

Stalag XII C was notable for the separation of its facilities from each other. The camp proper consisted of approximately 15 barracks of a former Reich Labor Service (*Reichsarbeitsdienst*, RAD) camp in Wiebelsheim. The majority of the commandant's office (headquarters) was located in buildings in Oberwesel, directly on the bank of the Rhine, 20 kilometers (12.4 miles) away. These buildings included, among others, the mail censor, the delousing facility, and the camp medical center.

The names of the following camp commandants are known:²

Oberstleutnant Bruno Becker	until May 8, 1941
Oberstleutnant Karl Christiani	May 9, 1941–March 24, 1942
Oberst Max Emmerling	March 25–June 20, 1942

The campgrounds in Wiebelsheim and the work detachments were guarded by a Reserve Battalion (*Landesschützenbataillon*). From December 17, 1940, to the end of 1941, Prisoner of War Construction and Labor Battalion 12 (*Kriegsgefangenen Bau- und Arbeitsbataillon 12*) was under the control of Stalag XII C while the battalion was deployed in the region.

Stalag XII C had field post number (*Feldpostnummer*) 42709, assigned between July 30, 1941, and February 28, 1942, and withdrawn between March 1 and September 7, 1942. The number was then given to Stalag 380.

Stalag XII C was a medium-sized camp with a maximum of 18,000 prisoners of war (POWs), consisting of noncommissioned officers and enlisted men.³ It was primarily a camp for French and Polish soldiers, although 8 Belgians and 100 Serians were also there for a short time. In 1940, a striking feature was the additional presence of around 2,500 so-called free workers who were housed in the camp. These were former Polish POWs who had been reclassified as civilian workers (contrary to the usual usages of international law). They also do not appear in the strength reports of the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW).

During the deployment in Wiebelsheim, 95 percent of the prisoners were assigned to about 500 work details (*Arbeitskommandos*). Their work was mostly agricultural. There were also work detachments that did heavy labor, so-called punishment units, like the one in Baumholder for former members of the French Foreign Legion.

On the whole, the French were well treated. They also received regular food deliveries from relief organizations. The situation of the Poles was certainly worse, but still bearable.

Stalag XII C at Wiebelsheim. Outdoor washbasin, November 1940.
COURTESY OF ICRC.

The prisoners had a library available, and also had their own orchestra and theater group, which performed in the camp and for larger work detachments. The French published their own camp newspaper (*L'an quarante*). Taking regular showers was somewhat difficult, as it was possible only in Oberwesel, 20 kilometers (12.4 miles) away. Clergymen, POWs themselves, conducted religious services on a regular basis.

Provision of medical services to the prisoners began first in the camp's medical clinic, which was in Oberwesel. It was run by physicians and medical personnel from the POW population, under German supervision. The more serious cases were referred to military hospitals with POW wards, such as those in Koblenz, Bad Kreuznach, and Birkenfeld.

Only in Wiebelsheim did visits by various delegations take place. The following visit reports are available: ICRC: October 10, 1940; YMCA: December 1940 and August 22, 1941; Scapini Mission: June 28, July 20, and September 10, 1941. In every report, the overall assessment of the camp and the morale of the prisoners was "good."

In September 1941, the operation of Stalag XII C in Wiebelsheim entered its final phase. On September 29, 1941, the OKW issued the order for the closure of the camp and the transfer of the headquarters to Końskie, in the Generalgouvernement. The labor detachments were handed over to Stalag XII A and Stalag XII D. The POWs from the camp proper and the buildings of the commandant's office in Oberwesel were taken over by Stalag XII A. The Stalag was reassigned to the Commander of Prisoners of War for Special Tasks in the Generalgouvernement (*Kommandeur der Kriegsgefangenen z.b.V. im Generalgouvernement*).

The commandant's office of Stalag XII C arrived in Końskie on October 21, 1941, and began operating a camp there again. The prisoners were housed in barracks. These were all Soviet prisoners, without exception, several thousand of them. A large segment of them were deployed in work detachments.

The treatment of the prisoners was in keeping with the usual poor conditions for Soviet POWs, for example, with respect to the food supply and the provision of medical care. There were no visits from delegations to inspect the camp, and there were no food shipments from relief organizations either.

On November 5, 1941, the camp was moved from Końskie to Skarżysko-Kamienna, where the camp operation continued in the same manner. The guarding of this camp area and its work detachments was the responsibility of Reserve Battalions (*Landesschützenbataillone*) 377 and 818. On April 7, 1942, the OKW gave the order (converted to an AHA directive dated April 17, 1942) to terminate Stalag XII C and reclassify it as Stalag 380.

SOURCES Primary source information about Stalag XII C is located in BA-MA (RH 34/138, RH 53-23/33, 36, RW 59/2128), MSg (200/810); BArch B 162/8079; PAAA (R 40705, 40739, 40974, 40989, 67033); and TsAMO (500-14250-41).

Additional information about Stalag XII C can be found in the following publications: Francis Ambrière et al., *Vie et mort des Français 1939–45* (Paris: Hachette, 1972); Yves Durand, *La Captivité, Histoire des Prisonniers de guerre français 1939–45* (Paris: Fédération nationale des combattants prisonniers de guerre et combattants d'Algérie Tunisie Maroc, 1980); Yves Durand, *La vie quotidienne des prisonniers de guerre dans les Stalag, les Oflag et les Kommandos 1939–45* (Paris: Hachette, 1987); *Revue Internationale du Croix Rouge* 267; and Gianfranco Mattiello, *Prisoners of War in Germany 1939–1945 (Camps, Nationalities, Monthly Population)* (Lodi: self-published, 2003).

MANNSCHAFTSSTAMMLAGER (STALAG) XII D

The Wehrmacht issued the order for the establishment of Stalag XII D on July 10, 1940. The camp was located in Trier (French: Treves) (map 4d), in Defense District (*Wehrkreis*) XII. On October 14, 1944, the camp relocated to Waldbreitbach, near Neuwied. The reserve hospitals (*Reservelazarette*) in Bad Kreuznach and Igel were subordinate to the camp.¹ Stalag XII D was subordinate to the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

Stalag XII D at Trier. Prisoners in front of their barracks, October 1940.
COURTESY OF ICRC.

Stalag XII D was located on the Petrisberg hill, east of the city center of Trier. The camp was composed of about 60 wooden barracks (constructed in 1939) with three-tiered bunks, surrounded by a barbed wire fence with several watchtowers. There was an infirmary (*Krankenrevier*) as well as a dentist's office within the camp.² The first commandant of Stalag XII D was Oberstleutnant Siegfried Krick. On July 28, 1941, he was replaced by Oberstleutnant Kurt Müller. The final commandant was Oberst Egon Arendt, who replaced Müller on June 25, 1942. The deputy commandants were Hauptmann Franz Kopp and Major Heinrich von Lattorff. The counterintelligence (*Abwehr*) officer was Hauptmann Alfred Paulus.³ The camp was guarded by personnel from Reserve Battalions (*Landesschützenbataillone*) 432, 725, 777, 780, 786, 788, and 789.⁴

Stalag XII D held Belgian, British, Bulgarian, Dutch, French, Polish, Serbian, and Soviet prisoners of war (POWs), as well as Italian military prisoners. It was a relatively large camp, with a population that remained above 18,000 prisoners throughout the war and had a maximum population of 37,715 in September 1944. However, most of the prisoners registered in the main camp were not actually housed there but instead distributed to the numerous work details (*Arbeitskommandos*) that were scattered throughout the area surrounding the camp.⁵

The first prisoners to arrive at Stalag XII D were Belgian, French, and Polish POWs. As of September 10, 1940, there were 22,765 French prisoners (including 14 officers and 80 civilians), 124 Belgian prisoners (including 1 officer), and 1,980 Polish prisoners (including 6 civilians). French prisoners

remained by far the largest national group throughout the war. Probably the best-known prisoner in Stalag XII D was French philosopher and writer Jean-Paul Sartre, who was captured while working as a meteorologist in the French army in 1940. Sartre was held in the camp from August 1940 to April 1941; it was during this time that he wrote his theatrical piece *Barionà, ou le Fils du tonnerre* (*Barionà, or the son of thunder*). The first British prisoners arrived in the camp in early 1941, although there was not a permanent contingent of British prisoners until the summer of 1943. The first Serbian prisoners arrived in the spring of 1941 after the Axis invasion of Yugoslavia in April of that year. As of May 1, 1941, there were 890 Serbian prisoners (including 6 officers and 62 civilians) in the camp; by July of that year, there were 3,905 Serbian prisoners. The first Soviet POWs arrived in the fall of 1941. The first Dutch prisoners arrived in the summer of 1943, followed by Italian military prisoners in the fall of that year. Finally, a group of Bulgarian POWs arrived in the late fall of 1944; as of December 1 of that year, there were 992 Bulgarians in the camp.⁶

The Western Allied prisoners in the camp were generally treated decently, and the conditions they experienced were mostly in line with the requirements of the Geneva Convention of 1929. Conditions in the work details varied, with some prisoners experiencing mistreatment and others experiencing better conditions than in the main camp. For example, in August 1942, the 52 French prisoners in Kommando 95 in Neu-magen, who were working on a private farm, reported that their quarters were acceptable and that they were fed well, with most of the prisoners eating their meals with the owners of the farm.⁷ Relations with German civilians were also mixed—tense in some cases, but in others quite friendly. For many French prisoners in the heavily Catholic Palatinate, there was a natural religious affinity with the local citizens that facilitated positive interactions.⁸

The Western Allied prisoners had access to some recreational and cultural activities in the camp, as well as in some of the work details. Religious services in the main camp were provided by three clergymen among the prisoners.⁹ The French prisoners managed to assemble a large library of over 16,000 books, which circulated both within the camp and in the work details.¹⁰ The Serbian library had around 4,300 books. There were several music groups among the different national sectors, and most prisoner groups also organized sports.¹¹ The French prisoners published a camp newspaper called *Tenir* (*Hold on*) which included both humorous illustrations as well as more serious and nostalgic photographs of peacetime life in France.¹²

Soviet prisoners, on the other hand, were treated horribly, in contravention of the established norms of international law regarding POWs but in line with how the Germans usually treated them. They lived in crowded quarters with inadequate sanitation and received minimal food rations (mainly consisting of a thin soup) and almost no medical care. These conditions led to widespread malnutrition and the spread of infectious diseases such as typhus and dysentery, particularly

in the winter of 1941–1942. The exact death toll for Soviet prisoners in Stalag XII D is unknown, but the Commander of Prisoners of War in Wehrkreis XII, General Reinhard von Westrem, estimated that the overall death rate for Soviet POWs in that district was between 15 percent and 20 percent during the first winter of the war, and this figure is likely representative of the death rate in Stalag XII D. A special unit (*Einsatzkommando*) from the Gestapo office in Frankfurt am Main conducted selections (*Aussonderungen*) of the Soviet prisoners in the camp to separate out “undesirables,” such as Jews and political commissars, who were sent to the Buchenwald concentration camp and executed.¹³ Little specific information is available about the treatment of Italian military prisoners in the camp, but, in general, Italian prisoners were also subject to very bad living conditions.

By the final year of the war, conditions in the camp had deteriorated for prisoners of all nationalities, as was the case in most camps in the Reich. American prisoners who were brought to the camp shortly after the Allied landings in Normandy in June 1944 recalled that the conditions were already difficult at that time. Private Earl Melven Cunningham, who arrived in the camp in late July, stated that while the prisoners’ lodging was acceptable (wooden barracks of similar size to American army barracks), their food supplies were insufficient—a cup of coffee in the morning, a small piece of bread (between one-sixth and one-seventh of a loaf), cabbage soup once a day, and boiled potatoes—and they were provided with no medical care.¹⁴ Sergeant William LeRoy Bruns, who was sent to Stalag XII D in September 1944, stated that the prisoners were not deloused upon arrival and that there were not enough faucets for prisoners to obtain sufficient water for drinking or bathing.¹⁵

No specific information is available about the camp after its redeployment to Waldbreitbach. Stalag XII D was liberated by American forces on March 22, 1945.¹⁶

MANNSCHAFTSSTAMMLAGER (STALAG) XII E

The Wehrmacht established Stalag XII E in Metz, in Defense District (*Wehrkreis*) XII (map 4d), on December 9, 1940, as a result of the reorganization of Frontstalag 212.¹ At first, it continued to be deployed in Metz.

Frontstalag 212 had taken over a large number of remnants of former temporary prisoner-collecting points, the condition of which by that time was often unacceptable. In addition, the parts of the fortifications that were used as housing and the camp area in Metz were suitable only to a very limited extent to serve as a Stalag. The aim of the reorganization was thus to reduce and streamline a large number of geographically separate housing areas by setting up a Stalag. The intention was to create a camp operation that was tightly organized and easy to oversee. The camp initially reported to the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

The following camp commandants have been identified: up to December 17, 1940, Oberstleutnant z.V. Ludwig Freiherr von Imhof, and from January 14–November 6, 1941,

Stalag XII E at Metz. ICRC delegate Dr. Marti visits the camp, February 1941.

COURTESY OF ICRC.

Major z.V. Theodor Wussow.² The permanent camp area and the work detachments (*Arbeitskommandos*) were guarded by Reserve Battalion (*Landesschützenbataillon*) 381.

Stalag XII E consisted of a large number of camp sections with various names:

- 1a. Fort Goeben (French: Fort de Queuleu)
- 1b. Fort Manteuffel (French: Fort de Saint-Julien), the main camp
2. Warningen (French: Vany) subcamp and Mörchingen (French: Morhange) subcamp
5. St. Julian camp military hospital in Metz
- 6b. Johannis-Bannberg (French: Ban Saint Jean) subcamp
7. Housing/work detachments in Wecklingen, Elsingen (French: Elzange), and Bidlingen (French: Budling)
8. Housing/work detachments in Fentsch (French: Fontoy) and Grosshettingen (French: Hettange-Grande)
- Saarburg (French: Sarrebourg) subcamp (housing for personnel of the military hospitals outside the combat zone and collecting camp (*Sammellager*) for escapees who had been recaptured
- Saargemünd (French: Sarreguemines) subcamp.

From December 17, 1940, to December 1941, prisoner of war (POW) Construction and Labor Battalion 42 (*Kriegsgefangenen Bau- und Arbeitsbataillon 42*) had been subordinate to Stalag XII E for disciplinary purposes because of its deployment in the region.

From Frontstalag 212, Stalag XII E took over field post number (*Feldpostnummer*) 10 655, which was terminated between July 15, 1942, and January 24, 1943.³

The Stalag was a medium-sized camp with a maximum of approximately 10,000 POWs.⁴ From first to last, most of the POWs were French, followed by Serbians during the final months. In addition, a small number of prisoners (fewer than 70) from Poland and Belgium were in the camp. In terms of rank, the prisoners were noncommissioned officers and enlisted men. Because some “old inventories” were taken over from Frontstalag 212, there were also some (fewer than 50) French officers and civilians in Stalag XII E during the first weeks.

The housing areas were very diverse, owing to the initial situation in the various parts of the camp:

- in Metz: buildings in permanent barracks (*Kasernen*) and in the fortress area, also wooden barracks;
- in Mörchingen and Saarburg: buildings of former French barracks; and
- in Saargemünd: vacant houses in park grounds, then in a former French permanent barracks area.

Around 70 percent of the POWs were deployed in approximately 100 work detachments. They were most commonly used to perform agricultural labor. One distinctive feature was that several detachments maintained various fortifications in the region, fortifications that were part of the former Maginot Line (water, heat, electricity, maintenance). These work detachments generally consisted of the French soldiers previously deployed there.

On the whole, the treatment of the POWs was acceptable but was adversely affected by poor external conditions, such as the damp and cold accommodations. An attempt was made to improve these living conditions or to close the worst areas.

There was a library for the prisoners, and they began to set up an orchestra and a theater group, but a sustained and full-scale program for the prisoners' free time was very difficult to bring about, partly because of the distance between the housing areas. Catholic priests from among the POWs held religious services. The Serbian POWs had to contend with the fact that they received no food deliveries from relief organizations.

Medical care for the prisoners was provided first in the camp's medical clinic, in this case Camp Section 5, the so-called St. Julian camp military hospital in Metz. It was run by physicians and personnel from the POW population, under German supervision. The more serious cases were referred to military hospitals outside the combat zone (with POW wards) in Mörchingen and Saarburg.

Various delegations visited the Stalag during its time in Metz. Visit reports are available for the following: International Committee of the Red Cross (ICRC): February 6, April, and September 26–27, 1941; Scapini Mission: May 12 and August 16, 1941; YMCA: April 22, August 20, and August 21, 1941.

The visit reports of the ICRC, in particular, describe the POWs' complete set of living conditions. They are explicit

concerning the prisoners' poor housing situation ("dirty and primitive") and suggest that the best solution is to close the camp.⁵

To the Germans, too, there was clearly no sustainable, long-term solution to the situation, and so they decided to close the camp in Metz and redeploy the Stalag XII E headquarters to the east. As a result, the commandant's office was made subordinate to the Commander of Prisoners of War in Defense District I, operation of the camp in Metz was terminated, and the remaining POWs and housing areas were made ready to hand over to Stalag XII F.

In January 1942, the Stalag staff moved to Zambrów, in the Białystok District. There, camp operations resumed in February. The prisoners were lodged in wooden barracks. They were all Soviet prisoners, approximately 2,000 in number. Their treatment was in keeping with the usual poor conditions for Soviet POWs in terms of food rations and medical care. There were no longer any visits by delegations, and there were no deliveries of food by relief organizations. Approximately 40 percent of the POWs were deployed in work detachments.

The deployment of Stalag XII E in the east ended after only seven months. On September 4, 1942, the General Army Office (*Allgemeines heeresamt*, AHA) ordered the closure of the camp. The POWs and the campgrounds were handed over to Stalag 316 for use as a subcamp. After the headquarters was disbanded, the headquarters personnel were used for the organization of POW Labor Battalions 180 to 190.

MANNSCHAFTSSTAMMLAGER (STALAG) XII F

The Wehrmacht established Stalag XII F on November 15, 1940, from Frontstalag 211 in Saarburg (today Sarrebourg, France) (map 4d), in a reorganization undertaken by Defense District (*Wehrkreis*) XII.¹ It was initially deployed in the Ulanen Barracks in Saarburg, 55.7 kilometers (34.6 miles) west-northwest of Strasbourg, in annexed Alsace.

The characteristic feature of this camp was its repeated relocation within Defense District XII; it moved four times, which was very unusual for a Stalag in the territory of the Reich. In addition, Stalag XII F had, in total, nine subcamps in the course of its deployment at the various sites.

Throughout, Stalag XII F was under the control of the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

These officers are known to have served as camp commandant:²

Oberst z.V. August Horschelt	until February 9, 1941
Oberstleutnant (Ldw)	February 10, 1941–June 21, 1942
Dr. Fritz Gerloff	June 22, 1942–January 31, 1943
Oberst Walter Dittler	February 1, 1943–July 31, 1943
Oberstleutnant d.R.	Dr. Fritz Gerloff
Oberst Johannes Klein	August 1, 1943–March 31, 1944
Oberst August Clüver	from April 1, 1944
Major Leuken	from September 1942 (sub-camp Frankenthal)

The campgrounds and the labor detachments were guarded by Reserve Battalions (*Landesschützenbataillonen*) 342, 381, 433, 434, 779, 780, and 782. POW Construction and Labor Battalion (*Kriegsgefangenen Bau- und Arbeitsbataillon*) 36 (from December 1940 to August 1943) and POW Construction and Labor Battalion 39 (December 1940 to October 1941) were under the control of Stalag XII F during their deployment in the region. No field post number (*Feldpostnummer*) was assigned to the camp, since it remained within the territory of the Reich.

On September 1, 1941, the camp was transferred from Saarburg to Bolchen (today Boulay-Moselle, France), to the former barracks of the French 162nd Fortress Artillery Regiment at the edge of town. On March 1, 1943, it was relocated again, this time to Forbach (4d), to the North Barracks (Spichern Barracks) and the South Barracks (General von François Barracks).

Yet another relocation, to Dudweiler (today part of the city of Saarbrücken) (4d), took place in August 1944. Finally, on October 1, 1944, the camp was moved to the planned alternate accommodations in Freinsheim, the last site. In the process, some of the POWs were left behind in the Saarland so that they could work on fortification and entrenchment projects.

Numerous subcamps are known:

- Bliesmengen-Bolchen: in operation from September 15, 1941, to September 1943
- Frankenthal: March 1, 1942, assumption of control over the former camp area of the disbanded Stalag XII B; on August 7, 1942, reorganized as Labor Detachment 200 B
- Johannis-Bannberg (today Ban Saint Jean, France): located in a disused permanent fortification of the Maginot Line, in the barracks of the former French 156th Fortress Infantry Regiment, on territory of the municipality of Denting
- Fort Manteuffel: taken over from the disbanded Stalag XII E in November 1941 in Metz; served as an assembly camp for Yugoslav POWs who were unfit for service, before their release
- Werningen (today Vervy, France): taken over from the disbanded Stalag XII E in November 1941 and in operation until April 1942
- Saargemünd (today Saareguemines, France): in operation from September to October 1944
- Saarburg: the former main camp of Stalag XII F continued as a subcamp from September 1941 to October 1944
- Nonnenhof (south of Worms): in use as a “camp for Russians” from April 1942 to the end of the war; located at a former factory site

Stalag XII F was a relatively large camp, with a maximum of 5,000 POWs until May 1942, and thereafter with between 40,000 and 75,000 POWs.³ Until March 1943, most of the prisoners came from France, but many other nations were represented as well, including Poland, Yugoslavia, Belgium, Great Britain, the United States, Italy, and the Soviet Union. From August 1943, the Soviets formed the largest contingent. Stalag XII F became the priority camp for Soviet POWs in the Gau Westmark, with a total of approximately 350,000 members of this prisoner group passing through the camp.

The treatment of the POWs depended on their nationality. The French, Belgians, British, and Americans received the best treatment; in particular, they received ample deliveries of foodstuffs and other items from aid organizations. They had a library available, and they operated an orchestra and a theater ensemble. The French published their own camp newspaper, *Brindilles (Twigs)*. Catholic priests, prisoners themselves, held religious services on a regular basis.

The Poles and Yugoslavs were somewhat worse off. The Italians and especially the Soviets were in the lowest category. They suffered consistently from a lack of food and medical care.

Approximately 85 percent of the POWs in the camp were deployed in around 1,000 work detachments (*Arbeitskommandos*). The focus of this deployment varied, depending on the region. In the Moselle/Palatinate area, agriculture was the focal point; along the Saar and in Lorraine, respectively, the

emphasis was on mining and industry. From the end of 1944, the work of constructing fortifications was added in the Saar and Moselle regions. This work was directed by the (now) forward command post of the camp in Dudweiler.

On March 1, 1942, the labor detachments from the area of the Westmark Regional Employment Office were taken over from the disbanded Stalag XII B. Because these detachments kept their old numbers, the letter “B” was appended to the number of each to prevent confusion.

Medical care for the POWs usually began in the medical clinic of the main camp. Physicians and personnel from the prisoner population operated it. Because the distance between the camp and the work detachments was significant in some cases, the clinic operated regional branches, such as those in Stirringen-Wendel (today Stirring-Wendel, France), Bolchen, and Johannis-Bannberg (this last facility more specifically for Soviet POWs with tuberculosis). The serious cases were referred to reserve military hospitals with POW wards, including those in Homburg, Saarburg, Fort Manteuffel, Frankenthal, Mörchingen (today Morhange, France), Forbach, Bolchen, and Andernach.

Stalag XII F received numerous visitors from Western countries. The following visit reports are known: ICRC—April 1941; August 22, 1942; March 9–10, and October 24, 1943; August 13, 1944; February 8, 1945; Scapini Mission—June 30, August 16, and November 9, 1941; February 9, 1942; February 25, May 6, and November 1943; YMCA—August 20, October 20, and December 5, 1941; July 25, August 22, and September 9, 1942; Swiss Legation—November 8, 1943, May 18, 1944; BKD—June 1943.

The overall assessment in many reports is not consistent, which is not surprising, given the large number of sites and the many subcamps. The assessments ranged from “poor/very poor” (Mörchingen branch camp and Bolchen main camp) to “satisfactory” (Freinsheim) to “good” (Forbach). In addition, the labor detachments that the inspectors visited were given evaluations ranging all the way from “poor” to “good/excellent.”

The end of Stalag XII F’s existence began in January 1945, when some of the prisoners were evacuated in the direction of Weilheim in Oberbayern, in Defense District VII. On March 21, 1945, the Freinsheim camp area was liberated by the US Army.

MANNSCHAFTSSTAMMLAGER (STALAG) XIII A

The Wehrmacht established Stalag XIII A (map 4d) in early September 1939, in Sulzbach-Rosenberg, in Defense District (*Wehrkreis*) XIII. Stalag XIII A had one subcamp (*Zweiglager*), which was designated as an internment camp (Ilag).¹ The camp was under the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*).

Stalag XIII A held French, Belgian, Polish, Serbian, Soviet, and Italian prisoners. It was a very large camp, with a maximum population of 50,507 in December 1942; the population was well above 30,000 and often above 40,000 for much of the first three years of its existence.² Many of the prisoners were assigned to work details (*Arbeitskommandos*) in nearby villages.

The Western Allied prisoners were treated decently by the German administrators and guards. Conditions in their part of the camp were generally satisfactory and in accordance with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). These prisoners had access to some cultural and recreational activities in the camp and the work details. There were a total of 56 Catholic clergy in the camp and the work details, but there was no spiritual support for the approximately 200 Evangelical prisoners. A German course was created in the main camp, in which 40 men were enrolled. The main camp had a 12-man orchestra and a 20-man theater troupe that performed monthly; there were 1,600 musical instruments distributed among a total of 65 work details, and a total of 25 theater groups between them. The main camp had a sport field on which the prisoners played football and handball.³

Stalag XIII A at Sulzbach. Camp orchestra performing at a concert, October 1942.

COURTESY OF ICRC.

The Soviet prisoners were treated inhumanely.⁴ They received little food and no medical care and lived in horrible conditions that facilitated the spread of disease, leading to a high mortality rate.

German authorities designated 14 hospitals and clinics for treatment of prisoners from the camps located in Wehrkreis XIII. Western Allied prisoners could receive treatment at 12 of these, and in extremely urgent cases civilian hospitals could be used for their treatment. Soviet prisoners, however, had access to only two of these hospitals. If the camp doctor deemed that transport to one of these two hospitals would threaten the patient's life, only then could a Soviet prisoner receive care at one of the closer hospitals. A separate camp near Stalag XIII B was designated as a recovery camp (*Aufpäppelungslager*) for Soviet prisoners in extreme states of malnutrition.⁵ American forces liberated the camp on April 22, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) XIII B

The Wehrmacht established Stalag XIII B (map 4d) on July 10, 1940, in Weiden, in Defense District (*Wehrkreis*) XIII.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*).

Stalag XIII B held French, Belgian, Polish, Serbian, British, American, and Soviet prisoners of war (POWs). The largest number of prisoners held at one time was 31,439, as of February 1, 1943; broken down by nationality, they included 15,275 French, 1,823 Belgians, 63 Poles, 2,899 Serbs, and 11,379 Soviets.² There were 10,456 prisoners (all French) on July 15, 1944, and 10,508 on January 15, 1945.³ Beginning in September 1943, there were also Italian military internees. There were 30 internees on October 1, 1943; 3,914 on December 1, 1943; 4,586 on February 1, 1944; 4,787 on April 1, 1944; and 138 on December 1, 1944.⁴

Treatment of Western Allied prisoners by the German administration and guards was decent. Conditions were generally satisfactory and in accordance with the Geneva Convention relative to the Treatment of Prisoners of War (1929). Large numbers of prisoners were assigned to work details (*Arbeitskommandos*) in nearby villages; there were about 300 such details in total. The work conditions were considered by international observers to be much worse than Western Allies faced in other camps, however.

American prisoner work detachment A II near Grässeth worked in underground coal mining. Typically, prisoners were made to work in surface mining and sent underground only if they had prior experience. At Stalag XIII B, however, all of the nearly 150 American prisoners in the detachment were expected to take part in long shifts underground in three mines.⁵ Conditions and high accident rates were so

appalling in the Heinrichsschacht mine that the International Red Cross accused the camp of violating the Geneva Convention. An investigation by the German Foreign Office concluded that "most of the accidents are due to the fault of the American POWs themselves, who out of carelessness or indifference do not observe the security and protection measures properly."⁶ As a result, the mine remained open and accidents decreased only once the prisoners gained more experience in underground mining.⁷

These prisoners had some opportunities to participate in cultural and recreational activities in the camps. Two masses were held every Sunday and a total of 24 clergymen served the men in the camp and work details. There was a camp library with approximately 8,000 books, of which around 6,800 were in French and 800 were in Serbo-Croatian. German language courses were taught in the main camp and 106 of the work details. There was an 11-man orchestra and a small theater troupe in the main camp, along with 46 musical groups and 29 theater groups in the work details. A small sport field was available to the prisoners in the main camp; the preferred sports were football and handball.⁸

The Soviet POWs, in contrast, were treated inhumanely. They received almost no food or medical care and lived in squalid conditions that enabled the spread of disease; as a result, mortality among the Soviet prisoners was high.

German authorities designated 14 hospitals and clinics for treatment of prisoners from the camps located in Wehrkreis XIII. Western Allied prisoners could receive treatment at 12 of these, and in extremely urgent cases civilian hospitals could be used for their treatment. Soviet prisoners, however, had access to only two of these hospitals. If the camp doctor deemed that transport to one of these two hospitals would threaten the patient's life, only then could a Soviet prisoner receive care at one of the closer hospitals. A separate camp near Stalag XIII B was designated as a recovery camp

(*Aufpäppelungslager*) for Soviet prisoners in extreme states of malnutrition.⁹

Late in the war, the camp received prisoners transferred from camps further east which were threatened by the Red Army's advance, such as Stalag 344 in Lamsdorf, Stalag III C in Alt Drewitz, and Oflag 64 in Schubin.¹⁰ American forces liberated the camp on April 22, 1945.¹¹

MANNSCHAFTSSTAMMLAGER (STALAG) XIII C

The Wehrmacht established Stalag XIII C (map 4d) on July 10, 1940, in Hammelburg, in Defense District (*Wehrkreis*) XIII. The camp was also responsible for the Reserve Hospital (*Reserve Lazarett*) Ebelsbach/Main.¹ Stalag XIII C was subordinate to the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*). The camp commandant from November 20, 1943, until April 1945 was Oberst Heinrich Westmann. His deputy was Oberstleutnant Behrens. The camp physician was Stabsarzt Dr. Koch.

Stalag XIII C was a large camp for noncommissioned officers and enlisted men, with separate compounds for prisoners of different nationalities, when practical. The conditions for Western Allied prisoners of war (POWs) were generally good early in the war, but began to deteriorate by 1944. The camp population on October 1, 1944, was 30,294 prisoners: 13,464 French; 870 British; 4,393 Belgian; 904 Polish; 2,477 Serbian; 7,914 Soviet; 270 Italian; and 2 American.

The barracks in which the men lived varied in size from about 18 meters (60 feet) by 4.3 meters (14 feet) to 36.6 meters (120 feet) by 7.6 meters (25 feet). The number of prisoners quartered in each of these barracks also varied, but they generally became more crowded in the last months of the war; while the larger barracks were designed to hold around 100 men, by 1945, they often held 250, and the smaller barracks eventually held as many as 135 men.² Most prisoners slept on wooden bunks, but as much as a quarter of the prisoner population slept on piles of straw on the floor in the more crowded barracks.³ The barracks were often infested with lice, particularly later in the war. The barracks were heated by coal or wood-fired stoves, but there was often insufficient fuel to keep the stoves burning, even during the winter months; at times, the prisoners received only enough fuel to provide two hours' heat.⁴ They were occasionally allowed to leave the camp to gather firewood, under close supervision from German guards.⁵

Sanitary conditions in the camp also deteriorated late in the war. While the men had access to large washbasins and cold running water, they were rarely given the opportunity to take hot showers and did not have hot water with which to wash their clothing.⁶ The latrines in the American compound were completely unsanitary, consisting only of a pole over an open pit. The unsanitary and overcrowded conditions in this compound led to the spread of diseases such as pneumonia and dysentery, which affected nearly all the American prisoners.⁷

While the prisoners' rations had generally been satisfactory until late 1944, they had begun to decline by early 1945. By that time, the prisoners' daily fare consisted of ersatz tea or coffee in the morning (reported by American private Joseph Melosky to be "so putrid we used it to wash with"),⁸ about a liter of watery soup at lunch (which consisted of turnips and potatoes, pine needles, potato skins, and/or barley), and one seventh of a loaf of bread at dinner.⁹ These rations were sometimes supplemented with a small portion of cheese or

sausage about once a week, and occasionally some jam or cottage cheese.¹⁰ American private first class Donald S. Thompson reported that the caloric value of these rations was about 5 percent above starvation-level.¹¹

The NCOs suffered even worse conditions than those for the enlisted men. They were quartered in a former horse stable.¹² They slept on wooden triple bunk beds with straw mattresses that were filled with lice. The stable was constantly cold and damp and there was no covering on the cement floor. The water was “polluted and unpalatable,” according to Security and Intelligence Corps Agent William J. Counihan, who was interned there from January to March 1945.¹³ The latrines were primitive, like those in the enlisted men’s compound, and the prisoners had to bail them out every four to five days. The men were fed so poorly that some lost as much as 23 kilograms (50 pounds) in two months. They became weak and developed jaundice due to malnutrition. Agent Counihan reported that men died “daily” from pneumonia and malnutrition.¹⁴ The two American medical officers in that part of the camp were unable to treat the population of 150 men with the minimal supplies they had.

The medical facilities in the enlisted men’s compound were not much better. The infirmary had 90 beds but was poorly supplied. Few medications were made available by the Germans and the camp medical personnel depended almost entirely on the Red Cross for their stocks of medicines.¹⁵ American first lieutenant Leonard J. Lanzilotti reported that when he arrived at the Stalag XIII C hospital from Oflag 64 on March 9, 1945, the same bandage was left on his wound for eight days; the Yugoslav doctor who treated him told him he could not replace it because there were no supplies available. Lieutenant Lanzilotti also stated that at least one man at the hospital died and that this man would have certainly survived with proper medical care.¹⁶ There was no possibility of performing surgery in the camp, and the X-ray and laboratory facilities were poor. Urgent cases were generally sent to the nearby Oflag XIII B for treatment, while seriously ill men were sent to the hospital in Ebelsbach.¹⁷

Large numbers of prisoners were assigned to work details (*Arbeitskommandos*) in nearby villages.¹⁸ The majority of the prisoners were engaged in agricultural labor or forestry; in September 1944, it was estimated that approximately 90 percent of the British prisoners, for example, were engaged in agricultural work.¹⁹ American staff sergeant Melvin M. Kimes reported that he and other American prisoners were assigned to unload military equipment from boxcars at the rail station in Hammelburg, in violation of the provisions of the Geneva Conventions regarding the use of POW labor.²⁰ Other prisoners were forced to perform other military tasks, such as digging machine gun trenches. The work to which the prisoners were assigned was invariably very hard, and there was, therefore, little in the way of recreational activity in the main camp.

Mistreatment by the German camp personnel only added to the misery that the prisoners experienced. The German block leader (*Blockführer*) over Block 4 in the American compound, for example, was notorious for abusing the prisoners.²¹

American staff sergeant Willard Smee witnessed a German guard punching and kicking an American prisoner in March 1945.²² Additionally, the prisoners were left exposed to the Allied aerial bombardments that became common near the end of the war; the Germans provided them with no shelter and men had to dig foxholes to protect themselves. Staff Sergeant Smee believed that American prisoners had been killed by strafing from Allied planes on at least one occasion.²³

Although the Western prisoners experienced poor conditions and treatment later in the war, their plight paled in comparison to that of the Soviet POWs. As in other camps, the Soviet prisoners were not afforded the protection of the Geneva Conventions and were treated inhumanely. They were subjected to deliberate starvation, complete neglect of their medical needs, and brutal treatment at the hands of the German camp personnel. These conditions led to a high mortality rate.

Stalag XIII C was the destination for many prisoners who had been evacuated from the camps in the east, such as Oflag 64 and Stalag VIII D, in advance of the Red Army’s arrival. On March 27, 1945, a number of prisoners were evacuated from Stalag XIII C as the American forces approached from the west. The American 14th Armored Division liberated the camp on April 7, 1945.²⁴

MANNSCHAFTSSTAMMLAGER (STALAG) XIII D

The Wehrmacht established Stalag XIII D (map 4d) between November 1 and November 15, 1942, in Hammelburg, in Defense District (*Wehrkreis*) XIII, on the site of the former Oflag 62 (XIII D).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XIII (*Kommandeur*

der Kriegsgefangenen im Wehrkreis XIII). The camp was relocated to Nürnberg-Langwasser in February 1943.

Stalag XIII D held French, Belgian, Polish, Serbian, British, Soviet, and American prisoners of war (POWs); including 10,000 officers who arrived in February 1945 from Stalag Luft III. The largest number of prisoners held at one time was 30,000.² There were 11,038 prisoners on July 15, 1944, and 7,160 (of whom 5,200 were French) on October 29, 1944. On January 15, 1945, there were 5,708 prisoners (all French).³ From September 1943, there were also Italian military internees (3,541 on October 1, 1943; 6,439 on December 1, 1943; 6,535 on February 1, 1944; 10,139 on April 1, 1944; and 1,521 on December 1, 1944).⁴ Large number of prisoners were assigned to work detachments (*Arbeitskommandos*) in nearby villages.⁵

Western Allied prisoners were in the minority in the camp. They faced conditions that deteriorated markedly as the war lasted into 1945. British and American prisoners confronted harsh working conditions, as the majority were assigned to work details outside the primary camp compounds. An estimated 90 percent of these units were engaged in agriculture, with the remaining assigned to lumber and street-clearing details. In contrast to many other Stalags, prisoners carried out very little industrial labor. Due to the heavily agricultural nature of the work, days were quite long, often beginning at four o'clock in the morning and not ending until after sundown.

Racial tensions existed with prisoners from some areas of the British Empire and Commonwealth. In September 1944, an arrival of 247 British troops primarily from India, Palestine, and South Africa led to the creation of a separate work detail, known as Detachment 1740.⁶ The spokesman for the 129 men in this detachment was the South African corporal Ben Hlatjwojo. The quarters they were given were greatly overcrowded (the men all slept in one room) and the rations were insufficient for the long and arduous days the prisoners spent digging trenches.⁷ They were treated much more brutally than British prisoners from the British Isles; as international observers described harsh physical treatment: "Supervisors cannot make themselves understood verbally, [so] orders are therefore given in a brutal way."⁸ Corporal Hlatjwojo corroborated this statement, stating that the prisoners were beaten because of their inability to communicate with the Germans.

By early 1945, rations, supplies, and overall conditions within the camp had deteriorated. The American prisoners were crammed into three overcrowded barracks. Food supplies were inadequate (the Americans supplemented their rations by borrowing from the Red Cross parcels given to Belgian and Serbian prisoners). The prisoners' clothing was in a poor state, and there was no possibility of having it repaired. The hygienic facilities were rudimentary; the latrines had frozen over and the prisoners were only able to have hot showers very infrequently. Due to the poor sanitary conditions, many of the Americans were infected with dysentery. The medical care supplied to them, however, was considered

adequate. There were about 100 books in the library in the American sector, and sports facilities were available.

The discipline in the camp was very strict, which made an “unfavorable” impression on international observers in the camp.⁹ American prisoners arriving at the camp from the front complained of the harsh interrogation tactics. They lacked reliable access to medical oversight and were clothed in the uniforms in which they were captured. Many from the western front endured long rides in cattle cars or long marches without rations prior to arrival.¹⁰ Meanwhile, prisoners began to arrive at Stalag XIII D from evacuated camps in the east. Injured prisoners from a POW hospital in Defense District VIII were marched town to town from the end of January until their arrival at Stalag XIII D on March 5, 1945.¹¹

The Soviet POWs were treated inhumanely. They were subject to deliberate starvation, withholding of medical care, and shocking displays of cruelty and violence at the hands of the German camp personnel. As in other camps for Soviet prisoners, regular “weeding out” operations (*Aussonderungen*) were conducted at Stalag XIII D, in which “undesirable” elements among the Soviets, including Jews, political commissars, other Communist Party members, and any soldiers determined to have become “thoroughly Bolshevikized” were taken out of the camp and sent to a concentration camp (usually Buchenwald or Dachau) and executed.

German authorities designated 14 hospitals and clinics for treatment of prisoners from the camps located in Wehrkreis XIII. Western Allied prisoners could receive treatment at 12 of these, and, in extremely urgent cases, civilian hospitals could be used for their treatment. Soviet prisoners, however, had access to only two of these hospitals. If the camp doctor deemed that transport to one of these two hospitals would threaten the patient’s life, only then could a Soviet prisoner receive care at one of the closer hospitals. A separate camp near Stalag XIII B was designated as a recovery camp (*Aufpäppelungslager* from the front) for Soviet prisoners in extreme states of malnutrition.¹²

Camp hospital (*Reserve Lazarett*) Nürnberg-Langwasser served injured or ill prisoners of Stalag XIII D and, on occasion, Stalag XIII C. The hospital had a capacity of 2,000 beds. As was the case in many camp hospitals, American and British prisoners were accorded certain advantages in their care. At Nürnberg-Langwasser, Germans dedicated an entire barrack to the 45 British and 18 American patients in May 1944.¹³

Although the camp hospital was well built and the medical arrangements were adequate, the prisoners’ care and treatment relied heavily on the availability of medicines and dressings from the Red Cross. The prisoners depended almost entirely on Red Cross parcels for their food as well. Prisoner health was considerably worse than in many other camps treating American and British prisoners. On average, prisoners remained in Nürnberg-Langwasser for four to five months prior to returning to the Stalag. In the opinion of international observers, this long period of convalescence stemmed from the reluctance of German officials’ to take the men off

their work detachments until they were completely unable to perform physically; this situation was particularly prominent in the case of the colonial prisoners, who were often physically unfit for work to begin with, and frequently became ill due to the unfamiliar climate and awful conditions in which they worked and lived.¹⁴

In the later stages of the war, the hospital’s location became a concern, as German forces began to move antiaircraft guns into the vicinity. These concerns were particularly heightened after the bombing of the main camp. The American Seventh Army liberated the camp on April 20, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) XVII A

The Wehrmacht established Stalag XVII A on September 30, 1939, by converting Dulag J into a Stalag.¹ The camp was located in Kaisersteinbruch (map 4f), 34.6 kilometers (21.5 miles) southeast of Vienna, in Defense District (*Wehrkreis*) XVII; it was the first Stalag opened in this Defense District. Stalag XVII A was subordinate to the Commander of Prisoners of War in Defense District XVII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVII*).

Stalag XVII A was located on the grounds of a former barracks of the Austrian army, which the Wehrmacht expanded. It was divided into two sections: Lager I, which consisted of 41 stone barracks, and Lager II, which comprised 32 wooden barracks and eight smaller buildings.² The two camp sections (alternately known as Lager A and Lager B) were located about 500 meters (1,640 feet) apart.³ The camp kitchen was operated by a German noncommissioned officer and the camp infirmary was run by a German doctor and five French doctors. There was also a camp canteen where the prisoners could purchase goods such as cigarettes (10 Reichsmarks for a package), chocolate (15 Reichsmarks for a bar), and shoes (60 Reichsmarks for a pair).⁴ The exact composition of the camp staff is unclear, but known commandants of the camp include Oberst von Puttkamer and Oberst Pamperl.⁵ The camp was guarded by personnel from Reserve Battalions (*Landesschützenbataillone*) XXV (875) and XVII (877).⁶

Stalag XVII A was one of the largest prisoner of war (POW) camps in the Reich from 1939 to early 1941. The prisoner numbers decreased after the spring of 1941 due to the conversion of the three Oflags in Wehrkreis XVIII (Oflags XVIII A, XVIII B, and XVIII C) into Stalags and the transfer of some prisoners from Stalag XVII A to these new camps.⁷ Nonetheless, Stalag XVII A remained a relatively large camp throughout the war, with a population generally between 20,000 and 30,000 prisoners.⁸ The first prisoners to arrive were Polish soldiers captured during the German invasion of Poland in September 1939. By December of that year, there were over 13,000 Polish prisoners in the camp (including a small number of officers and civilians); however, by the spring of 1940, most of the Poles had been transferred to other camps in the Reich.⁹

The next prisoners to arrive in the camp were French and Belgian POWs captured during the German campaigns in Western Europe in the spring of 1940. The French prisoners became and remained the largest prisoner group in the camp for the rest of the war; the maximum population of French prisoners in the camp was 65,793 in February 1941.¹⁰ In the spring of 1941, Serbian prisoners were brought to the camp after the Axis invasion of Yugoslavia. The first Soviet prisoners arrived in November 1941 and were confined to Lager I, which became known as the Russian camp (*Russenlager*).¹¹ In the fall of 1943, British prisoners of war and Italian military prisoners were brought to the camp. Finally, in the last months of the war, American, Bulgarian,

Romanian, and Slovak prisoners were brought to Stalag XVII A.¹²

The majority of the prisoners registered in the camp were not housed within the main camp itself but were instead deployed outside the camp in work details (*Arbeitskommandos*).¹³ As of 1944, there were at least 615 separate work details subordinate to Stalag XVII A.¹⁴ The prisoners in Stalag XVII A mainly worked in agricultural labor and in the nearby stone quarries from which Kaisersteinbruch takes its name.¹⁵ Others were employed in local factories and other industrial labor; for example, Kommando 96 GW worked in a cement factory.¹⁶ However, certain groups, such as Jewish and Arab French prisoners, were not required to work because the Germans deemed their presence among the German civilian population unacceptable.¹⁷ Prior to the creation of the Stalags in Wehrkreis XVIII, Stalag XVII A (along with Stalag XVII B in Gneixendorf) was responsible for the distribution of POW labor throughout the entire Ostmark (annexed Austria).¹⁸ While the conditions in the work details and the labor the prisoners performed generally conformed to the requirements of the Geneva Convention of 1929, French laborers in Kommando 25 GW at Eisenerz, who were working in an iron ore mine, informed the Red Cross delegate who visited them in October 1944 that their food was "bad and insufficient" and that their living conditions were "deplorable."¹⁹ In another case, French prisoners in Kommando 657 GW were sent to work in an armaments factory, in violation of the

provision of the Geneva Convention that prohibits the use of prisoners in directly war-related labor.²⁰

Little information is available about the conditions in Stalag XVII A during the early months of the war; however, in general, the Germans treated Polish prisoners poorly and often did not provide them with adequate food or clothing. By contrast, the Western Allied prisoners usually received better treatment, and the conditions of their confinement in the camp were generally in line with the provisions of the Geneva Convention. The prisoners slept in triple bunk beds and were able to take a hot shower once a week. The first Red Cross visit to the camp took place in the summer of 1940, shortly after the arrival of the first Belgian and French prisoners. The inspector reported that conditions in the camp were relatively good and that, although the prisoners had some complaints (small bread rations and inadequate clothing for the Belgian prisoners), they found life in Stalag XVII A preferable to the conditions they had experienced in the Frontstalags in France.²¹

The camp regulations (*Lagerordnung*) stated that the prisoners were to be awoken for roll call at 5:00 a.m. during the summer months (6:00 a.m. in the winter months). Afterward, they were given their breakfast between 6:00 a.m. and 7:00 a.m. and then performed 30 minutes of “morning exercises” before those who were assigned to work details were sent to work. Lunch was served between 11:00 a.m. and 1:00 p.m., and, after the prisoners returned from work, they received their dinner between 5:00 p.m. and 6:00 p.m. The prisoners’ officially allotted rations differed based on whether they were working and the type of work they were doing. The minimum weekly rations for nonworking prisoners were 2.6 kilograms (5.7 pounds) of bread, 250 grams (8.8 ounces) of meat, 130 grams (4.6 ounces) of fat, 7 kilograms (15.4 pounds) of potatoes, 110 grams (3.9 ounces) of sugar, and 14 grams (0.5 ounces) of ersatz tea, with vegetables and spices offered based on availability. The prisoners were, in theory, responsible for discipline within their own ranks—including the cleanliness and presentation of the individual prisoners as well as of their barracks—through their self-administrative structure; the German guards were only supposed to intercede in matters that could not be resolved among the prisoners themselves. The German camp doctor (*Lagerarzt*) was responsible for both the operation of the camp infirmary and the maintenance of the hygienic conditions in the camp, as well as arranging the transport of seriously ill or injured prisoners to the camp hospital (*Lagerlazarett*). Disciplinary matters were to be handled not arbitrarily but in a military manner.²²

However, the memoirs of former French POW Constantin Joffé demonstrate that the actual conditions in the camp were often much different than those described in the regulations and the more glowing Red Cross reports. According to Joffé, upon arrival at Stalag XVII A, the prisoners were taken to a large building where they showered and their clothes were disinfected. In contrast to the Red Cross report, Joffé described the food rations as unsatisfactory—a

cup of ersatz coffee, two bowls of potato soup, and 200 grams (7 ounces) of bread per day, well below the officially prescribed rations—and stated that gastrointestinal illnesses were common among the French prisoners early on in their captivity.²³ Joffé also recalled incidents of abuse by the German guards, such as a day in December 1940 when the temperature reached -28° Celsius (-18° Fahrenheit) and the Germans required the prisoners to move a large quantity of stones that were coated in ice, despite the fact that none of the prisoners had gloves or boots. Those who did not work quickly enough were beaten by the guards.²⁴ Joffé’s experiences clearly illustrate that the front the Germans were able to present to the Red Cross was not entirely representative of the prisoners’ experiences, and, while their treatment might have been proper in general, opportunities nonetheless existed for individual guards or groups of them to exercise wanton cruelty and violate the established norms for the treatment of prisoners. Joffé himself was among the fortunate prisoners from Stalag XVII A who were repatriated to France in 1941.²⁵

The Western Allied prisoners had access to some cultural and recreational activities within the camp, including a small library, musical groups, and sports. However, these activities, as well as religious services, were often unavailable to the Polish and Serbian prisoners due to a lack of supplies and clergymen.²⁶ There was a camp hospital not far from the main camp, which, as of 1944, was staffed by two British doctors. Most major cases of illness and injury were sent to the hospital; the doctors in the camp infirmary treated only minor cases. Red Cross inspectors noted in August 1944 that the camp hospital was in good order and that the health of the prisoners in Stalag XVII A was generally good. However, the inspectors also remarked that, although the hospital’s supplies of drugs were being depleted, they were not being replenished as quickly as they had been earlier in the war; in addition, the hot water in the hospital had been out for six months.²⁷

Unlike the Western Allied prisoners, Soviet POWs were treated horribly, in a manner that was in violation of international law regarding the treatment of POWs. They were transported to the camp in open railcars, and many of the men were dead or on the verge of death before they even arrived in the camp. Their quarters in Lager I were overcrowded, the prisoners received little food or medical care, and conditions facilitated the spread of diseases such as typhus and dysentery. The death rate among Soviet prisoners was very high, particularly in the winter of 1941–1942. In total, about 9,500 Soviet prisoners died in Stalag XVII A, compared with 216 prisoners of all other nationalities combined. The dead prisoners were buried in mass graves outside the camp, located about 100 meters (328 feet) behind the camp infirmary.²⁸ As in other camps for Soviet POWs, the Germans also carried out selections (*Aussonderungen*) of Soviet prisoners to separate out “undesirables,” such as Jews and political commissars, who were sent to concentration camps such as Mauthausen for execution.²⁹

Surprisingly, however, Italian military prisoners in Stalag XVII A were reported to have experienced better conditions there than they did in most other camps in Germany (where they were often treated very poorly). About 2,500 Italian prisoners “volunteered” for a German-created special unit (*Einsatzbrigade*) of Italian troops, which ensured them better rations and living conditions, much like the Soviet volunteer guards and soldiers (*Hilfswillige*, Hiwis) in other camps.³⁰

Late in the war, conditions deteriorated for all prisoners in Stalag XVII A. The camp became increasingly overcrowded with the transfer of prisoners from other camps closer to the front (such as a group of sick and wounded prisoners from Stalag 344 in Lamsdorf who arrived in March 1945)—at times, over 400 men were crammed into each barrack. Cultural and religious activities in the camp declined during this time due to the strained conditions. Some prisoners were shifted to defense-related labor (illegal under the Geneva Convention), and many were killed working on a barrier at the Austrian-Hungarian border in the winter of 1944–1945.³¹

As the Red Army approached from the east in the spring of 1945, the Germans began preparing to evacuate the prisoners from Stalag XVII A westward. The evacuations began on March 30, with the final convoy departing on April 2 (the exact date of the camp’s official dissolution is unknown). The prisoners were combined with columns of evacuees from Stalag XVII B in Gneixendorf and were led via Wels and Lambach in the direction of Braunau am Inn, in Upper Austria, where they arrived on April 19. The prisoners received little food during the march, and those who lagged behind were often shot.³² After reaching Braunau, the prisoners were marched about 10 kilometers (6.2 miles) further west to Neuenkirchen.³³ The evacuated prisoners were liberated by American troops on May 6, 1945.³⁴

MANNSCHAFTSSTAMMLAGER [STALAG] XVII B

The Wehrmacht established Stalag XVII B on October 26, 1939, in Gneixendorf, near Krems an der Donau, from Dulag Gneixendorf (map 4f). It developed into the largest prisoner of war (POW) camp in what was then the Ostmark

(present-day Austria). At one time, 66,000 POWs passed through the camp: French, Belgian, Serbian, Polish, British, and Soviet prisoners, as well as Italian military prisoners. The majority were housed in one of the camp's many work detachments (*Arbeitskommandos*). In October 1943, a "Luftwaffe subcamp" was created in Gneixendorf for 4,300 US Army Air Forces (USAAF) noncommissioned officers.

More than one-third of the POWs were used for agricultural work, and the rest worked primarily for the Wehrmacht and in construction. For the Soviet POWs, in particular, labor deployment meant some degree of improvement in their living conditions. The advantages of working for farmers were well known to the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW): "The high demand on the part of the agricultural sector, especially as a result of the scattered farming settlements, accommodates the wish of the prisoners of war to be employed there, owing to the availability of better food and relatively greater freedom."¹

For labor deployment outside the camp, POWs were put to work in detachments and housed directly at their place of work or in its vicinity. Their "employers" provided their lodging and rations. The camps for the work detachments, in comparison with the main camp, looked more basic, but here, too, above a certain size, various facilities were officially required. These included an infirmary and a housing space allocation of 5 cubic meters (177 cubic feet) per prisoner. However, the exact guidance was not always complied with, even in the labor camps, because of chronic overcrowding.

The size of the work detachments varied, depending on the deployment, but the demand for workers could not be met in either Defense District (*Wehrkreis*) XVII or Defense District XVIII: "The allocation of prisoners of war was and is not commensurate with the requests for manpower. Assistance by the relevant authorities was repeatedly asked for." The numbers were mind-boggling: in September 1940 alone, there were 1,446 work detachments under the control of Stalag XVII B—with around 44,000 POWs altogether—and 823 additional detachments requested.

From 1941 on, with the establishment of POW Stalags in Defense District XVIII, the administrative ambit of the camp was reduced to the greater part of the Lower Danube Administrative Region (*Gau*) and the entire Upper Danube Administrative Region. As a result of the creation of Stalag 398 in Pupping, Stalag XVII B surrendered the supervision of Upper Danube. Nonetheless, until the end of the war it remained the largest administrative organization for the work deployment of POWs in the territory of the Ostmark.

A wide camp street cut through the quadrangular grounds of the Stalag, with prisoner accommodations on either side. Stalag XVII B consisted of 40 barracks, which in 1942 were subdivided by additional barbed wire fencing to create "battalions," each with three barracks. In American reports, 12 sectors, or "compounds," 5 of which, at the eastern end, were assigned to the American prisoners, were mentioned. The four double barracks in each sector were planned for 400 men, and each of these structures was divided into two parts

by a washroom in the center, with six sinks. The latrine was outside near a playing field. The sectors for the Americans were separated from the areas for other nationalities by guard towers and barbed wire.

From the fall of 1943, when the first Americans came to Stalag XVII B, they were housed adjacent to the Soviet sectors. They were better fed and, in addition, received care parcels from the International Committee of the Red Cross. A lively barter trade across the barbed wire boundary separating the two groups soon developed, in which primarily the coveted American cigarettes were exchanged for onions or potatoes. The Soviet POWs, who worked outside the camp, were able to smuggle foods of this kind into their sector. Not until the fall of 1944 were the rations for Soviet POWs aligned with those for the other nationalities, and that alignment was often more theoretical than real.

The Soviet POWs were excluded from the aid provided by the Red Cross and thus from an additional source of food-stuffs. Also, in contrast to all the other nationalities, the Soviet POWs were not supplied with cooking areas for preparing additional food. Until the fall of 1942, they even received "Russian bread," consisting of 50 percent coarse-grained rye meal, 20 percent sugar beet shreds, 20 percent cellulose powder, and 10 percent straw powder or leaves, leading to symptoms of deficiency. The presence of straw in the bread also acted as an irritant and ultimately caused disorders of the digestive system. The Soviets also received a soup, called *balanda*, which was made from millet or buckwheat, turnips, and uncleaned, sometimes rotten, potatoes.

The accommodations of the individual nationalities also reflected the differences in their treatment. "One camp—two systems" was the slogan. American POWs were housed in a sector of their own, as were the Soviet POWs. The rest of the prisoners lived in the so-called international sector.

In September 1941, when the first "Russian transports" arrived in the "East camp," which was separate from the rest of the camp, deaths began to occur at an extremely high rate. An infirmary was set up in a tent, but the seriously ill men there were largely left to their own fate. In December 1941, an epidemic of spotted fever and typhus broke out, causing the entire camp to be placed under quarantine. Four French Jewish POWs were assigned to take care of the sick, and in the process the French assistant physician Rosenberg died from an infection, on New Year's Eve 1941. Within one month, approximately 700 Soviets died as a result of the epidemic.

All told, around 1,700 Soviet POWs perished in Stalag XVII B, most of them during 1941–1942. During the period from August 1943 to April 1945, there were 360 deaths in this group of prisoners. These deaths, although the mortality rate had significantly declined, still represented 83 percent of all prisoners who died during that time period. In addition to the Soviets, 19 Yugoslavs, 20 French, 1 Belgian, 2 Poles, 4 Americans (two of whom were shot while trying to escape), 22 Italians, 4 Romanians, and 1 Slovak—73 POWs altogether—were buried in the camp cemetery.²

Oberst Kühn (Army) was the commandant for most of the camp's existence, and Major Ertl (Luftwaffe) was camp officer in charge (*Lageroffizier*) or first camp leader (*Lagerführer*). Hauptmann Paletta (Luftwaffe) was assigned as second camp leader.

Reserve battalions (*Landesschützenbataillonen*) were used as guard personnel. They were ordinarily under the control of the Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) in each district and were replaced at regular intervals.³

The American POWs exhibited amazing creativity in Stalag XVII B. Many of them kept "wartime logs," which they filled with poems, drawings, caricatures, and the like, and they also kept diaries. The latter consist of short phrases in note form, frequently lacking verbs, which mention the most important facts, written down in great haste. They record the food situation, theater performances, bomb alarms, correspondence, weather conditions, birthdays, Christmas celebrations, and important military events.

In addition, the American POWs published a camp newspaper, *The Gremlin*. They organized their own camp school, an orchestra, and a camp theater known as the Cardboard Theatre. Here, the two American prisoners Don Bevan and Edmund Trzcinski authored a play that had its Broadway premiere in 1951. It served as the basis for Billy Wilder's Oscar-winning film *Stalag 17*.

Most of the other national groups of POWs in Stalag XVII B also developed cultural activities. From July 1941, the French published the camp newspaper *Le Gai Mât*, whose title was a play on the Austrian dialect expression "*Gemma*" ("Gehen wir," "let's go"). Published twice a month, it contained poems, discussions of the cultural events in the camp, stories, announcements by the man of confidence (*bonne de confiance*) for the French, and editorials intended to maintain a mood of patriotism in the French sector. There was a typical struggle between collaborators and resistance fighters over the editing of the newspaper and over the political orientation of its content.

By contrast, the Soviet POWs were, to the greatest possible extent, forbidden to engage in artistic and literary activities. The most basic preconditions for the creation of literature and art were absent, with inadequate light and space conditions, hunger, cold, illnesses, and time-consuming labor deployment not the only obstacles. Even keeping a diary was risky; writing materials had to be hidden, and, if they were discovered, the prisoner in question could expect harsh punishment. Countless preparations for escape attempts were made in Stalag XVII B; some were prevented by the Germans, some were punished with solitary confinement, and occasionally they even ended in death.

Of the four American POWs who died in Stalag XVII B, three died while attempting to escape. For example, Sergeant Proakis, in the course of his attempted escape together with Sergeant LaVoie on December 3, 1943, was shot by the guards. Immediately thereafter, the guards returned to the American sector of the Stalag, where they fired additional shots and wounded one POW in his barracks. The wounded man, William E. Binnebose, had to wait for almost an hour at the main gate and then was carried to the camp medical facility and

subjected to three hours of surgery. Only three months later, in late February 1944, was he able to return to his barracks in the camp.

Shortly before the war ended, a summary court martial in Stein an der Donau tried the commandant of the Gneixendorf camp, Franz Schweiger, as well as his subordinates Kilian and Zelenka, for attempted resistance to the regime. They organized a unit of guards that left the camp; the guards had planned to surrender to the Soviets but were captured. The guards were set at liberty; Schweiger, Kilian, and Zelenka were sentenced to death in Stein on April 21, 1945, and publicly hanged on the Südtiroler Platz in Krems an der Donau. Their bodies were left hanging for three days, as a cautionary example.

The public prosecutor's office in Vienna, on the basis of these two summary court-martial verdicts and other evidence, brought charges of high treason and other crimes against Higher Regional Court Counsellor, retired Higher Counsellor to the State Court (*Oberlandesgerichtsrat, ausser Dienst*) Dr. Viktor Reindl; director of Public Prosecutions, retired States Attorney General (*Generalstaatsanwalt, ausser Dienst*) Dr. Karl Stich; and the bookkeeper Franz Dobravsky. On June 18, 1948, the Vienna Regional Court, functioning as the People's Court, sentenced Reindl to five years of strict confinement, Stich to eight, and Dobravsky to two.

On April 6, 1945, after the Soviets broke through toward Vienna, the decision was made to evacuate the POW camps in the eastern part of the Ostmark. All the POW camps in Defense District XVII—with the exception of Stalag 398 in Pupping—were evacuated in the direction of Braunau am Inn. Some of the prisoners from Kaisersteinbruch, on their way westward, stopped over for a few days in Stalag XVII B.

The evacuation of all Americans who were transportable or able to walk began on April 8, after the Soviet prisoners had marched away several days before. They were followed two days later by the French and Belgians in four columns of 500 men each. The American POWs were arranged in eight columns of 500 men apiece, each column led by a POW and guarded by 20 German home guards (*Volkssturm*) with two dogs. The march, approximately 300 kilometers (186 miles) in length, led, with minor deviations from the route by the individual march columns, through the Wachau region, via Mauthausen to Linz, and finally via Erferding and Altheim to the Weilhartsförst reception camp, located 4 kilometers (2.5 miles) north of Braunau am Inn.

On May 3, 1945, the first American soldiers—six men from the US 13th Armored Division in three Jeeps—encountered the 15,000 POWs, guarded by 205 men. Soon thereafter, additional units of the 13th Armored Division arrived to coordinate the prisoners' return to their various home countries. On May 12, the removal of the former POWs from the Weilhartsförst began. They were taken in American trucks to the Pocking airfield, and from there transport planes flew them to Châteaudun, Reims, and Le Bourget.

After the evacuation of the majority of the POWs from Stalag XVII B, the only ones remaining there were those who

could not move for reasons of health or who had returned from work detachments, including around 200 Americans and 300 French. The remaining German guard forces proved accommodating during this final phase. The situation changed abruptly, however, on April 20, when SS troops assumed control of the camp. They remained in the camp until May 8, one day before the arrival of the Soviet troops.

Stalag XVII B was liberated on May 9 by elements of the Soviet 49th Rifle Division. A Soviet general permitted the liberated prisoners to move about freely inside the campgrounds in the daytime, but at night they were forbidden to be outside the barracks. Conditions in the camp are said to have been worse after liberation than before.

At least three former members of the camp staff at Stalag XVII B were tried by Soviet military courts in the postwar years. Two of them had been arrested as civilians in the Soviet zone of occupation in Austria. Found guilty of “war crimes,” they were sentenced to 15 and 25 years, respectively, in a Gulag prison camp. Hauptmann Johann E., for example, who had worked from 1943 as a company commander engaged in guarding POWs, was accused of having forbidden the Soviet POWs to search through the garbage for something to eat and of having ordered his subordinates to use weapons to compel the POWs to work. In addition, he was said to have placed under his protection two guards who had shot Soviet POWs.

Although Johann E. pled not guilty, he was sentenced to 25 years of camp imprisonment. Johann E. returned to Austria in 1955 with the 70th transport of returnees. His application for rehabilitation was denied by the Russian Main Military Prosecutor’s Office in 1998 on grounds of “proven cruel treatment of prisoners of war.”

MANNSCHAFTSSTAMMLAGER (STALAG) XVII C

The Wehrmacht established Stalag XVII C (map 4f) from Dulag Döllersheim on October 20, 1939, in Döllersheim, in Defense District (*Wehrkreis*) XVII.¹ On June 15, 1940, the camp was reorganized as an officers’ camp, designated Oflag XVII A, and the enlisted prisoners were transferred to Stalag XVII B.² The camp was subordinate to the Commander of Prisoners of War in Defense District XVII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVII*).

Stalag XVII C held Polish prisoners of war (POWs). Little information is available about the conditions in the camp, but, in general, conditions in camps for Polish POWs in 1939 and 1940 were poor, with inadequate housing and insufficient food supplies.

SOURCES Primary source material about Stalag XVII C is located in BA-MA (RW 6: 450; RH 53-17/16), BArch B 162/790, and WASt Berlin (Stammtafel Stalag XVII C).

MANNSCHAFTSSTAMMLAGER (STALAG) XVIII A

The Wehrmacht established Stalag XVIII A on March 1, 1941, by converting Oflag XVIII B into a Stalag.¹ The camp was located in Wolfsberg, 48.5 kilometers (32 miles) southwest of Graz, in Defense District (*Wehrkreis*) XVIII (map 4f). Between October 3, 1942, and August 1, 1944, Stalag XVIII A had a subcamp (*Zweiglager*) in Spittal an der Drau (previously, the independent Stalag XVIII B), which was designated Stalag XVIII A/Z. One section of this camp also served as a prisoner hospital (*Lazarett*), while the other was subsequently converted into Ilag XVIII. A second subcamp was established at Marburg an der Drau (today Maribor, Slovenia) from the former Stalag 306 (XVIII D)/Stalag XVIII B/Z in the spring

of 1943. Other branch camps were located at Wagna, near Leibnitz, and Unterpremstätten, near Graz.² Stalag XVIII A was subordinate to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*).

Stalag XVIII A was located on the site of the former barracks of the III Bataillon, Gebirgsjägerregiment 139 in the district of Priel, in the southern part of Wolfsberg. The original barracks were too small to hold the number of prisoners the Germans wished to keep at the camp, so the Wehrmacht purchased 10 hectares (24 acres) of private land surrounding the camp. By the end of the war, there were a total of 35 barracks at the campsite. There were two separate sections of the camp: Lager I, which held Western Allied prisoners, and Lager II, which held Italian military prisoners and Serbian prisoners of war (POWs). An additional camp section for British prisoners was fashioned out of seven stables in April 1943; these prisoners were later moved to three new barracks that were constructed in early 1945.³

The first camp commandant was Oberst Richard Flechner. He was succeeded in 1942 by Oberstleutnant Werner von Reckow. Oberstleutnant von Reckow was replaced by Oberst Georg Keller shortly before the end of the war. The adjutant was Hauptmann Anton Hopfer.⁴ The first camp officer (*Lageroffizier*) was Major Johann Knaus.⁵ His successor was Hauptmann Ferdinand Steiner; the latter was regarded by the prisoners as an understanding officer who followed regulations on prisoner treatment diligently.⁶ The counterintelligence (*Abwehr*) officers in the camp were Hauptmann Küchler, Hauptmann Wladimir Kosurik, Hauptmann Gerhard Ebenbichler, Major Gebhard Braun, Hauptmann Josef Steinklauber, Hauptmann Josef Küritz, and Major Dr. Karl Pollak.⁷

Stalag XVIII A was a relatively large camp, with a population that never fell below 21,000 prisoners; the maximum population of the camp was 47,844 prisoners in February 1944.⁸ The first prisoners to arrive were French and British POWs transferred to the camp from Stalag XVII A in Kaisersteinbruch. The French remained the largest prisoner group in the camp throughout the war, while the British were the second-largest group for most of the camp's existence. The number of British prisoners increased substantially in late 1943 with the transfer of prisoners from camps in Italy northward to Stalag XVIII A.⁹ This camp had the highest concentration of British, Australian, and New Zealand prisoners of any camp in the Reich.¹⁰ As of March 31, 1941, the first date for which population statistics are available, there were 25,668 French prisoners (including 8 officers) and 518 British prisoners in the camp. Beginning in July 1941, there were smaller numbers of Belgian prisoners (never more than 1,000) and Serbian prisoners (maximum population of 177) in the camp.¹¹ Soviet prisoners were first brought to the camp in November 1941, and their numbers greatly increased after the closure of the so-called Russian camp (*Russenlager*) in Spittal in August 1942.¹² The first Italian military prisoners were brought to

the camp in October 1943, and a small group of Dutch prisoners arrived in December of that year. Finally, a small group of Americans (63 men) was brought to the camp in January 1945.¹³ Although the camp's official population was quite large, the majority of the prisoners registered in Stalag XVIII A (over 80%) did not reside in the main camp but were instead deployed in the numerous work details (*Arbeitskommandos*) outside the camp.¹⁴

As in most camps, the Germans' treatment of Western Allied and Serbian prisoners of war was decent and within the requirements of the Geneva Convention of 1929. In April 1944, a delegate from the International Committee of the Red Cross who visited the camp went as far as to declare that Stalag XVIII A was a "good" Stalag. There was a camp kitchen operated by the prisoners, as well as a camp infirmary, which was staffed by British doctors supervised by the camp doctor (*Lagerarzt*), Dr. Toppler. The prisoners' food rations and the sanitary conditions in the camp were deemed adequate by international observers, and the prisoners' clothing was in good shape.¹⁵ A normal meal in the camp consisted of vegetable soup and black bread with margarine; the prisoners received 30–40 grams (1–1.4 ounces) of meat once a week.¹⁶ Prisoners noted that the German guards sometimes amused themselves by abusing the prisoners, particularly during morning roll call, which was often dragged out for as long as two hours by the guards' chicanery.¹⁷

All POW labor in Wehrkreis XVIII was coordinated through Stalag XVIII A.¹⁸ The prisoners worked primarily in agricultural labor and construction around the camp, and their work requirements generally conformed to the provisions of the Geneva Convention. Some work details consisted of large numbers of prisoners; however, others were simply small groups of prisoners assigned to work on private farms and quartered by the owners of the farms.¹⁹ However, a group of about 110 French prisoners was sent to work on defensive fortifications on the Hungarian border, which violated the Geneva Convention's prohibition on the use of prisoner labor for projects of an explicitly military nature.²⁰

The conditions in Stalag XVIII A deteriorated late in the war, as was the case in most camps within the Reich, although the problems were generally less severe than in many other camps, and Red Cross inspectors continued to give positive reports on the status of the camp even as late as the summer of 1944, noting adequate supplies of food and clothing at that time.²¹ However, by early 1945, food supplies for the prisoners had decreased, and the prisoners increasingly relied on Red Cross food parcels to meet their dietary needs.²² Overcrowding (due to the transfer of prisoners from other camps) and lack of fuel for heating were also major issues.²³ These problems had been exacerbated when the camp was accidentally bombed by the Allies on December 18, 1944. Seventy-two bombs hit the camp, killing 46 prisoners and damaging or destroying 10 barracks (mainly in Lager II), requiring the

confinement of larger numbers of prisoners in the remaining barracks. The camp infirmary was also badly damaged, and most ill or injured prisoners were transferred to the main (civilian) hospital in Wolfsberg.²⁴

Stalag XVIII A also had a hospital, which was located in the West Camp (*Westlager*) of the former Stalag XVIII B/Stalag XVIII A/Z in Spittal an der Drau. An American prisoner, Private Benjamin Eagleman, who was in the camp infirmary after the bombing, stated that the food rations and medical supplies were inadequate and that the prisoners' sleeping quarters were crowded and uncomfortable (double bunk beds with straw mattresses).²⁵

The prisoners had access to cultural and religious activities within the main camp. Religious services were held for Catholic, Protestant, and Serbian Orthodox prisoners. The camp had a library of about 15,000 books, and the prisoners organized educational courses (19 as of August 1942). There was a small British orchestra as well as a theater troupe that performed in a section of one of the barracks, which had been designated for cultural activities, that had a capacity of 200. The prisoners were also allowed to play sports like soccer during their spare time, although lack of sports equipment was a problem, according to prisoners' complaints to a visiting YMCA delegate.²⁶ The French prisoners published a camp newspaper called *L'Echo du XVIII A* (*The echo of [Stalag] XVIII A*).²⁷ Similar activities were organized on a smaller scale in the branch camps and work details.²⁸

Information about the treatment of Soviet and Italian prisoners in Stalag XVIII A is limited. In general, the Germans treated both of these groups of prisoners very poorly, and death rates among them were high. However, the number of Soviet prisoners in Stalag XVIII A was low during the winter of 1941–1942, when the largest number of deaths occurred among the Soviet prisoners in other camps (most of the Soviet prisoners were at the Russian camp at Stalag XVIII B during this time). There was an outbreak of typhus among the Russian prisoners, with estimates of deaths ranging from 100 to 500 (some French prisoners also died during the epidemic).²⁹ However, of the 121 prisoners buried at the camp cemetery, only 46 were from the Soviet Union (although this figure does not include prisoners who died at the camp in Spittal or those who died in transit to Stalag XVIII A); it is unclear where the remaining deceased Soviet prisoners were buried. French prisoners assisted the Soviets by passing food from the kitchen (operated by French soldiers) to them through the fence separating their sections of the camp.³⁰ A postwar investigation found no evidence of selections (*Aussonderungen*)—in which Soviet prisoners were screened and those identified as Jews and political commissars were executed—at Stalag XVIII A.³¹

There were no evacuations from the main camp of Stalag XVIII A (or most of the other camps in Wehrkreis XVIII) since this area was part of the German Alpine Fortress (*Alpenfestung*), which was purported by German propaganda to

be impenetrable to Allied forces; however, some work details in the eastern part of Austria were moved further west to Stalag 317 (XVIII C) in Markt Pongau. Stalag XVIII A was reached by British paratroopers from MI9 on May 8, 1945; at this time, the commandant handed control over to the British.³² Two units of the British Eighth Army, the 27th Lancers and the Irish Guard Fusiliers, arrived on May 11, 1945, to formally liberate the camp.³³

MANNSCHAFTSSTAMMLAGER (STALAG) XVIII B

The Wehrmacht established Stalag XVIII B on February 7, 1941, by converting Oflag XVIII C into a Stalag.¹ The camp was initially located in Spittal an der Drau (map 4f), in Defense District (*Wehrkreis*) XVIII. On October 3, 1942, the camp was relocated to Wagna, near Leibnitz. On January 31, 1943, the camp was relocated again to Pupping. Stalag XVIII B had a branch camp in Marburg an der Drau (today Maribor, Slovenia), designated Stalag XVIII B/Z (formerly Stalag 306 [XVIII D]), which operated from August 1 to November 15, 1942.² Stalag XVIII B was subordinate to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*).

Stalag XVIII B was a small camp, composed of seven barracks, each of which held between 170 and 250 prisoners. In

Spittal, the camp was divided into two sections, the West Camp (*Westlager*) and the East Camp (*Ostlager*), about 800 meters (2,625 feet) apart. The first commandant was Major Sachs. On October 17, 1941, Oberst von Alten was named camp commandant.³ He was succeeded in the summer of 1942 by Oberst Strandes.⁴ The Lagerführer was Major Martung. Many of the camp's guards were Ukrainian and Serbian volunteers (*Hilfswillige*, Hiwis).⁵

The population of Stalag XVIII B was originally composed primarily of French prisoners, with smaller numbers of Belgian and Polish prisoners also present. The first camp population statistics, from May 1941, recorded 13,116 French prisoners (including 7 officers), 475 Belgians, and 15 Poles. After June 1941, Serbian prisoners were the second-largest national group in the camp. Small numbers of British prisoners were also present in the summer of 1941. The maximum camp population during this period was 17,030 prisoners in July 1941. Many of the prisoners registered in the main camp were deployed in the numerous work details (*Arbeitskommandos*) that were subordinate to Stalag XVIII B.⁶ The prisoner-laborers from Stalag XVIII B worked in various locations near Spittal and throughout the districts of Salzburg and Tirol-Vorarlberg.⁷

In October 1941, the French, Serbian, Belgian, and British prisoners were transferred to Stalag 317 (XVIII C) in Markt Pongau and replaced by Soviet prisoners of war (POWs); Stalag XVIII B became known as the Russian camp (*Russenlager*) of Wehrkreis XVIII.⁸ As of November 1, 1941, 2,393 Soviet prisoners were in the camp; their numbers grew to as high as 11,260 in July 1942. In August 1942, British prisoners were returned to the camp, and in October 1942, just before the camp was transferred to Wagna, French prisoners (along with one Serbian prisoner) were also brought back to the camp. By November 1942, the French prisoners were once again the largest group in the camp.⁹ As of October 1942, the population of Stalag XVIII B/Z in Marburg was 11,444 prisoners (6,180 French, 2,812 British, 2 Serbian, and 2,450 Soviet).¹⁰

Information about the conditions in the camp prior to the fall of 1941 is limited. However, the Germans generally treated Western Allied and Serbian prisoners decently and observed the requirements of the Geneva Convention of 1929, and it is likely that they did so in Stalag XVIII B as well. Presumably, the same was true after the return of Western Allied prisoners to the camp in the summer of 1942. According to a YMCA delegate who visited the camp on August 26, 1942, the section of the camp where the British prisoners lived was "exceptionally nice." The prisoners had a small library of 1,250 books and had organized foreign language courses. The prisoners were able to conduct religious services and play sports on a small athletic field, and a small orchestra and theater troupe had been formed.¹¹ However, some prisoners reported to the International Committee of the Red Cross that the commander of the camp verbally abused them and was harsh toward prisoners who had allegedly violated camp rules.¹²

By contrast, the Soviet prisoners who arrived in the camp in the fall of 1941 were treated horribly, in flagrant violation of the Geneva Convention. They were transported to the camp in open wagons, unprotected from the elements, and given no food during the trip; about 10 percent of the Soviet prisoners sent to Stalag XVIII B died before they ever reached the camp. Their food rations were poor, consisting mainly of thin vegetable soup; prisoners who tried to steal food to ease their hunger were usually executed. The camp was also severely overcrowded, which, combined with poor sanitary conditions and nonexistent medical care, allowed diseases like typhus and typhoid fever to spread unchecked. The Ukrainian and Serbian volunteer guards were exceptionally cruel and abusive toward the Soviet prisoners.¹³ As in other camps, the Soviet prisoners were put through selections (*Aussonderungen*) to separate out “undesirables,” such as Jews and political commissars, who were taken into a cellar in the camp and executed.¹⁴ At least 6,000 Soviet prisoners are known to have died in Stalag XVIII B; they were buried in mass graves near the camp.¹⁵ On February 27, 1943, Stalag XVIII B was converted into Stalag 398.¹⁶

SOURCES Primary source information about Stalag XVIII B is located in BArch B 162/17305–17309: “‘Aussonderung’ von Kriegsgefangenen im Stalag XVIII B in Spittal/Drau, später Stalag 398 in Pupping (Wehrkreis XVIII—Salzburg)” (copies at USHMMMA, RG-14.101M, Reels 2985–2986) and USHMMMA (RG-30.007M, Reel 2, p. 620).

MANNSCHAFTSSTAMMLAGER (STALAG) XX A

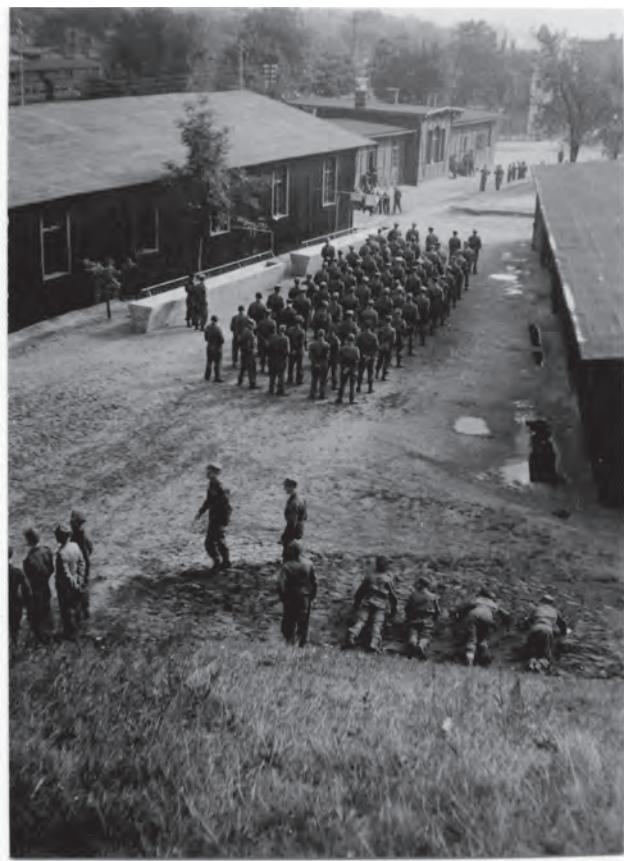

The Wehrmacht established Stalag XX A on December 7, 1939, in Thorn (today Toruń, Poland), in Defense District (*Wehrkreis*) XX (map 4c). The Germans constructed the camp within a string of forts that had been erected in the nineteenth century to protect East Prussia’s border with the Russian Empire. In all, the fortress complex comprised more than 200 different structures forming a beltway of forts approximately 22 kilometers (13.7 miles) in circumference.

In the first stage of construction, from September to October 1939, Polish prisoners of war (POWs) worked to adapt Thorn’s forts to serve as POW camps. The work mainly involved securing the camp against prisoner escape attempts and improving the roadways between the forts.¹ The Thorn camp made use of structures on the left bank of the Vistula River: the Stefan Batory Fort XI, Władysław Jagiełło Fort XII, Karol Kniaziewicz Fort XIII, Józef Bem Fort XIV, Jarosław Dąbrowski Fort XV, and Railway Fort XVI.² Forts XI, XII, XIII, XV, and XVII held prisoners. Fort XIV housed a prisoner hospital, mostly for French and British prisoners, and Fort XVI served as a jail.

The Michał Żymierski Fort XVII served as the headquarters of Stalag XX A and the prisoner camp.³ In early to mid-1940, the camp headquarters was moved from Fort XVII to a three-story apartment building, previously occupied by the 31st Light Artillery Regiment, located across from Fort XIII. The building, on what is now Okólna Street, housed the headquarters until the camp ceased operations.⁴ The Stalag XX A headquarters was in command of all the forts and camps in Thorn. This is evidenced by gathered accounts of witnesses, and German documents, including the daily orders (*Tagesbefehle*) of the commandant of Stalag XX A.⁵

The Stalag documentation is fragmentary, especially regarding the camp organizational staff. Major Ditmar was the first commandant. In September 1940, Oberstleutnant Werner took over, followed on March 24, 1941, by Major (later Oberstleutnant) Seeger. The last commandant was Oberstleutnant (later Oberst) Kokail.⁶

Older Wehrmacht soldiers served as guards. The number of prisoners in the Stalag can be determined based on Armed

Stalag XX A at Thorn. British POWs exercising, August 1940.
COURTESY OF ICRC.

Forces High Command (*Oberkommando der Wehrmacht*, OKW) reports sent to the International Committee of the Red Cross (ICRC, the Geneva Statistics), with the exception of those for 1940, which did not survive. There is also information from the results of court ordered exhumations conducted in 1948 at the Prisoner of War Cemetery.

The camp's first prisoners were Poles. In late 1939, 200 Polish POWs arrived at the Thorn camp. The Germans had interned them since September in a camp in Skarszewy (German: Schöneck) for Polish army, navy, and civilian prisoners.

Eventually, Stalag XX A housed prisoners from the following countries (based on the information in the OKW reports): Poland, Belgium, Norway, France, England, Yugoslavia (Serbs), the Soviet Union, and the United States, in addition to Italian military prisoners and Moroccan and sub-Saharan African colonial prisoners.⁷ As of September 1, 1941, there were 8,464 prisoners in the camp, including 8,360 British, 80 French, and 24 Poles. A year later, the total population rose to 13,308 prisoners, an increase of over 40 percent. The number of French prisoners grew by almost 2,000 to 2,073 prisoners. The number of British prisoners dropped by 1,609 to 6,751, and 2 Belgians, 9 Poles, 6 Yugoslavs, and, for the first time, 4,467 Soviets were also registered at the camp. The OKW statistics indicate that Soviet prisoners arrived at Thorn only

in December 1941, although the camp had been in operation since August.

On October 1, 1943, the ICRC recorded a total of 24,744 prisoners, including 1,298 French, 5,533 British, 77 Belgians, 10 Poles, 6 Yugoslavs, 2,835 Soviet, and 1 Norwegian. For the first time, Italian prisoners (14,984) were part of the camp as well, following Italy's surrender and Germany's subsequent internment of Italian soldiers.

A year later, there were a total of 14,454 prisoners in the camp (663 French, 4,897 British, 80 Belgian, 8 Polish, 8,316 Soviet, 484 Italian, and 6 American). Only the population of Belgian and Soviet prisoners had risen. On January 1, 1945, the camp population was about 18,000 prisoners, including 725 Frenchmen, 5,099 British, 83 Belgians, 3 Poles, 409 Yugoslavs, 11,309 Soviet, 484 Italians, and 9 Americans.⁸

As time went on, the respective prisoner groups occupied separate forts. Fort XIII held mainly British prisoners (thus it was called the "English camp") but also some Italians; there were also some British prisoners at Fort XV (officers) and XIV (the infirm). French prisoners occupied Fort XV (with smaller groups at Forts XI and XIII).⁹

As far as conditions were concerned, different standards applied to POWs of different countries. Westerners fared the best. The housing was adequate, as were the supply of clothing, underwear, and footwear, the medical care, and the opportunities for cultural and sporting activities (especially for the English and French). The death rates for these groups were not very high: 44 deaths, or an average of 3 per month, were recorded between October 1940 and December 1941, including 39 from natural causes. Two prisoners died at labor, two were shot while trying to escape, and one committed suicide.¹⁰ The stricter application of the Geneva Convention, and occasional inspections by monitoring countries, doubtless made a great deal of difference.

The Soviet prisoners lived under much worse conditions. They were subject to severe abuse from the moment of their arrival. The Germans weeded out political commissars and shot them, based upon the Guidelines for the Treatment of Political Commissars (*Richtlinien für die Behandlung politischer Kommissare*, known as the Commissar Order), which the OKW had disseminated in early June 1941. The remaining prisoners lived in barracks, mostly unheated and without flooring. The prisoners slept on three-level unpadded bunks (later paper mattresses were issued) or on the bare ground. They lived with no sanitary facilities, in filthy, bug-infested conditions, which caused epidemics of infectious disease (one of them happened in the summer of 1943). Prisoners were forced to bathe in the wintertime, which left them weakened and further prone to illness. The existing field hospital for prisoners did not have the resources to treat them. The food was insufficient and was prepared under unsanitary conditions. Instead of pots for cooking rutabaga, concrete bins were used. Chopped rutabaga was tossed into some hot water and some coal grease was added in the proportion of 19 kilograms per 500 liters (42 pounds per 528 quarts) of soup. The prisoners received no bowls, instead using cans, forage caps,

or boxes made in the carpenter's shop. On the way to work, the starving prisoners ripped up weeds and ate them.¹¹

All enlisted prisoners had to work, but the Germans forced the Soviet prisoners to do so for much longer, in so-called work detachments (*Arbeitskommandos*). The labor seemed designed to work them to death. It lasted 10–12 hours; with fewer hours on Sundays and holidays. In the city itself they worked at the military training ground or expanded the camp and locomotive house in the depot in the Kluczyki section of town. They did drainage, construction, and roadwork near the Vistula River. Most prisoners were put to work outside the city, chiefly doing farmwork or working in country farmsteads. Prisoners were also delegated to work at industrial centers in other cities. Working conditions in these details were very arduous, as evidenced by the commandant's daily notes on fatal accidents and prisoners refusing to work.¹²

For Soviet prisoners, malnutrition, illness, and beatings often proved fatal. An estimated several dozen to 150 prisoners died daily during normal periods, with the figure reaching up to 300 during epidemics. Hundreds of Soviet prisoners were shot by firing squads, particularly on the basis of the aforementioned Commissar Order. In this way 300 prisoners were killed initially, then 1,200.¹³

The instructions of January 17, 1940, issued by the OKW, instituted order in the camp, including a system of punishments covering violations of work discipline, theft, insubordination, and escape attempts. The instructions also governed the use of weapons without warning. Excerpts of the instructions were included in the order by the Commander of Prisoners of War in Defense District XX (*Kommandeur der Kriegsgefangenen im Wehrkreis XX*), dated August 23, 1941.¹⁴ The instructions, consisting of five items, particularly applied to Soviet prisoners (item 5), specifying how they were to be treated, especially the prohibition on other prisoners communicating with them. The punishment for Soviet prisoners ranged from 1–21 days' confinement, while punishments for other prisoners complied with regulations (the maximum punishment under the Geneva Convention of July 27, 1929, was 30 days).

Prisoners served their punishment in the jail. For more serious offenses (communicating with German contacts, dealings with civilians, or high-profile escape attempts), there were more severe consequences, such as exile to a penal camp, 10 years at a high-security prison, and, even a life sentence or death.

The Red Army liberated Stalag XX A on February 3, 1945. The total number of prisoners, according to the Geneva Statistics and the exhumation of 1948, has been established at 54,638, including 21,181 Soviets. A total of 14,263 died, including 14,219 Soviets. However, these are minimum figures. Maximum estimates (Soviet prisoners only) range from 60,000 to 80,000, of whom 30,000–40,000 died in the camp.¹⁵

MANNSCHAFTSSTAMMLAGER (STALAG) XX B

The Wehrmacht established Stalag XX B on December 16, 1939, on the outskirts of the city of Willenberg, Kreis Marienburg (today Wielbark, Gmina Malbork, Pomeranian Voivodeship, Poland) (map 4c). The camp administration was situated in

Stalag XX B at Willenberg. General view of the camp, 1942.
COURTESY OF ICRC.

the wooden barracks on what is today Piastowska Street between building number 3 and the bridge over the Młynówka River. Oberst Bollman held the position of camp commandant.¹

This was a camp for noncommissioned officers (NCOs) and rank-and-file soldiers of various nationalities. It also served as an Oflag for officers, several of whom had been interned at Stalag XX B, because there was no officers' camp in Kreis Marienburg.

The camp was enclosed by a triple fence of barbed wire as well as additional impediments. Prisoners were quartered in barracks that contained wooden bunk beds. The other barracks contained clothing stockrooms, the kitchen, and the bathhouse. Stalag XX B was composed of the main camp and several large subcamps as well as many small groups of prisoners who were put to work in the nearby villages doing forced labor on farms and in factories. The average daily prisoner population was approximately 10,000–15,000 at the main camp, 300 at the Focke-Wulf factory in Königsdorf (today Malbork-Królewo), 1,300 at the Gdingen (today Gdynia) shipyard, and approximately 600 at Danzig-Stolzenberg (today Gdańsk-Chełm).

Until June 1940, the camp only held Polish prisoners. From 1942 to 1944, mainly Western European prisoners were interned at the camp. According to an inspection report by the International Committee of the Red Cross (ICRC), on November 23, 1940, the camp housed 14,000 prisoners, two-thirds of whom were French. About 550 Belgians were also registered at the camp. Four hundred work detachments (*Arbeitskommandos*) were under the camp command at that point. The inspection report was mainly positive, and any shortcomings were to be remedied when the camp construction was completed. The report emphasized that the food was good and "complied with the prisoners' tastes as much as possible." The report stated that there were shortages of clothing, especially underwear.²

On February 28, 1941, the camp housed 14,118 prisoners, including 8,597 French (5 officers), 5,197 British (2 officers),

and 316 Belgians. Another inspection by the ICRC on September 19, 1941, showed that there were 18,592 prisoners (British, French, and Belgian) at Marienburg alone. The different figures are probably because some prisoners had been moved to other divisions and work detachments, of which there were 650 at the time. Some of the detachments did not return to the home camp.³ Stalag XX B, therefore, began to take on the nature of a transit camp, which was clearly stressed in the inspection report. The conclusions drawn from the inspection were less satisfactory this time. Both the camp spokesman and the camp doctor stated that "Stalag XX B is a bad camp." Cited among the contributing factors was a lack of British uniforms for 50 percent of British prisoners and no protective clothing; overwork and maltreatment; poor footwear; inadequate showers and disinfection facilities; and insufficient beds, as well as the imprisonment of NCOs for refusing to work, irregular remittance of soldiers' pay, and the lack of cultural opportunities.⁴

The prisoners were joined by Serbian and Soviet POWs in 1942, and by Italians beginning in the autumn of 1943. On June 1, 1942, the camp prisoner population was 23,010 (8,238 French, 9,541 British, 288 Belgian, 1,108 Serbian, and 3,835 Soviet). The ICRC inspection report of May 1, 1942, lists a much smaller population of 9,729, of whom 1,576 prisoners were in the camp itself. The number of work details was 704. The inspection conclusions were not entirely optimistic. The report states that "many things have improved since our last visit to the camp, especially in the work details, where cases of prisoner maltreatment are now very rare. They are very grateful to us for that. We have no stipulations as to the distribution of mass packages, food and clothing, for which the camp advocates are entirely responsible. We have no new stipulations in the camp itself."⁵

The summary stated that "the accommodation of prisoners in the camp leaves a lot to be desired. The barracks are overcrowded, old and poorly ventilated and lit. The sanitary facilities are inadequate, especially latrines and the camp infirmary. There is still a shortage of showers in the camp, causing recurrent lice infestations. There is no prosthetic section in the infirmary and the dental procedures still leave much to be desired. On the other hand the camp advocate's work is going well."⁶

A year later, on October 1, 1943, the camp population again increased to 27,529 prisoners, most of them British, French, Soviet, Italian, and Serbian. The largest population was recorded on July 1, 1944, at 32,477, including 10,577 French, 9,324 British, 6,081 Italian, and 5,708 Soviet prisoners. Also interned in the camp were groups of several hundred Belgians and Serbs, and two Poles. The prisoner population dropped to 31,151 at the beginning of 1945.⁷ Evacuation of the camp began on January 20, 1945. The POWs and other prisoners had to walk approximately 700 kilometers (435 miles).

We also have some insight as to conditions at the Marienburg camp from the recollections of British and Belgian

prisoners of war (Lance-Corporal Igor H. S. Lipscombe) and Robert Duchesne (chief camp advocate) and the inspections of the parent camp by the ICRC in Geneva, conducted on November 22–23, 1940, September 19, 1941, and May 1, 1942.

As Lipscombe recalled that “our toilets were no more than long deep ditches with crossed poles at each end and the middle, and our ‘urinals’ were large wooden barrels placed at several spots around the camp. They were situated so that the lights could shine on anyone using them in the night.” The ICRC camp inspection report from the autumn of 1940 stated that:

the wooden barracks are spacious and well furnished: tables and chairs have been arranged to provide a great deal of free space. The beds are three-level bunks. There is electricity everywhere. Heating will be provided via tile stoves. Some barracks have been built in the Polish manner, i.e., the packed-earth floor is about a meter [3 feet] below ground level outside. The roof is gabled and partially covered with turf. This type of construction nevertheless causes no discomfort; the area is very dry and sandy. In any case, those barracks will soon be closed and the occupants will be moved to new, more spacious barracks, which are under construction.⁸

In the autumn of 1941, the prisoner camp consisted of 36 wooden barracks. They were built around a broad athletic field 150 meters long and 80 meters wide (328 by 263 feet). The barracks could house 20–200 people. Some of them were crowded with prisoners. In May 1942, the camp consisted of approximately 38 wooden barracks, including 9 inhabited by French and Belgians. There were also eight earthen huts of a lesser quality than the wooden barracks; the huts housed many French prisoners.⁹

Each Christmas the prisoners were escorted in groups of 100 to the field hospital in Marienburg where their heads were shaved and their clothes were deloused in special ovens. One prisoner recalled that “we took a shower, then put on our still-hot clothing and marched back to the camp. That lasted all day from 6:00 in the morning until 8:00 in the evening. While we were gone from camp, the Germans searched our barracks and our things. When we came back, the food from the Red Cross packages, cigarettes and soap, etc., has disappeared, but of course nobody knew anything about it.” Bathrooms were later installed, consisting of wooden troughs with running water and a row of toilets with seats, and at the very end, the prisoners actually had their own washroom with a delousing facility and shower.

The assignment of prisoners to work detachments started at 6:00 a.m. They were put to work loading and unloading coal at the train station; others were sent to work at various places in northern Germany, and some went to local farms to harvest grain, potatoes, sugar beets, and rutabagas or to work

at the sugar factory. The winters would be so severe that they had to use pickaxes to dig out sugar beets.

The camp population was checked twice a day, at 7:00 a.m. and 4:00 p.m. As one prisoner recalled:

Many times we were kept in the cold because someone was late or the Germans couldn’t account for someone. During the day there was one hot meal at noon, a ladle of rutabaga with potato soup (. . .). We received one loaf of black bread with five tablespoons of jam, some sour whey or slimy fish paste (which looked, smelled and tasted disgusting) to spread on the bread. Our beds stood in two rows on both sides along the entire barrack. Those who slept on the lower level had to fight with the rats that came in through the floorboards. We all suffered from insect bites so much that sometimes we fled our beds at night.¹⁰

The winters were frigid and the summers hot and arid. Before British prisoners arrived at the camp, French prisoners were already there and occupied the best barracks and found the best work in camp at the Stalag headquarters in Marienburg. At the end of 1943, approximately 200 Serbs were put in the camp and brought in typhoid fever. Several of them died. General delousing was begun in the barracks; the prisoners’ heads were shaved and their clothes were disinfected. A group of 100 Italians arrived at camp after the Serbs.

The evacuation of the main camp from Willenberg was conducted in the evening of January 20, 1945. A column made up of approximately 150 Belgians, French, British, Serbs, Italians, and Soviets was escorted by armed guards headed by the camp commandant himself. The column crossed the Nogat River, then the Vistula. The prisoners spent the first night on the other side of the Vistula River in a meadow at 19 degrees below 0 Celsius (-2° Fahrenheit). They spent the successive nights in barns. Duchesne recalled:

At the beginning, it was the few “Lebensgabens” and especially “Nescafés” that we took along with us that kept us alive. Later, with daily stages of 30 to 35 kilometers [18.6 to 21.8 miles], we had to make do with the official rations of a moldy loaf of bread every 10 days. Fortunately, the prisoners managed to cope: we milked cows and took eggs from under hens (to the morning screams of farmers), which was a valuable addition to our diet. There were also oats and rye, which was “ground” by turning the huge wheel of a machine in the barn all night. One day a lame horse was slaughtered and quartered, and its stringy meat was cut into pieces and boiled in water. The most beautiful day was when we encountered a column of the International Red Cross which has

been searching for us and distributed American packages to everyone. That day we were the richest people on earth.¹¹

Apart from a modest meal from the escorts, who gave them steamed potatoes every day, the prisoners got additional food at the farms they passed. After they had walked across almost all of northern Germany over six or seven weeks, the group reached the vicinity of Hamburg. The evacuation continued by railroad, and, on March 19, 1945, the prisoners reached Husum, a port on the North Sea in Schleswig-Holstein. From Husum they were transported to the camp in Schwerin-Nord near the Danish border. The Danish and Norwegian Red Cross took over the provisioning of the prisoners, along with their chief, advocate for Stalag I A, who supplied them with packages of rice.

The capitulation of May 8 occurred when the prisoners were in Schwerin-Nord. However, they only regained freedom on May 10, because until then they were guarded by armed Germans. The Belgians were grouped together in Suderstappel, a North Sea port. They were then transported by trucks to Lüneburg and repatriated to Belgium on June 3, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) XXI A

The Wehrmacht established Stalag XXI A (map 4c) on January 6, 1940, in Schildberg (today Ostrzeszów, Poland), in Defense District (*Wehrkreis*) XXI.¹ It was under the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*).

The camp was located on the site of a former prison and forced labor camp for Polish civilians, or possibly a temporary prisoner of war (POW) compound (see Dulag Schildberg), which had been established in September 1939, shortly after the invasion of Poland. At first, Stalag XXI A only held Polish prisoners. In late May 1940, the first transport of French prisoners arrived (including some French colonial soldiers). The first transport of British prisoners, most of whom had been captured at Dunkirk, arrived in early August of that year. In December 1940, the majority of the Polish prisoners were transferred to other camps.²

In December 1940, there were about 2,500 prisoners in the camp. The 1,200 French prisoners resided in what was known as "Camp Seminar," a former school building. The 670 Poles still in the camp at that time lived in "Camp Gymnasium," also previously a school building. The 630 British prisoners lived in an old factory, known as "Camp Fabrik." The Germans planned to switch the locations of the French and British prisoners when the number of British prisoners exceeded

Stalag XXI A at Schildberg. ICRC delegate Dr. Roulet visits the camp, December 1940.
COURTESY OF ICRC.

that of the French. Two hundred of the British prisoners were divided into two equal work details deployed at sites that were 50 and 70 kilometers (31 and 43.5 miles) from the camp, respectively. Eight hundred French prisoners were also assigned to work details.³

Camp Hospital (*Reserve lazarett*) 5 was located next to “Camp Seminar,” while Camp Hospital 2, which was attended by British physicians, was located near “Camp Fabrik.” The British prisoners lived in a large room on the ground floor of the factory. There was also a loft with bunks, but it was unoccupied because the main sleeping quarters in the factory were adequate for the number of prisoners at that time. The British prisoners’ clothing had begun to deteriorate, but the Australian Red Cross Legation noted that they were planning to order more. The British also had a small library containing 45 books, and they had received a radio and soccer balls. Health was generally good, but some cases of diphtheria had emerged among the British prisoners.⁴

From 1941 until the closure of the camp, almost all of the prisoners were British. Conditions were generally satisfactory and in accordance with the Geneva Convention relative to the Treatment of Prisoners of War (1929). However, illnesses were present in the camp, with the most common being dysentery; cases of typhus were also reported. The prisoners had some access to recreational and cultural activities in the camp. Religious services were held in the camp every Sunday, and the camp library had been expanded and held 5,586 books as of February 1943. Twenty-seven educational courses were taught in the camp, covering diverse subjects including English, German, French, biology, music, art, mathematics, first

aid, and technical courses; a total of 537 prisoners participated. The most popular course was French, with 75 participants in two classes. A camp theater group performed plays regularly, including George Bernard Shaw’s *Pygmalion* around Christmas 1942.⁵ The order to disband the camp was dated March 15, 1943.

SOURCES Primary source material about Stalag XXI A is located in BA-MA (RW 6: 450–453 and RH 53-21/9), WASt Berlin (Stammtafel Stalag XXI A), and TNA (WO 224/50: Stalag XXI A Schildberg, Posen).

MANNSCHAFTSSTAMMLAGER (STALAG) XXI B

The Wehrmacht established Stalag XXI B from Prisoner of War Camp (*Kriegsgefangenenlager*) Schubin on October 5, 1939. Initially, the camp consisted of Stalag XXI B 1 Schokken (today Skoki, Poland) and Stalag XXI B 2 Schubin (known as Alburgund during the war; today Szubin, Poland). On August 1, 1940, Stalag XXI B 1 became Stalag XXI B/Z (Z for *Zweiglager*, or subcamp) (from September 1, 1940, it was Oflag XXI A), while Stalag XXI B 2 became Stalag XXI B/H (H for *Hauptlager*, or main camp). On December 3, 1940, Stalag XXI B/H was transferred from Alburgund to Thure (today Tur, Kuyavian-Pomeranian Voivodeship, Poland) (map 4e), and, at the end of October 1941, it was moved to the rear area of Army Group North (*Heeresgruppe Nord*) and deployed in the town of Täps, in Estonia (map 9a). On April 28, 1942, the camp was reorganized as Stalag 381.¹

Stalag XXI B at Schubin. British POWs in the camp yard, July 1940.
COURTESY OF ICRC.

Stalag XXI B received the field post number (*Feldpostnummer*) 46 105 between July 30, 1941, and February 28, 1942. The number was struck between March 1 and September 9, 1942.

From 1939 to 1941, the camp was subordinate to the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*). While deployed in Estonia, the camp was under the authority of the 207th Security Division (*Sicherungsdivision*).

Stalag XXI B initially held Polish POWs. In the summer of 1940, British prisoners replaced the Poles, and, in mid-1941, French prisoners were also brought to the camp. On February 28, 1941, the camp held 4,337 British prisoners; on July 1, 1941, there were 1,219 British prisoners; and on September 1, 1941, there were 1,119 British and 50 French prisoners.²

The conditions in the camp were generally satisfactory and in accordance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929). In August 1940, observers from the International Commission of the Red Cross visited both Stalag XXI B/H and Stalag XXI B/Z. At the main camp, there were 2,654 prisoners present. The food supply was reported to be good, with bread, fat, meat, crackers, butter, and barley available to the men. Each man received a kilogram (2.2 pounds) of potatoes a day, along with 330 grams (11.6 ounces) of bread, 100 grams (3.5 ounces) of barley, 69 grams (2.4 ounces) of meat, 5 grams (less than 0.2 ounces) of salt, and coffee. The observers tasted the soup for that day and reported that it was "excellent and substantial."³ Three hundred and fifty of the men in the camp had sold their undershirts or shoes for tobacco. The observers stated that the main camp gave a "generally excellent impression."⁴

At the subcamp in Schokken, there were 1,200 men present. As in the main camp, a number of the soldiers, as many as 300, had sold their undershirts to the Polish civilian workers at the camp to obtain tobacco. There was a large athletic field

available at the camp, to which men were sent in groups of 200 for a half day at a time.⁵

While the camp was deployed in Estonia, it held Soviet POWs. The treatment of the Soviet prisoners was inhumane, and the mortality rate was high, particularly in the winter of 1941–1942.

MANNSCHAFTSSTAMMLAGER (STALAG) XXI C

The Wehrmacht created Stalag XXI C (map 4c) on June 10, 1940, in Defense District (*Wehrkreis*) XXI and deployed it to Wollstein (today Wolsztyn, Poland). Stalag XXI C had a subcamp (*Zweiglager*), Stalag XXI C/Z, in Grätz (today Grodzisk Wielkopolski, Poland). The camp was subordinate to the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*). The Germans disbanded the main camp on April 12, 1943.¹

From June 1940 to the summer of 1941, Stalag XXI C held French and British prisoners of war (POWs). Beginning in the fall of 1941, it held Polish and Soviet POWs. The camp population peaked at 9,270 in September 1942, but it was much smaller for most of the camp's existence, rarely exceeding 2,000 prisoners.²

Stalag XXI C at Wollstein. General view of the camp, September 1941.
COURTESY OF ICRC.

The conditions for French, British, and Polish POWs were generally satisfactory and in compliance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929). The conditions for Soviet POWs were inhumane and led to a high mortality rate, especially in the winter of 1941–1942. For example, from December 1, 1941, to May 1, 1942, the number of Soviet prisoners decreased by 597. Because the camp was in quarantine during most of this period due to a typhus epidemic, and the movement of prisoners in and out of the camp was minimal, this decrease in population must have been almost entirely due to deaths.

SOURCES Primary source material about Stalag XXI C is located in BA-MA (RW 6: 451–453; RH 53-21/9); WASt Berlin (Stammtafel Stalag XXI C); BArch B 162/20334–20335 (*Tötungsverbrechen an Kriegsgefangenen im Stalag XXI C [Wollstein]*); and TNA (TS 26/234, WO 309/2234).

MANNSCHAFTSSTAMMLAGER (STALAG) XXI D

The Wehrmacht established Stalag XXI D (map 4c) from Stalag XXI A/Z on August 1, 1940, in Posen (today Poznań, Poland), in (Wehrkreis) XXI. Reserve Hospital (*Reserve Lazarett*) Schildberg (today Ostrzeszów, Poland) was subordinate to the camp. Stalag XXI D had subcamps (*Zweiglager*) in Litzmannstadt (today Łódź, Poland) from April 1943, in Schildberg from June to December 1943, and in Montwy (today Mątwy, Poland) from September to December 1943. The camp was subordinate to the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*). On February 1, 1945, the Germans ordered that Stalag XXI D be disbanded.¹

The camp held French, British, Belgian, Dutch, Serbian, Polish, and Soviet (from February 1943) prisoners of war (POWs), and Italian military internees (from December 1943). The camp reached a maximum population of 7,250 in October 1944.² The conditions for Western Allied prisoners were generally satisfactory and in keeping with the Geneva Convention Relative to the Treatment of Prisoners of War (1929). They were divided between two separate compounds: the main section of the camp, in which the prisoners lived in wooden barracks, and “Fort Rauch.” International observers who visited the camp in July 1944 reported that conditions were very good at Fort Rauch, where the prisoners lived in small, well-heated rooms. The conditions in the barracks in the main camp were never very satisfactory, particularly in winter, but the repair of a previously faulty water system quelled most of the complaints.³

The prisoners’ food rations were at a normal level, though as of the second week of July 1944, they had not received meat in five weeks. As in other camps, the prisoners relied on Red Cross food parcels as an important source of supplemental nutrition. The sanitary facilities in the camp were in good order; the men were not able to take hot showers, but they could take cold showers whenever they liked and had the opportunity to bathe in a nearby river several times a week. There were no vermin reported in the barracks at that time.⁴

The highest-ranking medical officer in the prison was Major Lawson, from Britain, who had been sent to Stalag XXI D from Stalag VIII B. In July 1944, he reported eight minor illnesses at the fort, four more severe illnesses in the main camp

Stalag XXI D at Posen. ICRC delegate Dr. Mayer visits the camp, April 1943.

COURTESY OF ICRC.

infirmary, and four psychological cases, which had been transferred to the Tiegenhof hospital. Eighty-four more seriously ill and injured patients were sent to Camp Hospital Wollstein, as was standard procedure. Major Lawson expressed the desire to vaccinate the entire prisoner population against typhus.⁵

Both Protestant and Catholic chaplains were available to lead religious services at the camp. The prisoners had access to well-organized theater and music programs and were able to partake in various sports at the camp's athletic fields, using supplies provided by the Red Cross.

The conditions for Soviet prisoners were far worse; insufficient rations, inadequate medical treatment, and deliberate abuse by German camp personnel led to a high mortality rate. In the second half of 1944, as the camp became increasingly crowded, the conditions for the Western Allied prisoners became significantly worse, though still not as bad as those experienced by the Soviet prisoners.

MANNSCHAFTSSTAMMLAGER (STALAG) XXI E

The Wehrmacht established Stalag XXI E (map 4c) from Stalag XXI C/Z on June 21, 1941, in Grätz (today Grodzisk Wielkopolski, Poland), in Defense District (*Wehrkreis*) XXI. On March 10, 1942, the camp was reorganized as Oflag XXI C.¹ It was subordinate to the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*). The camp was dissolved on March 10, 1942.

Stalag XXI E held British, Polish, and Serbian prisoners. On September 1, 1941, there were 241 British prisoners, and, on April 1, 1942, there were 7 Polish prisoners.² The maximum population of the camp was about 1,200.³ Conditions were generally satisfactory and in accordance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929).

SOURCES Primary source material about Stalag XXI E is located in BA-MA (RW 6: 451–453; RH 53-21/9) and WASt Berlin (Stammtafel Stalag XXI E).

MANNSCHAFTSSTAMMLAGER (STALAG) LUFT 1

The Luftwaffe established Stalag Luft 1 in mid-June 1941. The camp was located near Barth, in Air Defense District (*Luftgau*) I (about 51 kilometers/32 miles northeast of Rostock) (map 4b). The camp held primarily American and British officers captured during air raids. A German flak school was located several hundred meters to the south of the camp, and a small patch of forest separated the camp from the Baltic Sea.

When it initially opened in 1941, the camp known as Stalag Luft held captured airmen of all ranks. There were three sections within the camp: the first held officers, the second held noncommissioned officers (NCOs), and the third functioned as a kitchen and recreation facility. As the Allied bombing campaign intensified and the number of captured airmen increased, German authorities began to repurpose the camp. In April 1942, Germans redistributed the existing prisoner population to other camps, and, when it resumed operation in October 1942, Stalag Luft 1 became primarily an officers' camp.¹ Until the early spring of 1943, Soviet prisoners of war (POWs) occupied the former NCO camp, with British airmen in the former officers' camp. By May, the Soviet POWs had been transferred out of the camp and Stalag Luft 1 held only captured British and American airmen for the remainder of the war.²

The conditions during the early part of the second phase of the camp's existence were generally good. By early 1943, there was some overcrowding in the British prisoners' section of the camp, but, overall, the situation was not bad. The prisoners had access to a library, prepared courses and lectures in 15 subjects, began work on a theater, and enjoyed a large sports field, promptly put to use as a soccer pitch. Once the Germans removed the Soviets from the camp, prisoners had free access to three compounds, only separated at night. Throughout 1943, the canteen remained stocked and men slept comfortably, with six prisoners to a room. Prisoners regarded the accommodations as "ample" and requested of the German Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) that the population of the camp remain under 900.³

By February 1945, the camp's population had increased to 8,939. The dramatic, more than tenfold increase in the camp's size during this two-year span came about in large part because of the correspondingly dramatic increase in the scope of

Stalag Luft 1 at Barth. View of camp buildings, July 1941.
COURTESY OF ICRC.

the Allied air campaign over Germany. As Germans shot down and captured more Allied airmen, the Stalag Luft camps expanded both in number and in scale. Few camps demonstrate this expansion as clearly as Stalag Luft 1. The arrival of such large numbers of prisoners required a significant expansion of the camp's facilities. This was accomplished through several waves of construction. By early 1944, a new compound, designated the North Compound, opened across the principal street from the initial camp, now designated as the Vorlager and Southwest Compound. These facilities continued to expand, as the North Compound grew by 1945 into three separate compounds (North I, II, and III) and the Vorlager developed into a camp hospital with a capacity of more than 100.⁴

Although the camp was almost constantly being expanded during its last two years of operation, the facilities failed to keep up with the rising camp population, which grew steadily until early 1945. This created a situation of constant need and instability within the camp. At times conditions became so overcrowded that prisoners slept in hallways, on tables, or strewn about the floor.⁵ The theater and study rooms were closed so they could be used as barracks. At other points, tents were raised on the sports fields to temporarily alleviate the overcrowding.⁶ The focus on expansion of permanent facilities came at the expense of existing facilities. The electric system within the camp never improved, and each room only had a single 40-watt light bulb.⁷ Prisoners had few if any supplies on hand to perform basic repairs. A number of the barracks sat on the plain exposed to the harsh winds off the Baltic and

others lacked basic weatherproofing. Poor heating and leaky roofs meant that the weather had a large effect on the conditions.⁸

The camp's proximity to the Baltic Sea also limited the facilities. There were no underground air-raid shelters, as were present in most other POW camps, as the high-water table prevented their construction. The high-water table also led to poor drainage on the campgrounds. In April 1945, international observers reported "large lakes of open sewage . . . under and between the barracks." These could not be drained and only two horse-drawn wagons were on hand for the entire camp to remove waste.⁹ Nevertheless, the conditions never deteriorated enough to cause a total breakdown in morale within the camp. There was, it seemed, a consistent level to the mediocrity of camp conditions that proved somewhat bearable in the end.

The flourishing prisoner culture within the camp was vital for maintaining morale. Toward the end of the war, Lieutenant Colonel Charles Greening, who had participated in the Doolittle Raid, began petitioning the American government to "make an exhibition in the United States of the many articles such as model boats and aircraft, paintings, wood carving models of the POW camp, etc., after the war."¹⁰ In addition to their artistic endeavors, the prisoners kept themselves occupied through frequent escape attempts. As one international observer noted, "[The prisoners] keep the German staff very busy as they have developed a great activity in escaping. As the camp is very near the sea shore, successful escapes are particularly tempting."¹¹ However, successful escapes were exceedingly difficult and the recurrent attempts led to frequent disciplinary actions and a number of restrictions on movement at night and near the perimeter of the camp. On several occasions, prisoners were shot—and on at least one occasion killed—in their efforts to escape.¹²

Although Americans significantly outnumbered British prisoners during the latter years of the war, the Germans did not separate the prisoners by nationality. Instead, prisoners coexisted and shared resources freely. The exception was the decision late in the war to segregate all Jewish officers within the camp. Although these men were still accorded the same rations and access to the rest of the camp, they were housed in separate barracks in the North I compound. The irony of the Germans' efforts to isolate the Jewish prisoners was that, according to international observers, the Germans placed them in "two barracks which incidentally are much less crowded than all other barracks in the entire camp."¹³

The atmosphere in the camp changed considerably in the early months of 1945 as the end of war approached and liberation seemed a real possibility. Though conditions reached their worst in the camp during those months, international observers noted that the prisoners' morale remained high because "they expect to be liberated soon."¹⁴ Conversely, American lieutenant Raymond Feilbach recalled that by April, the German guards "kept pretty much

to themselves . . . [which] seemed to indicate that the jig was up."¹⁵ On April 30, 1945, the German personnel fled the camp. Feilbach recalled the circumstances and aftermath: "The Germans called in Colonel [Hubert] Zemke and told him they were leaving the Americans behind. That night we took over the camp. It was a great night. We had a victory bond fire [sic], burning up the fences and the watch tower. Then someone set out in a jeep to meet the advancing patrol of the Russians."¹⁶ Soviet forces liberated the camp on May 2, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) LUFT 2

The Luftwaffe established Stalag Luft 2 (maps 4b and 4c) on November 9, 1939, in Barth. In June 1941, the camp moved to the outskirts of Litzmannstadt (today Łódź, Poland). It was located in the southwestern part of Litzmannstadt (the Erzhausen district, today Ruda Pabianicka), within the area demarcated by Wallensteinerstrasse to the southwest (today Odrzańska Street), Parcelsusweg to the northwest (today Retmańska Street), Schwertbrüderstrasse to the northeast (today a segment of Łopianowa Street), and Goldene Pforte to the southeast (today Zuchów Street). At that time, the camp was subordinate to the commander of Air Defense District (*Luftgau*) II.

In Litzmannstadt, Stalag Luft 2 held Soviet airmen. The first prisoners arrived there on June 27. The camp's main purpose was to interrogate the prisoners. By the end of October 1941, 2,669 Soviet prisoners had come and gone through the camp, of which 787 turned out not to have anything to do with the air force and who thus quickly were sent off to other camps. During that time, 1,832 prisoners were interrogated (including 993 who were subject to special interrogations). Of those, 235 were pilots, 110 were soldiers from antiaircraft artillery, 202 were paratroopers, and 264 were ground personnel.

The entire area of the camp was fenced off and was composed basically of two parts. In the first (external) part, a brick-built camp headquarters building was situated, as were three canteens (officers' mess, noncommissioned officers' [NCOs] mess, and canteen for enlisted men, combined with a kitchen, as well as a separate one for civilian personnel), three barracks for guards, a large garage for vehicles, and several smaller warehouses. The canteen buildings, the headquarters, and two barracks still survive today (they are used as

residential facilities). The second part of the camp, the prisoner compound, lay behind a double barbed wire fence, additionally equipped with five tall watchtowers. A road led into the main part of the camp and a guardhouse was located at the gate. Inside the fenced-off area, closed sectors separated prisoners of war (POWs) who were awaiting or were undergoing interrogations (with separate areas for officers, NCOs, and enlisted men); prisoners after interrogations; and those awaiting transport to other camps (here officers, NCOs, and enlisted men occupied a common space), and for the so-called camp police (*Lagerpolizei*). The camp had its own sick room and, separately, the quarantine building, the prisoner detention facility, and a room for delousing, as well as an extensive barrack square situated in the northwestern corner of the prisoner compound.

There are no detailed data concerning the number of POWs in the camp for the period from November 1941 until the end of January 1942. The number of prisoners kept in Stalag Luft 2 Litzmannstadt averaged about 680, with a low figure of 382 and a high of 1,052.

Prisoners placed in the camp were used as labor on a nearby farm, at an airfield, in a textile factory and other industrial sites, on the railroad, and also in the camp itself. There are no known data concerning the prisoner death rate; however, it was not a mass occurrence as in most German camps for Soviet prisoners. Dead prisoners were initially buried nearby (outside the camp perimeter), then at the Orthodox Cemetery in Doły, the Łódź necropolis complex.

Only one case of a successful escape is known: on October 9, 1942, two air force officers, Alexander Kuznetsov and Arkady Voroztsov, managed to escape while working in one of the factories. The former fought in the ranks of the Communist partisans. The latter was arrested and sent to Auschwitz-Birkenau, then Mauthausen-Gusen. Both survived the war.

At the beginning of September 1944, most of prisoners were transported to Stalag Luft 3 Sagan. Only a small group of prisoners who were ill and incapable of work were left in the original camp. Most of them were freed by the Red Army on January 19, 1945. However, the camp headquarters and personnel were transferred to Königsberg in der Neumark. The Germans disbanded Stalag Luft 2 on November 21, 1944.

Polish authorities conducted an investigation in 1948, which was suspended and then resumed between 1967 and 1977, concerning crimes committed by the Germans in Stalag Luft 2. No charges were brought due to the inability to determine perpetrators and to problems in accessing archival materials.

MANNSCHAFTSSTAMMLAGER (STALAG LUFT 3)

The Luftwaffe created Stalag Luft 3 in May 1942, south of the town of Sagan (today Żagań, Poland) (map 4e) and west of Stalag VIII C, also located in Sagan, which had been in existence since the autumn of 1939. The camp was intended for officers, as well as noncommissioned officers (NCOs) and other ranks, serving mostly in the Royal Air Force and US Army Air Forces. Among those, apart from the British and Americans, there were also Canadians, Australians, New Zealanders, Afrikaners, Poles, Norwegians, Greeks, Dutch, Lithuanians, and Belgians.

When the Germans decided to create Stalag Luft 3 in October 1941, they intended it to be a model camp. The increasing number of escapes from prisoner of war (POW) camps influenced its design and location. The authorities placed it on the outskirts of a town deep within the Reich, in a remote and densely forested area with sandy soil, in order to hinder tunneling. They surrounded the camp with a 2.5 meter (8.2 feet) high double fence; the space between the fences was 1.5 meters (4.9 feet) wide and filled with barbed wire. Guard towers with search lights and machine guns stood every 100 meters (328 feet) alongside the fence. In addition, the forest had been cleared from around the camp to allow the guards better visibility. On the inside, a wire ran parallel to the fence, about 10 meters (32.8 feet) from it and about 45 centimeters (17.7 inches) above the ground. This was the "dead line," which the prisoners were forbidden to approach. The barracks stood on pillars, so that the guards could observe the space between the barrack floor and the ground. The Germans also installed special microphones, which were supposed to capture any potential attempts to dig escape tunnels.

Initially, the camp operated under the command of Air Defense District (*Luftgau*) III, and later Air Defense District VIII. The commandants of the camp were Oberst Stephan (March–May 1942), Oberst Friedrich Wilhelm von Lindeiner-Wildau (May 1942–March 1944), Oberst Cordes (briefly,

and finally Oberst Franz Braune (March 1944–January 1945). Most of the guards came from antiaircraft units, and later from among soldiers being sent to the rear from the eastern front. The number of guards initially fluctuated between 500 and 600, later rising to about 800.

The first prisoners, British airmen, arrived in the camp in April 1942; the camp itself (i.e., the first compound) had been completed and opened by the end of March. Initially, the camp comprised only two compounds: Eastern (for officers) and Central (for NCOs and other ranks), plus a sector designated for the camp's administration and the German guards. From there, the camp kept expanding. In March 1943, the Northern compound was opened (for officers), and, in the spring of 1944, Southern and Western compounds (for Americans). The compounds constructed between 1943 and 1944 were larger, each with enough capacity for 2,000–3,000 prisoners. At the beginning of 1944, the administration of the camp also included managing the camp of Sagan-Belaria, which for a short time (January–February 1944) operated independently, as Stalag Luft 4 Sagan-Belaria.

The first recorded statistics on the camp population, compiled in May 1942, indicate a total population of 1,084 prisoners, of whom 1,068 were British, 14 were French, and 2 belonged to other nationalities; 69 of the prisoners were officers. The camp population gradually increased throughout the war. The first American prisoners arrived in June 1942 and the first Soviet prisoners arrived in November 1944. The last French prisoners left the camp in October 1943. The final camp population figures, which also represented its maximum population, recorded 10,944 prisoners, of whom 3,948 were British, 6,831 were American, and 165 were Soviet; 5,438 of the prisoners were officers. The maximum number of officers in the camp was 9,384 in December 1944; the maximum proportion of officers among the camp population was recorded in October 1944, when 8,377 of the 9,136 prisoners in the camp were officers (91.7%).¹

Initially, Stalag Luft 3's prisoners were transferred there from Stalag Luft 1 in Barth, Dulag Luft, and several other camps under army control (Stalag IX C in Bad Sulza, Stalag VIII B in Lamsdorf, and Stalag III E in Kirchhain). The rapidly growing numbers of captured Allied airmen (mostly from bombers) required transfers of prisoners to other camps and the construction of new camps. Despite that, the numbers of prisoners kept increasing, particularly from the end of 1943 onward. The American prisoners gradually surpassed the British ones in number. The camp was the largest Luftwaffe POW camp during World War II.

Inside the camp, a wide range of activities took place, including cultural, educational, sports, religious, and publishing enterprises. The prisoners did not have to perform labor.

The prisoners undertook a number of escape attempts, the largest and most famous of them being the so-called "great escape" of the night of March 24–25, 1944, which was later depicted in the 1963 film *The Great Escape*. Seventy-six prisoners managed to escape, of whom 73 were quickly recaptured by the Germans. Fifty of these men were shot under the

so-called Sagan Order (*Sagan-Befehl*). The British military authorities initiated an inquiry into this incident after the war, which resulted in 18 of the accused being put before a tribunal and found guilty in 1948; 14 of them were executed.

With the Red Army approaching, the Germans evacuated the camp, gradually, between January 27 and January 29, 1945. The prisoners were routed to the west, first on foot toward Spremberg, where, after several days, they then boarded trains. Some were taken north, to Stalag III A in Luckenwalde, and further to Marlag Milag Nord (liberated on May 2), while others were sent south, to Stalag XIII D in Nürnberg-Langwasser and Stalag VII A in Moosburg (liberated on April 29).

MANNSCHAFTSSTAMMLAGER (STALAG) LUFT 4

The Luftwaffe gave the order to establish Stalag Luft 4 on August 31, 1942. The camp was originally located in Sagan (today Żagan, Poland) (map 4e), in Air Defense District (*Luftgau*) III. In 1944, the camp was relocated to Gross Tychow (today Tychowo, Poland) (map 4b). The Germans dissolved Stalag Luft 4 on February 2, 1945, and evacuated the prisoners to the west, due to the approach of Soviet forces.

The camp complex at Gross Tychow consisted of five sections: the forecamp (*Vorlager*) and four prisoner blocks, designated A, B, C, and D, which were designed to hold about 1,600 prisoners each, for a total capacity of 6,400. Two rows of barbed wire surrounded the complex, with guard towers sited around the perimeter. The prisoners lived in wooden barracks that held about 200 men each. The

accommodations were rather simple; while the barracks in Blocks A and B had three-tier wooden bunk beds for the prisoners, Blocks C and D had no bunks and the prisoners had to sleep on the floor. Each barrack had a washroom as well as two latrines.¹ The sanitary facilities in the camp were relatively basic. The camp had a small infirmary, but it was unable to treat serious illnesses or injuries due to lack of space and medical supplies; prisoners requiring intensive treatment were instead sent to a local hospital. The hospital facilities were later expanded, and by October had beds for 132 patients.²

Stalag Luft 4 held captured American and British airmen; near the end of the war, it also held a small number of prisoners of other nationalities. The first transport of 61 American prisoners arrived at the camp in Gross Tychow on May 14, 1944.³ At that time, only Block A had been completed. Construction of the camp's facilities continued through October. Blocks A, B, and C held only American prisoners, while Block D held both British and Americans. On June 29, 1944, the camp held only 1,485 prisoners, well below its capacity.⁴ Prisoners continued to arrive throughout 1944, many of them via Dulag Luft in Wetzlar. On July 14, 1944, the Germans began to evacuate prisoners from Stalag Luft 6 in Heydekrug (today Šilutė, Lithuania) to Stalag Luft 4; the first transport arrived at Stalag Luft 4 four days later. In total, 3,200 prisoners (2,400 Americans and 800 British) were brought to the camp from Stalag Luft 6, traveling in harsh conditions with limited food and water.⁵ On October 5, there were 7,975 prisoners in the camp, 7,089 of whom were Americans and 886 of whom were British. The camp was, therefore, more than 1,500 prisoners over its nominal capacity of 6,400.⁶ By January 1945, the population had swelled even further, to 9,742; 8,708 of the prisoners were Americans, 902 were British, and 132 were Soviet.⁷

The commandant of Stalag Luft 4 was Oberstleutnant Baumbauch and the guards were commanded by Hauptmann Pickhard. The counterintelligence (*Abwehr*) officer in the camp was Hauptmann Linderman, but the prisoners reported that he was only a figurehead and that most of the activities of the counterintelligence personnel in the camp were actually controlled by Feldwebel Farnard, who treated the prisoners cruelly.⁸

The Germans treated the Allied prisoners decently while in Stalag Luft 4 (aside from Farnard's counterintelligence men) and generally observed the requirements of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). However, there were isolated incidents of violence, including the shooting of at least one prisoner, Staff Sergeant Teague. Red Cross observers reported that sanitation and hygiene were good in June 1944; however, after the war, prisoner testimony disputed these reports, claiming that the sanitary conditions during their first months in the camp were poor, dysentery was widespread, and the hospital facilities were nonexistent until a camp hospital, with 150 beds, was opened in August.⁹ Although the prisoners' ability to engage in recreational and cultural activities was somewhat

constrained by their separation into four blocks, they managed to organize courses in a variety of subjects, including English literature, foreign languages, and navigation. The prisoners also had access to a small library in the camp. The YMCA provided sporting equipment for the prisoners. There was a small orchestra, although the prisoners only had a few instruments, and three chaplains conducted religious services.¹⁰

As prisoners continued to arrive throughout 1944 and the camp became increasingly crowded, conditions deteriorated. Each room in the barracks was intended to hold 16 men, but, by October 1944, there were as many as 24 prisoners in each room. The camp's food supply was strained by the arrival of prisoners from Stalag Luft 6, and these evacuees lived on reduced rations for most of their first three months in the camp.¹¹ Only five of the camp's 40 barracks had their own stoves, meaning that most of the prisoners' quarters were unheated. Furthermore, the sanitary situation became much worse, as the camp's latrine and bathing facilities were no longer adequate for the number of prisoners in the camp. Lice and other vermin became common. The Red Cross parcels that supplemented the prisoners' diets and provided them with other needed items, such as warm clothing, were not distributed by prisoner supervisors, as in other camps, but instead by the German guards, who regularly stole from the parcels; these actions led to deep distrust between the prisoners and their captors.¹² By the end of the camp's operation, the prisoners were only receiving one-seventh of a Red Cross parcel each.¹³

The evacuation of the camp began on January 28, 1945, as the Red Army approached from the east. About 3,000 prisoners who were unable to march were evacuated by train: the first transport departed for Stalag Luft 1 in Barth on January 28, while a second left for Stalag XIII D in Nürnberg-Langwasser on February 2.¹⁴ On February 6, prisoners who were capable of walking—about 6,000 in total—were sent westward on foot toward Stalag XI B in Fallingbostel. They traveled a circuitous route around 800 kilometers (500 miles) along the Baltic Sea coast in blizzard conditions and with little food or medical assistance.¹⁵ Some of the prisoners were liberated by British forces at Fallingbostel on April 16, 1945, while others, who were marched out of Stalag XI B back toward the east, were not liberated until May 2. There is substantial variation in the estimates of the number of prisoners who died on the evacuation march from Stalag Luft 4, and the true number remains uncertain.¹⁶

MANNSCHAFTSSTAMMLAGER (STALAG) LUFT 5

The Wehrmacht established Stalag Luft 5 (map 4e) in March 1943 in Wolfen, in Defense District (*Wehrkreis*) IV.¹ The camp was subordinate to Air District Command III (*Luftrück-Kommando III*).

Stalag Luft 5 held Soviet prisoners of war (POWs). It was a relatively small camp; the prisoner population peaked at 1,357 on June 1, 1943.² The conditions in the camp were harsh, as they were in other camps for Soviet POWs. By June 1, 1943, 46 prisoners had died, including 21 who were killed in Allied bombing raids, 5 who died in accidents, 3 who were shot, and 17 who succumbed to starvation or disease.³ The exact date of the camp's dissolution is unknown; however, it must have closed before April 19, 1945, when Allied forces occupied Wolfen.

SOURCES Primary source material about Stalag Luft 5 is located in BA-MA (RL 23) and TsAMORF.

MANNSCHAFTSSTAMMLAGER (STALAG) LUFT 6

The Luftwaffe established Stalag Luft 6 (map 4c) on March 5, 1943, in Heydekrug (today Šilutė, Lithuania), in Air Defense District (*Luftgau*) I. The camp commandant was Oberst Hermann von Hoerbach.

The camp was located outside Heydekrug in a wide plain dotted with small woods in the vicinity. Though positioned much closer to the eastern front than other Stalag Luft camps, the camp was safely removed from any vital military or industrial targets. The reasonably solid construction of the compound allowed the camp to weather the brief, hot summers and the long, cold winters without undo deprivation.¹ The camp had 10 large brick barracks, each with a capacity of 552 prisoners, and 12 wooden barracks, each of which held 54 prisoners, for a total capacity of 6,168 prisoners.²

Stalag Luft 6 held Royal Air Force noncommissioned officers (NCOs), transferred from Stalag Luft 1 Barth. In February 1944, American airmen were brought to the camp. Initially, the camp consisted of administrative and storage facilities (*Vorlager*) and two prisoner compounds. At its peak, the camp had three fenced-in compounds. A fourth enclosure was used as a sports field. Two compounds contained British prisoners of war (POWs), while the other held mostly American POWs. When the first prisoners arrived at the camp in 1943, only the first two compounds were operational.

The greatest challenge to the prisoners' well-being instead came from the overcrowding that became increasingly problematic by mid-1944. In February, American airmen began to arrive at the camp, with regular arrivals of 30–40 men per day.³ By April, the camp ranks had risen to 4,856, with 2,788 English, 1,280 Americans, 413 Canadians, 21 Irish, 128

Stalag Luft 6 at Heydekrug. General view of the camp with prisoners in the foreground, July 1943.

COURTESY OF ICRC.

Australians, 16 South Africans, 107 New Zealanders, 3 Dutch, 1 Belgian, 2 Norwegians, 91 Poles, and 6 Czechs.⁴ The growth required the creation of the third compound and expansion in the two existing ones. Additional bunks were added to old barracks and new tents and wooden barracks were constructed to house more prisoners.⁵ Few adjustments were made to the sanitation facilities, however, and the situation grew more serious as the spring turned to summer and the camp swelled to 40 percent above capacity.

In the barracks, the prisoners slept on double bunk beds and were provided with tables, stools, and small cupboards. All the barracks were heated. The camp had a laundry, a chapel (which three English clergymen served), seven hospital barracks with 70 total beds, and a theater with small rooms for rehearsing. The hospital beds were frequently fully occupied, and additional sick prisoners had to stay in their regular barracks.

Relations in the camp were at times strained between the POWs and guards. Prisoners occasionally attempted to play upon tensions between the overlapping authority of the various German units stationed in the camp. Similarly, German officers attempted to influence POWs by distributing Nazi and antisemitic propaganda, targeting those POWs with German-sounding names.⁶

Despite overcrowding and occasional tensions with the guards, morale in the camp remained high. Prisoners held an array of classes regularly with materials provided by the YMCA. Subjects ranged from engineering and architecture to music and electricity.⁷ Although facilities were lacking for much of 1943, by the spring of 1944 prisoners had a regular sports field and had constructed their own performance theater. They also published their own newsletter, *Barbed Wire News*, which the prisoners considered excellent and essential for morale.⁸ An adequate food supply was ensured through Red Cross parcels. The Red Cross also supplied the prisoners with clothing, which was supplemented with additional used clothing provided by the Germans.⁹

510 MANNSCHAFTSSTAMMLAGER (STALAG) LUFT 6

In mid-July 1944, the prisoners were evacuated to Stalag Luft 4 as the Red Army approached. The camp staff was transferred to St. Wendel, Germany, where it stayed until September 1944. The first prisoners were brought to St. Wendel from Dulag Luft in Wetzlar in mid-August 1944. In total, 400–450 American NCOs were held in the camp. The treatment of the prisoners was proper, and their conditions of confinement were satisfactory. On September 5, 1944, this camp was also evacuated and the prisoners were moved to Stalag Luft 4. In November 1944, Stalag Luft 6 was redeployed to Defense District (*Wehrkreis*) III, where it held Soviet POWs.¹⁰ The camp was disbanded in February 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) LUFT 7

The Luftwaffe established Stalag Luft 7 (maps 4b and 4e) in May 1943, at the airfield in Moritzfelde (today Morzyczyn, Poland). In 1944, the camp was relocated to Bankau (today

Bąków, Poland).¹ The camp was under the control of the commanding officer of Air Defense District (*Luftgau*) I. The commanding officers, in chronological order, were Generalleutnant Richard Putzier (January 21, 1941, to August 4, 1943), General der Flieger Hellmuth Bieneck (August 5, 1943, to August 17, 1944), and General der Flieger Albert Vierling (from August 18, 1944).

Stalag Luft 7 was located in a remote wooded area. It initially consisted of little more than poorly built small huts, barely sufficient for summer but inadequate for winter. The huts held six to seven men each, with beds composed of straw sacks on the ground and no lighting. The camp's water and food supplies were insufficient for the number of prisoners (1,029 as of August 1944). The International Committee of the Red Cross described the overall state of the camp as “deplorable.”

By August, prisoners of war were arriving at the camp at a rate of approximately 50 per week. The majority were from the British Isles, but smaller numbers of Commonwealth prisoners were also held in the camp. Of the 1,028 in the camp on August 24, 1944, 738 came from Great Britain, 172 from Canada, 69 from Australia, 19 from New Zealand, 12 from South Africa, and 6 from Rhodesia. There were also 5 American servicemen, 4 French resistance fighters, and 3 Dutch servicemen.

The camp was evacuated on January 19, 1945, although it was officially disbanded on February 5. The prisoners reached Stalag III A in Luckenwalde on February 8.

KRIEGSGEFANGENEN-LAZARETTE

The responsibility for the health services and medical care in the Wehrmacht's prisoner of war (POW) camps^{*} belonged to the Army Health Inspectorate (*Heeressanitätsinspektion*) through the "Health Manager for Prisoner of War Affairs" (*Sanitätsinspizienten für das Kriegsgefangenenwesen*), which underwent several reorganizations during the war.¹ The Military Health Regulations (*Kriegssanitätsvorschrift*), which regulated the entire Army Health Service of the Wehrmacht, were fundamental to the medical care of the prisoners in the Wehrmacht's POW camps. Regulation No. 300, "Health Service in Prisoner of War Camps," stated strictly: "The health care and the medical care in the POW camps is to be carried out according to Articles 13–15 of the Geneva Convention on the Treatment of Prisoners of War of July 27, 1929."² These articles regulated health care in the camps; the belligerent nations were required to provide prophylaxis against epidemics and maintain a certain level of hygiene in the camp as well as clean latrines, bathing facilities, sufficient water for bodily hygiene, and opportunities for physical exercise and to "get fresh air."³ Patient rooms and isolation rooms for patients with infectious diseases were to be established in every camp. Severely ill prisoners or those requiring emergency surgery were to be treated in nearby military or civilian hospitals. All of the costs of treatment were to be borne by the detaining power, and the patient was to receive treatment according to the type and duration of his illness. The extent to which doctors and health care personnel could be retained in the camps was to be decided through an agreement between the belligerents. Under the Geneva Convention, the prisoners were to receive monthly checkups for their general health and an examination for the presence of infectious diseases, such as tuberculosis and venereal diseases. These requirements for the rights of POWs were established in the regulations for the administrators of POW affairs and for the commanders of the different types of POW camps and the leaders of labor detachments (*Arbeitskommandos*), in addition to the requirements of the Geneva Conventions.⁴

The transit camps (*Durchgangslager*, Dulags) had no camp sick bays or hospitals (*Lagerlazarette*), so prisoners with serious illnesses requiring hospital care, or those suspected of having infectious diseases, were not taken to these camps. Preventing the spread of infectious diseases was an important focal point for the German camp doctor (*Lagerarzt*), who was responsible for medical care in the camp. Approximately 20 percent of the housing capacity of every camp was to be reserved as a quarantine area. Newly arrived prisoners were to be taken into the quarantine section, initially, and, "... if necessary, deloused, decontaminated, or, respectively, disinfected," and only transferred into the main camp after passing an examination. Before they could be transferred to another camp or sent to a labor detachment, they would have to undergo another brief examination. In simply equipped infirmaries (*Krankenrevier*), there were to be enough beds for

5 percent of the maximum camp population; these facilities treated only the lightly wounded or mildly sick. The camp doctor was responsible for monitoring hygiene in the Dulag's facilities as well as for determining the causes of any deaths outside of the medical realm and, when necessary, taking steps to prevent the spread of contagious diseases. The doctor was supported in his duties by captured enemy health care personnel in the camp.⁵

In the enlisted men's main camps (*Mannschaftsstammlager*, Stalags), the responsibilities of the camp doctor were similar; he was also responsible for health care and camp hygiene.⁶ In addition, the camp hospital operated under the authority of the camp doctor, who was responsible for the administrative functions and served as the disciplinary superior of both the medical staff and the patients. He could requisition the services of any prisoner with medical training while they were in German captivity. As a central element in the care of the prisoners, there was to be at least one doctor for every 1,000 prisoners in the camp, including personnel to fill the positions in the hospital. The health care of the guard units was handled separately and was not the responsibility of the camp doctor.

As in the Dulags, prisoners arriving in the Stalags were also required to enter quarantine and undergo delousing and disinfection as well as an examination and inoculations. Prisoners suspected of carrying infectious diseases were to remain in the quarantine area throughout the incubation period of the suspected illness to prevent the transmission of the illness to the rest of the prisoner population. As in the Dulag, the doctor was responsible for investigating all deaths to establish the cause of death and take any necessary measures against the spread of disease.

Therapeutic measures in the course of normal office hours—sick call—in the infirmary were limited to the treatment of mild illnesses. In the Stalag, regular dental services were also provided, and a dental clinic was established with regular office hours twice a week, and emergency dental services provided by civilian dentists.

As in the Dulag, in the course of overseeing the camp's hygiene, the facilities that dealt with relevant functions, such as the provision of food and drinking water and the disposal of garbage and sewage as well as the facilities that served for disinfection and delousing, had to be inspected. Further, the Lagerarzt was required to perform a "wellness visit" with the prisoners at least once a month as well as general or individual examinations more often, as needed.

Medical examinations and documentation were also required before a prisoner could be transferred to another camp, repatriated to his home country, or deployed in a labor detachment. Prisoners who became ill while working in the labor detachments were, when possible, to be treated by a doctor on-site or a local civilian doctor; necessary hospital care was to be provided in the main camp, if possible, and only if transport back to the camp was impossible was the prisoner to be transported to a reserve hospital (*Reservelazarett*) or, in exceptional cases, taken to a civilian hospital.

Medical care for the prisoners in the labor detachments was regulated by the “Service Instructions for the Leader of a Prisoner of War Labor Detachment,” as were the bureaucratic formalities and accounting for the treatment costs, which were to be borne by the German government via the Stalag.⁷ In labor detachments of more than 250 people, the establishment of an infirmary under the supervision of the doctor in the main camp was required. The regulations for the Stalags also required that severely ill or wounded patients be repatriated to their home countries as long as their condition permitted.⁸ The officers’ main camps (*Offizierslager*; Oflags) were only required to have small hospitals by the regulations. In severe cases that could not be handled in these facilities, the prisoners were to be transferred to a reserve hospital, a civilian hospital, or the hospital in a Stalag.⁹

The chapters on “medical services” in the regulations for the repatriation camps (*Heimkehrerlager*; Heilags) laid down the tasks and procedures for the “mixed doctors’ commission (*gemischten Ärztekommision*),” which was responsible for determining the medical grounds for the prisoners’ repatriation as well as the responsibilities of the camp doctor.¹⁰ Additional details on the tasks, subordinate relationships, and authorities of the camp doctors, on the infrastructure and the operation of the camp hospitals, on the reporting system and medical documentation, on the “service of enemy medical personnel,” and on other questions were regulated by the “Service Instructions for the Camp Doctor of a Prisoner of War Camp and Chief Doctor of a Prisoner of War Hospital.”¹¹

The construction and infrastructural requirements for a POW hospital were detailed in part 12 of the “Regulations for Prisoner of War Affairs,” the “Service Instructions for the Necessary Space, Construction, and Fitting-out of a Prisoner of War Camp.”¹² For example, according to the “Space Requirements,” for a camp with 10,000 prisoners, there was to be one infirmary barrack in the reception area (*Vorlager*). This was to contain a waiting room and an examination room as well as a storeroom, a dental office, quarters for medical personnel, 5 to 6 patient rooms for a total of 90 patients with 6 square meters (64.6 square feet) of space per patient, and a 10-square-meter (108-square-feet) “separation room” for the isolation of individual patients, along with separate washrooms for the patients, two showers, and separate latrines for the medical personnel, the regular patients, and the isolation patients.

The requirements for the POW hospital, which for these 10,000 prisoners included 300 beds in total at a distance of at least 400 meters (1,312 feet) from the main camp, were defined in a separate “Space Requirement for a POW hospital of up to 300 Beds.” The regulations included separate guard and storehouse barracks, the reception area, and the quarters of the doctors as well as the medical personnel, the barracks for the care and support of the patients, and the facilities for “mentally ill” and isolation patients in “separation barracks.” In addition, the treatment barracks with different rooms (e.g., X-rays, sterilization, operation, and dental offices) and the pharmacy as well as disinfection and laundry were to be part

of the hospital area. The personnel requirements for such a hospital were also set forth in these regulations: for every 1,000 prisoners, there was to be one doctor, as well as four additional unit doctors (*Abteilungsärzte*), and an orderly for each six patients, for a total of 14 doctors and 50 orderlies.

As noted previously, the health care of the prisoners in the different types of camps was dictated and structured by the relevant humanitarian requirements of the Wehrmacht’s instructions. However, these instructions only reflect a theoretical view—the reality of the health care system and the treatment of the prisoners differed from these requirements in many cases. One factor was the high number of POWs, to which one can add bottlenecks in the supply chain and in equipment as well as a lack of available (captured) medical personnel, especially doctors, such that it was impossible to provide health care for the prisoners at the planned level.

We cannot comprehensively and conclusively judge the degree to which the Germans implemented the regulations because of the variations in the local conditions and the circumstances in the individual camps, and especially because of problems with the sources and the current state of research. Thematically relevant historical studies and investigations exist only for individual camps and reflect only impressions and facts from certain points in time.¹³ Many of the vital questions about day-to-day medical care and the actual situation of wounded and sick prisoners, such as the process of their repatriation, their chances of being healed, and so forth, can be answered only on the basis of a few reliable individual examples. Alexander Neumann notes in his study that “because of the incomplete source base, creating a complete picture of the medical care for prisoners of war is difficult. It is clear that the regulations were applied differently in each camp and that the unique local conditions influenced the level of medical care that was available.”¹⁴

Fundamentally, one can assume that the Wehrmacht actually strove to provide at least somewhat sufficient medical care, because it was placing the POWs in work details, and the foremost goal was to maintain their ability to work. Neumann confirmed this in regard to the mission of the duty post of camp doctor, described above: “The camp doctors had to make decisions as to the POWs’ fitness to work. In that, they were supposed to apply the strictest standards so that, in light of the shortage of labor in the German economy, they could select prisoners for at least light labor, instead of declaring them unfit, which would have necessitated sending them home.”¹⁵

An additional important factor in the treatment of the prisoners was their ethnicity and national origin. Because of Nazi racial ideology and their antisemitic and anti-Bolshevist worldview and beliefs, prisoners from Slavic countries and, particularly, Soviet POWs were deemed to be primitive “sub-humans” (*Untermenschen*) and were, therefore, treated poorly. In addition, the Soviet Union had not ratified the Geneva Convention Relative to the Treatment of Prisoners of War of 1929. Although the convention required all signatories to treat POWs according to its terms even if the enemy was not

a signatory, Germany nonetheless used the fact that the USSR had not signed as an excuse to abuse Soviet prisoners. Even though the Soviet Union had not signed that agreement, it had signed other humanitarian agreements, such as the Hague Conventions of 1899 and 1907 and the Geneva Convention for the Amelioration of the Condition of the Wounded and Sick in Armed Forces in the Field, updated in 1929, and Germany should have observed them.¹⁶ It is clear from the existing scholarship that there was a "hierarchy" in the treatment of POWs, including medical care; at the top were British and American prisoners, followed by prisoners from other Western European countries, then by Southeastern European prisoners, then Poles, and, at the bottom, Soviet prisoners (especially those of Russian ethnicity).¹⁷

In addition to nationality, the treatment of different groups of POWs was influenced by the desired reciprocal treatment of German prisoners by their countries; the Germans provided better care for prisoners from countries that held large numbers of German prisoners, in hope that those countries would reciprocate. In particular, American and British prisoners were generally treated in strict accordance with the Geneva Conventions. In addition to the medical care they were required to provide for these prisoners under the Geneva Conventions, the Germans afforded them access to X-ray facilities and special infirmaries (*Sonderlazarette*) that provided services such as eye care and orthopedic surgery for injured limbs and supplied them with equipment like prostheses.¹⁸

This treatment stands in stark contrast to the shocking conditions that Soviet prisoners experienced.¹⁹ Their camps were overcrowded, often far above the prescribed capacity, resulting in particularly bad hygienic conditions. The prisoners suffered from exposure to the elements, due to being quartered under the open sky or in holes in the ground, as well as malnutrition, which also had a medical-ethical dimension: these living conditions had catastrophic consequences for the health of the prisoners. In addition to infectious diseases, parasites, wounds, and exhaustion, it was above all insufficient nutrition that led to mass death among the Soviet prisoners. Neither the troop commanders nor the medical personnel in the camps, in the Army Health Inspectorate, or in the Armed Forces Health Affairs (*Wehrmachtssanitätswesen*) attempted to prevent these conditions from developing or to ameliorate them. Adequate medical care for the wounded, sick, or malnourished prisoners was almost never provided. Far more often, their mass death was accepted, and, frequently, prisoners who were sick, wounded, or invalids were released and left to certain death. Deliberate killing of wounded or sick Soviet prisoners was also not uncommon.

Medical experimentation, primarily on Soviet POWs, constituted an additional dimension of crimes against humanity in the context of the medical care of POWs. Often the Army Health Inspectorate arranged for criminal human experimentation on Soviet prisoners, although Wehrmacht medical personnel also undertook such experiments on their own initiative. The most common forms of experimentation consisted of trials of vaccines against typhus, cholera, and

dysentery, as well as starvation experiments. A further, particularly repulsive, kind of experimentation consisted of shooting Soviet prisoners with dum-dum bullets, which took place in the summer of 1941.²⁰ Medical experiments on Western Allied prisoners have also been documented. For example, hepatitis experiments were performed on British prisoners captured on Crete in the summer of 1941.²¹

SOURCES Primary source information about Kriegsgefangenen-Lazaretten can be found in the multivolume *Vorschrift für das Kriegsgefangenenwesen* (H.Dv. 38; M.Dv. Nr. 38; L.Dv. 78); especially relevant is the *Vorschrift für das Kriegsgefangenenwesen. Teil 9: Dienstanweisung für den Lagerarzt eines Kriegsgefangenenlagers und Chefarzt des Kriegsgefangenenlagerlazaretts*, 3.8.1940 (= H.Dv. 38/9; M.Dv. Nr. 38/9; L.Dv. 78/9) (Berlin: Reichsdruckerei, 1940).

Various sources can be found in Markus Scholz, *Zur gesundheitlichen Lage und medizinischen Betreuung der im Zweiten Weltkrieg in deutschem Gewahrsam befindlichen Kriegsgefangenen der westlichen Alliierten* (med. dent. Diss. Leipzig, 1998), pp. 2–3; BA-MA: RH 12–23 (previously H 20), RW 6, RH 49, RW 4, RW 19, RM 7, und RHD 4. The following document collection also contains relevant material: Rüdiger Overmans, Andreas Hilger, and Pavel Polian, eds., *Rotarmisten in deutscher Hand: Dokumente zu Gefangenschaft, Repatriierung und Rehabilitierung sowjetischer Soldaten des Zweiten Weltkrieges* (Paderborn: Ferdinand Schöningh, 2012), pp. 497–606.

Personal records (such as, for example, hospital reports and medical records) of foreign POWs in German captivity are in the Deutsche Dienststelle (WAST) ("Übertragung der Aufgaben der Deutschen Dienststelle [WAST] an das Bundesarchiv," www.dd-wast.de/de/unterlagen/kriegsgefangenenunterlagen.html) and in the Datenbank sowjetische Kriegsgefangene of the Dokumentationsstelle der Stiftung Sächsische Gedenkstätten Dresden ("Informationen zur Datenbank sowjetische Kriegsgefangene," March 2014, www.dokst.de/main/content/auskuenfte/sowjetische-buerger/kriegsgefangene/kriegsgefangene-ehemalige-sowjetische-buerger).

Although there are a few studies on the subject of health care in the Wehrmacht POW camps, there remains a significant gap in the literature, in particular of a specific, primary-source-based description of the actual day-to-day implementation of the Wehrmacht's instructions. However, due to the problem of available sources, it is uncertain to what extent this type of study can be done.

Additional information about Kriegsgefangenen-Lazarette can be found in the following publications: K. Bringmann, *Kriegsgefangenen-Sanitätsdienst: Ärztliche Versorgung in deutschen Kriegsgefangenenlazaretten und Kriegsgefangenenauftausch während des Zweiten Weltkrieges* (Beiträge Wehrmedizin und Wehrpharmazie, vol. 6) (Bonn: Beta, 1992); Wolfgang Uwe Eckart, *Medizin in der NS-Diktatur: Ideologie, Praxis, Folgen* (Vienna; Böhlaus, 2012), pp. 326–334; Hubert Fischer, *Der deutsche Sanitätsdienst 1921–1945: Organisation, Dokumente und persönliche Erfahrungen. NOTES

*The original intent was to include separate entries on those clinics and hospitals that treated POWs in German hands, and which were separate from the POW camps themselves. Failing that, we hoped to include a list of such sites. However, neither solution proved practical, given the incomplete nature of the sources and the current state of research. We found, first of all, that information on hospitals in the occupied territories was almost completely lacking. We estimate that there were over 300 such facilities, so a list without them would be inaccurate. As for the hospitals in Germany, confusion abounds. Without research that would be extensive at best, and impossible at worst—because of a lack of records—sorting out the organization and subordination of the hundreds of hospitals, reserve hospitals, civilian hospitals, and infirmaries, and separating those that treated POWs from those that did not, would simply not be feasible. Therefore, we were forced to abandon the idea of appending a list of hospitals. We hope that future researchers will be able to achieve more clarity.

KRIEGSGEFANGENEN- ARBEITSVERBÄNDE AND NACHSCHUB-VERBÄNDE

In addition to utilizing labor units that were organizationally subordinate to camps, the most common of which being the work detachments (*Arbeitskommandos*), the Wehrmacht also deployed mobile prisoner of war (POW) labor battalions (*Kriegsgefangenen-arbeitsbataillone*, KrGefArbEin). Relative to the entire system of forced labor employed by the Nazis, these units occupied but a small corner of the wartime economy. For instance, only some 46,000 of the total 2.17 million POWs deployed by the Wehrmacht in July 1944 were in these mobile units, which the Germans often lumped together with the term “Construction and Labor Battalions (*Bau- und Arbeitsbataillone*, BAB).”¹ Their limited scale and usage makes these units a unique and less familiar chapter in the greater story of POW forced labor. The use of BABs and other POW mobile labor units began in late 1940 and continued until the end of the war in Europe. Since they used forced laborers held against their will for extended periods of time but do not fall into the category of a “camp” as defined in this encyclopedia, these units have all been treated in this one essay. This is also a necessity, as there were innumerable work sites and deployments and, because the surviving documentation is limited, only a small number can be described with any detail.

Before delving into the types of POW mobile labor battalions, some basic generalizations about these units can be described. They were most often divided into battalions numbering between 500 and 800 prisoners each and then into companies 100–200 people strong. Prisoners from many of these units—such as BABs—were rarely deployed in small teams but instead kept as entire companies or even battalions. The units were accommodated in a variety of facilities, ranging from actual POW or work camps to schools. They were kept behind barbed wire fences, guarded, and administered by the Wehrmacht. If they were to travel to a work site, they were escorted by Wehrmacht guards and returned to their lodgings at night.

The chief category of POW mobile labor units was the Prisoner of War Construction and Labor Battalion (*Kriegsgefangenenbau- und Arbeitsbataillon*, often abbreviated KrGefBau- u. ArbBtl, or, alternately, BAB). Other POW forced labor units were sometimes mistaken for these units due to the erroneous usage of the acronym BAB, making research into these units even more difficult. Many, but not all, units bore an abbreviation indicating that either Italians (it.) or Soviets (sowj.) made up the prisoner population.² These battalions were deployed starting in 1940, subordinate to German Defense Districts (*Wehrkreise*), and even specific POW camps—though for organizational purposes only. While the prisoners may have been transferred from POW camps, these labor battalions traveled to sites for work and were thus not billeted at a centralized detainment location. The Wehrmacht used any facilities on hand to quarter the POWs—in the case of Mannheim and many other locales, this often meant using schools. Only one company of each battalion was generally billeted in each location in these cases. There were also numerous examples of a school holding two companies at a time, but only rarely did the Wehrmacht billet three or more companies of POW mobile labor battalions in the same location.³ The accommodations for BABs (and most other POW mobile labor battalions) were fenced in with barbed wire. For battalions held in actual camps with fenced in barracks, the Wehrmacht tended to keep the entire battalion together, as in the case of BABs 2 and 22 deployed near Bremen.⁴ BABs were deployed across the Reich and occupied territories.

On average, BABs deployed between 500 and 700 men per battalion.⁵ This practice was based on a series of directives from the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) in 1940; one in November, for instance, ordered the creation of 24 BABs to be made up of 420 French and Polish workers and 180 “assisting” workers (*Zuarbeiter*) each.⁶ Work deployments varied for BABs. Unlike many of the other types of POW mobile labor battalions discussed later, BABs were rarely deployed in small numbers but instead kept as entire companies or battalions. They often worked on larger Wehrmacht work projects. On occasion they were deployed to serve other areas of the wartime economy. For example, a postwar investigation by the Bremen State Office of Criminal Investigations (*Landeskriminalamt Bremen*) listed that BAB 2 was billeted in a camp operated by the German Labor Front (*Deutsche Arbeitsfront*), and the battalion probably also conducted labor at this site as well.⁷

Since detailed documentation on the BABs did not survive the war, the paths of persecution for the POWs in these camps are difficult to reconstruct. However, postwar investigations, especially by the French and Belgian governments, shed light on specific units and specific victim groups. These reports give us an idea of how often these units were likely transferred to other sectors and what kind of work deployments they received. An investigation by the French Ministère des Prisonniers, Déportés et Réfugiés in September 1945 found that there had been approximately 560 POWs

in BAB 4, split up among three companies of between 180 and 190 men. When the BAB was established (some sources indicate this was in May 1940), it was deployed to Zeithain to construct the Stalag IV B subcamp (*Zweiglager*), Stalag IV B/Z. Later, in February 1942, these companies were regrouped in the Brux area, in the Sudetenland, in the vicinity of Stalag IV C, to construct a synthetic fuel plant. The French investigation reported that afterward, from September 1943 until September 1944, BAB 4 was set to clearing rubble in Hamburg. Starting in September 1944, BAB 4 was deployed to clear out a synthetic fuel plant in Rositz. Due to Allied bombing raids, BAB 4 ostensibly suffered heavy casualties at this deployment, after which the remnants of the battalion were resupplied with donations from the Red Cross via nearby Stalag IV F.⁸ An earlier Ministère des Prisonniers, Déportés et Réfugiés in May 1945 placed BAB 4 at Hamburg (specifically the barracks at Barmbeck, a nearby locality) in January 1945 with a strength of some 549 men, indicating that the battalion was either regrouped or filled out with replacement workers following the bombings at Rositz.⁹

A different category of mobile POW labor units bore a basically generic designation as a construction and engineering unit: the Prisoner of War Labor Battalion (*Kriegsgefangenen Arbeitsbataillon*, KrGefArbBtl). These units were different from the BABs, despite their names being so similar. KrGefArbBtls were created for somewhat specialized purposes in two main waves. The first wave, in September and October 1942, established units numbering 180 through 191. These were deployed to German-occupied Norway.¹⁰ An additional unit, KrGefArbBtl 192 appears to have been deployed to the southeastern theater in mid-1943.¹¹ Some wartime labor deployment records indicate that another series of these battalions was later established, numbered 202 through 206. These were also deployed to Norway alongside 180 through 190, beginning in August 1944.¹² These units likely performed labor in support of various attempts to prepare the coast for invasion by the Western Allies, such as building defensive positions as a part of the Atlantic Wall, digging roads, or (perhaps) extending the Norwegian rail network. The number of prisoners working in these KrGefArbBtls in Norway increased drastically starting in January 1943, from a deployment strength of some 4,700 to more than 27,000 by the end of the year, and then to 37,000 by the end of 1944. Most of these prisoners were Soviet soldiers, but there were a smaller number of Serbs—generally between 1,000 and 2,000. A curious detail about these units is that, when they originated in early 1943, they were only somewhat larger than the other POW mobile labor units, with some 6,200 men split between four battalions—roughly 1,550 men per unit. However, the 37,000 POWs deployed by the end of 1944 were then only divided among 14 battalions—more than 2,600 men per unit. It is likely for this reason that these battalions were consistently denoted as *verstärkt* (reinforced) in wartime documents; for example: “Verstärkte Kgf.-Arb.-Btle. Nr. 180, 182, 183, 184, 185, 186, 187, 188, 190.”¹³

The second large-scale establishment of KrGefArbBtls came in April 1945. These units were created in order to strengthen the rapidly collapsing eastern front, but they saw very brief deployment due to the Nazis' surrender in May. These KrGefArbBtls were numbered 1–10 and were deployed to locations including Neubrandenburg, Altengrabow, Teterow, Upper Silesia, and Waidhofen an der Thaya. Only a few KrGefArbBtls were created in other instances, as the BABs had been, on a seemingly more ad hoc basis. Again, these units were deployed to build defensive positions and for road work.¹⁴

The next category of POW mobile work units was the Prisoner of War Construction Battalion (*Kriegsgefangenen-Baubataillon*, BauBtl[K], or KrGefBauBtl). In most cases these units were composed solely of POWs, but, in a few exceptional cases, there were one to three POW companies added to a regular Wehrmacht Baubataillon—that is, companies of POWs were intermingled with companies of German soldiers. The majority of these units seem to have been deployed close to the fighting on the eastern front; as such, some were destroyed along with Army Group Center (*Heeresgruppe Mitte*) in the summer of 1944. Several KrGefBauBtls were also deployed to Norway in the winter of 1942–1943.¹⁵

Yet another category of POW mobile labor units was the Prisoner of War Construction Engineer Battalion (*Kriegsgefangenen-Baupionierbataillon*, BauPiBtl(K), or KrGefBauPiBtl). Though, there was a difference, in principle, between a construction and an engineering unit, these units bore both titles in their designations and seem to have been deployed for many of the same work assignments as the abovementioned labor units: general building and rubble clearance work in fighting sectors as well as building roads and defensive positions. KrGefBauPiBtls were established as early as August 1943 and as late as early 1945 and seem to have been deployed nearly exclusively to the Reich and Norway.¹⁶ Further complicating the task of researching the KrGefBauPiBtls is the fact that many of them existed under this designation starting only at the end of 1944. For example, the units that had been referred to as Polish BABs 28, 30, and 41 from January 1943 were redesignated BauPiBtle(K) 28, 30, and 41 between October and November 1944. This nomenclature issue was more complex for Soviet Pioneer Battalions 1, 2, and 3, which were called such from January 1943 until September 1944, at which point they were lumped in with the abovementioned Soviet units as BABs. All six of these units were redesignated BauPiBtl(K)s between October and November 1944. As with many other POW mobile labor battalions, these generally deployed between 500 and 800 prisoners.¹⁷

Another category of POW mobile labor units was the Prisoner of War-Engineer Unit (*Kriegsgefangenen-Pioniereinheit*, KrGefPiKp, or PiBtl). Only one unit consisting exclusively of POWs seems to have been created—that of Legionowo, in present-day Poland—while the remaining three were regular Wehrmacht engineer battalions that incorporated individual companies of POWs.¹⁸

A small and limited group of POW mobile labor units was the Prisoner of War Labor Battalion (Engineers) (*Kriegsgefangenen-Arbeitsbataillon [Pioniere]*, KrGefArb[Btl]), a designation that was only given to three units. The first two were created on December 10, 1941, and deployed to Norway. The third and final KrGefArbBtl(Pi) was created on January 12, 1942, and was also deployed to Norway. All three units consisted of Soviet POWs.¹⁹

On June 14, 1943, the Wehrmacht established five Prisoner of War Harbor Labor Units (*Kriegsgefangenen-Hafenarbeitsabteilung*, KrGefHafenArbAbt), in Defense District VII, which were then assigned to the Commander of Construction Troops (*Kommandeur der Bautruppen*) 112 in Rome. In Italy, these units performed tasks in harbors such as the unloading and loading of supplies and general labor as needed. As of September 1, 1943, there were a total of 1,250 POWs assigned to the five KrGefHafenArbAbt, all of whom were British.²⁰ It seems that most, if not all, of these units were disbanded in early 1944.²¹

Some POW mobile labor units were composed of specialized laborers, such as the Prisoner of War Glazier Battalion (*Kriegsgefangenen-Glaserbataillon*, KrGefGlaserBtl). These units were created as early as the beginning of 1941 and were deployed primarily within the Reich, to repair windows in buildings after Allied air raids.²² These units generally deployed between 500 and 800 men, split into four companies.²³ Many of the POWs were French, but British, Polish, and Serbian prisoners were also part of these units. A postwar investigation concerning the use of a KrGefGlaserBtl by a single company revealed that it utilized 11 POWs from the 2nd Company of Battalion VI between October 1943 and April 1944. If it is correct to assume that this is almost certainly too few men to have made up an entire company, or even platoon, it seems that relatively small fractions of these battalions could be split off for work deployments that did not require an entire company. This report also provides some indication of standard deployment procedures for POW glaziers. It states that “the prisoners of war were brought by a supervisory post in the morning and retrieved again in the evening.”²⁴

The mission of the Prisoner of War Roofing Battalion (*Kriegsgefangenen-Dachdeckerbataillon*, KrGefDachdeckerBtl) was much like that of the Glazier Battalion: repair (in this case, of the roofs) of buildings that Allied bombing had damaged, mostly in the Reich. These units were also meant to be composed of specialized laborers of various nationalities drawn from POW camps. Establishment of KrGefDachdeckerBtls began in mid-1941.²⁵ As was the case with the glazier units, the POW roofing battalions numbered some 700–800 prisoners on average—again more numerous than the typical BAB unit.²⁶ They were also housed in whatever accommodations were available—schools or barracks, for instance—and guarded by the Wehrmacht. According to a 1947 investigation of KrGefDachdeckerBtl V by the International Refugee Organization (IRO), the battalion was deployed in groups of 2–10 men. The employers or businesses paid between three and five Reichsmarks per worker per day, but this payment was remitted from the business to the local administration

and then to the Wehrmacht. The report does not specify whether the POWs received payment for their labor, or if the Wehrmacht retained the funds.²⁷

The German Air Corps also used POWs in mobile labor units, called Prisoner of War Construction Unit of the Air Force (*Kriegsgefangenen-Baueinheit der Luftwaffe*). These were divided into two main categories. By far the most common of these was the Air Corps Construction Battalion for Prisoners of War (*Luftwaffen-Baubataillon für Kriegsgefangene*, LwBauBtl[K]). These units were created from existing construction labor battalions within the Luftwaffe itself, and the German soldiers were then replaced with POWs. For organizational purposes, these units were each assigned to an Air Command District (*Luftgau*), which is reflected in each designation.²⁸ The second type of Air Corps mobile labor unit was the Air Force Main Construction Unit (*Luftwaffen-Baustammabteilung*, LwBauStammAbt), a designation that seems to have been established for a specific purpose and saw limited usage. Only four of these units were created in the winter of 1941–1942. They were deployed to Norway, and each consisted of Soviet POWs. The units were not created from an existing Luftwaffe construction unit, as the LwBauBtl(K) units had been, and were assigned to a guard detail indicated in the unit’s designation.²⁹

The use of POW labor by supply battalions was split into two categories. The Prisoner of War Supply Unit (*Kriegsgefangenen-Nachsuebeinheit*, KrGefNsChBtl/Kp, or NsChBtl) was a regular army supply battalion that incorporated individual companies of POWs. Generally trying to keep each NsChBtl at a strength of six companies, as many as four could have been made up of POWs. Supply units manned entirely by POWs did exist, but these were far less common.³⁰ These units performed labor surrounding the loading, unloading, distribution, and transportation of supplies for the Wehrmacht.

SOURCES Primary source material concerning the various types of POW mobile labor units is scattered throughout wartime city, state, and federal German municipal records; wartime Wehrmacht records; and postwar investigations conducted by German, Dutch, Belgian, French, and American authorities as well as international organizations such as the IRC, the IRO, UNRRA, and ITS.

Additional information about the Wehrmacht’s use of POW labor can be found in Rüdiger Overmans, “German Policy on Prisoners of War, 1939–1945,” in *Germany and the Second World War*, vols. IX/II, ed. Jörg Echternkamp (Oxford: Clarendon, 2014), pp. 733–879. Additional information about German POW administration in World War II can be found in Stefan Geck, “Das deutsche Kriegsgefangenenwesen, 1939–1945” (MA thesis, Johannes-Gutenberg-Universität Mainz, 1998). A list of these units compiled in 1987, though it contains some errors, is helpful for getting a sense of the dates and locations of deployment for most individual units: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945*, vol. 2 (Koblenz: self-published, 1987), pp. 95–165. On the

Serbian prisoners in Norway, see Ljubo Mlađenović, *Pod ſifrom viking: Život, borba i stradanja jugoslovenskih interniraca u logorima u Norveškoj 1942–1945. NOTES

1. ITS Digital Archive, 2.2.5.1/0001/0237. This OKW report is titled “Summary of prisoners of war in the OKW sphere, incl. Air Corps and Navy,” meaning that it presumably includes all POWs deployed for labor by the Reich. However, it should be noted that the report makes a distinction between “normal” POW forced labor and mobile units denoted as “Bau- u. Arb.-Btl” (i.e., BABs). It is unclear whether this somewhat problematic umbrella term refers to all 11 major categories of POW mobile labor units discussed in this essay. However, it is clear in the report that the types of units with the most prisoners—the BABs, the *Dachdeckerbataillone*, the *Glaserbataillone*, etc.—are represented. Whether the smaller units that saw limited usage are included in this count is probably statistically insignificant.

PRISONER OF WAR SPECIAL CAMPS INTRODUCTION

The Wehrmacht operated several types of camps outside the main prisoner of war (POW) camp system (*Kriegsgefangenenwesen*). These included temporary collection camps, which were referred to as transit camps (*Durchgangslager*, Dulags), although they were not part of the formal class of Dulags under the main system; a variety of camps that were simply called POW camps (*Kriegsgefangenenlager*, KGL); two camps that held Serbian civilians taken hostage in retaliation for partisan attacks, which were called concentration camps (*Konzentrationslager*, KL), even though they were not part of the SS Main Economic and Administrative Office (*SS-Wirtschafts- und Verwaltungshauptamt*, SS-WVHA) concentration camp system; and the “special camps” (*Sonderlager*), which mainly held Soviet POWs who were selected for training as propagandists and counterintelligence agents. The nature of these camps and the conditions experienced by the prisoners were as diverse as their functions, and they should not be thought of as a cohesive class of camps—their only unifying feature is that they were not part of the main POW camp system.

There were at least 20 camps designated Dulags that were not part of the formal system of transit camps. Rather than proper transit camps, these were ad hoc facilities, usually organized by individual military units for the temporary confinement of prisoners. Ten of these camps were established during the invasion of Poland, located in Blon (Błonie), Bochnia, Kielce, Krakau (Kraków), Öhringen (Gliwice-Sośnica), Reichshof (Rzeszów), Schildberg (Ostrzeszów), Soldau (Działdowo), Tarnów, and Wadowice. These camps were established hastily, and the conditions were quite primitive. Most of them had been closed by December 1939, as the prisoners had been transferred to permanent camps.¹

A Dulag of this type was established in Corinth in May 1941 to hold British and Commonwealth prisoners captured during the fighting in Greece. This camp only operated for a few weeks before the prisoners were transferred to Dulag 183 in Thessaloniki (which was part of the main system of Dulags).²

Three of these informal Dulags were established in the occupied Soviet Union, located at Achtyrka (today Okhtyrka, Ukraine), Borispol (today Boryspil', Ukraine), and Kurbatovo, near Voronezh. The camps at Achtyrka and Borispol held Soviet POWs. The conditions in these camps were atrocious, as they were in almost all camps for Soviet prisoners. The camp at Borispol also held some civilian prisoners. The camp at Kurbatovo held civilian prisoners exclusively. These civilians were residents of Voronezh who were evacuated from the frontline area. The conditions in this camp were also poor, with insufficient food and inadequate medical care leading to malnutrition and disease. All three of these camps had been dissolved by the end of 1942.³

Five such Dulags were created on the western front after the Allied landings in Normandy in 1944. Two were located within the Reich, in Lollar and Neubreisach (today

Neuf-Brisach, France); two were in France, in Châlons-sur-Marne and Morancez (Dulag West); and one in Belgium, in Mecheln (Mechelen/Malines). These camps held Allied POWs in transit to permanent POW camps.⁴

Finally, one other Dulag was established in Sassenitz, in Pomerania. Little is known about this camp, including its exact dates of operation and the number or nationality of its prisoners.

The second category of camps outside the main POW camp system was for those simply called POW camps, or KGLs. Thirty of these camps were in northern Italy and the formerly Italian-occupied areas of southeastern Europe. These camps held Italian military prisoners who were interned by the Germans after the Italian capitulation to the Allies in September 1943. Most of these camps were short lived, operating for only a few weeks while their prisoners were gradually transferred to permanent camps. Conditions in these camps were generally poor; the Germans viewed the interned Italians as traitors and often treated their former allies badly.⁵

There were also four camps in Western Europe that received this designation: three in France, located in Dunkirk (Dünkirchen), Lorient, and Saint-Nazaire, and one on the occupied island of Jersey. The camps in France were established in the weeks after the Allied landings in Normandy and continued to operate until the end of the war. Little is known about these camps or the conditions in them. The camp on Jersey was established in 1943 and held a diverse group of prisoners, including French North African soldiers, as well as some American and British troops and potentially some Soviet prisoners as well. Conditions in this camp were reportedly decent, and it received a positive assessment from a Red Cross delegate that visited the camp in February 1945.⁶

Two camps in Eastern Europe were designated as KGLs: one in Poland, located in Kielce, and one at Rogavka, in northwestern Russia. The camp in Kielce operated from 1942 to 1944, and held Soviet prisoners who were being assessed as potential collaborators and propagandists; in this sense, it was more similar to the Sonderlager, discussed below, than to the other camps designated as KGLs.⁷ The camp in Rogavka was also atypical—it was essentially a forced labor camp for Soviet POWs. A group of about 800 Soviet prisoners, mainly from Dulag 110 in Staraja Russa, were brought to Rogavka in the summer of 1942 to extract peat. By the following year, the need for laborers at the site had grown significantly and civilian laborers were also brought to the camp. On September 1, 1943, control of the camp was transferred to the civilian police forces in northwestern Russia, namely the Commander of the Security Police and SD (*Befehlshaber der Sicherheitspolizei und des Sicherheitsdienstes*, BdS) Ostland, and converted into a Sipo camp.⁸

Finally, there was one camp at Hövik, in Norway, which was also designated as a KGL. Little is known about this camp, as no significant documentation is currently available about it.

The third category of Wehrmacht camp that operated outside of the main POW camp system consisted of two so-called concentration camps, which, despite their names, were not part of the SS-WVHA concentration camp system. These two camps were located at Jarak and Šabac in German-occupied Serbia. Both camps were created by the 342nd Infantry Division and held Serbian civilians; the camps were later turned over to the German military administration in Serbia. The camp at Jarak was established in late September 1941 and held Serbian men from Šabac and Sremska Mitrovica who were interned after Chetniks and partisans attacked German soldiers in Šabac. This camp held between 6,000 and 7,000 people in terrible conditions. The Jarak camp was short lived: in early October, the prisoners were transferred to the new camp at Šabac. Here, they were joined by other civilian prisoners, including a group of 1,000 Austrian Jews as well as some Roma from the surrounding area. Conditions in the Šabac camp were likewise poor. The Germans frequently executed hostages from this camp in reprisal for partisan attacks on German forces. The camp in Šabac operated until March 31, 1942, when the prisoners were transferred to other camps, such as the Sajmište concentration camp in Semlin (Zemun).⁹

The final type of camps outside of the main POW camp system were the 10 special camps (*Sonderlager*). Eight of these camps—Sonderlager Boyen (Lötzen/Giżycko), Dabendorf, Fremde Heere Ost (Berlin), Ibbenbüren, Wuhlheide, Wustrau, Wutzetz, and Ziethenhorst—were operated by the Army High Command, Foreign Armies East Branch (*Oberkommando des Heeres, Abteilung Fremde Heere Ost*). Seven of these camps held Soviet POWs who had been identified as potential collaborators, either as propagandists and counter-intelligence agents or as volunteers for the collaborationist Russian Liberation Army, commanded by Andrei Vlasov. Sonderlager Boyen held Soviet officers who were interrogated (and frequently tortured) by the Germans. Unsurprisingly, those who cooperated with the Germans, whether through collaborating or by providing them with information, received much better treatment than those who refused.¹⁰

One Sonderlager, located in Komotau in the Sudetenland (today Chomutov, Czech Republic), held captured French intelligence officers who had been arrested by the Germans during the occupation of Vichy France in 1942. The camp operated from 1943 to 1945. Conditions in this camp were generally good.¹¹

Finally, one Sonderlager, Luftwaffe Sonderlager Ost, held Soviet Air Force officers captured by the Luftwaffe. This camp, which was located in Sudauen, in East Prussia (today Suwałki, Poland), operated from 1942 to 1943. Little information is available on the conditions in this camp, although they are believed to have been acceptable.¹²

The special camps operated by the Wehrmacht served a variety of purposes and held a diverse group of prisoners in a wide range of conditions. It should be emphasized that these camps were not a coherent class of camps—their only unifying feature is that they were not part of the main POW camp system. However, they do demonstrate the degree of

autonomy and initiative that individual units of the Wehrmacht possessed and the decision-making process of the lower levels of the Wehrmacht command structure. These idiosyncratic, improvised camps further demonstrate the diverse nature of Wehrmacht captivity during World War II.

DURCHGANGSLAGER (DULAG) ACHTYRKA

Dulag Achtyrka operated in 1941 and 1942 in the city of Achtyrka (today Okhtyrka, Ukraine) (map 9f).¹ The camp was under the authority of the Sixth Army. It was administered by a subunit assigned by the Sixth Army rather than a separate Dulag headquarters, and, for this reason, the camp was officially referred to as a prisoner of war (POW) camp (*Kriegsgefangenenlager*) or prisoner camp (*Gefangenentalager*). Nonetheless, the camp functioned as a Dulag, or transit camp.

The conditions in Dulag Achtyrka were similar to those in other camps for Soviet POWs. The camp was severely overcrowded, and the prisoners received little food or medical care. These conditions led to a high mortality rate. It is believed that 130 prisoners died in the camp.²

In April 1942, 1,400 prisoners were transferred from Achtyrka to Stalag 329 in Vinnytsia. The camp was still located in Achtyrka as of April 28, 1942.³

SOURCES Primary source information about Dulag Achtyrka is located in GARF (file 7021-74-487) and DASuO (file 2191-1-103).

Additional information about Dulag Achtyrka can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 62.

DURCHGANGSLAGER (DULAG) BŁONIE

Dulag Błonie, actually a temporary collection camp, existed briefly in the fall of 1939 in the town of Błonie, 27 kilometers (16.8 miles) west of Warsaw, in Poland (see map 5). The Germans disbanded the camp in late 1939 by transferring the prisoners to camps in Germany. This was an ad hoc camp, not part of the regular prisoner of war camp system, and was guarded by regular troops on temporary detail.

The camp was subordinate first to the commander of the Tenth Army Rear Area (*Kommandant rückwärtiges Armeebereich*, Korück, 540) and then to the Armed Forces Commander Poland (*Wehrmachtbefehlshaber Polen*). No information is available on the conditions in this camp, although they are likely to have been primitive.

SOURCES Primary source material about Dulag Błonie is located in BA-MA (RH 49); WASt Berlin; and the State Archive Warsaw.

Additional information about Dulag Błonie can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. DURCHGANGSLAGER (DULAG) BOCHNIA

The Wehrmacht created Dulag Bochnia on October 2, 1939, in Bochnia, Poland, about 22.5 kilometers (10 miles) east-southeast of Kraków (see map 5). This was not part of the regular prisoner of war (POW) camp system but actually an ad hoc collection camp, guarded by regular troops on temporary detail. It was eliminated in late November 1939 by transferring the prisoners to other camps in Germany.¹

Dulag Bochnia was first subordinate to the commander of the Fourteenth Army Rear Area (*Kommandant rückwärtiges Armeegebiet*, Korück, 520) and then to the Armed Forces Commander Poland (*Wehrmachtbefehlshaber Polen*). The Germans used the camp to hold about 1,000 Polish officers captured by the Wehrmacht during the invasion of September 1939. The prisoners were accommodated in former Polish army barracks. Local residents, as well as the Polish Red Cross, supplied the prisoners with food.²

SOURCES Primary source material about Dulag Bochnia is located in BA-MA (RH 49); WASt Berlin; and the State Archive Kraków.

Additional information about Dulag Bochnia can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. DURCHGANGSLAGER (DULAG) BORISPOL

The Wehrmacht established Dulag Borispol at the end of September 1941, in the city of Borispol (today Boryspil', Ukraine), 35 kilometers (21.7 miles) northeast of Kiev (map 9e). The camp was used to hold Red Army soldiers who had been taken prisoner in the encirclement east of Kiev.¹ The camp was subordinate at first to the 113th Infantry Division and then to Security Division (*Sicherungsdivision*) 454. The camp was operated by German subunits assigned by these divisions rather than a separate Dulag headquarters; therefore, the camp was officially referred to as a prisoner of war (POW) camp (*Kriegsgefangenenlager*) or prisoner camp (*Gefangenenslager*), although it functioned as a Dulag, or transit camp. As of October 9, 1941, the camp held 28,000 prisoners who were guarded by 300 German soldiers.²

Gefreiter Eugen Seibold, an artilleryman who was one of the soldiers guarding the camp, wrote in his diary on September 23, 1941:

In Borispol. Along the same route where we were firing last time, we are now advancing southward, to the Kiev-Khar'kov railroad line, with which we are already acquainted. Along the way are a great many abandoned trucks, transport vehicles, saddlebags scattered here and there, dead horses, [firing] batteries, which, along with the [artillery] tractors, had been abandoned at the firing position. The first trains carrying prisoners are being sent northward. There was no work at all for us, since the town had been abandoned, everyone had run away. On the other hand, we had to process several captured trains. By September 21, I already had an opportunity to take a look at Borispol. The town presents an unforgettable picture of the war. The Russians' routes of retreat had been attacked by German dive-bombers, and here we see terrible devastation: hundreds of trucks, some half-destroyed by fire, others completely blown up. Body parts of horses are lying all over the ground, and between the craters made by the bomb explosions there are heaps of corpses. We sleep in former barracks for paratroopers; the buildings are very well equipped. The night of September 23–24 we spend at an airfield and guard prisoners, of whom there were 18,000. The Russians slept in the hangar, while we slept out in the open. They presented a diverse picture: all kinds of troops, ranging from infantrymen, combat engineers, and artillerymen to people dressed in a summer uniform and the black uniform of railroad troops and even including sailors, who had come, most likely, from Kiev. One could even find civilians among them. Women who are partisans and nurses supply them with water, which they drink greedily. Although many

Russian prisoners were in combat for a protracted period, the uniforms they wore were in good condition. In most cases, the uniforms were even new. The cleanliness of their underwear was especially striking. They were all in boots, made of fine leather besides, and with high boot-tops. The Russian greatcoats are thicker, with warm padding, they give good protection against the cold, with which we tried to cope by means of bonfires. The headgear is extremely diverse. One can see caps with earflaps, peaked service caps, flat-topped round hats made of karakul lambskin, and field caps. The women, by and large, are dressed in the same uniform as the men, and only the bust indicates that they belong to the female gender. The majority of them are young, inspired by their work. Incidentally, most of them make the same impression as the women of Montmartre. With undisguised pleasure, they tormented the Jews. A part of the prisoners had been chosen and, by highly effective means, had to prove their Aryan origin. They undress the manager of a Kiev factory down to his shirt, he takes out a packet of money and surrenders it in despair, but to no avail. He tears off even his shirt and is left in a yellow-and-blue bathing suit and a woolen blanket. Egoism in its crudest form. Many unnecessary things are done purely out of stupidity or animal instinct. We accompany this crowd of people (10 of us for 3,500 Russians) to Brovary, not far from Kiev. A dreadful march. We go through endless plains and tiny hamlets. Everyone rushes to drink water from stinking puddles. Such is the lot of prisoners. We hope that we won't have to experience similar things.³

As in other camps for Soviet POWs, new arrivals were screened to separate out undesirables, such as Jews and political commissars, who were subsequently shot by the camp guards or Security Service (*Sicherheitsdienst*, SD) personnel. For example, "at the request of the camp commandant," a "platoon of Sonderkommando 4a shot 752 Jewish POWs on October 14, 1941, and 357 on October 18, 1941, among whom there were several [political] commissars and 78 wounded Jews, handed over by the camp doctor."⁴

Dulag Borispol was liquidated in late October 1941 by transferring the prisoners to other camps. For example, on October 16, 1941, Security Division 454 ordered the 375th Infantry Regiment to transport 8,000 prisoners (including 80 staff officers and around 300 other officers) under guard to Dulag 205 in Poltava on October 18. Based on the same order, the camp in Borispol, which at that time was run by the headquarters of Reserve Battalion (*Landesschützenbataillon*) 987, was supposed to hand over 10,000 prisoners to the 62nd Infantry Division for transport to Dulag 205 and from there to Stalag 339, in Kiev-Darnitsa, beginning on October 20.⁵

On April 13, 2011, during excavation work in Borispol, a ditch 30 meters long and 3 meters wide (98.4 by 9.8 feet) was uncovered, which held the remains of Red Army soldiers (killed with shots to the back of the head), some bearing the traces of serious predeath injuries. During the exhumation, the remains of 493 people (including women) were discovered, in addition to 26 personal identification cards. It was possible to identify nine of the bodies (all but one of whom were Jews).⁶

DURCHGANGSLAGER (DULAG) CHÂLONS-SUR-MARNE

The city of Châlons-sur-Marne (today Châlons-en-Champagne) lies about 148 kilometers (92 miles) east of Paris (map 2). It was a hub of major transportation arteries in the rear of the pre-1914 French fortress system, and it offered vast military encampments that served as prisoner of war (POW) camps and also as reception centers for French prisoners released or on leave from captivity in Germany from 1940 to 1944.

In June 1944, the German army installed a transit camp in the city to handle the influx of Allied POWs coming from the Normandy front—without housing them with French African soldiers. The administrative arrangements were somewhat unconventional. The camp and its guards were subordinate to Commander-in-Chief West (*Oberbefehlshaber West*, OB West), but the camp commandant was simultaneously the commandant for Frontstalag 194 in Nancy, and, in practical terms, the Frontstalag controlled the Dulag's administration. The field post number for all the camps in Châlons-sur-Marne was 19 375 A.

Dulag Châlons-sur-Marne. General view of the camp, July 1944.
COURTESY OF ICRC.

Dulag Châlons-sur-Marne (also called Dulag OB West) occupied a complex of three-story French barracks called Quartier Fargeot, dating from 1877. Each facility had its own washrooms and the buildings opened onto a common courtyard for recreation.¹

The Dulag served as a major transit camp not only for the Allied prisoners coming from the Normandy front but also for Frontstalag prisoners being evacuated to Germany. The Allied prisoners from Normandy usually arrived in Châlons from Dulag West in Morancez near Chartres and usually left Dulag Châlons-sur-Marne after about ten days, being sent to Frontstalag 194 or directly to Germany.²

When the International Committee of the Red Cross inspector Dr. J. de Morsier visited the Dulag on July 26, 1944, its morning strength report showed 1,037 prisoners (576 British enlisted men and 20 officers, 395 American enlisted men and 24 officers, and 4 Free French noncommissioned officers and 18 privates). The Germans did not separate the prisoners by nationality, contrary to the usual practice, but the inspector did not consider this to be a problem, in light of the rapid turnover of prisoners. (As a matter of fact, 230 prisoners left on a transport for Germany just before de Morsier arrived.)³

The British and American prisoners complained that the food rations were too small for them, given their exhaustion after hard fighting. The German commander retorted, however, that the prisoners received exactly the same rations as the German army, leading the inspector to wonder whether the British and Americans had higher standards than the Germans. Prisoners also argued that they did not have enough cooking fuel. Apparently, they had burned some of the camp furniture to heat the cooking stoves. The camp lacked recreation facilities, but this was again not a major problem in light of the fact that prisoners stayed such a short time. The hygienic conditions and medical care in the camp were excellent.⁴ The Germans closed Dulag Châlons-sur-Marne in September 1944, as the Allied armies approached.

SOURCES The best source of information on Dulag Châlons-sur-Marne consists of the reports of the International Red

Cross, dated July 19 and 26, 1944, which are available in NARA II and TNA.

DURCHGANGSLAGER (DULAG) CORINTH

The Wehrmacht established Dulag Corinth in May 1941 in Corinth, Greece (map 8). The camp was dissolved at the end of June 1941, when the last prisoners were moved to Dulag 183 in Salonika (today Thessaloniki). The camp was subordinate to the Twelfth Army (*Feldkommandantur*) 569.

Dulag Corinth was used to hold British, Australian, New Zealander, and Serbian prisoners of war (POWs). On May 2, 1941, there were 6,121 British servicemen, including 198 officers, in the camp. Soon thereafter, the number of prisoners in the camp grew to 11,110. Among the prisoners were 1,909 "Palestinians" (Jews and Arabs) who were serving in the British army. On May 18, 1941, Oberstleutnant Hanstein from Twelfth Army headquarters inspected the camp. German journalists and journalists from neutral countries accompanied him. The journalists interviewed prisoners and subsequently published their impressions in the German press.¹ It is possible that Heinrich Himmler visited the camp between May 6 and May 10, 1941, as he was in Corinth during a trip to Greece.² Red Cross delegates visited the camp in early June.

The conditions in the camp were unsatisfactory. The first prisoners to arrive in the camp slept in the open air. The camp was constantly short of water and food; Jewish Palestinian prisoner Ralf Bogo recalls that they were fed a single inch-thick slice of bread a day, along with ersatz coffee and watery soup.³ Initially, there was almost no medical assistance, and infectious diseases, particularly dysentery, were common. Later, a hospital barrack with 120 beds, operated by British doctors and medical orderlies, was opened for sick and wounded prisoners.⁴

DURCHGANGSLAGER (DULAG) KIELCE

Dulag Kielce, actually a temporary collection camp, existed for about two months, starting in early September 1939. Kielce is 100 kilometers (62 miles) north-northeast of Kraków, in Poland (map 5).¹ This was an ad hoc camp, not part of the regular prisoner of war (POW) camp system, and guarded by regular troops on temporary detail. The camp was subordinate first to the Tenth Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 540) and then to the Armed Forces Commander Poland (*Wehrmachtbefehlshaber Polen*). The Germans used the camp to hold Polish POWs whom the Wehrmacht captured during the German–Polish conflict in September 1939. The prisoners were housed in four places: a prison building, a barracks near the city, a building at 30 Prosta Street, and the “castle.” In the prison, prisoners (on average, 2,000 people) were present from September 6 to October 15, 1939. In all, 3,000 prisoners passed through the prison. There were cases of dysentery and typhoid fever, and 18 prisoners were executed by shooting. Prisoners were in the barracks near the city from September 8 until November 15, 1939; some of them, too, suffered from dysentery. In the building on Prosta Street, imprisoned officers were housed from October 8 until October 20, 1939 (on average, 300–600 people; in all, 1,200 prisoners passed through). Finally, about 800 prisoners were held in the castle in October 1939. The Polish Red Cross and local residents helped the prisoners by providing food and medicine. From October to November 1939, the Germans transferred the prisoners to camps in Germany.²

DURCHGANGSLAGER (DULAG) KRAKAU

Dulag Krakau (map 5) went through two phases. At first, it was a temporary prisoner of war (POW) collection camp, which existed from September until the end of October 1939. This was an ad hoc camp, not part of the regular POW camp system, and guarded by regular troops on temporary detail. On November 1, 1939, the POW system took over the camp. It closed in July 1940. At least some of the prisoners were transferred to Oflag VIII A in May and June 1940.¹

In September 1939, the camp operated under the authority of the Fourteenth Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 520). Later, it was transferred to the Armed Forces Commander Poland (*Wehrmachtsbefehlshaber Polen*).

The camp held Polish army servicemen taken prisoner by the Germans in the course of the German–Polish conflict in September 1939. No specific information on conditions in the camp is available. However, conditions in most camps for Polish POWs were primitive, especially at this early point in the war.

SOURCES Primary source material about Dulag Krakau is located in BA-MA (RH 49); WASt Berlin; and the State Archive Wrocław. Additional information is available through the Central Museum for Prisoners of War in Łambinowice.

More information about Dulag Krakau can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 65; Juliusz Pollack, *Jeńcy polscy w hitlerowskiej niewoli* (Warsaw: MON, 1986); and Stanisław Senft and Horst Więcek, *Obozy jenieckie na obszarze śląskiego okręgu Wehrmachtu 1939–1945* (Wrocław: Ossolineum, 1972).

DURCHGANGSLAGER (DULAG) KURBATOV

The Wehrmacht established Dulag Kurbatovo in July 1942, in the rear area of the Second Army, and deployed it in the village of Kurbatovo, 49 kilometers (30 miles) west of the city of Voronezh (Russia) (map 9d). The camp was disbanded no later than early October 1942 by moving the civilians confined there to other localities for settlement or by sending them to work in Germany.

The camp was under the command of the 57th Infantry Division. The division commander from April 10, 1942, was Generalleutnant Oskar Blümm (1884–1951); he was replaced on October 10, 1942, by General der Infanterie Friedrich Siebert (1888–1950).

The camp was intended for temporary confinement of the civilian population of Voronezh, which, by order of the headquarters of the Second Army (AOK 2), was subject to evacuation to the west because Voronezh was in the zone of combat operations.¹ By mid-August 1942, 55,000 inhabitants² were forcibly evacuated from Voronezh, and approximately 25,000 of them were relocated through the division's Dulag Kurbatovo.³

The treatment of the inhabitants of the city who were placed in the camp as well as the conditions of their confinement in the camp were unsatisfactory. The food and medical assistance were inadequate, and infectious diseases and fatalities occurred as a result. In December 1942, 200 civilians were newly brought to Dulag Kurbatovo from the rear area of the 57th Infantry Division to build tank hangars (sheds).⁴

SOURCES Primary source material about Dulag Kurbatovo can be found in BA-MA (RH 20-2: 2. Armee; RH 23/177–180; Korück 580, Kriegstagebuch, No. 14-17: August–November 1942; RH 26-57: 57. Infanterie-Division); and DAVoO.

DURCHGANGSLAGER (DULAG) LOLLAR

The Wehrmacht established Dulag Lollar in Lollar (map 4d) in February 1945. On March 21, a group of British and Commonwealth prisoners from Oflag XII B in Mainz was transferred to the camp, with the intention of moving them farther north; however, the nearby rail yard was struck by Allied

bombers, preventing this transfer.¹ The camp guards attempted to flee on the night of March 27 but were captured by the advancing American 7th Armored Division the following day, when the camp was liberated.²

SOURCES Additional information about Dulag Lollar can be found in the following publications: Walter Wynne Mason, *Official History of New Zealand in the Second World War: Prisoners of War* (Wellington: War History Branch, Department of Internal Affairs, 1954), pp. 463–464; David Rolf, *Prisoners of the Reich: Germany's Captives, 1939–1945* (London: Leo Cooper, 1989), pp. 163, 170, 181; and the only other source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

DURCHGANGSLAGER (DULAG) MECHLEN

The Wehrmacht established Dulag Mecheln in Mechelen, Belgium (known as Mecheln in German), in June 1940 (map 2). The camp received field post number (*Feldpostnummer*) 33 488 between April 28 and September 19, 1940. Dulag Mecheln closed in mid-1941, and the number was struck between February 28 and July 29, 1941.

SOURCES Primary sources exist in BA-MA, RW 59/20 and PAAA R 40820.

The only other source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

DURCHGANGSLAGER (DULAG) NEUBREISACH

Dulag Neubreisach existed from June until August 1940, in the eighteenth-century fortified town of Neubreisach (German)/Neuf Brisach (French), just west of the Rhine River in Alsace, France, which Germany annexed after its victory (map 4f).¹ The camp was under the control of the Twelfth Army headquarters (AOK 12) and was not part of the normal prisoner of war camp system.

Dulag Neubreisach held French prisoners. The maximum number of prisoners was as high as 70,000.² The treatment of the prisoners and the conditions of their confinement in the camp were satisfactory, by and large, and in compliance with the main provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929).

SOURCES Primary source material about Dulag Neubreisach is located in BA-MA (RH 49) and WASt Berlin.

Additional information about Dulag Neubreisach can be found in the following publications: Yves Durand, *La captivité:*

Histoire des prisonniers de guerre français, 1939–1945 (Paris: Fédération nationale des combattants prisonniers de guerre et combattants d'Algérie, Tunisie, Maroc, 1982); and Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. DURCHGANGSLAGER (DULAG) ÖHRINGEN

The Germans established Dulag Öhringen in late 1939 in Öhringen (today Gliwice-Sośnica, Poland), about 23 kilometers (14 miles) west-northwest of Katowice (map 4e), within Defense District (*Wehrkreis*) VIII.¹ This was an ad hoc camp, not one of the regular prisoner of war camps. It was guarded by regular troops on temporary detail. The camp was under the authority of the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

The Germans used Dulag Öhringen to hold Polish army servicemen taken prisoner in the course of the German invasion in September 1939. Information on the conditions in the camp is not available, but such camps were usually primitive at that point in the war.

SOURCES Primary source material about Dulag Öhringen is located in BA-MA (RH 49); WASt Berlin; and the State Archive Wrocław.

Additional information about Dulag Öhringen can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 66; Juliusz Pollack, *Jeniecy polscy w hitlerowskiej niewoli* (Warsaw: MON, 1986); Stanisław Senft and Horst Więcek, *Obozy jenieckie na obszarze śląskiego okręgu Wehrmachtu 1939–1945* (Wrocław: Ossolineum, 1972).

DURCHGANGSLAGER (DULAG) REICHSHOF

Dulag Reichshof, actually a temporary prisoner of war (POW) collection camp, existed briefly in the fall of 1939 in

the town of Reichshof (today Rzeszów, Poland), about 147 kilometers (91.5 miles) east of Kraków (map 5). This was an ad hoc camp, not part of the regular POW camp system and guarded by regular troops on temporary detail.¹

Initially, the camp operated under the authority of the Commander of the Fourteenth Army Rear Area (*Kommandant rückwärtiges Armeegebiet*, Korück, 520). Later, it came under the authority of the Armed Forces Commander Poland (*Wehrmachtsbefehlshaber Polen*).

The Germans used Dulag Reichshof to hold Polish army personnel taken prisoner by the Wehrmacht during the German–Polish conflict in September 1939. The prisoners lived in a school building that had previously housed a POW collection point.² The conditions in which the prisoners lived during their confinement were unsatisfactory. Local residents and the Polish Red Cross provided help to the prisoners. The camp was closed, and the prisoners were transferred to other camps in Germany.

SOURCES Primary source material about Dulag Reichshof is located in BA-MA (RH 49); WASt Berlin; and the State Archive Rzeszów.

Additional information about Dulag Reichshof can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 66; Czesław Pilichowski, *Obozy hitlerowskie na ziemiach polskich. 1939–1945. DURCHGANGSLAGER (DULAG) SASSNITZ

The Wehrmacht established Dulag Sassnitz in Sassnitz, Mecklenburg-Vorpommern, Germany, in Defense District (*Wehrkreis*) II (map 4b). Its exact opening and closing dates are unknown, but it was in operation in May 1942.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

Dallas Michelbacher

DURCHGANGSLAGER (DULAG) SCHILDBERG

The facts surrounding Dulag Schildberg are uncertain. It is believed that the Wehrmacht established the camp in

September 1939 in the town of Schildberg (today Ostrzeszów, Poland) about 72 kilometers (44.5 miles) northeast of Wrocław (map 4c). Dulag Schildberg was probably a short-term collection camp, organized on an ad hoc basis and guarded by regular troops on temporary duty. It was also called a “prisoners’ camp” (*Gefangenengelager*). On January 6, 1940, the Germans may have converted the camp into Stalag XXI A Schildberg.

In the fall of 1939, the camp was under the control of the Eighth Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 558); later, it came under the authority of the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*).

The camp held Polish army prisoners of war (POWs) captured by the Germans in September 1939 as well as civilians interned by the Germans because of their participation in the defense of their towns. In total, 22,000 Polish POWs and 12,000 members of the civilian population passed through the camp. The conditions in which the prisoners lived during their confinement were harsh, especially at the beginning of the camp’s existence. Because of overcrowding in the camp and an acute shortage of accommodations, newly arriving prisoners had to live in cellars or tents or even remain outdoors. The food was scanty, and medical aid was practically nonexistent (organization of a hospital did not begin until November 1939). Later on, the prisoners’ conditions of confinement improved somewhat.

In the camp, there was a constant effort to recruit civilians and POWs for work in Germany. At the same time, Polish Jewish officers were sent to special Jewish camps, while “suspicious” Poles were sent to concentration camps.

SOURCES Primary source material about Dulag Schildberg is located in the Archive of the Instytut Zachodni–Instytut Naukowo-Badawczy im. Zygmunta Wojciechowskiego, Poznań, and the Archive of the Instytut Pamięci Narodowej–Komisja Ścigania Zbrodni przeciwko Narodowi Polskiemu, Warsaw.

Additional information about Dulag Schildberg can be found in the following publications: Stanisław Goebel, “Oboz jeńców wojennych w Ostrzeszowie (1939–1945),” *Instytut Zachodni–Instytut Naukowo-Badawczy im. Zygmunta Wojciechowskiego w Poznaniu* (sygn. I. Z. Dok. III-81); Stanisław Rusak, “Obozy Wehrmachtu w okupowanym Ostrzeszowie i polsko-norweska pamięć o nich,” *Lambinowicki rocznik muzealny. DURCHGANGSLAGER (DULAG) SOLDAU

Dulag Soldau, actually a temporary prisoner of war (POW) collection camp, was in existence from the end of September

until the beginning of December 1939. This was an ad hoc camp, not a regular POW camp unit. The guards were regular troops on temporary detail. It was located in Soldau (today Działdowo, Poland), about 124 kilometers (77 miles) north-northwest of Warsaw (map 4c). The Germans dissolved the camp on December 2, 1939, by transferring the prisoners to camps in Germany.

The camp was first under the control of the Third Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 501). Later, it was under the authority of the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

The camp held Polish army personnel taken captive during the German invasion in September 1939, especially Polish soldiers who were captured during the defense of the city of Modlin. The Germans housed the prisoners in former barracks of the Polish 32nd Infantry Regiment. Detailed information on conditions in the camp is not available, but they are likely to have been primitive at that early stage in the war.

SOURCES Primary source material about Dulag Soldau is located in BA-MA (RH 49); WASt Berlin; the *Instytut Pamięci Narodowej–Komisja Ścigania Zbrodni przeciwko Narodowi Polskiemu* (Warsaw); and the State Archive Olsztyn.

Additional information about Dulag Soldau can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurtempel*, vol. 2 (Koblenz: self-published, 1987), p. 66; Czesław Pilichowski, *Obozy hitlerowskie na ziemiach polskich 1939–1945. DURCHGANGSLAGER (DULAG) TARNÓW

The Wehrmacht established Dulag Tarnów, actually a temporary prisoner of war (POW) collection camp, on September 12, 1939, in Tarnów, Poland, about 74 kilometers (46 miles) east of Kraków (map 5). This was an ad hoc camp, not part of the regular POW camp system, and guarded by regular troops on temporary detail. The Germans dissolved the camp at the end of October, by transferring the prisoners to camps in Germany.¹

In September 1939, the camp was under the control of the Fourteenth Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 520). Later, it was under the authority of the Armed Forces Commander Poland (*Wehrmachtsbefehlshaber Polen*).

The Germans used the camp to hold Polish army personnel taken prisoner during the German invasion in September 1939. The prisoners (around 4,000 people) were housed in a school building. Hunger and starvation were rampant in the camp. Local residents and the Polish Red Cross provided assistance to the prisoners.²

SOURCES Primary source material about Dulag Tarnów is located in BA-MA (RH 49); WASt Berlin; and the State Archive Kraków.

Additional information about Dulag Tarnów can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 67; Czesław Pilichowski, *Obozy hitlerowskie na ziemiach polskich. 1939–1945. DURCHGANGSLAGER (DULAG) WADOWICE

Dulag Wadowice, actually a temporary prisoner of war (POW) collection camp, existed briefly in the fall of 1939 in the town of Wadowice, 37 kilometers (23 miles) southwest of Kraków, Poland (map 5). This was an ad hoc camp, not part of the regular POW camp system, and guarded by regular troops on temporary detail. The Germans disbanded the camp at the end of 1939 and transferred the prisoners to camps in Germany.

Initially, the camp was under the authority of the Fourteenth Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 520), and then the Armed Forces Commander Poland (*Wehrmachtsbefehlshaber Polen*).

The camp was intended for confinement of Polish army personnel taken prisoner during the German invasion of September 1939. No details on conditions in the camp are available, but conditions were probably primitive, especially at this early stage of the war. The prisoners made numerous attempts to escape.

SOURCES Primary source material about Dulag Wadowice is located in BA-MA (RH 49), in Deutsche Dienststelle (WASt) Berlin, and the State Archive in Kraków (Poland).

Additional information about Dulag Wadowice can also be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 67; Czesław Pilichowski, *Obozy hitlerowskie na ziemiach polskich. 1939–1945. DURCHGANGSLAGER (DULAG) WEST

In July 1944, the German army reserved two large halls belonging to Frontstalag 133, sited in Morancez, just south of Chartres (map 2), for prisoners arriving from the Normandy front. These prisoners, who spent only a few days in this camp, were housed completely separately from the regular Frontstalag prisoners. Most of the Dulag prisoners were sent on to Dulag Châlons-sur-Marne and later to Germany.

An International Committee of the Red Cross inspector found that Dulag West held 1,554 prisoners on July 18, 1944, including 617 Americans, 516 British, and 1 Free French soldier (the remaining 420 prisoners had just arrived the night before the visit and had not yet been registered by nationality). The Dulag had an inadequate water supply because a water pipe had been damaged during an air raid. The German commander explained that the Dulag should have been installed in a different location offering better accommodations, and he apologized for the shortcomings of the camp. Yet, overall, the conditions in Dulag West were good. A French physician, Dr. Malaspina, provided good medical care for the prisoners. The prisoners asked only for more cigarettes, arguing that they needed to smoke after hard fighting and long, arduous marches. The camp commander, at the suggestion of the inspector, agreed to distribute stockpiled cigarettes to the prisoners. The food supply was good at the time of the visit because some packages sent to Morancez for distribution to other camps could not be delivered because of transport difficulties and, therefore, were opened and distributed in Morancez.¹

Dulag West likely was closed in early August 1944. The first Allied troops arrived in the area on August 15, and Chartres was liberated four days later.

SOURCES Primary source information about Dulag West can be found in TNA (WO 224/57).

KRIEGSGEFANGENENLAGER (KGL) ATHEN

KGL Athen existed in September and October 1943 and deployed in the city of Athens, Greece, in the Gudikaserne (map 8).¹ The camp was subordinate to Army Group South Greece (*Armeegruppe Süd griechenland*).

The Germans created the camp to confine Italian military prisoners temporarily. No details regarding conditions in the

camp are available, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Athen is located in BA-MA (RH 31 X/7: Bestand Armeegruppe Süd griechenland).

Additional information about KGL Athen can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) CESENA

KGL Cesena existed in September and October 1943 and was deployed in Cesena, a city in the Emilia-Romagna region of northern Italy, about 82 kilometers (51 miles) southeast of Bologna (map 6).¹ The camp was subordinate to the Military Commander of Upper Italy (*Militärbefehlshaber Oberitalien*)/General Commander (*Generalkommando*) Witthöft, under Army Group (*Heeresgruppe*) B.

The Germans intended to use the camp to confine Italian military prisoners temporarily. No details regarding conditions in the camp are available, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Cesena is located in BA-MA (Heeresgruppe B; Militärbefehlshaber Oberitalien; RH 24-73).

Additional information about KGL Cesena can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) CORFU

Despite its designation, KGL Corfu was an ad hoc collection camp, not part of the regular prisoner of war (POW) camp system, and it was guarded by regular troops on temporary detail. The camp existed in the fall of 1943 on the Greek island of Corfu/Kérkyra in the Ionian Sea (map 8). It was

subordinate to the German commandant of the island of Corfu/Army Group (*Heeresgruppe*) E.

German troops of the 1st Gebirgs-Division/Einsatzgruppe Corfu occupied the island on September 27, 1943. They immediately shot 30 Italian officers from the *Acqui* and *Parmi* divisions, and, over the days that followed, they shot an unknown number of other officers from those divisions. By order of the commander of the XXII Army Corps (General Hubert Lanz), their bodies were not buried but thrown into the sea.¹

The remaining Italian prisoners (more than 9,000) were confined in a specially created camp until they could be taken to the Greek mainland. The conditions in which the prisoners were kept were satisfactory, by and large, and mainly in keeping with the provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). The camp administration and guards treated the prisoners properly.

In the fall of 1943, the prisoners were transferred in groups to the Greek mainland. For example, on September 30, 1,588 POWs were transferred,² and, on October 14, 2,000 were taken to the mainland.³ On October 20, 1,200 POWs still remained on the island,⁴ and they soon were transported to the mainland as well.

SOURCES Additional information about KGL Corfu can be found in the following publications: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990); and Mario Torsiello, *Le operazioni delle unità italiane nel settembre–ottobre 1943* (Rome: l’Ufficio, 1975).

KRIEGSGEFANGENENLAGER (KGL) DÜNKIRCHEN

The Wehrmacht established KGL Dünkirchen in Dunkirk on September 4, 1944 (map 2). The unit was officially disbanded on the date of Dunkirk’s capitulation, May 8, 1945. It was apparently not part of the normal prisoner of war camp system but was run on an ad hoc basis and guarded by regular troops.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

KRIEGSGEFANGENENLAGER (KGL) EUBÖA

Despite its designation, KGL Euböa was an ad hoc collection camp, not part of the regular prisoner of war (POW) camp

530 KRIEGSGEFANGENENLAGER (KGL) EUBÖA

system, and it was guarded by regular troops on temporary detail. It existed from September to October 1943 on the Greek island of Euboea (German: Euböa) in the Aegean Sea (map 8). It was subordinate to the German commandant of the island of Euboea/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E.

German troops occupied the island in early September 1943 and created a temporary camp, into which they placed the approximately 6,000 Italian military personnel who were stationed there, pending their transfer to the Greek mainland in late October. Details on conditions in the camp are not available, but given German attitudes toward their erstwhile allies, life in the camp is likely to have been harsh.

On September 12, 1943, 3,000 POWs were taken to Saloniki (today Thessaloniki, Greece) by ship,¹ and, on October 28 and 30, 1943, respectively, 501 prisoners were transported to Saloniki and 2,500 to Piraeus.²

SOURCES Additional information about KGL Euböa can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) FLORENZ

KGL Florenz existed in September and October 1943 and was deployed in Florence, the capital of the province of Tuscany, Italy (map 6). In October 1943, the Germans converted the camp into a subcamp (*Zweiglager*) of Stalag 337 in Mantua.¹ The camp was subordinate to the Military Commander of Upper Italy (*Militärbefehlshaber Oberitalien*)/General Command (*Generalkommando*) Witthöft, in Army Group (*Heeresgruppe*) B.

The Germans designated KGL Florenz for the temporary confinement of Italian military prisoners. No details regarding conditions in the camp are available, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Florenz is located in BA-MA (Heeresgruppe B; Militärbefehlshaber Oberitalien) (BA-MA, RH 24-73/14).

Additional information about KGL Florenz can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) FORLI

KGL Forli existed in September and October 1943 and was deployed in Forli, a city in the Emilia-Romagna region of northern Italy (the capital of the province of Forli-Cesena, about 64 kilometers [40 miles] southeast of Bologna) (map 6).¹ It was subordinate to the Military Commander of Upper Italy (*Militärbefehlshaber Oberitalien*)/General Command (*Generalkommando*) Witthöft, which was part of Army Group (*Heeresgruppe*) B.

KGL Forli was designated for the temporary confinement of Italian military prisoners. No details regarding conditions in the camp have come to light, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Forli is located in BA-MA (Heeresgruppe B; Militärbefehlshaber Oberitalien, RH 24-73/14).

Additional information about KGL Forli can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) HÖVIK

The Wehrmacht established KGL Hövik at Hövik (Norwegian: Høvik, today part of Bærum, Oslo) (map 3). Little information on the camp is available, including its opening and closing dates.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

KRIEGSGEFANGENENLAGER (KGL) JERSEY

The Wehrmacht established KGL Jersey on August 15, 1943, on the island of Jersey, on Pier Road (map 1).¹ Jersey is one of several islands in the English Channel, close to the coast of Normandy, that are British possessions (known collectively as the Channel Islands). From 1940 to 1945, however, German forces occupied it. British troops liberated the island on May 9, 1945. The camp was subordinate to the Commander, Jersey/Field Command (*Feldkommandantur*) 515, and, above that, to the Commander, Channel Islands (*Befehlshaber Kanalinseln*),

whose headquarters was deployed on the island of Jersey, initially, but, from 1943 on, was based on the island of Guernsey.

The first prisoners in the camp were 115 French North African soldiers, who were brought to Jersey from France and the island of Alderney (also part of the Channel Islands). Then, 16 American servicemen (mainly naval personnel) were placed in the camp; this number later increased to 21.² Also in the camp were British and, possibly, some Soviet prisoners. The maximum number of prisoners in the camp was 300.³ The prisoners' conditions of confinement were satisfactory, on the whole. A Red Cross inspector visited the camp on February 15, 1945. He reported that the living conditions in the camp were decent: the barracks were well ventilated and heated, the prisoners had sufficient bedding, and the kitchen and sanitary facilities were adequate. The prisoners received the same food rations as the Wehrmacht soldiers stationed on the island, and medical care was provided by a Wehrmacht doctor. However, many of the prisoners no longer had the clothes they were wearing at the time of their capture, and the inspector noted that it would be prudent to send them additional clothes. The inspector concluded that his impression of the camp was "not unfavorable."⁴

SOURCES Primary source material about KGL Jersey is located in NARA (RG 389: Records of World War II Prisoners of War, Box 2145).

Additional information about KGL Jersey can be found in the following publications: Madeleine Bunting, *The Model Occupation: The Channel Islands under German Rule, 1940–45* (New York: Harper Collins, 1996); Audrey Falle, *Slaves of the Third Reich: Jersey 1940–1945* (self-published, 1994); Michael Ginns, *Jersey Occupied: The German Armed Forces in Jersey 1940–1945* (Jersey: Channel Island, 2009); Sonia Hillsdon, *Jersey Occupation Remembered* (Seaflower Books, 2004); Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. KRIEGSGEFANGENENLAGER (KGL) KALAMATA

KGL Kalamata was an ad hoc collection camp, not part of the regular prisoner of war (POW) camp system, and it was guarded by regular troops on temporary detail. The camp existed in late April and early May 1941,¹ and again in September and October 1943.² It was deployed in southern Greece, in the town of Kalamata (map 8).

In 1941, KGL Kalamata was subordinate to the XL Army Corps of the Twelfth Army. In 1943, the camp was subordinate to Army Group South Greece (*Armeegruppe Süd griechenland*).

In the spring of 1941, the camp held English, Australian, and New Zealander soldiers captured by the Germans in late April 1941 in southern Greece; their number reached 10,000. The prisoners' conditions of confinement in the camp were unsatisfactory. A shortage of water and food was constantly felt in the camp, and there was practically no medical aid. As a result, infectious diseases sprang up.³

In the fall of 1943, the Germans used the camp to confine Italian military prisoners temporarily.⁴ The prisoners' conditions of confinement were satisfactory, by and large, and basically in keeping with the provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). The camp administration and guards treated the prisoners properly.

SOURCES Primary source material about KGL Kalamata is located in BA-MA (AOK 12, Bestand Armeegruppe Süd griechenland).

Additional information about KGL Kalamata can be found in the following publications: Yoav Gelber, "Palestinian POWs in German Captivity," *Yad Vashem Studies* 14 (1981); and Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) KARPATHOS

KGL Karpathos was one of several ad hoc collection camps in Greece and was not part of the regular prisoner of war camp

system. The guards were regular army troops on temporary detail. The camp existed from the fall of 1943 until the spring of 1944 and was deployed on the Greek island of Karpathos in the Aegean Sea (map 8). It was subordinate to the German commandant of the island of Karpathos/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E.

The Germans used the camp to confine Italian military personnel temporarily. No details on conditions in the camp are available. In the fall of 1943 and in the winter of 1943–1944, the prisoners were transferred in groups to the Greek mainland.

SOURCES Additional information on KGL Karpathos can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) KEFALLENIA

KGL Kefallenia existed from the end of September 1943 until January 1944; it was deployed on the Greek island of Kefallenia (Kephallonia, Kefalonia, or Cephalonia) in the Ionian Sea (map 8). It was subordinated to the German commandant of the island of Kefallenia/Army Group (*Heeresgruppe*) E.

The German 1st Mountain Division/Task Group Hirschfeld (*1. Gebirgs-Division/Einsatzgruppe Hirschfeld*) occupied the island in the second half of September 1943. There were around 11,000 Italian troops on the island at that time. Of that number, about 2,500 were killed in action or shot and killed as “traitors.” The Italians who were taken prisoner (around 8,000 in all) were held in this specially created camp until their transfer to the Greek mainland. Of that number, 6,703 men (according to official German reports) were taken by ship. Approximately 1,564 drowned when ships were blown up by mines; 476 were rescued and sent off again, so the number of prisoners actually taken to the mainland was approximately 5,139. In addition, approximately 300 others were taken off the island in small groups. About 1,286 more remained on the island as forced laborers, and the Germans used around 300 to form four construction companies (*Baukompanien*). Finally, around 200 prisoners went into hiding with the help of Greeks and then joined the resistance.¹

As early as September 28, 1943, 840 prisoners departed by ship for the Greek mainland: the ship struck a mine and sank, and 120 were rescued.² On October 13, 1943, two ships carried 1,500 prisoners: one of these vessels (*Marguerita*), with 900 prisoners on board, also sank, and 356 were rescued.³ On October 17 and 20, 1943, respectively, the Germans sent 2,000 and 1,150 prisoners to the mainland.⁴ On November 2, 1943, 724 were sent, and, on December 30, 1943, 102.⁵ Finally, on January 6, 1944, the *Alma* carried another small number of

NOTES

1. Meyer, *Blutiges Edelweiss*, pp. 417–423. According to other data (G. Fricke, “Das Unternehmen des XXII. Gebirgsarmeekorps”; Farrell, *Mussolini*; Klein, Mentner, and Stracke, eds., *Mörder unterm Edelweiss*), around 1,300 Italian troops died in action; 189 officers and about 5,000 noncommissioned officers and men were shot on the spot; and 280 additional officers were executed later. According to a wireless message from the XXII. A.K. to Armeegruppe E on September 24, 1943, approximately 4,000 Italians were killed in action or executed, and approximately 5,000 Italians were taken prisoner (BA-MA, RH 28-1/11). KRIEGSGEFANGENENLAGER (KGL) KIELCE

KGL Kielce, a collection camp (*Sammellager*), existed from the spring of 1942 until the end of 1944. The camp was deployed in former army barracks on the outskirts of the town of Kielce, about 100 kilometers (63 miles) north-northeast of Krakau (today Kraków, Poland), in the Generalgouvernement Poland (map 5).

In terms of administration and management, the camp was subordinate to the Armed Forces Commander in the Generalgouvernement Poland (*Wehrmachtsbefehlshaber im Generalgouvernement Polen*)/Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*), but it also answered to the Reich Ministry for the Occupied Eastern Territories (*Ostministerium*).

The camp held Soviet prisoners of war (POWs) who were identified by Germans in other POW camps as potential collaborators. In KGL Kielce, the Germans tested the prisoners' suitability as propagandists and as various kinds of administrative and managerial workers in organizations that the Reich Ministry for the Occupied Eastern Territories created in occupied Soviet territory and in Germany itself. After careful testing, the prisoners selected for further training were released from captivity and transferred to appropriate training camps of the occupied eastern territories.¹

SOURCES Additional information about KGL Kielce can be found in the following publications: S. G. Chuev, *Spetsluzhby Tret'ego reikha*, vol. 2 (St. Petersburg: Neva, 2003), pp. 231–232; and A. V. Okorokov, *Osobyi front: Nemetskaia propaganda na Vostochnom fronte v gody Vtoroi mirovoi voiny* (Moscow: Izdatel'stvo "Russkii put", 2007).

NOTE

1. Chuev, *Spetsluzhby Tret'ego reikha*, pp. 231–232.

KRIEGSGEFANGENENLAGER (KGL) KOS

KGL Kos was not part of the regular prisoner of war (POW) camp system but rather an ad hoc collection camp for interned Italian soldiers, guarded by regular German troops on temporary detail. The camp existed from October 1943 until March 1944, on the Greek island of Kos in the Aegean Sea (map 8). The camp was subordinate to the German commandant of the island of Kos/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E.

The Germans (22nd Infantry Division/Kampfgruppe Müller) occupied Kos on October 3, 1943. They took more than 1,000 British troops and more than 3,000 Italian troops prisoner. They separated the British from the Italians and placed them in a separate camp, in which their treatment was strictly in keeping with the provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). As for the Italians, the Germans immediately separated the officers from the enlisted men and placed them in a barracks near the village of Linopotis. The following day, the Germans shot the officers in the nearest field, where they had been forced to dig their own grave; there were approximately 100 victims.¹ Between October 1943 and March 1944, the Germans transferred the remaining prisoners in groups to the Greek mainland by ship.

SOURCES Additional information about KGL Kos can be found in the following publications: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990); and Mario Torsiello, *Le operazioni delle unità italiane nel settembre–ottobre 1943* (Rome: l'Ufficio, 1975).

NOTE

1. Torsiello, *Le operazioni delle unità italiane*, p. 552.

KRIEGSGEFANGENENLAGER (KGL) KRETA

In June 1941, the Germans established a complex of five camps on the island of Crete, near Galatas and Canea (map 8), to hold Allied prisoners of war (POWs) until they could be transferred to the Greek mainland and from there sent to Germany.¹ They dissolved the camps in early 1942, with the departure of the last of the prisoners. The camps were subordinate to *Armeeoberkommando* (AOK) 12, at first, and then to the Commander South Greece (*Befehlshaber Süd griechenland*) and Commandant of Fortress Crete (*Kommandant der Festung Kreta*). The camp's field post number (*Feldpostnummer*) was 46 234. KGL Kreta was also referred to in some documents as Dulag Kreta.

The camps held British, Australian, New Zealander, and Greek POWs. The prisoners' conditions of confinement were unsatisfactory. There was a constant shortage of water and food, and, initially, there was practically no medical aid. Most of the prisoners lived outdoors, with no overcoats or proper clothing. The Red Cross was not granted access to the camps until early 1942. The Germans separated the prisoners according to nationality. There was a resistance movement, which primarily took the form of attempted escapes, many of which were successful: with the help of the local populace, escapees used stolen boats to get to the Greek mainland.²

As early as June 1941, the Germans moved the first group of prisoners to Dulag Corinth, and 6,500 prisoners remained on Crete. In early July 1941, 2,300 of them were transferred through Dulag Saloniki to Germany, and, one week later, 1,900 others followed. Then, an epidemic interrupted the shipment of prisoners to Germany, which did not resume until early October 1941. At the end of 1941, only 100 prisoners remained in the camps.³

The Germans reactivated the camp complex in December 1944, and it remained open until Germany capitulated in May 1945. As part of the complex, the Germans established a hospital camp (*Lazarett*) on June 9, 1941. They liquidated it at the end of September.⁴ The hospital camp was under the authority of the commandant of the island of Crete, the commander of the German forces on the island. This was the commander of the XI Fliegerkorps, General Kurt Student, who also—on his own initiative—called himself the “governor” of the island of Crete.⁵

The hospital camp held wounded and sick British, Australian, New Zealander, and Greek military personnel. There were up to 220 beds in the hospital camp, and the sick and wounded prisoners were tended by British doctors and medical orderlies. More than 1,200 prisoners passed through the hospital, 23 of whom died. In July–September 1941, all the prisoners were evacuated in batches to the camp in the city of Saloniki (Thessaloniki).⁶

SOURCES Additional information about KGL/Dulag Kreta can be found in the following publications: Yoav Gelber, "Palestinian POWs in German Captivity," *Yad Vashem Studies* XIV (1981), 100–101; Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 178.

Additional information about the camp hospital can be found in the following publication: Thomas Duncan MacGregor Stout, *Official History of New Zealand in the Second World War 1939–45. Medical Services in New Zealand and the Pacific. In Royal New Zealand Navy, Royal New Zealand Air Force and with Prisoners of War* (Wellington: War History Branch, Department of Internal Affairs, 1958), pp. 112–115.

KRIEGSGEFANGENENLAGER (KGL) LEIANOKLADION

KGL Leianokladion existed in September 1943 and was deployed in Greece, in the town of Leianokladion (Lianokladi, Leianokladi), 180 kilometers (112 miles) northwest of Athens, near the town of Lamia (map 8).¹ It was subordinate to Army Group South Greece/Army Group (*Armeegruppe Süd griechenland/Heeresgruppe*) E.

The Germans used the camp to temporarily confine Italian military prisoners from the area of Lamia. No details regarding conditions in the camp are available, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Leianokladion is located in BA-MA (RH 31 X/7: Bestand Armeegruppe Süd griechenland).

Additional information about KGL Leianokladion can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) LEROS

KGL Leros existed from November 1943 to April 1945 on the Greek island of Leros, in the Aegean Sea (map 8). It was an ad hoc prisoner of war (POW) collection camp. For part of its existence, it was not part of the regular POW camp system, and the guard force consisted of regular troops on temporary detail.

Initially, KGL Leros was subordinate to the German commandant of the island of Leros/ Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E. Then, on December 2, 1943, it became a subcamp of Dulag 185.¹ It remained in that status until March 23, 1944. What happened in the following months is unclear (the camp may well have shut down), but, in January 1945, there was again an independent POW collection camp (*Kriegsgefangene-Sammellager*) in Leros, which ceased operation in April.²

Troops of the German 22nd Infantry Division/Kampfgruppe Müller occupied the island on November 16, 1943. They captured 201 British and 351 Italian officers and approximately 2,000 British and 5,000 Italian enlisted men. During the fighting for the island and immediately after its conclusion, the Germans shot 12 Italian officers.³

Between November 1943 and March 1944, the Germans shipped many of the prisoners to the Greek mainland, while bringing in new prisoners from other islands. The purpose of KGL Leros was to house these prisoners while they awaited transport. Detailed information about the conditions in KGL Leros is not available, but, generally speaking, the Germans treated Italian military prisoners poorly.

SOURCES Primary source information on KGL Leros as a subcamp of Dulag 185 is located in BA-MA (RW 40/185 and RH 26-1007/20).

Additional information about KGL Leros can be found in the following publications: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990); and Mario Torsiello, *Le operazioni delle unità italiane nel settembre–ottobre 1943* (Rome, 1975).

KRIEGSGEFANGENENLAGER (KGL) LORIENT

The Wehrmacht established KGL Lorient in Lorient, France, on August 5, 1944 (map 1). The unit was dissolved on May 7, 1945, just before the military forces in the city capitulated.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

KRIEGSGEFANGENENLAGER (KGL) MEGALOPOLIS

KGL Megalopolis existed in September and October 1943 and was located in southern Greece, in the town of Megalopolis, about 154 kilometers (96 miles) southwest of Athens (map 8).¹ The camp was subordinated to Army Group South Greece (*Armeegruppe Süd griechenland*).

The Germans designated the camp for the temporary confinement of Italian military prisoners. No details regarding conditions in the camp are available, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Megalopolis is located in BA-MA (RH 31 X/2: Bestand Armeegruppe Süd griechenland).

Additional information about KGL Megalopolis can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

1. Schreiber, *Die italienischen Militärinternierten*, 252; Tätigkeitsbericht Armeegruppe Süd griechenland, Abt. 1a-01 No. 1282/43 geh., 22. 9.1943, an Heeresgruppe E 1a/01 (BA-MA, RH 31 X/2).

KRIEGSGEFANGENENLAGER (KGL) MESSOLONGION

KGL Messolongion was not part of the regular German prisoner of war (POW) camp system but rather an ad hoc collection camp for interned Italian soldiers, guarded by regular German troops on temporary detail. The camp opened in October 1943 in the town of Messolongion (also known as Mesolongion and Missolonghi) (map 8).¹ It closed down later that year, then opened again from the spring of 1944 until October 1944, at the latest.² It was subordinate to Army Group South Greece (*Armeegruppe Süd griechenland*)/Army Group (*Heeresgruppe*) E.

KGL Messolongion received field post number (*Feldpostnummer*) 13 347 on April 14, 1944. The number was struck on January 23, 1945.

The Germans used the camp to temporarily hold Italian military prisoners. No detailed information on conditions in the camp is available, but, generally speaking, the Germans did not treat their former allies well.

In the fall of 1943, the Germans transferred the prisoners in groups to Piraeus. No information is available on the prisoners who occupied the camp during its second period of existence.

SOURCES Primary source material about KGL Messolongion is located in BA-MA (RH 31 X/7: Bestand Armeegruppe Süd griechenland).

Additional information about KGL Messolongion can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 178; and Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) NAXOS

KGL Naxos was an ad hoc collection camp for interned Italian soldiers rather than part of the regular prisoner of war camp system. The guards were regular German troops on temporary detail. The camp existed in the second half of October 1943 on the Greek island of Naxos, in the Aegean Sea (map 8). The camp was subordinate to the German commandant of the island of Naxos/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E.

German forces occupied Naxos on October 12, 1943. They imprisoned the Italian military personnel (approximately 500) in a specially created camp, for about two weeks, before transporting them to the Greek mainland. No details on conditions in the camp are available, but they were probably primitive at best.

SOURCES Additional information about KGL Naxos can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) NEA-KOKKINIA

KGL Nea-Kokkinia existed in September and October 1943 in the town of Nea-Kokkinia (Attika region, today Nikaia, a suburb of Athens), Greece (map 8).¹ It was subordinate to Army Group South Greece (*Armeegruppe Süd griechenland*).

The camp was designated for the temporary confinement of Italian military prisoners. No details regarding conditions in the camp are available, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Nea-Kokkinia is located in BA-MA (RH 31 X/7: Bestand Armeegruppe Süd griechenland).

Additional information about KGL Nea-Kokkinia can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) NEA-PSYCHIKON

KGL Nea-Psychikon was not part of the regular German prisoner of war camp system but rather an ad hoc collection camp for interned Italian soldiers, guarded by regular German troops on temporary detail. The camp existed in the fall of 1943, until September 30, in the town of Nea-Psychikon (today Neo Psychiko, part of Athens) (map 8).¹ The camp was subordinate to Army Group South Greece (*Armeegruppe Süd griechenland*).

No information on conditions in the camp is available. However, the Germans were not generally kind toward their former allies.

SOURCES Primary source material about KGL Nea-Psychikon is located in BA-MA (RH 31 X/7: Bestand Armeegruppe Süd griechenland).

Additional information about KGL Nea-Psychikon can be found in the following publications: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) NOVI PAZAR

KGL Novi Pazar was an ad hoc collection camp for interned Italian soldiers, guarded by regular German troops on temporary detail. As such, it was not part of the regular German prisoner of war camp system. The camp existed in September 1943 and was deployed in Serbia (Sandžak region), in the town

of Novi Pazar (map 7).¹ It was subordinated to the Second Armored Army (Pz. AOK 2) in Army Group (*Heeresgruppe*) F.

The Germans created the camp to confine Italian military prisoners temporarily.² No information on conditions in the camp has emerged, but most such camps were primitive, even harsh.

SOURCES Primary source material about KGL Novi Pazar is located in BA-MA (Pz. AOK 2) and NARA (T-313, roll 484: Pz. AOK).

Additional information about KGL Novi Pazar can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) PATRAS

KGL Patras was not part of the regular German prisoner of war camp system. Rather, it was an ad hoc collection camp for interned Italian soldiers, guarded by regular German troops on temporary detail. The camp existed from September to December 1943. It was deployed in Greece, in the port city of Patras (in the northern Peloponnese), 176 kilometers (109 miles) west of Athens (map 8). The camp was subordinate to the German commandant of the town of Patras/Army Group South Greece (*Armeegruppe Süd griechenland*)/Army Group (*Heeresgruppe*) E.

German troops occupied the town in early September 1943. Pending transport to camps in Germany, the Italian military prisoners were held in the KGL. No record of conditions in the camp is available, but, generally speaking, such temporary camps for Italians tended to be spartan, at best.

By September 13, 1943, 1,000 prisoners (other sources give the number as 700) already had been taken by ship to Piraeus.¹ On November 2, 1943, 496 additional prisoners were taken by ship to Piraeus,² and, on December 20, 1943, the last 96 prisoners were taken there.³

SOURCES Additional information about KGL Patras can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) PISTOIA

KGL Pistoia existed in September and October 1943, in Pistoia, in the Tuscany region of northern Italy (map 6).¹ It was subordinated to the Military Commander Upper Italy/General Command Witthöft/Army Group (*Militärbefehlshaber Oberitalien/Generalkommando Witthöft/Heeresgruppe*) B.

The camp was intended for temporary confinement of Italian military prisoners. No details regarding conditions in the camp are available, but the Germans generally treated Italian military prisoners harshly.

SOURCES Primary source material about KGL Pistoia is located in BA-MA (Heeresgruppe B; Militärbefehlshaber Oberitalien; RH 24-73/14).

Additional information about KGL Pistoia can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) RHODOS

KGL Rhodos was not part of the regular German prisoner of war camp system but rather an ad hoc collection camp for interned Italian soldiers, guarded by regular German troops on temporary detail. The camp existed on the Greek island of Rhodos (Rhodes) in the Aegean Sea from mid-September 1943 until March 1944 and again from November 2, 1944, until the end of the war (map 8). The camp was subordinate to the German commandant of the island of Rhodos/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E.

German troops (Sturmdivision Rhodos, Generalleutnant Kleemann) occupied the island on September 11, 1943. Italian service members (approximately 37,000) were held prisoner, pending transport to the Greek mainland, in the KGL, parts of which were located at several inhabited localities (Calato/Kalathos and Campochiaro/Eleousa, among others) (map 8).¹ Fifty of the Italian military prisoners were shot as a result of sentencing by a field court-martial, and 40 others were shot without a trial or inquiry.²

On September 22, 1943, the military prisoners (whom the Germans, in a moment of euphemism, termed “military internees” [*Militärinternierte*]) began the transfer to the Greek mainland, both by air and by sea. Thus, on that day, 709 prisoners departed for the mainland by air and 1,584 by

sea. The ship carrying that latter group of prisoners founded, and all the prisoners perished. On December 3, 1943, 23,092 internees, including 400 officers, still remained on the island. In all, from January 1 to March 5, 1944, more than 10,000 prisoners were moved to the mainland by sea.³

No details on conditions in the camp are available, but, in general, the Germans did not take good care of Italian prisoners, so conditions in KGL Rhodos are likely to have been harsh. There was a resistance movement among the prisoners, which primarily took the form of attempts to escape. For example, from September 11 to December 31, 1943, 1,210 prisoners, including approximately 200 officers, managed to escape. Of the escaped prisoners, 96 were arrested by the Geheime Feldpolizei, and an undetermined number of escapees were arrested by the German Feldgendarmerie and Italian Carabinieri. Recaptured prisoners, if they showed no resistance and were not shot upon capture, were placed in a special camp at Calato/Kalathos pending transport to the mainland.⁴

SOURCES Additional information about KGL Rhodos can be found in the following publications: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990); and Mario Torsiello, *Le operazioni delle unità italiane nel settembre–ottobre 1943* (Rome: l’Uffizio, 1975).

KRIEGSGEFANGENENLAGER (KGL) ROGAVKA

The peat mining area of Rogavka, roughly 50 kilometers (31 miles) north-northwest of Novgorod, was occupied by the Wehrmacht almost without interruption from the fall of 1941 to January 1944 (map 9a).¹ There, next to the plant for the extraction of peat, which the local Soviet administration had mostly demolished, lay about half a million tons of this raw material, which was important for energy and heating. Army Group North (*Heeresgruppe Nord*) soon became interested in reestablishing extraction of the peat, such that its Economic Inspectorate (*Wirtschaftsinspektion*) soon declared “the exploitation of the peat supplies at Rogavka” to be its “greatest plan” in the Russian northwest.²

In the late summer of 1942, a camp for about 800 Soviet prisoners of war (POWs) came into being in the immediate

vicinity of the extraction facility; in all probability, this was a subcamp (*Aussenstelle*) of Dulag 110.³ The prisoners, for whom the Germans provided only minimal supplies from the very beginning, had to load the available supply of peat onto railroad cars, mostly without any kind of machine assistance. The daily average work performance reached 20–30 cars loaded, that is, up to 500 tons. In July 1943, it would reach 1,000 tons.⁴ The results of this lasting physical overexertion showed up not least in an increase in typhus in the camp and in a high death rate, which reached somewhat more than 10 percent per month in the summer of 1942.⁵ By the summer of 1943, the living conditions had worsened. For example, during the loading work at the train station, some desperate inmates tried to secretly steal bread from Wehrmacht supplies, an offense that brought draconian punishments.⁶ As a result, even the headquarters of the XXXVIII Corps, which was nearby, held that an “immediate change in the working conditions” in Rogavka was necessary.⁷

In the face of the increasingly unfavorable situation on the front, Soviet POWs were being brought to the camp more and more rarely, and, at the same time, the occupiers registered a “growing aversion to the labor recruiting for the peat patches” among the local inhabitants, so civilians were forcibly deported to KGL Rogavka.⁸ Soon, through the presence of about 600 native inhabitants working there, what had been a POW camp was taking on the character of a civilian facility, supervised by the paramilitary economic organization.⁹

In the second half of 1943, the Economic Inspectorate's increasing demands for workers (the estimate was up to 2,500) finally led to a formal reorganization of the camp.¹⁰ Responsible parties from Army Group North and the Economic Inspectorate entered into an agreement with the Commander of the Security Police and Security Service of the SS (*Befehlshaber der Sicherheitspolizei und des Sicherheitsdienstes*, BdS) Ostland on August 5, 1943, concerning a conversion of the complex into a “Security Police Prison Camp” for about 2,300 inmates. The official transfer of responsibility to the Security Police (*Sicherheitspolizei*) took place on September 1, 1943.

SOURCES Primary sources on KGL Rogavka are mostly in BA-MA, in RW 31 and RH 22.

KRIEGSGEFANGENENLAGER (KGL) SAMOS

Despite its designation, KGL Samos was not part of the regular German prisoner of war camp system but rather an ad hoc collection camp. Regular troops on temporary detail provided the guard force. The camp was in existence from late November until mid-December 1943 on the Greek island of Samos in the Aegean Sea (map 8). It was subordinate to the German commandant of the island of Samos/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe E*).

German forces (Battle Group—*Kampfgruppe*—Müller) occupied the island in late November 1943. At the same time, during the clearing of the island on November 27, 1943, one Italian officer and 26 men were shot as “partisans.”¹ The Germans placed the remaining Italian military prisoners from the Infantry Division Cuneo (about 4,000 people) into a purpose-built camp, pending transport to the Greek mainland.² Details on conditions are not available, but the Germans were generally hostile toward their erstwhile allies (as the shootings indicate), so treatment in the camp was most likely to have been harsh. On December 7 and 13, 1943, respectively, 2,400 and 1,620 prisoners were taken by ship to Piraeus.³

SOURCES Additional information about KGL Samos can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

2. Ibid., pp. 186–187.

3. Ibid., p. 284.

KRIEGSGEFANGENENLAGER (KGL) SANTORIN

KGL Santorin, despite its designation, was an ad hoc collection camp, not part of the regular German prisoner of war camp system. Regular troops on temporary detail provided the guard force. The camp existed in the second half of November 1943 on the Greek island of Santorini (officially known as Thira; German: Santorin) in the Aegean Sea (map 8). It was subordinate to the German commandant of the island of Santorin/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E.

German forces occupied the island in November 1943. They held Italian military prisoners (approximately 1,000 people) for about two weeks in a specially created camp before transferring them to the Greek mainland. Details on conditions in the camp are not available, although, in general, the Germans did not treat their erstwhile allies well. On November 27 and 30, 1943, respectively, 643 and 350 prisoners from KGL Santorin were taken by ship to Piraeus.¹

SOURCES Additional information about KGL Santorin can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

NOTE

1. Schreiber, *Die italienischen Militärinternierten*, p. 283.

KRIEGSGEFANGENENLAGER (KGL) SPLIT

Despite its designation, KGL Split was a temporary, ad hoc collection camp, not part of the regular German prisoner of war (POW) camp system. Regular troops on temporary detail comprised the guard force. The camp existed for several weeks, beginning in late September 1943, in the port city of Split (Italian: Spalato), in present-day Croatia (Dalmatia) (map 7). It was subordinate to the German commandant of Split, under the Second Armored Army (Pz. AOK 2) in Army Group (*Heeresgruppe*) F.

The camp was intended for the temporary confinement of Italian military prisoners. German forces of the SS-Division "Prinz Eugen" captured Split on September 27, 1943. At this time, the Germans captured 300 officers and 9,000 men from the Italian Infantry Division Bergamo. Pending transfer to POW camps in Germany, the Italian prisoners (enlisted ranks) were confined in the camp, which was actually located in several places in the city and its environs, while the officers were moved to Sinj (Italian: Signo; German: Zein), where 49 of them, including three general officers, were shot for "treason." Details on conditions for the prisoners are not available, but, as the shootings indicate, the Germans were not inclined to be humane with their erstwhile allies.

SOURCES Additional information about KGL Split can be found in the following publication: Menachem Shelah, "Die Ermordung italienischer Kriegsgefangener, September–November 1943," in *Vernichtungskrieg: Verbrechen der Wehrmacht 1941–1944*, ed. Hannes Heer and Klaus Naumann (Hamburg: Hamburger, 1995).

KRIEGSGEFANGENENLAGER (KGL) SAINT-NAZAIRE

The Wehrmacht established KGL Saint-Nazaire in Saint-Nazaire, France, on August 5, 1944 (map 1). The unit was dissolved on May 10, 1945, when Allied forces occupied Saint-Nazaire.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhart Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

KRIEGSGEFANGENENLAGER (KGL) SYROS

Its designation notwithstanding, KGL Syros was a temporary, ad hoc collection camp, rather than a part of the regular German prisoner of war camp system, and regular troops on temporary detail provided the guard force. The camp existed from mid-September to mid-October 1943 on the Greek island of Syros (also known as Siros or Syra) in the Aegean Sea (map 8). It was subordinate to the German commandant of the island of Syros/Admiral Aegean (*Admiral Ägäis*)/Army Group (*Heeresgruppe*) E.

German forces occupied the island in mid-September 1943. They took the Italian military personnel prisoner and held them in the specially created camp for about one month. Details on conditions are not available, but the Germans generally treated their erstwhile allies poorly. As early as September 18 and 30, 1943, respectively, 1,100 and 200 prisoners were taken by ship to Piraeus,¹ and, by October 15, 1943, the number of prisoners transferred totaled 3,176.²

SOURCES Additional information about KGL Syros can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943–1945: Verraten, Verachtet, Vergessen* (Munich: R. Oldenbourg, 1990).

KRIEGSGEFANGENENLAGER (KGL) UROŠEVAC

Despite its designation, KGL Uroševac was a temporary, ad hoc collection camp, rather than part of the regular German

prisoner of war camp system, and it was guarded by regular troops on temporary detail. The camp existed in November 1943, in present-day Kosovo, in the town of Uroševac (Albanian: Ferizaj), 38 kilometers (23.6 miles) south of Priština (map 7).¹ The camp was subordinate to the Second Armored Army (Pz. AOK 2) in Army Group (*Heeresgruppe*) F.

The Germans created KGL Uroševac to confine Italian military prisoners temporarily.² No record of conditions in the camp is available, but the Germans generally did not treat their former allies well.

SOURCES Primary source material about KGL Uroševac is located in BA-MA (Pz. AOK 2) and NARA (T-313, roll 484: Pz. AOK 2 records).

KRIEGSGEFANGENENLAGER (KGL) ZAKYNTHOS

KGL Zakynthos was a temporary ad hoc collection camp, not part of the regular German prisoner of war camp system, and it was guarded by regular troops on temporary detail. The camp existed from mid-September to mid-October 1943 on the Greek island of Zakynthos (also known as Zante) in the Ionian Sea (map 8). It was subordinate to the German commandant of the island of Zakynthos/Army Group (*Heeresgruppe*) E.

German forces occupied the island on September 12, 1943. They held over 4,000 Italian military prisoners in the specially created camp for about one month, pending transfer to the Greek mainland. No records of conditions in the camp are available, but the Germans were not inclined to treat their former allies according to the normal standards of international law. As early as September 15, 1943, 1,700 prisoners went by ship to Piraeus,¹ and, by October 15, 1943, the Germans had transported 4,250 prisoners to the mainland.²

KONZENTRATIONSLAGER (KL) JARAK

The Wehrmacht established a concentration camp at the end of September 1941 in the Serbian village of Jarak (community of Sremska Mitrovica) (map 7), as the result of an order of the Plenipotentiary Commanding General in Serbia (*Bevollmächtigter kommandierender General in Serbien*) dated September 23, 1941. The occasion for the creation of the camp was the firing of a machine gun and rifles at German patrols in the town of Šabac on September 23, 1941. In retribution, on September 24, 1941, the Plenipotentiary Commanding General ordered the 342nd Infantry Division to arrest all the male residents of Šabac between the ages of 14 and 70 and put them in the newly created camp north of the River Sava¹ (that is, in the village of Jarak).

Initially, the camp was under the command of the 342nd Infantry Division, and then, in accordance with orders of the Quartermaster (*Quartiermeister*) of the Plenipotentiary Commanding General dated September 25 and 27, 1941,² it was under the Chief of Military Administration with the Commander Serbia (*Chef der Militärverwaltung beim Befehlshaber Serbien*), General der Flieger Heinrich Danckelmann. In accordance with this order, the 64th Reserve Police Battalion took over responsibility for guarding the camp.³

The first prisoners in the camp were male inhabitants of the Serbian towns of Šabac and Sremska Mitrovica (6,000–7,000 people), who were put in the camp in retaliation for an attack by partisans. Dozens of those arrested were killed while on the way to the camp.

The conditions of those held in the camp were inhumane: the food was lacking in both quantity and quality, there was no medical services, and the prisoners were constantly subjected to humiliating treatment and beatings by the German guards and camp administrators.⁴ For example, by order of the Quartermaster of the Plenipotentiary Commanding General dated September 27, 1941, the food of the prisoners, which was supposed to be provided by the 342nd Infantry Division, was to consist of only 200 grams (7 ounces) of bread per day and 200 grams of meat per week.⁵ The camp was closed at the beginning of October 1941 by transferring all the prisoners to a newly created camp in the town of Šabac.

SOURCES Primary source material about KL Jarak is located in BA-MA (RH 24-18 and RH 26-342) and the Institut für Zeitgeschichte Archiv (MA 686/1).

Additional information about KL Jarak can also be found in the following publications: Venceslav Glišić, *Teror i zločini nacističke Nemačke u Srbiji 1941–1944* (Belgrade: Rad, 1970); and Walter Manoschek, “*Serbien ist judenfrei*”: *Militärische Besatzungspolitik und Judenvernichtung in Serbien 1941/42* (Munich: R. Oldenbourg), 1995.

KONZENTRATIONSLAGER (KL) ŠABAC

The Wehrmacht established a concentration camp on September 30, 1941, in the town of Šabac (German: Schabatz), 60 kilometers (37.5 miles) west of Belgrade, Serbia (map 7). Despite its designation as a concentration camp, this camp was operated by the Wehrmacht and was not part of the SS Main Economic and Administrative Office—*SS-Wirtschafts- und Verwaltungshauptamt*, SS-WVHA, concentration camp system.

At first, the camp was under the control of the 342nd Infantry Division (commanded by Generalleutnant Dr. Walter Hinghofer; then, from November 19, 1941, by Generalmajor Paul Hoffmann) and then of the Plenipotentiary Commanding General in Serbia (*Bevollmächtigter kommandierender General in Serbien*), his Quartermaster (*Quartiermeister*), and the head of the military administration (*Militärverwaltungschef*) in Serbia, Harald Turner. The camp was guarded by a company of the 64th Reserve Police Battalion as well as Companies 4 and 6 of the 750th Infantry Regiment of the 718th Infantry Division.

Barracks located in the town were used for the camp, but in the beginning the majority of the prisoners were out in the open in an area surrounded by barbed wire. The first prisoners in the camp were male residents of Šabac, Sremska Mitrovica, and other populated areas in western Serbia, who had been arrested in retaliation for a partisan attack.

The newly created camp also received a transfer of more than 1,000 mainly Austrian Jews from an internment camp. These Jews, en route to Palestine, had been forced to stay first in the small Serbian town of Kladovo in December 1939, but, in September 1940, they managed to move to Šabac. During 1940 and 1941, around 200 of them succeeded in leaving the town, and 1,107 Jews remained there. In addition, there were 63 local Jews in the town. After the occupation of Serbia by German troops, the foreign Jews were put in a camp for internees, while the local Jews remained free.¹ Finally, several hundred Roma (“Gypsies”) were put in the camp; the occupiers also suspected them of helping the partisans. According to a report of the 342nd Infantry Division, during operations to clear the Sava-Drina river bend between September 26 and October 9, 1941, 88 partisans were killed in the fighting, 1,127 other people were shot, and 21,440 were arrested and placed in the camp.² To screen the civilians forced into the camp, a Security Service (*Sicherheitsdienst*, SD) squad headed by

SS-Sturmbannführer Paul was sent there.³ According to an SD incident report (*Ereignismeldung UdSSR* No. 119, October 20, 1941), during the first half of October, the SD examined around 8,000 persons in the camp, of whom the Wehrmacht shot 910.⁴ Some of the prisoners were released. For example, according to a 10-day report of the Plenipotentiary Commanding General in Serbia dated October 20, 1941, 5,004 of the 22,658 prisoners in the camp were released after being checked.⁵

The Germans regularly selected hostages, from among the civilians in the camp, to be shot in retribution for partisan attacks on German units. The first execution of prisoners in the camp as hostages was carried out on the basis of an order from the Plenipotentiary Commanding General dated October 4, 1941. In accordance with this order, 2,100 hostages from the Šabac and Belgrade camps were to be shot for the death of 21 German soldiers near Topola on October 2, 1941 (in accordance with the OKW's 100-to-1 rule).⁶ The Šabac camp was supposed to select 805 Jews and Roma to be shot.⁷ However, in reality, around 400 Jews and approximately 160 Roma were shot on October 12 and 13, 1941.⁸

Up to October 24, 1941, approximately 1,000 people in total had been shot, including 90 between October 18 and 24, 1941. During this period, 891 additional people were screened in the camp, 727 were released, and 721 new prisoners were brought in. As of October 17, 1941, there were 15,724 prisoners in the camp, and, as of October 24, 1941, there were 16,445.⁹

Shootings of camp inmates as hostages also took place subsequently. For example, on November 11, 1941, the 342nd Infantry Division reported on the shooting of 129 prisoners from the camp,¹⁰ and, on November 20, 1941, the Plenipotentiary Commanding General ordered 385 hostages to be shot in retaliation for the losses of the 3rd Battalion of the 697th Infantry Regiment.¹¹

On March 18, 1942, the Commanding General and Commander in Serbia (*Kommandierender General und Befehlshaber in Serbien*), General Paul Bader, citing an order from the Plenipotentiary Commanding General in Serbia dated February 2, 1942, gave instructions that henceforth "insurgents" (partisans) were not to be shot but rather sent to the "[Š]abac concentration camp, later Semlin [Serbian: Zemun]."¹² This order no longer had any significance for the camp, however, as it closed on March 31, 1942; the prisoners were transferred to another camp.¹³

LUFTWAFFE SONDERLAGER OST

The Wehrmacht established Luftwaffe Sonderlager Ost with an order on October 22, 1943, and it remained in operation

until December 1944. It was located in Sudauen (today Suwałki, Poland), in Defense District (*Wehrkreis*) I (map 4c).

The camp was subordinated to the commander of Air District (*Luftgau*) I.

The table below shows the number of prisoners in the camp on selected dates in 1943 and 1944.¹

Date	Prisoners	Officers
December 1, 1943	26	18
January 1, 1944	30	20
February 1, 1944	27	18
April 1, 1944	26	14
May 1, 1944	28	18
June 1, 1944	21	12
July 1, 1944	21	12

The camp held Soviet Air Force officers. On January 1, 1944, there were 30 prisoners in the camp.² Specific information on conditions in the camp is not available, but indications are that they were generally good.

SOURCES Primary source material about Luftwaffe Sonderlager Ost is located in BA-MA (RL 23); and BArch B 162/18251.

Additional information about Luftwaffe Sonderlager Ost can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. SONDERLAGER ABTEILUNG FREMDE HEERE OST

The special camp (*Sonderlager*) Foreign Armies East (a.k.a. Sonderlager FHO) existed between 1942 and 1944, or possibly until the end of the war. The prisoners were technically under the control of the Army High Command, Army General Staff, Foreign Armies East Branch (*Oberkommando des Heeres, Generalstab des Heeres, Abteilung Fremde Heere Ost*), which handled intelligence on the eastern front, since they had originally come from FHO interrogation camps. However, the camp (or, more accurately perhaps, facility) was run by the Armed Forces High Command, Armed Forces

Propaganda Branch (*Oberkommando der Wehrmacht, Abteilung Wehrmacht Propaganda*), Section IV, which dealt with foreign propaganda: in this context, propaganda aimed at the Soviets. The camp was located in Berlin, in a villa at Victoriastrasse 10 (map 4b).

The Germans used the camp to hold prominent Soviet prisoners of war (POWs; maximum number: 50), who were prepared and trained for use as propagandists.¹ In the fall of 1942, the famous (or infamous) Lieutenant General Andrei Vlasov was placed in this camp. Besides Vlasov, the camp also held Colonel Vladimir Boiarskii, General Vasiliy Malyshkin, General Georgii Zhilenkov, and Major General Ivan Blagoveshchenskii, among others.²

Because the Germans wanted to elicit and maintain the prisoners' cooperation, the conditions in the camp were generally good, especially compared to those for normal Soviet POWs. The camp administration and guards behaved correctly toward the prisoners, and the food and housing were satisfactory. Unfortunately, no further information on the camp's operation is available.

SOURCES Primary source material about Sonderlager Abteilung Fremde Heere Ost is located in BA-MA (RW 6).

Additional information about Sonderlager Abteilung Fremde Heere Ost can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 177; and Matthias Schröder, "Deutschbaltische Offiziere im Zweiten Weltkrieg und ihre politischen Initiativen für General Vlasov," in *Deutschbalten, Weimarer Republik und Drittes Reich*, vol. 2, ed. Michael Garleff (Vienna: Böhlau, 2008), p. 339.

SONDERLAGER BOYEN

This special camp (*Sonderlager*) existed from 1942 to 1944 in the Boyen Fortress near the town of Lötzen (today Giżycko, Poland) (map 4c). The camp was subordinate to the Army High Command, Foreign Armies East Branch (*Oberkommando des Heeres, Abteilung Fremde Heere Ost*) as well as to the commander of the eastern volunteer units of the Wehrmacht, General der Kavallerie Ernst-August Köstring.

Sonderlager Boyen held captured Soviet officers (maximum number: around 100), whom the Germans subjected to interrogation for the purpose of obtaining important information about the Red Army.¹ Not infrequently, torture was a central element of these interrogations. The Germans also used a carrot-and-stick method to recruit captured officers for collaboration. Those who refused to collaborate were sent

to a prison in the town of Rhein (today Ryn, Poland). The prisoners who agreed to collaborate were placed in a separate sector of the fortress, where a dining room, a movie theater, and a library were available. From July 16 until September 4, 1942, the former commander of the Second Shock Army (*2-ia udarnaia armii*), Lieutenant General (*general-leutenant*) Andrei Vlasov—the future commander of the Russian Army of Liberation—was in the camp.²

SOURCES Additional information about Sonderlager Boyen can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 177; and Jürgen Thorwald, *Die Illusion: Rotarmisten in Hitlers Heeren* (Zürich: Droemer-Knaur, 1974).

SONDERLAGER DABENDORF

This special camp (*Sonderlager*) was in existence from March 1, 1943, until February 28, 1945. The camp was deployed near the village of Dabendorf, 40 kilometers (25 miles) south of Berlin, on the site of a former camp for French prisoners of war (POWs) (map 4b). It was administratively subordinate to the commander of Defense District (*Wehrkreis*) III, but, with regard to its special purpose, it was subordinate to several organizations simultaneously: the Armed Forces High Command, Armed Forces Propaganda Branch (*Oberkommando der Wehrmacht, Abteilung Wehrmacht Propaganda*), Section IV, responsible for foreign propaganda; the Eastern Propaganda Branch for Special Purposes (*Ostpropagandaabteilung zur besonderen Verwendung*); the Army High Command, Foreign Armies East Branch (*Oberkommando des Heeres, Abteilung Fremde Heere Ost*), and the commander of the eastern volunteer units of the Wehrmacht, General der Kavallerie Ernst-August Köstring.

The German head of the camp was Hauptmann Wilfried Strik-Strikfeldt (1897–1977). The Russian heads of the camp, in turn, were Major General Ivan Blagoveshchenskii (February to August 1943), Major General Fedor Trukhin (August 1943 to October 1944), and Podpolkovnik of the Russian Army of Liberation (ROA) G. A. Pshenichnyi (October 1944 to April 1945). The permanent camp personnel included 54 officers, 11 noncommissioned officers, and 44 enlisted men.

The camp's main contingent was made up of Red Army officers and men; these POWs had been specially selected in POW camps and were being trained as propagandists for units of the ROA and for the eastern units of the Wehrmacht. They filled out special questionnaires and took an oath of

loyalty to Germany. During the training, they received money, clothing, and food allowances, just as German army soldiers did. The main ideological task of the training was re-education of Red Army POWs, to turn them into convinced opponents of Stalin's regime. The instructional program included: methods and practices of propagandistic activity; political exercises on these topics—"Germany," "Russia and Bolshevism," and "The Russian Liberation Movement"; drill and physical training; and weapons training (from the end of 1943). The course of lectures amounted to criticizing the existing system in the USSR and convincing the trainees of the good prospects of the Vlasov movement. On the grounds of the camp were located two ROA newspapers: *Zaria (Dawn)* and *Dobrovolets (The volunteer)*. On April 12, 1943, at the initiative of Major M. A. Zykov, a conference was held at the camp: the First Anti-Bolshevist Conference of Former Red Army Men and Officers, in which more than 600 people participated. In total, between 1943 and 1945, as many as 5,000 POWs passed through Dabendorf, and 12 graduations were held.

SOURCES Additional information about Sonderlager Dabendorf can be found in the following publications: K. M. Aleksandrov, "K istorii Dabendorfskoi shkoly ROA," in *Russkie soldaty Vermakhta: Geroi ili predateli* (Moscow: Eksmo, 2005), pp. 143–168; S. G. Chuev, *Spetssluzhby Tret'ego reikha: Kniga II* (St. Petersburg: Neva, 2003), pp. 242–248; and Wilfried Strik-Strikfeldt, *Against Stalin and Hitler: Memoir of the Russian Liberation Movement, 1941–1945* (New York: Macmillan, 1970).

SONDERLAGER IBBENBÜREN

This special camp (*Sonderlager*) existed from the end of 1941 until March 1945. The camp was deployed 0.5 kilometers (0.3 miles) from the town of Ibbenbüren (20 kilometers [12.4 miles] west of Osnabrück) in a specially built barracks installation (map 4a). Officially, the name of the camp was Sonderlager 1750.

Administratively and managerially, the camp was subordinate to the commanding officer of Defense District (*Wehrkreis*) VI, but, for its special purpose, it was subordinate to the Armed Forces High Command/Office of Counterintelligence (*Oberkommando der Wehrmacht/Amt Abwehr*).

The camp held Soviet prisoners of war (POWs) who were natives of Ukraine and whom the Germans had specially selected in POW camps as potential collaborators. In Sonderlager Ibbenbüren, the Germans evaluated the prisoners' worth as propagandists and counterintelligence agents, for use in the occupied territory of Ukraine and in Germany itself, in POW work detachments (*Arbeitskommandos*), and in camps for eastern workers (*Ostarbeiter*).

SOURCES Additional information about the Sonderlager Ibbenbüren can be found in the following publications: S. G.

Chuev, *Spetsluzhby Tret'ego reikha: Kniga II* (St. Petersburg: Neva, 2003), pp. 248–249; and A. V. Okorokov, *Osobyi front: Nemetskaia propaganda na Vostochnom fronte v gody Vtoroi mirovoi voiny* (Moscow: Izdatel'stvo "Russkii put," 2007).

SONDERLAGER KOMOTAU

Information on this special camp (*Sonderlager*) is sparse. It existed between 1943 and 1945 in Defense District (*Wehrkreis*) IV, in the town of Komotau (today Chomutov, Czech Republic) (map 4e). The camp was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

The camp held French officers whose names were found on the rolls of the Deuxième Bureau (French military intelligence service) and who were arrested after German troops occupied the southern part of France in November 1942. The number of officers in the camp reached 300. The ranking officer was General Altmeyer. Among the officers were Pierre de Gaulle (the brother of General Charles de Gaulle), seven prefects, Michel Clemenceau, Colonel François de la Roque, and Leon Jouhaux. The camp also held a number of senior civil servants as internees.

The treatment of the prisoners and the conditions of their confinement in the camp were satisfactory, by and large, and in compliance with the main provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). The exact number of prisoners who passed through the camp is not known.

SOURCES Primary source information about Sonderlager Komotau can be found in TsAMO.

Additional information about the Sonderlager Komotau can be found in the following publication: Ministère de la Guerre, État-Major de l'Armee, 5ème Bureau, *Documentation sur les Camps de Prisonniers de Guerre* (Paris, 1945), p. 114.

SONDERLAGER WUHLHEIDE

This special camp (*Sonderlager*) existed from February 1942 until March 1943. The camp was deployed near the Wuhlheide railroad station, a little more than 10 kilometers (6 miles) southeast of the center of Berlin (map 4b). At the end of February 1943, the Germans disbanded the camp, and all the camp personnel were transferred to the newly created Sonderlager Dabendorf.

Administratively, the camp was subordinate to the commander of Defense District (*Wehrkreis*) III, but, in connection with its own special purpose, it was subordinate to the Armed Forces High Command, Armed Forces Propaganda Branch (*Oberkommando der Wehrmacht, Abteilung Wehrmacht Propaganda*), Section IV, which was in charge of foreign propaganda.

The camp held Soviet prisoners of war (POWs), former Red Army officers, whom the Germans specially selected in POW camps as potential collaborators. In the camp, the Germans evaluated the prisoners for training and use as propagandists in POW camps and for units of the Russian Army of Liberation and the Eastern Battalion (*Ostbataillone*) of the Wehrmacht. Prisoners selected by the Germans for testing and training were regarded as POWs, as before, were kept behind barbed wire, were guarded by German sentries, and received POW rations, albeit in more generous quantities than most of their compatriots in other camps. Besides the German guards, there was a Russian order guard within the camp, subordinate to the Russian commandant, former colonel G. I. Antonov. In the camp, the administration subjected the prisoners to systematic and goal-oriented ideological sessions in the Nazi spirit, for the purpose of turning the prisoners into determined opponents of the Bolshevik regime. The prisoners also were used to perform various types of labor inside and outside the camp.¹

The camp commandant was former Rittmeister Weissbeck of the army of Austria-Hungary, and the head of training was Sonderführer Baron von der Ropp. The instructors were mainly former generals and officers of the Red Army.

Among the prisoners in the camp was the former chief of staff of the Thirty-Second Army, Colonel Nikolai Bushmanov, who had been captured as early as October 1941. Bushmanov was used as an instructor, but he also created an underground anti-Nazi organization in the camp. By the summer of 1943, when Bushmanov was already in the Sonderlager Dabendorf, this organization turned into an international underground organization by the name of the "Berlin Committee of the All-Union Communist Party (Bolsheviks)," which did active work all over Germany. The organization, through Soviet POWs and forced laborers (*Ostarbeiter*), engaged in sabotage and diversion in German factories.²

SOURCES Additional information about the Sonderlager Wuhlheide can be found in the following publications: S. G. SONDERLAGER WUSTRAU

This special camp¹ (*Sonderlager*) existed from early 1942 until the end of 1944. The camp was deployed in a forest roughly 1.5 kilometers (1 mile) from the town of Wustrau (about 51.5 kilometers [32 miles] northwest of Berlin) (map 4b). In terms of administration, the camp was subordinate to the commander of Defense District (*Wehrkreis*) III, but it had a special relationship with the Reich Ministry for the Occupied Eastern Territories (*Ostministerium*).

The prisoners in the camp were Soviet prisoners of war (POWs) whom the Germans had specially selected in POW camps as potential collaborators. In the camp, the administration evaluated the prisoners' suitability for training as propagandists and various kinds of administrative personnel in organizations created by the Ostministerium in occupied Soviet territory and in Germany itself. The prisoners the Germans chose for testing were people who on the whole were educated—who had university degrees or some university education—and who were senior officers in the Red Army. The prisoners in the camp were mainly natives of the Caucasus and Transcaucasia, and they were divided up into blocks on the basis of national affiliation. Each block consisted of several groups, with 15–20 prisoners in each group. In all, there were as many as 500 prisoners in the camp at a time.

The evaluation, as a rule, took two to six months. The testing took place in the course of lessons, which were held twice a week for four hours per day. During the lessons, the prisoners had to lead discussions and ask questions on the topic under study for the purpose of revealing, in this way, individuals who had a negative attitude toward Nazi Germany. The prisoners also were divided up according to their progress, into Groups A and B. The more capable prisoners were placed in the former group, while those who were insufficiently reliable and were not making progress were put into the latter group.

Free time, when no lessons were under way, was devoted to independent studies, excursions, sports, and work around the camp.² The prisoners were under guard and did not have the right to go outside the confines of the camp grounds without a pass.

A participant in the selection committee, V. D. Poremskii, recalls the following regarding the selection procedure: "The selection was based on several categories—from 0 to 5. People with an intellectual level below 3 were of no interest. On the whole, we selected people with scores from 3 to 4.5. Someone who scored 5, was talented, and was capable of doing a great many things but was not selected either. It was dangerous. Del'vig [the head of the selection committee] characterized such people in this way: 'cunning, clever, and may be an agent.' We didn't take a risk with such people, we moved them to the 0 category on our lists." The POWs who passed the test were taken to the training camp site at Wustrau (*Ausbildungslager*, Wustrau), which was located 1 kilometer from Sonderlager Wustrau. In the training camp, people who had passed the test no longer had POW status. "They

were given civilian clothes and lived relatively freely. After some time they were allowed to travel freely to Berlin, go to restaurants, see the city, and the like; that is, we created conditions that would allow an individual to feel that he was a free, equal inhabitant, as the Nazis said, of the future territory to be ruled by Adolf Hitler. And we retrained them along those very lines."³

NOTES

1. Mattiello and Vogt erroneously refer to the camp as Ulstrau (an Oflag for Russian generals) rather than Wustrau.
2. Chuev, *Spetsluzhby Tret'ego reikha*, p. 233.
3. Poremskii, "Vustrau."

SONDERLAGER WUTZETZ

This special camp (*Sonderlager*) existed from the beginning of 1942 until the end of 1944. The camp was deployed in Wutzetz, near the town of Friesack, Brandenburg, about 64 kilometers (40 miles) northwest of Berlin (map 4b). Administratively, the camp was subordinate to the commander of Defense District (*Wehrkreis*) III, but it had a special relationship to the Reich Ministry for the Occupied Eastern Territories (*Ostministerium*).

The camp held Soviet prisoners of war (POWs), specially selected by the Germans in POW camps, to test their suitability for training as propagandists and various types of administrative personnel in organizations that the Ostministerium created in occupied Soviet territory and in Germany itself. Prisoners who passed the test and preliminary training were sent for further training to the training camp (*Ausbildungslager*) at Wustrau.

SOURCES Additional information about Sonderlager Wutzetz can be found in the following publications: S. G. Chuev, *Spetsluzhby Tret'ego reikha: Kniga II* (St. Petersburg, 2003), p. 236; and A. V. Okorokov, *Osobyi front: Nemetskaia propaganda na Vostochnom fronte v gody Vtoroi mirovoi voiny* (Moscow: Izdatel'stvo "Russkii put," 2007).

SONDERLAGER ZIETHENHORST

This special camp (*Sonderlager*) came into existence in March 1942. The camp was located at a former peat-processing site at Ziethenhorst, about 48 kilometers (30 miles) northwest of Berlin, in seven barracks that a labor service camp had occupied previously (map 4b). At the end of 1942, the Germans disbanded the camp, and the personnel were transferred to Sonderlager Wustrau. Administratively, the camp was subordinate to the commander of Defense District (*Wehrkreis*) III, but, in connection with its special mission, it was subordinate to the Reich Ministry for the Occupied Eastern Territories (*Ostministerium*).

The camp held Soviet prisoners of war (POWs) (generals and lower ranking officers) specially selected by the Germans in POW camps to test for their suitability for training as propagandists and various kinds of top administrative personnel in organizations that the Ostministerium created in occupied Soviet territory and in Germany itself. Prisoners who passed the testing and preliminary training were sent for further training to the training camp (*Ausbildungslager*) at Wustrau.

The Russian leader in the camp was former Red Army major general Fedor Trukhin, who, following his release from captivity on September 1, 1942, became an instructor in this camp (as of November 1942, he was a senior instructor). Among the prisoners whom the Germans held in the camp was former Red Army major general Dmitrii Zakutnyi.

SOURCES Additional information about Sonderlager Ziethenhorst can be found in the following publications: S. G. Chuev, *Spetssluzhby Tret'ego reikha: Kniga II* (St. Petersburg, 2003), pp. 234–235; and A. V. Okorokov, *Osobyi front: Nemetskaia propaganda na Vostochnom fronte v gody Vtoroi mirovoi voiny* (Moscow: Izdatel'stvo "Russkii put," 2007).

Camps and Other Facilities for Civilians Introduction

In addition to operating camps for prisoners of war and German military prisoners, the Wehrmacht operated a number of camps which interned enemy civilians. The camps treated in this section were not part of a centralized system of civilian internment, with the exception of the internment camps for Allied civilians (*Internierungslager* or Ilags). Rather, most of them were created on an ad hoc basis through the initiative of local military commanders, and as a result, they are quite diverse in nature. Also included in this section are general essays on labor camps for civilians which were operated by the Wehrmacht and brothels in which women were forced into prostitution by German military personnel.

The only category of camps for civilians which were part of the formal Wehrmacht camp system were the nine Ilags, which held civilians of Allied nations who were caught in

German-occupied parts of continental Europe when the war broke out. Four of these camps were located in Western Europe: three in France (in Giromagny, St. Denis, and Vittel) and one in Belgium (Dongelberg). The other four were located within the Reich, and are numbered based on the Defense Districts (*Wehrkreise*) in which they were located: Ilag IV in Schloss Eisenberg (now Jezeří Castle, in the Czech Republic), Ilag VII in Tittmoning (later relocated to Laufen), Ilag VIII in Tost (now Toszek, Poland), Ilag XIII in Würzburg, and Ilag XVIII in Spittal an der Drau, Austria. By far the largest group of prisoners in these camps were British civilians, although there were also large numbers of Americans, as well as citizens of various other countries in the Americas. Smaller numbers of civilians from combatant nations in continental Europe were also present, although in much smaller numbers. Conditions in these camps were generally relatively good. They were usually located in large, well-constructed buildings, such as castles or fortresses, and most of them had electricity, running water, and good food and medical care available to the prisoners.

On the contrary, conditions in some of the ad hoc civilian internment camps established by the Wehrmacht near the front line in the Soviet Union were among the worst anywhere in the German camp system. Many of these camps were hastily organized and lacked basic infrastructure. The prisoners received very little, if any, food, and there was essentially no medical care. Although most of these camps are poorly documented and there is little statistical information available, it is clear that the death rates in these camps were very high.

Since they were not centrally organized, these camps were given a variety of designations. At least four known camps were classified as "refugee camps" (*Flüchtlingslager*), which held Soviet civilians in front line areas during the German campaigns in southern Russia in 1942; these camps were located in Kalatsch (now Kalach-na-Donu, Russia), Pogodinskoje (now Pogodin, Russia), Tschir (now Chir, Russia), and the "main refugee camp" (*Hauptflüchtlingslager*) in Belaja Kalitwa (now Belaia Kalitva, Russia). Another camp in this category is the "collection camp" (*Sammellager*) at Chochol (now Khokhol, Russia), which held Soviet civilians from Voronezh who were later transferred westward for forced labor. There were at least two other camps designated as concentration camps (*Konzentrationslager*) despite the fact that they were run by the Wehrmacht and were not part of the SS-WVHA concentration camp system. These camps, which held Jewish civilians (including some accused of being partisans), were located at Charkow (now Khar'kiv, Ukraine) and Kramatorsk (now Kramatorsk, Ukraine).

There were other camps with specific purposes which were unique among the civilian camps. One of these was the "youth education camp" (*Jugenderziehungslager*) in Skobrovka, in present-day Belarus, where children between eight and 14 years old were subjected to German indoctrination. Another unique group of camps were the special detention camps (*Endlager*) which were established at Ozarichi (now

Azarychy, Belarus) in March 1944. These camps held Belarusian civilians who were unable to work and whom the Germans simply wished to get rid of. They were located in no-man's-land between the German and Soviet troops. The Germans established the camps (which were little more than barbed wire enclosures), surrounded them with land mines, and then left the prisoners to die.

In addition to these camps, there were also forced labor units for civilians (*Zivilarbeitsdienstabteilungen*, ZADA) which were established by Army Group Center in the occupied Soviet Union in late 1943 and operated until the end of the war (temporarily interrupted by the German withdrawal toward Poland in 1944). They performed forced labor for military purposes (e.g., building defensive works) and lived in makeshift villages, rather than proper forced labor camps, in which conditions were poor. However, they did receive more food and other provisions than most of the Eastern European forced laborers working in the Reich (*Ostarbeiter*).

Finally, there were brothels which were established by the Wehrmacht for use by its troops during the German occupation of various parts of Europe, including France, Poland, and the Soviet Union. The purpose of these institutions was to allow the soldiers an outlet in a controlled environment where the military authorities could prevent the spread of venereal diseases and restrain their men from having unauthorized relations with local women. Where possible, the Germans utilized already existing brothels and previous registries of prostitutes, creating their own where such pre-existing facilities were not available. The behavior of the soldiers who visited the brothels was strictly regulated in order to protect their health. Some of the women who worked in these brothels had been prostitutes before the war who were forced to continue that work. Although some had ostensibly "volunteered" to work in the brothels to help support their families, they had very little actual choice in the matter, and there are reports that in some cases (particularly in Eastern Europe), the Germans simply grabbed women off the street and forced them to work as prostitutes.

While these camps for civilians do not form a cohesive category of camps per se, they do serve to illustrate the variety of civilian experiences under German military occupation. The differences between the treatment of British and American "aliens" and the treatment of civilians in the occupied Soviet Union demonstrate how Nazi racial ideology trickled down and was practiced even at the lowest echelons. Documenting these camps is essential because they provide vital insights into the role the Wehrmacht played in the oppression and killing of civilians during the Second World War.

Dallas Michelbacher

ZIVILARBEITSDIENSTABTEILUNGEN (ZADA)

Alongside the extensive use of forced labor from the vast pools of foreign prisoners of war (POWs), court-martialed members of the Wehrmacht, and work detachments (*Arbeitskommandos*) originating in nearby POW and other camps, the German military in Army Group Center (*Heeresgruppe Mitte*) exploited the local civilian populations in so-called Civilian Labor Service Units (*Zivilarbeitsdienstabteilungen*, ZADA). The Germans created these units in late 1943, in the area of Army Group Center, under Generalfeldmarschall Ernst Busch. They suspended the policy during the retreat back to Poland but redeployed ZADA from the summer of

1944 until the war’s end. This was the first instance of Army Group Center deploying civilian forced laborers, thus affecting Soviet citizens in its corresponding sector of the eastern front.¹ Though ZADA constituted far from the largest category of forced labor under Nazi rule, a sizable number of civilians, some 60,000–90,000, were made to work in these units.²

The implementation of the ZADA system in Army Group Center came during a rapidly deteriorating campaign. Just a few days after the Germans initiated Operation Citadel to destroy Soviet forces in the Kursk salient, the Soviets launched a counteroffensive against Army Group Center, in the area around Orël, which broadened into a general offensive. By the fall, the Soviets had pushed Army Group Center back into Belarus. The shifting battle lines and the continued draining of workers from Eastern Europe for work deployments in the Reich led to both a military and a labor crisis for Army Group Center. Among other measures, on November 27, 1943, Busch, who had taken command less than a month before, issued the order to establish permanent civilian labor units.³ Creating civilian work units such as ZADA was a way to get heavy, nonspecialized work done and simultaneously make more troops available for combat. By this point in the campaign, local German military commanders could hardly select the fittest civilians for manual labor, because most had already been removed for labor elsewhere. The initial call for workers was, therefore, quite broad: men aged 15–55 and women aged 16–45 were to be conscripted.

In terms of military organization, ZADA were different from the work details, which were subordinate to the camps from which they derived. In other words, the prisoners in work details were still inmates in a certain POW camp and left these camps only for forced labor deployments. ZADA, on the other hand, were mobile civilian units subordinate directly to Wehrmacht divisions and to nondivisional engineering and construction units at the corps and army level. As such, Army Group Center effectively created duplicates of its construction, engineering, and railway military battalions with ZADA, which German personnel from those battalions directed.⁴

Orders to form ZADA went out from Second, Fourth, and Ninth Army headquarters late in 1943 and early in 1944. “Round-ups” (*Erfassungsaktionen*) took place over the following weeks in the rear areas, eventually extending up to 100 kilometers (62 miles) behind the front lines. The Ninth Army, for example, arrested 4,950 men and 1,000 women in the area east of the Berezina River just before New Year’s Eve and deposited them temporarily in Dulag 131 in Bobruisk. The Germans then transported such captives to the front lines to form battalions and put the civilians to work, often in sectors that appeared most under threat of Soviet attack. While the most arduous and perilous labor deployments were, in fact, reserved for members of the Wehrmacht itself who had been convicted of desertion, “subverting fighting strength” (*Wehrkraftzersetzung*), or other subversive or gravely insubordinate infractions,⁵ the Wehrmacht deployed ZADA for very hard

labor: digging and building defensive positions, building roads and bridges, cutting and hauling lumber, harvesting peat, and so on. The treatment of ZADA personnel has been characterized as more brutal, and “militarized,” than had been the case for forced laborers in Army Group Center to that point.⁶

While the Wehrmacht guarded and directed the Soviet civilians in ZADA, “volunteers” (*Hilfswillige*, Hiwis) helped to overcome the linguistic and cultural barriers between the Germans and local populations. The Hiwis came mostly from the ranks of Soviet POWs, although between one-sixth and one-third of them were civilians. They often “volunteered” in the sense that they chose service with the Germans as an alternative to starvation, although some of them doubtless had anti-Bolshevik feelings. In ZADA, the few Germans who supervised the units used Hiwis as translators or foremen. Their numbers—out of a total of 110,000 Hiwis and Eastern Troops (*Ostruppen*, armed Soviet volunteers)—were small, but they performed an important function.

The overall importance of ZADA and other labor units was significant. They built defensive works that slowed the Soviets down and inflicted additional casualties, and, without their efforts within the German supply system, Wehrmacht operations would have been hindered severely. This is not to say that the civilian labor system functioned without friction or was wholly positive. Wehrmacht use of civilian workers both prevented those workers from reaching the farms and factories of the Reich and interfered with the local production of food that both the Wehrmacht and German civilians used. Moreover, there was, quite predictably, a certain amount of resistance on the part of Soviet civilian conscripts. In January 1944, problems with the workers led Army Group Center to issue an order for the “maintenance of the population’s labor discipline.” The directive called for the use of the death penalty in extreme cases of labor indiscipline or absenteeism and formally enshrined the position of the Security Service (*Sicherheitsdienst*, SD) labor education camps (*Arbeitserziehungs-lager*), ordering that all persistently “work-shy” civilians be handed over to Einsatzgruppe B.⁷

Though the labor that Soviet civilians conducted in ZADA was by no means voluntary, they received somewhat better treatment than many forced laborers—especially eastern forced laborers—in Hitler’s Europe. They received some 2,000 calories of food per day and were outfitted with clothing. Of course, these “adequate” provisions were given only to enable them to work as many as 12 hours a day, and misbehavior was not tolerated. Even the Hiwis were subject to punishment by the Wehrmacht in tandem with ZADA, and these trials took place as official military courts-martial. Ivan Zviridok of the 3rd Company, Pioneer Battalion 211, was prosecuted by the court of the 211th Infantry Division, in August 1944, for selling a pair of used shoes and clothing to a woman in ZADA. Since he had found the shoes and clothing on the floor of his lodging, it was reasoned that he must have known they were military property. Though a longer sentence may have normally been awarded for someone convicted of

military theft (*militärische Diebstahl*), Zviridok’s sentence was commuted to a maximum of three weeks in “strict custody” as well as three months without tobacco, alcohol, or other non-essential items from military vendors.⁸

ZADA units were generally kept not in true camp-like facilities but in improvised “villages” in which conditions were grim. Detailed information on those sites is lacking, but their numbers were considerable. In January 1944, there would have been at least 35 camps under the divisions in Army Group Center alone, plus those under the nondivisional units.

SOURCES Though few witness testimonies regarding ZADA are available, there are numerous references to these units in the records of the International Tracing Service (ITS) and other postwar humanitarian agencies. The deployment details and statistics regarding labor and civilian policy on the eastern front can be found in the files of the Reich Ministry for the Occupied Eastern Territories, also available in part in ITS.

WEHRMACHT BROTHELS

Little is known about the system of brothels that the German military, the Wehrmacht, created during World War II.¹

That ignorance is part of a larger pattern: until relatively recently, there has been little discussion at all of sex or sexual violence in the war. We do know, however, that Nazism's racial, sexual, and power dynamics as well as broadly common attitudes and the violence and license of wartime all contributed to sexual exploitation on a massive scale. The brothels were a central part of that history. They existed in almost every city where German troops were present in significant numbers. Both military and civilian government authorities approved, organized, and supervised them. Their genesis derived from the belief that men needed sexual release and from a desire to prevent the spread of venereal diseases (VD), among other factors. Their management rested on a foundation of misogyny and racism. There are virtually no survivor testimonies, but the little documentation that does exist tells the story of an army that, at the very least, offered its male soldiers sexual gratification with no regard for the lives of the women involved. At their worst, the Wehrmacht brothels constituted nothing less than a system of organized mass rape.

The background to the creation of the brothels touches on themes of sexuality, gender, public health, morality, race, and masculinity as well as military effectiveness. The issues involved are not simple, and the discussions are rife with contradictions. On the one hand, prostitution appeared to be a threat to family values, a source of disease, and, according to Nazi propaganda, an element of the Jewish threat and a danger to racial purity. For many Germans (as for people in many other countries), prostitutes had a reputation for being undesirable social elements. Efforts to control prostitution went back at least as far as the Napoleonic Wars. The Nazis' claim that they would "clean up" Germany, which included cracking down on prostitution, was a popular campaign theme, especially with the Catholic right. Once in power, the Nazis eventually went so far as to declare prostitutes "asocials" and to put them in concentration camps. On the other hand, many people (especially men) believed that men required sexual release and would find it, one way or another. If they could not do so with their wives, and other women were not available, the thinking went, then they would likely resort to homosexuality, which the Nazis regarded with horror and disgust. At the same time, many people believed that having access to women would strengthen men's masculinity.

From the Wehrmacht's standpoint, probably the most important issue having to do with soldiers' sexuality centered on VD, more commonly known today as sexually transmitted disease (STD). In World War I, military doctors had reported over two million cases of gonorrhea and syphilis. Starting in 1915, the military occupation authorities had instituted a system for controlling prostitution that involved concentrating women in brothels and subjecting them to regular medical examinations.² Still, the loss of fighting strength was significant. With the start of World War II, the military authorities looked back to the experiences of World War I with some trepidation. The possibility that soldiers in occupied territories might develop relationships with local women added

other dangers: espionage, if the woman was an enemy agent, and the begetting of illegitimate children, "in which Germany has no interest whatsoever."³ Moreover, relations with foreign women could break down the distance between occupier and occupied that the German authorities wished to maintain.

A July 1940 decree from General Walther von Brauchitsch, commander in chief of the German Army, summed up many of the major concerns well and described a solution that mirrored German policy in the last conflict:

The longer that German troops stay in the occupied territories, and the more orderly and peaceful the conditions become, under which the soldier lives and performs his duty, the more the sexual question requires careful attention in all its circumstances and consequences. . . . The question is, in any case, not to be solved with a ban on sexual activity. Such a ban would doubtless, along with other disadvantageous results, lead to an increase in rape and the danger of offenses against Paragraph 175 [the law against homosexuality]. . . . For the health of the soldiers, the following fact plays a corresponding role: that VD is extraordinarily widespread in France, especially in the larger cities. One can already ascertain that the number of VD cases has increased considerably of late. I believe that I should hardly have to say anything about the damaging and unforeseeable results that the spread of these infections would have for the health of the people and the fighting strength of the army.

Sexual relations with female persons whose health is not monitored must be prevented, to the extent possible. Since monitoring prostitution is only possible with inhabitants of bordellos, it seems more advisable, from a hygienic and disciplinary standpoint, to open suitable bordellos for German soldiers, bordellos that will be under medical supervision, than to create the opportunity for the German soldier to fall victim to wild prostitution.⁴

This, then, was the model, which carried over, to some extent, from World War I: the Wehrmacht would run brothels for its soldiers, in which it could control the environment in such a way as to prevent the spread of STDs and head off the other problems that relationships between soldiers and foreign women might create. Von Brauchitsch's decree was certainly not the first word on the issue; discussions along these lines had been going on since the start of the war, and probably before. The decree also did not mark the end of all disagreements on the policy. There was still the racial issue, which was tied up with National Socialist ideology: should good Aryan soldiers be having sex with foreigners? Several different documents banned Jewish women or others "of foreign races" from sex work.⁵ Such a policy had limits, however; local women were often the only practical candidates for the

brothels, and so the Germans made allowances. For example, relationships between Germans and Poles were forbidden, by a personal decree from Hitler. The occupation authorities got around that prohibition by stating that sex with a prostitute was not a “social” act but rather of the “functional-economic type.”⁶ Similar lines of argument applied to Russian women. Then there were the basic moral questions, as von Brauchitsch himself identified in his own decree:

Corresponding to the generally necessary reserve that the German soldier is to maintain vis-à-vis the French population, a reserve I consider, as a fundamental philosophy, to be correct and appropriate, I must demand self-control from every individual, also in the sexual realm. Above all, for *married* soldiers, this demand should be self-evident.⁷

Later decrees demonstrated that he was not entirely happy with the results:

Recently in the occupied territories, events have played out during visits to bordellos that are incompatible with a soldier’s general sense of honor, and especially with that of officers. . . . Among other things, younger soldiers and even subordinates have been led on visits to bordellos by older comrades. Several times, this has led to undignified scenes. Married soldiers have offended against the self-evident basic concept of wedded loyalty.⁸

Despite such issues, the Wehrmacht and other German authorities did decide that brothels, which they could control, were the best solution, and well before von Brauchitsch had stated his position. The total number of such facilities remains unknown. Researchers may be able to compile a list eventually, but the records are scattered and quite likely incomplete. Between them, Regina Mühlhäuser and Maren Röger (see the Sources section below) mention 37 different cities in the occupied USSR and Poland that contained brothels, but that figure barely scratches the surface. For one thing, a city of any significant size contained more than one brothel. An existing leaflet from the chief military doctor (*Standortarzt*) in the French city of Bordeaux, which had about 255,000 inhabitants at the time (September 1940), listed eight brothels that were open for German soldiers.⁹ There were at least 40 brothels within the city limits of Paris, of which six were for officers.¹⁰ By 1942, there were at least 500 Wehrmacht brothels in operation between the eastern and western fronts.¹¹ In establishing them, the Germans faced a variety of different circumstances, depending on the geographic area in question. It should be noted that Germany’s allies also operated brothels for their personnel, although little information about these facilities is available.

In Germany itself, SS-Gruppenführer (later SS-Obergruppenführer und General der Polizei) Reinhard Heydrich, acting in his role as an official in the Interior Ministry,

issued an order on September 9, 1939, which he prepared in cooperation with the Armed Forces High Command (*Oberkommando der Wehrmacht*). The order regulated prostitution within those parts of Germany where the army was concentrated. Heydrich called on the police to round up prostitutes and see to it that they underwent thorough medical examinations. Some brothels were to be allowed to function, but streetwalking was forbidden. Anyone who resisted would be placed in “preventive custody” (*Vorbeugungshaft*) for a minimum of three months.¹²

In France, the Wehrmacht took advantage of an extensive system of brothels that already existed. The Germans took some of these over and imposed their own rules. They also benefited from the fact that French authorities had been working to control prostitution since the nineteenth century. They, too, favored brothels over streetwalkers. As early as July 1940, the Germans established a system of close cooperation with Vichy to continue and even expand the French system—new bordellos were established in cities in which they had previously not existed.¹³ The Vichy government was somewhat reluctant but saw this arrangement as one that would protect French society and minimize the harm that would ensue if the Germans ran the system alone. Known prostitutes were to be rounded up and handed over to the health authorities. All streetwalking and local sex traffic was to be halted.¹⁴ The French police were given instructions to root out underground brothels outside the regulated system, which, if visited by German soldiers, would pose a significant health risk in the eyes of the Wehrmacht leadership.¹⁵ The Germans would control their own brothel system. Much the same applied in states such as Belgium, the Netherlands, Italy, and Romania. Oberstarzt Schreiber, a senior official in the Medical Inspectorate of the Army High Command (*Oberkommando des Heeres*, OKH), reported on a visit to Naples in June 1941, where

several bordellos have been established for German soldiers. They are supervised well and regularly by Italian doctors. The quality of these bordellos varies greatly. I visited them, and although I had not announced myself beforehand, I could not detect any defects. . . . one can assume, with a high degree of probability, that no infections with VD will occur; up until now, there have been no reports of infections in these bordellos. The girls are young and make a healthy impression. Worth noting is a bordello for officers that seems exceptionally operated and that is very clean.¹⁶

Schreiber went on to report on brothels in North Africa, largely staffed with Italian women, and the improbability, as he saw it, of private liaisons between German soldiers and native women, which he wrote were not only forbidden by order but also by “the feel that two separate worlds, of whites and coloreds, stand opposite each other.” Of the Arab brothels that the Italians (and some Germans) used,

Schreiber wrote that “the appeal of the exotic plays no small role” but that, nevertheless, he could “only imagine that Northern Europeans would turn aside with a shudder,” given the racial and hygienic differences involved.¹⁷ Other, similar (though more positive), reports dealt with the opening of Wehrmacht brothels in Bucharest and Constanța, Romania.¹⁸

The situation in Poland was somewhat different, since Poland was an occupied country and so there was no Polish authority with which to cooperate. In Poland, the Germans registered sex workers and established control over existing brothels, where there were any; where there were not, the Germans established their own. The details took some time to work out. In October 1940, the chief medical officer with the Military Commander in the Generalgouvernement reported on efforts to set up brothels there. These efforts involved cooperation between medical authorities, military administrations, troop commanders, and civilian administrators, and such cooperation was not always forthcoming.¹⁹

The occupied Soviet Union presented still another set of challenges. Officially, the Soviet government had declared prostitution nonexistent in 1936, so, in most areas, it had gone underground, and there was no established system that the Germans could simply take over.²⁰ (The Baltic states were an exception: when the Germans invaded in 1941, the Soviets had only occupied the area for a short time, so there was still a registry of sex workers that was not out of date.) By March 1942, however, Eduard Wagner, the chief supply officer (*Generalquartiermeister*) in the OKH, wrote that the progressive worsening of the civilian food situation had led to an expansion of clandestine prostitution, with food often being used as a method of payment. He expressed concern about the increased risk of VD and the possibility that military secrets might leak. He called on the Secret Field Police (*Geheime Feldpolizei*) to institute measures to round up and eliminate (*Beseitigung*) the clandestine prostitutes and on the Local Commands (*Ortskommandanturen*) to set up bordellos.²¹ At least two existing documents ordered Local Commands to set up and manage brothels, among their many other duties.²²

One element stands out in the Germans’ efforts to set up their own brothels. Where no brothels existed, or where the Germans wanted to establish additional brothels, they often made a point of taking over Jewish properties. Two of the only five existing photographs of Wehrmacht brothels show one in the city of Brest, France, which the Wehrmacht Propaganda Company captioned as being in a former synagogue. Actually, the building was a Masonic temple, but the symbols on its outside wall looked enough like Stars of David for the Germans to make their claim, which has stuck for more than seven decades.²³ In that and other cases, such as Jewish student dormitories or other facilities, the Germans were fully aware of the power of their actions to desecrate meaningful religious sites.

Regional differences notwithstanding, the Germans were consistent in how they actually ran the brothels. Again and

again, nearly identical lists of rules appear in the records. The leaflet from the chief doctor in Bordeaux is typical. Having listed the eight brothels that Wehrmacht soldiers could patronize, as mentioned above, it went on to lay out the rules, which are worth quoting at length:

- 1) These bordellos are to be marked with signs and inscriptions. The use of other bordellos is punishable, because they are not medically inspected, and the soldier deliberately exposes himself to a possible infection.
- 2) Every soldier must, *in his own interest*, exactly follow the measures and regulations in the individual bordellos.

The following precautions and rules are to be heeded:

- a) Sex is only to be undertaken in the above-named and authorized bordellos.
- b) The price for all authorized bordellos is uniformly set at RM 2.50. This price includes the room fee, pay for the bordello partner, cleansing supplies, loan of a fresh hand towel, and a condom. Additional special fees are forbidden.
- c) *Before sex*, the visitor has to clean himself thoroughly with soap and water. After cleansing, spread the ointment provided on the member (glans to root).

Sex without a condom and the earlier use of the ointment is forbidden!

Especially when the partner rejects the use of the condom with the assurance that she is healthy.

- d) *After sex*, repeat the cleansing. Use caution when removing the condom (subsequent infection through contact with the fingers)!
- e) *After leaving the bordello*, immediately seek out the central sanitation [lit., rehabilitation] office (*Sanierungsstube*), rue Charles-Marionneau, 17, marked with a Red Cross flag and illuminated sign.
- f) Every bordello visitor receives from the relevant girl a *control number*, which is to be given to the medical NCO on duty in the sanitation office. (This serves to assist in the rapid apprehension of any female persons with venereal diseases.)
- 3) Entrance to the bordello is only allowed to enlisted men, NCOs, and the controlling authorities, in uniform. Entrance is forbidden to other visitors, including officers, and will be refused.
- 4) It is expressly pointed out that, also in the medically inspected and authorized bordellos, an infection with venereal disease is possible (e.g. through oral infection).

Every soldier visits the bordello at his own risk!

In case of infection, every soldier is required to report to his unit doctor immediately.

The treatment of Wehrmacht personnel by French doctors is forbidden! The French authorities are informed regarding this.

- 5) Sex with uncontrolled street walkers is forbidden and punishable.

Should a soldier nevertheless have sex outside of the authorized bordellos, he has the duty to make sure beforehand of the *name and address* of his partner, so that he can provide useful information, should he become infected.

- 6) The stay in the bordello may not fall outside the hours of 10:00 to 22:30, in order to guarantee a timely sanitation and subsequent return to quarters. (Timely sanitation up to 2 hours after sex!)

Staying overnight in the bordello is forbidden!

- 7) *Entrance to the so-called Negro Quarter is forbidden.* [boundaries defined]

The access roads are marked with signs. Extensive patrols will see to the rapid apprehension of all violators.

- 8) In the future, there will be a strict control of the so-called overnight quarters/hourly hotels (*Absteigequartiere/Stundenhotels*).
- 9) The following bars in the Bordeaux city limits are forbidden to Wehrmacht personnel: [eight locations identified].²⁴

Point 8 requires additional explanation. Because officers were forbidden to use the enlisted men's brothels, but presumably had the same needs, the army set up a separate, nominally more discreet system of establishments. As an OKH order of August 7, 1940, put it, if necessary, "Abstegehötel for officers in transit" are to be provided. Rooms could be rented by the day or hour. Such hotels were not to be located in the vicinity of brothels or of enlisted men's quarters. Enlisted men, NCOs, and French nationals were forbidden entrance, as were unknown or unauthorized women. Unlike in the enlisted men's brothels, the women were not to live in these hotels, but otherwise they were subject to the same medical controls as the brothel women.²⁵

Of course, the Germans also developed other rules, internal rules, for running the brothels. One such set of regulations dictated that the rooms for sex have: washbasins, bidets, and baskets with cleansing supplies; signage mandating the use of condoms and visit to the sanitation center, and a listing of the prices. The rooms were to be numbered, for easy identification, with black numbers of a certain size on a white background. Further signage adorned the building entrance (only Wehrmacht personnel allowed) and the waiting room. The sale of obscene photos, or the taking of photos of Wehrmacht personnel, was forbidden. Alcohol was also forbidden at first, although later regulations allowed weak beer or wine in limited quantities, while maintaining the ban on stronger drinks. Drunkenness was not allowed. Regulations even governed the nature of the sex: "obscene and unnatural acts," or the presence of any equipment for sadistic sex, was forbidden.²⁶

Further rules dealt with other aspects of brothel administration. Regulations governed the equipment and personnel for the sanitation center, which was sometimes located within the brothel itself. Opening and closing hours and rates had to be set; these often involved the local military headquarters, with input from the senior physician, or might also involve civilian authorities. Extra patrols and police guards were often assigned to maintain control in and around the brothels. Most brothels had a civilian in charge, someone who spoke the local language and could oversee the operation more closely than the military could. These overseers (usually women, but sometimes men) had to report to the rehabilitation center on the women who worked in the brothels and on the number of visitors. They were also responsible for seeing that the women followed all the regulations.

The controls on the lives of the women (or, as the Germans called them, "girls"—*Dirnen*) were extensive. The women had to live in the brothels. They could not leave without permission, and then often only with an escort. They could not change rooms within the brothel without permission. They had to submit to twice-weekly medical examinations by a local doctor as well as follow all the rules regarding condom use and hygiene and see to it that their visitors did also. If found to have an STD, they were admitted involuntarily to a hospital for treatment and forbidden to have sex until the treatment was complete. They were not allowed to possess any medications of their own with which to treat STDs. Any woman who was found to have infected a German soldier with an STD would be court-martialed.²⁷ The women could not be hired, change brothels, or resign without permission from the German authorities.²⁸ They could be, and often were, transferred from place to place by the Germans, depending on demand in particular brothels or regions. Polish women, for example, found themselves sent off, not just to different cities in Poland but also to Germany to service forced laborers or to Wehrmacht brothels on the eastern front. They were not allowed to set the prices for their own services; instead, they were fixed by the Wehrmacht administration.²⁹ There are indications that brothel women who became pregnant were forced to undergo abortions, which is credible, given that such cases are well documented for eastern forced laborers.³⁰ On top of all this, of course, the women had to deal with the psychological and physical strain of the work, which could involve sex with 20 or 30 men per day. Many of them ignored the ban on alcohol in order to cope with their circumstances.

As for the women themselves, their origins and their personal experiences, little information has come to light. The numbers are uncertain; estimates of the total who served in the brothels run as high as 50,000, but the data is unavailable. They came to the work for a variety of reasons. Some women did "volunteer," to the extent that the concept applies. Some had been established sex workers, while others were new to it. In either case, many probably acted out of a desire to save themselves and their families from the threat of starvation, which was even more serious under German occupation,

especially in the east. Some eastern women may have become prostitutes as an alternative to deportation to Germany, about which stories circulated of attendant rape, sexual slavery, sterilization, impregnation, incarceration, and even execution.

Once a woman became a sex worker, switching to another profession was problematic. The Germans (and their allies, such as the Vichy administration) registered prostitutes and suspected prostitutes. The latter category was broad and ill-defined; invariably, the Germans registered some women who were not, in fact, prostitutes or who engaged in it only occasionally. Once registered, however, they often could not find other work. They had to report to the health authorities regularly for their STD exams, which brought them into contact with others in that social circle and gave them a reputation, both of which made a return to normal work difficult. Many bordello workers later maintained that they were forced into the job. They often said that the choice was either a bordello or a labor camp. German documentation backs this up in at least one case in Poland, in the city of Bromberg (Bydgoszcz).³¹ In France, the Vichy authorities sent streetwalkers and unauthorized prostitutes to labor camps, such as Jargeau and La Lande, where the conditions were life-threatening; one way out was to work in a German brothel.³² Some registered women in Poland even volunteered to work in Germany, despite the dangers just mentioned, and then hid the fact of their registration, in hopes of escaping the label.

For still other women, any pretense of choice disappeared. There are stories from Eastern Europe, albeit undocumented, of Germans simply rounding women up off the street and putting them in brothels. The Germans also brought women from concentration camps, especially the women's camp at Ravensbrück, to work in army brothels.³³ In the Warthegau region of occupied Poland, Reichsstatthalter Arthur Greiser decreed on September 25, 1940, that women who violated the regulation against relationships with Germans could be forced into sex work as punishment, and documentation exists to prove that the authorities did indeed implement the policy.³⁴ The alternative was imprisonment in a concentration camp—where a woman could be forced into sexual slavery in any case.

The main point in all of this, of course, is that the women who worked in Wehrmacht brothels had little or no choice in the matter. Their lives were under the control of the military and governmental authorities, just as their bodies were used by tens of thousands of men who visited the brothels. They were victims of an official, militaristic, misogynistic masculinity and a racist ideology, and one should note that they never received any restitution or even acknowledgment for the damage that the Wehrmacht did to them. On the contrary, most of them lived lives of secret shame, once the war was over.

SOURCES Few primary sources on this topic have come to light so far, and those that have consist mostly of policy documents from the higher levels of the German military and political hierarchy. Records in BA-MA are the most fruitful, and some categories, such as the records of the Ortskommandanturen, may still hold some evidence that has not been uncovered yet, but initial searches in some of those records have

turned up little. The citations in this essay lead to many of the relevant record groups.

Note: an earlier version of this essay used material from an oral interview with Leigh Fraser, a British nurse who provided unique details from the lives of brothel women. Her testimony has since been struck, however, following the receipt of evidence that places serious doubt upon her veracity.

As for secondary works, an early study of prostitution and the brothel system during World War II is Franz Seidler's *Prostitution, Homosexualität, Selbstverstümmelung* (Neckargemünd: Kurt Vowinkel, 1977). Much of Seidler's work has come under criticism for its neoconservative approach and lack of citation, but this book is still a good starting point for research on this topic; the major obstacle is that it does not exist in an English translation.

Other important sources include: Maren Röger, *Kriegsbeziehungen: Intimität, Gewalt und Prostitution im besetzten Polen 1939 bis 1945* (Frankfurt am Main: S. Fischer, 2015); Regina Mühlhäuser, *Eroberungen: Sexuelle Gewalttaten und intime Beziehungen deutscher Soldaten in der Sowjetunion, 1941–1945* (Hamburg: Hamburger, 2010); Regina Mühlhäuser, "Between 'Racial Awareness' and Fantasies of Potency: Nazi Sexual Politics in the Occupied Territories of the Soviet Union, 1942–1945," in *Brutality and Desire*, ed. Dagmar Herzog (New York: Palgrave Macmillan, 2009), pp. 197–220; Birgit Beck, *Wehrmacht und sexuelle Gewalt: Sexualverbrechen vor deutschen Militärgerichten 1939–1945* (Paderborn: Ferdinand Schöningh, 2004); Insa Meinen, *Wehrmacht und Prostitution während des Zweiten Weltkriegs im besetzten Frankreich* (Bremen: Temmen, 2002); Christa Paul, *Zwangprostitution: Staatlich Errichtete Bordelle Im Nationalsozialismus* (Berlin: Henrich, 1994); Maren Röger and Emmanuel Debruyne, "From Control to Terror: German Prostitution Policies in Eastern and Western European Territories during Both World Wars," *Gender and History* 28, no. 3 (November 2016): 687–708; Monika Flaschka, "Race, Rape, and Gender in Nazi-Occupied Territories" (PhD dissertation, Kent State University, 2009); and Wendy Jo Gertjenssen, "Victims, Heroes, Survivors: Sexual Violence on the Eastern Front during World War II" (PhD dissertation, University of Minnesota, 2004) (use with caution; there are some problems with the translation and interpretation of sources).

FLÜCHTLINGSLAGER (FL) KALATSCH

This "refugee camp" existed from the end of September 1942 until November 1942 in the town of Kalatsch (map 9d) (today Kalach, Volgograd oblast', Russian Federation), 70 kilometers (43.5 miles) west of Stalingrad (today Volgograd). The Red Army liberated the town and the camp on November 23, 1942, during the initial phase of the Stalingrad counteroffensive. The camp was subordinate to the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585; as of October 1942, Korück 593).

The Germans created the camp in order to confine civilians from the city of Stalingrad, who were subject to evacuation westward by order of the Sixth Army headquarters, because Stalingrad was in the zone of combat operations.¹ Thus, the designation "refugee camp" was a misnomer or euphemism for a forced evacuation or internment camp.

The prisoners received wholly inadequate treatment in the camp: the food was lacking in both quality and quantity, and there was no medical aid; as a result, the prisoners developed

infectious diseases, and some died. A document dated June 27, 1943, described the civilians' conditions of confinement as follows:

In the transit camp at Kalach [sic], the people being sent on were kept outdoors, in snow, in rain, and they were starving. Food was given out once a day. It consisted of two spoonfuls of hot wheat and a small piece of uncooked horsemeat. Water was not provided at all. The mortality rate in this transit camp was very high. The weeping and groaning of the women, children, and sick here continued unceasingly. The German soldiers and bureaucrats looked at it all with indifference. People who had lost their strength were forced to do work that was too much for them, such as carrying logs and the like. Those who were unable to work were kicked by the Germans and beaten with rubber truncheons and rifle butts.²

FLÜCHTLINGSLAGER (FL) POGODINSKOJE

FL Pogodinskoje existed as a “refugee camp” from the end of September 1942 until November 1942 in the small village of Pogodinskii (map 9d) (German: Pogodinskoje; today Pogodin, Surovikinskii raion, Volgograd oblast’, Russian Federation), about 100 kilometers (62 miles) west of Stalingrad (today Volgograd), north of Tschir (today Chir). It was not really a refugee camp, since the inmates were forced evacuees. In German documents, the camp was also known as the prisoner of war camp (*Kriegsgefangenenlager*, KGL) Pogodinskoje, although it did not contain prisoners of war, and as a reception camp (*Auffanglager*).

The camp was subordinate to the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585; as of October 1942, Korück 593). Initially, the camp was “watched over” by a subunit of Organisation Todt, the quasi-governmental construction agency, and later by the neighboring Dulag 123.¹

The Germans built the camp to hold civilians from Stalingrad, who, by order of Sixth Army headquarters, were subject to evacuation westward, because Stalingrad was located in the zone of combat operations.² The camp in Pogodinskii was a transit camp: from this camp, people were sent by train (from Tschir) to the collection camp (*Sammellager*) (also known as the *Hauptflüchtlingslager* or main refugee camp) in Belaja Kalitwa (suburb). In early November 1942, an average of 200 people per day came to the camp, but with each passing day their number decreased.³

The treatment that the prisoners received was unsatisfactory: the food was lacking in both quantity and quality, and there was no medical aid, as a result of which infectious diseases broke out and some people died. The Red Army liberated the camp on November 23, 1942, during the initial phase of the Stalingrad counteroffensive.

SOURCES Primary source material about FL Pogodinskoje can be found in BA-MA (RH 20/6); GAVolO; and the State Institution “Center for Documentation of the Contemporary History of Volgograd Oblast”.

FLÜCHTLINGSLAGER (FL) TSCHIR

FL Tschir existed as a “refugee camp” from the end of September 1942 until November 1942. It was deployed at the Tschir railroad station (map 9d) (today Chir, Volgograd oblast’, Russian Federation), 100 kilometers (62 miles) southwest of Stalingrad (today Volgograd).¹ It was not really a refugee camp, since the inmates were actually forced evacuees. In German documents, the camp was also called a reception camp (*Auffanglager*), a collection camp (*Sammellager*), or a prisoner of war camp (*Kriegsgefangenenlager*)—the last also a misnomer, since the camp did not contain prisoners of war.

The camp was subordinate to the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585; as of October 1942, Korück 593). Local Command (*Ortskommandantur*) I/765, at the Tschir railroad station, apparently exercised direct control over the camp.

The Germans built the camp to hold civilians from the city of Stalingrad temporarily, who, by order of the Sixth Army headquarters, were subject to evacuation to the west, because Stalingrad was located in the zone of combat operations.² The camp at the Tschir railroad station was a transit camp: from this camp, the Germans sent people by rail to the main refugee camp (*Hauptflüchtlingslager*) at Belaja Kalitwa (suburb).

The treatment that the prisoners received was horrible: no shelter, food that was inadequate in quality and meager in quantity, and no medical aid; as a result, there were outbreaks of infectious diseases and instances of death in the camp.³ A description of the civilians' conditions of confinement in the camp can be found in the testimony of Stalingrad resident Iraida Modina:

After we crossed the Don at Kalach, they told us that we were going to Nizhnii Chir. Mama could no longer walk on her own, and Zina and Mariia led and supported her under the arms. We were afraid they would shoot her. Mariia managed to stop a truck that was driving past, and she asked the German driver to take Mama and me to Nizhnii Chir. "Nizhnii Chir, Nizhnii Chir," she repeated to the German. He took Mama and me, but after a time, for some reason, he put us out somewhere along the road. Mama was lying on the side of the road, and I was sitting next to her. I was very frightened. I was afraid that my sisters would not find us. Soon thereafter my sisters caught up with us, and we decided to always stay together from then on. When they brought us to the Chir railroad station, the first snow was falling. It was evening, and we looked for a place to spend the night in the freezing weather that had set in. At the station there were some storehouses made of red brick. We went into one of these buildings. There was no one there. Inside the building, we found a cement floor and cement walls. We sat around Mama, leaning our backs against the wall and covering ourselves with a quilt that already had become quite threadbare. After waking up in the morning, the first thing I saw was the quilt, covered with hoarfrost. My sisters woke up. We had to go, but we couldn't get up. The frozen tendons in our legs would not obey. Slowly we began to rock from side to side, using our hands and arms to push off the floor, until the tendons warmed up from our movements. We stood up, and my sisters took Mama under her arms and led her onto the platform. We were chilled to the bone and felt that we would inevitably get sick (which in these conditions was

tantamount to death) unless we could get into a heated building for a short while. Not far from the station was a small wooden cottage, the door of which stood half open. We went into the cottage. It was crammed full of people. The mistress of the house let in everyone who could manage to find room. We stayed in the warm hut for about 30 minutes until the train came to the station for us, and that was enough time to get warm. I remember the mistress of the house. She saved many people's lives, including ours, at that time.

Stalingrad resident Valentin Nefedov's testimony supplements that of Iraida Modina:

On foot, we reached the Chir railroad station. The large area around it was fenced in with barbed wire. One may say that we were the last ones to be shoved inside by the Germans, who then shut the "pen." It was late November, and in the daytime a light rain had already begun to fall. We started looking around: the area was large, almost empty, and they did not allow Russians into the small buildings that were located there. From time to time, cattle cars or simply flatcars were brought up to the station, and people were loaded in like livestock and taken westward. But the rain grew heavier . . . Luckily for us, Uncle Fedor spotted a rather large pit in the ground, most likely from a small bomb. On top, as a roof, we spread a Persian carpet and oilcloths, and somehow we were sheltered in the "dugout" from the rain, which by now had turned into a downpour. But a large number of people thus were left to get wet out in the open . . . At night it was freezing, minus 20 degrees Celsius [-4 degrees Fahrenheit] . . . In this "pen" we also met relatives on my father's side—his brother's wife and their two children. The little girl was 4 years old—her mother didn't let her out of her arms all night long, she kept her warm, shielded her with her own body from the wind, and the little boy, Vitia, was 10. He, drenched like everyone else, pressed his back against his mother's legs and knees. By morning the little guy had frozen to death. . . . And in the morning there was groaning at the Chir station.⁴

The Red Army liberated the railroad station and the camp on November 23, 1942, during the initial phase of the Stalingrad counteroffensive.

NOTES

1. Pohl, *Die Herrschaft der Wehrmacht*, 323, claims that the camp was located at the settlement (railroad station) of Nizhnechirskaia (20 kilometers [12.4 miles] south of the Chir station), but this assertion appears to be incorrect. The same incorrect statement is also found in a document dated June 27, 1943 (cf. Chuianov, *Zverstva nemetsko-fashistskikh zakhvatchikov*).

2. For details on the preparation for and implementation of the evacuation of the civilian population from Stalingrad, see Lübers, "Die 6. Armee."

3. On the German evaluation of the conditions of confinement of the civilian population in the camp, see Korück 593, Bericht vom 5.11.1942: Besichtigung des Flüchtlingslagers Tschir am 4.11.1942, BA-MA, RH 23/353.

4. The testimonies are posted on the website <http://serjcoltel.livejournal.com/4859.html>.

HAUPTFLÜCHTLINGSLAGER (HFL) BELAJA KALITWA

HFL Belaja Kalitwa, the "main refugee camp" at Belaja Kalitwa (today Belaja Kalitva, Rostov oblast', Russian Federation) (map 9i) existed from the end of September 1942 until January 1943. The town lies 168 kilometers (104 miles) northeast of Rostov-na-Donu and approximately 300 kilometers (186 miles) southwest of Stalingrad (today Volgograd). In German documents, Belaja Kalitwa was called Vorstadt.

The camp was subordinate to the Commanding General of Security Troops (*Kommandierender General der Sicherungstruppen*) and Commander of the Army Group Don Rear Area (*Befehlshaber Heeresgebiet Don*). Belaja Kalitwa was the location for the Chief Field Command (*Oberfeldkommandantur*) 398, with the subordinate Local Command (*Ortskommandantur*) I/926; indications are that they exercised direct control over the camp.

The Germans created the camp to temporarily confine civilians from Stalingrad, which, by order of the Sixth Army headquarters, was subject to evacuation to the west because it was located in the zone of combat operations.¹ The camp was also called a reception camp (*Auffanglager*) or a prisoner of war (POW) camp (*Kriegsgefangenenlager*), although it was not connected to the POW camp system in any way and did not

hold POWs. "Refugee camp" was itself a deliberate misnomer or euphemism for what was really a forced evacuation or internment camp.

The conditions in the camp were unsatisfactory: food was inadequate and meager, medical assistance was absent altogether, and, as a consequence, infectious diseases broke out and some people died. For example, according to a report from the head of the camp in Vorstadt, "Among the refugees during the period [of] October 27, 1942, to November 2, 1942, 24 refugees died from exhaustion, injury, and starvation."²

A 22-year-old from Stalingrad, S. A. Ivanova, who was in HFL Balaja Kalitwa, described the conditions there as follows:

On October 26 we arrived at the Chir [German: Tschir] station, where we were loaded onto open flatcars and taken to the Belaja Kalitva station in Rostov oblast'. We reached the Belaja Kalitva station on October 29 and lived out in the open there until November 13. It rained, and later there were freezing temperatures as well. The old people, the sick, and the children were dying and freezing to death. A great many were buried right there at the station. Graves for them were dug by those who were still able to hold spades in their hands. It was right there that I witnessed the following: a Soviet citizen, who had worked on building a railroad bridge at the Belaja Kalitva station and no longer had the strength to work, said as much to a German soldier and asked for something to eat. He was taken off the job and led away somewhere. The next morning he was hanged in the presence of all the remaining people busy at the construction site. People were sorted at the Belaja Kalitva station: the healthy adult men, young men, and young women were torn away from their families by the Germans, and some were taken to Germany, while some were taken to work in other places. The grief of the families left behind was boundless. The specter of an agonizing and terrible death hovered over both those who left and those who stayed behind. But the German slave owners were touched by neither the tears nor the cries of the unfortunate. In early February 1943, not long before their retreat, the Germans shot 66 Stalingrad families in the Grushevskia ravine, Belaja Kalitva raion, Rostov oblast'. The shooting took place over the course of three days, from February 3 to February 6. During the nights, the Germans took people in trucks from the small village of Sinegorsk to the Grushevskia ravine, located 18 kilometers [11 miles] from the small village. Entire families were taken. There were both old people and children. Before the departure their last belongings were taken away. Officially it was announced that these families were being sent farther into the rear

area of the German army. But in fact they were taken into the ravine, where they also were shot. The Germans planned to shoot 158 more people, but on February 8, 1943, the Red Army put an end to this nightmare. Found at that time was a list of people subject to execution by shooting, consisting entirely of people from Stalingrad. Among them was my family as well. The list was headed "List for removal of politically unreliable families."³

The testimony of S. A. Ivanova supplements a report dated June 8, 1943, that described the conditions in the camp as follows:

By early October 1942, the Germans herded around 10,000 Soviet citizens from the German-occupied raions of Stalingrad into Belaja Kalitva and placed them in the poultry houses and stables of a sovkhoz [state-owned collective farm]. The excessive congestion of human beings in impractical accommodations without provision of food of any kind resulted in diseases, and every day as many as 100 prisoners died of disease and starvation. Soon thereafter the German command suggested that the Soviet citizens volunteer to go off to work in Germany. When there proved to be no one willing to leave, the Germans organized a forcible selection of those who were fit for work, for the purpose of slave labor. Adhering to the principle of driving a strong, healthy workforce into slavery, the Germans selected Soviet citizens who were fit for work, not taking into account that they were separating children and parents. All the citizens who were selected were placed in special barracks surrounded with barbed wire and, after being subjected to a medical examination, they were sent off to Germany in railroad cars under strict guard.⁴

The selection of able-bodied civilians for use at forced labor was handled in the camp by Economic Detachment (*Wirtschaftskommando*) 3 (Major Schütte), which was subordinate to Economic Inspectorate (*Wirtschaftsinspektion*) Donez (Generalmajor Hans Nagel). Economic Detachment Rostow, which was subordinate to Army Group (*Heeresgruppe*) Don, was responsible for supplying the civilians in the camp with food. In the entire period of the camp's existence, 72,000 passed through it.⁵ Some of them were sent to Germany to work, and some were placed in other raions and oblasts, including the General Region (*Generalbezirk*) Dnjepropetrowsk (Dnepropetrovsk, today Dnipro, Ukraine).

SOURCES Primary source material about the HFL Belaja Kalitwa can be found in BA-MA (RH 20/6; RH 22/81; RW 31/615; RW 46/42); NARA (microcopy T-77, rolls 1160, 1207); GAVoO; GARO; and the State Institution "Center for Documentation of the Contemporary History of Volgograd Oblast."

INTERNIERUNGSLAGER (ILAG) DONGELBERG

The Germans established the internment camp Ilag Dongelberg in July 1942, in Dongelberg, Belgium, in a wing of a castle that was formerly a children's home (map 2). The camp received field post number (*Feldpostnummer*) 43 406 L on December 17, 1943; the number was struck on March 20, 1945, shortly after the Germans disbanded the camp. Ilag Dongelberg was under the administration of the Military Commander for Belgium and Northern France (*Militärbefehlshaber Belgien-Nordfrankreich*), but, several other agencies, including the Foreign Office (*Auswärtiges Amt*), were also involved in its administration.

As of March 27, 1943, the camp held 66 interned women, including 63 British (among them 10 Jews), 2 Australians, and 1 South African. Those numbers remained fairly consistent throughout the camp's existence.

Conditions in the camp were relatively comfortable, with spacious rooms, central heating, and electric light. The International Committee of the Red Cross, whose representatives had access to the camp, had protective power-like responsibilities for the internees. The food was adequate; the rations matched those of Belgian (later German) civilians. On October 9, 1943, the British government gave permission for its interned citizens to perform paid work on a voluntary basis. The emphasis was on getting the internees to do agricultural work on the grounds and so provide some of their own food. The authorities allowed the prisoners to write a card and two letters weekly, and the internees could attend religious

services in the village (for Catholics) or the camp (for the Church of England).

INTERNIERUNGLAGER (ILAG) GIROMAGNY

The Germans established an internment camp (Ilag) for enemy civilians in Giromagny, France (near Belfort), on November 15, 1943, from the staff of the former Ilag VIII (map 2). The camp was subordinate to the Armed Forces Commander France (*Wehrmachtbefehlshaber Frankreich*).

Ilag Giromagny primarily held British and Commonwealth citizens who had been living in continental Western Europe when the war broke out. As of February 1, 1944, there were 980 internees in the camp, 904 of whom were from Britain and the Commonwealth—835 from the United Kingdom, 41 from Canada, 20 from Australia, 5 from South Africa, 2 from New Zealand, and 1 from India. The 76 other internees were American.¹

The camp was located in a former French army barracks, which was later used by German forces after they occupied Giromagny in 1940. The camp contained nine stone barracks, 56 meter by 16 meter (184 feet by 53 feet), with tile roofs. The larger rooms within the barracks had three electric lights, while the smaller rooms only had one; however, all rooms had large windows to allow for sufficient lighting. One barrack was reserved for use as the camp mail room and chapel; this barrack also contained the storeroom for Red Cross parcels. A second barrack held the canteen, library, study hall, theater, and exercise room. The other seven barracks were the internees' quarters, six of which held British internees and one of which held Americans. The camp kitchen was located in a separate building.²

Conditions in the camp were relatively good, according to Red Cross inspectors. The food was reportedly decent and roughly equivalent to that which was available to German civilians. However, the internees complained that supplies of tobacco and cigarettes were inadequate. Another problem was a shortage of clothing, which the internees asked the Red Cross to ameliorate. The canteen was deemed to be well stocked. Hygienic conditions in the camp were good. The

sanitary facilities were adequate, and the prisoners were able to take hot showers once a week. Vermin were reportedly not a problem. The camp infirmary had about 20 beds for sick internees, which were not full at the time of the Red Cross inspectors' visit in February 1944, indicating that the internees' health was generally good. Most of the medical care was provided by two orderlies and a medical student, with periodic visits from a German doctor. Seriously ill people requiring surgery or advanced treatment were sent to the larger hospital at Ilag Vittel. Medical supplies were provided by the Germans.³ On March 16, 1944, the Germans reorganized the camp as Stalag 315.

INTERNIERUNGLAGER (ILAG) SAINT-DENIS

The Germans established Ilag Saint-Denis (today Seine-Saint-Denis), northeast of Paris, in June 1940 (map 2). The internment camp was subordinate to the Armed Forces Commander France, Administrative District (*Wehrmachtbefehlshaber Frankreich, Verwaltungsbezirk*) until June 21, 1941, when it ceased to be an independent camp. On July 28, 1941, it became a dependent camp of Frontstalag 122 in Compiègne and was subordinate to the Military Commander of Northwest France (*Wehrmachtbefehlshaber Nordwestfrankreich*).

The camp held American, British, and Commonwealth civilians who had been in continental Western Europe when the war broke out. Conditions in the camp were generally decent. However, a Red Cross inspector who visited the camp on June 5, 1943, reported that the camp was overcrowded. A subsequent visitor reported that there were 1,909 internees in the camp as of October 5, 1943. This inspector believed that

transferring about 200 internees to other camps would relieve the overcrowding. The inspector who visited in June noted that there was a shortage of clothing, particularly for those internees who were working, and that a reserve supply of clothing should be created; the October visitor reported that this issue had been addressed. Other problems noted in June 1943 included the presence of vermin in the barracks and a minimal selection available in the camp canteen, although the former problem had apparently been solved by October 1943.¹

According to the journal *The Prisoner of War*, the internees lived in a collection of barracks and huts, all of which were heated. Indoor and outdoor games were available, as were a library, theater, orchestra, art classes, and a school. The YMCA provided most of the materials for intellectual and artistic activities in the camp. A camp committee of British subjects directed all the activities. Medical and dental care were available. The internees received the same rations as German civilians, plus weekly Red Cross parcels. Religious services were available for both Catholics and Protestants, and the internees could both send and receive mail.² The Germans disbanded the camp in August 1944.

INTERNIERUNGSLAGER (ILAG) VITTEL

Ilag Vittel (map 2) was established in May 1941 as a civilian internment camp for holders of British and American passports and Allied prisoners of war (POWs) who were being held for exchange. Officially known as Ilag 121 or Frontstalag 194, it housed 2,000–3,000 internees, mostly British citizens, in addition to Americans, South Americans, and citizens of other Allied countries. In Vittel, in March 1944, there were 1,800 British citizens, 300 Americans, 250 South Americans (many of them Polish Jews with South American passports), and 75 Soviet citizens.¹ Among the internees in Vittel were several hundred Jews with British, Palestinian, American, or

other foreign citizenship, who were initially treated no differently from the other internees. The Germans viewed the British, American, and South American internees in Vittel (including Jews) as candidates for exchange with German civilians or POWs in internment camps in England, the United States, Palestine, or other British territories.

Vittel is located in northeastern France, approximately 80 kilometers (50 miles) south of Nancy, in the Vosges Département region of Lorraine. It is the site of a well-known resort famous for its mineral springs. The resort consists of a number of hotels situated in and around a large park bordering on the main street of the town. Within the park there are fountains, a lake, tennis courts, and other sports facilities. During the first year of the war, and especially after the German invasion of June 1940, the hotels in Vittel were used to treat wounded soldiers—at first French soldiers, then German soldiers and wounded civilians. The area around Vittel was designated as a “forbidden zone” due to its proximity to the border.

Vittel became a civilian internment camp in May 1941, when nearly 2,000 internees—more than 1,000 women with British citizenship, a few children, a group of elderly men, and British (or Canadian) nuns who cared for them—were transferred to Vittel from a concentration camp in Besançon, in eastern France. Many of the women had been born in France but had married British citizens; a few were Jews with Palestinian citizenship. They had been arrested by French police beginning in November 1940 and brought to Besançon, where they were housed in primitive barracks, lacking the most elementary facilities. British authorities threatened that, unless conditions in Besançon were improved, they would retaliate against German POWs in British hands. Shortly thereafter, the women, the elderly men, and the nuns were moved to Vittel. In October 1942, some 300 women with American citizenship, who had been arrested in Paris, were brought to Vittel, while their husbands were sent to other internment camps. In 1943, Vittel became a family camp, and many of the husbands joined their wives.

Conditions in Vittel were unique in comparison to other German internment camps. The internees lived in hotels, all of which had running water, and some of which had central heating. Where no central heating was available, small stoves were provided. Some rooms had private baths. In others, the bath was down the hall. A few internees were assigned to each room, and they could change their rooms if they wished. Families were allowed to live together.

Internees were not required to work but were asked to perform household chores such as peeling vegetables. Young men, however, were required to help with the maintenance of the camp. Much of the manual labor in the camp was performed by Senegalese POWs who had been with the French army.

During the day, the internees could use the sports facilities in Vittel. Movies were shown twice a week, and, in addition, the internees organized concerts and theater productions, complete with costumes. One of the hotels

Ilag Vittel. The departure of 100 prisoners who were repatriated from Vittel to their homeland, October 1943.

USHMM WS #13675.

housed a library with thousands of volumes. Another hotel served as a hospital, staffed by British and French doctors who were POWs. The nuns in the camp organized a school for the young children of internees. Older students could attend lectures given by visiting professors in preparation for their baccalaureate examinations. Religious services of several denominations were held in the camp.

Although the camp provided only a basic diet, British and American internees received supplementary food packages from the British or American Red Cross. The packages contained canned goods as well as cigarettes, which could be used for barter to obtain fresh food items from residents of the surrounding area. British internees received monthly cash allowances from the British Red Cross so that they could purchase fresh fruit and toiletries at the canteen. American internees received cash allowances from the American Red Cross sporadically. Kitchens in the hotels provided hot water for tea or coffee at all hours of the day, while the kitchen stoves were available for private cooking by internees. Some internees also grew vegetables in small gardens allocated to them. A number of internees set up small workshops where they repaired shoes or produced kitchen utensils fashioned from discarded Red Cross tins.

Internees in Vittel could correspond with the outside world, although their letters were censored. They could receive packages and money transfers from friends and relatives, and they could receive visitors.

Population changes occurred frequently in Vittel. Internees were transferred to Vittel from civilian internment camps in France and Germany or sent from Vittel to those camps. Internees arrived from Belgium and the Netherlands. There were 130 Libyan Jews with British citizenship who were brought to Vittel in the summer of 1944. A number of repatriations took place in which internees from Vittel were exchanged for German civilians or POWs and repatriated to England, the United States, or Palestine. The last repatriation took place in July 1944.

The camp, including the hotels and the park, was surrounded by three rows of barbed wire. German soldiers who had been wounded or were too old for combat, patrolled the outer perimeter of the barbed wire. Within the camp, there were no guards and internees could circulate freely until curfew.

As the number of internees in Vittel increased, hotels outside the park across the main street of Vittel were opened to accommodate them. To enable the internees to reach the park, the Germans constructed a footbridge over the main street.

Internees who needed medical care not available in Vittel were sent to the hospital in Nancy or to a hospital in Paris, accompanied by a guard. Some internees visited the surrounding villages accompanied by a guard. On at least one occasion, internees were taken to a nearby football stadium to attend a sports event. Internees were occasionally released from the camp for medical reasons, or for reasons of age, and were allowed to return to their homes in France.

The commandant of Ilag Vittel was Hauptmann Otto Landhauser, an Austrian. Before the war, he had been a physical education instructor. Landhauser was aided by two women chosen by the internees—one British and one American (known as “captains”)—who helped manage the camp. They, in turn, appointed “floor supervisors,” who checked the rooms on each floor of the hotels twice daily (morning and evening) to make sure that everyone was present. The captains arranged the schedule of chores. They also helped draw up lists of the internees who would be included in prisoner exchanges, and they were supposed to notify the protecting power of any new arrivals. A number of internees worked in the administration of the camp, helped distribute the Red Cross packages, and helped organize sports and cultural events.

Landhauser had two assistants, Stefan Wellens (apparently of the Wehrmacht) and a person known as Servai (possibly Erwin Serve), who searched the rooms of internees suspected of subversive activities and meted out punishments to those who violated camp rules, such as confinement to one's hotel or room or to the guard house, or the loss of mail privileges. One internee who complained to a Red Cross representative was transferred to an internment camp in Germany. In the event of an escape from Vittel, Landhauser and his two assistants, armed and accompanied by dogs, would search the surrounding area. Germans also served as censors in the camp.

As a civilian internment camp, Vittel was under the supervision of neutral Switzerland, which served as the protecting power for citizens of Britain, the United States, and a number of South American countries. Swiss diplomats visited Vittel every three months and filed detailed reports with British, American, and Swiss authorities. Representatives of the International Committee of the Red Cross and the YMCA also visited the camp periodically.

An active underground existed in Vittel. Its members included French workmen who entered the camp daily and doctors from the hospital, especially Dr. Jean Levy, a French

Jewish surgeon. Also active in the underground were a number of internees with British citizenship, some of them members of the Communist Party. With Dr. Levy's assistance, they helped several internees and POWs escape from the camp. Madame Germaine Bouloumie, the local Red Cross representative in the town of Vittel, also tried to help the internees.

Among the Polish internees with South American passports were some survivors of the Warsaw Ghetto Uprising, including the famous poet Yitzhak Katzenelson. Initially, these internees were recognized as Americans and received food packages from the American Red Cross. In early 1944, the Germans announced that the South American passports would no longer be considered valid. In March 1944, Jews holding such passports were isolated in the hotel Beau-Site, some distance from the main camp. On April 18, 1944, 163 Jews with South American passports were sent to Drancy.² On April 29, 1944, they were deported in convoy number 72 to the Auschwitz concentration camp.

The night before the deportation, two internees escaped from Vittel. The morning of the deportation, several of the internees tried to commit suicide. Three succeeded; others, whose attempts failed, were hospitalized.

On May 16, 1944, an additional 51 Jews with South American passports, some taken on stretchers from the hospital, were sent to Drancy.³ On May 30, 1944, they were deported in convoy number 75 to Auschwitz. Four internees escaped from the train.

Most of the (non-Jewish) internees in Vittel, unaware of events taking place in Poland, were apathetic to the plight of the Jewish internees. However, a group of non-Jewish internees who had heard about the Warsaw Ghetto Uprising from the Polish Jews in Vittel, led by the American pastor, tried to intervene with the commandant on behalf of those who were about to be deported. When the commandant assured them that the internees were merely being transferred to another camp, the pastor offered to accompany the internees to their new location. The commandant ordered that he be confined to his hotel, and other internees who tried to protest were confined to their hotels as well. One of the British internees wanted to marry a young Polish Jewish woman, thus conferring British citizenship on her and saving her from deportation, but the commandant refused to grant permission.

After the second deportation, approximately 30 Jews remained in Vittel, some in the hospital, the rest in hiding. They hid in the rooms of Jewish or non-Jewish internees until the liberation.

In August 1944, a train carrying several hundred Jewish prisoners and their families as well as French Resistance fighters—apparently convoy number 78 to Auschwitz—stopped briefly at Vittel. Those inside the train, who had been traveling for three days without food or water, cried for help. Madame Bouloumie, the local Red Cross representative, appealed to Landhauser to assist the prisoners, but he refused. Activists among the internees managed to smuggle food and water to the prisoners before the train continued its journey.

Vittel was liberated on September 12, 1944, by the French army of General Philippe Leclerc de Hauteclocque, followed by American army troops. Those who remained in the camp were interrogated by the liberating forces before being allowed to depart. Internees who were French citizens were permitted to return home; British and American citizens were repatriated. Internees who had no home to return to were taken to a hotel in La Bourboule in the south of France. By the end of October 1944, all the internees had left the camp.

Hauptmann Landhauser and his staff left Vittel in early September before the arrival of the French army. They apparently took the records of the camp with them; those records disappeared. After the war, Landhauser was arrested and tried for war crimes by a military tribunal. He was acquitted on the basis of testimony by former internees in Vittel, who praised his conduct while at the internment camp.

Dr. Jean Levy was decorated by the French and British governments for his heroic actions in Vittel. Sofka Skipwith and Madeleine Steinberg (née White), who were active in the underground in Vittel, were recognized by Yad Vashem as Righteous Among the Nations.

NOTES

1. Report of the Swiss diplomat who visited Vittel, March 11, 1944, NARA II, RG 389, Box 2142.

2. For the list of deportees, see HIJEFS to Gerhard M. Riegner, World Jewish Congress, September 29, 1944, Central Zionist Archives, C3/210. Some sources state that 173 Jews were deported in the first transport. This discrepancy is due to the fact that the deportation lists were drawn up ahead of time, but not everyone on the list was actually deported. For an exact list of those on the transport, see Klarsfeld, *Memorial to the Jews Deported*, pp. 544–547. See also Czech, *Auschwitz Chronicle*, p. 617.

3. Some sources estimate that 52 or more were deported. For an exact list of those on the transport, see Klarsfeld, *Memorial to the Jews Deported*, p. 568, and Czech, *Auschwitz Chronicle*, p. 638.

INTERNIERUNGSLAGER (ILAG) IV

Ilag IV existed from late 1943 or early 1944 until the spring of 1945. It was located in Schloss Eisenberg (today Jezeří Castle, in the Czech Republic), in Defense District (*Wehrkreis*) IV (map 4e). Ilag IV operated under the authority of the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*). The camp held Western Allied internees.

The conditions in Ilag IV are unknown, although, generally speaking, the Germans treated Western Allied internees relatively well. The International Committee of the Red Cross, whose representatives had access to the camp, had protecting power-like responsibilities for the internees.

SOURCES Additional information about Ilag IV can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensusstempel*, vol. 2 (Koblenz: self-published, 1987), p. 171.

INTERNIERUNGSLAGER (ILAG) VII Z

The Wehrmacht established Ilag VII Z as a civilian internment camp for Americans located in the Tittmoning castle (map 4f). The camp was a branch of the larger Ilag VII located 20 kilometers (14 miles) to the south in Laufen. The Wehrmacht first used the Tittmoning castle as a prisoner of war camp for officers, Oflag VII D, from February to November 1941. From November until February 1942, Oflag VII D was redesignated as Oflag VII C/Z, a subcamp of the Laufen officers' camp. In February, the Germans sent all these prisoners to Oflag VII B in Eichstätt. The Laufen camp, thereafter, became Ilag VII, and Tittmoning became its subcamp, Ilag VII Z.

Starting in the fall of 1942, Ilag VII Z held prisoners from North and South America. The majority held passports from the United States, and a small minority were from countries in Central and South America. In June 1943, of 369 internees, 327 had US citizenship. In April of the following year, 206 of 272 internees were nominally from the United States. Though they held American passports, most internees came from Poland and only a minority spoke English.¹ Many of the Polish men were separated from their families, some still in Poland, others in different civilian internment camps. The inhabitants ranged in age considerably. A significant number were over the age of 60 and suffered from chronic diseases. An international observer in April 1944 suggested that 54 of the 306 internees were not healthy enough to remain interned.²

A high proportion of the inhabitants at the camp were Jewish. In July 1943, 92 of the prisoners (over 25%) were Jews

from the Protectorate of Bohemia and Moravia.³ Some were American expatriates, while others, such as Zvi Rosenwein, had been fortunate to obtain passports to countries like Paraguay in the midst of the war.⁴ They had their own rabbi in the camp and were allowed to hold religious services. When one died, he was buried according to Jewish rites. This group was able to remain at Tittmoning through to liberation in 1945.

When the first civilian internees arrived at the camp, they regarded it as a step down from the well-equipped Laufen camp.⁵ The heavy and imposing medieval castle offered security and insulation, but these came with substantial trade-offs for the internees. The interiors of the three main buildings had dim lighting, and, although electric lighting was wired throughout, the small nearby town could not sustain the power necessary to keep the building well lit.⁶ The bordering Salzach River created a damp environment, and the combined dark and dank attributes of the castle contributed to a low state of morale.

The buildings could not be adapted to the number of inhabitants of the camp. Although there were sufficient beds for the internees, the castle buildings varied considerably in size and quality of accommodations. Some rooms held up to 40 inhabitants, while others held as few as 8. In one building, prisoners—several of them elderly—slept on the second floor and had to descend into the basement to access the bathrooms.⁷ Nearly 200 prisoners had to share six toilets, and the cesspools were located just outside the inhabitants' windows, which raised health concerns, particularly in the hot summer months, but, due to the nature of the castle structure, the authorities were unable to alter the situation.⁸

Upon first arriving, many believed the quarters to be only temporary. As a result, the inmates made little effort to improve the facilities through gardening or minor repairs, as happened in many other civilian camps. Temporary quarters became permanent, and the prisoners grew increasingly resentful. As one International Red Cross observer noted in August 1943, "So the discontentment [*sic*] is ever growing and the conditions which might be regarded as bearable are slowly felt as inhuman."⁹

Prisoners also initially exhibited a hostility toward work, fearing that any type of activity might advance the German war effort. The commandant initially proposed gardening and farming activities outside the camp, but these were rejected out of hand. By the summer of 1943, 31 prisoners had volunteered for work outside the camp, but the internees' representative refused to allocate these men their share of aid packages because of a belief they were "collaborating with the detaining power."¹⁰

INTERNIERUNGSLAGER (ILAG) VIII

The Germans established Ilag VIII on October 1, 1940, in Tost (today Toszek, Silesian Voivodeship, Poland), from the staff of Oflag VIII D (map 4e). Ilag VIII had a subcamp (*Zweiglager*) known as Ilag VIII/Z, in Kreuzburg, Upper Silesia (today Kluczbork, Poland). From June 4, 1942, the camp was known as Ilag VIII/H. The camp was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).¹

Ilag VIII primarily held British civilian internees. The following table shows the number of prisoners in the camp by nationality on selected dates between 1941 and 1943:²

Date	British	French	Yugoslavs	Americans	Total
February 28, 1941	1,227	—	—	—	1,227
September 1, 1941	1,018	—	—	—	1,018
April 1, 1942	1,247	2	4	—	1,253
October 1, 1942	1,307	—	—	—	1,307
June 1, 1943	1,420	—	—	86	1,506
October 1, 1943+	1,370	—	—	78	1,448

The initial 300 British internees came from the occupied Netherlands, while another 600 came from Belgium and France. Many had been employed by the Commonwealth War Graves Commission, tasked with identifying and preserving the graves of British soldiers from World War I.³

For most of these internees, the conditions at Ilag VIII proved superior to the poor conditions in the transit camps they had passed through on their way to the Ilag. They had regular access to Red Cross food parcels, and the camp canteen proved sufficient to meet their needs. The British

internees were able to make use of a cricket pitch and even built a miniature golf course on the camp grounds.⁴

The Germans initially created the subcamp at Kreuzburg as a punishment camp (*Straflager*), intended to hold problematic internees as well as those identified as Jewish. However, the conditions in the punishment camp were about the same as those in the main camp.⁵

Though conditions at Ilag VIII compared favorably to prisoner of war camps, the prisoners in the camp suffered due to overcrowding. Moreover, though prisoners were allowed regular mail communication, they complained of frequent delays beyond what would be expected solely based on wartime circumstances.⁶

On November 15, 1943, the camp administration was transferred to France, where it was redesignated Ilag Gironmagny.⁷ The internees in the camp were transferred to Ilag/Oflag 6 ZL (a subcamp of Ilag/Oflag 6) in Kreuzburg, and Ilag VIII was dissolved.

INTERNIERUNGSLAGER (ILAG) XIII

The Wehrmacht established Ilag XIII (map 4d) on July 15, 1940, in Defense District (*Wehrkreis*) XIII, in the Wülbzburg fortress.¹ It was under the jurisdiction of the Commander of Prisoners of War in Defense District XIII (*Kommandeur der*

Kriegsgefangenen im Wehrkreis XIII). From September 1943 to November 1944, the camp commandant was Oberst Karl-Friedrich Freiherr von Houwald.²

Ilag XIII held civilian internees from countries that were at war with Germany. Early in its existence, the camp held French, British, Dutch, and Belgian internees, followed by the arrival of Serbian and, later, Soviet internees. Among the internees were Arab civilians from British Palestine and Egypt; the latter were part of a failed attempt at an exchange for German prisoners held in Egypt in 1941.³ By October 1942, the camp held only Soviet citizens, as all of the internees of other nationalities had been repatriated or transferred to other camps. Beginning in September 1943, it also held Soviet officers, who lived in a separate part of the camp (*Teillager Oflag*).⁴ The camp population slowly increased from about 300 prisoners in September 1941 to about 540 prisoners in December 1944.⁵ According to a postwar questionnaire, there were subcamps in Weissenburg, Gundelsheim, and Möhren. The questionnaire also states that the camp held between 130 and 150 Jews.

The conditions in the camp were satisfactory. The camp administration and guards treated the internees decently. The interests of the detainees in the camp were represented by the Swiss embassy, the International Red Cross, and the War Prisoners' Aid Committee of the YMCA, whose representatives had access to the camp. The exact date of the camp's closure is unknown, but it must have been on or before April 23, 1945, when Wülbzberg was liberated by American forces.

INTERNIERUNGLAGER (ILAG) XVIII

The Wehrmacht established ILAG XVIII on May 19, 1944, in Spittal an der Drau in Defense District (*Wehrkreis*) XVIII (map 4f). The camp was subordinated to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*).¹

ILAG XVIII held American and British civilian internees. The camp prisoner population increased from 65 in October 1944 to 125 in December 1944.² Switzerland served as the protecting power for the prisoners in ILAG XVIII, which entitled the Swiss embassy to periodically send a delegation to the camp to inspect the conditions. The prisoners were divided into two barracks, one for the Americans and one for the British. Each barracks contained 12 small dormitory spaces. The internees slept in double bunk beds with sheets, pillows, and two blankets each. Each barracks had a washroom with cold water, but the internees could bathe with hot water at any time in their own "bathhouse," which was located outside the barracks area. In the barracks, there were toilets, running water, and wood- and coal-fired heating stoves; however, the internees had to obtain firewood themselves from the surrounding forests. Each internee was given an allowance of 10 RM per month, but they had little to spend the money on besides soap powder and soft drinks from the camp canteen. The internees regularly received food parcels from the International Red Cross. While most of the prisoners were treated decently by the Germans, the Jewish internees were treated poorly and subjected to abuses that the non-Jewish prisoners did not experience.³ The camp was liberated by British troops on May 3, 1945.

KONZENTRATIONSLAGER (KL) CHARKOW

The decision to establish KL Charkow (not part of the SS Main Economic and Administrative Office—SS-*Wirtschafts- und Verwaltungshauptamt*, SS-WVHA—concentration camp system) was made on October 23, 1941, on the eve of the occupation of the city (Russian: Khar'kov; today Kharkiv, Ukraine) (map 9f). The LV Corps Quartermaster Branch, working through the city commandant's headquarters (*Stadtkommandantur*), ordered Hauptmann Albert Minzenmay, aide-de-camp of the LV Corps, to establish a concentration and prisoner of war camp. Confirmation of the creation of the camp for hostages is also found in the orders of the LV Corps (Standortkommandanturbefehl, No. 4) on November 11, 1941, which also called for all Jews to be arrested.¹

The camp was first established in the Hotel International, renamed the Hotel Ukraine after the occupation of the city, situated on the city's main square, Dzerzhinsky Square. On December 6, 1941, the city housing office ordered the expulsion of the hostages from the hotel and the camp was transferred to two student dormitories in the city's 17th District (Tolkachevka).² The Germans probably disbanded the camp in February 1942, when they released those hostages who were still living. KL Charkow was subordinate to the LV Corps, through the Field Gendarmerie (*Feldgendarmerie*), and was led by Field Gendarmerie Oberstleutnant Roos.³

The camp was intended to hold hostages, who were subject to execution in retaliation for any acts of sabotage or attacks on German forces. In the early morning of November 11, 1941, a bomb, detonated via radio from Voronezh, blew up a building in which the staff of the 68th Infantry Division was quartered, killing the division commander, Generalmajor Georg Braun, the division's chiefs of staff and operations, and four clerks. Later in the day, four more buildings were blown up. In reprisal, 200 "communists" were immediately shot or hanged, and 1,000 hostages, among whom were several hundred Jews, were seized and placed in the camp.⁴ On November 28, according to the diary of Hauptmann Minzenmay, "the concentration camp was reduced by 400 heads, of whom 300 were Jews," which meant, without doubt, the execution of these individuals.⁵ Sonderkommando 4a probably carried out the executions. This unit conducted political checks on the hostages with the aim of uncovering "political unreliables."⁶ The last execution of hostages was on January 15, 1942, when 100 men were executed for the killing of a German soldier.⁷

A directive from the local commander (*Ortskommandantur*) Charkow-West of November 18, 1941, addressed to the mayor of the 6th District of Khar'kov, where the camp was located, defined the conditions of confinement. According to this directive, "District mayors must supply food and provide

essential household items for the hostages located in the Hotel International concentration camp. Food in the camp must be supplied by relatives. Those without relatives will be supplied by a levy on district inhabitants collected by the mayor. Food can be delivered at any time of day. Water buckets, chamber pots, and brooms are required."⁸ The conditions were extremely unsatisfactory. By November 1941, there was already famine in KL Charkow, and food supplied to the hostages was insufficient and irregularly delivered. Moreover, medical treatment was lacking.

KONZENTRATIONSLAGER (KL) KRAMATORSKAIA

On November 25, 1941, General Vincenz Müller of the Seventeenth Army headquarters (*Armeeoberkommando*, AOK 17) ordered the creation of a concentration camp next to the road between Kramatorskaia (today Kramators'k, Ukraine) (map 9f) and Druzhovka (today Druzhivka, Ukraine). Despite its

designation as a concentration camp, this camp was operated by the Wehrmacht and was not part of the SS Main Economic and Administrative Office (*SS-Wirtschafts- und Verwaltungshauptamt*, SS-WVHA) concentration camp system. KL Kramatorskaia was under the Seventeenth Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 550) and was run by the staff of Dulag 180.

Dulag 180 was to be responsible for surveying the camp site and constructing the camp. The camp also encompassed a compound of workers' housing in the area of the Melovaya Mountains on the northern outskirts of town. The intended capacity of the camp was 1,000 prisoners, although the order stated that it was possible that the camp would later be expanded to hold 2,000. The camp was to be guarded by troops from the Seventeenth Army, who would be subordinate to the camp commandant. The camp was to be ready to enter service by December 5.¹

The camp was intended to hold "suspected partisans and [enemy] agents until their guilt or innocence is clarified."² The true reason for their internment was reflected in an order issued by the commander of the Seventeenth Army, Generaloberst Hermann Hoth, earlier that month regarding the implementation of Field Marshal Walter von Reichenau's Severity Order (which had been issued on October 10, 1941). Hoth ordered that:

Every sign of passive or active resistance or any sort of machinations on the part of Jewish-Bolshevik agitators [is] to be immediately and mercilessly exterminated. . . . These circles are the intellectual supports of Bolshevism, the bearers of its murderous organization, the help-mates of the partisans. It is the same Jewish class of beings who have done so much damage to our own Fatherland by virtue of their activities against the nation and civilization, and who promote anti-German tendencies throughout the world, and who will be the harbingers of revenge. Their extermination is a dictate of our own survival.³

The AOK's order also gave specific instructions regarding the treatment of the prisoners in KL AOK 17:

1. Suspected vagrants and partisans, as well as others who are captured by organs of the AOK in the area of the [Seventeenth] Army, particularly that of the IV Corps, will be placed in the concentration camp.
2. During their stay in the camp, the men of confidence must attempt to perfectly clarify the past and intentions of the individual prisoners. Accordingly, the following procedures will be taken with the prisoners:
 - a. Former members of the Red Army will be sent to prisoner of war camps.
 - b. Commissars will receive special treatment [i.e., execution].

- c. Partisans, agents, and their accomplices will be sent to the Abwehr [Counterintelligence] officer of the Army to be registered. [The Counterintelligence officer] will decide their further treatment.
 - d. Harmless vagrants will be released in their place of origin with a warning and under the supervision of the newly appointed mayor or militia commander.
 - e. Prisoners who are from parts of the occupied area outside the Army's area of operations will be held in the camp for a minimum of one month, after which they may be released for good behavior.
 - f. Prisoners who are from the operations area or parts of the Soviet Union that are not yet occupied will remain in the camp (unless they fall under d.) until their place of origin is occupied or no longer in the area of operations.
3. The treatment of the prisoners shall be strict but correct. Every act of resistance will be immediately combated with the harshest methods. Prisoners who attempt to flee will be shot immediately.
 4. The prisoners remaining in the camp will receive the same rations, supervision, and punishment as provided for prisoners of war by the relevant orders. As many of them as possible will be sent to work, for example, removing snow, working on roads, and cleaning work; women will work in kitchens, as seamstresses, etc.
 5. Admit [to the camp]:
 - a. For the time being, all persons captured by the IV Army Corps except for prisoners of war.
 - b. Persons captured by the Secret Field Police [*Geheime Feldpolizei*], Security Service [*Sicherheitsdienst*, SD], and other law enforcement authorities of the AOK.
 - c. Prisoners transferred from concentration camps operated by other General Commands, who will be evaluated on a case-by-case basis. The camp administration must record in every case the reason why the delivered prisoners were taken prisoner and the offense of which they are suspected. The receipt of the prisoners must be certified.
 6. While the prisoners are in the camp, the staff will keep records of all interrogations as well as all behavioral sanctions received. After the clarification of each case, the camp administration will submit the recommendation for the release of prisoners to the Abwehr officer of the Army, Major Werner, with a brief but detailed explanation of the recommendation to be presented on the occasion of a visit [to Major Werner]. The camp commandant is responsible for the recommendation of releases.
 7. Releases will take place after a written order from the Abwehr officer of the Army. At the time of release, the prisoner will be given a certificate, which will read

in German and Russian: “[Name] from [city, street] is hereby released from the concentration camp in [location] because [grounds for release]. He must take the following route and report to the responsible mayor [route and name of mayor]. Every deviation from the aforementioned route will be punished harshly.” Add only in German: if the prisoner deviates from the assigned route, he is to be classified as a “suspected partisan or agent” and shot immediately.

8. The supervision instructions must be given to the probably frequently changing guard personnel by the camp commandant. Work outside the camp is also to be closely regulated. Another order will follow regarding the recruitment of Ukrainian militiamen for guard duty.
9. Food rations are to be the same as those for non-working prisoners of war, as recommended by the AOK Head Quartermaster. Additional supplies may be obtained from the nearby communities.
10. It is absolutely forbidden for civilians to enter the camp. The Abwehr personnel of the Army are to take special measures to ensure that entry to the camp is strictly regulated.
11. Propaganda: internment in the camp is an opportunity for the widespread use of anti-Bolshevik propaganda. The allocation of propaganda materials (newspapers, leaflets, records) will be regulated by the Propaganda Company. The connection of wired broadcasting systems is recommended.
12. Each day a report of the camp population will be submitted to the AOK (Abwehr officer Major Werner).

Although the AOK’s instructions stated that the prisoners were to be treated “strictly but correctly,” this order was not followed. Not only the suspects but their families were also confined, under brutal conditions, and the wives and children were shot along with any men found guilty.⁴ Details of SD and Wehrmacht personnel carried out the shootings.

In January 1942, when word arrived that the Red Army was approaching the area, the order was given to evacuate the camp to the west. However, there was no transport for the prisoners, so the camp administration decided to shoot all of them. The shootings took place on January 25–26, 1942, in a clay pit on the outskirts of town. Estimates of the total number of fatalities range from 379 (the official figure) to between 3,000 and 4,000. Afterward, the pit was dynamited, resulting in corpses being strewn around.⁵ Sonderkommando 4b probably carried out the executions.⁶

SAMMELLAGER CHOCHOL

In July 1942, the Wehrmacht established Sammellager Chochol (today Khokhol) (map 9d), 35 kilometers (22 miles) southwest of Voronezh, Russia. In October 1942, the camp was liquidated by transferring inmates to other towns or to work in Germany. Sammellager Chochol was subordinate to the Second Army Rear Area Command (*Kommandant rückwärtiges Armeegebiet*, Korück, 580).

The Germans used the camp to confine members of the civilian population of Voronezh, which, according to Second Army headquarters (*Armeeoberkommando*, AOK, 2), was subject to evacuation to the west, as Voronezh was in the zone of military operations.¹ Toward the end of 1942, 12,000 inhabitants left the city, and 2,500 people were funneled through Sammellager Chochol.²

Living quarters for city residents and conditions of confinement in the camp were unsatisfactory: food and medical care were inadequate, resulting in communicable diseases and a significant death rate. Sonderkommando 4a carried out checks on civilians and took Jews and others who seemed suspicious away for execution. In September 1942, 77 people identified as Jews (20 men, 47 women, and 10 children) were shot near the village of Staro-Nikolskoe.³

SOURCES Primary source material about the Sammellager Chochol can be found in BA-MA (RH 23/177–180: Korück 580, Kriegstagebuch No. 14–17: August–November 1942); and GAVO.

ENDLAGER OZARICHI

The Wehrmacht set up special detention camps (*Endlager*) near Ozarichi (today Azarychy in Belarus) (map 9c) on March 12, 1944. The camps lay in the German Ninth Army sector of the eastern front, about 120 kilometers (75 miles) south of the town of Bobruisk in Belorussia. They were, however, only in existence until March 19, since their sole purpose was to allow the Ninth Army to rid itself of those civilians who were incapable of labor, by shifting them into the no-man's-land between the Wehrmacht and the advancing Red Army.

The history of this group of detention camps is unlike that of almost any other set of camps under the Third Reich. It is tightly interwoven with the Ninth Army's military situation at the onset of 1944 as well as with the German policies of occupation, exploitation, and extermination. It is, thus, also a history closely connected with the civilian population, which was crowding together in increasing numbers in the shrinking territories under German control.

In March 1944, the forces of the Ninth Army were positioned in a perimeter of about 60–70 kilometers (37.3–43.5 miles) east and south of the city of Bobruisk. Among them were the LV Corps with the 5th Armored Division (*Panzerdivision*) and the 20th Armored Division; the XXXV Corps with the 6th, 45th, 296th, and 707th Infantry Divisions; the XXXXI Armored Corps (*Panzerkorps*) with the 36th and 253rd Infantry Divisions and the 4th Armored Division; and the LVI Armored Corps with the 35th, 110th, 129th, and 134th Infantry Divisions.

In the winter of 1943–1944, the Ninth Army faced the problem of having to provide food for thousands of civilians in its sector, some of them local, some of them already the victims of German deportations from farther east. The Wehrmacht had already deported all the able-bodied people to Germany for forced labor, leaving the old, infirm, sick, and women with young children. These people were mostly incapable of supporting themselves, but the Wehrmacht did not want to allocate precious food for their upkeep.

At the beginning of March, Adolf Hitler authorized a frontline adjustment within the 35th Infantry Division's sector, withdrawing from a salient in the German front line that was proving difficult to defend. This decision provided the Ninth Army with an opportunity to implement its radical plan: the elimination of "superfluous" civilians from the entire territory under its occupation by placing them in the territory that German troops would soon vacate, which lay within the sector controlled by the LVI Armored Corps, with General of Infantry Friedrich Hossbach in command. Directly pursuant to this authorization of retreat, the 35th Infantry Division began to set up the first camp.¹

General Josef Harpe, the commander of the Ninth Army, had pressed ahead vigorously with the enforced recruitment of civilian manpower for the Wehrmacht and the German war effort in 1943 and 1944, with full knowledge of the demographic consequences.² On March 9, he issued Order No. 233/44 in an effort to deal with those consequences. This order decreed that those persons incapable of labor be deported into the front area from which the army was retreating, starting at 4:00 a.m. on the morning of March 12. This measure also offered the advantage that it would help to control the spread of typhus, since the order included all civilians with the disease.³

The plan that the headquarters developed from this order called for German forces to establish a series of unloading points and collection camps (*Sammellager*) as well as the final detention camps. The quartermaster sections of the army headquarters, its corps, and the divisions were to organize and implement the operation. Besides the divisional troops, forces that reported directly to the corps as well as 150 men from Sonderkommando 7a of the SD were all to be involved.

Because of the local geographic conditions and the available means of transportation, the LVI and XXXXI Armored Corps, which were stationed nearest to the planned disengagement zone (*Absetzzone*) to the south of the Ninth Army sector, were to round up civilians and bring them to the camps, either on foot or by truck or horse-driven cart. The XXXV and LV Army Corps (*Armeekorps*), which were stationed farther away to the north, had the rail network for transport at their disposal. The order also regulated the deployment of Wehrmacht units under the command of Sonderkommando 7a to manage the victims' march up to the frontline zone and into the final detention camps.⁴ Apart from regulating issues relating to the supply of provisions, the order of March 9 further stipulated that, in the event of a retreat of the German frontline forces, the camps were to be shelled by artillery in order to prevent civilians from escaping and from approaching the German lines.⁵

The Germans established a system of fenced off areas, with no buildings and no sanitary facilities, in the area designated for the deportations. These collection camps would facilitate the concentration and transport of the civilians into the frontline area. The 129th Infantry Division, for example, set up a collection camp in the vicinity of the railroad depot at Rudobelka, which was a key point for the prisoners' transport

via rail. The camp was designed to hold 6,000 people. In fact, between March 13 and March 15, about 12,000–16,000 people were herded into it. From there, they were to be transported farther via a transit camp to the so-called Final Camp South (Endlager Süd), which the 35th Infantry Division had set up to accommodate 12,000 people. Sonderkommando 7a, aided by units of the Wehrmacht, was to guard the civilians during the last phase of the operation, the foot march from the depots to the detention camps.

In addition to this main axis for the transportation of the civilians, the 35th, 129th, and 110th Infantry Divisions set up smaller camps near to the villages of Nesanovichi, Porosslishche, and Mikul Gorodok, respectively, to take in those civilians brought in from the sectors for which the LVI and the XXXXI Armored Corps were responsible. Later on, they were moved to Endlager I near Myslov Rogor to Endlager II near Litvinovichi.

Each of the so-called Endlager consisted of a double-strand barbed wire fence and simple guard towers. The surrounding area was marshy woodland. To avoid the Red Army discovering the operation before the retreat had taken place, the civilians were forbidden to make fires, despite the severe cold.

According to the original plans, on which the order of March 9, 1944, was based, the intent was to deport 20,000 “diseased persons, crippled persons, old persons, women with more than 2 children under 10 years of age, and other persons incapable of labor” out of the Ninth Army sector.⁶ However, analysis of the available records shows that at least 30,873 persons were accounted for in the sector under the two northern corps alone, 23,519 of whom were brought by rail to Rudobelka. This is twice the number that was intended for this area. Correspondingly, conditions for the civilians in these camps became more acute, since food provisions were inadequate, as were the available means of transportation. As a measure against the typhus fever epidemic, those civilians who had already contracted the disease and were being held in quarantine, in so-called disease villages, were included in the deportations. A total of around 7,000 sick persons were brought to the camps, where they were not segregated from the still healthy victims. The consequences, both for those who had the disease to begin with and those who contracted it while in the camps, were often fatal.

The war diary of the quartermaster’s section contains information on the influx of victims into the camps between March 14 and March 16. It states that a total of 39,597 adult civilians in addition to “several thousand small children” were deported into the three detention camps.⁷ Furthermore, the Sonderkommando 7a registered a total of 47,461 persons.⁸ After liberating the detention camps, the Red Army spoke of 33,000 survivors and 9,000 dead.⁹ It is not possible to verify the accuracy of these figures, but they clearly indicate the deportation of up to 50,000 civilian victims.

Overall, the deportations covered an area of about 5,000 square kilometers (1,930 square miles). However, only some of the deportees originated from the area controlled by the Ninth Army. A lot of them had already been rounded up and

brought there from other regions of the Soviet Union under occupation by the German army. Some had been evacuated during the Ninth Army’s recent retreats; others had been in different Wehrmacht camps for weeks.

Wehrmacht units—particularly the supply units—were actively involved in all these activities.¹⁰ For the transportation into the detention camp at Dert, the escorting guards of the trains arriving in Rudobelka and “particularly resolute officers and NCOs of the LVI Armored Corps” reported directly to the Sonderkommando 7a.¹¹ In the areas under divisional control, the deportations were carried out by the troops of the Military Police (*Feldgendarmerie*) together with the units of the Supply Service, which reported directly to the quartermasters.

In agreement with the head of the Sonderkommando 7a—Sturmbannführer Helmuth Loos—the 110th Infantry Division took on the supervision of the northern transit camps (*Zwischenlager*) and detention camps. During the first days of the operation, the division supervised the civilians in the Transit Camp North (*Zwischenlager Nord*) near Mikul Gorodok and implemented their own truck transports from Rudobelka to the Transit Camp Center (*Zwischenlager Mitte*) near Porosslishche. Sonderkommando 7a, on the other hand, concentrated on the southern route, which was most heavily used and served as the main axis for the deportations. To guard the camps, the Supply Services of the Field Replacement Battalion (*Feldersatzbataillon*) of the 129th and 110th Infantry Divisions and reserve units of the Army Weapons Training School (*Armeewaffenschule*) and of the 35th Infantry Division were called in.

With regard to the conduct of the guards and soldiers during the operation, survivors reported later that even while rounding up the civilians initially, divisional units had reacted to any attempt at escape or any form of resistance with brutal force. Sonderkommando 7a prepared written documentation of the excessive brutality and killings, which took place above all on the marches from the railway station at Rudobelka to the detention camp at Dert. During the march, Sonderkommando 7a guarded the front and the rear of the column of civilians, while units of the Wehrmacht marched at their sides.¹² The guards ruthlessly killed those civilians who could not keep up with the rest. There are no exact figures available; however, the Ninth Army itself states in its corresponding report that about 500 people had perished during the rail transport alone¹³ and advised that for similar operations in the future, the marching columns should be followed by burial commandos, who would dispose of the dead bodies.¹⁴

Reports by surviving witnesses provide a picture of the horrid conditions on the marches and in the camps, over and above what one can glean from the available facts, such as the poor ratio between camp capacity and camp inhabitants, or the distances that the old, the sick, and the children were required to cover, the weather and ground conditions, and the pace at which the victims had to walk. Within the camps, the guards shot without warning any person who approached the fencing in search of water. Similarly, any

attempt to light a fire was met with shots from the Germans in the watchtowers.¹⁵

A dramatic diary entry made by a German army chaplain when he arrived at the huge camp near Dert, where at that time more than 20,000 civilians were already interned, illustrates the dreadful reality of the deportations:

I noticed that something had changed first of all because of a strange sound which I could not identify until I saw the camp in the distance. A continuous, low wail of many voices rose out of it up to the sky. And then I saw right in front of me how they were dragging the dead body of an old man as though he were a piece of cattle. They had tied a rope around his legs. An old woman lay dead by the wayside, a recent gunshot wound in her forehead. A man of the Military Police gave me further insight by pointing to a bundle that lay in the dirt: dead children whom he had covered up with a pillow. Women who could no longer carry their children left them at the roadside, where they were shot—"eliminated" like anybody else who cannot carry on due to illness, age, or infirmity.¹⁶

Once all the victims were in the camps, the camp entrances were blocked with mines and the units of the Wehrmacht left, leaving behind only some small surveillance commandos. On March 17, the last remaining guards also drew back to the new front line of the 35th Infantry Division, which shelled the camps to prevent any of the internees from escaping.

On March 19, reconnaissance units of the Red Army discovered the three camps near Ozarichi. After removing the German mines, which had killed numerous camp internees as they attempted to leave the camps after the guards withdrew, Soviet soldiers moved the survivors to different military hospitals in the surrounding area. The Ninth Army, in its final report to the Army Group Center (*Heeresgruppe Mitte*), stated that Luftwaffe aircraft had observed the survivors being transported into the Soviet rear some days later.¹⁷

As the extent of the deportations became clear following the liberation of the camps, the Soviet officials began to carry out investigations and to secure evidence. The "Extraordinary State Commission for ascertaining and investigating crimes perpetrated by the German-Fascist Invaders" demanded, in its report of May 6, 1944, that charges be brought against the eleven German officers responsible for the crime. In February 1946, at the Nuremberg Trial, Chief Counselor of Justice Smirnov, acting on behalf of the USSR, provided evidence in the form of a detailed report. In a Soviet war crimes trial in Minsk, General Johann-Georg Richert, commander of the 35th Infantry Division, who had been taken into Soviet captivity at the end of the war, was only one of those sentenced to death. Among other things, he was accused of involvement in the deportations near Ozarichi. He was executed at Minsk on January 30, 1946. Some lower ranks, whose involvement in the deportations was proved,

were sentenced to 25 years of hard labor. However, most of the men directly responsible for the planning and execution of the Ozarichi deportations, first of all Helmuth Loos, commanding officer of Sonderkommando 7a, Josef Harpe, commanding general of the Ninth Army, Friedrich Hossbach, commander of the LVI Armored Corps, and Werner Bodenstein, chief quartermaster of the Ninth Army, were never held accountable for their crimes. Hossbach, in fact, has gone down in history as a staunch anti-Nazi.

JUGENDERZIEHUNGSLAGER (JEL) SKOBROVKA

In the spring of 1944, the German Ninth Army, then stationed in the Bobruisk area of Belorussia, faced the problem that children were becoming an ever-growing share of the remaining civilian population. While the Germans were transporting 35,000–45,000 people to Ozarichi (the figures are uncertain; see **Endlager Ozarichi** in this volume), the German staff noted that almost 50 percent of these “useless mouths” were children of the age of 13 years or less.¹ In April, Army Group Center created a plan to concentrate, indoctrinate, and train Soviet children in occupied territory, by organizing “children’s villages.”² In accordance with that plan, the German Ninth Army took steps to create several youth education camps (*Jugenderziehungslager*, JEL) in villages in the army’s rear area, in which army personnel would concentrate the children. The children were to be “raised in the spirit of a future White Ruthenia under German administration.”³

On May 14, Ninth Army headquarters issued the order to erect the first of these camps. It was to be installed in the village of Skobrovka, approximately 50 kilometers (31 miles) southeast of Minsk and close to the local commandant’s office (*Ortskommandantur*) I/252 in Mar’ina Gorka (today Maryina Horka, Belarus) (map 9b). The Germans ordered the village to be prepared for the admission of 1,000 adolescents.⁴ Between May 15 and May 17, the Germans removed the inhabitants of the village, except for its northwestern part. Some

villagers and prisoners of war were also held just outside the village. Entry into the children’s camp was forbidden to anyone, even German soldiers. A Ninth Army staff officer characterized the facility in Skobrovka in the following way:

For the accommodation of mainly parentless children aged 8–14 years, a “youth village” has been erected, in which they are to be schooled and trained in handicrafts. The selection is conducted from the standpoint of health and race. An effort is to be made to collect children aged 8–14 years on a larger scale and accommodate them in the rear areas, to remove them from the grasp of the Russians.⁵

As of May 1944, the Germans planned to remove about 40,000 children from the territory occupied by the Ninth Army and send 30,000 of them to Pomerania, for the disposal of the Reichsjugendführer.⁶ In fact, they were only able to deport about 4,000 children, due to the successful Soviet summer offensive.⁷

The XXXV Army Corps received an order to select 200 healthy and “racially valuable” children from its area and prepare them for transport to Skobrovka by May 25.⁸ The Germans first concentrated the children in detention or transit camps, such as the one at Krasnyi Bereg.⁹ The LV Army Corps acted likewise and collected children on May 20. The 102nd Infantry Division rounded up 302 boys and 248 girls aged 8–14 years and sent them to a camp at Koptsevichi for delousing, medical checks, and registration. Of the girls, the Germans released 28 on May 22, having classified them as unfit, while all the others went on via Mar’ina Gorka to Skobrovka, in order to become inmates of the children’s village.¹⁰

After having installed all the necessary facilities, the Ninth Army opened the camp with a celebration on May 27. On June 3, the Germans handed over administration of the camp to the “Fighting League for Combatting Bolshevism (*Kampfbund zur Bekämpfung des Bolschewismus*),” a local organization of Soviet citizens who were collaborating with the Nazis. From this point forward, the Ninth Army withdrew almost completely from involvement with the children’s village. Only one German stayed on as a liaison; the camp’s commandant, Lieutenant Gradiushko, was responsible to him.¹¹ The Germans were very proud of their experiment, which had cost them quite a lot of money and effort, and the Wehrmacht hoped to be able to exploit it in propagandistic terms.¹²

When the camp officially started to operate, the children allegedly numbered 420 boys and 280 girls. The total number of inmates in the camp rose as time went on and fluctuated between 1,300 and 1,800 children, who had to live in the village’s 57 peasant huts. Between 20 and 36 children lived in each hut, separated by gender and under the leadership of one of their own as well as one educator.¹³

The Germans undertook their next collection of children for Skobrovka nearly a month later, on June 15. In the area under the control of the LV Army Corps, the 102nd Infantry Division gathered 715 boys and girls, while the 292nd

Infantry Division managed to collect 694 youngsters as well as 13 women for caretaking. The Germans expected to have to release 10 percent of the children, because they would not meet the Germans' requirements. Again the children underwent the procedure of delousing and treatment of scabies in the reception camps. On June 21, the older children went on to Crimmitschau in Saxony while all those aged eight or nine stayed in Skobrovka.¹⁴

Although the Germans made considerable efforts to explain the necessity and alleged benefits of the evacuation to the children's parents, in at least one case there were violent clashes between civilians and soldiers during the entrainment.¹⁵ The authorities then ordered that, every week, some parents should be able to visit their children in Skobrovka for a period of six days, in order to be able to convince themselves their offspring were receiving proper care.¹⁶

Every day followed a set routine in the children's camp. At seven in the morning, the kids were woken up and, after a little breakfast, had to assemble on the central square of their village for mustering. Next the children broke into detachments, which went into the streets and the vegetable gardens. Before and after lunch, the same mustering process had to be repeated, and only after supper, after having collectively sung a song, was the day done. Corporal punishment included physical exercise and beating.¹⁷

Although the Wehrmacht purportedly planned to raise the imprisoned children's food allowance to an adequate, officially defined level (*Verpflegungssatz II*),¹⁸ their nourishment was poor. One day's ration consisted of 200 grams (7 ounces) of bread, some kind of bitter coffee, cabbage, and sorrel. On rare occasions the children received some soup, meat, or milk. Often, they had to sneak out of the camp in order to beg for food in the huts still inhabited by villagers. These escapes were possible, although an armed guard patrolled the street, and the camp was surrounded by a double wooden wall filled with earth in which embrasures had been installed. No barbed wire was used, however.

Some children in the camp died of typhus. Rumors were common that the children of the camp in Skobrovka were being killed by forced blood donations. When being interviewed about this allegation on July 8, 1944, after the liberation of the camp by troops of the Red Army, the villagers stated, however, that no blood donations had taken place.¹⁹ It is likely that the purposeful selection of "Aryan" children in regard to their racial qualities (their "blood") had been misunderstood.

When the Soviet 1944 summer offensive began, the children were ordered to wreck the whole village. They filled wells with sand or rendered them unusable by dumping litter and fuel cans into them. Fields and orchards were torched. Also, the villagers' gardens were destroyed, windows smashed, and household goods burned. The German troops withdrew, and the overseers quickly abandoned the camp. The children were left behind and dispersed.²⁰

After the war, the Soviets held a show trial in Briansk for Generalleutnant Adolf Hamann, the commandant of Bobruisk when the city fell to the Red Army in 1944. Among

other crimes, they accused him of complicity in the deportation of children to the camp in Skobrovka. He labeled the children's village as a recreation camp,²¹ but the court believed it to have been a sort of concentration camp where Soviet children were abused as blood donors and killed deliberately. Hamann was convicted and publicly hanged on December 30, 1945.

TUNISIA WEHRMACHT CAMPS INTRODUCTION

Tunisia occupied a unique position in the context of the “Final Solution.”* It was not a German colony, nor that of any other Axis power; it was a French Protectorate and, thus, formally under the control of the Vichy regime. In November 1942, however, in reaction to Allied landings farther west in North Africa, the Wehrmacht occupied it. Thus, the Jews of Tunisia came under German control. These Jews, along with their brethren from Libya, escaped extermination at the hands of the Nazis, but the Wehrmacht put them to work under deplorable conditions, and there can be no doubt as to their eventual fate, had the Germans emerged victorious. This section of Volume IV covers the camps that the Wehrmacht authorities set up in Tunisia to hold Jewish forced laborers.

Before World War II, approximately 85,000 Jews lived in Tunisia, with about half of that number living in the capital city, Tunis.¹ Most were Tunisians, but a few thousand also had French citizenship, mostly former soldiers and those who worked in the administrative services. In addition, there were about 5,000 of these Jews who had Italian citizenship.

After British and American troops marched into Algeria and Morocco on November 8, 1942, the Wehrmacht began landing troops in northern Tunisia on November 9, around the capital city and the important harbor of Bizerte. By the end of November, the German and the (less numerous) Italian troops were under considerable military pressure, and it seemed possible that the Allies would cut off the so-called Tunisian bridgehead. In December, the Wehrmacht was able to strengthen its own position and even expand the bridgehead by conquering more land.

It was at this point that the Germans began to use Jewish forced labor. On December 6, Walther Nehring, commanding general of the XC Army Corps, ordered that the

bridgehead be strengthened “with all means in the H.K.L. [main front line], with a corresponding rear area.” The local population and Jews were to be used as auxiliary forces in this work. The order envisaged that the following rules would be applied in drafting the Jewish population:

- 1.) The S.D. is to assemble the male Jewish population for the purpose of carrying out the excavation. As a first installment, 1,000 men are to be made available for each of the sector commands Biserta, Tunis-North and Tunis-South.
- 2.) The Jewish communities are to raise the Jewish labor squads and are to assign each a leadership group. The leadership groups are responsible for cooperating with the German command authorities. They are responsible for the labor squads implementing orders. Otherwise the troops are to treat them as hostages.
- 3.) The Jewish communities are to supply equipment and supplies. The troops will provide quarters and appropriate security at the work sites.
- 4.) Each of the 1,000-man-strong labor squads are to be escorted to the following sectors by the S.D. in conjunction with the sector commanders (foot march, rail only inasmuch as possible).
 - Mateur for the Biserta Sector
 - St. Cyprien for the Tunis-North Sector
 - Ben Arous for the Tunis-South Sector
 - Further details are to be regulated by the sector commanders with the S.D. via the Gen. Kdo.
- 5.) Payment of the labor force is to be effected by the Jewish Community.”

This order was preceded by a discussion between the commanding general, General Nehring, SS-Obersturmbannführer Walter Rauff (who had seen service in occupied Yugoslavia and the Soviet Union), commander of the SiPo and SD in Tunis, and the emissary, Rudolf Rahn, who, as political representative to the commander of the German troops in Tunis between November 1942 and May 1943, represented the Foreign Office. With that, all the relevant German authorities were represented in the basic decision regarding the use of Jewish forced laborers. Rahn claimed in his autobiography that Generaloberst Hans-Jürgen von Arnim, who as commander of the Fifth Panzer Army assumed command of the Axis Forces in Tunisia on December 8, 1942, deployed Jewish labor companies to individual troop units and had issued an order “that the people are to be treated as voluntary workers.”² This is a euphemistic statement, since, in an order dated February 18, 1943, regarding the expansion of coastal defenses, Jewish labor detachments were treated on a par with prisoner detachments and, thus, not like free Arab workers.³

At the beginning of December 1942, the Tunis Jewish community was able to provide only 120 (some sources say 125) of the 2,000 men that the Germans had demanded for the planned labor detachments.⁴ As a result, the Germans

instituted a series of raids and resulting mass arrests of Jews. Of the Jews arrested, the men aged up to 50 (including a number of youths) were assigned to forced labor, and the remainder were held as hostages, to put pressure on the Jewish Council.

The nine-member Jewish Council in Tunis, formed on December 6, 1942, in accordance with German orders and with Grand Rabbi Haïm Bellaïche as its head, was able to persuade Rauff to grant a delay, in order to carry out the provision of Jews. However, the Council now had to provide 3,000 men (according to Nehring's order).

The council formed groups that dealt with the recruitment of the men, classified them for forced labor and transported them to the labor camps, provided supplies, and cared for their families. These groups were part of the Committee for the Recruitment of Jewish Manpower (*Comité de Recrutement de la Main-d'Œuvre Juive*). SS-Hauptscharführer Pohl and SS-Hauptsturmführer Theodor Saevecke, deputy commander of the SD Einsatzkommando Tunis, were the SD liaison to the Comité de Recrutement. Prior to this, SS-Hauptsturmführer Theodor Saevecke had been the SD liaison to the Italian African Police (*Polizia dell'Africa Italiana*) in Libya, and, later, he was head of the SiPo in Milan.

One of the most important tasks was the selection of the forced laborers and their care. Medical care was provided by the Medical Service of Jewish Manpower (*Service Médical de la Main-d'Œuvre Juive*). The Jews were medically examined in a Reform Center (*Centre de Réforme*) and categorized according to their abilities. The Service Médical also cared for those in Tunis who were ill and who were permitted to sleep outside the barracks ("home sleepers") and repeatedly sent Jewish physicians with medicine into the labor camps.

Between December 14, 1942, and January 21, 1943, the physicians examined 5,176 men, of whom 97 were rejected, 740 were to receive outpatient treatment for illnesses or injuries, and 861 classified as suited for light work. Consequently, the percentage accepted without restriction for this period was 67 percent (3,478 men). If one adds those who were suitable with some restrictions the number is 84 percent (4,339). Between February 1 and April 30, 1943, an additional 5,776 Jewish men were called up. Of these, 221 were classified as unsuitable and another 512 as only suitable for light work, while 2,404 needed medical attention.⁵ As a result the number of men either "suitable" or "suitable with restrictions" changed considerably. For this later period, the numbers are 55 percent (3,151) instead of 84 percent. This may have been a reaction to the impending defeat of the Wehrmacht, on the one hand; on the other hand, and to a lesser extent, it may have resulted from the enlistment of older year groups. In any event, German military physicians had the final say on the classifications. They often arrived at a different decision. Nevertheless, of 1,666 men regarded as not completely suitable, 623 were rejected and the deployment of 343 was delayed for a prolonged period.⁶

The Service of Military Stewardship (*Service de l'Intendance*) was another organization within the Committee for

Recruitment. This administrative department had sections for supplies, clothing, and issues regarding the camps. Its origin lay in an order from the Wehrmacht, to the effect that the Jewish community should be responsible for supplying and equipping the forced laborers. However, efforts to supply the forced laborers in the camps with a sufficient quantity of food failed. This was partly due to geographic conditions, as the labor camps around Mateur, for example, were hard to reach and, therefore, almost impossible to supply with food.

Likewise, it was impossible to supply sufficient items of clothing to the forced laborers. Jacob André Guez wrote in his diary that after a few weeks the Bizerte inmates were already walking around in rags. The same applied for the camp department, which supplied straw, tents, washtubs, basins, and the like, to the labor camps. In reality, there were never sufficient quantities to supply the Jewish internees adequately. They had to sleep on straw that was never changed, could not wash themselves properly, and lived in extremely unhygienic conditions.

The Committee for Recruitment was also responsible for the payment of wages to the forced laborers and for support of their families. Nehring, in his order of December 6, 1942, had prescribed that the Jewish Community should effect payment. A department, known as the Financial Services (*Service des Finances*), was created for this purpose. In the end, though, this department and the administration of the funds were likewise under German control. Each forced laborer was entitled to be paid a daily rate of 40 francs, but the *Service* retained half for their families. After the Germans took control of supplies on February 10, 1943, there was an additional 20 francs daily, to enable the Jews to increase their rations. The laborers who could sleep at home in Tunis received an additional 40 francs daily in wages and assistance as well as a loan of 20 francs daily. Altogether, the Committee for Recruitment paid almost 15.3 million francs in wages as well as 3.8 million francs for family support and 4.5 million francs for supplies.⁷

Initially, the Committee for Recruitment concentrated on obtaining Jews for work from all levels of the community. However, with the passage of time, it appears to have concentrated more on men from poorer families. From the German perspective, men aged 15–50 were obligated to perform forced labor. That said, the first call to come to the Alliance School (*Ecole d'Alliance*) for the completion of forced labor went out to Jewish men born between 1915 and 1924, that is, to people aged 18–27. Later, older cohorts were called on gradually. Rauff mentioned in a conversation with the grand rabbi, Moïse Borgel, the former chair of the Administration Committee of the Jewish Community of Tunis (*Comité d'Administration de la Communauté Israélite de Tunis*), and Max Trenner, of the Jewish Council, that each laborer was to wear a Star of David over his heart and between his shoulder blades, so that, in the event of an escape attempt, the laborer could be shot by the guards. With that, it was determined that the forced laborers would be marked as such with a special insignia. However, not all forced laborers appear to have worn the

yellow star, and those who did wear it may have removed it as time went on.

The Committee for Recruitment had regional representatives who were supposed to look after inmates in the regional camps. They were called “termites.” The name indicated their “undermining” activity, because they attempted to alleviate the lot of the forced laborers by bribing the guards or the officers. The creator of this system was Henry Sfez. Maurice Taïeb, for example, a pharmacist in Mateur, was the regional representative for the area around Mateur, in which numerous labor camps were established in December 1942. Moïse Chemla assisted him. Taïeb was regarded as the most persistent and inventive of all the “termites.”

According to Jacques Sabille, there may have been around 6,400 Jewish forced laborers in Tunisia. That meant that more than a third of the age group between 17 and 50, which comprised around 15,000 people, had been called up. Many fled from the labor camps, however. On December 20, 1942, 3,659 Jews were engaged in forced labor as permanent internees or home sleepers. On February 13, 1943, there were only 2,430, and on April 25 only 1,556.⁸ In May, the Allies finally liberated the approximately 1,500 Jewish forced laborers.

The forced labor was done in a number of ways. The Wehrmacht took a large number of the Jewish forced laborers from Tunis each morning to work sites in the capital city or its surroundings. In the evening, they were, as a rule, allowed to go home. The Wehrmacht also employed Jews in this way in other Tunisian cities. On the other hand, the Wehrmacht interned many men in camps on a permanent basis.

The Jewish labor units were militarily organized; that is, there were battalions that consisted of several companies, and each of these, in turn, consisted of several groups. Jewish group leaders directed the groups and were responsible for maintaining discipline and order. Moreover, there were usually one or more Jewish camp leaders in each camp who were subordinate to the responsible Wehrmacht officer or to the corresponding people in the other guard troops. The records of the Jewish Council show that there were four battalions (A to D), divided into various companies. Battalion A was composed, at a minimum, of Companies 1, 2, 3 and 4, which, in turn, were divided into several subgroups. Company 1 included Groups 2, 3, and 4 as well as the Group *Mutilés* (disabled, invalids). Battalion D consisted of Companies 1, 2, 3, 6, 7, and 12. In addition, Company 3 consisted of the Groups Bizerte, Djelloula, and M'Chergua. Many of the groups were named after the location of the camps where they were based. This applied for the last-mentioned groups as well as, for example, Groups Ariane, Enfidaville, Mateur, Saf Saf, Sbikha, and Sidi Ahmed.⁹ Groups of Jews were repeatedly transferred from one camp to another, often after a camp was dissolved or to form the basis of a new camp.

Finally, all the labor camps for the Jews were under the control of the Wehrmacht and the SD, who, in agreement with each other, regulated and oversaw the labor deployment. The camp guards were members of the Wehrmacht, but Italian and French soldiers also served, as did Arabs. Although

some camps had all-Italian guard forces, the Germans exercised command and control. This is discernible in the fact that, as early as November 1942, Rahn informed the French resident-general (*Résident Général*) in Tunis, Admiral Jean-Pierre Esteva, that dealing with the Jewish question in Tunisia was solely a matter for the Germans.¹⁰ The only exception was for Jews with Italian citizenship in Tunisia. These Jews alone, and not Jews in the so-called Italian zone, were immune from German measures, at least in so far as military requirements allowed.

Living conditions for the Jewish laborers in the battalions were very difficult. The forced labor always focused on military requirements, as can be seen from the abovementioned originating order. For example, an order from Generaloberst v. Arnim to expand the coastal defenses, dated December 25, 1942, states: “For the expansion, all possibilities are to be exhausted, including enlisting the population and especially the Jewish labor commandos.”¹¹ As a result of this order, Jewish labor groups and home sleepers from Tunis were deployed on the Bon Peninsula in the villages of Hammamet, Nabeul, and Korba. The Jewish forced laborers’ main tasks were the construction of defense positions, supplying the troops with ammunition and other materiel, and loading and unloading ships, trains, and aircraft. These activities in various harbors, railway yards, and airfields were also undertaken during Allied bombardments. Additionally, the Jews were enlisted to transport munitions as far as the front line. Many Jews were killed or wounded while engaged in such activities.

The Wehrmacht also used tradesmen among the Jews, according to their professional experiences. These workers were primarily home sleepers. They were used as forced laborers, for example, in the Clothing Restoration Shop of the Panzer Army Africa (*Bekleidungsinstandsetzungswerkstatt der Panzerguppe Afrika*), in a laundry, and in the Hygienic/Bacteriological Test Site (*Hygienisch-Bakteriellen Untersuchungsstelle*) in Sousse as well as mechanics in the Army Vehicle Park (*Armee Kraftfahrpark*) 689 in Tunis. In addition, the Jews were deployed in factories, for example, in Tunis at the Greco firm, which did work for the Luftwaffe, or in Djebel-Djelloud with a company that manufactured iron posts (*piquets en fer*).¹²

The parallelism between the military campaigns and the use of Jewish forced labor is visible in the labor camps at El Guettar, Gafsa Gare, and Kasserine. On February 14, 1943, Generalfeldmarschall Erwin Rommel commenced a campaign, using troops of the Panzerarmee Afrika that had been withdrawn from Libya, against US troops stationed in the Algerian-Tunisian border regions. As the German troops advanced, the aforementioned towns were captured, and Jews were deployed there to supply the Wehrmacht. After the Allies pushed the Wehrmacht from these areas at the end of March 1943, the labor camps ceased to exist. They were only established during the offensive and were then dissolved during the retreat.

The quarters for the Jews were related to their employment. In the important harbor of Bizerte, the camp was located in a garrison. On the other hand, in Sidi Ahmed, the

camp was located in wooden barracks; in Zaghouan, in basic structures without roofs; and, in Cheylus, in tents; while the forced laborers in Jefna had to sleep on the bare ground. As a rule, the quarters usually had neither sufficient space nor conditions suitable for human beings. Basic hygiene facilities were lacking. Initially, in Bizerte there were only three water taps that approximately 1,000 prisoners were to use for washing. Sometimes in Bizerte water was not available. The toilets in the garrison were insufficient in number so that many forced laborers had to attend to nature's call on the camp grounds. In Boucha, on the other hand, a dirty brown liquid served as water for drinking and washing. After the Zaghouan camp was established, to prevent escapes, the Italian guards forbade the Jewish forced laborers from washing in a nearby water source. The lack of water in most camps, but also the absence of soap, the overcrowding in the quarters, and the hard physical labor in construction, meant that most of the Jews were very filthy and suffered from skin diseases and vermin.

In addition, the medical care was insufficient. Although the male Jews underwent a medical examination when they were called up, many men were drafted who were not suited to hard labor. This was especially so for the Jews who were arrested during the raids in December 1942 in Tunis. In this instance, the SD prevented any checks by the Jewish doctors who were examining the other forced laborers. One of these Jews, an 18-year-old man, who because of physical disability could not last the march from Tunis to the Cheylus camp, was shot by a German guard. The Mutilés group of Company 1 of Battalion A is also proof that a larger number of invalids were drafted for forced labor.

In theory, either the Jewish doctors or medical orderlies that were interned in the camps, or members of the Labor Group 6 *Médical*, part of Company 12, Battalion D, had to care for those who were ill. This included the possibility of being released from forced labor, or, on the other hand, to die because of an illness or serious injury. Apparently, German military doctors almost exclusively issued such releases. One could even be released from a labor camp. The camp commander in Bizerte issued such passes with the following words: "[Name of the Jew] of the labor camp for Jews in Bizerte is dismissed as unfit for work, according to an examination by the German military doctor . . . signed Elfes, Lieutenant and Camp Commandant."¹³ Survivors reported that in the Boucha Camp, the ill had to do forced labor at night. And in Djebibinia, for example, a Jew died from blood poisoning, without receiving any medical care.

Those who injured their hands at work received only emergency care. Jacob André Guez reported from the Bizerte camp that many Jews had open wounds on their hands. There were no bandages so they had to wrap rags around their hands. As it was not possible to change them, the rags fell to pieces while the men were working. In addition, they quickly became filthy, which caused the wounds to become infected.¹⁴ Due to the unhygienic conditions, the Jewish forced laborers suffered from parasites such as lice and from scabies, boils, and eczema. Besides skin diseases, they also suffered from

heart and lung illnesses. How large a proportion of sick prisoners was possible is shown in the data for the Jefna camp. According to a statement from Jacques Sabille dated December 26, 1942, that is, only two weeks after the camp was erected, 50 inmates out of 120 (41.7%) were already sick.¹⁵

According to the order dated December 26, 1942, referred to above, the Jewish Council in Tunis was to procure food for the forced laborers. Generally, this meant that supplies had to be transported from Tunis to the individual camps. This was done in part by the Wehrmacht. For example, the activity report of the Tunisian transport officer, and the railway company that reported to him, for the period from November 14 to December 31, 1942, specifically in the entry for December 27, refers to a railway wagon of "Jewish food supplies" being shipped from the Djebel-Djelloud Railway Station, in a southern Tunis suburb, to Enfidaville; and, for December 29, to a railway wagon of "Food for Jews" going from the Tunis Central Railway Station to Sidi Ahmed.¹⁶ Jewish labor companies were permitted to obtain food from Wehrmacht supplies only in locations that were extremely difficult to reach and only if "other supplies could not be obtained and the use of laborers would otherwise be impossible," as was stated in a food supply situation report dated January 9, 1943, by the Wehrmacht commissariat officer based with the supreme commander of the Axis forces in Tunisia.¹⁷

Food rations were as follows: 500 grams (17.6 ounces) of bread or 400 grams (14.1 ounces) of flour daily; in addition, 100 grams (3.5 ounces) of rice, pearl barley, groats, semolina, or rolled oats daily, or as a substitute, 200 grams (7 ounces) of fresh vegetables, 20 grams (0.7 ounces) of dried vegetables, or 30 grams (1 ounce) of peas and beans. In addition, there were supposed to be 15 grams (0.5 ounces) of salt, 5 grams (0.2 ounces) of oil, 3 grams (0.1 ounces) of dried onions, 2 grams (0.07 ounces) of garlic powder, 10 grams (0.35 ounces) of sugar, and 15 grams (0.5 ounces) of coffee substitute daily. Further, there were plans for a weekly ration of 800 grams (28.2 ounces) of fresh meat, 20 grams of tobacco, and two fresh lemons, the last in case no fresh vegetables could be provided.¹⁸ Jewish forced laborers often did not receive these rations, however. Often the daily rations consisted of a half a loaf of bread (375–500 grams [13.2–17.6 ounces]) and a can of jam, such as in Ksar-Tyr. Jacob André Guez writes that in Bizerte, a typical midday meal consisted of a fifth of a loaf of bread, half a tin of sardines, and one-tenth of a jar of jam.¹⁹ There are records from the Saf-Saf camp showing that, for breakfast, the forced laborers received their daily bread ration, and, in the evening, soup with vegetables. The bread was supposed to be eaten with the soup. Daniel Carpi points out that some Italian guards used part of the Jewish forced laborers' rations for their own benefit.²⁰ This increased the inmates' hunger, since, for the most part, they did not receive adequate food for people doing heavy physical labor.

The Jewish Council was also required to provide the forced laborers with clothing and shoes. The drafted Jews did their work in their own clothes, which quickly fell to pieces due to the nature of the work. There were insufficient

replacement clothes, and in a few weeks the clothes being worn were filthy rags that provided inadequate protection against the weather. Many of the forced laborers had no shoes and had to walk around barefoot.

In the camps for the so-called home sleepers, the Jews were forbidden to leave the work site during working hours. For Jews in closed camps, this applied around the clock. Nevertheless, many Jews fled from the camps, especially after the Allies made clear advances in the spring of 1943. The official punishment for flight was death, and prisoners were sometimes shot. Guez reports on the execution of a Jew in Bizerte on March 26, 1943. On the whole, however, only a few escapees were shot.

More often there were internal camp punishments, such as prison or some form of mistreatment. If an escape was successful, it occurred mostly because the guards had been bribed or because there was assistance from the Jewish Council in Tunis. However, the escapee's family was then at risk. As the Germans interned family members, especially wives, the escapees repeatedly gave up or returned to the camps.²¹

All breaches of the camp rules were severely punished, and, occasionally, Jews were mistreated for no reason. In Bizerte, the camp prison was a small narrow room. In this room, the forced laborers were beaten brutally by the overseers with oxen whips and riding whips but also with clubs. The guards in Saf-Saf and Bizerte were especially cruel. In the latter labor camp, there was a soldier with the nickname *Le Tueur* (the butcher), who beat at least one Jew to death, as well as a soldier with the nickname *Grand-Mère* (grandmother), who mistreated at least two inmates who died.²² The Jews in Du-mergue also suffered at the hands of a supervisor, nicknamed the *Tortionnaire* (the torturer's lad).²³

In principle the forced laborers in the closed camps did not get a break because they regularly had to do hard labor seven days a week. They were physically exhausted, and there was no rest in the camp. The interned Jews were always guarded. Only the home sleepers had at least the possibility to sleep with their families and to escape the persecution for short periods of time. On the other hand, individual Jews in many camps were allowed to leave the labor camps for a few days to spend time with their families. This procedure, known as the *système de permission* (Front Leave System), did not exist in all the labor camps but was dependent on the German camp commanders. For example, it was not allowed in Jefna but was in Saf-Saf. A pass issued by Camp Commander Elfess for one of the Bizerte camp inmates has survived. It states that the holder is en route to Tunis "to visit his family" and will return on a specified date. The pass grants permission for rail travel, stating: "It is requested that the bearer of the pass be transported by rail from Sidi Ahmed to Tunis and return."²⁴ Such passes from other sites have survived as well. They were mostly valid for four days and usually contained a request to Wehrmacht members to take the Jewish "holiday makers" to Tunis.²⁵ If there was a rail connection between the camp and the capital city the pass functioned as a railway ticket.

The so-called Italian Sector in Tunisia was southeast of Tunis in the Zaghouan and Enfidaville region. It also included part of the harbor in La Goulette near Tunis. The Germans transferred nearly 1,000 Jewish forced laborers to these camps.²⁶ The isolation of this mountainous area and the difficult communication lines to Tunis worsened the situation of the Jews employed there, although it is known that the Italian guards treated the internees better than the Germans. The Jews were not as exposed to Allied bombing raids. However, they suffered from deplorable hygienic conditions in their miserable quarters as well as from a lack of water. The Italian guards kept for themselves the forced laborers' belongings and food. That is why the living conditions in the Italian camps were anything but fit for humans.²⁷

The exact number of Jews that either died during forced labor or who were murdered by the guards is unknown. Sabille gives the names of those forced laborers who died in a number of camps. Four died and 39 were wounded when the Allies bombed the El Aouina airfield. In Bizerte, 10 died and 19 were injured during bombing raids, and the German guards executed at least 4 Jews and murdered 3 by mistreating them. In the Sidi Ahmed camp, in February 1943, a Jewish prisoner died in an accident and another was murdered by the Germans. But Jews also died in the camps in Djebibinia, Djel-loula, and Djougar. It is estimated that around 100 Jewish forced laborers in Tunisia either died while doing forced labor or were murdered by the Germans.²⁸ Given that there were around 6,400 Jewish forced laborers, this means a death rate of almost 1.6 percent.

In 1941–1942, heavy fighting occurred in Libya, with a large part of the Italian colony repeatedly changing hands between the Wehrmacht and the Italian army, on the one side, and the British Eighth Army on the other side. At the end of January 1942, the German Panzer Army Africa pushed east and forced the British back to Egypt. On February 7, 1942, Mussolini, acting as the minister of the interior, instructed the Italian governor in Libya, Ettore Bastico, to intern the Jews. Jews with British citizenship had been taken from January 1942 by successive ships to Italy and interned at different locations. Jews with French citizenship were taken to Algeria and those with Tunisian citizenship were expelled to Tunis.

The Vichy administration, under the leadership of the resident-general Admiral Esteva, established three camps for those Jews brought to Tunisia in the summer of 1942: in Gabès, Marcia Plage near Tunis, and Tinet Agarev near Sfax.²⁹ In these internment camps for Jews from Libya with Tunisian citizenship, the conditions were similar to those in the closed labor camps, at least in principle. However, the camps were not established by the Wehrmacht but pursuant to an order of the Vichy authorities in Tunis. After German and Italian troops had conquered a large part of Tunisia, the German authorities were able to exert the power of decision over the so-called Jewish question. With that, the SD also took over control of the internment camps for those Jews expelled from Libya.

From this point on, the living conditions worsened for the Jews in the internment camps. Leaving the camps was allowed

only by exception and then under strict guard. At least for Gabès, it is known that the camp was fenced and that the death penalty applied to those who left the camp without permission. The support from the Jewish communities for the inmates was reduced. From the beginning, all the Jews had very poor quarters. They also suffered from hunger and thirst and had to live under poor hygienic conditions. Many fell ill due to these circumstances and the general lack of medical care.

As in other French colonies in North Africa, after the liberation, a military tribunal investigated crimes that the Germans and the Vichy authorities had committed. In Tunisia, this tribunal sat in Tunis. It collected survivors' reports and documents relating to the persecution. Resident-general Admiral Esteva, who had been evacuated by the Germans to France, had been sentenced to death in absentia on May 15, 1943, by a military court headed by General Giraud. After Admiral Esteva's arrest on September 22, 1944, in Paris, there was a new trial. On March 15, 1945, he was sentenced to life imprisonment. Esteva was released in August 1950 for health reasons. He died the following year in Reims.

The following discussion of the known Tunisian camps consists of labor camps with permanent internees and labor camps with internees only during working hours (i.e., the so-called home sleepers). The camps are listed in alphabetical order including available relevant information. While much is known about Bizerte, there is a lack of comprehensive information about the basic conditions in most of the camps. For this reason, the entries are relatively brief.

SOURCES Many documents relating to the Tunisian labor camps and the Jewish forced laborers are to be found in the Archiv des Centre de Documentation Juive Contemporaine in Paris (e.g., CXXIII-68, CXXIV-17, and CCCLXXX-VII-4). A few sources on the selection and transport of the forced laborers and their deployment are to be found in BA-MA Freiburg i. Br. in the collection RH 21-5. In addition, there are documents on the Jewish situation in Tunisia compiled by the United Restitution Organization in Frankfurt am Main in 1962—"Judenverfolgung in Italien, den italienisch besetzten Gebieten und in Nordafrika." Information on the three internment camps for Jews who were expelled from Libya to Tunisia comes from court cases for restitution at the OLG Köln. Extracts of the judgment are published in the *Rechtsprechung zum Wiedergutmachungsrecht* 26 (1975), pp. 28–31. There is a posthumous published eyewitness account on conditions in the Bizerte camp by Jacob André Guez, "Au camp de Bizerte," *Journal d'un Juif Tunisien interné sous l'occupation Allemande* (1942–1943) (Paris: L'Harmattan, 2001).

The first serious work on the occupation and forced labor was Jacques Sabille, *Les Juifs de Tunisie sous Vichy et l'occupation* (Paris: Centre, 1954). A copy of Nehring's order of December 6, 1942, is held in the Federal German Military Archive in Freiburg im Breisgau and has been published in part by Jacques Sabille. This French work was preceded by descriptions of the forced laborers' situation from the perspective of the Jews who lived in occupied Tunisia: Paul Ghez, *Six mois sous la botte: Les Juifs de Tunis aux prises avec le S.S.* Paris (Tunis: S.A.P.I., 1943); Robert Borgel, *Etoile jaune et croix gammée:*

Recit d'une servitude (Tunis: Artypo, 1944); and Gaston Guez, ed., *Nos martyrs sous la botte Allemande: Où, Les ex-travailleurs Juifs de Tunisie racontent leurs souffrances* (Tunis: Les presses Typo-Litho du journal *La Presse*, 1946). Albert Memmi, *Die Salzsäule* (Cologne: Kiepenheuer and Witsch, 1963) (the French original appeared under the title *La Statue de Sel* [Paris: Corréea, 1953]), describes his experiences as a member of the Committee for Recruitment and as a former forced laborer, in the form of an autobiographical novel. See also *Les Juifs de Tunisie sous le joug nazi 9 novembre 1942 – 8 mai 1943. Récits et témoignages rassemblés, présentés et annotés par Claude Nataf* (Paris: Le Manuscrit, 2012).

In the many later works dealing with Tunisia during Vichy, there are only a few sections on forced labor. In German, there is under the word "Tunesien" a short section in the *Enzyklopädie des Holocaust: Die Verfolgung und Ermordung der europäischen Juden*, hrsg. von Eberhard Jäckel, Peter Longerich, and Julius H. Schoeps (Munich: Piper, 1995); in Hebrew, there are details on particular locations and the camps erected there in *Pinkas Hakehillot Libya Tunisia*, ed. Irit Adamski-Bligh (Jerusalem: Yad Vashem, 1997). Michel Abitbol, *The Jews of North Africa during the Second World War* (Detroit: Wayne State University Press, 1989) (the French edition appeared under the title *Les Juifs d'Afrique du Nord sous Vichy* [Paris: Maisonneuve and Larose, 1983]). There is also Daniel Carpi, *Between Mussolini and Hitler: The Jews and the Italian Authorities in France and Tunisia* (Hanover: Brandeis University Press/University Press of New England, 1994), which has more closely investigated Italian policy in relation to the Jews in Tunisia. Additional general information can be found in Israel Gutman, ed., *Encyclopedia of the Holocaust*, 4 vols. (New York: Macmillan, 1990).

AÏN ZAMMIT

The Wehrmacht established the Aïn Zammit labor camp on December 13, 1942, for male Tunisian Jewish forced laborers. Sixty Jews were interned in the Aïn Zammit camp in December 1942. In mid-April 1943, the camp was dissolved after Maurice Taïeb, nicknamed “The Termite,” succeeded in convincing the responsible German officer that the Jews would be of no use during heavy fighting in this area of the front but would be useful as forced laborers in Mateur. As a result, the forced laborers were sent to Mateur to do clean up and earthworks. They were liberated by the Allies at the beginning of May 1943.

BIR M’CHERGA

The Wehrmacht established the Bir M’Cherga camp for forced labor on February 22, 1943. It was located about 40

kilometers (25 miles) southwest of Tunis. The Jews interned in the camp performed different types of forced labor. The camp was dissolved on April 21, 1943.

Jens Hoppe

BIZERTE

The Germans established a labor camp on December 11, 1942, in the Philibert Garrison in Bizerte, the most important harbor on the northern Tunisian coast. It was under Wehrmacht control and functioned as a center for labor for Bizerte. The camp held only Jewish men. They loaded and unloaded ships, and they worked on fortifications and on numerous construction sites within the city. They built roads, searched for unexploded ordnance, and worked on a wharf. Over and above that, they worked in Ferryville (today Menzel Bourguiba) and at Djebel Kebir. Prisoners who were assigned light duties had to work within the camp.

In December 1942, there were around 500 Jews in the Bizerte camp. By January 6, 1943, the number had increased to 1,050. After that, the number gradually declined, because many of the forced laborers fled, died, or were murdered, while the Germans sent others, whom they regarded as incapable of working, to Tunis. Moreover, some well-off people were able to buy their family member’s freedom. New prisoners were not available in sufficient numbers to make up for these losses. On the other hand, separate work groups from other camps were sent to Bizerte. This happened, for example, with a labor group of 65 men from Mornag, together with a group leader, on January 15, 1943. When the Allies liberated Bizerte on May 7, 1943, there were not even 200 of the Jewish forced laborers still there.

The German camp command is suspected of having executed 4 Jews for attempting to escape. On top of that, at least 6 forced laborers were beaten to death or died as a result of mistreatment. Another 10 died during Allied bombing raids, and 1 forced laborer died in an accident. Thus, of the 1,400 prisoners sent to Bizerte, at least 21 died. Although this camp was regarded as the worst one, the death rate of 1.5 percent corresponded to the general average for all the camps. This was due not least to the fact that the internment lasted for only six months. Had the detention lasted longer, more Jews would have been executed (on May 1, 1943, two forced laborers were sentenced to death, but the sentences were not carried out) or would have died in some other way. Liberation in May also prevented the deaths by starvation of undernourished forced laborers.

Jacques Cacoub was appointed as chief Jew of the camp (*chef Juif de camp*) in Bizerte by camp commander Elfess. Additionally, there were other Jewish camp leaders who were in charge of several groups. These formed a council. The members of the council included a Jew named Bedoucha as well as Kako Habib, Jacques Krief, Victor Sitbon, Gilbert Taïeb, and Lucien Zarka. They were the most influential group in the camp, organizing matters with the “termites” (regional

representatives of the Committee for Recruitment) as well as with the camp commander and his deputy. Below these groups there were 21 Jewish leaders who were responsible for the individual work groups. They too held a special position. All these group leaders lived under better conditions than the regular prisoners. For example, they did not have to do physically demanding work. There was also a Jewish camp police force, which had been created to maintain order. The police officers wore their own armband and carried a riding whip. They also had a privileged position within the camp society, due to their role in maintaining order.

The possibility that some forced laborers' freedom could be purchased changed the inmates' social structure: above all, men from poor and less influential families remained in Bizerte. This was especially so, moreover, for Jews who were ill or incapable of working, because the ill but well-off prisoners were sent to Tunis. This unequal treatment resulted in tensions among the internees and disputes between family members and the Committee for Recruitment (Comité de Recrutement), which increased over time.

The killing of prisoners in Bizerte by the guards is exemplified by the murder in March 1943 of the forced laborer Victor Lellouche. Though Lellouche worked as a trained bookkeeper in the camp administration, on March 24, a German officer assigned him to construction work. On the following day, he returned to the camp and reported that a German soldier had tried to shoot him while he was working. On March 26, three German soldiers took him away. At midday, a truck returned with the forced laborer's disfigured body: a bullet had gone through his right leg, a second through his left wrist and an eye. The body had been smashed. The motives for the murder are unclear. However, witnesses reported that an SS officer wanted to kill Lellouche for personal reasons. The camp administration stated, to the contrary, that he had been sentenced to death for attempting to escape. A second forced laborer, Emile Hababout, was shot by a German guard during the night of January 23, 1943.

The commander of the Bizerte camp was Oberleutnant Elfess; his deputy was Feldwebel Thild. Former forced laborers describe Elfess as being a fanatical National Socialist who also robbed the Jews in the camp. His deputy, on the other hand, was known as a man who did not mistreat anyone, but who, on the contrary, treated the Jews in a friendly and understanding manner. Wehrmacht soldiers guarded the camp. Among them were many former members of the French Foreign Legion and Alsatians, who presumably had been chosen because of their ability to speak French.

Because of the catastrophic conditions in Bizerte, the "termites" Henry Sfez and his deputy Victor Bismut tried very hard to improve conditions in the camp. As early as January 1943, Sfez was able to convince the camp commander to release 50 forced laborers, who were unfit for work, back to Tunis. Another 25 were released in February 1943. Two Jewish doctors worked in a small hospital barracks. The "termites"

organized medical supplies for them. They also organized other supplies for the internees. Well-off inmates, who were able to bring valuables into the camp or to smuggle things in through their relatives, used these items to bribe the guards to secure better treatment.

The internees in the Bizerte camp committed numerous small spontaneous acts of sabotage. For example, coal that had to be loaded off ships was shoveled into the sea. A few forced laborers emptied cement sacks that had been delivered to the harbor into the sea instead of loading them onto trucks.

Many people were informed of the inhuman conditions, the mistreatment by the guards, and the poor supplies in Bizerte, since the "termites" reported on these facts, as did the forced laborers whom the Germans released as unfit for work. Additionally, a few family members were able to get to Bizerte and to speak to the forced laborers at the camp entrance and give them food and other necessities.

During the camp's entire existence, and especially after February 1943, many Jews fled from the labor camp and attempted to survive the remaining days and weeks until liberation in hiding. By February 1943, around 200 Jews had managed to escape from Bizerte or forced labor. Additionally, on May 4, 1943, it was determined that 30 Jews had escaped from the labor camp overnight. Shortly before liberation by the Allies, Elfess ordered that the camp be evacuated. The Jewish leader, Bedoucha, remained in the camp with a group of men, while other groups made their way in the direction of Tunis, where they arrived just as British troops entered the city. On May 8, 1943, the American army liberated the last forced laborers in Bizerte.

BORDJ FREDJ

A labor camp for Jewish men was established in Bordj Fredj on December 11, 1942. The Germans used the prisoners as forced laborers in constructing roads and in various other tasks. The camp was dissolved by December 30, 1942.

Jens Hoppe
Trans. Stephen Pallavicini

BOUCHA

The Wehrmacht established a forced labor camp for Jews in Boucha, to the south of Medjez-el-Bab, likely on February 14, 1943. In March, the forced laborers were located in Henchir-Gayasse, not far from Boucha. This camp served to intern Jewish men who, as forced laborers for the Wehrmacht, maintained airfields and worked on the front line. Work was done between 8:00 p.m. and the morning, when there was no artillery fire from the Allies. There were approximately only 32 Jews in this camp. The Boucha labor camp was dissolved on March 17, 1943, after the responsible Wehrmacht officer had

been bribed by the “termite” (regional representative of the Committee for Recruitment) Henry Sfez. To regain their health, the Jewish forced workers could be brought to Goubellat, a town whose labor camp had likewise been dissolved in the middle of March.

Jens Hoppe
Trans. Stephen Pallavicini

CAP SERRAT

In February 1943, the Wehrmacht captured the area around Cap Serrat and established an improvised labor camp for male Jews, who had to supply German soldiers at the main front line and recover fallen soldiers. Some of these forced laborers came from the Saf-Saf camp. At the end of March 1943, the Allies liberated the area. During the Wehrmacht’s retreat, the camp was dissolved.

Trans. Stephen Pallavicini

CHEYLUS

The Wehrmacht established a labor camp at Cheylus, 20 kilometers (12.5 miles) south of Tunis, on December 11, 1942. The Jewish men interned at Cheylus repaired airfields. In December 1942, there were 420 Jews in the camp, with a large number having been seized in Tunis during raids by the Germans. On the march to the camp, an 18-year-old Jew with a clubfoot was shot dead because he could not keep up.

Jens Hoppe
Trans. Stephen Pallavicini

DRIJA (OUED DRIJA)

A camp was established at Drija on December 9, 1942. The Jews interned in Drija performed forced labor mainly on road construction but also in various other areas. The camp was dissolved on December 26, 1942.

Jens Hoppe
Trans. Stephen Pallavicini

DUMERGUE

The Dumergue labor camp, also known as Dumergue-Frethia, was established on December 13, 1942, in the area of Mateur. The inmates were quartered on a farm and performed forced labor for the Wehrmacht. At its inception, there were 40 Jewish forced laborers in the camp. Neither deaths during forced labor nor murders of inmates have been proven for the Dumergue camp. The camp commander, a Tunisian Arab, was also a German spy.

The camp was dissolved in 1943 because of a trick by one of the “termites” (regional representatives of the Committee for Recruitment), Maurice Taïeb. He told the Germans that typhus had broken out among the inmates and that they had

to be taken to Mateur for a thorough examination. From there they were secretly taken to Tunis. At the same time, he told the Germans that the Jews had illegally scattered themselves around the countryside before they arrived in Mateur.

Jens Hoppe
Trans. Stephen Pallavicini

EL-GUETTAR (EL QUETTAR)

In February 1943, the Wehrmacht established a labor camp for Jews in El-Guettar, about 60 kilometers (37.3 miles) northwest of Gabes. In the course of the offensive by Generalfeldmarschall Erwin Rommel, the Germans captured the area, which lies on the road to Tebessa. After that, it served as a supply base for German troops. The Jewish internees performed forced labor for the Wehrmacht.

On March 20, 1943, Allied troops began an offensive from Algeria in the direction of the Tunisian coast. In the course of that offensive, the German troops were pushed back to El-Guettar by the end of March. The Wehrmacht dissolved the camp during the retreat.

Jens Hoppe
Trans. Stephen Pallavicini

GAFSA GARE

The Wehrmacht captured Gafsa in February 1943. After that, they erected a labor camp for male Jews at the railroad station outside the city, because Gafsa lay on the railway to Sfax and on the road to Tebessa and was thus an important supply base for the German army. The Jews in the camp performed forced labor for the Wehrmacht. On March 20, 1943, Allied troops began an offensive from Algeria in the direction of the Tunisian coast. During the Wehrmacht’s withdrawal, the camp was dissolved.

Jens Hoppe
Trans. Stephen Pallavicini

GOUBELLAT (QUBALLAT)

On February 7, 1943, the Wehrmacht established a labor camp in Goubellat, 50 kilometers (31 miles) southwest of Tunis. Jewish men were interned in the camp and used as forced laborers, mainly repairing airfields in the area. The camp was dissolved on March 16, 1943.

Jens Hoppe
Trans. Stephen Pallavicini

HAMMAMET

In December 1942, the Wehrmacht established a labor camp for male Jews aged 18–50 in Hammamet, 60 kilometers (37.3 miles) southeast of Tunis, on the Gulf of Hammamet. The men originated from the city of Nabeul, northeast of

Hammamet. The Jews worked on fortifications and dug trenches. From March 1943 on, many Jews were able to escape from the camp. The British army liberated the camp on May 11, 1943.

Jens Hoppe
Trans. Stephen Pallavicini

JEFNA (DJEFNA)

The Wehrmacht established a labor camp for Jewish men at Jefna, 20 kilometers (12.4 miles) west of Mateur, on December 13, 1942. They had to work 18 hours a day, transporting munitions to the front line. There were 120 Jewish forced laborers in the camp when it opened. The guards were German soldiers. The “termites” (regional representatives of the Committee for Recruitment) Maurice Taïeb and Moïse Chemla were able to negotiate three days’ rest for 70 forced laborers. Of those, 36 were finally able to return to Tunis because of illness, while the remaining 34 were sent to the Saf-Safalabor camp. With that, the number of inmates dramatically declined at the beginning of 1943.

The camp was dissolved in the middle of April 1943, after Taïeb was able to convince the responsible German officer that the Jews were of no value in the heavy fighting that was taking place on this section of the front, but they were probably of more use for forced labor in Mateur. As a result, the remaining forced laborers were sent to Mateur to do cleanup work and excavation. The Allies freed them in May 1943.

Jens Hoppe
Trans. Stephen Pallavicini

KASSERINE

The Wehrmacht established a labor camp for Jews in Kasserine, around 75 kilometers (46.6 miles) north of Gafsa, in February 1943. The town had been captured during the offensive by Generalfeldmarschall Erwin Rommel. The Jews interned here worked as forced laborers for the Wehrmacht and supplied units at the nearby front with ammunition and other supplies. On March 20, 1943, Allied troops began an offensive from Algeria in the direction of the Tunisian coast. During the Wehrmacht’s retreat, the camp was dissolved.

Jens Hoppe
Trans. Stephen Pallavicini

KATACH-BAYA

Seventy Jewish forced laborers were interned in Katach-Baya on December 13, 1942. The camp was dissolved in mid-April 1943, after the “termite” (regional representative of the Committee for Recruitment) Maurice Taïeb was successful in convincing the responsible German officer that the Jews were of no value during heavy fighting but would be useful for forced labor in Mateur. As a result, the remaining forced laborers were

sent to Mateur to do clean up and excavation. They were freed by the Allies at the beginning of May 1943.

Jens Hoppe
Trans. Stephen Pallavicini

KSAR TYR

The Wehrmacht established the Ksar Tyr labor camp on December 9, 1942. The Jews lived in the stables of a farm. The interned Jewish forced laborers performed various tasks. At least one forced laborer died here when his preexisting illness grew worse and he was not given any medical treatment. There was a Jewish camp leader (*chef Juif de camp*) in Ksar Tyr. German soldiers served as guards. One former inmate reported—describing, as it were, a noteworthy event in the short history of the camp—that a Jewish doctor and a member of the Committee for Recruitment inspected the camp at the end of December 1942. They did not relieve obviously sick forced laborers from work but classified them as fit for duty. The camp was dissolved on January 9, 1943, and the remaining inmates were transferred to the labor camp at Massicault.

Jens Hoppe
Trans. Stephen Pallavicini

MAA-ABIOD

On December 13, 1942, 40 Jewish forced laborers were interned in Maa-Abiod. The camp was dissolved in the middle of April 1943 after the “termite” (regional representative of the Committee for Recruitment) Maurice Taïeb was able to convince the responsible German officer that the Jews would be of no use in the heavy fighting in that area but would be useful as forced laborers in Mateur. The forced laborers were then sent to Mateur to do cleanup work and excavation. The Allies liberated them at the beginning of May 1943.

Jens Hoppe
Trans. Stephen Pallavicini

MASSICAULT

In January 1943, the Wehrmacht erected a labor camp in Massicault, about 15 kilometers (9.3 miles) to the west of Tunis. It operated as an internment camp for Jewish men. They performed different types of forced labor, but mostly road construction. The men interned in Massicault had previously done forced labor in the Ksar-Tyr camp. The camp in Massicault was dissolved on April 23, 1943.

Jens Hoppe
Trans. Stephen Pallavicini

MATEUR

A labor camp for Jews was erected in December 1942 in Mateur, 30 kilometers (18.6 miles) southwest of Bizerte. It was planned that the inmates would be at the disposal of the

Wehrmacht. On January 24, 1943, there were 40 internees who were put to work removing rubble after bombing raids. There were around 10 specialists, such as tailors, cobblers, and barbers, who were distributed around Mateur for use by the Wehrmacht, according to their qualifications. In April 1943, forced laborers arrived from the dissolved camps at Aïn Zammit, Jefna, Katach-Baya, Maa-Abiod, Michaud, and Rosignol. This camp was liberated on May 3, 1943.

Jens Hoppe

Jews. In mid-April 1943, the camp was dissolved, after the “termite” (regional representative of the Committee for Recruitment) Maurice Taïeb was able to convince the responsible German officer that the Jews were of no value in the heavy fighting in the area, but that they would be of greater value doing forced labor in Mateur. As a result, the remaining forced laborers were sent to Mateur to do cleanup work and excavation. They were liberated by the Allies at the beginning of May 1943.

Jens Hoppe
Trans. Stephen Pallavicini

MENZEL TEMIM (MANZIL TAMIM)

The Wehrmacht erected a labor camp for Jews in Menzel Temim, about 12 kilometers (7.5 miles) southwest of Kelibia, on the south coast of the Cap Bon Peninsula, in December 1942. The camp held only men from Nabeul aged 18–50, who were quartered in huts and a cattle barn. Because families from the Jewish community in Nabeul received support when their men went into the camp in place of other forced laborers, more poor than well-off Jews were interned. The forced laborers erected a landing field for the Luftwaffe, which they then had to maintain throughout the entire period of the occupation. A few Jews worked in the camp kitchen. The forced laborers had to continue working during Allied bombardments.

In December 1942, around 100 Jews in Menzel Temim were performing forced labor. Soon the number increased to around 300. A few survivors, however, mention only 50 internees. This could be the result of the fact that, in March 1943, many of the forced laborers were able to flee. No Jewish forced laborer died while the landing field was being bombed. According to a survivor’s report, however, the German guards shot a Jew who was shoeless and exhausted because he could not march anymore.

The labor camp’s guards were Wehrmacht soldiers. The Jewish community in Nabeul had to support the camp while, at the same time, providing medical care for the inmates, even though the Wehrmacht would not permit a Jewish doctor to be stationed there. Many complaints filtered out of the camp to Nabeul about the inhuman living conditions. As a result, the chairman of the Jewish community and his deputy visited the camp. The prisoners fell upon them and threw them into the barn. Only after three days were they able to convince the forced laborers that, without their assistance, no further supplies would be provided to the camp inmates. The camp was liberated by the British army on May 11, 1943.

Jens Hoppe
Trans. Stephen Pallavicini

MICHAUD

On December 13, 1942, 40 Jewish forced laborers were interned in Michaud, about 10 kilometers (6.2 miles) from Mateur. They were held on a farm. German soldiers guarded the

ROSSIGNOL

On December 13, 1942, 50 Jewish forced laborers were interned in Rossignol. In mid-April 1943, the camp was dissolved, after the “termite” (regional representative of the Committee for Recruitment) Maurice Taïeb was able to convince the responsible German officer that the Jews were of no value during the heavy fighting in the area but would be of use doing forced labor in Mateur. As a result, the remaining forced laborers were sent to Mateur to do cleanup work and excavation. They were liberated by the Allies at the beginning of May 1943.

Jens Hoppe
Trans. Stephen Pallavicini

SAF-SAF

The Wehrmacht labor camp at Saf-Saf was founded on December 13, 1942. Initially, 200 Jewish forced laborers were interned there. On January 13, 1943, a group of these forced laborers was able to return to Tunis. They quartered in the Alliance School (*École de l’Alliance*). Jacob André Guez described the prisoners in his diary: “They leave now, filthy, flea-ridden, all dressed in tunics.”

The Jews had to excavate trenches, erect fortifications and observation posts, and transport supplies to the front. German soldiers guarded the inmates in the camp and from posts on the surrounding hills. There was a system of front leave (permission), on the basis of which the Jewish forced laborers could be sent home for a few days before returning to the labor camp. The camp was dissolved in February 1943, with some of the forced laborers being transferred to the Cap Serrat camp and others to Sedjenane.

Jens Hoppe
Trans. Stephen Pallavicini

SEDJENANE

It is suspected that the Wehrmacht erected an improvised work camp at Sedjenane in January 1943. The Jews who were put to work in Sedjenane, about 40 kilometers (25 miles) north of Beja, brought supplies and ammunition direct to the

front line and retrieved the bodies of fallen German soldiers. Thus, they were employed under the fire of the Allies. In February 1943, a group of forced laborers from Saf-Saf arrived. Sedjenane was liberated by the Allies on March 30, 1943.

Jens Hoppe
Trans. Geoffrey Megargee

SFAX

The Wehrmacht established a labor camp for male Jews in Sfax. However, the Jewish community itself arranged the recruitment for labor and paid the Jews who reported voluntarily. They received 100 francs daily, a much higher sum than was paid by the Committee for Recruitment. Thus, almost exclusively, poor Jews performed forced labor. It is uncertain whether the inmates could leave the camp in the evening or whether they were interned the whole time. The forced laborers had to load and unload Wehrmacht trucks, work in the harbor, and build dugouts. Altogether, the Germans demanded 100 Jews as forced laborers. However, those 100 never worked together at the same time.

The commander of the forced labor service in Sfax, and with it the labor camp, was SS-Sturmbannführer Best, who, later, also took over this role in Sousse. His deputy was SS-Sturmbannführer Jensen. German soldiers guarded the forced laborers, but they did not seriously mistreat the Jews. So far as is known, none of the forced laborers in Sfax was murdered. The city was liberated by the British Eighth Army on April 10, 1943.

Jens Hoppe
Trans. Stephen Pallavicini

SIDI AHMED (SIDI HAMED)

Likely at the beginning of January 1943, the Wehrmacht erected a labor camp for Jews in Sidi Ahmed, near Bizerte, which resembled a prisoner of war (POW) camp. The inmates had to perform forced labor at the airfield as well as on the railways and at the railway station. Following the destruction of the Bizerte railway station at the end of December 1942, the Sidi Ahmed railway station constituted the terminus of the railway from Tunis, by which the Wehrmacht received much of its supplies. On January 28, 1943, 250 Jewish men were interned in Sidi Ahmed. There were two Jewish camp bosses, Henry Bismut and Alex Bonan. The latter had received a 75 percent disability in a World War I POW camp but still had to report for forced labor. In addition, each work squad was led by a Jewish group commander. The result was that there was an influential group of internees who tried to use their influence for the benefit of the forced laborers.

On February 16, 1943, a Jewish forced laborer died in a truck accident on the road to Tunis. Another, Elie Saadoun, was executed by the Germans on February 9, 1943. Saadoun had repeatedly tried to escape from the camp. After the last

attempt he was taken to Bizerte, around 10 kilometers (6.2 miles) away, and handed to the camp commander, Lieutenant Elfess. He, in turn, ordered the German soldier with the nickname *le Tueur* (the butcher) to execute Saadoun. Saadoun was found with three bullets in the back, his chest open, and his heart ripped out.

The camp at the airport was fully evacuated on April 15, 1943, following a bluff (*coup de bluff*). Bonan, one of the Jewish camp bosses, asked the commanding Wehrmacht officer for a general front leave for the forthcoming Passover. The request was declined, but Bonan boldly told the noncommissioned officer that everything had been arranged and that the men had permission to go home, resulting in the dissolution of the Sidi Ahmed labor camp. Only the three group leaders were to remain, to guard important supplies.

Jens Hoppe
Trans. Stephen Pallavicini

SOUSSE

In December 1942, the Wehrmacht established a labor camp for male Jews from Sfax in Sousse, in a former French military camp known as Ardent de Picq. Mostly, young Jews were interned in Sousse, while older so-called home sleepers did forced labor. Because of the demanding physical labor, over time, more and more Jews became incapable of working, so that the circle of forced laborers became steadily smaller. The Jews worked mostly for the Wehrmacht at the harbor, at the railway station, and in the nearby quarries. Some of the home sleepers worked in a fish-canning factory and for the Wehrmacht's Hygienic/Bacteriological Test Site (*Hygienisch-bakteriellen Untersuchungsstelle*).

Initially, the French colonel Eyraud was in charge of the forced labor and, with it, the camp for the younger Jews. Former forced laborers described him as an antisemite who abused the Jews. After an inspection by SS-Hauptsturmführer Theo Saevecke, he was removed from this position. SS-Sturmbannführer Best, who was already in charge of forced labor at Sfax, took over the role. Best was regarded as tough and merciless. Forces from the British Eighth Army (probably the 1st Free French Division) liberated Sousse on April 12 or 13, 1943.

WEHRMACHT DISCIPLINARY FACILITIES INTRODUCTION

In January 1934, the National Socialists reinstated the military's jurisdiction (*Militärgerichtsharkeit*), which had been placed under civilian control during the Weimar Republic, over its own disciplinary cases.* There were once again military courts (courts-martial) for larger units and headquarters (divisions, corps, armies, and army groups) and in military administrative districts. Between 1939 and 1944, the military

judiciary had a significant influence on the entire jurisdiction of the Nazi state. During the war, over 1,000 military courts were formed in which about 3,000 judges were active. The courts-martial could actually take any criminal cases they considered appropriate. Only after the assassination attempt on Hitler on July 20, 1944, could the (civil) Reich Ministry of Justice (*Reichsjustizministerium*) exercise power over the Wehrmacht. In political criminal cases, soldiers could now be dismissed and handed over to the People's Court (*Volksgericht*) or to special courts.

With the beginning of the war, a new law took effect that redefined the jurisdiction and proceedings of the courts-martial. Not only soldiers could be accused but also German and foreign civilians. In addition, the courts-martial had jurisdiction over prisoners of war (POWs) and also over foreign members of the Wehrmacht ("legionnaires") and auxiliary workers, who were recruited from POWs (*Hilfswillige*, or voluntary helpers, called "Hiwis" by the Wehrmacht).

The military judiciary mainly applied the Military Penal Code (*Militärstrafgesetzbuch*), which regulated typical military offenses, such as desertion, disobedience, or neglect of duty while on guard. In addition, the Armed Forces Legal Department (*Wehrmachtrechtsabteilung*) created a new Wartime Special Penal Ordinance (*Kriegsonderstrafrechtsverordnung*), which went into effect on August 26, 1939, and which created special criminal offenses, such as "subversion of the war effort" (*Wehrkraftzersetzung*). This was a broad regulation that encompassed any speech or act that undermined military service, from inciting desertion, to theft of supplies or mail, to attempted suicide. The military courts also applied (civil) criminal law, which in addition to common offenses (murder, fraud, or theft) also included political rules (e.g., the prohibition of listening to foreign radio broadcasts). Moreover, another new law allowed a human to be legally assessed as "vermin" (the *Volksschädlingsverordnung* or People's Pest Ordinance), so that the death penalty could be imposed at any time for a variety of offenses. Germany also issued special laws and regulations within the territories that it occupied (e.g., prohibitions against weapons possession).

The military justice system of the Third Reich grew out of Germany's experiences in World War I. Military jurists and commanders believed that the penal system had been too lenient in the years 1914–1918 and that too few death sentences had been issued. They were especially concerned about the mutinies that took place in some units in the last part of the war. Therefore, they strengthened the legal system to make it extremely brutal, with an eye toward deterring soldiers from committing any offense. The idea was to make the punishment worse than combat, so that soldiers would not think they could exchange harsh conditions at the front for relative comfort in a detention facility.

As some basic statistics demonstrate, the Wehrmacht judiciary was a most brutal legal organization: 50,000 death sentences were handed down, for example. Several tens of thousands more soldiers received sentences of penal servitude, and 400,000 more received prison sentences. Penitentiary

sentences meant not only deprivation of liberty but also dishonor—if the convicted were soldiers, they were expelled from the Wehrmacht and handed over to the German civil justice system, so that the Reich Ministry of Justice carried out the punishment in a penitentiary (*Zuchthaus*) or a prison camp. (From the autumn of 1944 on, this changed, as the Wehrmacht began to request former soldiers back from the Ministry of Justice, because the Wehrmacht wanted to use them as laborers.) Prison sentences for soldiers, POWs, and legionnaires (foreigners serving with the Wehrmacht) were carried out in Wehrmacht prisons. Foreign legionnaires who came from the territories of the Soviet Union and from Eastern Europe were mostly transferred to "special camps" (labor camps), which existed, for example, in Ostrov (Ostrovskii raion, Pskovskaiia oblast', Russia) and in Małkinia Góra in Poland. From September 1943, such prisoners were regularly transferred to a camp controlled by the SS, which was affiliated with the Mauthausen concentration camp.

During the war, the Wehrmacht operated eight Armed Forces Prisons (*Wehrmachtfestungenisse*, WG), which were all in the territory of the German Reich: Torgau-Fort Zinna, Torgau-Brückenkopf, Germersheim, Bruchsal, Anklam, Glatz (today Kłodzko, Poland), Graudenz (today Grudziądz, Poland), and Freiburg im Breisgau. For the execution of shorter prison sentences, there were also a total of 21 Wartime Armed Forces Prisons (*Kriegswehrmachtfestungenisse*, KWG), which were mainly located in occupied countries. Below these prisons, there were more than one hundred Wartime Armed Forces Detention Centers (*Kriegswehrmachthaftanstalten*), which had been established for very short prison sentences and military arrests. In the first years of the war, army groups also established Mobile Army Prisons (*Bewegliche Heeresfestungenisse*) whose primary purpose was to transfer convicted soldiers to regular detention centers. Later, as the number of those convicts grew, army divisions created Penal Platoons (*Strafvollstreckungsgruppen*), where short sentences could be served. In addition, there were Armed Forces Prisoner Units (*Wehrmacht-Gefangeneneinheiten*) that included between 50 and several hundred prisoners. These were essentially labor detachments. In some cases, they existed temporarily, for use at construction sites. Other such units were permanent additions to industrial facilities.

The Wehrmacht's remand prisons (*Untersuchungsgefängnisse*, lit., "investigative prisons") assumed an important role. Germany's military and political leaders were interested in punishment for the sake of deterrence, and the Wehrmacht was also interested in returning men to combat. So, capital punishment was popular, as were extremely harsh prison and camp conditions, because they seemed likely to deter soldiers from evading service or committing other offenses. Beyond that, the Wehrmacht had only a limited interest in seeing prison terms carried out, especially penitentiary terms, because those men were lost to the service. The remand prisons, on the other hand, because they held prisoners who had not yet been tried, and so might be found innocent, represented a pool of manpower that could, potentially, be returned to

combat. However, the remand prisons' capacities were never sufficient, and the transport to these places was usually time consuming, so the Germans used the Wartime Armed Forces Prisons, especially, as remand prisons for the military courts. And to reinforce the idea that prisoners could be reintegrated into combat units, the Wehrmacht prisons were structured like battalions. There was a commander and company commanders, and the guards were platoon leaders and section leaders, thus, primarily, sergeants, corporals, and lance corporals. Military efficiency was the focus.

As a replacement for combat duty while in prison, detained soldiers regularly had to work for up to 14 hours a day. Their labor was to benefit the military directly. This included shoveling coal, loading transport goods, felling trees, or working for armament factories. The daily rations were much less compared to the daily rations for fighting soldiers. For "incorrigible" prisoners, Penal Camp Companies (*Straflagerkompanien*) were formed in every Armed Forces Prison, where the labor was even harder and the nutrition even worse.¹ The conditions in a Penal Camp Company were to be aligned with those of a concentration camp.² Therefore, they were called "Concentration Camps of the Wehrmacht" in the parlance of the military leaders.³

Where possible, civilians were held in Wehrmacht detention centers only for the purpose of pretrial detention. When civilians were sentenced to prison, the Wehrmacht usually rejected the idea of imprisonment in a military prison. Instead, the German military usually handed over convicted civilians to civilian enforcement authorities. Longer terms of imprisonment were usually served in prisons in the German Reich that were under the control of the Reich Ministry of Justice. There, the military could be sure that escapes were almost impossible. The German Ministry of Justice brought the detainees together in particular detention facilities. For example, convicted men from Norway and Denmark were sent to Hamburg-Fuhlsbüttel Penitentiary, women to the Lübeck-Lauerhof Penitentiary or to the Hamburg-Fuhlsbüttel Prison. However, it was also possible for convicted civilians in occupied countries to remain in their home countries: in the Netherlands, they were sometimes handed over to the enforcement authorities of the German civil administration (the Reichskommissar for the Occupied Netherlands). In France, convicted civilians were sometimes handed over to the French judiciary.⁴

The Wehrmacht detention facilities in the occupied territories also served to house people who had been sentenced to death. Furthermore, the regional commanders sometimes used these facilities for hostages, whom the Germans killed in retaliation for attacks against the Wehrmacht.

The large Wehrmacht prisons were under the control of the Commander of the Replacement Army (*Befehlshaber des Ersatzheeres*), an organization of the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) (under the control of Generaloberst Friedrich Fromm from 1939 to 1944 and Reichsführer-SS Heinrich Himmler from July 21, 1944, to May 1945). The Wartime Armed Forces Prisons and Wartime Armed Forces Detention Centers in occupied foreign

territory were under the authority of the local commanders or of the commanders of army groups, armies, corps, or divisions.

Between 1941 and 1942, the Wehrmacht's penal system started changing considerably. On the one hand, the Wehrmacht's great losses created increasing pressure to deploy prisoners militarily. On the other hand, there was a continuing desire to make punishments even more brutal to increase the deterrent effect. Therefore, from 1941 on, the Wehrmacht formed so-called probation battalions (*Bewährungsbataillone*), in which prisoners served as soldiers, with light weapons. More than 60,000 convicts served in such units. If the men were sentenced by courts-martial, they were deployed in the Probation Unit (*Bewährungstruppe*) 500. Those who were sentenced by German civil courts (state courts, higher state courts, special courts, or the People's Court) were also seized and forced into Probation Unit 999. As the names of the units implied, those prisoners who fought in a probation battalion could gain their freedom. For this, they had to fight successfully (e.g., they had to have been involved in the defense against several attacks, destroyed several tanks, etc.), have been badly wounded—or killed. The principle was "blood atones for guilt."⁵

The Wehrmacht's local detention centers held pretrial detainees and, mostly, those prisoners who had to serve short sentences (e.g., for negligence, traffic accidents, drunkenness, insulting superiors, or embezzlement). Such prisoners could be reinstated directly into their units for combat, after having served a prison sentence of a few months.

As of 1942, detainees of Armed Forces Prisons and Wartime Armed Forces Prisons who were not considered fit to fight in a probation battalion were brought together in the thousands in new detention facilities: longer prison sentences were mainly served in Field Prisoner Battalions (*Feldstrafgefangen-Abteilungen*). These were "punitive battalions" (*Strafbataillone*) that were employed as labor units directly on the front. They were supposed to work mainly in the combat area, digging trenches, disarming mines, building wooden bunkers, or recovering dead bodies. The prisoners were to be deployed in hotly disputed, dangerous areas. They were supposed to be exposed to a greater mortal danger than regular soldiers. If a prisoner had proved himself in such a Field Prisoner Unit, he could be transferred to a probation battalion to shorten his sentence.

An even more extreme punishment took the form of the Field Penal Camps, which were a further development of the Penal Camp Companies. Beginning in April 1942, three Field Penal Camps were set up, and they had replaced the Penal Camp Companies completely by January 1943. Those field punishment camps were supposed to be deployed under "particularly dangerous circumstances."⁶ The daily ration was still below that for other prisoners. After six to nine months had passed, there had to be a review of such employment: those who had proved themselves were to be transferred to a Field Prisoner Unit. Those who did not prove themselves were to be handed over to the Gestapo and sent to a concentration camp. The mortality rate was so high, though, that

such instructions appeared absurd. Many prisoners died because of malnutrition, illness, cold, hard labor, accidents, or the brutality of the guards. Poor work was punished by withholding food. Noncompliance was broken by the force of arms; in case of doubt, a drumhead court could pass a death sentence without further review. The prisoners were supposed to work especially in regions of northern Norway and northern Finland: building roads, clearing roads of snow, and building positions for the Wehrmacht. The Field Penal Camps were predominantly under the command of the Organisation Todt, a civil and military engineering group that often did work for the Wehrmacht.

After Heinrich Himmler became Commander of the Replacement Army and, thus, master of most of the penal facilities, no more convicted soldiers were handed over to the German civil judicial authorities. Almost all convicts were now pressed into probation battalions or Field Prisoner Units to support the Wehrmacht directly through combat missions or by building entrenchments at the front.

In summary, it can be said that the military justice was designed to meet all forms of resistance, as well as disobedience, with force. The most important punishment for the military courts was, therefore, the death penalty. If a sentence of imprisonment was issued nevertheless, then the Wehrmacht's punishment was meant to fall primarily on soldiers, as opposed to civilians (the Wehrmacht had no interest in the latter, because they could not be integrated into combat units). The prisoners had to carry out tasks for the Wehrmacht, and the punishment had to be brutal at the same time, to deter others. As the war continued, conscript prisoners were either handed over to probation battalions or sent to penal units, doing forced labor directly at the front. The Wehrmacht detention facilities transferred detainees to civilian prisons, probation battalions, field prisoner departments, and field punishment camps, and yet they were constantly overcrowded.

SOURCES Primary source information about Wehrmacht prisons is located in BArch (R 3001/25015); BA-MA (RH 14/33; RH 19 XIII/5; RH 20-7/298; RH 26-281/31; RH 36/324; RH 48/7; RH 53-23/52; RM 31/3351; RW 4/1191; RW 13/62; RW 19/2130; RW 35/314; RW 35/1249; RW 41/57); and Hauptstaatsarchiv Hannover (Nds. 721 69/75. Vol. 10; Nds. 721 Acc. 90/99).

Additional information about Wehrmacht prisons can be found in the following publications: Rudolf Absolon, *Die Sonderreinheiten in der früheren deutschen Wehrmacht (Bewährungs- und Erziehungseinrichtungen)* (Kornelimünster: Bundesarchiv Koblenz, 1952); Fietje Ausländer, *Verräter oder Vorbilder? NOTES

* The reader should be aware that, because of a lack of sources, a number of sites do not appear in this volume. These include some Wartime Armed Forces Prisons whose existence is confirmed in archival sources:

Akershus (BA-MA, RW 39/158); Antwerp (BA-MA, RH 48/7); Bordeaux (Source: Ludwig Baumann, prisoner and interviewee; Frank Bührmann-Peters, "Ziviler Strafvollzug für die Wehrmacht"); Clermont-Ferrand (BA-MA, RH 48/7); Kiev (BA-MA, RH 48/7); Lemberg, today Lviv, Ukraine (BA-MA, RH 48/7); Marseille (BA-MA, RW 60/4166); and Toulouse (BArch B R 70/Frankreich/12 sowie BA-MA, RH 48/7).

The existence of these others is suspected: Athens, Bruges, Brussels, Gent, Lyon, Pleskau (today Pskov, Russia), and Warsaw.

The existence of several additional Remand Prisons, in Akershus, Belgrade, Hamburg, Meseritz (today Międzyrzecz, Poland), Munich, and Ploiești, is also suspected.

Of the Wartime Armed Forces Detention Centers (*Kriegs-Wehrmacht-Haftanstalten*), briefly mentioned above, we can confirm such facilities in Smolensk (established June 1, 1942) and Odessa (established January 27, 1943), from BA-MA, RH 48/7. No information on the others is available.

The so-called Armed Forces Prisoner Units (*Wehrmachtgefangenenaufstellungen*), also mentioned above, were, in effect, "work columns," but they set up camps in some locations that lasted for some time. These locations are mentioned in BA-MA, RH 48/7: Bernau (near Berlin), Clauen, Diekholzen (near Hildesheim), Fallingbostel, Georgenhof, Lanke, Peene-münde, Pinnow (near Angermünde), Rachelshof (today Brachlewo, Poland), Schieratz (today Sieradz, Poland), Strasbourg in Westpreussen (today Bronica, Poland), Steyerberg, Thorn-Süd (today Toruń, Poland), and Wesseling (near Cologne).

There may well be other facilities that have been missed. It is hoped that other researchers can fill the gaps in this understudied subject.

(captain or lieutenant) as commander, an Oberfeldwebel (master sergeant), a Feldwebel (staff sergeant), and six Unteroffiziere (sergeants or corporals) as well as two privates as drivers. Accordingly, the number of prisoners was likely to be estimated in the two digit rather than three digit range. The reason for the small number was that the BHG were "not penal facilities in the usual sense," but rather "first and foremost reception, collection, and transfer stations."⁴ Because of this role, the Germans usually established BHGs at the sites of the prisoner of war collection points at the front.

From April 1942 on, the execution of sentences was largely moved out of the armed forces prisons in the homeland to areas near the front, that is, to Field Penal Battalions (*Feldstrafgefangenen-Abteilungen*, FStGAs) and Field Penal Camps (*Feldstraflager*). At that point, the activities and the number of BGHs in the east expanded. As of the end of May 1942, mobile army prisons existed with AOKs 6, 9, 11, 12, 16, 17, and 18, and with the commanding generals of security troops and the commanders of the rear areas of Army Groups South, Center, and North. Their tasks were outlined this way at the time: "Accepting custody of judicially convicted soldiers from the respective commands for the purpose of transferring them to the penal institutions in the rear, or to field penal battalions (or field penal camps). Execution of disciplinary and judicial penal detention, and *in exceptional cases* also up to six weeks of time remaining on an existing sentence."⁵ The BHGs also came into consideration for the temporary housing of provisionally arrested soldiers.

From January 1943 on, so-called penal platoons (*Strafvollstreckungsgruppen*) were established in order to be able to also execute sentences of a few weeks in the immediate area of the front, and this development further restricted the responsibilities of the BHGs. On September 4, 1944, their "purpose" was communicated thus: "1. Housing of temporarily apprehended prisoners and those being held for interrogation; 2. Acceptance into custody of those sentenced by military courts within the jurisdiction of the army or army group, for transfer to field penal units and field penal camps or to penal installations in the rear; 3. Execution of penal detention of up to six weeks' duration, if temporary incarceration in a penal platoon is not possible."⁶ Messerschmidt underscores the importance that befitted the BHGs as a hinge to the field penal units and the field penal camps, by noting that the Sixteenth Army judge inspected the BHG there three times in the fourth quarter of 1944.⁷ Apparently, the inspections were supposed to establish that the prisoners reached the field penal system as quickly as possible.⁸

After mobile army prisons were established, at first on an "as needed"⁹ basis only at army headquarters and the commanders of army rear areas, others were added at various army groups, the last one being established in 1944. As of March 16, 1943, there were already 14 mobile army prisons in the area of the eastern front.¹⁰ Occasionally, they were also referred to as "Bewegliche Armeegefängnisse" (which also translates to "mobile army prisons"), as was the case, for example, with the installation with AOK 18, located in Volosovo

MOBILE ARMY PRISONS (BEWEGLICHE HEERESGEFÄNGNISSE)

Among the earliest Mobile Army Prisons (*Bewegliche Beeresgefängnisse*, BHG) known by name is BHG Athens, which the Germans established in Greece in the summer of 1941. Presumably, it existed only for a few months, until the establishment of the Armed Forces Prison (*Wehrmachtgefängnis*, WG), Athens.¹ A larger number of BHGs came into being immediately after the attack on the Soviet Union. Thus, the first identification cards for BHG personnel were issued by the headquarters of armies (*Armeeoberkommando*, AOK) 9, 11, 17, and 18 date from July 1941.² A few of the BHGs that the Germans established on the eastern front in 1941 existed until 1945, for example, the BHG with AOK 18. Others were disbanded again after a short period of time, as was the case with the BHG with the Fourth Army by the end of 1941.

An order from the commander of the Ninth Army outlined the role of the BHGs, according to their status as of the spring of 1942, thus: "The mobile army prison in Witebsk [today Vitebsk, Belarus] is not available for the execution of penal detention. Its task, first and foremost, is to concentrate and dispatch those prisoners who have been sentenced to longer prison sentences and detention in penal camps, and who are to be transported to detention facilities in the homeland. Prison sentences of up to 3 months will be served in the prison in Borissow (KWG) [today Barysaw, Belarus]; sentences of more than 3 months in prisons in the homeland. Those affected are to be conducted to the mobile army prison in Witebsk for transport, including those for whom detention in penal camps has been ordered."³

The authorized strength for the permanent staff of the mobile army prisons also provides a clue to the size of their prisoner populations. According to Seidler, the permanent staff of a BHG in 1941 consisted of a Hauptmann or Leutnant

(Leningrad oblast') in May 1943.¹¹ After the start of combat action in Italy, by February 1944, a BHG Italy existed there.¹² The Field Post Number Overview of June 6, 1944, shows a BHG North,¹³ which may have been located in Norway or perhaps Denmark. Soon after the Allied landing in Normandy in the summer of 1944, BHGs were established on the western front; they existed as part of the Fifteenth and Nineteenth Army commands. Also, the First Airborne Army command had an army mobile prison at its disposal—even though the army itself was under the command of the air force.¹⁴

In December 1944 and January 1945, the designations of the existing 21¹⁵ BHG were changed to mobile army prisons 500–520. The following listing shows the last former designation: BHG 500 (formerly the BHG with AOK 2), BHG 501 (with AOK 4), BHG 502 (with AOK 6), BHG 503 (with AOK8/B II), BHG 504 (was the BHG Italy), BHG 505 (with AOK 16), BHG 506 (with AOK 17), BHG 507 (with A II), BHG 508 (with AOK 1), BHG 509 (with AOK 7), BHG 10 (with AOK15), BHG 511 (with AOK 19), BHG 512 (with Pz .AOK [Armored Army Headquarters] 1), BHG 513 (with Pz .AOK 3), BHG 514 (with Pz.AOK 4), BHG 515 (with Pz.AOK 5), BHG 516 (the BHG with Airborne AOK1), BHG 17 (was the BHG at A I), BHG 518 (was the BHG with Army Group A), BHG 519 (was the BHG with Army Group Center), and BHG 520 (was the BHG North). BHG 521 and BHG 522, which appear in the Field Post Number Overviews of January 16 and March 3, 1945, respectively, had apparently already been established at unknown locations.¹⁶

Like all Wehrmacht detention sites, the mobile army prisons added their contribution to the balance of terror of National Socialist military justice, which carried out over 20,000 executions of members of the armed forces alone. The example of BHG 511, which was under the control of the Nineteenth Army, serves to illustrate the role that the mobile army prisons played in this regard. On April 25, 1945, its commander, Hauptmann Otto Siebler, arrived in Diepoldshofen with 120 prisoners, on a march from Waldkirch via Sigmaringen. Among the prisoners were 45 soldiers who had been sentenced to death. For 16 of them—one of whom was able to flee—Siebler had received the execution orders on April 19. On April 26, two days before French troops arrived, he had the remaining 15 men executed in the forest of Diepoldshofen. Two criminal proceedings against him in the 1950s were suspended, because juridically he could not be found guilty, since the sentences had been legally valid.¹⁷

SOURCES A systematic evaluation of the Wehrmacht's documents on the mobile army prisons has yet to be done. In this essay, similarly to the cited secondary literature, the author relies first and foremost on the statements that the Army High Command (*Oberkommando des Heeres*, OKH) made in its surveys of the penal installations, probationary units, and so on, which are cited several times here. Additionally, there are individual document finds that have come up in the past decades, during research on related topics. The significance that local and regional historical research also has for this subject is illustrated by the cited contribution by Nicola Siegloch.

Relevant, if general, secondary sources include Franz Seidler, *Die Militärgerichtsbarkeit der Deutschen Wehrmacht 1933–1945: Rechtsprechung und Strafvollzug* (Munich: Herbig, 1991); and Manfred Messerschmidt, *Die Wehrmachtjustiz 1933–1945* (Paderborn: Ferdinand Schöningh, 2005). SPECIAL FIELD BATTALIONS (FELD-SONDERBATAILLONE)

Beginning in 1936, the Wehrmacht established prisons to hold German military personnel convicted of violating military law. In addition, they created so-called special battalions (*Sonderbataillone*) for the reeducation of “undesirable” soldiers. In October 1936, seven of these special battalions were established by the Heer, housed in the barracks of the military training grounds in Altengrabow, Stablaek (today Bagrationovsk, Russia), Königsbrück, Münsingen, Grafenwöhr, Ohrdruf, and Wahn. The Luftwaffe had a separate special battalion in Dedelstorf.

Soldiers who were considered to be of little value or who committed actions deemed dishonorable by the Nazi regime were transferred to the special battalions. Soldiers who had been punished for repeated disobedience or other disciplinary infractions were sent to the special battalions, as were those who had served prison sentences for theft and homosexual activity. Alcoholics, mentally ill men, and “asocials” were also sent to the special battalions, as were conscripts who had converted to Judaism. These battalions were viewed as a preliminary or diversionary stage of punishment, which could be followed by transfer to a concentration camp. Those who resisted the “educational methods” of the special battalions could be expelled from the Wehrmacht and turned over to the Gestapo. By the end of 1936, there were about 500 soldiers who had been sent to the special battalions for “education”; by the spring of 1938, their numbers had increased to approximately 1,350 prisoners. At least 3,000 conscripts were sent to the special battalions in the period between October 1936 and September 1939; however, the actual number may have been as high as 6,000.

The education in the special battalions was geared toward instilling absolute obedience in the men, after which they could be returned to conventional military battalions. The men in the special battalions were not locked up, but their barracks were kept isolated from those of regular soldiers

within the military bases where they were located. However, the soldiers in the special battalions were treated like prisoners. Their days consisted of hours of exercises and drills, hard manual labor, and ideological instruction. The officers were harsh disciplinarians who harassed the men and sometimes treated them quite brutally. Even minor infractions were met with severe punishment. For example, a soldier was placed under five days of “close arrest” with his rations reduced to water and bread simply for having used his army overcoat as a pillow while sleeping. Desertions were a regular occurrence in the special battalions and accounted for a substantial proportion of the prewar desertions in the Wehrmacht (perhaps as high as 20 percent).

After the war began, the special battalions were integrated into the Replacement Army (*Ersatzheer*), which oversaw all special battalions in Germany. The Kriegsmarine also had its own special battalion, known as the Eastern Special Battalion (*Sonderabteilung Ost*) or Baltic Sea Special Battalion (*Sonderabteilung Ostsee*), which was headquartered at the U-boat training base at Hela (today Hel, Poland). The Luftwaffe dissolved its special battalion at Dedelstorf and organized a new one in Leipzig, which was known as the Luftwaffe Examination Camp (*Prüfungslager der Luftwaffe*).

Prior to September 1939, the special battalions were regularly inspected and problem prisoners were sent to concentration camps. During this time, 180 “re-education soldiers” (*Erziehungssoldaten*) were sent to Sachsenhausen concentration camp, where they were quartered in separate barracks referred to as the “Wehrmacht Special Battalion” (*Sonderabteilung Wehrmacht*). These men were stigmatized as cowards who refused to fight at the front line, and they were subject to extremely brutal treatment. In the winter of 1938–1939, these men were sent to work clearing forests. They were treated as slave laborers, worked to the point of exhaustion, and subjected to constant physical abuse by their guards. About half of them died before the spring of 1939.

In January and February 1940, three “special field battalions” (*Feld-Sonderabteilungen*) were established, in addition to the Heer’s seven existing special battalions. The three special field battalions were assigned to Army Groups A, B, and C, which were stationed on Germany’s western border. During the Western European Campaign (May 10 to June 25, 1940), the special field battalions were used for various purposes by the Wehrmacht. For example, on May 19, 1940, the Wehrmacht had captured Fort La Ferté, part of the Maginot Line. Three weeks later, the men from Special Field Battalion C were sent to clear debris from the damaged fort and remove the badly decomposed bodies of its former defenders. Sometimes, the men had to crawl into tunnels and rooms that were 30 meters underground. During this time, the fort was under fire from French artillery. Accumulations of toxic gases in the underground tunnels of the fort posed a potentially fatal health risk to the soldiers, and many of them were adversely affected by the traumatic experience—frequent vomiting, disturbed equilibrium, and severe anxiety were common. The soldiers were prevented from taking cover from artillery

bombardments while doing their work under the threat of corporal punishment.

In June 1940, the three special field battalions were sent to Metz, where they were combined into a single Special Field Battalion, with the previous separate battalions redesignated as Companies A, B, and C. During the following months, the soldiers were sent to work in France and Belgium, primarily as miners. A Luftwaffe medical officer stated that the work the soldiers were performing was not only exhausting and dangerous but also led to “unimaginable” uncleanliness. The soldiers’ washing facilities had only cold water and no soap, and their clothes were almost always damp.

In the summer of 1941, the soldiers were working for the Wehrmacht in the mountainous Eifel region of the upper Rhineland. In October 1941, the Special Field Battalion was transferred to Riga, where it was attached to the Commander of the Rear Area of Army Group North (*Befehlshaber des rückwärtigen Gebiets der Heeresgruppe Nord*). After this point, the Special Field Battalion was classified as a penal battalion, rather than a “re-education” unit. The soldiers were not allowed to wear insignia indicating their nationality, nor were they allowed to wear any sort of badges. They were sent to do forced labor at the front line, where they performed work that was intended to be dangerous to life and limb, such as digging trenches and minesweeping. After operations in the immediate vicinity of the front line concluded, the men were then sent to work building roads, clearing trees, or removing snow from roadways in winter. In 1941 and 1942, 20 soldiers in the Special Field Battalion were sentenced to death for desertion.

In July 1941, the Kriegsmarine established a company at Hela composed of the former members of its “special unit.” The company was integrated into the Heer’s Special Field Battalion in August. An additional company of men from the Heer, designated as Company D, arrived the same month. Additional men were transferred to the battalion via Metz while it was located on the western front; after it was transferred to the east, new soldiers were sent from Warsaw.

In February 1943, the naval company was transferred back to Hela, where it became an autonomous “naval special field battalion” under the direct control of the Kriegsmarine. The conditions in this battalion were just as brutal. The men had to perform exhausting (and often pointless) manual labor, such as moving crates of sand that had to be stacked, then unstacked, and moved to another location. The guards were violent to the point of sadism. The naval command documented cases in which the guards kicked soldiers lying on the ground, ground their boots into the palms of their hands, or extinguished cigarettes on their bare skin. In addition, the soldiers sent to the Naval Special Field Battalion were sometimes required to carry out the executions of naval personnel who had been sentenced to death. One eyewitness reported a comrade of his who was sent to the Special Field Battalion for several months for alcoholism and repeated indiscipline; when he returned, he exhibited symptoms of mental disorder and was completely subservient. Many soldiers attempted to desert from the battalion to escape the brutality of the

guards, even though they knew the penalty for desertion was death.

In August 1943, the Special Field Battalion was downsized further with the dissolution of Company D. Although the Wehrmacht was prosecuting violations of military law more vigorously than ever before, most of the prisoners were being sent to the military penal system—the Wehrmacht prisons (*Wehrmachtgefängnisse* and *Kriegswehrmachtgefängnisse*), field penal camps (*FeldstrafLAGER*), field penal units (*Feldstrafgefangenen-Abelungen*, a separate category from the Special Field Battalion), or probationary units (*Bewährungstruppen*). The Replacement Army had also decreased its number of special battalions from six to four. However, the Luftwaffe had established three new “special companies for special tasks” (*Sonderkompanien z.b.V.*) that, like the Special Field Battalion, would be deployed to the front line for forced labor. Those who behaved well in these units and proved themselves to be disciplined enough would be sent to serve as frontline infantry in a “field fighter battalion” (*Feld-Jäger-Bataillon*); those who did not would be sent to concentration camps.

In late 1943 and early 1944, the three remaining companies of the Special Field Battalion were deployed to Lake Peipus in Estonia. By that time, about 300 men remained in the unit, with 40 regular soldiers serving as guards. In February 1944, the battalion was reassigned to Senior Pioneer Leader (*Höherer Pionierführer*) 32 but remained at Lake Peipus. In the summer of 1944, the battalion was pulled back to the Courland Peninsula in Latvia, where it was placed under the control of the Eighth Army. In September 1944, it was withdrawn from the Baltic region and transferred to Hungary. It arrived at Székesfehérvár (German: Stuhlweissenburg), about 60 kilometers southwest of Budapest, on October 8.

At the end of October 1944, the Kriegsmarine dissolved its special field battalion. In November, the collection points for the Special Field Battalion at Metz and Warsaw were also dissolved. The Special Field Battalion disappears from the documentary record after the end of 1944. The special battalions of the Replacement Army remained in operation until March 1945, when their men were sent to regular combat duty. In total, about 1,000 Wehrmacht soldiers were sent to concentration camps via the various iterations of the special battalions and special field battalions between 1936 and 1945.

SOURCES Primary source information about the Special Field Battalions is located in BA-MA (RH 2/3, 13/61, 13/62, 14/33, 15/186, 15/427, 31/3335, 48/5) and HStA Hannover (Nds. 721 Lüneburg 69/76). In addition, the author’s private archive contains an interview with Special Field Battalion soldier Heinz Neuhold.

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 1

The German Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) ordered the establishment of FStGA 1 on April 26, 1942, “through the Commander of Defense District (*Wehrkreis*) VIII at Armed Forces Prison (*Wehrmachtgefängnis*, WG) Glatz [today Kłodzko, Poland].”¹ The original contingent consisted of 50 military prisoners from Glatz as well as 100 from WG Torgau-Fort Zinna and 50 from WG Torgau-Brückenkopf. The OKW order specified that the FStGA was established for “shirkers” and men who were repeatedly punished for “deliberate offensive actions.” Examples of shirkers included deserters, “sentenced for subversion of fighting power (*Wehrkraftzersetzung*)” and “serious cases of unauthorized absence.”²

Prisoners who were sentenced to terms of less than six months were generally “not to be sent to the FStGAs.”³ However, as early as June 1942—with a few exceptions—“fundamentally” all men with sentences of more than three months were sent to the FStGA.⁴ From the beginning, prisoners who were fit only for “service in garrisons in the homeland” were sent to the FStGA. As the OKW informed the chief of the Wehrmacht Medical Service (*Wehrmachtsanitätswesens*), sending these prisoners to serve in the garrisons in the Reich would “only encourage shirking,” and they were, therefore, sent to the FStGAs, where they would work according to their physical capacity.⁵ Prisoners with the lowest fitness rating, “fit for labor service,” were to remain in the WGs for the time being.⁶

Although FStGA 1 was the first of 22 such units to be formed and operated until the end of the war, there is little substantial documentation on its operation. In addition to a lack of reports on the unit’s activity, there are also no testimonies from former prisoners or guard personnel. This entry, therefore, relies on the instructions given to the FStGAs in general to reconstruct the history of FStGA 1. Since the FStGA units aimed for an “equal treatment of the prisoners,” one can make inferences about FStGA 1 from records pertaining to other FStGAs that are better documented.⁷ However, one should keep in mind that, although general instructions for the FStGAs existed, individual commanders retained substantial leeway to interpret those instructions, and so there was some variability among the FStGAs.

Like all of the FStGAs that the Germans established later, FStGA 1 was intended for service on the eastern front. General

der Artillerie Eugen Müller (the general in the Army High Command—*Oberkommando des Heeres*, OKH—who was responsible for the FStGAs) ordered on May 28, 1942, that FStGA 1 would be subordinate to Army Group South (*Heeresgruppe Süd*).⁸ While it was located in the area of Army Group South, it was supplied through the nearest Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG), which was in Dubno, along with its subordinate Reception Center (*Auffangstelle*) in Kiev. The four companies of FStGA 1 had a strength of about 165 men each, with about 50 staff personnel. In July 1942, a 5th Company was established, whose staff was assembled in WG Bruchsal or WG Freiburg,⁹ while the prisoners were sent directly from the field army.¹⁰ Almost all FStGAs were organized in a similar way, with a staff and five companies; only in exceptional cases was a sixth company established.¹¹

The order to establish the 5th Company of FStGA 1 also reveals the selection criteria for staff personnel. Specifically, only “energetic, especially energetic, and physically fit soldiers” were to be selected. “Unsuitable personnel” were “to be immediately exchanged by the commanders of the WGs, in coordination with the Defense District commanders.” These personnel, which would include at least one sergeant from the prison service, would be expected to bring 12 pairs of hand and ankle cuffs with them.¹² The Youth Prison (*Jugendgefängnis*) Niederschönfeld am Lech was to be the source of supplies for these personnel.

On May 28, 1942, the OKH sent an order to Army Group South that the prisoners in the FStGAs were to be sent to “the hardest labor, in dangerous circumstances and under difficult conditions.” In addition, it explained that “through these measures, the penal system could be organized effectively, so that soldiers who were afraid of danger and combat would not have the incentive to avoid front line service by committing criminal acts. For those of weak character, the existing military penal system in the homeland had lost its deterrent effect in comparison to the hard winter campaign in the east.”¹³

The primary plan was for the prisoners to perform difficult and dangerous military-related tasks in support of the fighting troops at the front, which would, on the one hand, free up reserves for the frontline units and, on the other, maintain discipline among the troops by achieving the desired deterrent quality of the penal units. The OKW guidelines for “punishment in the FStGAs” from April 15, 1942, gave the following examples of “the hardest labor”: “clearing mines; digging graves for dead enemy soldiers; bridge, bunker, defensive structure, and road construction, etc.” The prisoners would work every day, “including Sundays and holidays, at least ten hours a day if possible.” When working hours were limited by darkness or weather, work was to be replaced with “extended [military] exercises,” which would otherwise take place on the march to and from the work site.¹⁴ The prisoners received the lowest ration category (*Wehrmachtverpflegungsatz* IV 2), which was to be reduced by an additional 30 percent in the event of arrest, investigative detention, or hospitalization for “self-inflicted injury.”¹⁵ The guard personnel were ordered to “immediately use [their] weapons for any

attempt at physical defiance, sedition, or flight. A warning shot is *not* necessary! To prevent flight attempts, *special areas* will be established, in which the order is to fire *without* an order to halt.” [Emphasis in original].¹⁶

In the fall of 1942, FStGA received new “instructions for the FStGAs and Feldstraflager” from the OKH.¹⁷ This document, which was designated as a “supplement” to the basic OKH orders of April 14 and 15, 1942, incorporated lessons learned from experience in the use of FStGAs that had been gathered since early summer. This experience demonstrated that, in practice, the prescribed use of the FStGAs had been counterproductive from a military perspective. The malnutrition and rapid exhaustion stemming from excessively long periods of difficult labor threatened the timely completion of military projects and could also allow the emergence of epidemics of diseases that could put the fighting troops in danger. Based on this experience, the new “instructions” informed FStGA 1 that the prisoners who were working on tasks of “military importance” were “to be kept in good physical condition and morale by whatever measures necessary.”¹⁸ In order to maintain these prisoners’ physical fitness, the FStGA commanders could petition the OKH for an increase of rations “with the approval of a military doctor” and “for a limited time.”¹⁹ General Müller’s instructions also specified that the “reduction of rations” for punitive reasons “was not to threaten the working strength” of the prisoners. His remark that “hunger . . . would lead to new offenses” was based on numerous instances of prisoners going absent without leave or deserting because of hunger, which often resulted in their execution.²⁰

Along with the “punishment and deterrence concepts,” the new instructions also incorporated more “reform and education concepts.” General Müller specifically ordered the FStGA commanders to “act firmly to prevent guard personnel from abusing their power.” However, in the same paragraph, he said that there was to be “no softening of punishment . . . for resistance, physical attacks, or flight,” which were still to be punished harshly.²¹ He recommended the creation of a “class system” in the FStGAs, in which prisoners could be promoted for good behavior and hard work, adding that “special incentives (smoke breaks, additional mail privileges, etc.) could be attached to these promotions.”²² However, it was noted, at the same time, that the newly arrived prisoners had to “feel the full difficulty” of service in the FStGA first.²³

The goal of this “reform and education” was to transform the FStGA prisoners into potential frontline soldiers. First-time offenders could be recommended for “suspension of sentence to probation at the front” after three months with good behavior. As a preliminary stage, it was suggested, prisoners, “especially the ‘promoted’” could be sent to perform exercises with weapons even before their release from the FStGA so that “in an emergency, they could be sent to defend against enemy attacks under the leadership of the staff personnel” and, “under certain circumstances,” also be “used in smaller operations.” In addition, the awarding of “wound badges” was possible.²⁴ However, it was noted that awards for “assault,

close combat, or anti-partisan combat” could not be given to prisoners in the FStGAs.²⁵

The introduction of the possibility of “promotion” hearkened back to the penal reforms of the Weimar Republic, which were referred to as the “progressive system” or “level-punishment.”²⁶ However, the return to these ideas took place—as in the civilian penal system of the Third Reich—in the context of the Nazis’ racialized, social Darwinist worldview, which also provided for the “extermination” of alleged “ethnic” or “military vermin.” Therefore, the aforementioned instructions also informed FStGA 1 that “if a prisoner proves to be incorrigible after six to nine months, despite written warning, then he should be sent to a field punishment camp (*Feldstraflager*).”²⁷ In Feldstraflager I, II, and III, there were much more difficult conditions of confinement as well as the possibility to send the prisoners to one of the SS concentration camps.²⁸ The period of internment in the Feldstraflager or concentration camps would not count against the prisoner’s sentence, and he would still be expected to serve that sentence after the end of the war.

On August 19, 1943, FStGA 1, like all other FStGAs, was informed once again by the OKH that “incorrigibles . . . should no longer be kept in the penal institutions” because “their bad influence could unnecessarily reduce the effectiveness of the reform work” in the unit. Thus, “the strongest measure, that is, assignment to a prison camp, must be applied” in those cases.²⁹ This system would ideally divide the prisoners between “those soldiers who can be improved and reformed on the one hand, and asocials and those who are weak in character, constitution, and morals on the other.”³⁰

Because of the lack of eyewitness sources, it is not possible to say exactly how these regulations—which gave the FStGA commanders wide leeway—were implemented in FStGA 1 specifically. It is also not possible to determine to what extent the options of transferring prisoners to the Feldstraflager or assigning them to probationary service at the front were applied. A cursory examination of the prisoner identification directory of FStGA 1³¹ reveals that many more prisoners were sent to regular units for front probation than to special probationary units like Bewährungstruppe 500.³²

By late 1943, FStGA 1 had been relocated from the southern to the middle area of the eastern front. The last-known commanding authority for the unit was the XXVII Army Corps of the Second Army (*Heeresgruppe Weichsel*), which was located in West Prussia, in 1945.³³ The relocation of the unit to the central area of the front is reflected in the locations of the executions of prisoners from FStGA 1 who were sentenced to death. For example, Josef Zintl of 4th Company of FStGA 1 was executed for desertion on May 19, 1943, in Odessa.³⁴ The verdict was handed down by the commander of the German Troops in Transnistria (*Befehlshaber der deutschen Truppen in Transnistrien*). However, Karl Bolgert, a soldier from Strasbourg, was executed on August 12, 1943, in Briansk, in the central part of the front.³⁵ On June 1, 1944, Emil Schmidtke was executed for desertion by a firing squad in Brest, which was also in the area of Army Group Center

(Heeresgruppe Mitte).³⁶ In his case, the death sentence was handed down by Oberbaustab 18. Just two weeks later, Karl Weippert and Günther Schulze, who had both been sent to Company 5 of FStGA 1 in May 1944, were sentenced to “death for collective unauthorized absence that exceeded the regular range of sentences in paragraph 5 of the Wartime Special Criminal Law Decree” by Oberfeldkommandantur 399. The text of the sentence reveals that the death penalty was rigorously enforced against military prisoners:

Orderly punishment in a Feldstrafgefangenens-Abteilung is only guaranteed when escapees, even if they cannot be convicted of desertion, are sentenced to death. Experience has shown that these escaped prisoners often present the excuse that they wished to return to the fighting troops. If the escapee is allowed to use this excuse and is only sentenced to be returned to the Feldstrafgefangenens-Abteilung as punishment, it would over time lead to an unacceptable number of such unpermitted absences.³⁷

In December 1944 and January 1945, seven death sentences were passed by Höheren Pionierführer 10 against prisoners from FStGA 1.³⁸ These sentences for desertion were all confirmed. However, it was only possible to carry two of them out. Hans Hochradl was shot in Schröttersburg (today Płock, Poland) on January 4, 1945, and Ernst Lindhorst, from Company 5 of FStGA 1, was executed in WG Anklam on April 6, 1945.

In instances of desertion in which the prisoner was absent for more than three months, the case was automatically referred to the Wehrmachtkommandantur Berlin. Three additional death sentences were handed down by this highest Wehrmacht court against prisoners from FStGA 1. The first, Fritz Hildebrandt, was beheaded in Brandenburg-Görden Prison on August 14, 1944.³⁹ The second, Karl Schuh, was shot in Spandau on October 19, 1944.⁴⁰ The third, Hermann Zimmerman, had his sentence commuted to “probation in special service” by Heinrich Himmler in his capacity as the head of the Replacement Army (*Ersatzheer*) on February 23, 1945.⁴¹

FELDSTRAGGEFANGENEN-ABTEILUNG (FStGA) 2

The Germans formed FStGA 2 through Defense District (*Wehrkreis*) XII command, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Germersheim on May 1, 1942.¹ The

camp originally consisted of 130 prisoners from Germersheim as well as 50 from WG Bruchsal and 20 inmates from WG Freiburg.

On May 28, 1942, General der Artillerie Eugen Müller, general for Special Tasks in the Army High Command (*Oberkommando des Heeres*, OKH), who was responsible for prison sentences, informed the Army Groups and Armies in the east that FStGA 2 would be deployed with Army Group Center (*Heeresgruppe Mitte*).² Convicts from the Army Group Center area were to be transferred to FStGA 2 via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borisow (Borisov/Barysaŭ), provided that a direct transfer was not possible.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—with the clarifications added by General Müller on October 28 after initial deployment experiences—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners’ treatment and employment. The FStGA 1 entry describes the guidelines in more detail. There is no known documentation as to their concrete implementation in FStGA 2.

Some casualty reports handed in by FStGA 2 for the period of July 12 to September 9, 1943, indicate around 30 dead and wounded through bombing raids, artillery fire, tank and infantry fire, and cavalry attacks.³ Accordingly, this report indicates that this unit was located directly on the front in this phase. The unit reported heavy casualties for the “withdrawal . . . in the period from June 29–July 18, 1944”—that is, in the retreat following the collapse of Army Group Center. Along with the dead and wounded, there were 255 missing reported—a number that was actually, due to a missing report page, estimated at nearly 270 men. FStGA 2, which had been used initially, in 1942, as a supporting unit with the Second Armored Army, would remain in the central section of the eastern front until the end of the war. The end came for the unit in April 1945, with the Fourth Army in East Prussia.⁵

Among the few known details is that there were three executions of members of FStGA 2 who fled the unit, that is, went absent without leave. Gefreiter Johannes Roosen (b. February 12, 1920) escaped all the way to France. He was sentenced to death there on November 24, 1942, by the court of the Field Command (*Feldkommandantur*) 540. He was shot on November 26, 1942, in Rochefort.⁶ The engineer Franc Beaumart (b. May 30, 1920) appears to have hidden himself for more than three months. In such cases, searches fell under the responsibility of the court of the Armed Forces Headquarters, Berlin. This highest military court sentenced him to death on February 9, 1944. The execution was carried out on March 27 in Brandenburg-Görden Prison by beheading.⁷ Gunner Herbert Sachweh (b. September 29, 1922) was sentenced to death for absence without leave by the court of Division No. 190 in Hamburg. The shooting followed on April 9, 1945, after General Wilhelm Wetzel denied his pardon.⁸ The basis for the shooting of two members of FStGA 2 is unknown. On July 22, 1943, Günther Boll (b. March 18, 1921) was executed in Briansk, and, on October 21, 1944, in another location, Otto

Brüchert (b. August 28, 1915) was executed after a verdict by the court of the 17th Engineer Higher Commander.⁹

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 3

The Wehrmacht established FStGA 3 on May 1, 1942, "through District II Armed Forces Prison (*Wehrmachtgefängnis*, WG) Anklam."¹ The unit originally comprised 100 prisoners from WG Anklam as well as 50 inmates sent from WG Graudenz (today Grudziądz, Poland) and 50 from the Armed Forces Prison Camp (*Wehrmachtgefängenenlager*, WGL) Donau.

On May 28, 1942, General der Artillerie Eugen Müller, general for Special Tasks in the Army High Command (*Oberkommando des Heeres*, OKH), who was responsible for prison sentences, instructed the "Army Groups, Army High Commanders and Armored Armies in the East"² that FStGA 3 would be sent to Army Group North (*Heeresgruppe Nord*). Convicts in the vicinity of this Army Group were to be brought to FStGA 3 via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Wilna (Vilnius), if a direct transfer was not possible.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15,

1942—which General Müller expanded on October 28, 1942, after initial deployment experiences—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners' treatment and deployment. These guidelines are discussed in detail in the entry for FStGA 1. Their concrete implementation in FStGA 3 can be thoroughly reconstructed for the beginning phase.

On May 27, 1942, the Sixteenth Army in Army Group North reported that FStGA 3 would be incorporated into the XXXIX Army Corps. At the same time, AOK 16 requested guidelines for the treatment of the unit's personnel. In explanation, the following was cited:

According to a fundamental order of the Armed Forces High Command, the Field Penal Unit is to be deployed for the most difficult labor, under unfavorable climatic conditions and with perilous circumstances in the operational area, possibly in the deployment area of fighting troops, for building bunkers and fortifications, road construction, and mine sweeping, etc.

I ask for guidelines for the positioning of the guard units—which provide for their military service under the same circumstances that are imagined as strict punishment for prisoners. The difficult service of these irreproachable soldiers demands special recognition, also to make them stand out in the eyes of the prisoners. The question of the removal, replacement, or, if necessary, health care privileges, special bonuses, etc., requires fundamental regulation.³

The letter from AOK 16 was finally reflected in an order from Army High Command to ensure "heightened care for and care of supervisory staff through the outlined command authorities." With this came the directive not to "forget" the officers and permanent staff and to reward them with "decorations and promotions." A "permanent instruction" to operate within the troops was that the "guard duty in prisons was not inferior to, but rather equal to, infantry service."⁴ It was later indicated that officers of the FStGA could be recommended "for priority promotion" if their unit was "incorporated into a front division."⁵

A FStGA 3 duty report for July 1942 illustrated service (*Dienst*) for internees, which was "imagined [as] particularly severe punishment." According to this report, 375 prisoners from WG Wilna and five directly "from the [front line] troops"⁶ were sent to the unit in that month. The unit comprised 640 men, divided into four companies (i.e., 160 men per company). Mainly due to illness, 160 men were unavailable for service at that time. In July 1942, the four companies of FStGA 3 were deployed "near the front line with at least 120 men," in order to "make the sole highway (*Rollbahn*) under construction for the 218th Infantry Division somewhat passable." Specifically, the work entailed, "sawing logs, . . . to carry them to the highway." Felling the trees and transporting the logs was

difficult because the subsoil on all sides was made “nearly completely [of] swamp and water.” The men also had to deal with “thick underbrush everywhere.” The unit commander gave a positive report: “Working seven days, 120 men cut down between 7,331 and 9,527 tree trunks per week, which means building a wooden embankment [*Knüppeldamm*] of nearly five kilometers [3 miles] for the deployed company. Since the work is to be done in marshland, morass, and softened-up muddy roads, and the logs are to be carried 200 to 500 meters [656 to 1,640 feet] from the forest, the performance of the military prisoners—who have worked for a long while without a break—will be recognized.” The commander also commended “a minesweeping squad of approximately 16 men” who were working on the Loknia-Kholm highway under the 218th Infantry Division. This task had been “flawlessly operated” to that point. The report continued that “naturally, casualties from mine fragments, death, and wounds [would occur].”⁷ The commander reported that, up to that time, 2 men had been killed and 10 wounded working on this task.

The assessment of the guard personnel was less positive. According to the unit commander, it did “not yet meet highest standards . . . despite much instruction and punishment.” Clearly, the selection standards were not closely observed. This problem continued “especially in the guard platoon [*Wachzug*],”⁸ which was composed of soldiers who had only received six weeks of training after their conscription. Per an order from June 24, 1942, the guard personnel were to be chosen from “completely trained, reliable, particularly energetic and physically robust soldiers.”⁹

The report indicated numerous additional permanent departures among the prisoners: 2 “in the course of punishment,” 4 through “sentence reassignment [to probation on the front],”¹⁰ 15 due to serious illness, 3 by “order of penal camp custody,”¹¹ and 6 “by updated sentence,” whereby it was supposedly based on prison sentences. Even though FStGA 3 had only been deployed for two months, two men had already been “shot for desertion.” Court authorities confirmed two additional death sentences at the time. The grounds for the two other “departures” were eventually entered as “absent without leave.”¹² Since the subsequent months and years yielded no comparable source material, it cannot be judged whether these figures are representative of the normal movement of personnel to and from FStGA 3.

The leader of FStGA 3 emphasized in his report of August 1, 1942, that he was “pleased” with the work carried out to that point by “all senior deployed units.”¹³ However, the flyer created in Everding’s name described the malnutrition and exhaustion the prisoners experienced in the unit: “With the rations that we in the battalion [*sic*] receive, and the great physical burden we won’t be able to hold out long. You know our daily rations well: 150 to 200 grams [5.3 to 7 ounces] of bread, thin soup without meat, etc. You all remember well how Reinhold Buhr once gave in under the weight of a heavy beam, and how the Feldwebel of the First Company gave him a kick.”¹⁴

This assessment—which might otherwise be attributed to Soviet propaganda—was confirmed later in the “Activity

Report of the Advising Internees at the Army Medic of the Sixteenth Army for the Period November 1, 1942 to May 1, 1943.” Oberfeldarzt Schmidt-Ott said of FStGA 3 that “of the 100 field prisoners, I often saw none with a body weight exceeding 50 kilograms [110 pounds]. This FStGA had the highest rate of deaths due to dysentery . . . even if the burden of the punishment abbreviates the sentence, the individual convict will very soon not be able to do the labor because he is too calorically malnourished.”¹⁵ Because of the lack of source material, it is not possible to determine whether the doctor’s evaluation led to any improvement in conditions.

FStGA 3 was supposedly the first FStGA to receive the order to deploy “climbers” (*Aufgestiegene*)—prisoners promoted within the unit for good behavior. In effect, the assignments for climbers were expanded on the spot—they were to take up arms in emergency situations—and were already deployed to antipartisan fighting. In the beginning of 1944, the Sixteenth Army formed two battalions with about 900 climbers from FStGAs 3, 9, and 14. They wore the insignia “Army Group-Probationary-Btl. III and IV.”¹⁶ Army Group-Probationary-Btl. IV had been dissolved by May 1944, after which its members were returned to the FStGAs. The same procedure was supposedly carried out with Army Group-Probationary-Btl. III. The reason for the dissolution of these units is unknown. In any case, General Müller confirmed that the FStGAs should continue to be deployed “without weapons, under perilous conditions . . . essentially as construction troops . . . positioned according to deployment and military duty with engineering posts.” “Temporary armed deployment of select field prisoners in a breakthrough company or platoon” was only to take place in “exceptional cases.”¹⁷

In the fall of 1944, FStGA 3 was among the eight FStGAs transferred to the western front to build fortifications against the approaching Western Allied troops in the area along the German border with France and Belgium.¹⁸ The last-known deployment of FStGA 3 was with Army Group B in the Eifel Mountains in western Germany and eastern Belgium.¹⁹

The guidelines issued to the FStGAs by General der Artillerie Eugen Müller—the general for Special Tasks at the Army High Command (*Oberkommando des Heeres*, OKH) responsible for the FStGAs—on April 14 and 15, 1942, along with the updated guidelines from October 28, which were based upon the experiences earlier in the year, provide some insight into the makeup and strength of the unit, the selection of the prisoners, and the prisoners’ treatment and deployment. These guidelines are discussed in detail in **FStGA 1**. Essentially, the FStGA prisoners were to be sent “when possible into the area of the fighting troops and put to the hardest labor . . . particularly in unfavorable and dangerous conditions.”² The practical implications of this order for the prisoners in FStGA 4 are revealed in the monthly service report from the I Army Corps of the Eighteenth Army, under which the unit was operating. This report, from December 2, 1942, began with critical comments about the staff of the unit. According to the report, the previously issued selection criteria for FStGA staff were apparently not being followed closely, as was the case in other units (e.g., FStGA 3). The text states that

the service of the FStGA under the command of the I Army Corps places the highest demands on the guard personnel and prisoners. The composition of the guard personnel is in no way in accordance with the requirements placed upon staff of the penal system. 52 NCOs and soldiers are over 40 years old and can no longer enforce discipline on the prisoners to the extent that is required. In addition, they are physically not able to withstand the climatic conditions. Reports about escaped prisoners show that one NCO for every 10 prisoners does not provide sufficient supervision. A failure of the guard personnel could not be determined in any particular case.

It was also pointed out that the I Army Corps had made a request to the Eighteenth Army High Command (*Armeoberkommando*, AOK 18) for the “replenishment, rejuvenation, and reinforcement of the guard personnel” because “an orderly penal system cannot be guaranteed under the current conditions.” The report then continues with a discussion of the prisoners:

The inadequate housing, nutrition, and clothing, the lack of proper hygiene, and deteriorating working conditions in the service area place great demands on the prisoners. Only about 20 percent of the men maintained a reasonably normal appearance, while the others were so emaciated that they were not capable of performing productive labor. There are no beds, except in the headquarters and in the field hospitals.

It was obvious that the emaciated prisoners could not carry out construction or transport work in a timely fashion. The

FELDSTRAGGEFANGENEN-ABTEILUNG (FStGA) 4

The Wehrmacht established FStGA 4 on August 1, 1942, through the commander of Defense District (*Wehrkreis*) II in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Anklam.¹ In mid-September 1942, FStGA 4 was put into service on the eastern front with Army Group North (*Heeresgruppe Nord*). While it was deployed in this area, additional prisoners were transferred to FStGA 4 via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Wilna (Vilnius) in cases where direct transfers were not possible.

report also noted another aspect of the conditions in the FStGA that was counterproductive from a military perspective: “There is also the threat of epidemics which could pose a not-to-be-understated danger to the fighting troops.” For this reason, the I Army Corps submitted a “Request for the Improvement of the Food Rations” for the men in the FStGA, which AOK 18 immediately approved.³

Experiences like these led General Müller to adopt a more flexible approach to the enforcement of the OKH guidelines. However, despite the temporary increase in food rations, the prisoners in FStGA 4 continued to suffer from agonizing hunger. Many prisoners resorted to leaving the unit without permission to get something to eat. A military judge of the Eighteenth Army described the situation in the legal documentation of the death sentence passed against Heinz Dahms of the first company of FStGA 4 on November 19, 1942: “Absences without leave among the prisoners, as is well-known, have gotten out of hand. The escaped prisoners and their beggars constantly disturb the fighting troops. The prisoners frequently resort to stealing others’ property which has been left unattended in the bunkers.” (Heinz Dahms was executed on May 10, 1943).⁴

In addition, the same judge’s proceedings from the December 8, 1942, execution of Heinz Wilhelm and Xaver Rampp—both from the 3rd Company of FStGA 4—note the “repeated cases of desertion in the FStGAs,”⁵ which often occurred when the hunger and excessive hard labor became unbearable for the prisoners. In the 10-month period between November 1942 and August 1943, there were at least 29 executions of prisoners from FStGA 4.⁶ Of these, 23 were for desertion and two were for absence without leave. The remaining cases consisted of one assault on a superior officer, one for disobedience in the field, and two for the “subversion of fighting power (*Wehrkraftzersetzung*).”

On January 27, 1943, an order from AOK 18 reached FStGA 4, an order that led from the atonement and deterrent goals to those of “reform and education,” through the establishment of an “armed platoon” for prisoners who had exhibited good behavior. This order stated that “expansion to an armed company remains conditional upon the experiences with the armed platoon.”⁷ The order expanded on the instructions from General Müller that “in emergency situations, prisoners (particularly ‘promoted’ prisoners [those who had been rewarded for good behavior in the FStGAs]) . . . can be asked to defend against enemy attacks” or “be deployed in smaller operations.”⁸ The positive experience with a “task force” from FStGA 3, which was used to fight against partisans, was probably influential in this decision.

The armed platoon established in FStGA 4 was subordinated to the 21st Infantry Division in the summer of 1943, where a “probationary platoon” was also mentioned. Its “combat strength” consisted of 53 military prisoners on August 25, 1943; two days later, it had already grown to 107.⁹ In February 1944, after the order had also gone out to FStGAs 6 and 19, “out of the ‘promoted’ prisoners . . . to form so-called ‘task forces’ or platoons,” which were to be used “in combat, for example in

battling partisans [‘bandits’],”¹⁰ “promoted” prisoners from FStGA 4, together with others from FStGA 19, were combined into a temporary “Army Group Probationary Battalion I,” which was transferred to a “security detail at Lake Peipus.”¹¹

The extent to which prisoners from FStGA who had served in the “armed platoons” received suspended sentences through assignment to “front probation” in regular units or in special units like Probationary Unit (*Bewährungstruppe*) 500 is unknown.¹² Lothar Walmrath describes the case of a sailor who was sent to FStGA 4 from WG Bruchsal in April 1944 for “subversion of fighting power” after a suicide attempt. After he was wounded there in August 1944, the Naval High Command (*Oberkommando der Marine*, OKM) transferred him to Probationary Unit 500.¹³

FStGA 4 was one of the eight FStGAs that was transferred to the western front in October 1944, in order to construct defensive works near the German borders with France and the Benelux states to resist the advancing Western Allies. Shortly before transport in the direction of Germany, four additional prisoners from FStGA 4 were executed for desertion. On September 13, 1944, Franz Krupp, Richard Schänzer, and Willi Schnock were executed, followed by Alfred Näger on October 6. All of these sentences were handed down by the Wehrmacht Local Commander (*Wehrmachttortskommandantur*) Riga.¹⁴

On the western front, FStGA 4 was subordinated to Army Group G on the Upper Rhine, then to First Airborne Army under Army Group B on the Lower Rhine, and, finally, to the Fifth Armored Army in the Eifel Mountains in western Germany and eastern Belgium.¹⁵ According to the testimony of Emil Bonetti, who arrived at FStGA 4 in Xanten from WG Torgau-Fort Zinna on January 16, 1945, the prisoners worked on “defusing dud shells” or “building defensive works on the front line.”¹⁶ Bonetti, whose death sentence for desertion was commuted to a 15-year prison term, recalled the hunger in the FStGA and that “a woman once gave us a piece of bread. An SS man immediately came over and shoved her to the ground.”¹⁷ Bonetti himself was knocked to the ground by a soldier’s rifle butt because he had spoken to another prisoner while marching. He managed to use his last bit of strength to get up just in time to avoid the dreaded “neck shot” (*Genickschuss*).

In this last period of its existence, the chain of executions under military justice continued in FStGA 4. On December 16, 1944, Georg Parczyk and Albert Sailer were shot for desertion. Their sentences were issued by the Field Court of the 7th Airborne Division.¹⁸ On February 17, 1945, Walter Engelmann and Rudolf Löwenstein were also executed for desertion. Their sentences were passed by the Field Court of the II Airborne Corps.¹⁹ It is unknown whether five additional death sentences, all of which were confirmed, were ever carried out.²⁰ In a sixth case, the sentence was commuted to “probation” in labor of military importance (“Interim Detention I” or “Zwischenhaft I”) at KZ Mauthausen.²¹ On April 6, 1945, Martin Herbst, who was sentenced to death for desertion by the Reich Military Court (*Reichs-*

kriegsgericht), was executed in WG Torgau-Fort Zinna.²² With more than 60 death sentences handed down for its prisoners—at least 50 of which were carried out—FStGA 4 holds the dubious distinction of having the most death sentences of any FStGA. Shortly before the end of the war, American and British troops encircled FStGA 4. The majority of the remaining prisoners in the unit were captured, although some, like Emil Bonetti, were able to escape and make their way home.²³

FELDSTRAGGEFANGENEN-ABTEILUNG (FStGA) 5

The Wehrmacht formed FStGA 5 on August 1, 1942, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Germersheim, through the commander of Defense District (*Wehrkreis*) II. The Army High Command (*Oberkommando des Heeres*, OKH) ordered the unit to be sent to the central section of the eastern front, where it was subsequently utilized by the Third Armored Army, then by the Fourth Armored Army, and, finally, by the Ninth Army.¹ Additional prisoners were transferred to FStGA 5 from the area of Army Group Center (*Heeresgruppe Mitte*) during the FStGAs service at the front; when direct transfer was not possible, the prisoners were sent via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borisow (Borisov/Barysaŭ) and its subordinate Reception Center (*Auffangstelle*) Smolensk. FStGA 5 also continued to receive prisoners from Germany, primarily from WG Anklam, WG Torgau-Brückenkopf, and WG Torgau-Fort Zinna.²

The guidelines issued by the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) on April 14 and 15, 1942—which were later expanded on October 28, based on the experiences up to that point—dictated the organization and strength of the section, the selection of the prisoners, and the prisoners’ treatment and deployment. These instructions are discussed in detail in FStGA 1. There is no documentation to speak to the implementation of these guidelines in FStGA 5. The only known archival records are wartime court documents concerning two escaped prisoners from FStGA 5, Werner S. and Georg H. After they were recaptured, they explained that they were repeatedly beaten in the unit and, therefore, tried to proceed to a front unit: “We cannot accept that we, as

German soldiers, are beaten by German soldiers. We can no longer bear this treatment.”³ Though it was difficult to prove their claim to have been attempting to join a frontline unit, the statement concerning the blows sustained through questioning at FStGA 5 was easy to prove, which spoke to their credibility.

In light of the problematic source material, it is of special significance that at the earlier Wehrmachtssakuntstelle (WASt)—later the “Deutsche Dienststelle (WASSt) for the notification of fallen soldiers’ next of kin of the former German Wehrmacht”—the Change Reports Re: the Identity Tag Index (*Veränderungsmeldungen zum Erkennungsmarkenverzeichnis*) for FStGA 5 until the end of 1944 seem relatively complete, by all appearances. An examination of these records reveals that there were relatively few casualties due to “enemy action” from the summer of 1942 to the end of 1944—even though the official instructions ordered that the FStGAs were to be sent to “the hardest labor possible in the vicinity of the fighting troops” and “under particularly unfavorable and perilous conditions.”⁴ It is clear that FStGA 5 was deployed behind the front for a long period, since “only” 50 deaths were reported through the end of 1944. Prisoners who exhibited good behavior in the FStGA could be “promoted” within the unit and eventually sent back to the front on probationary status; casualties among these prisoners were recorded as having fallen “during infantry deployment.”⁵ FStGA 5, like other FStGAs, formed small units from these men, which “in emergency situations” could be “equipped with weapons to repel enemy attacks under the direction of the staff personnel” or used “for smaller operations.”⁶

Some prisoners were killed “in flight” or in subsequent wartime court executions. Escape attempts began shortly after FStGA 5 arrived in the deployment area. In some cases, the deserters were shot by guard soldiers immediately after their alleged escape attempts began. Such was the case for Gerhard Knoll (b. January 31, 1908), shot on April 28, 1943, in Waldlager Chotenowa;⁷ Willibald Schebeck (b. October 24, 1924), shot on June 10, 1943, in Belaia Rudnia (Smolenskaia oblast’);⁸ and Franz Schmidt (b. November 23, 1922), shot on September 17, 1944, 2 kilometers (1.2 miles) south of the Polish village of Ogoronowice.⁹

Some escapees managed to avoid recapture for a longer period. At the turn of the year 1943–1944, it was reported of four men: “More than three months at large; records transferred to Armed Forces Prison Germersheim.”¹⁰ Anton Schardt also managed to evade capture for about three months; his records indicated that he was “in flight. Files on December 12, 1943, at Armed Forces Prison Germersheim.”¹¹ Schardt was executed shortly after he was recaptured on February 2, 1944, in Wilna (today Vilnius, Lithuania), seat of a wartime military court.¹² Some prisoners who fled FStGA 5 made it back to Germany before being recaptured. This was the case for Josef Doerner (b. March 8, 1923) who was beheaded for desertion in the Remand Prison (*Untersuchungsgefängnis*) Hamburg,¹³ as well as Edmund Hackhausen, reported as a deserter on October 15, 1942, who was guillotined on August 18, 1943, in Remand Detention Center (*Untersuchungshaftanstalt*) Dortmund.¹⁴ Two

other deserters, Heinz Bartholl (b. April 1, 1921) and Albert Reinhardt (b. September 22, 1919), were executed by shooting on April 12, 1944, in Königsberg (today Kaliningrad, Russia).¹⁵

An escape to the Soviet side did not carry a great likelihood of survival. The already emaciated FStGA prisoners rarely survived the difficult conditions in Soviet prisoner of war camps. Such was the case of Friedrich Wickel (b. June 5, 1922), a member of FStGA 5 who was sentenced to death in absentia by the court of the 260th Infantry Division on March 21, 1944, for desertion. However, Wickel never met his punishment at German hands, as he perished in Soviet imprisonment on February 10, 1945.¹⁶

Between 1942 and 1944, there are 24 definitively documented or highly probable known cases of executed death sentences of members of FStGA 5. Almost all of the known executions were for desertion. However, Hugo Hass (b. February 25, 1916) was shot for self-mutilation on May 26, 1944, in Wilna.¹⁷ The high number of shootings of members of FStGA 5 carried out in KWG Borissow is curious. In the period from October 3, 1942, until May 18, 1944, 10 documented executions occurred there. It is likely there were more such executions for which no documentation exists.

The end of the Change Reports records for FStGA 5 in December 1944 was not coincidental—the unit was destroyed in a Soviet breakthrough in Weichselbogen in January 1945 while it was evacuating westward. Only a few survivors made it to their unit’s original destination in Torgau.¹⁸ Nonetheless, there are records for some executions in this final phase. For example, Edmund Michelsen (b. October 22, 1914) was executed by firing squad in Ludwigsburg after being convicted of desertion by the court of the 465th Division.¹⁹ In another case, Gerhard Molto of the 5th Company of FStGA 5 was “shot in flight” on March 21, 1945.²⁰

No information is available about FStGA 5 prisoners who were deemed “incorrigible” and were sent to field penal camps (*Feldstraflager*); these prisoners would spend the rest of the war in the field penal camps and then begin to serve the term to which they were originally sentenced when the war ended.²¹ There is also no information about men who were sent to “front probation” with a normal combat unit or with the specially created Probationary Unit (*Bewährungstruppe*) 500.²²

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 6

The Wehrmacht formed FStGA 6 in Defense District (*Wehrkreis*) V, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Freiburg.¹ It was the only FStGA formed in this WG. In mid-September 1942, FStGA 6 deployed to the eastern front, where it was subordinated to Army Group North (*Heeresgruppe Nord*). Additional prisoners were added to the FStGA from the area of Army Group North during its deployment; if direct transfer was not possible, they were sent via Wartime

Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Wilna (Vilnius).

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded on October 28, based on the experiences up to that point—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners’ treatment and deployment. These guidelines are discussed in detail in the entry for **FStGA 1**. The OKW’s instruction that the prisoners in the FStGAs were to be sent “to the hardest labor” under “particularly unfavorable and perilous circumstances”² was practiced in a particularly brutal manner in FStGA 6. On September 4, 1943, the court of the 61st Infantry Division reported to the Eighteenth Army that prisoners in FStGA 6 who were sick or otherwise incapable of working had nonetheless been forced to continue working to the point of physical collapse. The prisoners were also subject to torture, including having water poured over their naked bodies outdoors in subzero temperatures. A prisoner who was shot while attempting to break into a supply camp (*Verpflegungslager*) was subsequently tied to a tree for hours while almost naked during cold, rainy weather, and subjected to further beatings. These instances of torture took place in full view of the guard staff and with the knowledge of the unit’s commanding officers.³

A prisoner from FStGA 6 who managed to defect to the Red Army captured the prevailing conditions in the unit in a leaflet distributed in June 1943 under the headline “To the Comrades of the 6th Penal Battalion.” It continued: “They let you slave away like animals and treat you as such. And who condemned you? Men in clean, pressed uniforms, who have never felt any of the horrors of war, and who only benefit from all the killing. You’ve risked everything including your life to this point, and now your reward for it will be a slow ruin.”⁴

The inhuman conditions of imprisonment brought with them numerous escape attempts, which resulted in additional deaths through executions. On December 14, 1942, Wilhelm Bruhn of the 2nd Company of FStGA 6 was sentenced to death for desertion. The legal reports concerning his execution note that “in light of the many cases of desertion in the Field Penal Units . . . , the immediate execution of the sentence is necessary to deter all unreliable elements, despite the demonstrated mitigating circumstances.”⁵ In the 11 months between October 1942 and August 1943, there were at least 26 documented executions of prisoners from FStGA 6.⁶ The executions took place in Shar on the train line from Chudovo to Volkov and at the train station in Mga. It should be noted that FStGA 6 had the highest number of prisoners of any FStGA, as it was the only such unit with six companies (all of the others had a maximum of five).⁷ Nonetheless, it should be noted that FStGA 6 approached the likewise high total of executions in FStGA 4, which was located in the area of the front between Leningrad and Volkov.

After August 1943, fewer death sentences were documented. This change may have been because fewer prisoners

were sentenced to death, or simply because the documents for the executions during this period were lost or destroyed. It is possible that the abovementioned report by the court of the 61st Infantry Division of AOK 18 also led to an intervention against unnecessary torture, which could have led to a decrease in escape attempts and, therefore, death sentences. A letter sent to FStGA 6 and other units by the Eighteenth Army headquarters on May 14, 1943, emphasized that "fair and by-the-book treatment of prisoners under all circumstances must be ensured with all due toughness in imprisonment. Measures for their care must have the goal of absolutely holding onto the valuable labor force of the prisoners in the interests of the fighting troops."⁸

In addition to preserving the prisoners' ability to work, the Eighteenth Army also wanted to maintain their fighting strength for potential deployment to "front probation" for prisoners who demonstrated good behavior. On January 27, 1943, FStGA 6 acted on the order from AOK 18 to establish an armed platoon (*Waffenzug*) from prisoners who had been promoted within the ranks of the FStGA for good behavior, the so-called climbers. The order stated that "expansion [of the armed platoon] to an armed company remain contingent upon the experiences with the platoon."⁹ This order followed the October 1942 directive from the general for Special Tasks at the Army High Command (*Oberkommando des Heeres*, OKH) responsible for the FStGAs that the FStGAs should take measures so that "in cases of emergency, prisoners (particularly the 'climbers') could be armed with weapons to defend against enemy attacks" or "be deployed for smaller operations."¹⁰ This order was likely motivated by positive experiences with a "task group" (*Einsatzkommando*) in FStGA 3—which was also deployed with Army Group North—in "anti-partisan warfare (*Bandenbekämpfung*)."¹¹ In February 1944, "Army Group-Probationary-Battalion II" . . . was formed from parts of FStGA 6 that were assigned to Pleskau [today Pskov, Russia] Garrison Command.¹² Supposedly, this battalion was only used temporarily to carry out security-related tasks. It is unclear how many prisoners from FStGA 6 were assigned to front probation with normal combat units or the specially created Probationary Unit (*Bewährungstruppe*) 500 after deployment to an armed platoon or similar group.¹³ It is also unclear how many prisoners from FStGA 6 were deemed to be "incorrigible" and were assigned to field penal camps (*Feldsträflager*). Prisoners sent to the field penal camps were to remain there for the rest of the war; the time they spent there would not count against their sentences, which they were expected to serve in full after the war ended.¹⁴

Although it is possible that the worst excesses in the treatment of prisoners in FStGA 6 had ceased by the end of 1943, the conditions in the unit remained harsh, as indicated by the testimony of former prisoner Wolf Gerlach. Gerlach, a Luftwaffe airman, was sentenced to two years of prison for "subversion of fighting power" (*Wehrkraftzersetzung*) and transferred from WG Glatz to FStGA 6. Although he did not witness any executions as a result of courts-martial, his recollections nonetheless attest to the brutal conditions in FStGA

6 in 1943 and 1944, when the prisoners were assigned to "building obstacles in front of our own lines and minesweeping. In no-man's land, the unarmed prisoners were continually exposed to their own and Russian fire. . . . And this was our lot: the hardest physical labor with total malnourishment, casualties under fire, and mistreatment and beatings to death for inability to work, whereby the poor parents were then informed that their son died of 'circulatory system failure.' The torture and harassment is impossible to describe in so few words. It was hell."¹⁵ If the described treatment of individual FStGA prisoners was to serve as "atonement and deterrence," it was also to serve a general preventive function. General der Artillerie Eugen Müller, the General for Special Tasks at OKH, had clearly stated that "the knowledge of these hardships [in the FStGAs] must effectively deter others from committing similar crimes. Only when they can realize the bigger picture can the incarceration fulfill its purpose."¹⁶

The observations of Hans Breithaupt, who at the time served as a major in the 30th Infantry Division, show that the hardships in the FStGAs did, in fact, come into the "wider consciousness" of the troops at the front. He reported in April and May 1944 that "the deployment of one Prisoner Unit 6 [FStGA 6] in the division sector is also depressing. Among the prisoners are numerous demoted service ranks. Now they must manage the work of clearing out the direct vicinity of the front line, particularly the mountain of numerous dead from previous battles, with its awful side effects. They conduct their work quietly and give the soldiers food for deep thought, particularly since there are occasionally personal connections, even though the troops are forbidden from speaking with prisoners."¹⁷ The "deep thought" Breithaupt mentioned had a dual nature—both the deterrent effect desired by the army leadership and pity for their mistreated comrades and anger at those responsible.

Breithaupt remarked of the guards of FStGA 6 that "the sentry is very sharp, but on the other hand also visibly happy when the dangerous deployment at the front line is over."¹⁸ Wolf Gerlach also recalled the sharpness of the guards in FStGA 6. He recalled the case of two Soviet women who hid a bowl with boiled potatoes for the prisoners multiple times as FStGA 6 built reception camps (*Auffangstellungen*) for prisoners behind German lines. He noted: "It worked for eight full days . . . until a certain Unteroffizier, Butz, from Karlsruhe, became aware of them, smashed the potatoes, stormed into the house, dragged out the girl and her old mother, and along with Feldwebel Göttinger, Unteroffizier Mühleisen, Obergefreiter Dietz, and other guards, beat the women with the butt of the rifle until they lay in their own blood."¹⁹

The front side of the aforementioned leaflet intended for the prisoners of FStGA 6, ended with the words: "All the work that you do builds the throne of your . . ." 'oppressors,' the text may have continued on the unavailable backside of the leaflet. Gerlach arrived at a similar view. He and a comrade fled together to the Soviet partisans in August 1944.

FStGA 6 was among four FStGAs that were sent from the sector of the Sixteenth Army to the western front between

October 1 and October 15, 1944. These units were deployed to the border region with France and Belgium to build defensive installations in advance of the approaching western Allied troops.¹⁹ Prior to this transfer, at least three more members of FStGA 6 were executed in Riga. On August 8, 1944, Hans Lasse (b. August 8, 1922) "was shot . . . for desertion . . . and buried in the Jewish cemetery" after he was sentenced to death by the court of Field Training Division North (*Feldausbildungs-Division Nord*).²⁰ The regular practice of burying executed deserters and prisoners convicted of "subversion of fighting strength" in the Jewish cemetery in Riga was intended to extend the shame of the prisoners beyond death.²¹ Werner Bandekow and Karl Bismanns (b. July 27, 1924) were also executed for desertion on September 11 and October 4, 1944, respectively, in Riga. The verdicts had been handed down by the court of the Armed Forces Local Command (*Wehrmacht-Ortskommandantur*) in Riga.²²

After it was transferred to the western front, FStGA 6 was deployed to Army Group G in the Upper Rhine region. It was temporarily subordinated to the 708th Volks-Grenadier-Division, as is apparent from two death sentences handed down by the divisional court on November 14, 1944, against Josef Gschwandtner for desertion and Gerhard Thiede for insubordination.²³ It is not known whether these sentences were carried out. FStGA was sent back to the eastern front in early 1945, where it was subordinated to Army Group Center (*Heeresgruppe Mitte*) in Silesia.²⁴ As late as May 1, 1945, sentences were still being passed against prisoners from FStGA 6 for various offenses. On that date, the unit leader drafted a verdict against Heinrich H., who had been interned in the Penitentiary Company of FStGA 6 for a term of 15 years for desertion.²⁵

FELDSTRAGGEFANGENEN-ABTEILUNG (FStGA) 7

The Wehrmacht established FStGA 7 on September 10, 1942, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Glatz, in

Defense District (*Wehrkreis*) VIII.¹ It was sent to the southern section of the eastern front, where it was subordinated to Army Group South (*Heeresgruppe Süd*), and, later, to its successor Army Groups A, B, and Don. Prisoners from this area of the front were sent to FStGA 7 primarily via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Dubno and its subordinate Reception Center (*Auffangstelle*) Kiev, if a direct transfer was not possible.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were supplemented with additional instructions on October 28, 1942, based on experiences up to that point—dictated the organization and strength of the FStGAs, the selection of the prisoners, and the prisoners' treatment and deployment. These guidelines are discussed in detail in the entry for **FStGA 1**. The application of the guidelines in FStGA 7 is quite well documented from different perspectives for the early summer of 1943. The unit, stationed in Zaporozh'e (today Zaporizhzhia, Ukraine), was subordinated at the time to the Superior Field Command (*Oberfeldkommandantur*, OFK) 397 in Dnepropetrovsk (today Dnipro, Ukraine).

Oberstkriegsgerichtsrat Dr. Thoms from OFK 397 drew up a report about FStGA 7 at the end of June 1943. He had visited the unit on June 17, 1943, staying in a barrack in Zaporozh'e, to "get a closer look at these penal institutions."² The unit leader, Major Knobloch, was in Germany at the time, primarily for home leave but also for a conference at the Army High Command (*Oberkommando des Heeres*, OKH), which general for Special Tasks, General der Artillerie Eugen Müller, had ordered all leaders of FStGAs as well as the commanders of the two existing Field Penal Camps (*FeldstrafLAGer*) to attend.³ In his one-hour visit to FStGA 7, Oberstkriegsgerichtsrat Thoms came to the conclusion that "there can be no talk of . . . a hard sentence in the unit." He claimed that "a stay in the FStGA [is] practically a lovely summer vacation with a little work." He criticized the unit's commander for not forcing the men to work longer hours, not requiring additional "calisthenics," and providing them with food rations that were too good. He believed that the prisoners' work in "construction of anti-tank ditches and bunkers" did not meet the "guidelines . . . prescribed for the punishment in FStGAs . . . namely deployment to the hardest work under perilous circumstances in the operational area."⁴

Upon his return, Major Knobloch issued a statement contesting Thoms's conclusions. In a letter from July 21, 1943, he emphasized that punishment in the unit had, in fact, been "implemented with the guidelines of April 15, 1942." However, he noted that "through later additions and through oral orders by General Müller, changes would be initiated." Knobloch contended that even in the course of the prescribed harsh punishment, "German military prisoners certainly must be kept physically capable of working. Therefore, the care has also been improved."⁵

In his statement, Major Knobloch gave an extensive report on the labor deployment of the prisoners in his unit. According to his account, three companies were "constructing

[defensive] positions in Zaporozh'e" and two were "deployed to cut timber." He stated that "the work is hard throughout. Nevertheless, the results are considerably above average." Knobloch added that "Sunday is also never free of work, since commandos must be constantly stationed for urgent tasks." In order to underline that the prisoners were working "under perilous circumstances," he added that "there are currently around 150 prisoners deployed against partisans, looking for mines or detonating duds." Major Knobloch countered Oberstkriegsgerichtsrat Thoms's claim that exercises were only performed on Sundays with a claim that the prisoners did "the exercise [marching] to and from"⁶ work.

It is unknown whether Oberstkriegsgerichtsrat Thoms's report led to harsher conditions in FStGA 7. His report was presented to the OKH while Major Knobloch appeared at the abovementioned meeting with General Müller. If Knobloch was "not compelled . . . to make a statement"⁷ to the OKH, as he claimed in his statement from July 21, 1943, then the idea of an order "from above" to worsen conditions in the unit seems less likely.

Knobloch himself considered the platoon-level organization of punishment practiced within the FStGA 7 thoroughly successful. He saw the majority of prisoners making an effort to integrate back into "normal" military service, stating that "there remains in no way the intention, amongst the military prisoners, to prolong their stay here. . . . This is clear in their letters. They happily accept hard and dangerous work as a matter of course, in order to get out."⁸ The men with good conduct were assigned to special platoons within their companies where they received "bonus pay, including, among other things, two cigarettes."⁹ Prisoners who did not behave properly were placed in the third (lowest) platoon of each company. Knobloch conceded that the desired spatial "isolation of the third platoon" under the present conditions ("a dearth of equipment for accommodations"), similar to the "*Aussenlager* [satellite camps for WGs] in Germany," could not be achieved at that time. The third platoons were thus to be put in place at the "back of the room" within the prisoners' quarters—but still in the same room.¹⁰

Knobloch's positive overall portrayal was based on what appeared to be a comparably low rate of recidivism: "Of the military prisoners who have gone through the unit, fewer than three percent have offended again." The rate was clearly based on different offenses. Knobloch conceded that "it plays a role that some of these [offenses] may have been for the reason that it is safer to be in prison than on the front. In the second company there have recently been some cases of escapes and thefts."¹¹ Escape attempts and absences without leave in FStGA 7 to this point—which were a daily routine in many other FStGAs—were apparently not very common. The low rate of such offenses was likely part of the reason why excessively harsh treatment was less prevalent in FStGA 7.

Günther Rosahl outlined the deployment of FStGA 7 from the perspective of an internee. Rosahl was sentenced to a prison term "due to a petty offense"¹² as an officer candidate (*Oberfähnrich*) in the navy, which he did not describe in detail.

In the summer of 1943, he was sent to FStGA 7 in a transport from WG Anklam:

Mornings at the crack of dawn we're taken out to lay down a line of fortification. For this work, each man's daily quota, according to soil conditions, totals 5 to 8 meters of excavated soil. Since I wasn't used to physical labor, I would have never, ever accomplished this. However, a Feldwebel at the time named der Flak, a career chess master from Teterow in Mecklenburg, kept me as his assistant in his cunning work techniques, through which we both accomplished our daily shared workload. Whoever did not meet his quota received only half rations at the field kitchen and soon met his end.¹³

The "cutting of rations"¹⁴ already being practiced in WGs as "in-house punishment" came into use in FStGA 7 as well. Rosahl's report does not mention Major Knobloch's use of prisoners to fight partisans, for which they were allowed "the rations normally approved for hunting detachments (*Jagdkommandos*), including chocolate," at first generally, then "from case to case, according to performance."¹⁵ Instead, he said that "only once to my knowledge was FStGA 7 issued weapons; that was in a particularly dicey situation with the breakthrough of the Russians at Zaporozh'e [on October 14, 1943]. Other than that, we were 'armed' only with spades and shovels."¹⁶

Rosahl, emphasizing that he remembered "the conditions in FStGA 7 . . . still very well,"¹⁷ mentioned neither mistreatment nor shootings. This recollection suggests that the prisoners in FStGA 7 under Major Knobloch were treated with less brutality than those in other FStGAs, which contributed to fewer absences without leave and desertions and resultant punitive measures. Attempts to defect to the Red Army were also rare, according to Rosahl. He states that "we wore no insignia that were known to the Red Army on our uniforms. Nevertheless, the fear of being in Soviet prisoner of war camps was so high that I have only once heard of prisoners going over to the Red Army." Rosahl noted an additional impediment to cooperative actions by the prisoners was the fact that "among the prisoners, mutual distrust reigned constant."¹⁸

Although the conditions in FStGA 7 may have been less brutal than those in other FStGAs, executions were still carried out. On April 2, 1943, Karl Sikora (b. December 1, 1921) of the 2nd Company of FStGA 7 was sentenced to death for desertion. The verdict of the court of the Standortkommandantur of Zaporozh'e was confirmed on May 1, 1943, by the Commander of the Army Group South Rear Area (*Befehlshaber des rückwärtigen Heeresgebiets Süd*) but was later commuted to 10 years in prison.¹⁹ Herbert Keller (b. February 12, 1923) of the 3rd Company of FStGA 7 endured a similar experience. He was sentenced to death for absence without leave on May 18, 1943; however, although the verdict of the court of the municipal commander in Rostov was confirmed on June 11, 1943, his sentence was commuted to 12 years in prison.²⁰ On

the other hand, Rudolf Endres (b. September 26, 1919), also of the 3rd Company of FStGA 7, was executed on July 15, 1943, after having been sentenced to death by the court of the municipal commander in Zaporozh'e on May 4, 1943, for alleged treason.²¹ The same court ordered the execution of Schütze Heinrich Ballmann (b. January 9, 1916), of the 2nd Company of FStGA 7, on September 2, 1943; he was beheaded on August 17, 1943, in Dresden. The execution was taken over by the court of the 408th Division in Breslau (today Wrocław, Poland).²² On August 27, 1943, the court of the municipal commander in Dnepropetrovsk gave Rudolf Schultz of the 2nd Company of FStGA 7 the maximum penalty for desertion; however, Schultz was convicted in absentia and the sentence could not be carried out.²³ Another prisoner from FStGA 7, Rudolf Beer (b. November 4, 1923), was executed on December 22, 1943, in Dubovaia Balka.²⁴

FStGA 7 took advantage of the opportunity to send "incorrigible" prisoners to Field Penal Camps (*Feldstraflager*). In the Field Penal Camps, convicts were subjected to harsh conditions of internment. However, their time in the camps was not counted against their sentences, which they would still be expected to serve in full after the end of the war.²⁵ In addition, a request could be made to the military police to intern incorrigible prisoners in concentration camps. One such case was that of Willi Schmidt, who was transferred from KWG Dubno to FStGA 7 in Zaporozh'e on April 18, 1943. A Luftwaffe court sentenced him to several years of prison for "subversion of fighting power" (*Wehrkraftzersetzung*) and absence without leave. Due to his unruly behavior, he was transferred to Feldstraflager II via WG Torgau-Fort Zinna on December 29, 1943. After Schmidt had spent 10 months there in detention, another statement from WG Torgau-Fort Zinna was sent to the Gestapo, which resulted in his internment in a concentration camp. Schmidt survived imprisonment in the concentration camps at Gross-Rosen and Flossenbürg.²⁶ The total count of the transfers carried out from FStGA 7 to the penal camps is unknown. It is also uncertain how many prisoners were rewarded for good behavior by being sent to "front probation" with a normal combat unit or a specially created unit like Probationary Unit (*Bewährungstruppe*) 500.²⁷

After the breakthrough of the Red Army at Zaporozh'e in October 1943, FStGA 7 was deployed in a series of retreating maneuvers, resulting in heavy casualties; these retreating actions were broken up by intermittent entrenchments. FStGA was transferred to the First Armored Army in late 1943, then to the Sixth Army beginning on January 1, 1944. Rosahl, who had earned the privilege of working as a sentry by January 1944, reported that

the forced marches were the worst during the muddy period. Through malnourishment and forced labor, weakened by diseases like spotted fever and dysentery, filthy and lice-ridden, our unit must have made a heartrending impression. Grunts whom we begged for bread were shocked by our desolate state. The weakened were eventually just left to lie there. The

rest—to which I belonged—were able to bring themselves to safety across the Dniester into Bessarabia in April [1944]. With our last strength we reached a Romanian village in a snowstorm, where the farmers carried us from the street into their houses in order to save us from freezing to death.²⁸

Rosahl was transferred to a regular naval unit in April 1944. His account provides a vivid example of how the deployments of FStGAs often led to high casualties through sudden, often rushed withdrawals, which were exacerbated by frequent failures of motorized equipment.

Several more death sentences were carried out against prisoners from FStGA 7 in 1944. Alfred Eidam (b. March 6, 1924), who was sentenced to death for absence without leave by the court of the municipal commander in Rostov on January 14, 1944, was executed on April 25, 1944, by Municipal Commander 456 Lemberg (today Lviv, Ukraine).²⁹ The death sentence for desertion given to Rudolf Köhler (b. September 26, 1919) of the 5th Company of FStGA 7 by the court of Korück 593 (the headquarters for the Sixth Army rear area) on May 18, 1944, was confirmed but was later commuted to 12 years in prison.³⁰ Similarly, Bernhard Wilczak (b. September 5, 1922), who was sentenced to death for the same offense on March 13, 1944, by the Armed Forces Commander Berlin, had his sentence commuted to 15 years in prison.³¹

After the destruction of Army Group South by the Second and Third Ukrainian Front of the Red Army in late August 1944, FStGA 7 was virtually obliterated. Thereafter, it was officially dissolved and the remaining prisoners were transferred to FStGA 18.³² In the search registries of the German Red Cross, 317 prisoners from FStGA 7 were registered as missing.³³ This was the second-highest count among all FStGAs.

FELDSTRAGGEFANGENEN-ABTEILUNG (FStGA) 8

The Wehrmacht formed FStGA 8 in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Anklam, in Defense District (*Wehrkreis*) VIII, on September 10, 1942.¹ Like all FStGAs, FStGA 8 was deployed to the eastern front. It was transferred to the southern sector of the front, where it was assigned to Army Group (*Heeresgruppe*) B, which had been formed from Army Group South (*Heeresgruppe Süd*) in July of that year. FStGA 8 was originally deployed around Valuiki (137 kilometers [85 miles] east of Kharkiv), where defensive positions were being constructed, presumably. Additional prisoners from the front and rear area of Army Group B were transferred to FStGA 8 via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Kiew (Kiev/Kyiv) and its Reception Center (*Auffangstelle*) in Kremenchug as well as via KWG Dubno, when a direct transfer was not possible.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were supplemented with additional instructions on October 28, based on experiences up to that point—dictated the organization and strength of the FStGAs, the selection of the prisoners, and the prisoners' treatment and deployment. These guidelines are discussed in detail in FStGA 1. Little is known about the implementation of these guidelines in FStGA 8 due to the lack of available documentation. The first of nine numbered “Named Casualty Reports” (*Namentlichen Verlustmeldungen*) claims that in the period from October 15, 1942, until March 31, 1943, at least 101 prisoners in FStGA 8 were killed, wounded, or missing.² Of that, the greatest number were lost as the unit withdrew from the front during the Soviet attack on Khar’kov. The leader of the 4th Company of FStGA 8 described the withdrawal of his unit:

Early on January 19, 1943, the small city of Urasov and the airstrip located nearby were attacked by Russian tanks and cavalry. The . . . FStGA had very few rifles at its disposal and was therefore forced to pull back to Kubiansk, 55 kilometers [34 miles] away. Due to heavy snowfall and darkness at night, parts of the company were scattered, as the unit marched continuously from early on January 1, 1943, around 8 a.m., until around 1 p.m. on January 20 without rest. In recognition of the exceptional difficulties . . . prosecutions for absence without leave were suspended, even when people were absent for several weeks.³

In the following months, April to October 1943, FStGA 8 appears to have suffered very few losses, probably because it was deployed to a quiet area far from the front line. The conditions in FStGA 8 at this time were briefly described by the Judge Advocate for the Commander of the Rear Area of Army Group South (*Oberstkriegsgerichtsrat beim Befehlshaber des*

rückwärtigen Heeresgebiets Süd), Dr. Thoma. The military jurist—known as an agitator—stated on the record that, in 1943, it had “occasionally” been reported to him that a sentence in FStGA 8 was “relaxation for the prisoners, and no punishment.”⁴ In August and September 1943, FStGA 8 was assigned to build positions in Kiev, as indicated by the death sentence against prisoner Reinhold Heilig of the 5th Company, FStGA 8, who stated that he had been abducted from Kiev on September 24, 1943, by Soviet partisans in German uniforms.⁵

Further Soviet attacks near Kiev on November 6, 1943, forced FStGA 8 to withdraw once again. The surviving “Named Casualty Reports 2–9” record about 270 losses for the period of October 4, 1943, to July 27, 1944, many of whom were missing, rather than killed or wounded. Such records are missing for the remaining months of the war. FStGA 8 remained on the eastern front until the war’s end; its final location was in Silesia with Army Group Center (*Heeresgruppe Mitte*).⁶

There are no records indicating how many prisoners were sent to the Field Penal Camps (*Feldstraflager*) from FStGA 8 after being deemed “incorrigible.” Prisoners who were sent to the Feldstraflager would remain in the camps until the end of the war, but their time there would not count against their sentences, which they would still be expected to serve in full after the war.⁷ A Penal Camp Company (*Straflagerkompanie*) was added to FStGA 8 in the late summer of 1944, when similar companies were also added to other FStGAs.⁸ There is also no information about prisoners from FStGA 8 who were sent to “front probation” with a normal combat unit or with specially formed units like Probationary Unit (*Bewährungstruppe*) 500.⁹

There are only a few accounts of death sentences handed down against prisoners from FStGA 8. Alfred K. (b. July 1, 1921) was executed on March 23, 1944, in WG Anklam. He deserted from FStGA 8 during a retreat in early 1943 and eventually went into hiding in Germany.¹⁰ The verdict was issued by the court of the Swinemünde Branch of the Coastal Commander of the Western Baltic (*Küstenbefehlshaber westliche Ostsee*) on January 31, 1944. Hans-Werner Zühlendorf (b. February 26, 1924) was executed for desertion on July 12, 1944, at the firing range on Klepazowskstrasse in Lemberg (then also known as Lwów; today L’viv, Ukraine).¹¹ The verdict was handed down by the court of Higher Pioneer Leader (*Höheren Pionierführer*) 14. FStGA 8 prisoner August Wagner was executed at the shooting range at Poppenweiler in Ludwigsburg on October 28, 1944.¹² Eight days before, the court of Higher Pioneer Leader 23 had sentenced Albert H., a member of the penal camp company of FStGA 8, to death. He was charged with continually shirking duty because he was constantly noticed illegally smoking, wearing a dirty uniform, saluting sloppily, and committing other disciplinary infractions. In his case, the execution was temporarily suspended because he was transferred to work in a concentration camp.¹³ Prisoners like Albert H. who had been sentenced to death were sent to “Transitional Internment I [*Zwischenhaft I*]” in Mauthausen.¹⁴

Unlike Albert H., sailors Felix Buchardt Held (b. May 11, 1923), Egon Kielz, and Hermann Stockfisch (August 21, 1922), who had fled FStGA 8 together on August 14, 1944, were shortly after sent to their deaths. After the verdict was passed by the Linz Branch of the Court of the Naval Command Italy (*Zweigstelle Linz des Gerichts des Marinekommandos Italien*) on January 8, 1945, the three men were executed on the Kagran shooting range in Vienna on February 13.¹⁵ The case of Wilhelm Larmann shows that executions continued in FStGA 8 right up to the end of the war. A member of the penal camp company, Larmann was sentenced to death by the court of the 17th Infantry Division on April 6, 1945, for “subversion of fighting power” by feigning illness.¹⁶ He was executed on April 10, 1945, in Schmottseiffen (today Pławna Góra, Poland). The entire 5th Company, as well as 25 men of the 1st and 20 men of the 4th Company of FStGA 8, were forced to watch the execution as a deterrent.

FELDSTRAGEFANGENEN-ABTEILUNG (FStGA) 9

The Wehrmacht established FStGA 9 on September 10, 1942, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Germersheim through the commander of Defense District (*Wehrkreis*) XII.¹ Like all FStGAs, FStGA 9 was deployed to the eastern front. It was subordinated to Army Group Center (*Heeresgruppe Mitte*), where it was temporarily placed into service with the Third Panzer Army and the 330th Infantry Division, respectively. Its service with the “Army Troop North Russia” (*Heerestruppe Nordrussland*), documented by Georg Tessin, began at the end of 1943 or beginning of 1944.²

When FStGA 9 arrived at Army Group Center, it was composed of a staff and five companies. Each company consisted of about 35–40 permanent staff members and about 75 prisoners. Once the unit was in service, each company received about 60 additional men who were sentenced to the FStGA in the front or rear area of Army Group Center. These prisoners were transferred from Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borissow when a direct transfer to FStGA 9 was not possible.³

The guidelines issued to the FStGAs by the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) on April 14 and 15, 1942—which were expanded on October 28, based on the experiences in the FStGAs up to that point—provide information about the staff and strength of the unit,

the selection of the prisoners, and the prisoners' treatment and service. These guidelines are described in detail in FStGA 1. It appears that these guidelines were implemented with the requisite harshness in FStGA 9, as is indicated by the seven "Named Casualty Reports" (*Namentliche Verlustmeldungen*) that were issued between October 7, 1942, and March 31, 1944. In the first quarter of this period (from October 7 to December 31, 1942), three prisoners died from "circulatory system failure" and one from "general bodily weakness," euphemisms that certainly indicate that they died from some combination of hard labor, malnutrition, and abuse. Three prisoners were shot during alleged "escape attempts" during this period, and two more were executed.⁴

In the second quarter (January 1 to March 31, 1943), one prisoner died of cachexia and another of "circulatory system failure/heart weakness." Two additional death sentences were carried out. Six other prisoners died due to "lawful use of weapons." These deaths stemmed from the standing order to the guard personnel that "the staff is required to immediately use weapons at every attempt at resistance, incitement, or flight. A preceding warning shot is not required. In order to prevent escape attempts . . . certain areas are to be established, in which prisoners will be shot immediately without the order to halt."⁶ The number of prisoners who were executed in the FStGAs and Field Penal Camps (*Feldstraflager*) was eventually so high that Form 3705 43 2 A was printed to inform the relatives of the deceased. The form, which the guards would fill in with the prisoner's name, notified his relatives that he "has died as a result of a disciplinary measure which resulted from his own actions. Obituaries . . . are forbidden."⁷

"Named Casualty Report No. 3" from FStGA 9, which covered the third quarter (April 1 to June 30, 1943) counted one death from "heart weakness" and five from "lawful use of weapons."⁸ In addition, two men died from a mine explosion and one fell victim to an enemy aerial attack. On May 10, General der Artillerie Eugen Müller—the General for Special Tasks at the Army High Command (*Oberkommando des Heeres*, OKH) responsible for the FStGAs—visited the Third Panzer Army High Command (*Panzerarmeeoberkommando*, or PAOK 3). Müller wanted to see how the penal servitude of the prisoners in FStGA 9 was being carried out with the Third Panzer Army, as well as in the special "front probation units," the 550th Infantry Division and Probationary Unit (*Bewährungstruppe*) 500. During this visit, the commander of the Third Panzer Army, Generaloberst Georg-Hans Reinhardt, described the operation of FStGA 9 as "good," whereas the administration of FStGA 14, which was also under his overall command, was "not carried out harshly enough" and the unit was "filled with too many incorrigible elements."⁹

The next "Named Casualty Report" covered the four months between July and October 1943. In this period, a prisoner died of "circulatory system failure," another was killed by partisans, and three were killed "by lawful use of weapons during flight."¹⁰ In addition, two executions were registered. The last two months of the year were covered by "Named Casualty Reports No. 5" and "No. 6." During this period, two

prisoners died from pneumonia and two from "heart failure" or "circulatory collapse." There were no shootings registered during this period, but nine prisoners were reported as "killed in action."¹¹ Thus, the number of prisoners who were killed as a result of "enemy action" through the end of 1943 was rather small.

Around the beginning of 1944, FStGA 9 was transferred to Army Group North (*Heeresgruppe Nord*), where it went into service with the I Army Corps of the Sixteenth Army. The developments there during the first quarter of 1944 are documented in "Named Casualty Report No. 7." One death was reported due to an accident, one prisoner was shot "in flight," and another was executed.¹² The significant decrease in shootings that began in November 1943 continued through March 1944. Because of the lack of sources, it is unclear whether this decrease was the result of effective deterrence because of the shootings earlier in 1943 or if efforts to ensure the working strength of the prisoners resulted in better conditions and fewer escape attempts (and, therefore, fewer shootings).

The Change Reports re: The Identity Tag Index (*Veränderungsmeldungen zum Erkennungsmarkenverzeichnis*) of FStGA 9 indicate a large number of transfers within the unit. These changes may have been the result of the so-called ranked punishment, in which prisoners who demonstrated good behavior could be "promoted" within the ranks of the unit, leading to better conditions and, eventually, recommendation for "probation with the [regular] troops."¹³ Conversely, there was also the potential for "demotion into lower classes for poor behavior."¹⁴ In FStGA 9, the 5th Company was used for transfer to the Field Penal Camp, where conditions were even worse than in the FStGA. Time spent in the Feldstraflager did not count against the prisoner's sentence, which he would be expected to serve in full at the end of the war. Thus, documents often refer to "transfer to the 5th Company for eventual transfer to a Field Penal Camp."¹⁵ The total number of prisoners from FStGA 9 who were sent to the Field Penal Camp is unknown. It is also unclear how many prisoners were sent to "front probation" with regular combat units or special units like Probationary Unit 500.¹⁶

At the beginning of 1944, the Sixteenth Army formed the "promoted" prisoners from FStGAs 3, 9, and 14 into two battalions, with "about 900 total prisoners," that were given the names "Army Group Probationary Battalions III and IV"—the men promoted from FStGA 9 were sent to the latter.¹⁷ However, by the beginning of May 1944, Battalion IV had already been dissolved, after which the men were returned to the FStGAs; it is possible that the same occurred in Battalion III. The reason for the dissolution of the battalions is unknown. In any case, at the beginning of September 1944, General Müller reaffirmed that service in the FStGAs was to be done "essentially without weapons, but under dangerous conditions" and that the prisoners were to work "basically as a construction unit, providing operational and military support under pioneer units." Only in "special cases" should "selected prisoners be temporarily armed for service in a Quick Reaction Company (*Eingreifkompanie*)."¹⁸

FStGA 9 had established at least one Quick Reaction Company after the dissolution of Army Group Probationary Battalion IV. The testimony of prisoner Hans Nussbaum, who was sentenced to four years' imprisonment for desertion or absence without leave (records conflict), reveals the nature of the service in the "3rd Quick Reaction Company" within FStGA 9:

On March 7, 1944, the company carried out a counterattack in the forest near Polotsk-North. The company suffered great losses and wounded, including the company commander, as well as many missing. After the battle the absence of Nussbaum was noted. It was impossible for the company commander to establish his whereabouts as the fighting had dragged on for several hours in dense forest without a clear view. Nussbaum was recorded as missing . . . Nussbaum had the possibility to report back to the company or to another unit. Because neither has happened, it must be assumed that he has deserted.¹⁹

Nussbaum had, in fact, reported to another unit, where he suffered a relapse of jaundice. In the hospital, he concealed his status as a prisoner so that he would not have to return to FStGA 9. As a result, he was charged with absence without leave and forgery and was sentenced to an additional year and a half in the penitentiary.

There is no reliable information about the number of deaths in FStGA 9 between April and September 1944. In the first half of October, the unit was transferred from the eastern front to the western front (like FStGAs 3, 4, 6, 14, 15, 16, and 19), where it was assigned to build defensive works in the border area with France and Belgium against the advancing Western Allied troops. Shortly before the transfer to the west, at least two death sentences were carried out. On September 2, 1944, Heinrich Braun was shot by a firing squad in Riga, and, on September 20, Alfred Bach died in the same manner.²⁰

On the western front, FStGA 9 was put into service with Army Group B in the Eifel Mountains in the Lower Rhine region.²¹ Their assignment was to dig trenches and foxholes. Even at this late stage the shootings of prisoners did not end. On December 23, 1944, Herbert Schöberl (b. January 14, 1921) was shot for desertion.²² On February 5, 1945, Fredy Paul (b. June 9, 1924) and Johann Ramsauer (b. March 23, 1926) were executed in Wolsfeld after they were convicted by a court-martial.²³ The same fate befell Wilhelm Bolz (b. March 23, 1921) on March 3, 1945, in an unknown place near Neuenahr.²⁴

Somewhat more is known about the death of Ewald Giessen (b. on June 9, 1909, in Wesel), who was shot "in flight" at 8:30 p.m. on March 14, 1945, in Hilgenroth.²⁵ Together with other members of FStGA 9, he was housed in a barn owned by the Spiestersbach family. The following description, published by the Idstein War Cemetery, was based on their report.²⁶ According to the report, several prisoners had escaped from the barn to beg for food. On March 14, Giessen sneaked

out of the barn with one of his comrades, either to beg for food or to escape. However, the guards were waiting outside and shot them both. The guard who shot Giessen, who was also from Wesel, sat in the Spiestersbachs' kitchen crying, rationalizing to himself that he had to shoot Giessen since his superiors were watching him. Giessen was buried on March 15 in a corner of the Hilgenroth Cemetery away from the other graves. His comrade was sent to the hospital in Bad Schwalbach with a gunshot wound to the stomach; he died shortly after. Two days after the death of Giessen, on March 17, two additional members of FStGA 9—Wilhelm Schwarzhöfle (b. January 12, 1917) and Günter Voss (b. April 27, 1924)—were shot for desertion.²⁷

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 10

The Wehrmacht formed FStGA 10 on April 26, 1942, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Glatz in coordination with the commander of Defense District (*Wehrkreis*) VIII.¹ The unit was sent to the eastern front by the Army High Command (*Oberkommando des Heeres*, OKH), where it was subordinate to Army Group South (*Heeresgruppe Süd*). Prisoners from this area of the front were sent to FStGA 10 during its deployment; if a direct transfer was not possible, they were sent via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Dubno and its subordinate Reception Center (*Auffangstelle*) in Kiev.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines for the FStGAs, issued April 14 and 15, 1942—which were expanded on October 28, based on the experiences with the FStGAs up to that point—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners' treatment and deployment. These instructions are discussed in detail in **FStGA 1**. The recommended deployment of the FStGA prisoners “in dangerous conditions, to the hardest work . . . in the operational area of the fighting troops”² was clearly implemented in FStGA 10, with severe consequences, as indicated by the 42 casualty reports for the period of January 1, 1943, until August 15, 1944.³

Ten casualty reports covering the period between January 1 and September 25, 1943, which refer to deployment at the Kuban bridgehead (Kuban-Brückenkopf), near Novorossiisk, indicate nearly 280 losses as a result of death or wounds, most of which were the result of “enemy action.” Other deaths resulted from exhaustion or malnutrition due to the hard work the prisoners were required to perform and the insufficient rations they received. Among the casualties for the given period, 5 court-martial executions were also listed as well as 21 prisoners who were shot by the guards “in flight” or in “self-defense.”⁴ One episode highlights daily life in FStGA 10. Thomas Kryzaniak, who fled FStGA 10 in September 1943, depicted the unit as follows:

We laid in tents in a fruit garden. The first sergeant said “eat the fruit and die!” One morning as we were receiving coffee, a comrade saw an apple lying on the ground. He bent over and picked it up. But when he saw that the apple was half-rotten he dropped it again. The first sergeant saw this. He took his pistol, cocked it, and said to the prisoner, “do you also know that I can shoot you now?” The prisoner tried to immediately answer “yes sir,” but then the gunshot rang out and hit the man in the head above his nose.⁵

It is unknown whether the pointed gun was fired or if it had gone off involuntarily. The first sergeant could point to his orders “to summarily crack down . . . on resistance.”⁶ The families of prisoners who were shot while in a FStGA were sent a copy of Form 3705 43 2 A, which informed them that their relative “while a prisoner . . . had been shot as a disciplinary measure as a result of his own actions” and that “announcements of death or obituaries . . . are forbidden.”⁷

To compensate for the high casualties that occurred at the Kuban bridgehead, two replacement companies were formed in WG Torgau-Fort Zinna as early as May 1943. These prisoners reached FStGA 10 on June 3, 1943.⁸ FStGA 10 deployed to clear bridgeheads to the First Armored Army as of September 25, 1943, and, as of December 8, 1943, to the Eighth Army. Casualty reports 11 through 42 indicate losses of approximately 355 men for the period from September 25, 1943, until August 15, 1944. As of January 1944, there were also many listed as “missing” in these reports.

It is surprising that in this period, only nine of the shootings were reported to have been of prisoners “in flight.” This pronounced decline could indicate that the conditions in FStGA 10 improved by the fall of 1943, resulting in fewer escape attempts. The possible improvement of conditions may have resulted from the scandalous exposure of the conditions in FStGA 16, likewise deployed to the southern section of the eastern front, by Oberfeldarzt Dr. Katsch. The horrible conditions in that unit were deemed to be detrimental to productivity and military purposes. The ripples of this scandal reached the highest military positions. Katsch also mentioned in that regard a “Directive of the Army Sanitation-Inspector of July 24, 1943, concerning the monitoring of medical conditions of military prisoners in field penal facilities.”⁹

There is no information indicating the number of prisoners from FStGA 10 who were deemed “incorrigible” and sent to Field Penal Camps (*Feldstraflager*).¹⁰ At the same time, it is also uncertain how many prisoners were sent to “front probation” as a result of good behavior, either with regular combat units or with the specially created Probationary Unit (*Bewährungstruppe*) 500.¹¹ Two letters from the leader of the 2nd Company of FStGA 10 demonstrate the type of information that was relayed to the receiving unit when a prisoner was transferred from the FStGA. These letters concern Franz Herbert Charles de Beaulieu, who served a seven-month sentence in FStGA 10 for “subversion of fighting power” (*Wehrkraftzersetzung*) and insubordination. The commander’s

evaluation of de Beaulieu from October 13, 1943, notes that “he made every effort to cope with the demands at the building site. He is not an outspoken, snappy soldier, his performance in drilling exercises is average. He always maintained a soldierly attitude [toward] superiors. Compared to his comrades, he exhibited restraint on that day. All in all, [de Beaulieu] is the intellectual type of soldier who had a spoiled and soft upbringing. He has an open and honest disposition.”¹²

Along with this letter, enclosed with the personal papers of a prisoner relocated to Reconnaissance Unit 339, was a letter on the finding in the prisoner’s court-martial. The company commander highlighted the most serious aggravating circumstance: “The critical treatment of all aspects of the war and the spreading of his opinion to his colleagues poses a great danger. In this it should be especially considered that he is personally and spiritually drawn to Jewish-related circles.”¹³

While there are no known death sentences under wartime jurisdiction against members of FStGA 10 in 1943, a few accounts of such sentences in 1944 are available. Thomas Kryzaniak was beheaded on March 27, 1944, in Brandenburg-Görden Prison after he was sentenced to death by the court of the Armed Forces Command (*Wehrmachtkommandantur*), Berlin.¹⁴ On May 23, 1944, Johannes Smolinski of the 3rd Company of FStGA 10 was executed for desertion in Lemberg (then also known as Lwów; today Lviv, Ukraine). The verdict was passed down by the court of the town commander (*Stadtkommandantur*) of Lemberg on April 3, 1944.¹⁵ Walter Böhning (b. June 2, 1923) was executed by firing squad on August 1, 1944, in the forest north of Bahmut, in present-day Moldova.¹⁶

The death sentence given to Georg Rohrmüller by the court of the 106th Infantry Division on July 28, 1944, for absence without leave was confirmed by the Supreme Commander of Air Fleet 6 on September 15, 1944. However, his execution was temporarily stayed for “probation” with a work detail considered important to the war effort in the Mauthausen concentration camp (*Zwischenhaft I*).¹⁷ Siegfried Graf’s (b. April 11, 1922) death sentence for desertion by the court of Armed Forces Command, Berlin on June 28, 1944, was confirmed by Himmler on September 4, 1944, but was also stayed for service in Zwischenhaft I.¹⁸ Graf died on April 15, 1945, in Mauthausen.

It is no coincidence that the casualty reports for FStGA 10 end on August 15, 1944. The unit was destroyed along with the German Army Group Southern Ukraine during the major Soviet offensive against the combined German-Romanian forces that began later that month. The few remaining prisoners from FStGA 10 were sent to FStGA 18.¹⁹ They were not redeployed.

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 11

The Wehrmacht established FStGA 11 in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Anklam through the commander of Defense District (*Wehrkreis*) II.¹ It was deployed to the eastern front with Army Group Center (*Heeresgruppe Mitte*), taking the place originally intended for FStGA 12. The unit, “about 800 men” strong, was subordinated to the LVI Army Corps at the end of November 1942.² Army Group Center had previously informed the Army High Command (*Oberkommando des Heeres*, OKH) that “the possibility of accommodating and utilizing additional penal units also exists [this] winter. The transfer of additional units, however, is only requested if a smooth and productive work deployment is guaranteed through the provision of a sufficient number of personnel—who are fully suitable as guards—with each unit.”³

There had already been problems with the prisoners’ productivity in FStGAs 2 and 5, which had both been deployed to the central section of the front. These problems were blamed on inadequate numbers and quality of guards.⁴ The General for Special Tasks at the OKH who was responsible for the FStGAs, General der Artillerie Eugen Müller, had indicated in his guidelines of October 28, 1942, that “few personnel suited for use as guards, who have been trained in the prisons, remain available” and that “it is therefore necessary to train qualified guards in the prison and use them to train a new generation of guards within the units [at the front].”⁵

Once it was deployed to the front, FStGA 11 received additional prisoners from WG Anklam (and presumably other WGs in Germany). Convicts from the front and rear areas of Army Group Center were also incorporated into the unit at that time. If they could not be transferred directly to FStGA 11, they were collected and transferred via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borissow and its Reception Center (*Auffangstelle*) in Smolensk.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by General Müller on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners’ treatment and deployment. These guidelines are discussed in more detail in **FStGA 1**. Little information concerning the specific implementation of these guidelines in FStGA 11 is available. It is known that the unit remained in the central area of the front, with its final deployment near Danzig (today Gdańsk, Poland).⁶

The Soviet liberation of occupied Belarus, which began with the launch of Operation Bagration on June 22, 1944, resulted in the destruction of Army Group Center and FStGA 11. Many men in the unit went missing on or shortly after this date. Sailor Hans M., who was 19 and who had been sentenced to a year in prison for insubordination and resistance, was reported missing at Starossalja (today Starosel'e, Brianskaia oblast', Russia) on June 23, 1944.⁷ Franz K., who had been

transferred to FStGA 11 from WG Anklam, had been sentenced to a year in prison for perjury. He succeeded in fleeing during troop movements on July 1, 1944.⁸ The 20-year-old naval Lance Corporal S., who had received five years in prison for breaking and entering, escaped by different means. As a straggler on a march toward the rear, he joined up with a regular combat unit and then took part in a successful small-scale counterattack. As a result, his sentence was commuted to “front probation” with Probationary Unit (*Bewährungstruppe*) 500 on September 22, 1944.⁹ Although FStGA 11 reported “heavy defensive actions . . . on the front line” in the fall of 1944, the unit did not suffer as high a casualty rate as it had in the summer, unlike other units, such as FStGAs 2 and 15.¹⁰

Beyond the case of Lance Corporal S., there are no available accounts to indicate how many prisoners from FStGA 11 had their sentences commuted to front probation with regular combat units or Probationary Unit 500.¹¹ Similarly, there is no documentation of the number of prisoners who were deemed “incorrigible” and transferred from FStGA 11 to “custody” in a Field Penal Camp (*Feldstraflager*), where they were subjected to even worse conditions. Their time in the Field Penal Camp would not count against their sentences, which were still to be served in full at the end of the war.¹² However, at least one example indicates that prisoners from FStGA 11 were sent to the Field Penal Camp.¹³

Despite the general lack of source material, there are two examples from FStGA 11 that illustrate how the strict application of penal regulations shaped service in a FStGA. The first example concerns the connection between stays in field hospitals and the calculation of prison sentences. For prisoners in the FStGAs, treatment in a field hospital had to occur “under secure guard” and in the same section of the front or army group rear area (*Heeresgebiet*).¹⁴ Generally, the nearest KWG was responsible for their transfer to the hospital. However, the course of the war—which led to hasty retreats, cutoff transport connections, and other problems—increasingly prevented compliance with this regulation. The case of Grenadier Heinrich Kampmann, who was sentenced to a 10-year prison term for “subversion of fighting power” (*Wehrkraftzerstörung*) through self-mutilation, demonstrated the difficulties these circumstances created. An officer of the 3rd Company of FStGA 11 reported Kampmann on December 23, 1944, for having stayed in an unguarded hospital for 15 days. As a result, 15 days were added to the end of his sentence, moving his release date from September 7, 1954, to September 22.¹⁵

The second example concerns dealings with postal transportation and censorship.¹⁶ In October 1944, the authorities of FStGA 11 refused to give prisoner Ernst Röstel a letter from his mother, because the censor apparently found its contents objectionable. His mother had told him that of the 2,200 people in his hometown, “many from Wurzbach have fallen [in combat].” She added that “it will all be over quickly, then we will rejoice if we can celebrate the festival of peace.”¹⁷ It is unsurprising that such seemingly “defeatist” remarks did not

pass the censor; in fact, it is perhaps more surprising that in the sixth year of war the letter was not destroyed or filed away but returned to Wurzbach via the *Feldpost*, stamped “returned to sender for official reasons.”¹⁸

This strict compliance with regulations within a penal system in which permanent hunger, difficult working conditions, and frequent shootings all dominated—as well as the constant threat of the possibility of transfer to a Field Penal Camp, where conditions would be even worse—parallels the similar situation in the area of military judicial criminal proceedings. Alongside the proverbial “speedy trial,” there were also excessively protracted and meticulous investigations, even when the circumstances and required sentences seemed clear from the beginning. Denunciatory formulations could also emerge in the findings of these drawn out investigations, which were similar to the verdicts pronounced in the “speedy trials.” Historians detect here a “curious synthesis of authoritarian formality and Nazi-justice arbitrariness.”¹⁹ The compliance with formal standards can be understood as more than the result of “Prussian thoroughness.” A persistent “judicial” and “procedural certainty,” alongside the terror in certain spheres, was deemed necessary and appropriate for guaranteeing the functionality of the whole system of “educational,” penal, and probationary units of the Wehrmacht.

The adherence to legal formalities facilitated the rehabilitation of offenders who still appeared to have the potential to be useful soldiers. The strict adherence to codified procedural regulations simultaneously promoted the extensive, frictionless participation of men who came from the more traditional judicial service of the Weimar Republic and did not agree with all aspects of Nazi ideology, goals, or methods. They could cling onto this legal window dressing and block out the terror that loomed behind the facade. Those who were deemed “enemies of the Volk” or “Wehrmacht” and permanently unsuitable for military service were threatened with “eradication” through transfer to a Field Penal Camp or regular concentration camp or simply through execution.

Evidence concerning the exact number of prisoners from FStGA 11 who were sentenced to death and executed is limited. Heinrich Ackmann—who had been sentenced to death for collaborative desertion by the court of the Higher Pioneer Leader (*Höherer Pionierführer*) 18 on November 13, 1943—could not be executed despite the confirmation of his death sentence on December 5, 1943, because he had still not been captured.²⁰ Walter Bunge and Paul Abramsohn of the fourth company of FStGA 11, both of whom had also been sentenced to death, avoided execution because they escaped during a Soviet offensive in the summer of 1944, while being transported from KWG Minsk to Molodechno, where their sentences were to be carried out.²¹ Helmut Ströll (or Ströh) was executed by firing squad for “subversion of fighting power” on September 2, 1944, having been sentenced to death by the court of Field Command (*Feldkommandantur*) 186 on August 8, 1944.²² Richard Behnke, another member of FStGA 11, was executed on October 8, 1944.²³ On October 19, 1944, Karl Leiterholt (b. October 18, 1922) was shot by a

firing squad at Spandau Prison in Berlin. His sentence, for desertion, had been handed down by the court of Armed Forces High Command Berlin (*Wehrmachtbefehlshaber Berlin*).²⁴

On December 8, 1944, the commander of the Third Panzer Army, Generaloberst Erhard Raus, stayed the execution of two other members of the 1st Company of FStGA 11, Horst Broschinski and Heinz Hermsdorf, who had been sentenced to death for desertion.²⁵ The verdict had been pronounced by the court of the XXVI Army Corps on November 30, 1944. By that time, it appeared advisable (due to the drastic losses of personnel) to decrease the number of executions to a minimum, only carrying out those deemed necessary for effective deterrence. Those who were spared execution were to be utilized in armaments production or “front probation.” It is unknown whether Broschinski and Hermsdorf were sent to work deployment considered important to the war in the Mauthausen concentration camp (*Zwischenhaft I*)²⁶ or to “special probation”²⁷ in combat. The men were threatened with “death in installments” as the military sought to maximize the exploitation of “human material.”

27. After the period of "special probation," which consisted of deployment to Probationary Unit 500 (or, from the summer of 1944, SS-Sonderformation Dirlewanger) on the front for a maximum of three months, it would be decided whether the prisoner was to be executed or transferred for an additional period of "front probation." See Klausch, *Die Bewährungsgruppe 500*, pp. 85, 261; Hans-Peter Klausch, *Antifaschisten in SS-Uniform: Schicksal und Widerstand der deutschen politischen KZ-Häftlinge, Zuchthaus- und Wehrmachtstraufgefangenen in der SS-Sonderformation Dirlewanger* (Bremen: Temmen, 1993), pp. 125–129; and Kalmbach, *Wehrmachtjustiz*, p. 233.

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 12

The Wehrmacht established FStGA 12 on November 1, 1942, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Germersheim through the commander of Defense District (*Wehrkreis*) XII.¹ The unit was deployed to the eastern front with Army Group South (*Heeresgruppe Süd*). Convicts from the nearby area—including Army Groups A, B, Don, North Ukraine, and South Ukraine—initially came to FStGA 12 primarily via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Dubno, if a direct transfer was not possible. Other prisoners came from KWGs Kiew (Kiev), Makejewka (Makeevka), and Odessa after the establishment of those prisons. Like other FStGAs, FStGA 12 received additional transports of replacement prisoners from WGs in Germany as needed.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by General der Artillerie Eugen Müller, the General for Special Tasks responsible for the FStGAs at the Army High Command (*Oberkommando des Heeres*, OKH) on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners' treatment and deployment. These guidelines are discussed in detail in FStGA 1. Along with FStGA 16, FStGA 12 was subordinated for a long period of time to the newly re-created Sixth Army. The recommended utilization of the FStGA prisoners "for the hardest labor in the most dangerous conditions . . . in the area of the fighting troops"² was not applied as brutally in FStGA 12 as it was in FStGA 16. The difference in conditions between the two units is demonstrated by the report of Oberfeldarzt Dr. Katsch, who inspected FStGA 12 on August 14, 1943, while it was located in Sambek, near Taganrog. He noted "only limited severe malnourishment" and recorded that "the collective state of the unit makes a far better impression than FStGA 16."³ In his quarterly report for the period from July to September 1943, the doctor returned to his inspection of FStGA 12. He conceded that he had seen "very emaciated figures and people underweight" but concluded that "altogether the nourishment and public health conditions, by the standards which are suitable for a FStGA . . . are not objectionable."⁴

At roughly the same time, prisoners Hans Dublizy, Harry König, Waldemar Mühlhausen, and Alfred Leisten remarked on the conditions of internment in FStGA 12 from an entirely different perspective. In late August or September 1943, the four prisoners allowed themselves to be taken prisoner by the Soviets. Their captors gave them the opportunity to appeal to their comrades who stayed behind with a leaflet (*Flugblatt*). The leaflet, dated September 19, 1943, bore the heading, "Soldiers of FStGA 12! Read this letter from Russian imprisonment."⁵ In the name of the four German prisoners, various incidents from FStGA 12 were recalled: "You have surely not forgotten how in July of this year, as we were

at Sambek, the boss of the second company, Hauptmann Merkel, gunned down the soldier Gerlach only because he couldn't work anymore due to his physical weakness. Was that just?" The families of prisoners who were shot in the circumstances described in the leaflet were notified with Form 3705 43 2 A. This form, which was filled in with the name of the prisoner, noted that the deceased, "as a prisoner has . . . been shot as a disciplinary measure brought about by his own actions. . . . Announcements of death and obituaries . . . are forbidden."⁶

The four escaped convicts also discussed the calisthenics the prisoners were required to perform in addition to their work as well as the "house punishment" of decreased rations already practiced in the WGs: "Still today, you rail on the leader of the first company, Hauptmann Aschmudat, who often punishes you with exercises in blazing heat with full packs. There, with raised pistol, he threatens to shoot everyone who, completely exhausted, can no longer keep up. Was this just? Do you still remember how the leader of the fourth company, Oberleutnant Mayer, again and again decreased our daily rations if we could not live up to the work standards? Is this somehow just? No, and again no!"

The leaflet concluded with the invitation to voluntarily surrender to the Soviets in order to hasten the end of the war. This call was particularly directed toward FStGA 12 prisoners, who were referred to by name in the leaflet: "Comrades! Convince yourself whether it is worth it to save your life. Germany can no longer hold out in the war. But before the war is over, many Germans will perish. . . . The end of the war will come about more quickly if more soldiers lay down their arms. . . . Right now, while the German Army is in retreat, you all have the possibility to give yourself up as prisoners."

Retreats certainly offered better possibilities for fleeing across the line than guarded work deployments. However, the prisoners who surrendered to the Soviets did not find themselves "far from every danger," as was described in the leaflet. Their bodies, weakened by their time in the FStGA, were not able to hold up in the difficult conditions in the Soviet prisoner of war camps. It appears that none of the four prisoners who ostensibly authored the leaflet ever returned to Germany. Two of them appeared in the list of missing soldiers of the Tracing Service of the Red Cross. Alfred Leisten was listed as missing without a location as of September 1944, and the corresponding entry for Waldemar Mühlhausen read only "Soviet Union 9/43."⁷

Apart from the pursuit of "concepts of punishment and deterrence," FStGA 12 also aimed to employ "concepts of reform and education" for field prisoners with good conduct, the so-called climbers, who were eventually to be sent back to service with normal combat units. These men could be "in emergency . . . under the leadership of the unit staff" called up for "repelling enemy attacks" or "for smaller operations."⁸ FStGA 12 appears to have been quite successful in this area. At any rate, Oberfeldarzt Dr. Katsch recorded in his report of August 14, 1943, that "two companies were deployed at the front line with weapons."⁹

On August 20, 1943, just six days after the quoted entry, the only recorded execution of a member of FStGA 12 took place. The victim, Rudi Bortscheller (b. May 12, 1923), was executed by firing squad in Nikolaev (today Mykolaïv, Ukraine).¹⁰ It is certain that additional prisoners from FStGA 12 were executed during the course of its deployment; however, due to a fragmented and poorly preserved documentary record, it is impossible to determine specific information about further executions. Similar issues prevent the determination of how many prisoners from FStGA 12 were sent to the Field Penal Camps (*Feldstraflager*) where they were subjected to still harsher conditions of internment. Their time in the Field Penal Camp would not count against their sentence, which they were still expected to serve in full at the end of the war.¹¹ There is also no documentation of the transfer of prisoners who exhibited good behavior to "front probation" with regular combat units or the specially created Probationary Unit (*Bewährungstruppe*) 500.¹² FStGA 12 remained in the southern sector of the front until the end of the war. After numerous withdrawals, the unit ended up in the area of Budapest. While Georg Tessin states that FStGA 12 was destroyed in Budapest, the report of a former prisoner suggests a different fate.¹³ Hans Joachim H., a religious opponent of the Nazi regime, was sentenced to four-and-a-half years in prison by the court of the 192nd Division in Prague on January 12, 1945, for absence without leave, and transferred to the prison company of FStGA 12.¹⁴ His testimony from March 8, 1948, states that "in the area of deployment, the Danube marshes, I came down with malaria. Despite frequent bouts of illness, I had to participate in the whole retreat through Hungary and Austria. In May 1945, we were freed through the sudden breakthrough of the Americans in the Steiermark (Styria). With that the saddest period of my life was over."¹⁵

Kasseler Soldaten zwischen Verweigerung und Widerstand (1939–1945): Eine Dokumentation*, 2nd ed. (Fuldabrück: Hesse, 1985), p. 56. A testimony from another prisoner from FStGA 12 can be found in *ibid.*, p. 134.

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 13

The Wehrmacht probably formed FStGA 13 on January 5, 1943, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Glatz (today Kłodzko, Poland) through the commander of Defense District (*Wehrkreis*) VIII.¹ The unit was subsequently deployed to Army Group Center (*Heeresgruppe Mitte*) on the eastern front, where it was subordinate to the Second Army in 1944 and 1945. Convicts from the front and rear areas of Army Group Center were transferred to FStGA 13 primarily via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borissow (Borisov/Barysaŭ) and its Reception Center (*Auffangstelle*) in Smolensk.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by General der Artillerie Eugen Müller, the General for Special Tasks responsible for the FStGAs at the Army High Command (*Oberkommando des Heeres*, OKH) on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners’ treatment and deployment. These guidelines are discussed in detail in FStGA 1. For many FStGAs, including FStGA 13, there is little documentation or research on the application of these guidelines. Specific information is only available for the last months of 1944 and early months of 1945.

A letter from FStGA 13 dated January 5, 1945, reveals how the instructions for “deployment to the hardest labor under the most perilous conditions possible . . . in the deployment area of the fighting troops” were implemented in the unit.² However, the document also illustrates how “ideas of reform and education” were applied, in addition to the “ideas of atonement and deterrence.” “Reform and education” were practiced

in the case of prisoners who, “having been recognized through good conduct and work performance,” would show themselves “in deployment on the front as an ordinary and bold soldier.” These prisoners would receive a “recommendation for probationary deployment” along with a suspension of their original sentence.³ The January 1945 letter deals with the case of Albert Dröge, who had attempted to withdraw himself from deployment on the front through falsification of documents, for which he was given a two-year prison sentence in September 1944. FStGA 13 requested that Dröge, who had been a member of the Nazi Party, receive a “suspension of sentence under assignment to the 560th Infantry Battalion z.b.V.” For the grounds of this transfer, unit leadership wrote:

[Dröge] was transferred on November 1, 1944 to incarceration with the unit and has belonged to the first (deployment) company since then. He has proved himself to be useful and reliable in office and field work. He regrets his crime earnestly and has sought, with success, to make amends for it. Despite his somewhat physically weak predisposition, he has always exhibited a laudable zeal [for work]. He showed himself to be a soldier especially conscious of his duty during a nightly work deployment, which was quite casualty-heavy for his company, at the front line in December 1944. He is suitable for [service with] the regular troops again.⁴

The request was granted and Dröge was transferred with the 560th Infantry Battalion z.b.V. This unit was one of the field battalions of Probationary Unit (*Bewährungstruppe*) 500. For most of 1944, the standing order was that “the probationary teams [were] . . . always to be transferred to the 500th Infantry Replacement Battalion, currently in Skierniewice in the Generalgouvernement. From there they [were] transferred to the field battalion.”⁵ In order to guarantee the quickest possible deployment to the front, prisoners sent to “front probation” apparently bypassed FStGA 13 and were assigned directly to the 560th Infantry Battalion z.b.V., which was also deployed to the central sector of the front. By October 17, 1944, 149 former prisoners from FStGA 13 had arrived in the 560th Infantry Battalion z.b.V. They were spread out among the five companies of the probationary battalion.⁶ Many of them were reported missing in the casualty-heavy fighting in the last six months of the war, among them Dröge.⁷

There is no information as to how many prisoners in FStGA 13 were deemed “incorrigible” and transferred to the Field Penal Camps (*Feldstraflager*), where they faced even harsher conditions. Their time in the Field Penal Camps would not count against their sentence, which they were still expected to serve in full after the end of the war.⁸ There are a small number of records of death sentences handed down against prisoners from FStGA 13 by courts-martial. Prisoner Karl Behnke was executed in Briansk on July 5, 1943. A death sentence against Michael Haas was carried out on February 1, 1944, in WG Glatz.⁹ Fritz Hallermöller was beheaded three

days later in Köln-Klingelpütz prison.¹⁰ The court of the 526th Division in Wuppertal had convicted Hallermöller of desertion on December 20, 1943. Joachim Bauer (b. May 6, 1924) and Werner Böhland (b. December 8, 1920) were executed by a firing squad on March 7, 1944, in Pinsk.¹¹ Bauer had been convicted of desertion, and it is possible that Böhland had faced the same charge.

A large number of prisoners from FStGA 13 were sentenced to death in late 1944 and early 1945. The court of Higher Pioneer Leader (*Höherer Pionierführer*) 10 sentenced 13 members of the unit to death in the five weeks from November 30, 1944, until January 3, 1945—mostly for desertion.¹² All of the sentences were confirmed by the commander of the Second Army (as the presiding judge) between December 6, 1944, and January 9, 1945. The first three death sentences were carried out on December 21, 1944, and on January 4, 1945, in Schröttersburg (today Płock, Poland). Information about the remaining 10 sentences is unavailable, possibly as a result of the Soviet Weichsel-Oder Offensive, which commenced on January 12, 1945. Comparing FStGA 13 with other units, such as FStGAs 4 and 6, shows that 13 death sentences in little more than a month was an unusually high figure.¹³

While the execution machinery was in operation in FStGA 13, another member of the unit, Walter Jamroszyk (b. September 5, 1921), awaited a decision on his fate back in Germany. The court of the 526th Division had sentenced him to death on two counts of desertion. However, Reichsführer-SS Heinrich Himmler, as commander of the Replacement Army (*Ersatzheer*) and presiding judge in his case, granted him “special probation” with SS-Sonderformation Dirlewanger, which functioned as a probation unit within the Waffen-SS. The grounds for this pardon, as recorded in the confirming decree of March 7, 1945, read: “The [Reichsführer-SS] has stayed the implementation of the death sentence only with the expectation that this would be an incentive to the convicted to prove himself worthy of a future pardon through exceptional readiness for action, good conduct, and fortitude.”¹⁴ Prisoners sentenced to special probation would serve a maximum of three months, after which it would be determined whether their death sentence would be carried out or they would be sentenced to further front probation.¹⁵ Whether Jamroszyk ever went through this procedure is unknown.

FELDSTRAGEFANGENEN-ABTEILUNG (FStGA) 14

The Wehrmacht formed FStGA 14 on January 5, 1943, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Anklam through the commander of Defense District (*Wehrkreis*) II.¹ The unit was deployed to the eastern front with Army Group Center (*Heeresgruppe Mitte*), where it was subordinate to the Third Armored Army. Its subordination to Army Group North Russia (*Heeresgruppe Nordrussland*), attested by Georg Tessin, took place in late 1943.² While FStGA 14 was stationed in the central sector of the front, it received convicts from the front and rear areas of Army Group Center,

primarily via Wartime Armed Forces Prison (*Kriegswebmachtgefängnis*, KWG) Borissow (Borisov/Barysaŭ) and its Reception Center (*Auffangstelle*) in Smolensk, if a direct transfer was not possible. After it was transferred to Army Group North Russia, prisoners were sent via KWG Wilna (Vilnius) and its Reception Center in Dünaburg (today Daugavpils, Latvia).

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by General der Artillerie Eugen Müller, the General for Special Tasks responsible for the FStGAs at the Army High Command (*Oberkommando des Heeres*, OKH) on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners' treatment and deployment. These guidelines are discussed in detail in the entry for **FStGA 1**. There is only fragmented documentation concerning the implementation of these guidelines in FStGA 14. According to testimony by Joachim T.—who had been assigned to FStGA 14 since its creation in WG Anklam and served part of his one-year prison sentence in the unit through September 1943—FStGA 14 followed the instruction that the prisoners were to be utilized “in the area of the fighting troops,” for “the hardest work possible.”³ This work included tasks such as “felling trees, constructing bunkers and digging [anti-]tank ditches,” during which Joachim T. and his comrades had sometimes “come under fire.” Each man had a quota of 6 meters (almost 20 feet) of trench to be dug each day or 1 meter (3.3 feet) of antitank ditch. Joachim T. noted that “it was not allowed to go home before the work was completed.” When Joachim T. was sent to the “front probation” with Probationary Unit (*Bewährungstruppe*) 500, in the summer of 1943, he had to report to the unit’s infirmary on arrival because of edema in his legs due to malnutrition and hard labor in FStGA 14. Nonetheless, he thought that the conditions in FStGA 14, considering the situation of the war, were “humane,” noting that his immediate superior in the unit was “an Oberfeldwebel, a former estate manager, a very decent man who had never harassed the men.”⁴

Schütze Ernst Grzik (b. June 21, 1920) had less luck with his superiors. A message from FStGA 14 states that his death near Semenkovo on February 23, 1943, occurred when he was “shot through justified use of weapons for continued insubordination.”⁵ Grzik was not detained and presented for court-martial but was instead summarily executed. His family received a copy of Form 3705 43 2 A, informing them of his death. The form notified the recipient that the deceased “as a prisoner has . . . been shot as a disciplinary measure as a result of his own actions. . . . Announcements of death and obituaries . . . are forbidden.”⁶

Despite this incident, FStGA 14, similar to FStGA 7, seems to have been less brutal than other FStGAs. This assessment is corroborated by the statement of Joachim T., as well as a report from the commander of the Third Armored Army, Generaloberst Georg-Hans Reinhardt, on May 10, 1943.

General der Artillerie Müller arrived that day in order “to obtain an immediate impression of the implementation of Armed Forces imprisonment” by inspecting FStGA 14. Reinhardt criticized the regime in FStGA 14 as “not conducted harshly enough.”⁷

In the course of his discussion with Müller, Reinhardt expressed concern that FStGA 14 “was pervaded with too many incorrigible elements.”⁸ However, no documentation exists to indicate how many prisoners in FStGA 14 were deemed “incorrigible” and sent to Field Penal Camps (*Feldstraflager*), where they would face even more difficult conditions. The time spent in the Field Penal Camp would not count against their sentences, which they were still expected to serve in full at the end of the war.⁹ It is also unclear how many prisoners were sent to “front probation” with a regular combat unit or—as in the case of Joachim T.—to Probationary Unit 500.¹⁰

It is certain that early in the deployment of FStGA 14, an “armed platoon” was formed from prisoners who were promoted for good behavior, the so-called climbers. Joachim T., who belonged to this formation, reported that it was released “completely equipped”¹¹ with rifles and ammunition. General Müller ordered that “in emergency, prisoners”—particularly the “climbers”—“with the leadership of the staff are also to be deployed with arms for repelling enemy attacks, [as well as] for smaller operations under certain circumstances.”¹² After the unit was transferred to Army Troop North Russia in October 1943, members of FStGA 14, along with men from FStGA 3, formed “Army Group-Probationary-Battalion III”¹³ on February 3, 1944. However, this new formation—like “Army Group-Probationary-Battalion IV,” formed from members of FStGA 9—was apparently dissolved at the beginning of May 1944.¹⁴ A combat deployment of FStGA 14 mentioned by Walmrath on April 7, 1944—in which at least one prisoner was killed—could have referred to Army Group-Probationary-Battalion III.¹⁵ In the summer of 1944, FStGA 14 added a Quick Reaction Company, in which prisoner Heinz Brathering was mortally wounded on July 15, 1944.¹⁶

Most of the few known death sentences handed down against prisoners from FStGA 14 came from its period of deployment near Polotsk in 1944. A sailor, who was being considered for “front probation,” was sentenced to death for desertion on March 11, 1944, by the court of Army Field Command (*Heeresfeldkommandantur*) 749 in Polotsk. The execution took place on March 31.¹⁷ The same court also sentenced Willy Bauer (b. November 3, 1922) to death for desertion on April 14, 1944.¹⁸ The commander of the Sixteenth Army confirmed the sentence on April 25, though it is unclear if or when it was carried out. Another prisoner was apparently court-martialed and shot for desertion near Polotsk a short time later, although accurate information on this case is lacking.¹⁹

FStGA 14 was one of the eight FStGAs transferred to the western front in October 1944 to build a defensive position against the advancing Western Allied troops in the border area with France and Belgium. Shortly before the unit was

redeployed, on October 4, another death sentence was carried out in Riga on the shooting range at the Kreuzkirchenkaserne. The court of the Wehrmacht Local Commander (*Wehrmacht Ortskommandantur*) Riga had sentenced the executed prisoner, Max Rauer (b. July 28, 1918), to death for desertion on September 21.²⁰ An additional death sentence given by the same court to Heinz Bärkefeld on September 5, for desertion, was confirmed on September 25; however, his sentence was later commuted to 12 years' imprisonment.²¹

FStGA 14's final deployment in the west was with Army Group G, under the command of the Nineteenth Army in the Upper Rhine region.²² The last of the executions of a member of FStGA 14 occurred there. Hubert Stengel (b. March 30, 1921), of the 5th Company of FStGA 14, was executed by firing squad on March 21, 1945 after a field court-martial for the 106th Infantry Division had sentenced him to death for desertion.²³ His grave is located in the military cemetery at Bühlertal-Oberbühlertal.

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 15

The Wehrmacht formed FStGA 15 in early January 1943 in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Germersheim through the commander of Defense District (*Wehrkreis*) XII.¹ It was subsequently deployed to the eastern front with Army Group Center, where it was utilized primarily by the Fourth Army but occasionally also by the Ninth Army. Convicts from the front and rear areas of Army Group Center were transferred to FStGA 15 via primarily Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borissow (Borisov/Barysaū), if a direct transfer was not possible. Reserve Replacement Battalion (*Landesschützen-Ersatz-Bataillon*) 12 in Mainz served as the reserve pool for the guard personnel of the unit.²

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by General der Artillerie Eugen Müller, the general for Special Tasks responsible for the FStGAs at the Army High Command (*Oberkommando des Heeres*, OKH) on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners' treatment and deployment. These guidelines are discussed in detail in **FStGA 1**. Comparatively few sources are available for determining the precise implementation of these guidelines in FStGA 15. As in the other FStGAs, the men were to be sent "to the hardest work . . . under especially unfavorable and

dangerous conditions.”³ These conditions resulted in deaths soon after the initial deployment of the unit to the front. The causes of death listed in the casualty reports of FStGA 15 from early 1943 reflect the hard labor and insufficient nutrition the prisoners received. Among the recorded causes of death were “indulgence in self-procured spoiled meat (crow),” “circulatory debilitation by general state of exhaustion,” “acute heart debilitation,” “circulatory debilitation as a result of dysentery,” and “severe state of exhaustion.”⁴

Along with the punishment and deterrence brought about through the conditions in the unit—which were to be “deliberately worse [than those experienced by] the front fighters”—FStGA 15 was also responsible for preparing suitable prisoners within the unit for armed combat. This program of selecting prisoners with good conduct, the so-called climbers, was in pursuit of “notions of reform and education.” These men were to be called up primarily “in emergency . . . under the leadership of the [FStGA] staff” for “repelling enemy attacks” or “for smaller operations.”⁵ A letter from FStGA 15, in which 13 climbers were reported missing, illustrates the nature of their employment: “On August 1, 1943, a probationary company was formed within FStGA 15 by order of the commander of the 268th Infantry Division, General-leutenant Greiner. The same was formed in the combat group of the 286th ID and was deployed on August 6, 1943 southwest of Viaz’ma.”⁶

It is unknown how many prisoners from FStGA 15 were granted a suspension of their sentence for “front probation” with a normal combat unit or a battalion of the specially created Probationary Unit (*Bewährungstruppe*) 500 after a deployment in this “probationary company” (or its predecessors).⁷ It is also unknown how many prisoners of FStGA 15 were deemed to be “incorrigible” and selected for “transfer into a (Field) Penal Camp [*Feldstraflager*],”⁸ where conditions were even harsher than in the FStGA. Their time in the Field Penal Camp would not count against their sentence, which they would still be required to serve in full after the end of the war.⁹

The case of one such prisoner, Josef Kerner, is relatively well documented. Before being conscripted in the army, Kerner was “sentenced to four months [in] prison per [charge] by civil court for refusal to work and for theft.” As a soldier, the unskilled laborer was sentenced for desertion three times: once to 18 months in prison, once to 6 weeks in close arrest, and then again on April 1, 1943 (along with military larceny) to 3 years in prison. The last punishment was served with FStGA 15, where he was seen as having a “baseless, weak, and dishonorable character,” as a “shirker without the will to fight,” and as a “lazy, unwilling, and yellow soldier.” His “cleanliness and order” was “denoted with dirtiness and his whole conduct was assessed as insufficient.”¹⁰ In January 1944, Kerner delayed being treated for frostbite in order to allow his condition to become serious enough to require referral to a field hospital, which he succeeded in doing.

After 10 days of treatment in a field hospital in Borisov, which was presumably a section of KWG Borisow, Kerner

returned to FStGA 15 on February 2, 1944. On January 31, 1944, a report had already been filed against him, suggesting his frostbite had been self-inflicted. On February 7, he received seven days’ close arrest because he had “gone absent without leave from his work post and placed himself in a Russian house.” At the same time, custody in a penal camp was applied to him in the form that had been threatened in a written warning. On March 14, he received another seven days of strict custody, this time because he “relieved himself on his bivouac and wet a fellow prisoner lying underneath him.”¹¹ Another seven days strict custody followed on March 30, because Kerner delayed treatment for louse-eczema and, because of which, “the sickness [had] worsened.” On that day the unit requested the command of the field penal camp custody with the 260th Infantry Division because Kerner would have represented “a great danger to the discipline of the troops.”¹² Before that matter could be decided, first came the court-martial proceedings for the alleged self-mutilation in connection with his frostbite.

The field court martial of the 260th Infantry Division declared the 23-year-old guilty and sentenced him to death for “subversion of fighting power (*Wehrkraftzersetzung*)—self-mutilation.” The reasoning for this was that “the act . . . is capable of undermining and impairing the discipline and the deployment abilities of a FStGA to a great extent. Additionally, the . . . tactic used is very simple and, as is currently shown in the present case, capable of ‘catching on.’” In fact, several other prisoners had done the same. The report continued: “The protection of the decent German soldier, who puts at stake and sacrifices his life, requires a ruthless crackdown. Therefore, it is to be recognized on [issuing] the death sentence—which the court is persuaded in favor of—that elements like the defendant [would be], even after a successful conclusion to the war, only a burden.”¹³

The defense attorney assigned to Kerner applied for a clemency and commutation to a prison sentence. He protested that Kerner’s work ability “was not impaired by the frostbite for long,” and, as a result, “at the present time deployment to such necessary work [is] not prevented.”¹⁴ Though the death sentence from the commander of the 260th Infantry Division was approved and the plea for clemency was rejected, the commander of the Fourth Army recommended a commutation of the sentence and a retrial for “shirking,” a less serious offense than self-mutilation.

The case was retried by the court of Festen Platz Borisow (Field Command 516). Their verdict of June 6, 1944 read: “The self-mutilation that was brought about intentionally or through deterioration of frostbite symptoms is a nuisance. This phenomenon can now be regularly observed in the FStGAs and is not easy to combat, since intent . . . is in many cases difficult to prove. On this it appears to be necessary to crack down on the clearly-established cases in order to head off the further expansion of this abuse.”¹⁵ The court deemed a five-year prison sentence to be adequate punishment for Kerner.

A second judicial review by the Fourth Army, which had authority over the matter, agreed with the recommendation

of the court. However, the commander of the Fourth Army overrode the second verdict as well on June 23, 1944, and sentenced Kerner to three weeks of close arrest. This decision led to disputes between FStGA 15, the courts of the 260th Infantry Division, and Festen Platz Borissow on one side and AOK 4 and its judicial reviewers on the other. Though these controversies were based on differing legal evaluations of the factual findings, the lenient outcome had not presumably been influenced by acute labor requirements of the Fourth Army—to which Kerner's attorney had alluded in his plea for clemency. It is unknown whether Kerner knew about the commander's decision in his case. Similarly, little is known about the decision regarding his internment in a Field Penal Camp.

By the summer of 1943, increased losses due to "aerial bomb fragments" and "mortar fragments" were registered in FStGA 15, which indicated a deployment near the front.¹⁶ The heavy casualties that Georg Tessin records in 1944¹⁷ occurred after the last surviving casualty records (July 2, 1944) during the "withdrawal of the middle section" of the front in the face of the Soviet offensive in Belarus (Operation Bagration).¹⁸ With more than 300 prisoners missing in the area of the front between Vitebsk, Mogilev, and Minsk, FStGA 15 had the third-highest number of missing prisoners of all FStGAs recorded in the Tracing Service of the German Red Cross.¹⁹

The collapse of Army Group Center created the opportunity for some of the members of FStGA 15 to escape and survive—including Karl Holzapfel and Josef Kerner. At that time, they were among 10 internees of KWG Minsk, for whom the former court of Field Command 516 in Borissow searched with special importance: "The criminal proceedings of the local court hung over these prisoners. It consistently concerned difficult cases, to a large part final death sentences."²⁰ Yet, the outcome of the investigations indicated that prisoners from "Minsk military prison, on the transport from Minsk to Molodechno, [had] been attacked by the Russians. The internees are scattered."²¹

After the heavy losses in the middle section of the eastern front, the remnants of FStGA 15 were transferred rearward for "renewal" in WG Germersheim. From there, the unit wrote on September 28, 1944, to the Armed Forces Information Office in Berlin: "After renewal of essential personnel, the department submits new dog tag directories for the staff and the first through fifth companies. The dog tag directories to this point went totally missing through enemy activity and thus could not be completed."²² It is possible that this loss of records is the reason that few death sentences from FStGA 15 during this period are known.

Luftwaffe soldiers Gerhard Becker (b. May 29, 1920), Heinrich Reitz (b. November 23, 1921), and Hans Nansen (b. January 26, 1923) were sentenced to death for cooperative desertion from the 3rd Company of FStGA 15 by the court of Air Defense District (*Luftgau*) XXVII in Smolensk on June 28, 1943. The execution took place on November 19, in WG Torgau-Fort Zinna.²³ Aloys Berghoff (b. June 9, 1921) was

beheaded on March 17, 1944, in Posen (today Poznań, Poland) after he was sentenced to death by the court of the Armed Forces Commander (*Wehrmachtkommandantur*) Posen.²⁴ Johann Podmoranski was executed on April 18 (or possibly 28), 1944, in Borissow after the court of the 299th Infantry Division sentenced him to death.²⁵ Horst Salewski (b. May 6, 1920), of the 1st Company of FStGA 15, was sentenced to death by the court of the navy (*Kriegsmarine*) in Berlin and executed by guillotine in Brandenburg-Görden Prison on May 22, 1944.²⁶

FStGA 15 was among the eight FStGAs transferred to the western front in September and October 1944. It was deployed in the border region with France and Belgium to build positions against the advancing Western Allied troops. The deployment area for FStGA 15 was initially the area around La Bresse in the Vosges, where the unit was subordinated to Army Group G. That region soon became a focal point for fighting in the west. As a result, both battalions of Probationary Unit 500 that were deployed in the west as well as Grenadier Battalions 291 and 292 z.b.V. were thrust into combat there.²⁷ In January 1945, six prisoners of FStGA 15 in that area of deployment allegedly succeeded in fleeing the unit.²⁸ Near the end of the war, FStGA 15—as well as FStGAs 14 and 19—was deployed with the Nineteenth Army in the Upper Rhine region.

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 16

The Wehrmacht established FStGA 16 in March 1943 in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Glatz through the commander of Defense District (*Wehrkreis*) VIII.¹ The unit deployed to the eastern front for service with Army Group South (*Heeresgruppe Süd*), where it was subordinated to the Sixth Army. Additional convicts from the front and rear areas of Army Group South were transferred to FStGA 16; in cases where direct transfers were not possible, the prisoners were usually sent via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Dubno and its subordinate Reception Center (*Auffangstelle*) Kiev.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by the General for Special Tasks responsible for the FStGAs at the Army High Command (*Oberkommando des Heeres*, OKH) on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners’ treatment and deployment. These guidelines are discussed in detail in **FStGA 1**.

Hauptmann Friedrich Böttger was responsible for the implementation of these guidelines in FStGA 16 as well as the unit’s deployment and leadership. Böttger was transferred from Infantry Replacement Battalion 10 in Dresden to WG Torgau-Fort Zinna in the middle of 1941, when he still held the rank of Oberleutnant, so that he could be familiarized with the Wehrmacht corrections system. In the fall of 1941, he took over a company of the offshoot Armed Forces Prisoner Unit (*Wehrmachtgefängenen-Abteilung*, WGA) Wolfen, which, due to its location (Lager Marie über Bitterfeld), was also designated WGA Bitterfeld. In the summer of 1942, Böttger took over leadership of FStGA 16 and remained in command until it was dissolved at the end of the war.² Böttger (who had by then been promoted to Hauptmann) was transferred to WG Glatz to form FStGA 16. After the war, in regard to the deployment of the unit with Army Group South (*Heeresgruppe Süd*), Böttger stated: “I was deployed with this unit as its leader in April 1943 to dig trenches behind the front, ca. 150 kilometers [93 miles] east of Stalino [today Donetsk, Ukraine]. Several months later we were withdrawn and the unit was deployed temporarily at the bridgehead in Nikopol.”³

The report of Fritz D. discusses the detail of these deployments in the southern section of the eastern front. Fritz D. traveled with Hauptmann Böttger from Glatz to Stalino. Fritz D., who was sentenced to two years in prison for absence without leave, wrote about that time: “We had to bury corpses there, clear mines, build tank ditches and so on. My strength was nearly out, I was in pain, I was malnourished. If you could not accomplish the intended work, you were hit and didn’t get the watery soup.” Fritz. D. was eventually transferred into KWG Dubno with a transport of “malnourished and sick [prisoners].” He stayed there for “recovery,” meaning the restoration of work strength. However, Fritz D. was soon sent to the front again: “It didn’t take long before I collapsed. I was struck with a rifle butt, and I couldn’t recover my breath.”⁴ He was diagnosed with open pulmonary tuberculosis and had to remain in the care of a field hospital (*Lazarett*) until well after the end of the war.

The disastrous consequences of the combination of insufficient rations, long and hard labor, and harassment by the staff were reflected in the reports of the consulting internist with Armeearzt 6, Oberfeldarzt Dr. Katsch. He first encountered members of FStGA 16 on July 9, 1943, in KWG Makejewka (Makeevka) and noted: “52 men from Field Penal Unit 16 have arrived who were pulled out of the Div.-Arzt [i.e., the Third Mountain Division] as no longer fit for deployment. Of

these, 51 are most severely malnourished. Yesterday the Standortarzt sent 14 directly to field hospital 776 because they to some extent could no longer remain on their feet or displayed severe hunger edema. The rest of the prisoners [of FStGA 16] are quite miserable, some underweight by up to 20 kilograms [44 pounds].⁶

On July 14, 1943, Dr. Katsch traveled to FStGA 16, located in Lotikovo (today Lotykove, Ukraine), to carry out a "study of the health, work, and nutritional conditions" of the unit "on special orders" of commander of the Sixth Army. "Some 30 percent" of the prisoners were in a "catastrophic state of malnourishment."⁶ Dr. Katsch gave the commander a report two days later. This report ordered a continuation of the study. Katsch returned to FStGA 16 on July 23, this time accompanied by Armeereichter Kowarzik and Hauptmann Löhrmann of the OKW. The following day, Katsch and the Armeereichter met with the Pioneer Leader (*Pionierführer*) of the "Mieth Group," under whose command FStGA 16 was deployed at the time.

In his activity report for the period of July to October 1943, Katsch wrote of FStGA 16 that "three cases of death have occurred. Numerous cases of hunger edema, even more numerous cases of extreme exhaustion with dried, exfoliated skin, shaggy hair, underweight by up to 20 kg. Festering wounds from work accidents or gunshots healed very poorly, which was apparently for the majority of the cases wrongly attributed to prisoners manipulating their wounds."

Katsch described the vicious cycle that resulted from the treatment of the prisoners: "Psychological reactions were pronounced with some of the severely malnourished: a dull apathy from which they did not report their sickness, on the one hand, and indifference to orders or lack of cleanliness in dress and in physical posture on the other. Here they incurred particularly unfavorable judgments and special punishments (partially through food deprivation), through which they descended into a hopeless cycle of harm."⁷ For some, this "cycle of harm" led directly to death by exhaustion; others undertook futile escape attempts or simply quit obeying orders. In both cases, a death sentence often resulted, or the prisoner was shot "as a disciplinary measure resulting from his own actions,"⁸ as it was called on the form used to notify next of kin.

In the above-cited postwar statement by the former leader of FStGA 16, Hauptmann Böttger, there are no hints as to the catastrophic internment conditions in the unit. In regard to other events, it merely says that "as a result of the quick advance of the Red Army, in which the unit was without weapons, we experienced great material—and through enemy activity also human—losses. Therefore, I submitted to the Generalkommando, Corrections Division [*Abteilung Strafvollzug*] a new formation of the unit. The new formation was approved and was to be prepared in the homeland."⁹

As a result of Böttger's statement, the "majority of the personnel and all the prisoners" were divided among the other FStGAs in the southern section of the front. The "rest of the personnel" returned around May 1944 to WG Glatz to carry

out the reorganization of FStGA 16, which was to begin in August 1944 in Rokitnitz, in the Sudetenland (today Rokytnice v Orlických horách, Czech Republic). After the reorganization was completed, Böttger surrendered leadership of the unit because his appeal for release from the penal system, which, in his words, he "no longer felt physically up to," was granted.¹⁰ It is possible that Dr. Katsch's suggestion that "procedures be taken" against the commander of FStGA 16 was based on his previous report.¹¹ However, Katsch's suggestion had little effect on Böttger or his career. He found further military employment and retained the rank of Hauptmann. In the last days of the war, he commanded Reserve Battalion (*Landesschützenbataillon*) 4.

The newly reformed FStGA 16 was spared redeployment on the eastern front. Instead, it was among the eight FStGAs transferred to the western front in the fall of 1944. FStGA 16 was deployed with the First Airborne Army in the Lower Rhine region. Between December 1944 and February 1945, six death sentences for desertion, handed down by the court of the Generalkommando of the LXXXVI Army Corps, were confirmed. These sentences were carried out in Walbeck, near the Dutch border.¹² In January 1945, the same court issued three other death sentences, which, in two cases, were commuted to lengthy prison sentences. In the other case, the convicted was given over to the Gestapo for work deployment in a concentration camp.¹³ In the case of a fourth death sentence, handed down in February 1945 for subversion of fighting power (*Wehrkraftzersetzung*), the prisoner was still awaiting a decision on his appeal for clemency. Finally, another death sentence, on March 24, 1945, was handed down by the field court of the Airborne Army Troops against Gerhard Klimek, for desertion. The sentence, although it was confirmed on April 26, was commuted to "special probation."¹⁴ Though there are some fragmented records of prisoners from FStGA 16 who were sentenced to death, there are no records of how many prisoners were deemed "incorrigible" and transferred to Field Penal Camps (*Feldstraflager*),¹⁵ or how many were sent to "front probation" with a regular combat unit or the specially created Probationary Unit (*Bewährungsgruppe*) 500 as a result of good behavior.¹⁶

More than three years after the end of the war, a former military prisoner named Paul G. accidentally encountered the former leader of FStGA 16, Hauptmann Böttger—whom he recognized from his time in WGA Wolfen—at a company party in Dresden. Due to the mistreatment he had suffered there, Paul G. went to the police. In the course of the trial, the issue of death sentences carried out during Böttger's tenure in FStGA 16 was raised. The verdict against him stated that the court had heard "the accounts of about 18 internees sentenced by court-martial to death by firing squad. This court-martial was the responsibility of the officer of the camp, and therefore also of the defendant. [Böttger] twice participated in the execution of these sentences. The condemned had attempted to flee. The other prisoners were required to witness the executions to show them what would happen to them if they were also to attempt to flee."¹⁷

The term “court-martial” may have been used in error. The leaders of FStGAs were authorized to call for court-martials under §13a of the Wartime Penal Process Regulation (*Kriegsstrafverfahrensordnung*), if it seemed to be necessary “for imperative military reasons.”¹⁸ However, it is questionable whether the 18 death sentences mentioned here were all handed down by a court-martial. As a rule, proper military courts were supposed to be available for such proceedings. The court of the 79th Infantry Division, which at the time represented the “Combat Command of the Bridgehead at Nikopol,” sentenced four members of FStGA 16 to death for desertion in December 1943. In one case, the execution was commuted to probation, while two other convicts, Herbert Scholz and Franz Morgen, were executed on December 29. The fourth verdict was confirmed on January 16, 1944, by the court martial, though it is unknown whether the sentence was actually carried out.¹⁹

There are no accounts of death sentences issued to prisoners from FStGA prior to December 1943. Böttger stated in the course of interrogations that he could only remember two executions. However, six additional death sentences against members of FStGA 16 were entered in January 1944 alone.²⁰ At least two of these death sentences handed down by the court of the Local Commander (*Ortskommandantur*) 456 (formerly located in Rostov but by then located in Lemberg; then also known as Lwów; today Lviv, Ukraine). Both of these sentences were carried out: Rudolf Naake was executed on April 25, 1944, and Reinhold Bardischefsky was shot by a firing squad in Lemberg on May 22.

Böttger was sentenced to eight years in prison on March 5, 1949, for “an infraction of Control Council Directive No. 38, Paragraph II, Article II, No. 8 in concomitance with a crime against humanity,” by the Landgericht Dresden.²¹

FELDSTRAGGEFANGENEN-ABTEILUNG (FStGA) 17

The Wehrmacht established FStGA 17 on March 20, 1943, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Anklam through the commander of Defense District (*Wehrkreis*) II.¹ The Army High Command (*Oberkommando des Heeres*, OKH) deployed the unit to the eastern front with Army Group South (*Heeresgruppe Süd*). Convicts from the front and rear areas of Army Group South were transferred to FStGA 17; if they could not be sent directly to the unit, they were transferred primarily via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Dubno and its subordinate Reception Center (*Auffangstelle*) Kiev.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by the General for Special Tasks responsible for the FStGAs at the OKH on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, and the prisoners' treatment and deployment. These guidelines are discussed in detail in **FStGA 1**.

A report written by Karl Baumgardt indicates that these guidelines were implemented in an especially harsh manner in FStGA 17. Baumgardt, whose death sentence for desertion was commuted to a prison sentence, was among the first prisoners who were sent from Anklam with FStGA 17 to Sukha Kam'ianka, near Izium in the Donbass region. He recalled that, while the unit was deployed there, “we mostly had to dig trenches, lay out barbed-wire barriers, clear mines, and haul wounded out of the forward area, for long periods of time and in dangerous areas.” It is likely that recovering soldiers’ corpses was the primary task, because his report continues: “Occasionally I only had an arm, the thigh, and sometimes only the head of a grunt in my tent tarp.”² As for the FStGA’s own losses, he writes: “Many of us [were killed] in the mine clearing teams.”³

The guards frequently got drunk and vented their rage on the prisoners. Baumgardt remembered that “if we hadn’t excavated enough of the fire trench in front, then they flailed on us with a rifle butt. A couple times my legs got really swollen from rifle butt hits.”⁴ The prisoners were often unable to complete their work due to exhaustion and insufficient food rations. Baumgardt recalled that the prisoners were badly malnourished, leading them to resort to desperate means: “At the front they occasionally court-martialed and shot some [prisoners] for stealing bread. We were definitely hungry. . . . Sometimes I hungrily grabbed bread from the pockets of Russians or our [dead] soldiers who had been lying there, bloated, for several days. It literally tasted like corpses. We chowed down on it.”⁵ As a result, the prisoners were frequently affected by diarrheal diseases. While the field prisoners deployed in the north operated in fiercely cold weather, torturous thirst was common in the southern section of the front. Baumgardt reported that he had not only “shaved and washed”⁶ with his own urine but also drunk it. As the Red

Army conducted an offensive in the south in the late summer of 1943, Baumgardt was able to escape from FStGA 17 and allowed himself to be taken prisoner by the Soviets.

During that offensive, FStGA 17 withdrew to Krivoi Rog (today Kryvyi Rih, Ukraine). There, it received the order to create a second reception center. Aviator Werner Klein (b. May 5, 1920), who had arrived in a replacement transport from WG Glatz (today Kłodzko, Poland) to FStGA 17 on December 8, 1943, took part in this operation. According to the statements Klein made in an interrogation on May 2, 1944, the workday amounted to around nine hours (not including the time it took to distribute and collect work implements and march to and from the work site), with a half-hour lunch break. Afterward, some prisoners were forced to exercise “a half hour in full pack” while wearing gas masks as punishment for various infractions. Such infractions included a prisoner picking up “cigarette butts or pieces of bread off the ground on the march out or in”⁷ or missing an article of clothing or equipment in the weekly roll call—even if it had been stolen. For most prisoners, however, the workday ended around 4:00 p.m. This work period was presumably due to the early sunset in winter. Klein also experienced the same torturous hunger and appalling living conditions that Baumgardt reported.

As a general precept, the military corrections system sought “the easiest, most frugal lodging in solitary or collective imprisonment.”⁸ Collective imprisonment was particularly sought during field imprisonment. FStGA 17 came across a collective farm (*kolkhoz*) around the beginning of 1944 that was secured by barbed wire and posts. Klein’s company was locked in a stable. He indicated that he “could [only] wash once a day,” done after working “in a pond 300 meters [984 feet] away from the lodging.” Due to the “insufficient personal hygiene,” he and other prisoners eventually reached a “moral and physical low,” which led to the spread of vermin—which brought the “appearance of infectious diseases amongst the prisoners.” With this, “the greater part of the prisoners [refrained from] reporting a sickness” out of fear because, in the event that the unit doctor wrote that the internee was not sick, they ran the risk “of being punished with tougher internment” conditions by the company commander,⁹ which meant an additional decrease to their already hunger-inducing rations.

The combination of hunger, sickness, and poor hygiene culminated in disgusting lodging conditions. Werner Klein stated:

At 6 p.m. was inspection by the officer on duty, and after he left the billets were closed. At 8 p.m. was a communal visit to the latrine and following that was lights out. To relieve ourselves in the middle of the night we used a sawed-through gas tank, but it was not big enough to accommodate the needs of all the prisoners. And so nearly every night this tank overflowed and the urine spilled on the ground, spreading an unpleasant smell. For want of sufficient

rations and out of hunger bordering on madness, we all ate whatever was in reach, regardless of whether it was corncobs, red turnips, or potato peelings. In doing so we all got worse diarrhea, which . . . was particularly problematic in the middle of the night. Since it was forbidden to use the urinal—that is, the gas tank—during the night for solid waste, and since we also feared more punishment, many of the prisoners were so weak-willed that they relieved themselves in underwear, tissues, or a shirt and then threw it away.¹⁰

Despite the horrible conditions, Baumgardt gave a positive description of the relations among the prisoners in 1943: “We did not give each other any trouble. The camaraderie was good. We were in agreement: we wanted nothing to do with Hitler.”¹¹ By contrast, Klein reported of a progressive demoralization of the prisoners, including “scuffles” during ration distribution and “cases of theft among comrades.” These thefts “increased from day to day” and included bread as well as pieces of clothing and equipment. To escape these conditions, he fled the unit along with Aviator Willi Lehwalder (b. June 6, 1915) on February 12, 1944. Both were recaptured later that month and were sentenced to death for desertion on June 8, 1944. At the end of 1944, both were imprisoned in WG Anklam. It is unknown whether their death sentences were carried out.

The counterintelligence (*Abwehr*) daily report of the Sixth Army of July 15, 1944, recorded two other escape attempts: “In the area of Sserpeni [today Šerpeni, Moldova], two members of FStGA 17 escaped on July 13. There is suspicion that they defected.”¹² FStGA 17 was wiped out in August 1944 during a major Soviet offensive (the Jassy-Kishinev Offensive) that destroyed Army Group South Ukraine.¹³ The unit was not reformed. The German Red Cross lists 360 men missing from FStGA 17, the highest number of missing reported from any FStGA.¹⁴

Aside from those handed down against Werner Klein and Willi Lehwalder, only three other death sentences are known to have been given to members of FStGA 17. On January 5, 1944, Eugen Hoffmann was sentenced to death for desertion by the court of the Local Command (*Standortkommandantur*) in Rostov. The sentence was carried out on May 26.¹⁵ Four days prior, on May 22, Fritz Keller was beheaded in Brandenburg-Görden Prison after he was sentenced to death on April 6 by the court of the Kriegsmarine in Berlin for subversion of fighting power (*Wehrkraftzersetzung*).¹⁶ Josef Weidenkopf (b. October 6, 1922) was sentenced to death for desertion by the court of the 320th Infantry Division on July 19, 1944. Although his sentence was confirmed on September 30, it was later commuted to a 10-year prison sentence.¹⁷

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 18

The Wehrmacht established FStGA 18 in early 1943 (probably in March) in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Germersheim through the commander of Defense District (*Wehrkreis*) XII.¹ The Army High Command (*Oberkommando des Heeres*, OKH) deployed the unit to the eastern front with Army Group South (*Heeresgruppe Süd*). Convicts from the front and rear areas of Army Group South were transferred to FStGA 17; if they could not be sent directly to the unit, they were transferred primarily via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Dubno and its subordinate Reception Center (*Auffangstelle*) Kiev.

The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines of April 14 and 15, 1942—which were expanded by the General for Special Tasks responsible for the FStGAs at the OKH on October 28, based on the initial experiences with the FStGAs—dictated the organization and strength of the unit, the selection of the prisoners, their treatment, and their deployment. These guidelines are discussed in detail in **FStGA 1**.

The OKW order of April 15, 1942, stated that FStGA prisoners were to work 10 hours a day, even on Sundays and holidays. However, on May 2, 1943, the XXXXII Army Corps, to which FStGA 18 was subordinate, decided that the prisoners would be allowed 24 work-free hours per week, in which the men were to be “educated and cared for.”² Nonetheless, the prisoners were quickly deployed (in the OKW’s words) “to the hardest labor, under the most perilous circumstances . . . possible in the deployment area of the fighting troops.”³ The implementation of this order is indicated by a casualty report from July 25, 1943. That day, prisoner Josef Meier was shot by a guard “in a disciplinary action resulting from his own behavior,” as the notification form sent to the prisoner’s next of kin read. The location of Meier’s death was reported only as “at the front line (location unknown).”⁴

By that time, court-martial executions were already being carried out in FStGA 18. Fritz Liebisch (b. September 28, 1918) and Max Schwabl (b. May 29, 1921) of the 2nd Company of FStGA 18 were executed for desertion in the village of Zarozhnoe, about 50 kilometers (31 miles) east of Kharkiv, on July 22, 1943.⁵ The next day, Otto Behringer (b. December 8, 1922), Robert Löhrengel (b. July 8, 1921), Willi Sarg (b. July 19, 1921), and Robert Schäffauer (b. January 20, 1922) were executed by firing squad for the same offense.⁶ All of these death sentences were handed down by the court of the 39th Infantry Division—to which FStGA had been subordinated in July 1943—which was at that time engaged with the Red Army along a static front east of Kharkiv.

FStGA 18 withdrew westward in response to the Soviet offensive around Kharkiv in August 1943. During the withdrawal, on September 18, 1943, two members of the unit—Waldemar Knappe (b. June 1, 1921) and Paul Knott (b. November 21, 1919)—were executed for desertion at KWG Dubno.⁷ These verdicts were also issued by the court of the 39th Infantry Division. Another escapee managed to get all the way back to Germany before he was recaptured. He was beheaded in Vienna on October 8, 1943, after being sentenced to death by the court of the 39th Infantry Division.⁸ The records of the court also included a 10th death sentence for a member of FStGA 18 during the period from July 15 to October 15, 1943, which was commuted to 12 years in prison.⁹

The (presumably complete) list of 10 known death sentences (9 carried out) during this period offers a point of comparison with a “normal” military unit, revealing the extent of the judicial terror within the FStGAs. For example, the 253rd Infantry Division—which was sent to the eastern front after the campaign in France, serving there from June 1941 to May 1945—kept quite thorough records of its death sentences.

Despite the fact that the 253rd Infantry Division had more than 10 times more men than FStGA 18, it only passed 14 death sentences in all of 1943, only 8 of which were carried out.¹⁰

FStGA 18’s subordination to the 39th Infantry Division ended when the latter was dissolved in the fall of 1943. In the first half of 1944, FStGA 18 was subordinate to different divisions of the Sixth and Eighth Armies along the southern section of the front. The deployment locations of the unit for this period can be reconstructed from the death sentences issued during this period. The surviving court documents indicate that the retreat movements of FStGA 18 took it from Kirovohrad (today Kropyvnyts’kyi, Ukraine) across the Bug River in the direction of Tiraspol, then to Kishinev (today Chișinău, Moldova), and finally to Iași (German: Jassy), in Romania.

On January 31, 1944, the court of the 282nd Infantry Division sentenced the prisoner Franz Schmied (b. April 15, 1915) to death for absence without leave. This verdict, confirmed by the commander of the Eighth Army on February 20, was later commuted to 12 years in prison. However, Albert Grabowski (b. July 2, 1924) sentenced to death for desertion by the same court on May 6, 1944, was not so fortunate. The verdict was subsequently confirmed by the commander of the Sixth Army on May 22, and Grabowski was executed on May 30, in Kishinev. The commander also declined to extend clemency to Willi Grzegoreck (b. May 20, 1923), who was sentenced to death for desertion by the same court on June 15, 1944. He was executed on July 7, in Kishinev.¹¹ Erich Hawlick was sentenced to death on June 2, 1944, for desertion and looting by the court of the 79th Infantry Division. Following confirmation by the commander of the Eighth Army, the execution took place on June 22.¹²

The court of the 376th Infantry Division handed down death sentences against Ernst Dörfler and Matthias Gassner for absence without leave on June 5, 1944. However, their sentences were commuted to probation by the commander of Army Group Wöhler (formerly part of the Eighth Army).¹³ The same court sentenced Walter Kubis of the 1st Company FStGA 18 to death for desertion on August 9, 1944. Unlike Dörfler and Gassner, Kubis’s sentence was confirmed by the commander of the 376th Infantry Division and carried out on the same day.¹⁴ It is unclear whether the death sentence handed down against Willi Kampschulte by the court of the 376th Infantry Division for subversion of fighting power on August 9, 1944, was carried out.¹⁵ Another member of FStGA 18, 19-year-old Horst Henze was beheaded on June 19, 1944, in Brandenburg-Görden Prison. He had been sentenced to death by the court of the Armed Forces Command (*Wehrmachtkommandantur*) Berlin for desertion and other offenses on May 5, 1944.¹⁶

FStGA 18 sustained heavy losses in the summer of 1944 as a result of the Soviet offensive that began on August 20, 1944 (the Jassy-Kishinev Offensive), which destroyed Army Group South Ukraine. The majority of the 262 prisoners from FStGA 18 who were recorded missing by the German Red Cross went

missing in eastern Romania, in locations including Iași, Bârlad, and others.¹⁷ Unlike FStGAs 7 and 10, which were in the same area, FStGA 18 was not completely destroyed; it absorbed the remaining prisoners from those units.¹⁸

After the destruction of Army Group South Ukraine, FStGA 18 was once again subordinated to Army Group South. During this period, Georg Ermentraut joined the unit. His 10-year prison sentence for desertion was commuted to a 10-year jail sentence. According to his words, the internees of FStGA 18 were treated like “the scum of the earth on bread and water” and sent to construct defensive positions, where they were “pushed back and forth across the Hungarian-Yugoslavian border.”¹⁹

Additional death sentences were recorded in this last period of FStGA 18’s existence. Anton Boos (b. October 1, 1921) was shot on December 11, 1944, on the Deuthen parade ground, after he was sentenced to death for desertion by the court of the 461st Division, Zweigstelle Allenstein. Richard Stemmler (or Stemmler), 22 years old, met the same fate in Ulm on March 21, 1945, after he was convicted of desertion by the 465th Division.²⁰

In the deployment area of FStGA 18, Richard Storch was sentenced to death on December 1, 1944, by the court of the commander of Army Area Hungary (*Befehlshaber im Heeresgebiet Ungarn*) for “cowardice before the enemy.” In his case, the execution was stayed and he was transferred “to Gestapo Vienna.”²¹ This phrase referred euphemistically to his transfer to Transitional Custody (*Zwischenhaft*) I—war-related forced labor in the Mauthausen concentration camp. This unit, established by the Luftwaffe on June 1, 1944, and taken over by the army six weeks later, was intended to preserve valuable manpower, especially those who were skilled in technical jobs.²²

FStGA 18 operated until the end of the war and continued its assignment of transferring potentially useful soldiers back to the front. Georg Ermentraut was deployed for four months digging trenches at the front and was sent to a four-week operational assignment with Probationary Unit (*Bewährungstruppe*) 500 at Olmütz (today Olomouc, Czech Republic). Ermentraut, serving with the last remaining troops of Probationary Unit 500, was involved in the final skirmishes of the war at Olmütz between May 6 and May 8, 1945.²³ Information is not available about the final days of FStGA 18’s operation.

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 19

The Wehrmacht established FStGA 19 in April 1943 by the conversion of Field Penal Camp (*Feldstraflager*) III—which

had been created by Defense District (*Wehrkreis*) IV in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Torgau-Fort Zinna on August 1, 1942—into a FStGA.¹ Prior to this conversion, the 237 remaining prisoners in Feldstrafager III had been transferred to Feldstrafager I. The decision to convert this unit was the result of the increasingly dire shortage of manpower at the front. The transfer of prisoners deemed “incorrigible” from the Field Penal Camp to the front was an attempt to alleviate this shortage.² These prisoners were transferred to the FStGAs with the hope that they could eventually be reformed and sent to “front probation,” where they would serve with a regular combat unit.

FStGA 19 was initially attached to Army Group North (*Heeresgruppe Nord*) and was deployed near Leningrad, where the prisoners worked on the construction of bunkers and defensive positions as well as retrieving dead and wounded soldiers.³ It operated under the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) guidelines, which are discussed in detail in **FStGA 1**. The guiding principle of those instructions—that the prisoners were to be kept “under the hardest living and working conditions”—led to a high number of escape attempts, absences without leave, and other types of avoidance of service in FStGA 19.⁴

Thirteen prisoners from FStGA 19 were executed in the period from June to December 1943. Johann Waldmann (b. July 21, 1910), Heinrich Lathan (b. October 6, 1922), and Heinz Mitzner (b. July 23, 1921) were executed for desertion on June 9, 18, and 22, 1943, respectively, after being sentenced to death by the court of the 58th Infantry Division.⁵ On August 10, 1943, Kurt Brichta (b. June 3, 1921) and Kurt Steinert (b. January 30, 1914) were executed by firing squad. The court of the 21st Infantry Division had sentenced both men to death for “collective subversion of fighting power” (*Wehrkraftzersetzung*) under §5, Abs. 1 (3) of the Special Wartime Military Code (*Kriegssonderstrafrechtsverordnung*), which dealt with withdrawal from military service “through deceptive, calculated means.”⁶ Adolf Klosa was shot for desertion in Volosovo (Leningradskia oblast') on August 18, 1943, after he was sentenced to death by the court of the commander of the Eighteenth Army Rear Area (*Kommandeur des rückwärtigen Armeegebiets*, Korück, 583).⁷ The next two death sentences came from the court of the 24th Infantry Division. Hans-Joachim Wählting (b. February 5, 1924) and Günther Krautwald (b. November 7, 1920) were sentenced to death for desertion and executed on August 23 and September 13, 1943, respectively.⁸ Three other soldiers were executed as a result of verdicts issued by the court of the I Army Corps (*I. Armeekorps*): Heinrich Schwarz (b. May 22, 1919) on September 28, 1943, Kurt Lüttich (b. April 24, 1921) on October 29, and Friedolin Haus (b. April 19, 1924) on November 1. Schwarz and Haus had been convicted of desertion, while Lüttich had been convicted of withdrawal from military service “through deceptive, calculated means.”⁹ Christian Sopp was executed on November 5, 1943, for desertion after he was sentenced to death by the court of the 24th Infantry Division. Karl Eichler was convicted of “absence without leave” by the court of the

Eighteenth Army and sentenced to death on December 18, 1943.¹⁰

Although FStGA 19 applied a “concept of punishment and deterrence” in the treatment of its prisoners, it also pursued the goal of reforming the prisoners so that they could be used “again as useful, dutiful, honorable soldiers with the fighting troops,”¹¹ which represented a “concept of reform and education.”¹² The application of such a concept was based on an order from the Eighteenth Army High Command (*Armeoberkommando*, AOK 18) from May 14, 1943. Under this order, prisoners who exhibited good behavior (referred to as “climbers”) were to be “brought up, equipped, and educated for the so-called ‘deployment groups [or] platoons.’” AOK 18 noted that these prisoners were “intended for combat deployment, for example [in] anti-partisan warfare.”¹³ In FStGA 19, the formation of these “deployment platoons” apparently occurred in the 5th Company. On June 23, 1943, its “provisional strength” was listed as 1 officer, 17 noncommissioned officers, 33 other staff personnel, and 166 prisoners.¹⁴ On July 12, 1943, its “combat strength” included 1 officer, 9 noncommissioned officers, 4 additional staff personnel, and 128 prisoners.¹⁵

Until January 1944, an “intervention company,” which was separated from the “deployment platoons,” was assigned to the 24th Infantry Division for “cleaning up” a “deep breakthrough,”¹⁶ as its temporary commanders Hans von Tettau and Kurt Versock later recorded. “Probationary Company 19, formed out of FStGA 19,” led by Tettau and Versock, was trapped in this counterattack together with the 225th Füsiler-Bataillon. Nevertheless, it was able to “free itself from a constantly attacking enemy in full sight” and, together with the 225th Füsiler-Bataillon, “fight [its way] back,” along with all wounded prisoners, who were transported with them. In February 1944, “climbers” from FStGA 19 were combined with those from FStGA 4 in a temporary “Army Group-Probationary-Battalion I,” which was transferred to “security on Lake Peipus.”¹⁷

The example of a sailor named Fan indicates how the use of prisoners in an “intervention company” was intended to work from the military leadership’s perspective. Fan had been sentenced to three years in prison for violently attacking a superior while drunk. As a member of the “intervention company” of FStGA 19, he was wounded by grenade fragments on July 18, 1944. As a result, on January 5, 1945, the Naval High Command (*Oberkommando der Marine*, OKM) granted him a conditional suspension of his sentence for “probation on the front” with Probationary Unit (*Bewährungstruppe*) 500. One of Fan’s accomplices had already been transferred from FStGA 19 to Probationary Unit 500 in November 1944.¹⁸

The existence of the “intervention company” shows that FStGA 19 achieved “successful reforms” and transformed prisoners into useful soldiers. However, this was only true for some prisoners. For example, the case of Kanonier Martin Krammer demonstrates that many prisoners from FStGA 19 were not capable of being successful soldiers after constant

hunger, long hours of physical labor, and other hardships. It was noted that “in January 1944 [he had not taken] the available opportunity to prove himself in the intervention company.”¹⁹ Due to his constant reticence—primarily due to hunger—Krammer was detained and transferred out of the unit and was “deployed to digging work at the front line”²⁰ with FStGA 19. The sentence he received later for subversion of fighting power noted:

He went, however, very slowly, required all of maybe five minutes rest, and explained to the noncommissioned officer: “If it is too slow for you, then order a car. And if you shoot me dead, I’ll go as it suits [me].” . . . [When] the officer of the court wanted to question [him], he feigned insanity; he indicated that he was the Count of Luxembourg, was born in the year 1400, his father had red hair, and so forth. As his company commander . . . tried to influence him with benevolent persuasion, [Krammer] interrupted him multiple times and demanded a piece of bread in the interest of public health.²¹

Krammer was declared a “simulator” (*Simulant*) by an army psychiatrist. The court of the XXXVIII Army Corps of the Eighteenth Army sentenced him to death for subversion of fighting power on August 18, 1944. In the verdict, the court-martial also remarked on the morale of the prisoners in FStGA 19, indicating a general concern about increasing defiance by the prisoners: “In the last few months the propensity of prisoners in the FStGA toward insubordination is increasing in dangerous ways. The delinquent portion of the prisoners take the hard battles on the front as cause to act fresh and act in an insubordinate manner toward the [unit] staff.”²²

Perhaps as a deterrent to this trend, Krammer’s sentence was carried out on the day he was convicted. Nine death sentences for desertion and absence without leave had been handed down against members of FStGA 19 between late April and mid-July 1944. However, six of them were commuted to prison sentences of between 10 and 15 years. Only two, Hans Bergemann and Bruno Arnold, were executed, on May 26, and June 1, 1944, respectively. Meanwhile, Heinz Heitmüller, who had been sentenced to death for desertion on July 14, 1944, had escaped and was still at large.²³

In the fall of 1944, FStGA 19 was among the eight FStGAs that were transferred from the eastern to the western front to build defensive positions against the advancing Western Allied troops in the border area with France and the Benelux countries. Under the command of the Nineteenth Army, FStGA 19 was sent to dig trenches, initially in the Vosges, near St. Dié and La Bresse, and then later in the Upper Rhine region.²⁴

In this final phase, FStGA 19 returned to the concentration camp methods that had been used in its previous iteration as Feldstraflager III. The report of Peter Schilling, who was sent to FStGA 19 for desertion in late 1944, indicates the nature of this change:

Upon reaching [the unit], the commander of the F[St]GA curtly and concisely informed me that I would surely not live a long life in his unit. In F[St] GA 19 the murder of prisoners was a daily occurrence. I witnessed, as one of our prisoner attendants ordered a comrade to go out over a pre-marked line—which we were not allowed to cross—to get a leaflet that had been blown from a propaganda grenade. As the prisoner hesitated and pointed out the restricted line, the watchman threatened to shoot him for failure to follow orders. As the prisoner then moved out, he was gunned down from behind as he crossed the demarcation line; that is, “shot during escape.” Similar things occurred daily. In addition, rations were minimal, such that one could speak of an extermination by hunger.²⁵

The reference to a daily occurrence of such “incidents” may be an exaggeration, especially since Schilling was apparently only “in the F[St]GA a very short time,”²⁶ since he fled after being wounded by a shell fragment. Some court-martial executions have been corroborated, however. On November 17, 1944, Paul Hagenow, Helmut Skott, and Max Glöckner of the 3rd Company of FStGA 19 were shot after having been sentenced to death for cooperative desertion by the court of the 708th Volksgrenadier Division in Allarmont.²⁷ On January 9, 1945, prisoners Werner Mensch (b. October 7, 1926) and Ernst Otto (b. June 24, 1910) were sentenced to death by the court of the Nineteenth Army; they were executed on January 29, 1945.²⁸

Werner Krauss was a convicted resistance fighter of the “Red Chapel” (*Rote Kapelle*), who had been initially sentenced to death by a court-martial before his sentence was commuted to five years’ imprisonment. He cites FStGA 19 as an example of how the FStGAs on the western front were, “along with the personnel, encircled and overrun by the enemy.” He supports his statement with information in the “Secret Reports on the Disposition of the F[St]GA,” which he was able to look through during his duty as a prison scribe (August 1944 to March 1945) of the 7th Company of WG Torgau-Fort Zinna.²⁹ However, no independent sources confirm the details of Krauss’s imprecisely dated account. It is possible that instead of being overrun, many of the prisoners in FStGA 19 voluntarily surrendered to the Allies during their retreat.

Among the last members of the unit, who built trenches and antitank obstacles in the area of Freiburg im Breisgau, were three Communist resistance fighters who had been sentenced to death by a court-martial. Eduard Czamler, Heinrich Schifer, and Johann Schaubmair of Linz had had their sentences commuted to 10 years in prison by Hitler because they had children at home. A so-called Prison Company (*Zuchthauskompanie*) had been formed in FStGA 19 in late August or early September 1944.³⁰ The three men were transferred into this company from WG Torgau-Fort Zinna on March 1, 1945. Czamler and Schifer were taken prisoner by the French in late April 1945. Schaubmair also survived; he

indicated April 22, 1945, as the end of his internment in the Wehrmacht penal system.³¹

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 20

The Wehrmacht established FStGA 20 on October 1, 1943, in Armed Forces Prison (*Wehrmachtgefängnis*, WG) Glatz (today Kłodzko, Poland), through the commander of Defense District (*Wehrkreis*) VIII.¹ The Army High Command (*Oberkommando des Heeres*, OKH) placed FStGA 20 into service on the eastern front, with Army Group Center (*Heeresgruppe Mitte*). Convicts from the area of Army Group Center were sent to FStGA 20; when a direct transfer was not possible, they were sent via Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borissow (Borisov/Barysaū).

There is only a limited amount of fragmented information available on FStGA 20. We know that on November 22, 1943, the prisoner F. Brackemeier was shot during an escape attempt.² Paul Wacker, who came to FStGA 20 via KWG Wilna in early 1944 after being sentenced to a year in prison (originally to be served in Feldstraflager II but later commuted to service in the FStGA), reported that the men in the unit were deployed to "armed combat against partisans in the Pripyat Marshes."³ FStGA 20 was attacked by partisans in April 1944, resulting in the death of one prisoner from the 5th Company.⁴ On September 1, 1944, Hans Bürger, a prisoner in the 5th Company, was shot "in flight."⁵ On July 24,

1944, Alfred Nüske (b. July 19, 1919) escaped from the unit. He also belonged to the 5th Company, which at that time was deployed in Oldaki, Poland. Nüske was recaptured in Berlin and was sentenced to death for desertion in Torgau on February 15, 1945, by the court of the Armed Forces Command (*Wehrmachtkommandantur*) Berlin. Although the sentence was confirmed by the commanding general of Defense District III on March 29, 1945, he was not executed before the end of the war.⁶ The last-known location in which FStGA 20 was in service was East Prussia. On January 25, 1945, Army Group Center was redesignated as Army Group North (*Heeresgruppe Nord*), to which FStGA 20 remained subordinate for the rest of the war.⁷

The 5th Company reveals a feature that distinguishes FStGA 20 from all other similar units. On December 19, 1943, the general for Special Tasks at the OKH responsible for the FStGAs gave a written order to FStGA 20 that its 5th Company was to be used as a probationary unit for prisoners from the Field Penal Camps (*Feldstraflager*).⁸ Until that time, prisoners who had been classified as “incorrigible” had been sent to the field penal camps, where they would remain for the rest of the war under extremely strict conditions; their time in the Field Penal Camps would not count against their sentences, which they would still be expected to serve in full at the end of the war.⁹ The camps’ jurisdiction had applied explicitly to probationary prisoners of “all fitness levels.”¹⁰

From December 19, 1943, on, the “mixed” FStGA 20 would be responsible for convicts from the Field Penal Camps who had been classified as “suitable for work and conditionally capable of service in the Replacement Army [*Ersatzheer*]”.¹¹ Apparently, the purpose of this measure was to prevent prisoners from becoming too weak to serve as laborers at the front (where there was a severe shortage of labor), as often happened with those interned in the Field Penal Camps. In addition, prisoners who would have otherwise been the responsibility of the WGs due to their decreased fitness level could now be sent to “field enforcement” through FStGA 20.

In hindsight, the restructuring of FStGA 20 as a unit in which prisoners of lower fitness levels could potentially perform effective services and the creation of a mixed unit had an experimental character: it could be examined whether prison enforcement (*Gefängnisvollzug*) and prison camp probation (*Straflagerverwahrung*) could take place within a field penal structure. However, a principle formulated in September 1941 opposed such an arrangement, noting that “bringing together . . . trainable soldiers . . . with untrainable criminals [*Rechtsverbrecher*] or those who are not trainable in the foreseeable future . . . would achieve the opposite of the intended purpose” of the field penal system.¹² In fact, it had already been demonstrated during the normal operation of the FStGA system that the frequent lack of opportunities to place prisoners who behaved badly in separate accommodations could become a problem for military discipline and the “training process.”¹³ On the

other hand, there was an advantage to such a restructuring: the creation of a penal camp company within the FStGA could reduce the number of lengthy prisoner transports and the amount of long-distance correspondence, since the transfer of prisoners from the field penal system into the Field Penal Camps—and their return in the event of an “improvement”—could take place within a single unit.

In fact, as the case of FStGA 21 demonstrates, by the summer of 1944, it had been decided to equip all—or at least most—FStGAs with penal camp (or prison) companies.¹⁴ It would, however, be an exaggeration to view FStGA 20 as a sort of “pilot program” in this respect. The decision to add these companies to the existing field penal units was based not on the results in FStGA 20 but rather on the increasingly desperate situation at the front and the desire to bring all possible reclaimed prisoners of different categories (those in prison, those in the penal camps, and those in the penitentiaries) into service at the front.

FELDSTRAGGEFANGENEN-ABTEILUNG (FStGA) 21

The Wehrmacht established FStGA 21 in March 1945 through the conversion of Field Penal Camp (*Feldstraflager I*), which was in service at that time with Army Group South (*Heeresgruppe Süd*) in Hungary.¹ The five companies of FStGA 21 (at least according to plans) included a penal camp company (*Straflager-Kompanie*) and a penitentiary company (*Zuchthaus-Kompanie*).

The redesignation and reclassification of Feldstraflager I (which took place in a similar manner with Feldstraflager II) brought to an end the process of expanding and unifying the military penal system, which had begun in the late summer of 1944. Up to that time, prisoners who were sentenced to terms in penitentiaries, if their sentences were not commuted to prison terms, were classified as “unfit for combat,” kicked out of the armed forces, and turned over to the Reich Justice Administration (*Reichsjustizverwaltung*, i.e. the civilian penal system). They were often sent to prison camps in Emsland—where they lived in conditions that were “similar to those in the concentration camps”—for what was deemed “probation.”² Their time there did not count against their sentence, which they were expected to serve in full at the end of the war.

Early on, there were already critics of the idea of returning penitentiary prisoners to Germany. As one naval court put it, “undesirable elements . . . may find it preferable to be sentenced to the penitentiary rather than prison.”³ The Naval High Command (*Oberkommando der Kriegsmarine*, OKM) expressed the same concern in October 1942. However, the OKM did not see a possibility for “field penal service for these bad elements” because of the lack of suitable guards. It stated that “the guard personnel cannot be assembled in sufficient strength for supervision and maintenance of the prisoners, to prevent mutiny, unauthorized leave, and desertion.”⁴ It had, in fact, already become apparent in some cases, such as those of FStGAs 3 and 4, that there was a shortage of adequate guard personnel. On October 6, 1942, General der Artillerie Eugen Müller of the Army High Command (*Oberkommando des Heeres*, OKH) stated that in view of the “the generally restricted availability of staff personnel” the FStGAs “unfortunately cannot be expanded.”⁵ Because field penal service for the penitentiary prisoners would have required increased

numbers of guard personnel, it appeared inefficient from a military standpoint.

In fact, two detachments with about 4,600 total penitentiary prisoners from the Emsland camps had been formed outside the Wehrmacht and deployed to northern Norway (*Kommando Nord*) and the Atlantic coast of France (*Kommando West*), where they provided good results in the eyes of the German authorities. The men were sent to work on military construction projects under Organisation Todt, which included the construction of defensive works and construction and maintenance of military supply lines.⁶ The Industrial Ministry, which was responsible for these units, expressed its satisfaction with the work done by these units to the Justice Ministry.⁷

It is unknown whether the experiences with Kommando Nord and Kommando West had any direct influence on the decision to use soldiers sentenced to penitentiary terms in the FStGAs. It is possible that the increasingly desperate military situation led the military leadership to resort to using these men. On September 4, 1944, General Müller gave the order for the large-scale transfer of penitentiary prisoners to penal service at the front. The special penitentiary companies were attached to the FStGAs in late August or early September 1944. According to Müller’s order, “members of the field army who have been sentenced to a penitentiary term” were only to be handed over to the Reich Justice Administration if they were “the most uneducable asocials; homosexual repeat-offenders; elements which were dangerous to the community; or convicts who were not needed by the Wehrmacht for various reasons.” In all other cases, “prisoners who were sentenced to the penitentiary” were to be sent “to the FStGAs or Feldstraflager under a conditional restoration of suitability for military service.”⁸

A day after Müller’s order, Heinrich Himmler, who had become the commander of the Replacement Army (*Ersatzheer*) on July 20, 1944, ordered that in his area of responsibility, the penal system was “to be placed without exception in the immediate service of the war effort”: “Soldiers and army officials . . . who have been sentenced to prison are no longer to be . . . given over to the civilian justice system. They are either to be sent to the penitentiary companies of the FStGAs or turned over to the Gestapo and transferred to labor service in a concentration camp.”⁹ The prisoners selected for the penitentiary companies were to be those who could be considered for “front probation” with Probationary Unit (*Bewährungstruppe*) 500. Time served in the penitentiary company would only begin to count against the prisoner’s sentence when they were transferred to Probationary Unit 500. The Kriegsmarine and Luftwaffe soon adopted the same practice.¹⁰ The army sent a commission of military judges to the Emsland camps to evaluate the prisoners there for suitability for service in a penitentiary company in a FStGA, in Probationary Unit 500, or in the labor service at Buchenwald. Since the majority of the prisoners in the Emsland camps were already working in war-related industries, the transfer of

prisoners to Probationary Unit 500 was very selective, while the transfer of prisoners to the FStGAs or labor in Buchenwald was much more common.¹¹ A similar practice was instituted for former service members who had been sentenced to the penitentiary because they were “unfit for duty on the Moor [i.e., in the Emsland camps].”

Alongside the integration of the penitentiary companies, the FStGAs also received penal camp companies, which in the special case of FStGA 20 had already been done in late 1943. In the process of a unification of the organizational structures, Feldstraflager I was reorganized as FStGA 21. If this change in the final weeks of the war had any practical effect it is unknown due to the lack of available sources. The prisoners in FStGA 21 were captured by American forces on May 8, 1945, and became prisoners of war.¹²

FELDSTRAFGEFANGENEN-ABTEILUNG (FStGA) 22

The Wehrmacht established FStGA 22 in March 1945 through the conversion of Field Penal Camp (*Feldstraflager*) II into a FStGA. Feldstraflager II was deployed with Army Group South (*Heeresgruppe Süd*) in Hungary at the time.¹ FStGA 22 consisted of five companies, including a penal camp company and a penitentiary company (at least according to plans). Whether this restructuring—the background of which was similar to that of FStGA 21—had any notable practical effect on the prisoners during the last weeks of the war is unknown due to the lack of available source material.

On May 4 or 5, 1945, FStGA 22 was marching from the Horn camp to Zwettl in Lower Austria.² The unit was captured by American forces shortly thereafter, and the men became prisoners of war.

KRIEGSWEHRMACHTGEFÄNGNIS (KWG) BORISSOW

KWG Borissow (Russian: Borisov; today Barysaŭ, Belarus) was—along with Dubno and Dünaburg (today Daugavpils, Latvia)—one of the three KWGs that the Wehrmacht established in the occupied territories shortly after the invasion of the Soviet Union (map 9b). The main criteria for the selection of locations for the KWGs in the northern, central, and southern rear areas of the eastern front were the existence of suitable prison buildings and proximity to “well-located transport hubs.”¹ Under the “enforcement plan” of November 17, 1941, soldiers from “Army Group Center (*Heeresgruppe Mitte*), its rear areas, and the Military Commander (*Wehrmachtsbefehlshaber*) Ostland” who were sentenced to “imprisonment of up to three months” by military courts were to be held at Borisov. Soldiers from those areas who were sentenced to terms longer than three months were to be held temporarily at Borisov and “transferred in regular transports” to Armed Forces Prison (*Wehrmachtgefängnis*, WG) Grudziądz.² From the end of 1942 at the latest, KWG Borissow, which from 1942 was under the command of Field Command (*Feldkommandantur*) 516, had control over a Reception Center (*Auffangstelle*) in Smolensk.³

From April 1942, the punishment of military prisoners was largely transferred to the front area in the form of the newly established field penal battalions (*Feldstrafgefangenen-Abteilungen*, FStGA) and field penal camps (*Feldstraflager*);⁴ as a result, the responsibilities of KWG Borissow were expanded. From May 1942, it collected military prisoners from the area of Army Group Center who had been “ordered to serve in a Field Penal Battalion” and sent them onward to FStGA 2.⁵ By October 1943, FStGAs 1, 5, 9, 11, 14, 15, and 20 had also been deployed in the central zone of the eastern front, and prisoners were sent to them from KWG Borissow as well.

However, prisoners also came to KWG Borissow from the FStGAs. The basis for this practice was derived from the guidelines for medical care in the penal battalions, in which was stated: “Hospital care for prisoners is carried out . . . under strict supervision in the army or army group rear area; a transfer to a hospital in the homeland or, respectively, to a replacement unit (here: Armed Forces Prison) is not to occur.” Military prisoners who were “physically and medically unfit,” according to the judgment of both the battalion doctor and the doctor of the higher division, were then to be “sent to the responsible Kriegswehrmachtgefängnis” for treatment. If the reports differed, the prisoner would remain with the battalion.⁶ Under this order, large numbers of prisoners from the FStGAs were sent temporarily to KWG Borissow to recover their strength.

After the establishment of the penal units, regular transports of prisoners also left KWG Borissow for institutions within the Reich. These transports included prisoners who did not meet the minimum health requirements for the penal battalions⁷ as well as officers and noncommissioned officers

who were sentenced to prison terms of more than three months without deprivation of rank and were, therefore, to serve their sentences in military prisons in Germany.⁸ Particularly common in these transports were military prisoners who were turned over to the civilian authorities for punishment pursuant to §102 Sections 1 and 3 of the Military Criminal Code (*Kriegsstrafverfahrensordnung*).⁹ In practice, these transports also included those who, because of their crimes, were considered to be “unworthy” of the military and were to be expelled from the Wehrmacht. Soldiers from the rear area of Army Group Center who received this sentence were sent “from KWG Borissow to the Sonnenburg Prison” in Neu-mark in Ostbrandenburg, from which they would then be sent to the prosecutor in Frankfurt an der Oder, who would send them for further punishment “in the *Strafgefangenenlager* [penal camp] Esterwegen.”¹⁰ One prisoner punished in this manner was Heinz Weinholdt, who was sentenced to death by the court of the 330th Infantry Division for deliberately rendering himself unfit for combat by self-mutilation; his sentence was subsequently commuted to 10 years imprisonment. His recollection of his time in KWG Borissow and the transport to the Sonnenburg Prison gives an impression of the difficult conditions there:

I came to Borisov . . . , where all who were sentenced by the military courts were collected. When the number of prisoners reached 100, they were sent on to Germany. . . . We were placed with about 30 men in a cell and were kept in handcuffs and shackles day and night. One was only uncuffed to tend to one’s bodily needs, and then only the right hand; for this purpose, there was a basin in each cell. After a week, the number required for a transport was reached. We were loaded into freight cars, approximately 50 men per car. They were locked from the outside. We barely received anything to eat or drink. That was in May 1943, and it was pretty hot. When it rained, we collected the raindrops that fell through the roof in tin cans so that we would at least have something to drink. Many people died on the transport to Germany.¹¹

Further transports from Borissow carried those who were considered “irredeemable” and, therefore, sentenced to the hardest form of punishment: imprisonment in the field penal camps.¹² It was ordered that “soldiers who are sent to the penal camps shall only be transferred via WG Torgau-Fort Zinna—with the exception of those who are in the area of the Field Penal Camps . . . who will be sent directly to the camps.”¹³ Because there was no field penal camp in the area of KWG Borissow, those in Borissow who were sentenced to the camps were sent via WG Torgau-Fort Zinna, from which they were sent to the field penal camps in special transports. Finally, prisoners from Borissow were also sent to Probationary Unit (*Bewährungstruppe*) 500, as was the case for other KWGs.

In the “Leaflet on Enforcement Facilities and Probationary Units” from September 4, 1944, by which point KWG Borissow no longer existed, the “accommodation of investigative prisoners and temporary detainees” was listed as a “purpose” of the KWGs.¹⁴ It is safe to assume, however, that the KWGs had been used for investigative imprisonment before this date.¹⁵ As a result, the KWGs, including Borisov, were often execution sites. At least 10 prisoners from FStGA alone were executed there. On October 3, 1942, Heinz Bartsch (b. August 13, 1920) and Werner Best (b. March 13, 1921) were shot in Borissow.¹⁶ Alfred Goy (b. July 17, 1923) died before a firing squad there on December 23, 1943.¹⁷ He was followed by Ernst Kasch (b. October 19, 1920) on January 5, 1944.¹⁸ February 15, 1944, was the execution date for Peter Hendricks (b. January 18, 1923).¹⁹ On April 28, 1944, Georg Kettler (b. December 2, 1923)²⁰ and Gustav Beuster (b. June 30, 1922) were killed by a firing squad in Borissow.²¹ Alfred Jaschka (b. July 9, 1921) was executed by firing squad on May 3, 1944.²² Finally, Philipp Lenhart (b. October 8, 1920)²³ and Johann Rothländer (b. January 7, 1916) were shot for desertion on May 18, 1944.²⁴

The execution sites for additional prisoners from FStGA 5 are unknown, and, therefore, it can only be assumed that these executions also took place in Borissow. Executions also took place at the Reception Center of KWG Borissow in Smolensk. The following prisoners from FStGA 9 were executed at Smolensk: Herbert Neuschwender (b. August 16, 1922) and Art[h]ur Brendel (b. February 27, 1920) on January 22, 1943,²⁵ and Heinz Grewe (b. March 3, 1920) on May 18, 1943.²⁶

While KWG Dubno and KWG Wilna were withdrawn in the face of the Soviet advance in August 1944 to Lemberg (then also known as Lwów; today Lviv, Ukraine) and Tarnów, respectively, KWG Borissow was moved to East Prussia. There it became known as KWG Wormditt after the village of the same name (today Orneta, Poland), in what was then Kreis Braunsberg.²⁷ The location of the prison there is not known; it is possible that the St. Andreasberg Hospital for Epileptics was used as a KWG. Later, on December 4, 1944, it was renamed Kriegswehrmachtgefängnis 203 in the Field Post Directory (*Feldpostübersicht*).²⁸

KRIEGSWEHRMACHTGEFÄNGNIS (KWG) DUBNO

KWG Dubno (map 9e) was—along with Dünaburg (Daugavpils) and Borissow (Borisov/Barysaŭ)—one of the three KWGs that the Wehrmacht established in the occupied territories shortly after the invasion of the Soviet Union. The main deciding factors for the locations of these three KWGs—in the southern, northern, and central rear areas of the eastern front—were the existence of suitable buildings for housing prisoners and “convenient location to transportation hubs.”¹ Under the “enforcement plan” of November 17, 1941, the purpose of KWG Dubno was to house prisoners from Army Group South (*Heeresgruppe Süd*), its rear areas, and the Military Commander (*Wehrmachtsbefehlshaber*) Ukraine, who were given sentences of up to three months imprisonment by military courts. Soldiers from these areas who were given longer sentences were transferred from Dubno “in regular, expedited transports” to Armed Forces Prison (*Wehrmachtsgefängnis*, WG) Glatz (today Kłodzko, Poland) in Lower Silesia. The KWG in Dubno had a Reception Center (*Auffangsstelle*) in Kiev.² Beginning in April 1942, the military penal system was largely transferred from the military prisons within Germany to the areas near the front,³ in the form of the newly created field penal battalions (*Feldstrafegefängenen-Abteilungen*, FStGA) and field penal camps (*Feldstraflager*); as a result, the responsibilities of KWG Dubno increased. From May 1942, it collected Wehrmacht soldiers from Army Group South who had been sentenced to the penal battalions and

sent them on to FStGA 1.⁴ In this respect, by October 1943, FStGA 7, 8, 10, 12, 16, 17, and 18 had also been deployed to the southern section of the eastern front.

Like other KWGs, Dubno also served as a temporary residence for prisoners from the nearby penal battalions who were unable to work due to stress, hunger, and abuse. The basis for this practice was derived from the guidelines for medical care in the penal battalions, in which was stated: “Hospital care for prisoners is carried out . . . under strict supervision in the army or army group rear area; a transfer to a hospital in the homeland or, respectively, to a replacement unit (here: Armed Forces Prison) is not to occur.” Military prisoners who were “physically and medically unfit,” according to the judgment of both the battalion doctor and the doctor of the higher division, were then to be “sent to the responsible Kriegswehrmachtgefängnis” for treatment.⁵ If the reports differed with each other, the prisoner would remain with the battalion. One such prisoner sent to KWG Dubno was Fritz D. from FStGA 16, who was no longer able to work due to malnutrition. He reported: “One day a column went to Dubno, and we undernourished and sick prisoners were driven [there]—70 kilometers [43.5 miles] by foot. In Dubno, they were supposed to let us recover, but we had to spend seven hours in the yard, double-timing. Every day, one saw deaths. Those who were near death were taken out at night to be shot.”⁶

That last quote indicates that KWG Dubno was already used as a remand prison in 1943, although the “accommodation of remanded prisoners and those provisionally detained” was first mentioned as a responsibility of the KWGs in instructions from September 4, 1944.⁷ Indeed, two shootings of prisoners in KWG Dubno have been documented. On September 18, 1943, two prisoners from FStGA, Paul Knott (b. November 21, 1919) and Waldemar Knappe (b. June 1, 1921), were executed for desertion.⁸

Even after the establishment of the field penal units, regular transports to the prisons within Germany continued. These transports carried either prisoners who were not healthy enough to be sent to the FStGAs⁹ or officers and non-commissioned officers who had been sentenced to more than three months’ imprisonment (without loss of rank) and were thus required to serve their sentences in the military prisons in Germany.¹⁰ In particular, those soldiers who had been sentenced under §102 Abs. 1 and 3 of the military penal code (*Kriegsstrafverfahrensordnung*) were sent back to Germany to be turned over to the civilian authorities.¹¹ In practice, these transports also included soldiers who were determined to be “unworthy” of the military due to their criminal sentences and who would thus be expelled from the Wehrmacht. Soldiers under the authority of the Army Group South Rear Area Command (*Befehlshaber des rückwärtigen Heeresgebietes Süd*) who were given such sentences were sent from “KWG Dubno . . . to the Ratibor prison” in Upper Silesia, from which they were then sent via the prosecutor in Ratibor (today Racibórz, Poland) “to the *Strafgefangenenlager* [prison camp] Esterwegen.”¹²

Further transports from Dubno to Germany carried those who were considered to be “irredeemable” and were thus sentenced to the hardest form of military punishment, imprisonment in the field penal camps.¹³ The policy toward these prisoners was that “soldiers who were sent to the Field Penal Camps will be transferred only via WG Torgau-Fort Zinna—with the exception of those who can be transferred directly from the area of these Field Penal Camps.”¹⁴ Because there were no field penal camps in the area around KWG Dubno, soldiers from the area who were sentenced to terms in those camps were transferred from Dubno via WG Torgau-Fort Zinna. Finally, another unknown number of men were sent to Probationary Unit (*Bewährungstruppe*) 500. The associated risk to life and limb is illustrated by the example of Oberfeldwebel Andreas Seitz. On April 23, 1944, he was sentenced to five years in prison for alleged cowardice and was sent to KWG Dubno. On May 13, the chief of Luftflotte 4, his former unit, recommended him (apparently based on his previous good record) for transfer to the Probationary Unit.¹⁵ On June 14, he was sent to Probationary Unit 500 at Tomaszów Mazowiecki; by August 6, he was registered as “killed in action” by the 550th Infantry Battalion.

As the Red Army advanced during that time, KWG Dubno was moved to Lemberg (then also known as Lwów; today Lviv, Ukraine). The closing of the prison at Dubno was ordered by the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) on August 24, 1944, with the accompanying order to send the prisoners held there to WG Bruchsal, where a processing center was established.¹⁶ By September 31, 1944, KWG Dubno’s field post number (*Feldpostnummer*) had been struck.¹⁷

SOURCES Additional information about KWG Dubno can be found in the following publications: Rudolf Absolon, *Das Wehrmachtstrafrecht im 2. Weltkrieg. Sammlung der grundlegenden Gesetze, Verordnungen und Erlassen* (Kornelimünster: Bundesarchiv, Abteilung Zentralnachweisstelle, 1958); and Peter Kalmbach, *Wehrmachtjustiz* (Berlin: Metropol, 2012).

KRIEGSWEHRMACHTGEFÄNGNIS (KWG) DÜNABURG

KWG Dünaburg (map 9b) in Dünaburg (today Daugavpils, Latvia) was, along with Dubno and Borissow (Borisov/Barysaū), one of the three KWGs that the Germans

established in the occupied Soviet territories shortly after the invasion of the Soviet Union. The KWGs were located in the northern, central, and southern rear areas of the eastern front, in preexisting prison buildings that were close to “well-located transportation hubs.”¹ Under the enforcement plan of November 17, 1941, KWG Dünaburg was intended to hold Wehrmacht soldiers from Army Group North (*Heeresgruppe Nord*), its rear areas, and the Armed Forces Commander (*Wehrmachtbefehlshaber*) Ostland who were convicted under military law and sentenced to terms of three months or less. Soldiers sentenced to longer prison terms were to be held there and sent “in regular transports” to the Armed Forces Prison (*Wehrmachtgefängnis*) in Graudenz (today Grudziądz, Poland).²

At the end of 1941, the prison was moved from Dünaburg to Wilna (today Vilnius, Lithuania), where it retained the same responsibilities. A Reception Center (*Auffangsstelle*) for prisoners sent to KWG Wilna (Vilnius) remained at Dünaburg. It is unknown whether the reception area in Dünaburg, which was open until at least 1943, and probably until 1944, also took in prisoners from nearby areas who had been sentenced to death, as was likely the case at the reception area in Smolensk of KWG Borissow.³

SOURCES Primary source information about KWG Dünaburg is located in BA-MA and BArch PA.

KRIEGSWEHRMACHTGEFÄNGNIS (KWG) MAKEJEWKA

KWG Makejewka (map 9f) in Makejewka (Makeevka; today Makiivka, Ukraine) was established in the late summer of 1942.¹ It was one of three KWGs located in the southern part of the eastern front, along with KWG Dubno and KWG Kiew (Kiev/Kyiv). The reason for the existence of three separate camps in this area was the division of Army Group South (*Heeresgruppe Süd*) into Army Groups A, B, and Don in preparation for the Wehrmacht offensive against Stalingrad and the oil-producing regions of the Caucasus (Case Blue).

The responsibilities of KWG Makejewka, according to the orders of the Army High Command (*Oberkommando des Heeres*, OKH) in January 1943, were the collection and transfer of soldiers in the Operations Area who had been sentenced to the field penal battalions (*Feldstrafgefangenen-Abteilungen*, FStGA), field penal camps (*Feldstraflager*), and the military prisons in the Reich and holding soldiers from the area who were sentenced to prison terms of up to three months.² As with KWG Dubno, these orders resulted in KWG Makejewka establishing a cooperation with the armed forces prisons (*Wehrmachtsgefängnisse*) in Glatz (today Kłodzko, Poland), to which soldiers serving terms longer than three months were sent, and Torgau-Fort Zinna, from which soldiers were transferred to the penal battalions. KWG Makejewka also coordinated with the prison (*Zuchthaus*) Ratibor (today Racibórz, Poland), from which former Wehrmacht soldiers who were deemed “unworthy of the military” were sent to “custody” in the Reich Justice Administration (*Reichsjustizverwaltung*) camps in the Emsland region.

An additional function of KWG Makejewka was established by the guidelines for medical treatment of prisoners in the penal battalions and field penal camps: “Hospital care for military prisoners and field prison camp inmates under strict supervision in the army area, i.e. near the front; transfer to hospitals in the Reich instead of transfer to special units [military prisons] is not allowed.” Those prisoners who were determined to be “unfit physically and in health” for the penal battalions or internment in the field prison camps were to be sent to the “responsible KWG” for treatment; if the opinions of the doctors differed, the prisoner was to remain with the penal battalion or in the field prison camp.³ Although field prison camps were not established in the southern area of the eastern front until the fall of 1944, large numbers of prisoners from the FStGAs were sent to KWG Makejewka to recover their strength, which had been depleted by overwork and undernourishment. On July 9, 1943, Oberfeldarzt Prof. Dr. Katsch, the internist of Armeelazarett 6, noted about a report from Oberleutnant Dr. Gaede on KWG Makejewka:

52 men have arrived here from FStGA 16, whom the division doctor [3rd Gebirgs-Division] declared to no longer be fit for service. Of these, 51 are in the worst state of malnourishment. Yesterday, 14 of them, who could no longer stand or had severe edema due to hunger, were sent immediately to Feldlazarett 776 by the field doctor. The rest of the prisoners [from FStGA 16] are very miserable, some as much as 20 kilograms underweight.⁴

By contrast, Katsch saw prisoners who originated at KWG Makejewka (i.e., those who had been sentenced to terms of less than three months) who were in “satisfactory physical condition, although they were entitled to smaller food rations than the prisoners in the FStGA.”⁵ The smaller rations for the “inmates of the Wehrmacht-Strafgefängnis [sic] in Makejewka”

were justified by the fact that they were not sent “to work on the front line,” as the prisoners in FStGA 16 were.⁶

As the Red Army prepared for the liberation of the Donbass in the summer of 1943, KWG Makejewka was transferred to Odessa and renamed KWG Odessa.⁷ At the latest, transfers to Probationary Unit (*Bewährungstruppe*) 500 began at that time. On May 4, 1944, the 561st Infantry Battalion noted that 20 men from KWG Odessa were sent there.⁸ The total number of prisoners sent to “front probation” from Makejewka and Odessa, to a regular combat unit or to Probationary Unit 500, remains unknown, as does the beginning date of the transfers to FStGAs and prisons on the home front. It is also uncertain when investigative prisoners and prisoners who had received death sentences first arrived at this KWG. Records for the transfer of prisoners sentenced to death only exist for KWG Odessa, but it is unclear to what extent KWG Odessa was used for this purpose.

On December 9, 1944, KWG Odessa was renamed Kriegswehrmachtgefängnis 205 in the Field Post Directory (*Feldpostübersicht*).⁹ The location of this prison is unknown.

KRIEGSWEHRMACHTGEFÄNGNIS (KWG) RIGA

KWG Riga (map 9b) first appears in the Field Post Directory (*Feldpostübersicht*) on November 2, 1944. Only four weeks later, its Field Post Number (*Feldpostnummer*) was struck.¹ Since the city of Riga was liberated by the Red Army on October 15, 1944, the KWG must have been closed in the first half of October. It is important to note, therefore, that the dates in the Field Post Directory are often only a vague hint as to the period in which a unit existed. Assignment and striking of field post numbers was often delayed. The transfer of KWG Dubno to the already-extant military detention center (*Kriegswehrmachthaftanstalt*, KWHA) Riga was probably completed by mid-1944; KWG Riga received the order to take over KWG Wilna (Vilnius), which was dissolved due to the proximity of the front, in early July 1944.²

A report from Heinz Drossel regarding KWG Riga's assumption of control over KWG Wilna offers a glimpse of the situation in the former. In March 1944, Lieutenant Drossel, who had served as the legal officer (*Gerichtsoffizier*) of the 561st Infantry Battalion of Probationary Unit (*Bewährungstruppe*) 500 since the beginning of 1944, received the order to collect two prisoners sentenced to “front probation” (*Frontbewährung*) from “Wehrmachtsgefängnis Riga [sic].”³ He recalled that “the prison is a gloomy building—but it is friendly compared to what takes place behind these walls. In the office, I set the papers down. The commandant, an older Hauptmann, signed [acknowledging] the reception of both. Then they were brought in. Outside I saw . . . what the daily routine is here. It was only ‘marsch, marsch’—emaciated shapes—and many blows. I seethed with rage. Then came a Feldwebel with my two. Faster—he hits them in the back with a leather strap.”⁴

In March 1942, at the latest, a series of executions began at KWHA Riga, which continued after the transfer of KWG Riga to the site. In the time between August 1944 and October 6, 1944, alone, the names of 15 prisoners from field penal camps (*Feldstraflager*), field penal battalions (*Feldstrafgefangenabteilungen*, FStGA) and Probationary Unit 500 who were executed at Riga are known; the actual number was surely higher.⁵ In addition, there were the execution victims who were not from penal or probationary units. On August 8, 1944, when Hans Lasse from FStGA 6 was shot, there were more than 100 prisoners awaiting execution in the death cells of KWHA/KWG Riga.⁶ The executed men from KWG Riga were buried in the Jewish cemetery, which was meant to stigmatize them even after death.

a result, the responsibilities of KWG Wilna were expanded. From May 1942, it was responsible for collecting prisoners from the area of Army Group North who were "ordered to serve in the Feldstrafgefangen-en-Abteilungen" and sending them on to FStGA 3.³ By the end of 1943 and beginning of 1944, FStGAs 4, 6, 9, 14, and 19 were also operating in the northern area of the eastern front. Because the Field Penal Camps I–III were employed in the area of Army Group North from the beginning of 1943 until October 1944, they too received replacement transports via KWG Wilna in the course of the "immediate transfer," while "convicted prisoners for whom detention in a penal camp had been ordered" were instead to be brought without exception to WG Torgau–Fort Zinna, from which they were then to be sent off "in group transports to the field penal camps immediately upon their request."⁴

Prisoners also arrived at KWG Wilna from the field penal battalions and field penal camps. Prisoners were being sent there mainly because of the guidelines for medical care of prisoners in these units: "Hospital care for prisoners and penal camp inmates will be carried out under strict supervision in the army area, i.e. in the area of the front; transfer to hospitals on the home front instead of to special units [e.g., WGs] is not allowed." Those prisoners and field penal camp inmates who were deemed by the doctors of the superordinate divisions to be "unfit physically or in health" were to be transferred "to the responsible KWG" for treatment; prisoners who received mixed opinions from the doctors were required to remain with their unit.⁵ Under these orders, large numbers of men from the FStGAs and especially from Feldstraflager I, II, and III were sent to KWG Wilna to recover their strength.⁶

After the establishment of the field penal units, regular transports were sent from KWG Wilna to the detention centers (*Haftanstalten*) in the Reich. These transports included prisoners who did not meet the minimum health requirements for service in the field penal units⁷ as well as officers and non-commissioned officers who were sentenced to terms of more than three months without loss of rank and were, therefore, to serve their sentences in the military prisons in Germany.⁸ Especially common in these transports were soldiers who were turned over to the civilian authorities pursuant to §102 Section 1 and 3 of the Military Penal Code (*Kriegsstrafverfahrensordnung*).⁹ In practice, most of the soldiers on the transport were men who were determined to be "unworthy of the service" and discharged from the Wehrmacht. Soldiers from the rear area of Army Group North who received this punishment were sent from "KWG Wilna . . . to Zuchthaus [penitentiary] Wartenburg" (today Barczewo, Poland) in East Prussia, from which they were sent to the prosecutor in Allenstein (today Olsztyn, Poland), and then transferred "to the Strafan- genenlager [penal camp] Esterwegen" in the Emsland district.¹⁰

The transfer of KWG Wilna in the early summer of 1944 was a dramatic event. A report about Georg Ermentraut, who was at that time waiting in KWG Wilna for

KRIEGSWEHRMACHTSGEFÄNGNIS (KWG) WILNA

KWG Wilna (map 9b) in Wilna (today Vilnius, Lithuania) was established in December 1941, taking the place of the former KWG Dünaburg (today Daugavpils, Latvia), for which it had previously served as a reception site (*Auffangsstelle*).¹ KWG Wilna held soldiers from Army Group North (*Heeresgruppe Nord*), its rear areas, and Armed Forces Commander (*Wehrmachtbefehlshaber*) Ostland, who were sentenced to prison terms of up to three months by military courts. Soldiers from this area who were sentenced to longer terms were sent to Wilna and then "transferred in regular transports" to the Armed Forces Prison (*Wehrmachtgefängnis*, WG) in Graudenz (today Grudziądz, Poland).²

Beginning in April 1942, the punishment of soldiers who violated military law was largely transferred from military prisons within Germany to the area near the front, in the newly established field penal battalions (*Feldstrafgefangen-en-Abteilungen*, FStGA) and field penal camps (*Feldstraflager*); as

confirmation of a 10-year prison sentence for desertion, summarizes the situation:

The Russians entered the city and bombers plastered the unoccupied areas. 47 men were crowded into a small cell in the military prison, in which only half could lie down and the other half were forced to squat. The cells were on the first floor, but the guards had left. So had the head of the prison. He was in civilian life an executioner, from a place near Königsberg, and was forbidden to have a weapon because he had previously shot a prisoner in anger. The prisoners, fearing death, became a storm of flesh and blood, pounding against the door with their backs. The next day, the hangman had almost all of them back together and took them back. The 600 inmates in the prison were ordered to get dressed again and a Major took it upon himself to drive Ermentraut and a group of 50 investigative prisoners to Germany.¹¹

While Georg Ermentraut eventually went from Germany to FStGA 18, the prisoners from Wilna, or at least some of them, were taken to Tarnów. There, the KWG was officially dissolved on August 24, 1944, and the prisoners were “transferred to the Wehrmachtgefängnis Bruchsal.”¹²

Shortly beforehand, a new regulation on the transport of prisoners came into force. Through this regulation, the possibility of contact between civilians and soldiers was minimized. It was probably intended to minimize concerns that civilians, seeing the emaciated, shackled prisoners, would lose faith in a “final victory.” Additionally, the pursuit of escapees would be more difficult. In any case, on July 24, 1944, “transport of military and investigative prisoners, inmates, and soldiers from the special field units . . . on public transportation and on DmW- and EmW-trains [was] strictly prohibited.” Transports of six or more prisoners were only to be carried in “prisoner wagons or closed [military] wagons” on freight trains. Groups of five or fewer prisoners could be taken on the special trains for those on leave from the front and the Wehrmacht sections of passenger trains. The so-called Sperrwagen were especially used for this purpose, so that the prisoners would be protected from strafing attacks on the locomotive: “As long as Sperrwagen (not mail or package cars) are available, they [i.e., the prisoners] should be transported in the Sperrwagen.”¹³

In WG Bruchsal, a reception area for prisoners from KWG Wilna was established. After it had finished its work, KWG Wilna was (with some delay) struck from the Feldpostübersicht (Field Post Directory) on February 24, 1945.¹⁴

STRAFVOLLSTRECKUNGSZÜGE (StVZ)

Strafvollstreckungszüge (StVZ) are first mentioned in the Wehrmacht “enforcement plan” of November 27, 1942, which came into force on January 1, 1943. Under that plan, prison sentences of up to three months should be served in the “Strafvollstreckungszüge of the divisions, armies, etc.,” if the sentencing court so ordered.¹ This regulation applied only to enlisted men, officers, and noncommissioned officers (NCOs) and the equivalent military officers who had not been deprived of rank, remaining responsible to the Military Prisoners’ Units (*Wehrmachtgefangenabteilungen*) of the *Wehrmachtgefängnisse* (military prisons).²

In an OKH leaflet from January 24, 1943, which gave an overview of the “enforcement facilities in the area of the field armies,” there is no reference to StVZs.³ The first mention of “Strafvollstreckungszüge in the divisions” appears in another paper from March 16, 1943, and even then with the comment “number unknown.”⁴ The creation of StVZs must have begun in January 1943, as they were not suddenly created in all sections of the Wehrmacht but only on demand. For example, on February 21, 1944, the Third Panzer Army received an “order to the General Kommandos of all divisions to establish Strafvollstreckungszüge for service of prison sentences up to 6 weeks.”⁵ The great importance that the Wehrmacht leadership together with its legal section placed upon the introduction of the StVZs is reflected by the fact that the StVZs received a separate article in the July 1944 *Zeitschrift für Wehrrecht* (*Journal of Military Justice*).⁶

For the introduction of the StVZs, authorities were able to draw on experiences from earlier organizations that were established by individual units based on the regulations on “temporary enforcement” under §109 of the Military Criminal Procedure Code (*Kriegsstrafverfahrensordnung*, KStVO) and §55 of the Wehrmachtdisziplinarstrafordnung (WDStO; Wehrmacht Disciplinary Penal Code). The later-Generalfeldmarschall Walter Model played a leading role. On March 20, 1942, as commander of the Ninth Army, Model ordered that soldiers sentenced to prison terms for whom “commutation of the entire sentence [to ‘front probation’] did not appear justifiable,” would “generally be sentenced to a partial service” and “expeditiously placed under intensified arrest, as this is a more effective form of punishment than imprisonment.”⁷ Model did not believe in the “more effective nature” of the intensified arrest only because of the “hard camp conditions” and a diet of only “water and bread.”⁸ The “service of a sentence in the form of imprisonment” was, in Model’s view, “to be avoided because—for sentences of more than three months—transport to the Wehrmacht penal facilities in the Reich and transfer to

special units” were connected. Additionally, “the regulated life in the penal facilities in the Reich could perhaps appear acceptable to some compared to the unpleasant conditions in which the troops here [i.e., at the front] must live, if the conditions of imprisonment in the Reich were not exacerbated.” In other words, to avoid a transfer from the front, Model determined that an “arrest [of a criminal and disciplinary nature for] more than 10 days should be served in arrest facilities that should be created in each division, etc. Suitable officers are to be selected to lead these arrest facilities; they will be responsible for ensuring that the penalty follows the Wehrmacht enforcement plan (H. Dv. 3 g).”⁹ Units were to report by May 1, 1942, where the “arrest facilities,” as they were then known, would be located.

Model’s plans were partially rendered obsolete by the “Führer-Order” of April 2, 1942, which moved the majority of the enforcement of military justice out of the military prisons and into the penal units—the field penal battalions (*Feldstrafgefangen-Abteilungen*, FStGA) and field penal camps (*Feldstraflager*)—near the front. Transport to the Reich for prisoners serving sentences of more than three months could now be avoided by transfer to a field penal battalion. As a result, the “arrest facilities . . . in every division” ordered by Model were not created.¹⁰

Those who were arrested were, on the other hand, sentenced to short prison terms of less than three months or a multiweek “intensified arrest,” after which a “front probation” was granted. In the first case, it was possible to rely on the military prisons (*Kriegswehrmachtgefängnisse*, generally located in the rear area of the front) and, in the second case, on the mobile army prisons (*Beweglichen Heeresgefängnisse*) and Military Detention Centers (*Kriegswehrmachthafstanstalten*), in which, according to regulations, “arrest penalties of any type”—legal or disciplinary—“up to six weeks” could be enforced.¹¹ However, these facilities were relatively far behind the front. The lack of labor during the arrest periods was also seen as a “weak point.” The “idleness” and “greater security of life,” based on the “experiences of the First World War”—according to Oberstkriegsgerichtsrat Burkhardt—created the danger that “unreliable and undutiful soldiers” would, therefore, have an incentive to seek such punishments.¹² At the same time, even Model recognized that the “intensified arrest” had negative effects on the eventual operational capacity. As Burkhardt later recorded, “the bodily state of those punished with intensified arrest was . . . impaired” when they were sent “back to the units pale and starved.”¹³

Further disadvantages eventually resulted from the decreased number of the mobile military prisons, military detention centers, and military prisons as well as from the resulting transport costs. The military jurist Burkhardt explained: “Enforcement of arrest ran into technical difficulties in its execution due to mobile warfare in the East. It was almost impossible to find suitable locations for the service of arrest. Then it was also notably difficult that the punished must be withdrawn from the fighting troops; there were

additional difficulties in transferring the punished to the next detention center, never mind later, when they had to find their unit again after serving their sentence. Thus, sometimes people were moved very far from their units during their punishment.”¹⁴

On the basis of the “experiences of the front,” according to Burkhardt, “first in the east, then also on other fronts, completely new forms of punishment [were developed] in the armies, corps, and divisions,” which were given “the designation ‘Strafvollstreckungszüge’ (StVZ).”¹⁵ Their eventual introduction was justified on the same basis as the field penal battalions and field penal camps: to create a similar form of short-term punishment for troops near the front that had an enhanced deterrent effect. This reasoning explains the introduction of the StVZs, while at the same time fewer soldiers were being sentenced to short terms in the FStGAs.¹⁶ Burkhardt summarized the composition of the inmates of the StVZs: “Those who were punished [with terms of up to three months] as well as disciplinary and legal arrests and arrest punishments, were sent to the StVZs to serve their sentence in place of prison time. It must be noted that these two types of prisoners are divided in their housing, while at work there is no way to distinguish between the two.”¹⁷

The recommended separate housing of those arrested for disciplinary and criminal actions as well as the possibility to “earn benefits for diligence and special achievements” can be recognized as further developments of the field penal battalions and field penal camps into categories based on the progressive “graduated punishment” of the Weimar Republic.¹⁸ It was also required that “untrainable and irredeemable elements [emphasis in original] . . . must be separated and sent to other forms of punishment by the Gerichtsherr.”¹⁹ This statement referred primarily to the field penal battalions, from which further transfers to “front probation” in *Bewährungstruppe* 500 or a field penal camp, with the prospect of future internment in a concentration camp, could occur. However, assignment to penal camps remained the exception, and terms in the StVZs became the norm “for first or minor offenses.”²⁰

The labor details of the StVZs were responsible for “the military needs”²¹ of their respective areas of the front. The OKH noted at the beginning of September 1944 that, for the required “hard, physical labor possibly under enemy fire,” an affiliation with the Pioneer Battalions would appear useful.²² Burkhardt gave additional advice: “The time of work must be as long and the performance demanded as high as possible without deleterious effects on health; they must also work longer hours than the men in the units. They will work all day on Sunday.”²³ The instructions for the StVZs issued by the Oberbefehlshaber West (Western Commander) Generalfeldmarschall Rundstedt on March 27, 1944, which came into force on May 1, 1944, stated that, in summer, the prisoners were to work 15 hours a day, and, in winter, 12 hours a day, in construction, mining, or munitions transport.²⁴

The negative experiences caused by undernourishment in the original form of “intensified arrest,” and especially in the

early days of the field penal battalions and field penal camps, resulted in the decision that, in the StVZs, “food supply [was to be] normal.” With a view to maintaining fighting strength, a proposed decrease of the food ration was abandoned: “In the end . . . the *maintenance of fighting strength* [emphasis in original] must not be forgotten; it is alongside work. Allocation of light weapons other than handguns appears necessary so that the StVZs can be used immediately [in combat] in an emergency.”²⁵ For the same reason, “doctors’ visits” were to be ensured, so that all men in the StVZs remained “healthy and fit for hard labor.”²⁶ In practice, hunger was nevertheless the rule in the StVZs, because the normal rations for the recommended labor quotas (“the most exceptional”) were barely sufficient. It was explicitly noted that “supplemental food supply is impermissible.”²⁷

The terror that spread even to StVZs on the nonfighting fronts in the final weeks of the war is demonstrated in the example of the Greek island of Kos (then known by its Italian name, Coo). While the Wehrmacht evacuated Greece in the fall of 1944, German occupation troops remained on Kos and other eastern Aegean islands. A large number of them belonged to Bewährungstruppe 999. The occupation forces on the islands were soon cut off from regular supply. To maintain discipline among the starving troops, the local officers (including those in the StVZs) struck back. In the StVZs, the universally slim food rations were reduced to especially meager starvation rations, which often triggered despair. The “Commandant of the East Aegean,” Generalmajor Wagener, reported the events in the StVZ on Kos in his Order of the Day on April 1, 1945:

A large commando was assembled from the occupation forces on Coo and Marine Artillery Unit 624 to recapture 10 escapees from the StVZ on Coo who had fled into the hills. Despite great difficulties in the rugged and impassable hills, cold nights, and shortage of water and food supplies, the unit was able to track down and capture the escapees on the third day of their expedition. I express my gratitude to the officers and their capable men for their exemplary achievement and give my special recognition to the zeal which is solely to thank for their success. In recognition of their special achievement, I have awarded individual soldiers the Kriegsverdienstkreuz [War Merit Cross] 1st and 2nd Class and announced two promotions.²⁸

Further details come from the report of Fritz Näther, who was forced to participate in the search commando. The Communist from Altenburg was sent to the X Fortress Infantry Battalion of Bewährungstruppe 999 after he was sentenced to a year and a half in prison in June 1934 for his resistance work. He reported:

At midnight the planned pursuit of the escapees began. We could not imagine the hardships that would

come. Day and night, from midnight Thursday to noon on Monday we went up and down through the hills, through tunnels, along slopes, through thick, thorny underbrush. A series of comrades withdrew due to broken bones from falls, one succumbed to a heart attack, one died in the hospital of exhaustion, two were mistakenly shot by their own comrades. . . . The result of this hunt was that . . . all of the escapees were captured. . . . On the return march . . . they had to carry the equipment of the officers and a badly wounded comrade. They marched back under constant abuse and beatings. In Pilly, they were taken in front of the comrades who had gathered there, as well as the curious local population, and once again abused and beaten.²⁹

The numerical strength of a StVZ was generally between 20 and, at the most, 40–50 prisoners. The total number of StVZs was unknown, however, as the aforementioned OKH report from March 16, 1943, indicated. Seidler, who erroneously asserts that the StVZs were first established in 1944, says, without citing sources, that by the spring of 1944, almost every division at the front and at least every Army Corps in the rear areas had a StVZ.³⁰ Thus, there could have been hundreds more StVZs. This development seems possible because the results of the StVZs were not bad in the view of the Wehrmacht. At the least, in the *Journal of Military Justice* in the summer of 1944, the following description was published: “The experiences with the StVZs to this point are unreservedly good; the labor performance is generally recognized as respectable. The StVZs, after some initial hesitation, were appreciated and adopted by all units. The results achieved to this point show that this new form of punishment with its new principles developed in accordance with the Wehrmachtstrafrecht [military criminal law], does not remove the punished from within the framework of the community, but ties them more firmly to the community.”³¹

In his July 1944 article, Burkhardt noted that up to that point, no final central regulations for the StVZs existed: “The basic principles of this type of punishment must be derived from the intended purpose and determined by further experience.”³² On the other hand, regulations were provided for the special StVZs created for “volunteers from the east” (i.e., Soviet collaborators) “in the area of each Army and each Wehrmacht Commander.”³³ Regarding the labor details, supply, and demotion in service rank, the instructions largely corresponded to those that had been given for the StVZs for German soldiers in Burkhardt’s aforementioned article and by Commander West on March 27, 1944. Differences resulted mainly from considerations for security policy and racial ideology; for example, “commanders and staff [may] only [be] German.” The commanding officer should have available “a German soldier for each 5 prisoners, and a German NCO for each 15 prisoners” and “the necessary number of translators.” It was explicitly stated that “any integration with German StVZs must be avoided.” Additionally, the

separation of those arrested for disciplinary and criminal offenses was not required in the StVZs for “foreigners” as it was in the StVZs for German soldiers; “volunteers punished for criminal and disciplinary offenses are not to be divided within the StVZ.”³⁴

An expectation announced by Burkhardt in his hymn of praise to the StVZs would not be fulfilled by either the StVZs for Germans or those for “foreigners.” The military jurist had ended his article with the hopeful words: “Thus, the StVZs will contribute their part to the final victory.”³⁵

UNTERSUCHUNGSGEFÄNGNISSE (UG) BERLIN

Berlin played a major role in the Wehrmacht judiciary. The city not only hosted many military courts but also had especially important ones that could be called Wehrmacht special

courts. In the German capital, there were numerous high command staffs, so there were also established military special courts. The regular military courts served units stationed in Berlin, mostly training units or the numerous subordinate departments and military schools. This situation created a need for large-capacity detention facilities, especially after the beginning of World War II.

In October 1936, the Reich Court-Martial (*Reichskriegsgericht*) was established in Berlin. It functioned as an Appellate Court of the Wehrmacht until August 1939 and was also responsible for alleged cases of treason. The Reich Court-Martial was considered the Supreme Court of the Wehrmacht. After the beginning of World War II, appeals and revisions were suspended and the Reich Court-Martial instead received special jurisdiction for cases of *Wehrkraftzersetzung* (subversion of fighting power), including for conscientious objection, espionage, and members of resistance groups in domestic and international territory. Because of the increasing number of bombing attacks on Berlin, the Reich Court-Martial relocated to Torgau in August 1943. Nevertheless, detainees for the court remained in Berlin.

Other courts were also active in the Berlin area. The Court of the Wehrmacht Headquarters in Berlin (*Gericht der Wehrmachtkommandantur Berlin*) was a part of the special courts of the military. This court dealt primarily with deserters whom the authorities had seized in the territory of the German Reich. In addition, it dealt with cases in which a soldier had been sentenced by another military court, but the responsible commander had not verified the verdict (usually because the verdict was considered too lenient). The Army Central Court (*Zentralgericht des Heeres*) was established in April 1944. It was intended to be involved in searches for deserters in the Reich territory and to punish political offenses and corruption. Near Berlin, in Bad Saarow, was the Field Court of the Air Force z.b.V. (*Feldgericht der Luftwaffe z.b.V.*) (z.b.V. means for special employment), which was responsible for the prosecution of political offenses by members of the Air Force. At the end of January 1945, the Flying Court Martial of Defense District (*Fliegendes Standgericht des Wehrkreises*) III, the Defense District that included Berlin, was added. At least 150 military judges were deployed in the military special courts and the numerous regular military courts of Berlin at any one time.

Before the war began and in its opening months, the Wehrmacht used part of the Berlin-Plötzensee Prison, in the Plötzensee district of Berlin. Plötzensee was one of the most important prisons of the German judiciary and the central execution site of the Reich Ministry of Justice. This changed in 1940: the Wehrmacht withdrew the prisoners from Plötzensee and henceforth used a substation of Plötzensee as a central remand prison (*Untersuchungsgefängnis*). The prison was located at Lehrter Street 61, which the Reich Ministry of Justice gave to the armed forces (map 4b). The Wehrmacht Remand Prison “Lehrterstrasse 61” was at the same time a Wehrmacht Detention Facility (*Wehrmacht-Arrestanstalt*).

In the same year, the Wehrmacht received a building in a nearby prison complex, which was also used by the judiciary and the Gestapo. This prison, on Lehrter Street 5 was sometimes referred to as the “Moabit cell jail” (*Zellengefängnis Moabit*). It was built in the middle of the nineteenth century as the most modern German prison in the district of Moabit and had individual cells, instead of mass quarters.

In 1943, the Wehrmacht detention system in Berlin was expanded: the prison at Lehrter Street 61 remained the main detention center but only took in officers as prisoners. The commander of the Remand Prison Berlin and all its ancillary facilities, Oberstleutnant Rudolf Maass, remained there, too. To increase the system's overall capacity, the Wehrmacht took over parts of the civilian prison Berlin-Tegel (in the Tegel district of Berlin). This prison had detention rooms for up to 1,800 inmates. Thereafter, most of the remand prisoners of the armed forces (in the case of soldiers, mainly enlisted men and noncommissioned officers) were sent here. Hauptmann Walter Maetz was the prison commander. In addition, the Reich Ministry of Justice handed over a detention facility in the Berlin-Spandau prison, which was also used as an ancillary facility. The third (and smallest) prison was the detention building at Lehrter Street 5.

The Wehrmacht Remand Prisons in Berlin were part of the Replacement Army (*Ersatzheer*) and were under the command of the city commander of Berlin. Generalmajor (later Generalleutnant) Paul von Hase was the city commander from November 1940 to July 20, 1944. Von Hase was a coconspirator of Claus von Stauffenberg and was arrested on July 20, 1944, sentenced to death by the People's Court (*Volksgericht*) on August 8, and executed in Plötzensee. His successor was Oberst (later Generalmajor) Georg Hofmeister, who was city commander until April 20, 1945.

The remand prisons detained predominantly soldiers (including foreign “legionaries” of the armed forces) but also civilians (Germans and foreigners) and occasionally prisoners of war. Among the known civil detainees were 47 women and men of the Dutch Resistance, who belonged to the “Stijkel Group.” As so-called Night and Fog Prisoners (*Nacht und Nebel*) they were condemned by the Reich Court-Martial and 32 of them were shot.

Remand prisoners were required to work. As a rule, simple activities, such as gluing bags, was carried out as individual work in the cells. In contrast to Justice Ministry detention facilities, the remand prisons had no armament factories affiliated with them and, contrary to the practice in the armed forces prison, no labor units were established for collective forced labor.

The food was limited and of poor quality. The prisoners were allowed to see daylight for only 20 minutes daily—that was when the “yard exercises” were performed. This meant a brief escape from the narrow cells for the prisoners. A contemporary witness reported that “it satisfied an elemental physical need for fresh air and physical activity. One could take a deep breath and step vigorously in a ‘large circle,’ which was a long oval shaped circle the size of the yard; disabled and

very old people walked in the ‘small circle,’ which was actually a circle in the middle of the oval tramped through countless prisoner footsteps. The supervising sergeant, who had to ensure that the inmates kept a regular distance and that there were no conversations held between inmates, stood where circle and oval touched.”¹ As of the winter of 1941, severe coal restrictions were implemented in detention. Essentially, the cells were heated for only two hours, like the workrooms. This situation led to illnesses and even frostbite every winter, especially on hands and feet. Because of the insufficient heating, the showers were operated only every few days, so the prisoners were often only able to thoroughly wash themselves once a week.

Until the end of 1942, the prisons were not fully occupied. Sometimes the prison authorities used vacant cells to create space between especially important prisoners to prevent communication. In the months after 1942, overcrowding became permanent. From 1944 on, the prison in Spandau was almost exclusively occupied by members of the armed forces, such that the Justice Ministry was forced to relocate its prisoners to other detention centers.

The atmosphere in the prisons was always tense: many were afraid of being punished with the death penalty. It was clear that even thefts and criticism of the war could be sanctioned as serious crimes. In addition, it was constantly noisy, because the acoustics made sounds seem louder: orders were shouted, the clogs of the prisoners rattled while walking, food pails scraped along the corridor, latches were constantly slammed, prisoners wept miserably. In addition, vermin, which lived mainly in the straw mattresses, plagued the inmates. This problem forced many to sleep without anything under them, or to sleep in a squatting position. Above all, from November 1943 on, the increasing air attacks on Berlin became a danger to life and caused psychological suffering. The prisoners were not brought into air-raid shelters or bunkers during raids but had to remain defenseless in the cells. Many inmates panicked, screaming for their lives and raging in the cells. In particular, those condemned to death were not able to endure this agony, as they wore chains and saw no chance to come out alive through the rubble. In fact, there were bomb hits on the prisons that caused deaths and injuries among the inmates. During cleanup after the raids, prisoners had to help recover the dead, which increased their fear. The air strikes also led to further deterioration of conditions: many windows were broken, causing the cells to become still colder.

Transports to the trials were carried out in vehicles and closely guarded. Not only escapes were to be prevented but also suicides. To that end, several prisoners were often tied together. This was to prevent fugitives from being shot while fleeing.

In 1943 and 1944, the well-known anti-Nazi resisters Dietrich Bonhoeffer and Hans von Dohnanyi were imprisoned in the Wehrmacht Remand Prisons in Berlin: Bonhoeffer from April 5, 1943, to October 8, 1944, in Tegel, and von Dohnanyi from April 5, 1943, to August 22, 1944, in Lehrter

Street 61 (Moabit). Both were killed on April 9, 1945, by hanging: von Dohnanyi in the Sachsenhausen concentration camp, Bonhoeffer in the Flossenbürg concentration camp.

The Wehrmacht Remand Prisons in Berlin also served to detain prisoners sentenced to death: after some time, convicts who were to die by beheading or hanging were taken to the prison Plötzensee (in Berlin) or to the Brandenburg-Görden prison (west of Berlin).² Each of these prisons, which were subordinate to the Ministry of Justice, housed a guillotine and gallows. In Brandenburg-Görden, about 700 people who had spent their pretrial detention in the Wehrmacht Remand Prisons were beheaded or hanged. There were about 400 executed in Plötzensee.

Soldiers, and sometimes (but rarely) resistance fighters, who had been sentenced to death by shooting, remained in Berlin. The shootings took place on Wehrmacht shooting ranges, which were attached to army barracks, in particular, the barracks shooting range at Spandau-Ruhleben, which was located in a hilly landscape in the western area of Berlin (the so-called Murellen Gorge). In this place alone, at least 350 people died. Another frequently used shooting site was the Jungfernheide, a park in Berlin where the military also had a shooting range.

The total number of shootings is unknown, especially since the documentation for the year 1945 is incomplete, while at the same time the opportunities to impose death sentences was simplified. In February 1945, the armed forces judiciary even worried that it would not be possible to empty the death cells on a regular basis. The armed forces headquarters in Berlin ensured that merely through the 12,000 soldiers stationed in Spandau, enough firing squads could be formed to carry out the expected rising number of shootings in a timely manner.

In April 1945, many prisoners were sent into combat for "front probation." At the same time, convictions were performed more and more quickly and more frequently involved the death penalty, due to the fact that already in February 1945, the Wehrmacht had "short trials" carried out in Berlin by the "flying drumhead courts-martial of Defense District III." As of April, 23, 1945, a number of "flying drumhead courts-martial" (mostly SS drumhead courts-martial) took control—they executed deserters and the war weary without hesitation; the accused were no longer detained for investigative purposes. Therefore, the Wehrmacht Remand Prisons were only occupied by a few inmates when the Red Army liberated them at the end of April 1945. In the Berlin-Spandau prison there were 83 military inmates whom the Soviets released on April 26.

UNTERSUCHUNGSGEFÄNGNIS (UG) MUNICH

At the beginning of 1943, an Armed Forces remand prison was established in Munich (map 4d). It was located at Leonrod Street 51-53 and was part of a large building complex in which several military offices were located, including the headquarters of the Military Commander of Munich (*Wehrkreis*) VII and two military courts. The location was significant: the central railway station was nearby and enabled a smooth relocation of prisoners.

The rations were very poor. The prisoners were constantly suffering from starvation. In general, convicts were transferred to other detention centers. However, those sentenced to death remained initially in the remand prison. Moreover, condemned soldiers who had been sentenced by other courts to death by the guillotine and were to be executed in Munich were also kept in the remand prison. Death row inmates remained handcuffed day and night. In their cells, there were no cots to sleep on; they had to lie on the bare floor. Those who were sentenced to death by beheading were transferred to the Munich-Stadelheim prison, where the verdict was executed with a guillotine. Furthermore, short imprisonments (six weeks to several months) were executed in the remand prison.

In August 1944, the remand prison was destroyed by aircraft bombs. Therefore, the prisoners were relocated to the small town of Manching, located about 70 kilometers (44 miles) north of Munich. Manching had a fortress, which was part of the fortress of Ingolstadt dating back to the middle of the nineteenth century. The Munich remand prison was now situated in "Fort VIII" there. The prisoners were accommodated in casemates, serving as mass cells, since 20–30 prisoners were held in one cell. In addition, it was always damp and cold.

In "Fort VIII," courts-martial also were held. The court of the 467th Division of the Replacement Army was permanently accommodated there. Between August 1944 and April 1945, more than 100 death verdicts were imposed in Manching. In general, the sentences were executed at a Wehrmacht artillery range in a gravel pit located in Ingolstadt's Auwaldsee. The first execution took place there on August 24, 1944. The last two executions, involving two Wehrmacht soldiers, were conducted on April 21, 1945. Among these casualties, 75 German soldiers (mainly sentenced for desertion, subversion of the war effort, and cowardice), 9 Italians, 2 Russian officers, and 1 Polish forced laborer were counted.

court, the Court of the Commandant of Greater Paris (*Gericht des Kommandanten von Gross-Paris*). This commandant's court was the largest military court in France and involved more than 20 military judges. It dealt with all cases related to Paris or with those proceedings that took on a large scope, above all, those against a large number of accused or large resistance organizations.

Furthermore, the Military Commander had responsibility for the supervision of the French judiciary. The French judiciary had to serve the German occupation forces. In particular, the courts had to proceed against Communists and Gaullists. Under German pressure, in 1941 the French judiciary established a special court (*Sondergericht*), which included criminal divisions (*Strafkammern*) in Paris and Lyon. Their main purpose was to proceed against political enemies of National Socialism.

In this context, the Wehrmacht required detention areas, especially in Paris. Due to the high number of proceedings against German soldiers and French civilians, the demand for remand (pretrial detention, *Untersuchungshaft*) was high. As the main detention center, the prison in Paris-Fresnes was requisitioned, since the Germans considered it the most modern French prison. In addition, the Wehrmacht took over the Parisian prisons La Santé and Cherche Midi, in order to use them as branches of Fresnes. Finally, the armed forces also used Fort de Romainville, which was located just outside Paris, as a prison.

In 1940 and 1941, the occupying power behaved with some restraint, in order to encourage collaboration. Offenses by German soldiers were also not yet taken up in great numbers or always punished severely. However, the remand prisons were also used to carry out sentences: soldiers who received prison sentences of up to three months remained in the Paris prisons. Convicted Frenchmen, on the other hand, were transferred to other prisons after sentencing (e.g., Villeneuve St. Georges). German civilians formed a special group: they were charged in front of German military courts only, as this competency was denied to the French courts. German civilians served sentences of up to three months in the Paris armed forces prisons. There was a separate section for women in Fresnes. Italian citizens were also exclusively processed by German courts-martial.

German and Czech exiles took on greater proportions within the system initially. These were individuals who fled before the German advance, for political reasons. After the occupation, they were brought back to Germany or condemned by the German wartime courts in France. In those cases, the German high command (*Oberkommando*) ordered the courts to act as drumhead courts-martial (*Standgericht*) and not to hesitate to pronounce sentences of death for treason or other political offenses.

From the autumn of 1940 to the spring of 1941, a large number of French were imprisoned in the prisons of Fresnes and Cherche Midi, who were supposed to have abused German aviators during the campaign against France in May and June 1940. For this purpose, a so-called special commission

UNTERSUCHUNGSGEFÄNGNISSE (UG) PARIS

Paris (map 2) was the headquarters site for most of the major organs of the German occupying power from 1940 to 1944. From October 1940 on, the city was home to the headquarters of the Military Commander in France (*Militärbefehlshaber in Frankreich*). One of the main duties of the German military administration was the maintenance of order and security in the territory. To fulfill that task, the administration employed various means. First, it established regional garrison headquarters (*Kommandanturen*) in different French cities. These headquarters controlled their own military courts. Second, there were several military courts (*Truppengerichte*) in Paris, such as an air force court (*Luftwaffengericht*), and, as a central

(*Sonderkommission*) was established, which included judges from the Luftwaffe and members of the German criminal police (*Kriminalpolizei*).

With that, an additional role came into play for the armed forces remand prisons in Paris: they served as places of accommodation for people who had been sentenced to death. Executions by shooting were mainly carried out on the Mont Valérien (more than 1,000) but also in Fort de Romainville. The condemned men were transported there in heavily guarded trucks from the remand prisons. For this transport, prisoners were bound together in pairs with iron restraints. Alone the Court of the Commandant of Greater Paris pronounced 850 death sentences between 1941 and 1944 (against French civilians as well as members of the Wehrmacht).

After Germany's invasion of the Soviet Union, the French Resistance grew, and the number of attacks against the occupying power increased, so the situation escalated very quickly: in August 1941, the Military Commander ordered hostages to be shot if German soldiers or civil servants fell victim to attacks. These hostages were mainly French (in particular, Jewish or alleged Communists) who were already in German custody. Additionally, all the prisoners in the armed forces remand prisons in Paris became potential candidates for execution.

In addition to these drastic repressive measures, in December 1941 the so-called Night and Fog (*Nacht und Nebel*) program was introduced. Suspected resistance members were either to be court-martialed and sentenced to death within 24 hours or the prisoners were to be transported secretly to Germany, in order to be brought before a special court or the Reich Court-Martial (*Reichskriegsgericht*). In either case, the prisoners' whereabouts were to be withheld: their relatives were not to be able to learn anything of their fate. Even those against whom no resistance activity could be proven remained in German custody and were carried off to concentration camps. The Paris detention sites took on an important function in this context.

From them, the Secret Field Police (*Geheime Feldpolizei*, GFP) deported many of the 5,000 Night and Fog prisoners to Germany.

At least from the end of 1941, one must assume that the Parisian prisons were overcrowded. Generally, those sentenced to more than nine months in prison were deported to the Reich, while only those with lesser sentences were left in the armed forces prisons or handed over to the French judicial authorities. Moreover, to minimize the danger of escapes, court proceedings were held directly in Fresnes prison from time to time. Questioning by the German Security Police (*Sicherheitspolizei*), the GFP, or prosecutors was also increasingly carried out in the prisons.

Starting at the end of 1942, the sentencing practices against German soldiers became stricter. This concerned, for one thing, increased desertion. Convictions rose significantly, because the Wehrmacht occupied southern France in November and captured numerous deserters who, until that point, had been able to hide themselves better in that region than they could in occupied western and northern France.

Many of those arrested were brought before German courts in Paris. Moreover, many other deserters tried to hide themselves in Paris, because the city offered better opportunities to hide—which is why the GFP and regular patrols increased their activities. In addition, there were increased numbers of judgments for “undermining fighting strength” (*Wehrkraftzersetzung*), a charge that could cover, among other things, criticizing Germany's political or military leadership (for which the regular punishment was death).

The conditions in the Parisian prisons were particularly bad: the rations were always short, and the cells were not heated, even in the depths of winter. In particular, inmates kept in solitary confinement struggled with depression and loneliness. Sometimes French prisoners sang the *Marseillaise* out of the barred windows of their cells, in order to encourage themselves and other prisoners. During the war, the main Parisian prison, Fresnes, developed into a transportation hub for the transfer of French prisoners to German prisons or penitentiaries (*Zuchthäuser*). While male prisoners were transported to the penitentiary in Rheinbach or the prison in Saarbrücken, female prisoners were brought to the penitentiary in Anrath or the prison in Cologne. Moreover, Cherche Midi and Fort Romainville were used as transit camps for deported Jews from France.

The Germans stopped carrying out prison sentences in the Paris prisons in the summer of 1944. The system by which the French carried out sentences in the service of the German occupying authority broke down in July and August, as the Allies liberated France. From July 30, 1944 on, French civilians convicted of activities with the French Resistance were handed over to the SS and the Security Police, so that the Wehrmacht had essentially no more responsibility for citizens of France. Existing prisoners were transferred to concentration camps. The sentences of German soldiers were carried out primarily by transferring them to Probationary Units or Field Penal Battalions (*Bewährungs- oder Feldstrafgefangenen-Abteilungen*), which were deployed to the front. On August 25, 1944, Paris was liberated, and the armed forces prisons closed down.

Famous prisoners were, among others, the resistance fighters Suzanne Spaaks and Agnès Humbert. The German Catholic priest Abbé Franz Stock gained fame, as he looked after condemned men and was highly respected for his humanity. After the liberation, the German former Military Commander, General der Infanterie Otto von Stülpnagel, was imprisoned in Cherche Midi and committed suicide there in 1948.

WEHRMACHTGEFANGENENLAGER (WGL) DONAU

Alongside the eight German military prisons (*Wehrmachtfängnisse*, WG), there was also an equivalent institution, WGL Donau, which existed from mid-1941 to September or October 1942. The camp does not appear to have had the status of a reception facility (*Auffangstelle*); it received its prisoners solely through transfers from the military prisons. This status explains its absence from the enforcement plan of September 10, 1941.¹

The postal address of the Commander of WGL Donau was Leipheim 2, Günzburg (Donau), Fliegerhorst (map 4f).² One of the three prisoners’ units of the camp was also located in Fliegerhorst Leipheim, east of Ulm. The other two units were located in Regensburg and in the nearby town of Obertraubling.

Before the establishment of WGL Donau, there was already a military prisoners’ unit from WG Germersheim in Leipheim, and a unit from WG Torgau-Fort Zinna was located in Obertraubling.³ The literature on Obertraubling Airport describes the “conversion of a Luftwaffe base into an

aircraft factory” beginning in December 1940 and the arrival of “around 2,200 soldiers from the Defense District (*Wehrkreis*) penal company stationed in Grafenwöhr.”⁴ In fact, the penal unit stationed in Grafenwöhr, Sonderabteilung XIII, a disciplinary “educational unit,” comprised only about 100–200 men (outside of the regular staff), who were only temporarily stationed in Obertraubling. The 2,200 men who arrived on December 4, 1940, belonged instead to the military prisoners’ unit (*Wehrmachtgefangenabteilung*, WGA) Obertraubling of WG Torgau-Fort Zinna.⁵ They were quartered at the airport in barracks surrounded by barbed wire.⁶ It is not known when the military prisoners’ unit in Leipheim from WG Germersheim arrived. Its strength was at least 1,000 men. After the arrival of a third military prisoners’ unit in the area of Regensburg-Obertraubling, the three units were consolidated into the independent WGL Donau in mid-1941.

The establishment of WGL Donau (as was the case with its predecessor organizations) was closely connected with the needs of the German military aircraft industry. There were important military airfields in both Leipheim and Obertraubling, on which the Messerschmitt company established factories in 1940 for the production of military aircraft. Messerschmitt had manufactured the Me 108 and Me 109 fighters in Regensburg since 1938. In the branch factories at Obertraubling and Leipheim, which were under the Augsburg branch of Messerschmitt, the Me 321 “Gigant” cargo glider and the motorized version, the Me 323, were built; later, the Me 262 jet fighter was built in Leipheim and the rocket-powered Me 163 fighter was built in Obertraubling.⁷ The importance of these projects to the OKW is reflected in the May 10, 1941, order that military prisoners who had served their sentence or who had been granted “front probation” be retained in the prisoners’ units at Obertraubling and Leipheim to continue to work for the arms industry.⁸ Possibly, military prisoners from the Luftwaffe were preferentially selected. Such selections could explain why some sources incorrectly refer to “soldiers from a Luftwaffe penal battalion.”⁹

A total of just under 5,000 prisoners passed through WGL Donau. By the end of 1941, there were 4,000 military prisoners working alongside 8,000 civilian laborers in the Messerschmitt factory in Regensburg, the second-largest aircraft factory in Europe. Whether the latter participated in the sabotage actions in the Regensburg factory that were investigated by the Gestapo is not known.¹⁰

WGL Donau controlled a so-called penal camp unit (*Straflagerabteilung*), as did the eight military prisons. As was the case at the military prisons, such as WG Glatz, for example, these units were used for “custody” of prisoners who were classified as “irredeemable.” Those who were considered “pests, criminal types, [and] carriers of hostile spirits” had to endure the harshest conditions of confinement.¹¹ They were, therefore, considered “protected,” while they would actually begin serving their sentences after the war. The penal camp unit in WGL Donau held at least 270 men as of March 1,

1942.¹² Compared with the eight military prisons, this total is the second highest. Apparently, the living and working conditions in the camp offered sufficient leeway to realize the demand for the hardest imprisonment.

After the Wehrmacht's offensive stalled at the gates of Moscow, in the winter of 1941, the Nazi leadership saw a "reorganization of enforcement" as unavoidable; the result was the "Führer-Order" of April 2, 1942.¹³ This "reorganization" had especially grave consequences for WGL Donau until its dissolution in the early fall of 1942. Hitler's order reemphasized that the "probationary potential of the Eastern Front . . . must be utilized more than it has been to this point."¹⁴ As early as February 12, 1942, the OKW ordered the military prisons, as well as WGL Donau, to "immediately evaluate [emphasis in original] once again" whether their prisoners could be recommended "for a commutation of their sentence to probation in their own units or a unit of the regular Army or in the Probationary Units [*Bewährungstruppe*.]"¹⁵ The Wehrmacht judges who were tasked with making these recommendations were cautioned that due to the "completely changed situation . . . commutation of punishment is only to be granted if it is somehow justifiable."¹⁶ The number of prisoners from Regensburg, Obertraubling, and Leipheim who were sent to front probation in the "normal" combat units or in the battalions of Probationary Unit 500 is unknown. Provisions for probation on the "battlefield," as was the case in May 1941 (see above), were barely still in question.

The Führer-Order of April 2, 1942, also included prisoners for whom front probation was out of the question: "In the future some of the condemned will not be able to be deployed (or deployed immediately) to the fighting troops. For those unstable elements, it is necessary to remove the incentive for them to withdraw themselves from the front line through prison sentences by hardening the conditions of imprisonment. For this purpose immediate field prisoners' detachments are to be drawn up, which are to be used in the operational area, if possible in the area where the fighting troops are deployed, for the hardest labor and under the most dangerous circumstances."¹⁷ The implementation of Hitler's order resulted in the large-scale transfer of the military penal system to the front in the field penal battalions (*Feldstrafgefangenen-Abteilungen*, FStGA), as they were later known, and in the field penal camps (*Feldstraflager*). The latter were responsible for those previously held in "custody" in the penal camp units.

When the establishment of the first two field penal camps was ordered on April 13, 1942, WGL Donau had to transfer the 270 men in the penal camp unit to WG Torgau-Brückenkopf, where Feldstraflager II was to be formed. The former penal camp unit prisoners were to be transferred beginning on June 1 via WG Torgau-Fort Zinna, which thereafter had to collect "all remaining penal camp inmates" and was given sole responsibility for the field penal camps.¹⁸

On April 14, 1942, the order was given for the establishment of the first three FStGAs. WGL Donau was to send 50 prisoners to FStGA 3, who were to be temporarily kept in

WG Anklam. This order was connected to an additional order to report the number of "those prisoners who were to be sent to the FStGAs" by May 5.¹⁹ Thereafter, such reports were created monthly. On the basis of these reports, the respective general at the OKH coordinated the creation of additional field penal battalions and the organization of special transports for those prisoners.

To move the "emphasis of enforcement" from "the military prisons to the field penal battalions and field penal camps" and to increase the potential for use of "front probation," it was essential to have quick and uninterrupted access to the prisoners.²⁰ In order to secure this access, the OKW made decisive choices about the use of Wehrmacht prisoners in industries unrelated to the Wehrmacht, as had been practiced up to that time. The resulting measures would lead to the dissolution of WGL Donau. It was decided that, beginning on August 15, 1942, Wehrmacht prisoners would "no longer be sent to work outside of the Wehrmacht."²¹ Of the 18,000 men who had been sent to work in industrial concerns outside the Wehrmacht by that time, 7,350 were withdrawn by October 1, 1942: "The 7,350 men should be sent to probationary units, field penal battalions, and field penal camps."²² In the intervening time, the removal of all Wehrmacht prisoners working in war-related businesses outside the Wehrmacht was planned; they were to be replaced by foreign forced laborers, prisoners of war, and concentration camp inmates.

A temporary reprieve from the October 1, 1942 order to send prisoners to probationary and field penal units was granted for those working in the "petroleum industry," which was deemed to be particularly important to the war effort. Here, "transfers to field penal battalions . . . for the time being will only be allowed" if "competent replacements can be sent from less-important operations." Departures "through criminal proceedings, commutation of sentences to probation" and "transfers to field penal camps" should be delayed, at least "for the time being" "until it is possible to replace them with transfers of prisoners from less-important operations."²³ The Messerschmitt factories in which the prisoners from WGL Donau worked were included among these "less-important operations."

The departure of military prisoners from Leipheim and Regensburg-Obertraubling was so rigorously carried out that the production of the Me 323 in Leipheim ceased on September 26, 1942, because the 1,307 concentration camp prisoners requested by Messerschmitt had not arrived. In Obertraubling, the transfer of 4,100 Soviet prisoners of war was requested in compensation for the military prisoners. However, only between 2,200 and 2,750 men arrived for the planned "Russian camp."²⁴ In view of these negative effects on aircraft production, it is also noteworthy that the former inmates of WGL Donau were transferred to the field units with some delay. Some of them were subsequently sent to perform excavations at the Wildflecken zum Einatz training ground, where WG Germersheim had previously had a military prisoners' unit. Others were temporarily employed at the exercise ground in Klagenfurt.²⁵

It is unclear whether executions took place at the sites of WGL Donau, as was the case at the eight military prisons. Fritz Wüllner writes that executions did take place at Leiphheim but does not provide any evidence.²⁶ In the database of cards in the former Zentralnachweisstelle of the Bundesarchiv, which document death sentences issued by military courts, there is a record of one death sentence handed down against Kanonier Stephan Schein by the court of the 465th Division in 1944; however, there is no indication whether, and, if so, where and when, this sentence was carried out.²⁷

WEHRMACHTGEFÄNGNIS (WG) ANKLAM

WG Anklam was mentioned in official documentation as early as November 1938, albeit with the additional designation “Zwischenunterkunft Glatz” (today Kłodzko, Poland).¹ The provisional unit in Glatz became necessary because the prison in Anklam, which had originally been intended as a

women's detention center, would only be available in late 1940 due to construction delays.² WG Anklam had a capacity of 600 prisoners, but it was almost constantly overcrowded. In 1944 and 1945, there were consistently around 1,500 prisoners crammed into the individual and group cells at Anklam. It is estimated that, in total, more than 15,000 prisoners passed through Anklam (map 4b).

Oberstleutnant Heinrich Tschersich, who had served as commandant of Zwischenunterkunft Glatz, was subsequently named commandant of WG Anklam. Tschersich was a professional soldier of 16 years. In early 1944, he volunteered to be sent to the eastern front but was instead deployed with the Feldgendarmerie in southern Poland. Oberstleutnant Nickel replaced him as commandant of Anklam in the summer of 1944 and remained there until its evacuation.

Under the "enforcement plan" of September 10, 1941, Anklam was to hold Wehrmacht soldiers from Defense District (*Wehrkreis*) II and XI, Luftwaffe men from Air Defense District (*Luftgau*) XI, and sailors from the Baltic Sea Naval Station (*Marinestation Ostsee*) sentenced to prison terms of longer than six weeks; it shared responsibility for the sailors with WG Graudenz (today Grudziądz, Poland). Later, prisoners from the occupied areas of Northern Europe and Finland were also sent to Anklam.³ Under the enforcement plan of November 27, 1942, which came into effect on January 1, 1943, the responsibilities of WG Anklam were expanded because WG Graudenz was redesignated (possibly temporarily) as a reception center (*Aufnahmeanstalt*).⁴ Afterward, Anklam also received army prisoners from Defense District I, Luftwaffe prisoners from Air Defense District I, and Wehrmacht prisoners from the rear area of Army Group North (*Heeresgruppe Nord*) and part of the territory of the Armed Forces Commander (*Wehrmachtbefehlshaber*) Ostland. In 1944, British and Belgian officers were temporarily brought to Anklam, having been sentenced to several months' imprisonment for "threats" or "insults" to Germans. Under the enforcement plan that took effect in January 1943, the overcrowded WG Graudenz was responsible for the "French, Belgians, English, [and] Americans" being sentenced for violations of military law; this responsibility presumably passed to Anklam after Graudenz was converted into a reception center.⁵

Like the other WGs, Anklam not only was a place where ordinary prisoners served out their sentences but also was for the "detention" of those prisoners who, by virtue of confirmation by the judicial authorities or application on the part of the prison commandant, were classified as "incapable of improvement." This detention was carried out under harsher conditions in the so-called penal camp unit (*Straflagerabteilung*), in which the actual sentence would begin only after the war ended. The strength of the Anklam penal camp unit, which existed until April 1942, was at least 100 men as of March 1, 1942.⁶

Alongside the transfer to penal camp units, candidates were continuously selected for a "commutation" of their sentence to "front probation" in combat roles. These "front

probationers" could be deployed alongside normal combat units or in a battalion of the separately established Probation Unit (*Bewährungstruppe*) 500.⁷ On February 12, 1942, the OKW ordered the commandants of the WGs to "immediately re-examine" their prisoners to determine whether they could be recommended "for a commutation of sentence to probation" in a combat role.⁸ The total number of prisoners from Anklam who were sent to front probation is unknown.

Beginning on March 25, 1942, the forced use of the possibilities for front probation was accompanied by a "reorganization" of the prison system, which was to be implemented "according to uniform criteria, in battalions with companies" from that point forward.⁹ Along with the labor companies, in which military drill took place before and after the work as well as during the marches to and from the labor sites, a so-called training company (*Ausbildungskompanie*) was also established at Anklam. In the training company, those who were soon to be sent to the front were no longer required to work but performed military drills instead (sometimes with weapons, but with no ammunition).

Along with "parade drill and exercises to encourage toughness and courage,"¹⁰ the other German prisoners were also sent on labor details. Prisoners from WG Anklam worked at the Arado Airplane Factory, Oldenburg Furniture Factory, Pomeranian Sugar Factory, the property of the Baron von Schwerin in Ziethen, Burmeister Sawmill, Breitsprecher Coal Plant, and the Ruhrbeck and Raiffeisen firms. WG prisoners were also used for community labor, such as the construction of a bridge on Greifswalder Strasse and the construction of temporary shelters on the Ringstrasse in Anklam. Military construction projects were set up at the air base in Anklam and the airfield in Sanitz.

Alongside the labor details, in which military drill took place before and after work, a so-called training company was also established in Anklam. In the training company, men who were soon to be returned to the front were no longer sent to labor but rather only performed military drills. Former Anklam prisoner Werner Ulrich belonged to this company in late 1944. He recalled that "in the training company we also practiced on a training-*Panzerfaust* [antitank rocket launcher]. We were often required to perform exercises at the Richthofen Airport. We trained not only during the day but also at night. There were 30–40 kilometer [18.6–25 mile] night-marches. When we returned from those, we lined up alphabetically. Then the day duty began later."¹¹

In addition, WG Anklam supervised three armed forces prisoner units (*Wehrmachtgefangenenabteilungen*, WGA)s as of 1941: WGA Pinnow in Kreis Angermünde (later relocated to and renamed WGA Rathenow), WGA Bernau (near Berlin), and WGA Schwerin. By 1942, only WGA Bernau remained, and three new units were created: WGA Clauen (between Hannover and Braunschweig), WGA Fallingbostel (near Celle), and WGA Peenemünde auf Usedom.¹² In Pinnow and Clauen, the prisoners worked in the local

Wehrmacht munitions factories; in Rathenow, the prisoners worked at the Arado Airplane Factory; and in Peenemünde, the prisoners from Anklam worked at the rocket testing facility and as agricultural laborers on military property. Where prisoners from Anklam were used by nonmilitary entities, those employers had to pay hourly wages to the military. The prisoners (with the exception of those in the penal camp probationary units) received—conditional upon good behavior—a small part of this payment as “work remuneration.”¹³

In April 1942, the “majority of the punishment” of military prisoners was moved to the penal camp units in the area of the front, specifically the field penal battalions (*Feldstrafgefangenabteilungen*, FStGA) and field penal camps (*Feldstraflager*).¹⁴ The goal of these measures was to intensify the deterrent effect of military prison for the soldiers at the front by introducing dangerous work such as the construction of battlefield fortifications. Additionally, it would reduce the overcrowding of the military prisons. On April 13, 1942, WG Anklam was ordered to send 100 prisoners to WG Torgau-Fort Zinna, where Feldstraflager I was to be formed with a strength of 600 men.¹⁵ In Anklam itself, six field penal battalions were formed later: on May 1, 1942, FStGA 3; on August 1, 1942, FStGA 4; on September 10, 1942, FStGA 8; on November 1, 1942, FStGA 11; on January 5, 1943, FStGA 14; and on March 20, 1943, FStGA 17.

WG Anklam also functioned as a remand prison (*Untersuchungsgefängnis*) and a detention facility for prisoners who were sentenced to death. Prisoners who were sentenced to terms in penitentiary were normally declared “unworthy of the military,” expelled from the Wehrmacht, and sent by the Reich Ministry of Justice to “detention” in the penal camps in the Emsland district of Germany. Those who were sentenced to death were sent to the death cells, which were located in the cellar of the south wing of the prison, where they were chained hand and foot. From October 14, 1941, to April 26, 1945, at least 123 prisoners are known to have been executed at WG Anklam, most for desertion or “subversion of the military’s strength” (*Wehrkraftzersetzung*). By 1944, several officers had also been executed at Anklam.

Between mid-April and mid-October 1943, no executions by firing squad took place in Anklam because of the “Führer Order” of March 4, 1943, which required that death sentences for military crimes “be carried out by beheading or hanging.”¹⁶ The “dishonorable” beheading and the “shameful” hanging were seen as worse punishments for these criminals compared with the “soldier’s death” by a bullet. Those who were held at Anklam awaiting their executions were sent to Posen (today Poznań, Poland), where they were beheaded in the investigative prison. It is likely that additional prisoners from Anklam were executed by guillotine or at the gallows.

From the end of October 1943, executions at Anklam were once again carried out by shooting, in large numbers. According to the former staff director (*Stabsintendant*) of Anklam, Karl Prill, the judicial officer (*Gerichtsoffizier*) in Anklam, Leutnant Bethke, strongly advocated for the return to the old

method because the deterrent effect of shooting was believed to be stronger than that of beheading; the transport costs and escape risk from transferring prisoners to Posen likely played a role in the decision. Two Belgian citizens were also executed in WG Anklam: Georges Mommens, who was arrested by the SD in Brussels for “communist activities” died there on March 17, 1944; his compatriot Josef Gypen was executed on March 26, 1944, for “failure to fulfill duties.”¹⁷

Alongside the transfers to Probation Unit (*Bewährungstruppe*) 500, which had been continuous since 1941, in the late summer of 1944, three special transports were delivered to SS-Sonderformation Dirlewanger—officially known as the 36th Waffen Grenadier Division—which operated within the Waffen-SS as a “probation unit.” Around 1,000 military prisoners from WG Anklam were sent to SS-Sonderformation Dirlewanger during the suppression of the Warsaw Uprising, during the Slovak National Uprising, and, finally, to service on the eastern front.¹⁸

As Soviet troops overran the borders of the Reich, an “Alarm-Battalion Anklam” was created from men destined for front probation on January 21, 1945. This 200-man battalion, led by officers from the prison’s guards, was thrown against the Red Army near Schneidemühl. One member of the unit was “probation-gunner” Werner Beissel, who was executed for “false reports and unauthorized withdrawal” on February 24, 1945.¹⁹ Additionally, prisoners from Anklam were sent to Probation Unit 500 until March 1945. One of them was former U-boat commander Hartmuth Schimmel-pfennig, who was sentenced to an 18-month term in Anklam in January 1945 for homosexuality; he was killed in action with Probation Unit 500 in the Battle of Berlin on April 27, 1945.²⁰

On April 28, 1945, the evacuation of WG Anklam began. After some of the prisoners and guards were marched toward Neubrandenburg (and possibly Küstrin) to be sent into combat against the Red Army, the remainder of the prisoners and guards set out to the west. The probable destination of their march was Zuchthaus Dreibergen Bützow, but the column was overtaken by the Red Army in Bad Sulza on May 1, 1945. Along with the men in the column, the longtime commandant, Oberst Heinrich Tschersich, who had returned to Anklam at the end of 1944, was captured. While other officers from Anklam had already returned to Germany in 1947, Tschersich was sentenced to a 25-year prison term.²¹ However, he was released in 1954. He moved from Anklam to Gelsenkirchen in West Germany, where he received a 2,000 deutsche mark pension as a “late returner” (*Spätheimkehrer*) and long-tenured officer.

WEHRMACHTGEFÄNGNIS (WG) BRUCHSAL

The history of WG Bruchsal dates to the eighteenth century, when a part of the old castle was converted into a prison (1745) and half of the barracks were turned into a detention center (1776).¹ In the Weimar period, this facility housed a psychiatric prison, which held 49 prisoners, a women’s detention center with 60 cells, and a prison complex for 156 female prisoners.² On December 15, 1939, the Wehrmacht took over the compound, where an external unit of WG Germersheim was established. By the beginning of 1940, it had been redesignated as WG Bruchsal (map 4f).

Under the “enforcement plan” of September 10, 1941, WG Bruchsal was responsible for the confinement of Wehrmacht soldiers from Defense District (*Wehrkreis*) V and VII and Luftwaffe men from Air Defense District (*Luftgau*) VII who had been sentenced to prison terms of more than six weeks. It also held Wehrmacht soldiers from occupied Western Europe, a responsibility it shared with WG Freiburg and WG Germersheim.³ In the summer of 1944, the military prisons (*Kriegswehrmachtgefängnisse*, KWGs) in Wilna (today Vilnius, Lithuania) and Dubno were dissolved and their inmates were transferred to Bruchsal.⁴

The capacity of WG Bruchsal increased during the war. A noncommissioned officer (NCO) who was assigned to the prison guard staff between August 1940 and April 1941 estimated the prison’s population during that time to be at least 600.⁵ Heinrich Karl Maria Meybrink, who was brought to Bruchsal as an investigative prisoner in November 1944, said that there were around 1,000 prisoners and at times as many as 1,200–1,300.⁶ The total number of prisoners who passed through Bruchsal is estimated at 12,400.⁷ Bruchsal also held prisoners who were to be sent to the penal camp units

(*Straflagerabteilungen*). These prisoners were deemed “unable to be improved” by the judgment of a court or the recommendation of a prison commandant. The Bruchsal penal camp unit held at least 110 men as of March 1, 1942.⁸

Alongside the transfer of prisoners to the penal camps, WG Bruchsal was also responsible for the selection of prisoners who were deemed to be candidates for commutation of their sentence to “front probation” in combat zones. Front probation could be served in normal combat units or in a battalion of the separate Probation Unit (*Bewährungsgruppe*) 500.⁹ On February 12, 1942, the OKW ordered WG Bruchsal to “immediately re-evaluate” its prisoners to determine whether they could be recommended “for a commutation of sentence to probation” in combat.¹⁰ The total number of those who were sent to front probation from Bruchsal is unknown. In September 1944, a special transport of around 300 prisoners from WG Bruchsal was sent to SS-Sonderformation Dirlewanger—officially known as the 36th Waffen Grenadier Division, which operated within the Waffen-SS as a “probation unit”—which participated in the defeat of the Warsaw Uprising and Slovak National Uprising and in operations at the front.¹¹

The labor details from WG Bruchsal were mostly deployed outside the city. While officers and NCOs were sent to work on vegetable farms, enlisted inmates were taken by train every day to Ludwigshafen and Oppau, where they worked to repair the IG Farben AG Factory, which had been damaged by air raids, or on the railroads.¹² Other prisoners from Bruchsal unloaded goods in the Rhine ports. An “arrangement for prisoners from WG Bruchsal with [the] state-owned Rhine port” in Karlsruhe from March 18, 1940,¹³ stated that 32 prisoners from Bruchsal would work 12 hours per day (with a half-hour lunch break) in the port, for which the prisoners would be paid 40 Reichspfennig an hour.¹⁴ The hourly rate was supposed to be at a similar level in other locations where Wehrmacht prisoners were used. In the last year of the war, prisoners were also employed scrapping old batteries for raw material.¹⁵

In addition, WG Bruchsal supervised two armed forces prisoner units (*Wehrmachtgefangenabteilungen*, WGA) in Siegelsbach and Neckarzimmern, both near Mosbach am Neckar. In 1942, WGA Neckarzimmern continued to operate along with a new WGA in Wesseling, near Cologne; it was later transferred to WG Germersheim.¹⁶ In Siegelsbach, the prisoners were employed in an army munitions depot, while in Neckarzimmern, they were sent to a munitions storage facility. In Wesseling, they were probably sent to work for the Union Rheinische Braunkohlen Kraftstoff AG.

Hard labor alone did not meet the standard for the recommended “toughness” of the regime in WG Bruchsal; military drill and meager rations also played a role. As in the other WGs, a “Führer Order” required strong disciplinary measures constituting “strict arrest.” The “strict arrest” was practiced, as in all other units, with “intensified arrest” with “hard conditions” and “bread and water,” while additional intensified measures included “daily outdoor exercise” and

“darkened arrest cells.”¹⁷ In Bruchsal, the cells were located in the dungeon of the old castle.¹⁸

In April 1942, the “majority of the punishment” of military prisoners was moved from the WGs and their penal camp units to the front area, in the field penal battalions (*Feldstrafgefangenen-Abteilungen*, FStGAs) and field penal camps (*Feldstraflager*). The goal of this measure was to create a greater deterrent effect on the fighting troops by placing the military prisoners in dangerous tasks such as the construction of frontline fortifications. In addition, overcrowding in the WGs could be reduced. On April 13, 1942, WG Bruchsal was ordered to send 110 prisoners to WG Torgau-Brückenkopf, where Feldstraflager II, with a planned strength of 600 men, was being organized. From June 1, 1942, all prisoners destined for the penal camps were to be sent via WG Torgau-Fort Zinna, which was thereafter given the responsibility for “collecting all those to be held in the penal camps” and held sole responsibility for the field penal camps.¹⁹

On April 14, 1942, the order was given for the establishment of FStGA 1, 2, and 3. WG Bruchsal was ordered to send 50 prisoners to WG Germersheim, where FStGA 2 was being formed. Thereafter, WG Bruchsal was to send monthly reports on “the number of military prisoners sent to the FStGAs” to the OKW.²⁰ These reports were used by the general at the OKW who was responsible for the FStGAs to determine the organization of special transports for the prisoners assigned to the FStGAs and the creation of new FStGAs. No field penal units were formed in WG Bruchsal itself, but there were regular transports to other WGs for the formation of FStGAs.²¹

To create additional reserves for the front, in September 1944, in a major departure from previous practice, prisoners declared to be “unworthy of the military” who had been sentenced to prison were sent to the penal camps of the Reich Justice Administration (*Reichjustizverwaltung*). A large number of these men were to be deemed “conditionally unworthy of the military” and enrolled in the prison companies, which were later integrated into the FStGAs.²² These measures also affected the March 1942 “Reclassification of the Wehrmacht Penal Facilities” in labor and training companies, which experienced an expansion.

Unlike the other WGs within the Reich, there were, for a long time, no executions under military justice at WG Bruchsal. Apparently, there was no shooting range or another area usable for executions, such as a gravel pit or quarry, available. However, cells at Bruchsal held prisoners sentenced to death, beginning at the latest in late 1941. They were then taken to one of the larger surrounding garrisons at Stuttgart, Ludwigsburg, or Karlsruhe for execution. On January 21, 1942, Max Bender was executed at the Dornhalde shooting range in Stuttgart.²³ In June 1942, at least three deserters, former prisoners of Bruchsal, were shot: on June 3, Otto Janikowski,²⁴ on June 10, Hans Meisel, and on June 17, Karl Seifert.²⁵ Helmut Nickel, another prisoner from WG Bruchsal, was executed on October 14, 1942, at a shooting range in Karlsruhe.²⁶ One

further execution was carried out in the subordinate WGA Wesseling: Martin Reichhart was sentenced to death for desertion and shot on March 11, 1943.²⁷

As of mid-April 1943, military executions were to be carried out by beheading or hanging rather than shooting. One of those affected by this decision was Bruchsal prisoner Herbert Hosters, who was sentenced to death for desertion. On July 26, 1943, he was taken to the investigative prison in Stuttgart, where he was beheaded.²⁸ It is not known if other Bruchsal prisoners died under the guillotine in Stuttgart, but additional prisoners from Bruchsal were executed in the following period (after the preferred execution method reverted to firing squad) at the Poppenweiler shooting range near Ludwigsburg, including Leonhard Maier on January 18, 1944, and Josef Blöchinger, on June 23, 1944.²⁹ To relieve the executioner at Stuttgart, an additional guillotine was installed at Bruchsal in the early summer of 1944.³⁰

On March 1, 1945, Bruchsal was the target of an American bombing raid that killed nearly 1,000 people in the city. The WG was hit by conventional and incendiary bombs and completely destroyed. The number of victims among the prisoners was comparatively low because the thick prison walls protected them and the cells were quickly evacuated. Those sentenced to death and prison terms were thereafter held in the undamaged civilian jail on the Schönbornstrasse.

On March 11, 1945, the five companies of the destroyed WG Bruchsal were taken by foot and then by train in the direction of Neuburg an der Donau, where the transport arrived five days later. There, the 1st, 2nd, and 5th Companies were housed in a barn surrounded by barbed wire at a Wehrmacht detention center—probably the former WGA Neuburg—which was already overcrowded. The 3rd and 4th Companies were taken to the Wehrmacht investigative prison in Ingolstadt. Shortly thereafter, the prisoners from Neuburg and Ingolstadt were taken to the SS barracks at the Dachau concentration camp, where they formed a Wehrmacht probationary battalion. The designation “Bewährungsregiment VII, Einheit Bender”³¹ probably indicated that it was considered to be part of Probationary Unit 500, whose last battalions were denoted with Roman numerals and the name of the commander.³² On April 28, 1945, the former Bruchsal inmates in the probationary unit received ammunition. They were marched to the south to meet the American troops, however, they do not seem to have been involved in any significant fighting.

WEHRMACHTGEFÄNGNIS (WG) FREIBURG IM BREISGAU

The facility that held the WG in Freiburg im Breisgau (map 4f) was commissioned in 1878 as “Grand Duke-Baden State Prison (*Landesgefängnis*) Freiburg (Central Corrections Facility),” and completed in October of the same year. A star-shaped or radial building with five wings, it was modeled after the so-called Pennsylvania style of modern American prisons of the time. At the beginning of Germany’s war with France in 1939, civilian prisoners in what was then known as Freiburg State Prison were transferred to other prisons in Württemberg, farther from the French border. From February 1940, Freiburg State Prison served almost exclusively as a WG; only a few cells on one floor of one of the facility’s five wings were used for civilian prisoners.

Little archival documentation for WG Freiburg exists. Neither the average occupancy of the prison nor exact counts of incoming and outgoing prisoners and convicts can be determined. There are also few precise records about the guard personnel, and the names of the commandants are unknown. The only available sources concerning the prison are unpublished memoirs of former prisoners and members of the guard and administrative staff.

One of these memoirs was written by a former Luftwaffe noncommissioned officer (NCO) who had been stationed at the air base in Freiburg since 1941. He was arrested in August 1942 for expressing criticisms in letters to his wife and his father, which were discovered by the censor, and charged with undermining the military’s fighting strength (*Wehrkraftzerstörung*) and violating the treason law. He had been taken to WG Freiburg on remand. He wrote that he

was, as a prisoner on remand, naturally in solitary confinement, in a cell which consisted of a cot with 2 wool blankets and a head wedge, a very small table with stools and a built-in latrine in one corner. The barred window was so high that I couldn’t see even a slice of heaven from it. . . . Luckily I was permitted to read in Freiburg—newspapers as well as books from the library. These books were then mostly old tomes, but there were nevertheless perhaps interesting works among them. I had a penchant for reading travel literature like that of Sven Hedin and other researchers in the Arctic and Antarctica. The approved periodical holdings furthermore had the advantage of being able to protect me from the increasingly cold nights—in which I spread newspapers under the bed linens and between the blankets. . . . Since I [was rushed to the prison] after the imprisonment . . . around mid-morning, “lunch” came a short time afterwards: 2 so-called helpers [*Kalfaktoren*] went from cell door to cell door with a large bucket full of soup, opened the little flap in the iron door, and handed us through a tin bowl and a spoon. This first “meal-time” has stayed in my memory. It was a soup made of red cabbage with chunks of potato, and if my appetite wasn’t already gone anyway, it was then. I poured the swill in the toilet as not to allow the opinion to develop that I was satisfied. Initially, however, I went hungry for a few days with the exception of the dry army bread in the morning. . . . As I gradually got my wits about me again, I wrote my brother—who is a lawyer and attorney—a letter and asked him to procure legal aid for me and to explain my fate to my poor parents. Postal transport was granted to prisoners on remand, even if every letter that came and went was also read and stamped by the censor. . . . After a few days, and before some legal steps had been taken, I was transferred to the WG of Berlin-Tegel.¹

Little other information is available about the daily life of prisoners in the WG or the labor the prisoners had to perform. Residents of the city recalled that the prisoners were used for heavy loading and unloading work in nearby freight yards. It is also reported that the prisoners had to perform punitive physical exercise while burdened with bricks.

Executions are known to have been carried out at WG Freiburg. The above-quoted Luftwaffe NCO had been forced to participate as a rifleman in a firing squad at the prison in 1941, prior to his own imprisonment. He recalled that

[o]n the next morning the whole company was marched at gunpoint to the site of the shooting range and arranged in the prescribed order. We eight riflemen had one live cartridge each and stood in a double column approx. eight meters [26 feet] in

front of the pole, which was generally designated as a stake. Shortly thereafter a truck came: In its bed sat a delinquent shackled with long chains, the Oberfeldwebel from the WG and two other escorts were with him. The poor guy was deathly pale and couldn't walk anymore. So he was propped up by the two escorts and dragged to the pole, and his chains were rewound around the pole. He clearly would have fallen to the ground without this. This dragging to the pole was a heart-wrenching sight. Now everything went according to plan: The court martial official read the verdict once more, the military priest said a short prayer and crossed himself. Then the poor guy was blindfolded and the troop doctor pinned a paper patch as a target on his canvas jacket, over his heart. An officer stood nearby, pistol drawn, who would have shot the delinquent once more out of mercy [*Gnadenschuss*] if he was not killed immediately. . . . On the signal of a whistle we then had to shoot into the patch, and thereby into his heart. After the shooting the guy's head drooped—he had surely endured no more bodily pain, provided that he still had his senses. Afterwards the chains were taken off again, the patch was checked for the 8 shots—it was previously said to us that he who didn't shoot would be punished. I had actually played with this idea, but then forgot about it; because the execution would be completed at any rate. . . . The aftermath was then particularly shameful: before the dead were laid in the coffin that was brought along, someone took off his lace-up shoes—clearly “objects necessary to the war!”²

Residents reported that the executed inmates were buried in a special section of the Freiburg Cemetery (*Hauptfriedhof*), which is located near the prison. However, because the graves of all soldiers buried at the cemetery were ceremonially adorned during the war on the so-called Hero's Memorial Day (*Heldengedenktag*; March 16 or the Sunday preceding March 16), it was possible to determine which graves were for executed prisoners, as they were the only ones not decorated. In this way, they could also discern how many executions there had been in the last year since the last Hero's Memorial Day. However, these numbers were apparently not recorded, and thus it is not known how many prisoners were executed at WG Freiburg.

In 1942, the military penal system became harsher through the creation of field penal units (*Feldstrafgefangenen-Abteilungen*, or FStGAs) and field penal camps (*Feldstraflager*). WG Freiburg was responsible for one FStGA: FStGA 6, which was deployed to the Eighteenth Army (*Armeooberkommando*, AOK 18) in the sector of Army Group North (*Heeresgruppe Nord*) on the eastern front. Convicted soldiers who had been interned in WG Freiburg and received a sentence of at least three years were transferred to FStGA 6. In mid-1944, during the Wehrmacht's withdrawal to the west,

FStGA 6 was deployed to Army Group G on the Upper Rhine, not far from WG Freiburg. Near the end of the war, the remnants of FStGA 6 were deployed to Army Group Center in Silesia.

WG Freiburg was damaged by a large British bombing raid on the city on the evening of November 27, 1944. The southern wing of the prison, pointing in the direction of the inner city, was partially destroyed. Around 120 military prisoners used this opportunity to escape. A number of prisoners who escaped from the burning prison were scattered in the surrounding streets. There they performed rescue and clearing work in the neighborhood particularly affected by the bombing raid. Many of these prisoners were recaptured and brought back to the prison, while others returned voluntarily the next morning. Heinrich Himmler decided to establish a special *Auffangsstab* from the army's Secret Field Police (*Geheime Feldpolizei*) and Field Gendarmerie (*Feldgendarmerie*) to find the remaining escapees; nonetheless, many succeeded in either making it to the Allied lines in Alsace or hiding in the Black Forest. One of those who fled that night was the Austrian writer H. C. Artmann (1921–2000), who was able to make it all the way to his hometown of Vienna, where he remained until the end of the war. In an interview shortly before his death, he spoke publicly about his escape from WG for the first time:

In the bombardment of Freiburg half the city was destroyed, this was on November 27, [19]44. I was interned there. And in this attack the prison walls actually fell down. It looked like a doll's house without the wall. So there I jumped down and took off. . . . No, first I jumped into shit, since the toilet was there, to put it bluntly, and I looked like a hog. And then I was in the private quarters of the prison director, who thank God was about my size, got undressed, washed, dressed, took his stamps, so I basically robbed [him]. The food stamps. . . . Yeah, you got these stubs there. You definitely needed them, otherwise you didn't get anything. I stuffed them in my pocket. And then I was out, as a civilian. Then I helped with the rescue efforts a little. The whole city was ablaze. Yeah, and then I [took off] toward . . . Donaueschingen. . . . Well, anywhere the Donau flowed. . . I also hid myself there. But there was a son-in-law there, an SS man, and this was very dangerous. But he'd already had it up to here. . . . Yeah, and so then I took off from there and took a train without a ticket (*bin schwarzgefahren*).³

After the bombing raid, the remaining prisoners were transferred to Wildflecken. For a short time, the prison was nearly empty, but, in March 1945, a group of civilian prisoners from Alsace were transferred to Freiburg from Wildflecken. As French tanks rolled into the city on April 21, 1945, the last prisoners were released by remaining prison

personnel. Until the summer of 1947, the French occupation authorities used the former WG as a military prison. It was also used to house the local Nazi functionaries in the first months after the war.

WEHRMACHTGEFÄNGNIS (WG) GERMERSHEIM

On September 9, 1936, the German Army High Command (*Oberkommando des Heeres*, OKH) issued an order for the former detention facility of the Germersheim fortress, built between 1834 and 1861, to be expanded to serve as a military prison for the Wehrmacht (map 4d). The expansion was to include the neighboring buildings: the commissariat (*Proviantamt*) and the military hospital barracks (*Lazarettkaserne*).¹ The structure, shortly thereafter renamed Armed Forces Prison (*Wehrmachtgefängnis*, WG) Germersheim, was the second of three Wehrmacht prisons (after WG Torgau-Fort Zinna) already in existence before World War II.

From November 1, 1936, to the end of November 1939, Major (later Oberstleutnant) Alexander Ludwig Ratcliffe was named commandant of WG Germersheim. Three months after the beginning of the war, as of December 1, 1939, Ratcliffe handed off the function of prison commandant to Oberst Bittrloff. Oberstleutnant Hans Merten succeeded Bittrloff in 1941.

The first convicts arrived in Germersheim on March 15, 1937. The prison held around 500 prisoners, initially, but was expanded to hold approximately 1,200 in 1938. According to Ratcliffe, during his service as commanding officer, around 4,500 soldiers passed through the facility. With regard to the inmates' crimes, he stated that only "around 25 percent of all these cases concerned offenses—such as property crimes—which were to be judged in accordance with the general criminal statutes."² Desertion or absence without leave was more common (the latter more than the former). According to Ratcliffe, "Unwillingness to bear arms or inability to adapt to military discipline, as well as fear of superiors or a sense of unjust treatment, were rarely the motives." (Here one must consider that the delinquents, in view of the punishment to be anticipated, tried hard to conceal any "reluctance to bear arms.") Traffic violations, drunkenness, homosexuality, disobedience, treatment of subordinates contrary to regulations, assault on superiors, and the like, made up the balance.

In conclusion, Ratcliffe stated, "The most serious crimes of a criminal or military nature, such as mutiny or betrayal of military secrets . . . were . . . so extremely rare that there is no need to consider them here. Such crimes were expiated with harsh penitentiary sentences, including expulsion from military service, or with death on the sand-heap."³ Actually, the first five executions in Germersheim took place in December 1939, when Ratcliffe was no longer in office. The preceding court-martial proceedings, however, probably took place while he was still the commandant, a position he held until November 30, 1939.

As early as November 9, 1938, the commandants of the three military prisons in existence at that time received permission to hand prisoners over to the police for direct transfer to a concentration camp. Only two transfers to a concentration camp directly from the military prison are known to have occurred. Both concerned Germersheim and took place while Ratcliffe was serving as commanding officer there.

On November 3, 1939, Germersheim—as well as Glatz and Torgau—received instructions to set up a special "penal camp unit" (*Straflagerabteilung*). The convicts to be sent to these units were "elements dangerous to military discipline" who had been classified as "incorrigible." Their regular sentences were to begin only after the war was over. Until that time, they were "to be treated with great severity" in order to have "a sustainable deterrent effect on the unsafe elements of the force" and counter "in a decisive manner the incentive . . . to avoid one's duty by bringing about terms of imprisonment."⁴ Particulars regarding the size and use of the Germersheim penal camp unit are not available.

Like the other Wehrmacht prisons, WG Germersheim quickly became overcrowded soon after the onset of the war, with approximately 1,400–2,000 prisoners. For the period from August 1944 onward, it was reported that all "the buildings, all the cells, and even rooms [supposed to be] reserved for economic purposes" were "overcrowded with prisoners."⁵

Like other WGs, Germersheim was subject to the Wehrmacht's sentence implementation plan (*Strafvollstreckungsplan*).⁶ This dictated that the prison would hold Wehrmacht soldiers or some prisoners of war (POWs) or enemy aliens whom military courts had handed down prison sentences greater than six weeks, and it defined the geographic areas from which those soldiers came. Regarding POWs, Germersheim accepted men from the southeastern and eastern theaters.

If, despite the large number of Soviet POWs, only one Wehrmacht prison in Germany seemed sufficient for their accommodation, the reason for this was that prisoners from the east, in particular, were largely withdrawn from military jurisdiction, because field elements, Security Police, and Einsatz-kommendos were supposed to take immediate action against any unruliness from their ranks. Only after Soviet citizens and POWs were taken into German units as "auxiliary volunteers" (*Hilfswillige*) or into independent collaborationist forces as "volunteers" did they come under German military jurisdiction in greater numbers. The POWs confined in Germersheim probably came largely from the aforementioned

categories. To a great extent, their fate is still unknown. Obviously, they were imprisoned at a considerable distance from the Wehrmacht prisoners. Their place of imprisonment, also known as a “POW penal camp,” was located in the former “Vorfest Wrede,” part of a detached concentration of fortifications for the old fortress, where approximately 800–1,000 men could be housed.

With regard to the labor deployment of the Wehrmacht prisoners, Alfred Klut of the Army High Command wrote as follows in the *Zeitschrift für Wehrrecht*, 1938–1939: “The labor requirement prescribed for the sentence of imprisonment is met by occupying the men in useful work for military purposes or in other productive work, as far as possible. Special emphasis is placed on agricultural tasks that are intended to keep the prisoners healthy and strengthen them for active military service.”⁷ The demand for agricultural work, justified on those grounds, was accommodated in Germersheim by affiliating a farming operation, located in Elisabethwörth on the right bank of the Rhine, with the prison facility. The produce grown on the property, known as the St. Elisabeth farm, was not only used to support the prison operation itself but also sold to the civilian population.⁸

Former prisoners characterize confinement in Germersheim as extremely harsh. Anton Igel, who was convicted of absence without official leave, spent four months of a one-year prison term there, beginning in February 1941. He says of this time: “The guard personnel . . . were very strict. Everything had to be done at a quick pace, whether it was getting food or doing work, seeing to human needs or doing roll-call. Everything was done in response to the whistle.” According to his information, at that time prisoners were already being called on to perform clearing up and repair tasks in Mannheim after air raids. He himself, however, was called into action with the “St. Elisabeth farm detail.” According to Igel, during the work in the fields there “with spade and hoe,” “directed by the sound of the whistle, the last ounce of performance” was gotten out of the prisoners: “When someone collapsed from weakness, he got kicked in the rear and in the ribs. . . . When it was evident that nothing more could be done, they [the prisoners] were loaded onto a truck and taken back to the prison. There, the prisoner was led before the officer in charge of labor and accused of refusing to work or to obey a command. Even when people saw that the prisoner was really all in, there was a special punishment anyway, such as the infamous *Dunkelarrest* [confinement in a darkened cell].” According to Igel, WG Germersheim had six dark cells, with which he himself became acquainted on two occasions: “They were equipped with a plank bed, two blankets, and on the lower right part of the cell door there was a tiny rectangular hole for ventilation, which was covered with a screen. Through it, the prisoner could roughly determine when the day was at an end.”⁹ The hard lot of the prisoners allegedly led the Germersheim populace to lend them support, in spite of a strict ban on such help.¹⁰

For labor deployments outside of Germersheim and Mannheim, external Wehrmacht prisoner detachments

(*Wehrmachtgefangenabteilungen*, WGA) were set up as early as 1941. Some of them were several hundred kilometers away from Germersheim. They simultaneously helped to reduce the overcrowding of the Wehrmacht prison. Little is known about the personnel strength of the individual detachments, but some information about their fields of activity is available. The WGA in Gelsenkirchen-Buer and Wesseling were used at the local hydrogenation plants of IG Farben’s Scholven AG or the Union Rheinische Braunkohlen Kraftstoff AG to produce synthetic fuels from coal. In the case of the WGA in Leipheim, which later became a component of the Wehrmacht Prisoner Camp (*Wehrmachtgefangenelager*, WGL) Donau, the prisoners worked on airfield and aircraft construction for the Augsburg firm Messerschmitt AG. The prisoners of the Rothenfelde-Wolfsburg WGA, up to 1,000 in number, worked in extremely harsh conditions on various armaments projects of the Volkswagen plant (building military light utility vehicles and amphibious tanks, repairing fighter planes, etc.).¹¹ The prisoners in the Senne WGA probably worked at the local army ammunition plant.¹² The operational area of the prisoners in the Fallingbostel WGA near Bergen was presumably the local troop training grounds, also the site of an army ammunition plant. The approximately 2,000 members of the Salzgitter WGA also worked for the ammunition plant, predominantly in the Braunschweig steel plants.¹³ The WGA in Steyerberg probably supplied workers for the Wolff and Company explosives plant.¹⁴

From April 1942 onward the execution of prison sentences was largely transferred out of the Wehrmacht prisons, with their associated penal camp detachments, and into the front area—that is, to field prisoner units (*Feldstrafgefangenabteilungen*, FStGA) and field penal camps (*Feldstraflager*, FSL). On April 13, 1942, WG Germersheim received an order to organize FStGA 2. The foundation for the detachment consisted of 130 of the prison’s own prisoners, out of a total strength of 600–700 prisoners. From then on, WG Germersheim had to provide the Armed Forces High Command with a monthly report on “the supply of Wehrmacht prisoners in line for the FStGA.”¹⁵ Then, on the basis of these numbers, instructions were issued through the General z.b.V. (general officer on special assignment) in the Army High Command regarding the assembly of replacement transports for the existing FStGAs as well as the new formation of additional FStGAs. After FStGA 2, five more detachments were organized for deployment on the eastern front: by August 1, 1942, FStGA 5; by September 10, 1942, FStGA 9; by November 1, 1942, FStGA 12; by January 5, 1943, FStGA 15; and by March 20, 1943, FStGA 18.

In parallel with the prison regime and detention in penal camps, after the beginning of the war, prisoners were continually selected for suspension of their sentences for the purpose of “frontline probation” in combat. This frontline probation could be served in “normal” combat units, or in a battalion of the specially organized Probationary Unit (*Bewährungstruppe*) 500. On February 12, 1942, the Armed Forces High Command also instructed WG Germersheim to

"re-assess all Wehrmacht prisoners immediately" to determine whether they could be nominated "for a suspended sentence on probation"¹⁶ in combat. The total number of those whose imprisonment in Germersheim was discontinued for the purpose of frontline probation is not known. At any rate, this practice was followed until some point in 1945.

The darkest chapter in the history of WG Germersheim was the carrying out of death sentences imposed by military courts. The victims were, first, Wehrmacht convicts confined in Germersheim and, second, soldiers who were being held there on remand, awaiting trial. The death row cells were located in the basement rooms of the same building that housed the solitary cells for confinement in darkness ("harsh confinement"). Anton Igel, who, while serving as a trustee in 1941, had access to the death row cells, reported that "in the same building, in the basement, were four additional cells in which there was also a cage. . . . In the middle [of the cage] was a large ring with short chains, to which the prisoners were chained in addition. These were the ones condemned to death. A red light burned here day and night. I can tell about this because I knew a buddy who was down there. . . . This buddy was . . . chained to a ring set in the floor. Down at his feet, he had perhaps a range of motion amounting to five steps. As well, he was kept from moving by a chain at chest height and an additional iron bar. It looked like something from the era of slavery."¹⁷ This manner of "securing prisoners," which was common in a similar form in the other Wehrmacht prisons, was intended to prevent escape and suicide attempts as well as attacks on the guards. Even though the shackling practices described were not a specifically National Socialist phenomenon but rather were features of the consistent operation of the prison regime over a long period, to some extent continuing to the present day,¹⁸ their implementation in Wehrmacht prisons such as Germersheim nonetheless reached a sad peak.

According to the records of the local cemetery administration, 47 members of the Wehrmacht were executed in Germersheim from 1939 to 1945. The sites used for the executions were the firing range in the western part of the city and the moat near the Theobald Barracks. Among the men executed were also two Russians, Nikolai Smirnov and a man named Vasil'ev. Presumably, these men were inmates of the aforementioned "POW penal camp."

As noted in the example of the Wehrmacht prisons at Anklam and Bruchsal, in the spring of 1943 there was a substantial expansion of the option to carry out death sentences imposed by military courts by means of beheading or hanging. This policy also affected an unknown number of inmates of WG Germersheim.

The last historically documented shooting ordered by a military court took place in Germersheim on February 24, 1945. In the following two weeks, WG Germersheim, according to information from the local German Red Cross, was "evacuated to Bavaria with its personnel and prisoners as a result of the approach of the front." In Bavaria, it allegedly was "disbanded in the region of Munich."¹⁹ Polap, however,

dates the evacuation of the Wehrmacht prison to a later point in time, March 20, 1945. According to his information, the guards and prisoners were captured by American forces in the Wasserburg area (45 kilometers [28 miles] east of Munich) in the first few days of May.²⁰ Whether any last "probation operations" took place beforehand in the greater Munich area, as is reported in the case of WG Bruchsal, is unclear.

SOURCES The earliest publication dealing with the Wehrmacht prison in Germersheim was written by its first commandant, A. L. Ratcliffe, "Von Strafbüchern und Tatberichten: Ein Beitrag zum Kapitel 'Schwer erziehbare Soldaten,'" *Wehrkunde* 6, no. 2 (1957): 86–90. See also Eugen Polap, "Militärgeschichte der Stadt und Festung Germersheim 1900–1975," in *Germersheim: Beiträge zur Stadtgeschichte 1900–1975* (Neustadt an der Weinstraße: Stadtverwaltung Germersheim, 1976), pp. 101–170; and Hans-Peter Klausch, "Das Wehrmachtgefängnis in Germersheim und die NS-Militärjustiz," in *Die Zeit des Nationalsozialismus in Rheinland-Pfalz*, vol. 3: *Unser Ziel—die Ewigkeit Deutschlands*, ed. Hans-Georg Meyer and Hans Berkessel (Mainz, 2001), pp. 102–111. It should be noted in particular that Manfred Grieger and Hans Mommsen, in their study of the Volkswagen plant submitted in 1996, *Das Volkswagenwerk und seine Arbeiter im Dritten Reich* (Düsseldorf, 1996), pp. 430–432, 743, discuss the Germersheim Wehrmacht prisoner detachment in Rothenfelde-Wolfsburg in relatively great detail. See also Hans-Peter Klausch, "Von der Wehrmacht ins KZ: Die Häftlingskategorien der SAW- und Zwischenhaft-Gefangenen," in *Wehrmacht und Konzentrationslager*, ed. KZ-Gedenkstätte Neuengamme (Bremen: Temmen, 2012), p. 69.

WEHRMACHTGEFÄNGNIS (WG) GLATZ

Three separate "fortress prisons" existed in the eighteenth-century fortress in Glatz (map 4e) (today Kłodzko, Poland) in the period before World War II.¹ On January 10, 1938, the fortress prison was closed to new arrivals, and, in its place, WG Glatz was established. Those sentenced to serve time in the fortress prison were sent to the detention center in Ingolstadt from January 1, 1939. The new WG was initially only used as "transitional housing" for prisoners destined for WG Anklam, which was still under construction.

Between 1938 and 1940, Oberstleutnant Heinrich Tscherisch was the commandant of the prison in Glatz. After Tscherisch moved to Anklam, Oberstleutnant Hans Merten became the commander of the independent WG Glatz on January 1, 1941. He was replaced on April 1, 1942, by Oberstleutnant Reinhard-Günther Rudorff of the Abteilung Heerwesen of the OKH. Rudorff held the position of commandant

until the camp was evacuated in early 1945. The staff of WG Glatz was assigned by Generalkommando VII in Breslau (today Wrocław, Poland). "For the supervisory personnel," as the order read, "the most suitable are older, resolute NCOs, who have the necessary degree of firmness, prudence, love of order, faithfulness to duty, and physical hardiness, and who are able to demonstrate impeccable leadership."² An additional guard unit of seven men from the 38th Infantry Regiment in Glatz was rotated daily.

Under the "peace enforcement plan," which was in place until 1941, WG Glatz was responsible for soldiers from Defense Districts (*Wehrkreise*) II, III, and VII, who had been sentenced to prison terms between six weeks and six months.³ After the beginning of the war, Glatz also took in prisoners serving longer sentences. Only the dungeon of the fortress was used for prison cells. As the number of inmates the prison needed to accommodate increased above its capacity, the casemates north of the dungeon were also used. The number of prisoners in Glatz varied between about 400 and 600. In mid-1944, WG Glatz reported overcrowding.⁴ Wilhelm Wicziok, who was temporarily employed as a kitchen accountant in 1940 and 1941, gave his first impression of the prisoners' quarters: "The ascent to the fortress was steep. The first door: massive! The second door: even more massive! After the third door, one arrived at the place from which one could reach the casemates. . . . The fortress walls of Fortress Glatz deprived each man of the hope of escape."⁵

In the summer of 1944, the prison was moved into Fortress Schäferberg, another part of the Glatz fortress complex located about 1.5 kilometers (almost a mile) from the main fort. The main fortress and the casemates, damaged by bombing, were used only for the production of components needed for the war effort by Polish civilian forced laborers.⁶ The so-called Small Fortress at Schäferberg had previously held the military prisoners' unit (*Wehrmachtgefangeneneabteilung*, WGA) Schäferberg, which was subordinate to WG Glatz. It held officers who were sentenced to terms of "more than three months" without loss of rank.⁷ The punishment of such officers was moved to Rokitnitz in Adlergebirge (today Rokytnice v Orlických horách, Czech Republic) in September 1944.⁸ Prisoners who were serving long sentences and those sentenced to death remained in the cells in the dungeon of the main fortress.

On November 3, 1939, WG Glatz, along with the two other WGs in existence at the time (in Germersheim and Torgau), was ordered to create a penal camp unit (*Straflagerabteilung*). This unit was to hold men who were "dangerous elements" or those who were determined by a court or the prison commandant to be "unsuitable for improvement." These men were to be "treated with great harshness" in order to create "a lasting deterrent effect on the unsecure elements among the troops" and "decisively" decrease "the incentive . . . to improve their conditions through serving a prison term."⁹

As of March 1, 1942, WG Glatz had more prisoners in its WGAs than any other WG in Germany with around 300 men "in custody."¹⁰ It is likely that Glatz had such large numbers of prisoners in its WGAs because of the particular wish to create

a strong deterrent effect due to the possibilities for work and undesirable living conditions. Johannes Buchwald, who was sent to the penal camp for attempted desertion in the summer of 1941, described his arrival there at the casemates in the Glatz fortress, recalling that “through bumpy courtyards and dark paths I was then taken with other Wehrmacht prisoners to a dark, rocky cave. The floor was covered with musty straw. Only a little light came in through the cracks, the prisoners squatted. . . . Water constantly dripped from the mossy rock walls. The smell, disgusting and musty, was unbearable from the very beginning.”¹¹ A soldier who was then part of the guard personnel said that “in the casemates of the prison, they lay there, barely enough air to breathe. The NCO unlocks the door, a terrible smell comes out like a poison cloud.”¹²

Regular prisoners from Glatz were sent to agricultural labor in the surrounding areas.¹³ In 1941, the WGs supported by WG Glatz worked in Gross-Mittel, near Wiener Neustadt; Lobník, near Freudenthal (today Bruntál, Czech Republic); and Hultschin (today Hlučín, Czech Republic), the latter two located in the Sudetengau. In 1942, the WGs were located at Gross-Mittel; Ludwigsdorf im Eulengebirge (today Ludwikowice Kłodzkie, Poland); Blechhammer; and Heydebreck (Lager Hugoslust) in Kreis Cosel.¹⁴ From 1942, there were also WGs in Schieratz (today Sieradz, Poland), near Litzmannstadt (today: Łódź; Poland), at the military exercise ground in Döllersheim, in the Waldviertel region of Austria; and at a synthetic fuel factory at Moosbierbaum im Tullnfeld.¹⁵ Men from the WGA in Ludwigsdorf also worked in a gunpowder factory.¹⁶

On September 15, 1942, WGA Gross-Mittel was dissolved and its members, who had previously worked at a munitions depot, were transferred to WGA Blechhammer.¹⁷ According to military prisoner Fritz D., who was sentenced to three years in WG Glatz for “unauthorized absence” and assigned to work in WGA Blechhammer, “There, they wanted to exterminate us through hard work and hunger.”¹⁸ The prisoners at WGA Heydebreck also worked on the construction of a hydrogenation plant, which was being built for I. G. Farben AG. Under the wartime “enforcement plan” of September 10, 1941, Glatz was responsible for Wehrmacht soldiers from Defense Districts VIII and XVII, and the southern Generalgouvernement as well as Luftwaffe airmen from Air Defense District (*Luftgau*) VII who were sentenced to terms of more than six weeks. Additionally, it was responsible for prisoners from the southern part of the occupied Soviet territories and the Balkans.¹⁹ Under the enforcement plan that came into effect on January 1, 1943, the responsibilities of WG Glatz were expanded. While WG Graudenz was (temporarily) converted into a reception center (*Auffangsstelle*), WG Glatz was also responsible for soldiers from Defense District XXI and the northern and central Generalgouvernement, as well as Luftwaffe airmen from Air Defense District II.²⁰ Finally, after the division of Army Group South into Army Group A and B, Glatz received prisoners sentenced to terms of more than three months from the armed forces prisons (*Kriegswehrmachtgefängnisse*, KWG) in Dubno, Makejewka (today Makiivka, Ukraine), and Kiev.²¹

In April 1942, the “majority of the punishment” of military prisoners was moved from the WGs and their penal camp units to the front area, namely, in the Feldstraflager-Abteilungen (FStGA; field penal battalions) and Feldstraflager (field penal camps). On April 13, 1942, WG Glatz was ordered to send 300 prisoners to WG Torgau-Fort Zinna, where Feldstraflager I, with a planned strength of 600 men, was being organized.²² On April 14, 1942, the OKW ordered the formation of the first three FStGAs. FStGA 1 was formed at WG Glatz. Glatz provided the first 50 prisoners for this unit, along with 100 prisoners from WG Torgau-Fort Zinna and 50 from Torgau-Brückenkopf. After additional transfers from the penal facilities of the field army, FStGA 1 was sent to the front with between 600 and 700 men. Thereafter, WG Glatz was required to give monthly reports on “the prisoners suitable for the FStGAs” to the OKW.²³ On the basis of these reports, the general at the OKH responsible for the FStGAs organized transports to the FStGAs as well as the creation of new FStGAs. After FStGA 1, five additional FStGAs were created in Glatz: FStGA 7 on September 10, 1942; FStGA 10 on November 1, 1942; FStGA 13 on January 5, 1943; FStGA 16 on March 20, 1943; and FStGA 20 on October 1, 1943.

Along with the transports to Probationary Unit (*Bewährungstruppe*) 500, which began shortly after the start of the war, in the late summer of 1944, there were two special transports to SS-Sonderformation Dirlewanger—officially known as the 36th Waffen Grenadier Division—which functioned as a “probationary unit” within the Waffen-SS. Between 700 and 800 men from WG Glatz were sent to SS-Sonderformation Dirlewanger; their first action was in the suppression of the Warsaw Uprising.²⁴

WG Glatz received prisoners sentenced to death throughout the war. A report from July 4, 1941, on the executions that had been carried out in Glatz to that point reported six deaths by firing squad, the first occurring on December 19, 1939, and the most recent on April 28, 1941.²⁵ Further executions took place between 1942 and 1945, but the exact total is unknown. The executions took place on the shooting range in a section of the fort complex in Kranich and on the Puhuberg, above the Moltke barracks. As a deterrent measure, other prisoners were required to attend the executions.²⁶ In mid-April 1943, the method for military executions was changed from shooting to beheading or hanging. Prisoners from WG Glatz who were slated for execution were taken to the prison on Kletschkastrasse in Breslau, where they were beheaded by a civilian executioner.²⁷

With the Red Army approaching in January 1945, part of the prison’s population was organized into “Probationary Battalion Glatz” by the commanders of the camp and sent to Frankenstein (today Ząbkowice Śląskie, Poland), 20 kilometers (12.4 miles) northeast of Glatz. This unit was placed under the command of the Seventeenth Army and renamed Grenadier Battalion 570 z.B.V., indicating subordination to Bewährungstruppe 500, which sent its last battalions into battle in that area.²⁸ The remainder of the staff and prisoners were

taken westward by rail later that month. The transport was attacked by bombers in Kohlfurt (today Wegliniec, Poland), about 20 kilometers northeast of Görlitz, and there were many fatalities among the prisoners and guards. For the survivors, the trip ended 10 kilometers (6.2 miles) south-southwest of Magdeburg, in the area of Welslebe-Biere-Tarthun, where they were taken prisoner by American forces.²⁹

WEHRMACHTGEFÄNGNIS (WG) GRAUDENZ

After the Wehrmacht conquered Poland, the Germans reintegrated Graudenz (map 4c) (today Grudziądz, Poland) into Germany as part of Reichsgau Danzig-Westpreussen. The penitentiary there was converted into an Armed Forces Prison (*Wehrmachtgefängnis*, WG). One, albeit vague, clue as

to the size of the prison comes from information on the original Graudenz Prison, built in 1883, which could hold 674 male and 239 female prisoners and had an additional 57 single cells as well as space for “15 juvenile offenders.”¹ The first soldiers convicted under military law arrived at WG Graudenz on January 2, 1940.²

Under the “enforcement plan” of September 10, 1941, WG Graudenz was to hold Wehrmacht soldiers from Military Districts (*Wehrkreise*) I, XX, and XXI as well as the northern and central Generalgouvernement; Luftwaffe airmen from Air Districts (*Luftgaue*) I and II; and sailors from the Naval Station (*Marinestation*) Ostsee (shared with WG Anklam), all of whom had received sentences of more than six weeks’ imprisonment. Until November 17, 1941, the prison also held Wehrmacht soldiers from the northern and central areas of the occupied Soviet Union.³ From November 17, 1941 on, WG Graudenz only received such prisoners if they were sentenced to prison terms of three months or more. It received such prisoners from the area of Army Group Center (*Heeresgruppe Mitte*), including its rear areas, and from the territory of Armed Forces Commander (*Wehrmachtsbefehlshaber*) Ostland via the Wartime Armed Forces Prison (*Kriegswehrmachtgefängnis*, KWG) Borissow (today Barysaŭ, Belarus).⁴ Prisoners from the area of Army Group North (*Heeresgruppe Nord*), its rear areas, and from Armed Forces Commander Ostland were sent via KWG Dünaburg (today Daugavpils, Latvia); in December 1941, KWG Dünaburg was relocated to Wilna (today Vilnius, Lithuania) and renamed KWG Wilna.⁵

Little is known about the labor that WG Graudenz’s prisoners had to perform. In 1941, some of them were sent to the Junker and Ruh firm in Graudenz to work in the production of infantry vehicles.⁶ There is no information available about the Military Prisoners’ Units (*Wehrmachtgefangeneneinheiten*, WGA) that were subordinate to WG Graudenz. An address directory from May 13, 1941, lists a WGA from Graudenz in Strasburg, West Prussia (today known as Strasburg [Uckermark]). Another directory from January 31, 1942, indicates that it had been replaced by a WGA at Georgenhof in Pestlin (today Postolin, Pomeranian Voivodeship, Poland).⁷

As in other WGs, Graudenz was not only a place where prisoners served out normal terms but also a site for “detaining” (*Verwahrung*) prisoners who, subject to confirmation by the judge or petition by the prison commandant, were classified as “irredeemable” (*besserungsunfähig*).⁸ This detention was carried out under especially harsh conditions in the so-called Penal Camp Unit (*Straflagerabteilung*). Significantly, the prisoners’ actual prison terms would only begin after the war. The strength of the Graudenz Penal Camp Unit was at least 100 men as of March 1, 1942, according to a report from April of that year.⁹

In parallel to the transfer of prisoners to the penal camps, since the beginning of the war, the prison authorities regularly selected candidates to receive suspended sentences through “front probation,” that is, through proving themselves in combat. Front probation could be served in normal

combat units or in a battalion of the separate Probation Unit (*Bewährungstruppe*) 500.¹⁰ On February 12, 1942, the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) ordered WG Graudenz to “immediately re-evaluate” the prisoners to determine whether they could be recommended “for a suspension of sentence through probation” in combat.¹¹ The total number of those who were sent to Probation Unit 500 from Graudenz is unknown.

As the example of Armed Forces Detention Camp (*Wehrmachtgefangenengelager*, WGL) Donau demonstrates more clearly, in April 1942, the “center of gravity” of military prisoners’ punishment was moved from the WGs and their Penal Camp Units to the front, namely in the field prisoner battalions (*Feldstrafgefangenen-Abteilungen*, FStGA) and field penal camps (*Feldstraflager*).¹² The goal of this measure was to create a greater deterrent effect on the fighting troops by giving the military prisoners dangerous tasks, such as constructing frontline fortifications. In addition, this measure would reduce overcrowding in the WGs.

In the course of this development, on April 13, 1942, WG Graudenz received the order to send 100 prisoners to WG Torgau-Brückenkopf, where Field Penal Camp II, with a planned strength of 600 men, was being organized. From June 1, 1942, all prisoners destined for the penal camps were to be sent via WG Torgau-Fort Zinna, which was thereafter given the responsibility for “collecting all those to be held in the penal camps” and which held sole responsibility for the Field Penal Camps.¹³

On April 14, 1942, the order for the establishment of the first three FStGAs was issued. WG Graudenz was ordered to send 50 prisoners to FStGA 3; they were interned in WG Anklam in the interim. WG Graudenz had to send the OKW monthly reports on “the number of prisoners to be sent to the FStGAs.”¹⁴ Based on these reports, the OKW determined the number of transports needed and made decisions on the creation of new FStGAs. No FStGAs were established at WG Graudenz itself.

Under the enforcement plan of March 10, 1941, Graudenz—along with WG Torgau-Fort Zinna and WG Germersheim—was also responsible for holding prisoners of war (POWs) who were sentenced to “prison terms of greater than 6 weeks.” Such prisoners came to Graudenz from Defense Districts I, II, VIII, XX, and XXI.¹⁵ Additionally, such prisoners were sent to Graudenz from military units for which Graudenz was the nearest WG. The enforcement plan of October 4, 1941 changed the responsibility so that it was determined by nationality, rather than location. Graudenz was to hold French POWs, while Torgau-Fort Zinna held British and Belgian prisoners. WG Germersheim was responsible for POWs from Eastern and Southeastern Europe (i.e., Poles, Soviets, Serbs, and Greeks). Under the enforcement plan of November 27, 1942, which came into effect at the beginning of 1943, WG Torgau-Fort Zinna was no longer responsible for POWs. Graudenz was given new responsibility for “Belgians, Britons, and Americans,” in addition to French prisoners.¹⁶ Ostensibly to discourage escape attempts, POWs were

sent to the WG that was farthest from their home countries. Information on the experience of POWs in Graudenz is not available.

With the expanded responsibilities for POWs, WG Graudenz lost its status as a detention center for Wehrmacht prisoners. Whether the WG's Wehrmacht prisoners were all evacuated at the beginning of 1943 is unknown. It is also unknown what became of the group of officers for whom Graudenz was chosen as the central prison. In this capacity, it handled officers of the Replacement Army (*Ersatzheer*) who were sentenced to prison terms of more than three months without loss of rank. Possibly, they were sent to a subordinate WGA, as officers who received the same penalty in WG Glatz were.¹⁷

As in other locations for Wehrmacht prisoners, death sentences were also carried out in Graudenz. The execution site was the shooting range in the city forest. On April 14, 1940, Graudenz penal camp prisoners Heinrich Hammann (b. December 6, 1918), Alfred Krüger (b. June 18, 1918), and Hans Joachim Werner (b. May 9, 1917) were executed. All three were sentenced to death for desertion on March 27, 1940, by the court of the 156th Division.¹⁸ One day later, Wehrmacht prisoner Paul Remus (b. October 11, 1919) died in the same place, having received his death sentence for the same crime.¹⁹ Karl Möritz (b. March 2, 1911) and Gustav Jentsch (b. December 18, 1912) were sentenced to death by the court of the 428th Division and executed in the forest on August 18, 1941, and December 2, 1942, respectively.²⁰

It is unclear if WG Graudenz continued to hold prisoners sentenced to death after the changes at the beginning of 1943. In the time from the spring of 1943 to the end of September 1944, the Wehrmacht expanded the use of hanging and beheading as methods of execution.²¹ It was possible that prisoners sentenced to death from WG Graudenz were executed in the Investigative Detention Facility (*Untersuchungshaftanstalt*) in Posen (today Poznań, Poland) during this time, where there was a guillotine operated by a Reich Justice Administration (*Reichsjustizverwaltung*) executioner under the leadership of a martial law council (*Kriegsgerichtsrat*). This could have been the case with the following soldiers, all of whom were sentenced in the court of the 152nd Division in Graudenz, and all of whom were executed in Posen: Kurt Schuchardt, executed on either June 16 or June 17, 1943, and Walter Keller and Viktor Tschedne, executed on March 28, 1944.²² On the latter date, a prisoner from Probation Unit 500 was also beheaded in Posen. The times of death of Tschedne (12:00) and Keller (12:06) suggest that the three were guillotined one after the other.

On January 30, 1945, Georg Itzel (b. January 6, 1909) was shot in Graudenz on the orders of the court of the 83rd Infantry Division.²³ However, it is questionable whether the execution was carried out in association with WG Graudenz, or if the prison had already been evacuated in the face of the advancing Red Army. Graudenz fortress was encircled by the Soviets on February 18, 1945; it capitulated on March 5.²⁴ The fate of the remaining Wehrmacht prisoners is unknown.

SOURCES Primary source information about WG Graudenz is located in BA-MA (RH 14/31); BArch, CEGES/SOMA Microfilm Collection; the Hessischen Staatsarchiv Darmstadt, Bestand G 27 (Staatsanwaltschaft beim Landgericht Darmstadt); and BArch PA.

WEHRMACHTGEFÄNGNIS (WG) TORGAU-FORT ZINNA AND BRÜCKENKOPF

From 1919 in Germany, civil courts enforced penalties against soldiers. Beginning on January 1, 1934, the army and navy established their own military courts, but there were no military prisons at the time. There were special regulations for guilty soldiers, who, for example, could continue to wear their uniforms, but they were still held in civilian prisons, under the control of the Reich Justice Ministry (*Reichsjustizministerium*) in Berlin.

In March 1936, the Wehrmacht founded their first detention facility on a floor of the prison in Ulm. Because this proved insufficient, in April the authorities founded a military prison in "Fort Zinna" (built 1810–1813), part of the fortifications of the city of Torgau on Elbe, lying just to the east of the town proper (map 4e). The Prussian army had already

used the fort as a prison in the nineteenth century. Now, it became the first Armed Forces Prison (*Wehrmachtfängnis*). The Torgau fortifications were massive constructions with thick walls enclosing many buildings. The whole complex had an effect on those inside it that was confusing and intimidating.

From 1936 to 1939, the Wehrmacht expanded Fort Zinna into an enormous military prison, the largest that the armed forces possessed through the end of the war. At first, it had a capacity of 1,500 prisoners. In August 1939, the authorities added another barracks complex in town, known as "Brückenkopf," to Fort Zinna. The number of prisoners was growing rapidly, however, so, in November 1939, Brückenkopf became an independent Armed Forces Prison under the command of Oberstleutnant Hans Merten, with a capacity of about 1,000 prisoners. In total, up to 70,000 prisoners served time in Torgau between its establishment and the end of the war. Oberst (later Generalmajor) Heinrich Remlinger was the commander of the whole complex.

The number of prisoners continued to increase steadily, so Fort Zinna and Brückenkopf established external camps (barrack camps) at other locations, where the prisoners usually had to work in factories. Such labor detachments (*Arbeitskommandos*) existed, for example, in Brüx (today Most, Czech Republic), where 300 prisoners worked in the chemical industry, and Bitterfeld-Wolfen, where several hundred prisoners also had to work in chemical production.

From 1941 on, Torgau was the Wehrmacht's central prison, holding approximately 6,000–7,000 prisoners. Besides German officers and enlisted men, there were also hundreds of legionnaires: foreigners who served in the Wehrmacht. In the summer of 1939, penal camp companies (*Straflager-Kompanien*) were established for prisoners whom the authorities considered "not educable" and thus never eligible for any reduction in sentence. Members of the penal camp companies were to receive treatment as in a penitentiary and similar to that in a concentration camp. They had to work every day, even on Sundays and holidays. Generally, among Wehrmacht soldiers, Torgau was well known and feared as a place of horror.

The entire Torgau complex was overcrowded, starting in 1941. Sometimes up to 10 people had to stay in a single cell under horrible circumstances: many of them had to sleep while sitting, and often the floor was wet. Every room, even the casemates, were used as cells, and additional buildings were erected. Both prisons were central points for selecting members of the Wehrmacht, who were classified as incorrigible prisoners, to be transferred into the concentration camps. The basement of Fort Zinna included several cells for soldiers awaiting death.

Beginning in 1939, the Torgau prisons, like all other armed forces prisons, were subordinate to the Commander of the Replacement Army (*Befehlshaber des Ersatzheeres*). Both prisons were organized like battalions, and the prisoners were subject to military discipline. The guard personnel were composed of officers, sergeants, and lower ranks. In addition to

forced labor, all the prisoners were drilled like infantry. Occasionally, the prisoners had to exercise for hours, in all weather.

Forced labor took place mostly in military facilities that manufactured munitions. There, artillery shells were filled with explosives. Work shifts were at least 10 hours long, and sometimes as long as 14. Workers who were judged to be "disobedient" (mostly because of exhaustion) were subject to solitary confinement in a dark cell, loss of rations, and beatings. Especially in connection with hard physical labor, most prisoners suffered from malnourishment and exhaustion.

The Torgau prisons also served as remand prisons. Several military courts used the prisons for pretrial detention. These included courts in Leipzig, the Army Central Court (*Zentralgericht des Heeres*) in Berlin, and the Court of the Armed Forces Commander Berlin (*Gericht der Wehrmachtkommandantur Berlin*).

From the spring of 1941, a new process was developed. Selected prisoners from armed forces prisons, as well as from Reich Justice Ministry prisons and penitentiaries, were to be examined in Torgau, to see if they could be employed as infantry in probation battalions (*Bewährungsbataillone*), which were part of the larger unit, Probationary Unit (*Bewährungstruppe*) 500. Nearly 20,000 prisoners were processed through Torgau and sent on to the probation battalions, including up to 6,000 penitentiary prisoners. Through exceptional bravery (or death or severe wounds), these soldiers could have their sentences commuted. Those selected were tested above all for their physical fitness (many were too weak to manage the athletic exercises). Those who could not pass the extremely strenuous selection procedure were either returned to their prison or penitentiary or were classified as "incorrigible" and sent to a concentration camp.

Those who, after years of incarceration, received the chance to join a probation battalion were full of hope at this chance to save their lives. In 1943, a Luftwaffe corporal, who had received a sentence of five years in a penitentiary for desertion and who had spent a year and nine months in the penal camp at Esterwegen, made it to Torgau to be mustered into a probation battalion: "Our prison clothes were taken away, and we received army uniforms. Everyone who had been assigned to the probation battalion received basic training. Physical fitness was decisive. They told us that anyone who could not complete these exercises would have to go back in the camp. The main exercise was a forward dive over at least five people. I took a run-up, jumped, and managed to clear seven people. Thank God—I did not need to go back into the camp."¹ What these men did not realize was that employment in the probation battalion was essentially a suicide mission. On average, a probation battalion had to be sent back to the homeland after three months to be reformed, because most probationary soldiers were either dead or wounded. The soldier quoted above was wounded twice before he fell into enemy hands in October 1944.

Additional units were formed in Torgau in April 1942: field penal units (*Feldstrafgefangenen-Abteilungen*) and field penal

camps (*Feldstraflager*). In this way, prisoners would be punished yet more harshly, and they would also be made available to the front as a workforce. Occasionally, prisoners came back out of the Field Penal Units after several months at the front, because their commanders had classified them as "incorrigible." From Torgau-Fort Zinna, these men were transferred to a concentration camp.²

From 1941 on, Torgau took in mostly soldiers who had been convicted in Germany or areas of the Soviet Union. Prisoner transports mostly took place in railroad cattle cars and presented the prisoners with serious hardships: heat or cold, hunger and thirst. Wilhelm Busch, one of those affected, reported on his reception in the armed forces prison: "A sergeant called out with a scornful voice: 'Don't imagine yourselves to be soldiers. Whoever does not obey will be liquidated. Every order is to be carried out on the double. You'll be sorry if I catch you walking on the barracks square! That goes for the former gentlemen officers, too!'"³

The decision to transfer the Reich Court-Martial (*Reichskriegsgericht*)—the highest military court—from Berlin to Torgau in August 1943 proved, in retrospect, to be far reaching because, during the war, the judicial authorities were abolished: the Reich Court Martial operated no longer as a court of appeal but as a special court with special responsibilities. Among other things, it was responsible for cases of conscientious objection (Jehovah's Witnesses were affected especially), espionage, treason, and high treason as well as for foreign resistance fighters that were active in organized groups. For that reason, from 1943 on, increasing numbers of remand prisoners came to Torgau, where they were principally held in Fort Zinna. Many of these prisoners were inhabitants of occupied territories in Northern and Western Europe but also in Poland. The president of the Reich Court Martial was Admiral Max Bastian, until October 1944, then General Hans-Karl von Scheele until April 1945.

In the Wehrmacht prisons in Torgau, up to 1,000 prisoners may have been executed by firing squad. The executions were carried out in a gravel pit or in the old moat of Fort Zinna. The victims were notified several hours before their execution. The firing squad was usually made up of members of the guard force. Other prisoners had to witness the execution. Likewise, it was prisoners who had to bind the condemned to the posts, lay the dead in coffins, and bury them.

Any of the condemned who were to be beheaded were taken to the prison in Halle/Saale. Between September 1943 and April 1945, over 200 prisoners from Torgau were killed there. In 1944, medical experiments were carried out there for the navy, to test camouflage, and these were also done on delinquents from Torgau. The interest lay at first in the eyes of those killed: to obtain scientific proof, the condemned had their eyes covered for hours before their execution, so that no light could penetrate. Later, the eyes were removed from the bodies in a chamber illuminated with red light. In addition, preparations were tested that were supposed to increase the eyes' performance. These were introduced before execution;

later, the dead men's livers and eyes were removed for examination.

Starting in the autumn of 1944, increasing numbers of prisoners from other Wehrmacht prisons were transferred to Torgau. This was true especially for prisoners from France, because that country was being liberated by the Allies and the occupying authority had collapsed. Much the same was true of the collapsing fronts in the east, where detention facilities had to be evacuated.

In the middle of April 1945, the military had all but abandoned the city of Torgau, but there were still thousands of prisoners in the prisons. Brückenkopf and Fort Zinna were evacuated starting on April 14; the prisoners were forced to march into the Erz Mountains (*Erzgebirge*). Several were bound with chains for the march. The Reich Court Martial also fled on April 14. Probationary units were still being formed from several hundred prisoners, to be employed against the Soviets. About 1,000 prisoners remained behind because they were too weak for the evacuation. Death sentences were still being carried out as late as April 19. On April 25, the last guard personnel abandoned the prisons. Several prisoners—especially foreigners—organized themselves and raised a Red Cross flag over Fort Zinna. In the course of the afternoon, American troops reached the prison area and freed the remaining prisoners. The last prisoners from Torgau were freed in the Erz Mountains on May 8, 1945.

ABOUT THE EDITORS

Geoffrey Megargee was Senior Applied Research Scholar in the Mandel Center for Advanced Holocaust Studies, United States Holocaust Memorial Museum, where he served since 2000 as project director and editor in chief for the museum's seven-volume *Encyclopedia of Camps and Ghettos, 1933–1945*. The first volume of that work, for which he served as volume editor, appeared in May 2009 and received a National Jewish Book Award and a Judaica Reference Award, among other distinctions. Dr. Megargee received his doctorate in military history in 1998 from the Ohio State University. He was the recipient of, among other honors, a J. William Fulbright grant for research in Germany, on which he based his book *Inside Hitler's High Command* (winner of the Society for Military History's 2001 Distinguished Book Award). He is also author of *War of Annihilation: Combat and Genocide on the Eastern Front, 1941*, and a contributor to the *West Point History of Warfare*. Dr. Megargee was a member of the Department of the Army Historical Advisory Subcommittee and a Trustee for the Society for Military History; he served as Treasurer of the United States Commission on Military History and Presidential Counselor for the National World War II Museum in New Orleans. He lectured frequently on the German army in World War II and the Holocaust. Dr. Megargee passed away in 2020.

Rüdiger Overmans lives in Freiburg, Germany. He holds doctorates in economics and history. He is a retired member of the former Militärgeschichtliches Forschungsamt der Bundeswehr (Military History Research Institute of the Federal Armed Forces); nowadays it resides in Potsdam, near Berlin, under the designation Zentrum für Militärgeschichte und Sozialwissenschaft der Bundeswehr (Center for Military History and Social Sciences).

Beginning in 1987, he took part in the book project *Das Deutsche Reich und der Zweite Weltkrieg* (published in English as *Germany and the Second World War*), a multivolume series on many aspects of World War II. Since his retirement in 2004, Dr. Overmans works as a freelance historian, consultant,

and reviewer. His fields of interest are mainly the expulsion of Germans from their settlement areas after World War II, the human losses caused by wars, and the prisoners of war. His first major publication as a historian was *Deutsche militärische Verluste im Zweiten Weltkrieg* (German Military Losses in the Second World War), which was published in 1996. Other major pieces include chapters on the fate of the POWs in Germany (volume 9/2 of *Germany and the Second World War*, 2005) and the fate of the German POWs in Allied hands as well (volume 10/2, 2008). He has published several collaborative works, and together with Wolfgang Vogt und Reinhard Otto he is working to complete an encyclopedia of the German POW administration system in World War II.

Wolfgang Vogt lives in Koblenz, Germany. He retired as an officer in the Bundeswehr in 2006. Since 1986, he has been studying the topic of German prisoner of war policy in World War II. At the center of that work is the creation of a private archive of camp records as well as the analysis of relevant prisoner of war correspondence (at present consisting of approximately 26,000 pieces). Since 1988, he has been the chairman of the international Arbeitsgemeinschaft Zensurpost e.V. (Study Group for Censored Mail) and editor of their publications. Together with Dr. Gianfranco Mattiello of Italy, Mr. Vogt is author of the two-volume handbook, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–45* (*German Prisoner of War and Internee Facilities 1939–45*). As a freelance historian, Vogt's areas of concentration lie in providing factual advice to authors and official or unofficial organizations, including archives, on German prisoner of war policy as well as authoring expert reports. Such activity includes providing testimony in court (e.g., 1994, legal proceedings in the Hamburg superior district court regarding the authenticity of the *Diary of Anne Frank*). Together with Rüdiger Overmans and Reinhard Otto, he is working to complete an encyclopedia of the German POW administration system in World War II.

NAMES INDEX

This index lists all names alphabetically by family name. Names and spellings of names sometimes vary, because of marriage, use of a pseudonym, or alternate spellings in the source documents. Titles and ranks appear only where first names are unknown. Page numbers in *italics* refer to illustrations and their captions.

PLACES INDEX

This index lists place names. Organizations are included in the Organizations and Enterprises Index. Because many camps changed location, camps appear in the Organizations Index as well. Page numbers in *italics* refer to illustrations and their captions.

- Aachen, 161
Achtyrka (Okhtyrka), 518, 520
Adabash, 289
Aegean Sea, 530, 532–535, 537–539

ORGANIZATIONS AND ENTERPRISES INDEX

This index lists organizations and entities, such as detention facilities, military and governmental agencies, political parties, educational institutions, private associations, and businesses mentioned in the text. Some German titles refer to both the person and the office; therefore they are included here. Note that extremely prevalent organizations such as the Wehrmacht have not been indexed. Government agencies and military units not otherwise identified by country are German. Page numbers in *italics* refer to illustrations and their captions. The page numbers corresponding to each camp essay are in **bold** type.
