PREFACE

Between 1933 and 1945, National Socialist Germany, together with its allies and collaborators across Europe, created perhaps the most pervasive incarceration system the world has ever known. That system's goals, which included detention, intimidation, indoctrination, labor, punishment, racial and social manipulation, and murder, operated in direct support of the Nazi state's broad, overlapping aims for Germany: the advancement of the Aryan "race," the creation of a "people's racial community" (*Volksgemeinschaft*), the acquisition of "living space" (*Lebensraum*), and the defeat of Germany's internal and external enemies. The Holocaust, that is, the annihilation of European Jewry, was linked to all those aims, and so it was also connected to the camp system.

The *United States Holocaust Memorial Museum Encyclopedia of Camps and Ghettos, 1933–1945* is the result of the museum's effort to understand the camp system and its connections to the Holocaust and to pass that understanding on to the public. The *Encyclopedia* aims to achieve four main goals. First, it provides as much basic information as possible about individual camps and other detention facilities. Why were they established? Who ran them? What kinds of prisoners did they hold? What kinds of work did the prisoners do, and for whom? What were the conditions like? And so on. Second, because we know that ours cannot be the last word, the entries detail the sources from which the authors drew their material, so that future scholars can expand on the work. Third, the volumes' internal structures and the overall organization of the project are meant to help the reader see the overarching architecture of the camp system. Finally, and perhaps most important, this is a work of memorialization: it preserves the histories of tens of thousands of places where people suffered and died.

The response to the volumes published thus far has been heartening. Word comes in regularly, from within and outside the museum, of how much use they are getting. Thousands of people have referred to them, as part of academic research projects and to sort out family histories. People have found the camps and ghettos where their relatives were incarcerated; sometimes they have found their relatives' names. Teams of scholars have extracted information from the volumes and used it to examine the camp system in new ways. Moreover, many of these users have benefited from the agreement we reached with Indiana University Press to put the first two volumes online, making them much more accessible and completely searchable.

With this volume, the *Encyclopedia* team is opening up additional new avenues of inquiry, by examining an underresearched segment of the larger incarceration system: camps and other detention facilities under the direct control of the German military, the Wehrmacht. These include prisoner of

war (POW) camps, civilian internment and labor camps, work camps for Tunisian Jews, brothels in which women were forced to have sex with soldiers, and prisons and penal camps for Wehrmacht personnel. As a result, this volume not only brings to light many detention sites whose existence has been little known but also advances the decades-old process of dismantling the myth of the "clean Wehrmacht," according to which the German military had nothing to do with the Holocaust or the Nazi regime's other crimes. This book contains detailed descriptions, drawn from German records and eyewitness testimony, of hundreds of sites that the Wehrmacht organized and supervised. Conditions at those sites ranged from relatively benign, to oppressive, to murderous. The worst of them, such as the camps for Soviet POWs, imposed levels of suffering that are nearly unimaginable and that led to millions of deaths. Additionally, the army assisted in the identification and murder of Jewish Soviet POWs, through either shooting or gassing. If the German generals' refrain after May 1945, "We were no Nazis," was sometimes true in a narrow legalistic sense, that circumstance had little practical significance for the large number of people who suffered at their hands.

The appearance of this fourth volume means that there are three more to complete. The *Encyclopedia* team in the Jack, Joseph and Morton Mandel Center for Advanced Holocaust Studies is working on all of them simultaneously, with much-needed help from hundreds of outside authors, volunteers, and other specialists. Volume V will deal with a broad array of camps for non-Jews, including internment camps for Poles, "euthanasia" sites, "work education" camps, camps for Roma and Sinti, Gestapo and Justice Ministry prisons, and facilities for forced abortion and infanticide, among others. Volume VI will cover a variety of sites solely for Jews, including extermination, transit, and forced labor camps. Volume VII will encompass the camps for foreign (non-Jewish) forced laborers, but the hardcover volume will treat the topic only in general terms, since the numbers involved—more than 35,000 sites—are too large, and the data too sparse, to include entries on individual camps. We will handle these in a database whose design is in development. It will allow scholars of the Holocaust, World War II, and Nazi Germany to extract, sort, and analyze information on the camps in ways we can hardly imagine today.

Above all, this volume and the *Encyclopedia* series is a testament to the abilities and dedication of its general editor, Geoffrey P. Megargee, who died before he could see this work come to completion. In his more than twenty years of service at the United States Holocaust Memorial Museum, Dr. Megargee forged this project into the unique resource it now is. His successor, Dr. Alexandra Lohse, will continue the work in his spirit.

XVIII PREFACE

To date, the project has involved the efforts of over 700 authors from 34 countries, plus translators, editors, cartographers and cartographic researchers, archivists, librarians, curators, photographic researchers, and administrative support staff. Archives, museums, universities, and other scholarly institutions from around the world have contributed. The museum's own resources, including nearly 300 million pages of documents, over 111,000 photographs and images, and over 113,000 published works, have provided much of the raw material. We hope and expect that the project will be expanded on, but we doubt that it will ever be replicated.

Like the others in the series, this volume is the product of a team effort. Special thanks go to Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt, who made available core camp data from their forthcoming *Das Kriegsgefangenenwesen der Wehrmacht im Zweiten Weltkrieg. Organisation und Einsatz*. The availability of this information as well as the involvement of Rüdiger Overmans and Wolfgang Vogt as coeditors ensured that this volume would include the most up-to-date, comprehensive coverage of Wehrmacht camps. Their efforts, along with those of the other external and in-house authors of the more than 650 entries in this volume, have helped identify many of the Wehrmacht's facilities for the first time. Since most of these entries came to us in Russian, German, or Polish, we are indebted to our adept and diligent translators.

Beyond the *Encyclopedia*, the Mandel Center is doing a range of other work designed to strengthen and shape the field of Holocaust Studies. The Mandel Center's programs include (1) the largest extant international fellowship residency program for Holocaust-related research, including competitive graduate student research assistantships, in the world;

(2) annual seminars for college/university faculty who teach about the Holocaust; (3) a variety of academic symposia, seminars, research workshops, panels, and special lectures both in North America and abroad; (4) specialized research projects, including the publication of the *Encyclopedia* and the Jewish Source Study Initiative series, *Documenting Life and Destruction: Holocaust Sources in Context* and the related digital teaching platform, *Experiencing History: Jewish Perspectives on the Holocaust*; (5) academic publications, including the journal *Holocaust and Genocide Studies* and research works produced in partnership with university and other publishing houses. The Mandel Center develops and sponsors research and teaching that tap into the Museum's resources, including its collections of documents, rare books, memoirs, oral testimony, film, photographs, art, and artifacts, and the Holocaust survivors and victims' database. These programs and other efforts offer invaluable opportunities to established and emerging scholars and help the Mandel Center to advance the field of Holocaust Studies and thus to honor the memory of the victims and deepen understanding of their history.

ACKNOWLEDGMENTS

As with any volume, and especially in connection with a work of this kind, there are a great many people and institutions who have contributed, and we would like to thank them.

Paul A. Shapiro, director of the Jack, Joseph and Morton Mandel Center for Advanced Holocaust Studies until Spring 2016, brought the *Encyclopedia of Camps and Ghettos* project into existence and devoted his expertise and influence to keeping it going. As the project grew in scope and complexity, and, as the time necessary for completion expanded beyond anyone's expectations, he never wavered in his commitment to the idea that we should produce the most comprehensive, highest-quality work we could. Wendy Lower and Lisa Leff, Paul's successors, maintained that commitment.

The Museum's Academic Committee has also continued to provide firm support, encouragement, and advice to the *Encyclopedia* team.

The Mandel Center's director of Applied Research, Jürgen Matthäus, has been a key source of reasoned guidance, perspective, organizational backing, and comradeship.

My coeditors, Rüdiger Overmans and Wolfgang Vogt, were the subject experts behind the prisoner of war camp section, which makes up the bulk of the volume. Rüdiger has been involved in this project since 2002, and Wolfgang since 2003. Without them, if the volume had come out at all, its accuracy and comprehensiveness would have suffered tremendously. They shaped the section's organization and content, and they reviewed every entry, contributing corrections or additions of vital importance in almost every instance. Reinhard Otto also lent his expertise to the section.

Mel Hecker, the Mandel Center's Publications Officer, deserves special mention. As with the previous three volumes, he was our go-between with Indiana University Press. He read every single word of the manuscript, made sure it was ready for the publisher, then reviewed the copy edits and the page proofs. The concentration, dedication, and attention to detail that his job required would be difficult to overstate.

Dallas Michelbacher, who contributed greatly to this volume, wrote a good number of the essays and was instrumental in helping to ensure the historical accuracy of the text. His positive attitude and unflagging energy were always appreciated, as was his scholarship.

The contractors who worked on this project over the years deserve a great deal of credit. The volume would never have reached completion without their efforts, which included re-

search, writing, editing, photo research, mapping, translation, and administration. We offer our thanks to Guy Aldridge, Jen Burton, Leslie Curley, Robert Hyam, Jolanta Kraemer, Kathleen Luft, Gerard Majka, Bradley Napier, Allison DeGraff Ollivierre, Patrick Tobin, and Evelyn Zegenhagen.

The following current and former Mandel Center and Museum staff members also made important contributions to this volume over the years: Elizabeth Anthony, Peter Black, Tracy Brown, Robert Ehrenreich, Neal Guthrie, Emil Kerenji, Jerry McCauley, Patricia Heberer Rice, Wrenetta Richards, Claire Rosensen, Alexander Rossino, Gwendolyn Sherman, and Kristen Walker.

Current and former staff members of the Museum's Library, Archives, and Photographic Archives all provided invaluable service. We would especially like to thank Michlean Amir, Aleksandra Borecka, Judith Cohen, Ronald Coleman, Nancy Hartman, Steven Kanaley, Megan Lewis, Henry Mayer, Vincent Slatt, and Caroline Waddell.

Thanks, too, to Eli Rosenbaum and the Office of Special Investigations in the Criminal Division of the United States Department of Justice.

Financial support is, of course, the lifeblood of a project as massive as this one. We wish to thank the Helen Bader Foundation, whose interest got the project started. The Conference on Material Claims Against Germany, Inc. has been a steady supporter for years. The Jack, Joseph and Morton Mandel Foundation has expressed its great enthusiasm for the project. The William Zell Family Foundation, Diane and Howard Wohl, the Fischmann Family Foundation, and the Miriam Schaeffer Family Foundation also provided significant support.

Many people at Indiana University Press and Amnet Publishing Services helped with the massive job of editing the copy and putting the work into print. We would like to recognize especially David Hulsey and Pete Feely.

We obviously owe a great deal to the many outside contributors who worked so hard to provide the content of this volume. Their expertise and commitment ensure that the sites they described will not fade from history. We would especially like to recognize Alexander Kruglov, without whom most of the POW camp entries would never have taken shape.

To anyone whom we left out, we beg your forgiveness.

GEOFFREY P. MEGARCEE

EDITORS' INTRODUCTION

In the years following World War II, a myth grew up around the German armed forces, the Wehrmacht. According to this myth, the Holocaust and Germany's other crimes (to the extent that they took place at all) were the fault of Hitler, a small clique of yes-men around him, and his fanatical followers, especially the SS. In contrast, the Wehrmacht had fought honorably, under the leadership of men who only served Hitler grudgingly, men who certainly wanted nothing to do with genocide or war crimes and who resisted them when they could. German soldiers believed they were fighting to defend their fatherland and European civilization, so the myth goes, but Hitler tricked them into serving an evil regime. If they were guilty of anything, it was naivete.

This is not the place to offer a full account of how this myth came about. Suffice it to say that the myth of the "clean Wehrmacht" was the result of deliberate efforts on the part of former senior members of the Wehrmacht and sympathetic foreigners and that emerging cold war tensions provided a supportive environment on both sides of the iron curtain. The historical and legal communities have known the truth for decades, even going back to the Nuremberg trials in 1946. This is especially true in Germany, where scholars have uncovered and examined the Wehrmacht's crimes comprehensively. Scholarship in the United States has been a bit slow to catch up, but most serious students of World War II and Holocaust history are aware of the facts. Still, the myth has proven amazingly resilient; it clings to life even today. It rears its ugly head on World War II websites, in behind-the-scenes debates over Wikipedia entries, in reenactors' groups, and in popular books and magazines. It overlaps with Holocaust denial and minimalization, and it has connections to neo-Nazi and white supremacist movements.

This volume of the *Encyclopedia of Camps and Ghettos* represents one more salvo in the battle against the myth. It contributes to the fight by describing the different sites for detention, persecution, forced labor, and murder that the Wehrmacht ran on its own. The human toll that those sites took was enormous; of the Soviet prisoners of war (POWs), for example, around 3.3 million—58 percent of the total—died in German captivity. Here, at the start, however, we wish to make clear that the sites under direct Wehrmacht control comprised only a fraction of the camps and other facilities with which it was involved. The main focus for this larger group of sites was labor: tens of thousands of them produced weapons, munitions, and equipment and served other important functions within the German war economy and German society. In the process, the forced labor sites also released millions of men for service at the front, so the Wehrmacht received a double benefit. Those sites included over 35,000 camps for foreign (non-Jewish) forced laborers, 1,050 ghettos

in the occupied eastern territories, 1,900 forced labor camps for Jews, and 900 concentration camps and subcamps.¹ The Wehrmacht helped to create some of those sites, and it coordinated with the agencies, such as the Reich Labor Ministry, Organisation Todt, and the SS, that actually oversaw them. In some cases, the Wehrmacht also provided guards and put prisoners to work on military projects, such as airfield or shipyard expansion, or building defensive works. It also helped with the labor supply side: it rounded up millions of people and funneled them into the Third Reich's labor system, including POWs that it released from POW status (contrary to accepted international law) so that they could be used for forced labor outside the protections of the Geneva Convention. All of this fit, of course, into the larger context of Wehrmacht crimes, from planning and launching a war of aggression to participating in the murder of millions of Jews, the handicapped, and other soldiers and civilians, outside of the camp system. As an institution, the Wehrmacht was anything but "clean."

Briefly, this volume covers several types of camps and other facilities that the Wehrmacht ran directly. First and foremost, the POW camps: various kinds of collection points behind the front, and transit camps farther back, all of them mobile; main camps for enlisted men (Stalags) and for officers (Oflags); and some less numerous types. Rüdiger Overmans's introduction provides an overview of that system. The Wehrmacht also set up a multitude of labor camps, detention camps, "concentration camps" (not part of the SS system), and civilian internment camps, especially in the east. It established a special set of labor camps for Jews in Tunisia, during the occupation of that country in 1942–1943. There were hundreds of Wehrmacht brothels scattered across occupied Europe, in which many women were forced to serve as sexual slaves for German soldiers. Finally, hundreds of thousands of Wehrmacht soldiers, sailors, and airmen who violated regulations in one way or another had to serve time in Wehrmacht prisons and penal camps, where the cruelty of the conditions rivaled those of nearly any other camp type.

In some respects, all those facilities differed markedly from one another. They appear together in this volume for two reasons. Most obviously, the Wehrmacht ran them all, and that is the organizing principle for the volume. That fact would be unimportant, however, if the sites in this volume did not arise from, and reflect, certain fundamental principles that linked them with each other and with the sites in all the other volumes of the *Encyclopedia of Camps and Ghettos*. Irrespective of the motivations and actions of individual soldiers, the Wehrmacht as an institution, in pursuit of a war of conquest, adopted a spectrum of policies and measures that ranged from internationally accepted, to criminal, to

genocidal. This was possible because concepts such as “obedience,” “military honor,” “military necessity,” and “total war,” in combination with broad prejudices that were common in German society at the time, all of which were central parts of Nazi propaganda, resonated with soldiers struggling with the stresses of war. So, when it came to the treatment it meted out to Soviet and Italian soldiers, to women in brothels, to Jews, and to its own soldiers, the Wehrmacht reflected a set of values and beliefs that linked it with National Socialism. That fact goes to the heart of the “clean Wehrmacht” myth.

The state of research on the various types of Wehrmacht facilities is generally poor, for reasons that are complicated. To some extent, the German government’s attitude toward the victim groups has been significant. Despite the horrendous conditions in many of the sites, despite the mind-boggling death rates and terrible suffering in them, German officials have argued that POWs, former Wehrmacht soldiers, and the women who served in the brothels were not legally entitled to restitution. (Only in 2015 did the German parliament agree to symbolic payments to former Soviet POWs, of whom an estimated 4,000 remained alive at that time.) The lack of official interest meant that government money did not go to support research on these victim groups. Broader societal attitudes and corresponding scholarly interests also helped to draw researchers in other directions until relatively recently. Then there is the problem with sources. In many cases, documentation is simply lacking. For all the millions of pages of German records that do exist, vast troves of documents either did not survive the war, were destroyed later, or simply have not been uncovered.

This is not to say that no one has studied these sites at all. Some noteworthy scholarship has emerged over the years. This includes works by Gianfranco Mattiello and Wolfgang Vogt (*Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog*); Czesław Pilichowski (*Obozy hitlerowskie na ziemiach polskich 1939–1945. Informator encyklopedyczny*); and Georg Tessin (*Verbände und Truppen der deutschen Wehrmacht und Waffen-SS im Zweiten Weltkrieg 1939–1945*), among others.² We are also especially grateful for the recent work by our coeditors, Rüdiger Overmans and Wolfgang Vogt, which they refer to as the *Kerndatensätze* (core records): the dates of establishment and dissolution, and, where applicable, the field post numbers, for nearly every POW camp.

Because of the general state of research, and despite the work that scholars before us did, this volume is less complete than we would like it to be. We have entries for all the main POW camps, but many of those entries are mere skeletons, to which we have been able to add little or no flesh. Similarly, the entries for the Tunisian work camps for Jews are quite short. We are certain that we are missing many hundreds of labor and detention camps, especially in the east, for which we could not find any records, and we were also unable to uncover

any meaningful amount of documentation for individual brothels; as a result, these facilities are covered in single broad essays.

One type of camp deserves special mention in this context: the POW subcamps. When we began work on this volume, we assumed that we would cover those sites with individual entries, as we had the concentration camp subcamps in Volume 1. The standard we applied in that volume was this: if the prisoners lived at a site, as opposed to marching out to it and back daily, then that site would count as a subcamp. That standard proved impractical in this volume, however, for two reasons. First, there was almost no documentation on the subcamps (or labor detachments, *Arbeitskommandos*, as they were often called). Second, the numbers were astronomical. For much of the war, most POWs were not in the main POW camps; they were scattered all over Germany and occupied Europe, performing labor. Because of the lack of documentation, we cannot pin the figures down, but, if one limits the coverage to camps with a minimum size of 100 prisoners and a minimum duration of one month, there were tens of thousands of them. There is simply no way for us to cover them all. Some of them come up in the main camp essays, and occasionally we can cite a figure for the number of subcamps under a certain main camp on a certain date, but that is all we can do. With regard to this, we wish to emphasize that, while we are certain of the existence of the camps that this volume describes, the absence of a particular location or unit in this volume does not constitute proof that no such camp existed.

All the caveats notwithstanding, we believe this volume represents a significant contribution to the field. It is the only one of its kind, in which readers in the English-speaking world can find information on the kinds of facilities it covers. We hope that this volume proves as useful as the first three and that future researchers will be able to build on the foundation we have provided, by finding more information about individual sites and, perhaps, by using geographic and other information in databases and graphic representations to explore the topic in new ways.

Geoffrey P. Megargee

NOTES

1. These sites are, or will be, covered in volumes 7, 2, 6, and 1 of the *Encyclopedia*, respectively.

2. Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog*, 2 vols. (Koblenz: self-published, 1986–1987); Czesław Pilichowski, *Obozy hitlerowskie na ziemiach polskich 1939–1945. Informator encyklopedyczny* (Warsaw: Państwowe Wydawnictwo Naukowe, 1979); and Georg Tessin, *Verbände und Truppen der deutschen Wehrmacht und Waffen-SS im Zweiten Weltkrieg 1939–1945* (Osnabrück: Biblio, 1966–2002).

READER'S GUIDE TO USING THE VOLUME

The purpose of this section is to give the reader some tips on how best to use this volume and to offer some information on the more technical aspects of the work. As is the case for every other volume, the content all but dictates a unique structure, especially within the prisoner of war (POW) camp section. Most of the POW camps were mobile, and there are few records that pertain to their histories in particular locations. However, almost all the camps had assigned unit numbers. Therefore, we have used those as the framework for the POW section, rather than locations. If you know a camp's official designation (such as Stalag II B or Dulag 170), you will find it in the table of contents. (Browsing the table of contents is also a good way to get a feel for the volume's organization.) If you know a place where a camp existed, you can look for it in the Places Index. If you wish to find out what camps existed in a particular region, the Map Section would be your first stop. Remember that, because some camps changed locations, many camps appear more than once on the maps. This approach applies to some of the Wehrmacht disciplinary facilities, as well. We have organized the other types by location, as appropriate.

Regarding the maps: we have placed them together in one section, with a map index, and opted to show, on each map, all the different sites that existed in the area that the map covers. That seemed the simplest and clearest solution, since the nature of the volume's contents all but precludes placing maps within particular sections, and because so many of the camps existed in more than one location over the course of the war. This approach also provides a picture of just how many Wehrmacht camps and other sites there were, on one set of maps.

The *Encyclopedia*'s first purpose is to provide as much basic information as possible on each individual site. To achieve that end and also to provide for as much consistency as possible among the entries, we asked our many contributors to try to answer questions such as the following, as best as they could, in what is admittedly a small amount of space:

- When was the site established, under what authority, and for what purpose? What agencies were involved in its construction?
- What kinds of prisoners did the site hold, and how many?
- What type of labor did the prisoners perform, and what companies or organizations employed them?
- What were the demographics of the prisoner population? What were the changes in its composi-

tion, the decreases and increases in overall numbers, the death rates, and the causes of death?

- If inmates were killed, what were the methods, motives, and circumstances involved?
- Who were the commanders and key officers at the site, and what were their career patterns and length of service there?
- What units guarded the site? Did these units and their composition change and, if so, why?
- What elements of the prisoner culture were unique to the site, if any? Was there some particular aspect of the prisoners' coping mechanism that is worth mentioning?
- Were there any key events in the history of the site, such as resistance and/or escapes, organized or spontaneous?
- When and under what circumstances was the site dissolved or evacuated? What happened to the prisoners afterward?
- Were site personnel tried after the war and, if so, what were the results of those proceedings?

By and large, the contributors did an excellent job in answering these questions, given the limitations of space and, more often, of the amount of source material available. We did not insist that they address the questions in any particular order, but they nonetheless put their essays together in such a way that particular items of information are usually easy to find, assuming that the information was available in the sources.

The *Encyclopedia*'s second purpose is to encourage additional research on the sites in question, and so we also asked each author to include, first, citations to key documents, when available, and, second, a narrative description of published and archival sources, both primary and secondary, at the end of each entry. In that way, readers can see what sources an author has already consulted and where to seek additional information.

In practical terms, this volume can be used for either of two related purposes. If your goal is to learn about a particular site or sites, and no more, you may, of course, go to the relevant essays and stop there. If you want to understand a site's place in the larger system within which it existed—POW camps, for example—then begin with the introductory essay for that system, and then move to the site entry or entries in which you are interested. This is also a useful approach if you are interested in sources, since those listed for a

XXIV READER'S GUIDE TO USING THE VOLUME

particular site may not include broader works that might contain valuable information; for those, you must go to the introductory essay.

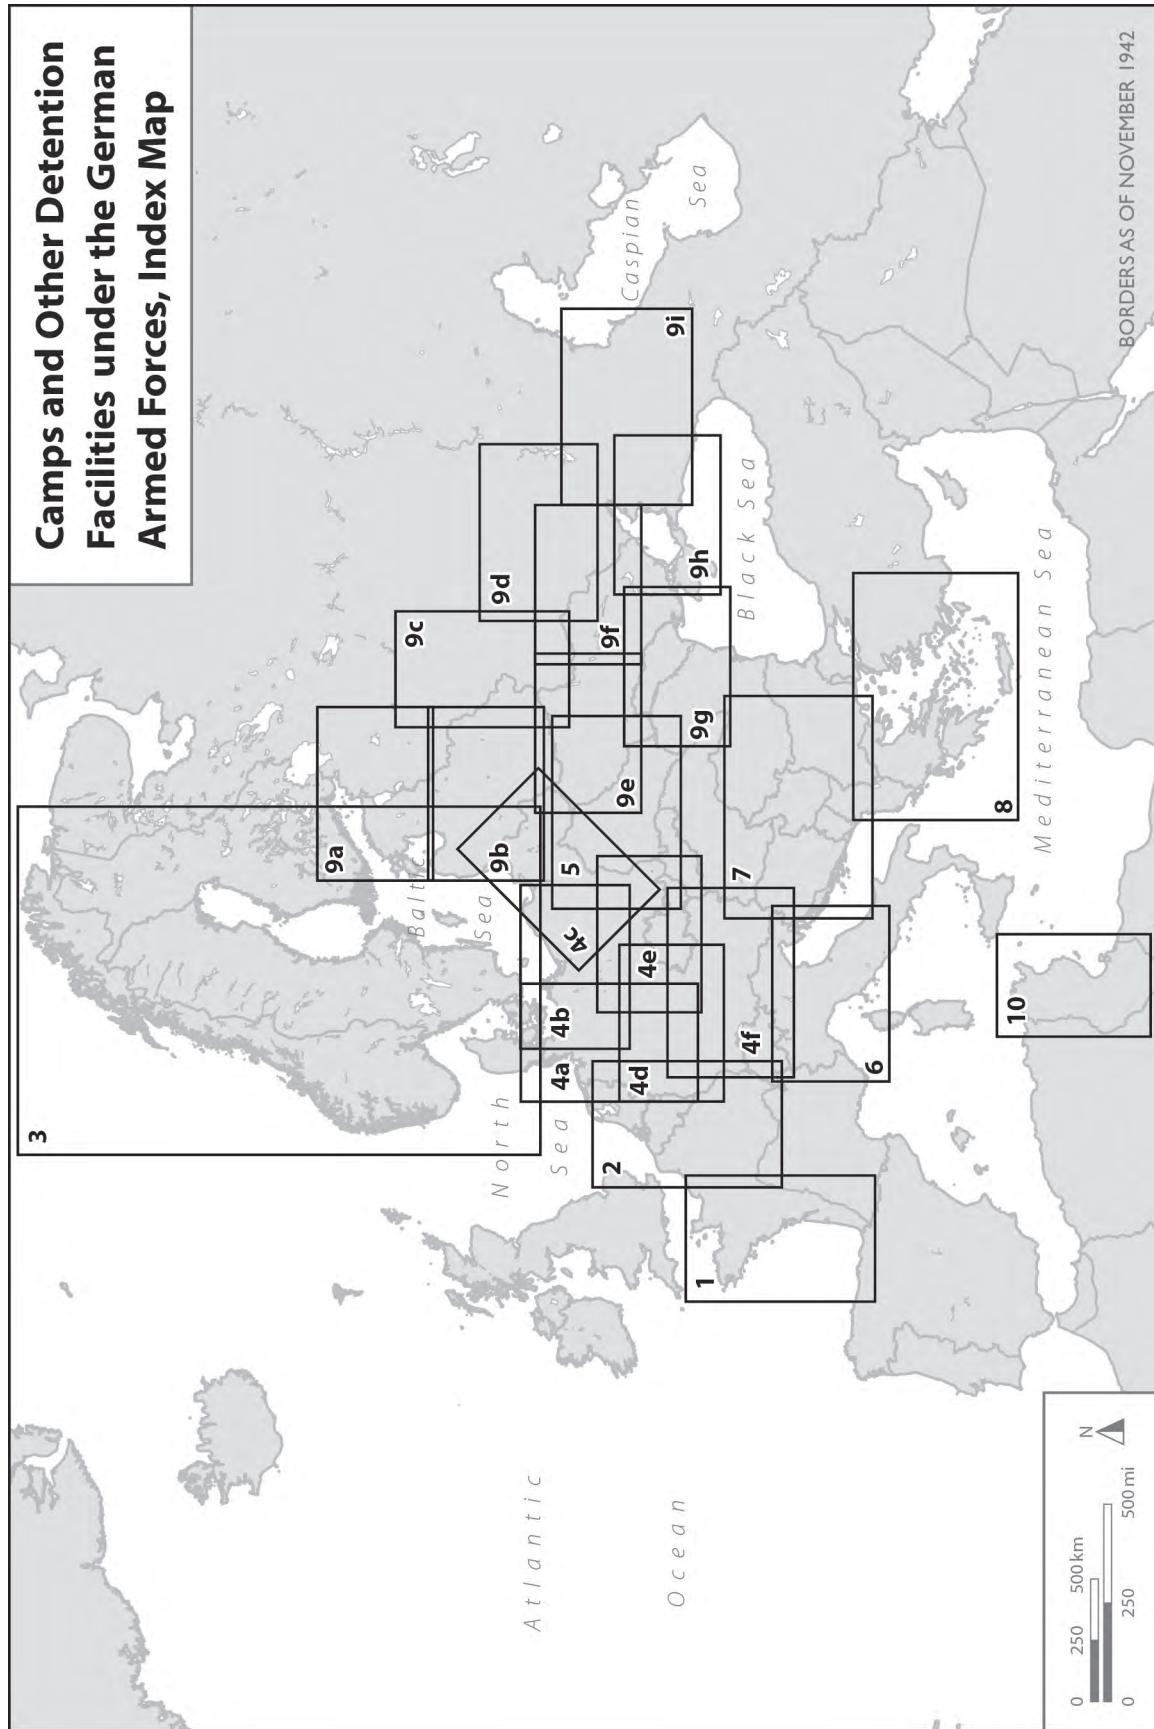

Readers should also be aware of a couple of space-saving measures. The names of archives have been abbreviated in the source sections and citations; please refer to the List of

Abbreviations for the full names. Also, there are only a few cross-references within the text, for the simple reason that most such references would be to other camps, for which there are entries in any case. We have made exceptions to this policy only where there seemed to be a special need to do so.

WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

OVERVIEW

Any attempt to describe the Wehrmacht's administration of prisoners of war (POWs) tends to be a task that knows no bounds. At some point during World War II, a great many German soldiers were occupied on a full-time basis with POW affairs. If the guard personnel are included, the number of these soldiers was presumably in the six-figure range.¹ In addition, it should be noted that the management and deployment of POWs was a cross-sectional task involving the entire Wehrmacht. An unknown but large number of German soldiers were, therefore, confronted with POW issues to a greater or lesser extent. By way of comparison, the number of POWs who had to live in the Wehrmacht's POW camps for some length of time was in the high seven figures.

Nonetheless, the Wehrmacht's arrangement for handling POWs remains an underexplored topic of research. One of the reasons for the research gap is the absence or the inadequacy of the surviving records. The files related to war imprisonment, like other records, were accidentally destroyed during the hostilities or fell victim to conscious decisions to destroy them. As a case in point, on September 9, 1944, the Chief of POW Administration (*Chef Kriegsgefangenenwesen*), under the control of the commander of the Replacement Army (*Ersatzheer*)—and, thus, of the Reichsführer-SS, Heinrich Himmler—ordered the destruction of all files that could not be taken along during redeployments. The files of the POW camps, which have survived in a few instances, and even then, only in part, are one example of such records. With regard to the files of the command level, SS-Obergruppenführer Gottlob Berger, the last Chief of POW Administration, testified after the war that the files of his office had not been destroyed by his own staff and that he had given the personnel files and the most important documents to the US military. In fact, scarcely any documents, particularly those dating from the final phase of the war, have survived.²

The desperate shortage of source material creates problems for the introductory remarks that follow. In tracing the development of POW administration in the different command areas, it would have been desirable to apply a uniform pattern as a helpful basis for comparisons. Unfortunately, this proved impractical as the developments did not always follow decisions made in advance, and, occasionally, organizational changes were more likely to be adjustments to changes that had already occurred. More than once, the absence of crucial documents meant that inferences as to the underlying decisions had to be drawn from reality on the ground. Therefore, the argument below is deductive sometimes but inductive at others.

Given the breadth of the subject matter reflected in this volume and the focus of this introduction on organizational issues, some limits must be set:

Part of the Wehrmacht's POW administration was simultaneously responsible both for the foreign prisoners in German custody and for the German soldiers imprisoned by the enemy. The following remarks, however, deal primarily with the foreign POWs in German hands; the "other side" is discussed only when this is a necessary part of the historical record.

The coverage is limited to the organizational structure of POW administration. The aim is not to write a history of the administration of POW affairs in its full breadth but to facilitate a better understanding of the camp system addressed in this volume.

At the forefront is the "desired structure" aimed at by the chief POW administrators; the degree to which it was realized and any problems in its implementation are addressed only if organizational changes were the result.

As the following remarks refer to organizational structures, great differences can be found between and among the various command areas. It would be a mistake, however, to conclude that this situation might have led to similarly great differences in the handling of the POWs. How well or poorly a POW fared depended far more on the fundamental rules for the treatment of POWs from the country in question and the local situation than on the organizational structures of the Wehrmacht.

THE ORIGIN OF THE WEHRMACHT'S PRISONER OF WAR ADMINISTRATION

Quite a few readers may be inclined to believe that the Wehrmacht had a single unified POW organization. That was not the case, however. During the initial planning for the organization of POW administration in 1937, the Army (*Heer*) had still intended to assume absolute responsibility for all POWs. Such an approach had been rejected by the other branches of the Wehrmacht, particularly the Luftwaffe, in anticipation that by no means would all the future POWs be Army soldiers. The central responsibility for management of POW affairs was, therefore, entrusted to the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW).

At first a single Wehrmacht-wide POW system under OKW command seemed to be a possibility, but, at the start of the war, the Luftwaffe's proposal nonetheless gained acceptance: the Luftwaffe and the Navy (*Marine*) were allowed to establish their own camps for the members of enemy air and naval forces, respectively. As a result, only the Army remained

2 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

the concern of the POW administration in the Armed Forces High Command—though, even this was subject to limitations. Not a single office was subordinate to it in the service chain of command or regarding deployment; its managerial authority was purely formal in nature.³

Initially, in 1939, all the POW facilities of the Army were still functionally subordinate to the POW administrative apparatus in the OKW. In 1940, however, with the campaign in the West and the Army High Command (*Oberkommando des Heeres*, OKH) in the leading role, an independent arrangement for POW administration also was created for the Field Army. The same thing occurred in the summer of 1941, when a new theater of war arose in the East. Under the authority of the Field Army, therefore, were the POW facilities:

- In France⁴
- In the Army's theater of operations in the eastern theater of war

Three other theaters of war can only be mentioned briefly here:

- The conquest of Poland in 1939 was so swift that there was no need to establish a POW organization there.
- In the Netherlands and Belgium, POW district commanders (*Kriegsgefangenenbezirkskommandanten*) were deployed in the Army for the first time in 1940. Within a few months, however, this POW organization was merged into the POW administration in France.⁵
- The German Armed Forces in Romania had a small POW administration. The same was true for Norway, Northern Italy in 1943, and the Balkans.⁶

In all these areas, the Field Army made its own decisions, which naturally depended also on the specific situation in these occupied territories.

Nonetheless, the POW apparatus in the Armed Forces High Command—far more extensive than the POW administrations of the Wehrmacht's other branches—retained a leading role with respect to all other POW organizations, including those of the Luftwaffe and the Navy. Functional regulations of the OKW were generally adopted unaltered, but printed on the branch's own letterhead or with an official cover letter attached to lend them legitimacy. With respect to organizations outside the Wehrmacht, such as the protecting powers and the aid societies, the OKW always played a leading role, acknowledged by all parties. Matters that transcended the Wehrmacht's sphere of authority were routed via the OKW. In addition, the special regulations applied only to the foreign soldiers in German custody but not to the German POWs in enemy hands. Here, the OKW remained responsible for all German POWs, no matter which branch of the Wehrmacht they belonged to. Thus, the head of POW administration in the Armed Forces High Command, when issuing commands, constantly had to keep in mind the

concerns of all three Wehrmacht branches, despite the fact that his practical influence was restricted to the Army. Moreover, he had to be mindful of the ramifications for the German POWs in foreign countries.⁷

Despite all the differences, there were also similarities among the various POW organizations of the Wehrmacht's branches. This is especially true of the basic structure, generally a three-tiered hierarchy:

A top-ranking authority had functional responsibility for the POWs; only the Navy had no centralized leadership entity.

If the area of responsibility was too big geographically or the number of POWs managed was too large, a second tier of the hierarchy was introduced: the Commanders of Prisoners of War (*Kommandeur der Kriegsgefangenen*). If necessary, their regions could be subdivided, so this tier could also be described as having two levels. In places where the number of POWs was small, however, the second tier might well be completely absent.

The camps represented the lowest tier of the POW organization, at least in most cases, and especially in the early days of the war. In individual cases, particularly in that of the Replacement Army, entities below the camp level emerged over the course of the war, ultimately causing the camps to occupy an intermediate position.

Even though the three-tiered hierarchy above must be taken with a grain of salt for most of the component POW organizations of the Wehrmacht, this does not mean that the organizational structures would have been uniform. In fact, they differed substantially from one theater of war to another.

THE PRISONER OF WAR ORGANIZATION IN THE DOMAIN OF THE ARMED FORCES HIGH COMMAND, 1939–1944

In the final analysis, the Armed Forces High Command was left with only the OKW command area, usually termed the OKW domain (*OKW-Gebiet*), consisting of the following areas, which were independent of each other:

- The command area of the Replacement Army, that is, the Home Command or Zone of the Interior (*Heimatkriegsgebiet*), including the annexed Polish territories
- The Protectorate of Bohemia and Moravia, where no POW facilities were stationed
- The Generalgouvernement, where a commander of POWs on special assignment (*Kommandeur der Kriegsgefangenen z.b.V.*) was subordinate to the Military District Commander in the occupied territory (*Wehrmachtbefehlshaber*)

- The Reich Commissariat for Ostland and the Reich Commissariat for Ukraine, each with a commander of POWs
- Norway and Finland, with several POW command posts (*Kommandostellen*), camps, and labor units
- The Italian theater of war after the occupation of Italy by the Wehrmacht
- The theater of war in the Balkans, beginning in 1944⁸

In addition, at one time or another, individual POW units were deployed in occupied countries, such as Denmark, and after 1940, Belgium and the Netherlands. Because no controlling administrative office (*Führungs-Dienststelle*) was deployed there, however, this could not be termed a POW organization.⁹

THE PRISONER OF WAR ADMINISTRATION OF THE ARMED FORCES HIGH COMMAND

For the central management of POW administration in these areas, the OKW had already created a command and control structure long before the war began. In September 1938, Major Hans-Joachim Breyer was appointed head of Group V, Prisoner of War Administration and Central Records (*Kriegsgefangenenwesen und Zentralnachweis*), in the Domestic Department of the General Office of the Armed Forces (*Allgemeines Wehrmachttamt, AWA*) in the Armed Forces High Command. His job was to organize the scheme of POW administration for future military activities. Then, as of October 1, 1939, the POW administration, under the name “Department of Wehrmacht Casualties and Prisoner of War Administration” (*Abteilung Wehrmachtverluste und Kriegsgefangenenwesen*), headed by Major Breyer, acquired its organizational structure, geared to wartime deployment:

- Group 1: Enemy Prisoners of War in Germany
- Group 2: Administrative Affairs
- Group 3: German Prisoners of War in Enemy Territory
- Group 4: Exchange and Internment in Neutral Foreign Territory
- Group 5: Wehrmacht Information Office for War Casualties and Prisoners of War (WASt)
- Group 6: Liaison with the Red Cross¹⁰

In accordance with the low casualty figures four weeks into the war, POW affairs were the focus of the work. Personnel losses were dealt with in Group 5, which was simultaneously the central office required under the international law of war to provide information about the fate of German soldiers and of enemy POWs in German custody.¹¹

At first glance, the organizational plan may seem logical and useful, but the appearance is deceiving. To begin with, it is noteworthy that the fate of the German POWs in enemy hands and that of the enemy POWs in German custody were organizationally coupled together. As a result, it was repeatedly demonstrated to the department leadership in their daily

work how greatly the fate of their own comrades in enemy hands depended on the Germans' treatment of the foreigners. Such a linkage was by no means a self-evident one. The POW organizations of the Luftwaffe, the Navy, and the Field Army, as well as that of the overall Wehrmacht, which will be further examined later, did not exhibit this linkage. Outside Germany, for example, in the Soviet Union, the administrations for foreign POWs and those for Soviet POWs in other countries were not organizationally tied. In other countries, such as Poland, there did not even exist a unified, national-level POW administration.¹²

A second point must be added: the decision makers had learned from the experiences of World War I that POWs represented an indispensable labor pool. Nonetheless, labor deployment was not a focal point of the organizational structure; instead, from the outset, Wehrmacht leaders envisaged a cooperative arrangement with the Labor Administration.¹³

The schedule of responsibilities outlined above might create the impression that the Department of Wehrmacht Casualties and Prisoner of War Administration possessed comprehensive authorities; however, that was not so. Such a department within the General Office of the Armed Forces had merely the function of a task force. The central decisions were made by Hitler or by the leadership of the OKW and then relayed to the department head via the head of the General Office of the Armed Forces. Although the influence that can be wielded by skillful department leadership with professional expertise should not be underestimated, in the final analysis, and in most cases, central instructions regarding POW administration trace back to decisions made at the highest level, which could at best be modified by the expert bodies.¹⁴

The new department had to pass its first performance test in the first weeks of its existence, when it faced the influx of Polish POWs. The volume of work continued to grow in the spring of 1940 with the capture of French, Dutch, and Belgian soldiers. The French soldiers were transferred into the territory of the Reich for labor deployment.¹⁵

By early 1941, even before the invasion of the Soviet Union, it proved necessary to expand the organization. The area of responsibility referred to as “Casualties” was relocated as of March 1, 1941, along with the Wehrmacht Information Office, to create a new Department of Wehrmacht Casualties. The remaining sections were combined to form the new Department of POW Administration, which continued to be headed by Hans-Joachim Breyer, meanwhile promoted to the rank of Oberstleutnant. Regarding the scope of tasks, there were changes at two points:

1. Communication with the Red Cross was now assigned to the Inspector for Prisoner of War Administration (*Inspekteur für das Kriegsgefangenenwesen*).
2. The area of responsibility known as “Enemy Prisoners of War” was divided into two groups, “Enemy Prisoners of War in Germany” and “Enemy

4 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

Prisoners of War in Occupied Territories" (meaning France rather than the Soviet Union).¹⁶

The next step toward expansion was taken on March 1, 1942. The previous Department of POW Administration was upgraded to the status of an independent office: the Office Group of the Chief of Prisoner of War Administration, usually shortened to Chief of POW Administration. The new office group had two departments, one for general issues and relations with offices outside the Wehrmacht, and the other for the concrete organization of POW administration in the territory of the Reich. Oberst Hans von Graevenitz was appointed to head the new office group.¹⁷

One might suspect that the expansion was attributable to the large number of Soviet POWs captured by the Germans since the invasion of the Soviet Union. That is only partially accurate, however, as the Field Army built up its own POW organization for the Soviet POWs, in the Army's theater of operations in the east. This organization is discussed at a later point. The area of responsibility of the Chief of POW Administration, therefore, included only those Soviet POWs who were moved outside the operations zone in the East. Nonetheless, the influx of Soviet prisoners brought the number of POWs taken into Reich territory—mostly for the purpose of labor deployment—to a magnitude that necessitated a separate department within the office group to organize the personnel and resources. At the same time, however, this development produced a shift in relative importance: the area of responsibility known as "Foreign Prisoners of War" came to exert greater power than the area concerned with the German POWs in other countries.¹⁸

As aerial attacks made work in Berlin increasingly difficult, the office was moved to Torgau on the River Elbe, around 110 kilometers (68 miles) from Berlin, at the end of 1943 and beginning of 1944. The move entailed a significant change in working conditions and placed a substantial constraint on working capacity, given the rising numbers of breakdowns in the road, rail, and telecommunications networks. A few months later, on April 1, 1944, Oberst Adolf Westhoff took command of the Office Group of the Chief of POW Administration. But probably the most sweeping change occurred as of October 1 with the complete reorganization of the scheme of POW administration, which is examined in a later section of this introduction.¹⁹

THE INSPECTORS FOR PRISONER OF WAR ADMINISTRATION

Besides the official leadership of POW administration in the Armed Forces High Command, there existed two other authorities in POW affairs, the inspectors. Readers who are unfamiliar with contemporary organizational principles may be inclined to view this structural parallelism as the typical Nazi opposition of organizations. This was not the case, however; the Wehrmacht was applying a classical tenet of organizational theory: the line staff principle. In this approach, only

the commander of a unit was authorized to issue orders and to control their execution through administrative supervision. He had helpers, of course, in the form of the staff, but characteristically they were permitted to sign orders only with the addition of the words "by order." This system could be adopted successfully in those units that the respective superior himself was still able to oversee, at least in principle. However, the commanders of the central Wehrmacht staffs, with hundreds of subordinate offices, were unable to meet the requirement that they exercise administrative supervision themselves. For this reason, inspectors were appointed and empowered to perform this task as substitutes for the major commanders.

On August 26, 1939, Generalmajor Winfried von der Schulenburg was appointed General on Special Assignment for POW Administration (*General z.b.V. für das Kriegsgefangenenwesen*). He was subordinate to and reported to the head of the General Office of the Armed Forces. He looked after foreign delegations visiting the POW camps. In addition, he supervised the camps for POWs and civilian internees run by all branches of the Wehrmacht on the soil of the German Reich, but because he was not in a directly commanding position, he could only report shortcomings.²⁰

As of December 1, 1939, the office was given a new name: Inspector for POW Administration (*Inspekteur für das Kriegsgefangenwesen*). Additional duties were entrusted to von der Schulenburg in the following years: from the fall of 1940, he supervised the Scapini Mission, and, beginning in the fall of 1941, he examined the labor deployment of the POWs regarding efficiency. As of April 1, 1943, General von der Schulenburg was replaced, and his job was taken over by the Chief of POW Administration, Oberst Hans von Graevenitz. Von Graevenitz retained his previous assignment and held both positions simultaneously. As of April 1, 1944, von Graevenitz was transferred to the front as a division commander. His successor as Chief of POW Administration was Oberst Adolf Westhoff. The position of Inspector for POW Administration, however, remained unfilled until it was assigned a completely new area of responsibility as part of the reorganization on October 1, 1944. During the vacancy period, the duties of the inspector were discharged "alternatively" by the Chief of POW Administration, in consultation with the second inspector in the POW administration, as discussed below.²¹

The main task of the Inspector for POW Administration—at least in the first two years of the war—had been to protect the rights of the POWs and ensure their proper care. In 1943, however, when the number of escapes by POWs rose to the level of an increasingly serious problem, Hitler, in response to Göring's suggestion, created a new position on July 1, 1943: Inspector General for POW Administration (*Generalinspekteur für das Kriegsgefangenenwesen*). His central task was to safeguard the interests of the detaining power, that is, to prevent POWs from escaping and boost the efficiency of labor deployment. Appointed to this post was Generalleutnant Otto Roettig, who was directly subordinate to the Chief of the Armed Forces High Command and reported to him. In

the hierarchy, the Inspector General thus ranked above the Inspector for POW Administration and the Chief of POW Administration. As of October 1, 1944, with the restructuring of the system of POW administration, his area of responsibility was dropped, and the position was eliminated.²²

THE PRISONER OF WAR ORGANIZATION OF THE REPLACEMENT ARMY

At the beginning of World War II, the Department of Wehrmacht Casualties and POW Administration existed as the leadership entity and commanded the few POW camps that had been set up in the Home Command for the military campaign in Poland. By the time the invasion of France began, their number had increased to approximately 40, some of them created by converting Dulags into Stalags. As a general rule, there were approximately two Stalags per Defense District (*Wehrkreis*); only in Defense Districts II (Stettin/Szczecin) and VI (Münster) was the number significantly higher than average, with five and seven camps, respectively.²³

At the outbreak of the war, Ic (enemy situation) departments in the deputy corps headquarters (*Stellvertretende Generalkommandos*) of the respective Defense Districts acted as regional intermediate authorities between the Department of Wehrmacht Casualties and POW Administration and the camps. The institution of a “commander of prisoners of war” as an intermediate tier in the hierarchy at the level of the Defense Districts was in fact already provided for in the regulations, but, in reality, the post did not yet exist.

For the time being, however, an independent intermediate level in the system of POW administration started to develop not in the Home Command but rather in the conquered territories in the West.²⁴ In the sphere of the Replacement Army, at first, only a new Subject Group for POW Administration was set up in the headquarters of the Defense Districts as of July 1, 1940. Soon, however, the group was upgraded to an independent department: Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*). This process, which was far from being a synchronized occurrence in all the Defense Districts, was not concluded until March 1941. A connection to the upcoming attack on the Soviet Union seems tenuous at best, as there were no plans for bringing the Soviet POWs in substantial numbers into the territory of the Reich, thus creating no sizable burden on the administrative structure. The expansion is more likely attributable to the large number of French POWs who had been brought to Germany after the summer of 1940 and had to be integrated into the economic process.²⁵

Essentially, the Commander of Prisoners of War had three areas of responsibility:

- Command of the German troops under his authority
- Administration of the enemy POWs
- Support of the family members of German POWs in foreign countries.

Although the use of the POWs for the German economy was the central motive for bringing them into the territory of the Reich, the commander of POWs had no labor deployment department, as POW deployment was subject to the discretionary power of the civilian Labor Administration.²⁶

If the number of POWs in the Defense District remained below the level of 15,000, the staff of the commander of POWs consisted of seven officers and nine noncommissioned officers (NCOs) or enlisted personnel, and thus was relatively small. If the POW figures exceeded that level, there were 13 officers and 20 supporting staff. In keeping with the low manning level, the range of responsibilities was limited. The Commander of POWs was the immediate—and, most notably, also the functional superior of the camps subordinate to him, that is, of the German camp administration as well as the POWs themselves. He was not responsible for supply, however—this was seen to by other administrative offices in the Defense District.²⁷

The offices under the commander of POWs’ authority can be classified into three groups:

- Guard units
- POW camps
- Labor and supply units

First, the guard units: originally, at least one Reserve Battalion (*Landesschützenbataillon*) with four companies per Oflag and two battalions per Stalag was scheduled, but, with the increasing occupancy figures, the number of guard units rose to as many as five per Stalag. Up to 240,000 members of these guard units are said to have been deployed in the OKW area. Absent numerical data, it can only be assumed that most of the guard forces were deployed in the Home Command. In addition, an unknown number of civilian workers were used as auxiliary guards.²⁸

Each Defense District had one division for special assignment at its disposal to command the approximately 10–15 Reserve Battalions. These guard units were under the control of their divisions only in terms of service subordination; with respect to their deployment, the Stalag commandants were in charge. Originally, the operational areas of the Reserve Battalions in a Defense District had been scheduled to rotate at regular intervals so that their effectiveness would not be diminished by familiar routines. This arrangement apparently proved unsuccessful, however; if anything, the affiliation between the camp and its guard units became increasingly close as the guard units were assigned to “their” camps. At different points in time, they evidently became more and more closely tied to the Stalag commandants. Over the course of 1942, the divisions for special assignment were also disbanded, so that the Reserve Battalions were now completely subordinate to their respective Stalags.²⁹ A number of guard battalions were permanently classified as Stalag battalions for guarding the camp areas themselves; the others were assigned territorial districts (*Bezirke*) within which they were responsible for all guard duties. The districts were subdivided into company

6 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

districts (*Kompaniebezirke*), which were further divided into section districts (*Abschnittsbezirke*). In terms of size, a company district might include two administrative districts (*Landkreise*). This was the situation at the end of 1942: the guard battalions had become a fixed component of the camp organization. In 1943 they began to take on additional duties, which are considered later.³⁰

The second group of duty stations that were under the authority of the commander of POWs consisted of the POW camps. In the Home Command, in accordance with the objective of holding the POWs in custody over the long term, only Stalags, Oflags, and Ilags were deployed. Dulags were deployed only for a short time, in exceptional cases. These camps were distributed very unevenly throughout the Defense Districts, as the table below shows.³¹

Quantitatively, the lower limit of the range is two Stalags in Defense District XX, and the upper limit is nine Stalags in Defense District VI; for the Oflags, the area of variation is between zero in Defense Districts I and XX and eight in Defense District VIII. On average, four Stalags and three Oflags were stationed in each Defense District. At first glance, it may seem surprising that the number of Oflags (53) was not very much smaller than the number of Stalags (74), as the share of officers in the total number of soldiers for most POW nationalities was only a few percentage points. Here, the differences in capacity between the two types of camps had an effect: an Oflag held at most a few thousand officers, but the number of soldiers confined in a Stalag was in the tens of thousands. Regionally, the distribution, though very uneven, does not reveal a clear tendency of any kind. A case in point: in the two Defense Districts, I and XX, that were located at the eastern edge of the Home Command, there were only eight Stalags and not a single Oflag, far fewer than the average. But the numbers were above average in the other two districts located in the east, VIII and XXI, where there were nine Stalags and eleven Oflags. A slight concentration of camps can be discerned only for the three adjoining Defense Districts (VII, XII, and XV) in the central part of the Home Command, with a total of 33 camps.³²

The main task of the Stalags was to deploy the prisoners as a labor force.³³ For this purpose, each Stalag was assigned a regional area of responsibility, which it had to supply with a workforce of POWs. Admittedly, the Labor Administration, which had a field office in every Stalag, handled the allocation

of POW contingents to users, but the implementation of these objectives, that is, the concrete assignment of the POWs to places of employment, was up to the Stalag. The labor detachments (*Arbeitskommandos*) formed in this way could range in size from a single POW allocated to assist a shoemaker in a village to a massive work detail made up of hundreds or even a few thousand POWs. The total number of labor detachments formed in the Home Command may have been as large as 50,000. Smaller detachments were led by NCOs; larger ones were under the command of an officer.³⁴

During the period of labor deployment, the Stalag commandant remained the superior of the POWs; the employers had no control over the prisoners, apart from professional managerial authority during the work. The commandant's status as superior officer, however, also implied responsibility. Even if the employer provided housing and rations, it remained the Stalag's task to verify that matters were properly handled. To this end, the Stalag had control officers, each of whom supervised a district. Nonetheless, the higher the number of deployed POWs and detachments rose, the less able the Stalag was to administer so many detachments by means of control officers. An organizational level below the Stalag and above the individual labor detachments proved increasingly necessary. A starting point for such a development had always existed: officers, as labor detachment commanders, were the disciplinary superiors of their POWs, and, from 1942, control officers, too, were appointed disciplinary superiors of the labor detachments they supervised. In this way, an intermediate level of superiors was created that developed over time.³⁵

In early 1943, a new structure was created, in that the guard battalions no longer just kept watch over the POWs but also assumed personal responsibility for them. Thus, the battalion commander of the Reserve Battalion and, subordinate to him, also the company commanders and section heads became the immediate superiors of the POWs. The guard battalions were now responsible for the guarding, provisioning, and medical care of the POWs as well as their communications with the outside world. Moreover, these battalions had responsibility for the security and maintenance of the wards.³⁶

The control officers, who had increasingly assumed the functions of superiors by the end of 1942, acquired a new range of duties in early 1943 because of reorganization. At the local level, they discharged the functions that the inspector

Defense				Defense				Defense							
District	Stalags	Oflags	Ilags	Total	District	Stalags	Oflags	Ilags	Total	District	Stalags	Oflags	Ilags	Total	
I	6	0	0	6	VII	2	4	1	7	XIII	4	3	2	9

VI	9	5	0	14	XII	6	2	0	8	Total	74	53	5	132	

possessed in the Armed Forces High Command. They were not under the control of the Reserve Battalions but rather directly subordinated to the Stalag commandant; on his behalf, they kept in touch with the labor offices, the police, and the employers. But, only two months later, another change took place: the direct subordination of the control officers to the Stalag commandants was revoked, and these officers were integrated into the Reserve Battalions.³⁷

Even before this change, the regulations for large labor detachments had already provided for a small support unit, consisting of an office, medical facilities, and a paymaster's office. Now the respective company areas of authority were given a minicamp structure. Clothing storerooms and clothing repair shops, as well as detention rooms, had to be set up in all company sections, and responsibility for the facilities already in existence was transferred to the companies. In this way, an organizational structure that covered day-to-day needs came into being below the Stalag level, making contact between the Stalag and the POWs housed in a labor detachment—a miniature Stalag, to a certain extent—largely superfluous. A POW in the Home Command who was deployed outside the main camp lived not so much in a Stalag as in an environment created by the Reserve Battalion at his deployment site.³⁸

The third, yet unmentioned, group of duty stations that were subordinate to the commander of POWs consisted of German-staffed labor and supply units. Unfortunately, the history of their establishment and the organization and operations of these units are mostly unexplored; thus, the following remarks can be neither thorough nor detailed.

First, the labor units: in the Home Command, they were generally established under the responsibility of local Stalags unless they were new creations and not the result of reorganizations. Because there were no replacement units for these formations, they must have been permanently assigned to Stalags that were responsible for personnel replacement. As soon as their initial organization was complete, the units were transferred to their regions of deployment—frequently to Norway or to the eastern theater of operations. Construction and labor battalions usually remained in the Home Command, and the specialized units—roofer and glazier battalions—always did so.³⁹

If the supply or labor units remained in the command area of the Commander of the Replacement Army (*Befehlshaber des Ersatzheeres*, BdE), they were subordinate to the commander of POWs in the administrative chain of command—apparently directly subordinate, but on occasion they were also administratively assigned to the Stalags. With respect to deployment, we can distinguish two configurations: long-term construction projects, possibly in the context of air-raid precautions, on the one hand, and short-term repairs in connection with damage sustained in air raids, on the other hand. Responsible for the former group of measures were the commanders of the regional construction troops, who in turn were subordinate to the Inspectorate of Army Fortifications (*Inspektion der Festungen des Heeres*); for the latter group, the

Defense District headquarters (*Wehrkreiskommandos*) had responsibility. This dilemma—the need to serve two masters—was resolved as of May 1944 by also subordinating the construction staffs, meanwhile renamed “senior regional construction engineer officers” (*Höhere Landes-Bau-Pionierführer*), to the Defense Districts.⁴⁰

Little is known about the POW supply units of the Army. They do not appear to have been subordinate to a centralized leadership, and the purpose of their establishment was often localized. There, the POWs may have been primarily employed as “handymen.”

That was the point to which the POW organization in the Replacement Army had developed by October 1944. The reorganization undertaken at that time, however, concerned not the lower levels of the hierarchy but primarily the top-level structure.

THE PRISONER OF WAR ADMINISTRATION OF THE FIELD ARMY

Regarding the following remarks, it is necessary to identify the differences among three groups of POWs. First, the units of the Field Army had the right to retain POWs they collected for use in their own area and not send them on to the POW organization. Without authorization, however, the units were not allowed to absorb POWs as non-German volunteer forces, or Hiwis (*Hilfswillige*). Their status was probably comparable to that of the auxiliary personnel for the Luftwaffe and the Navy. This rule came into play only in the east, with respect to the Soviet POWs. This group seems not to have been registered by the Field Army and, therefore, is not considered in the remarks below.⁴¹

The second group was made up of the POW labor units and supply units. The former presumably were managed by the construction staffs; the organizational tie-in of the POW supply units, however, is undetermined. Infrequently, the existence of such units can be confirmed in the theater of operations of the Field Army, but the details of their deployment are not known. Therefore, they are also not a subject of this chapter.⁴²

The third, and by far the largest, group consisted of the prisoners who were forwarded to the POW organization by Wehrmacht field units. The discussion below deals exclusively with them.

THE MILITARY ADMINISTRATION DEPARTMENT

When the war began, the Field Army, like the Replacement Army, lacked a management organization for POW affairs. Coordination between the units of the Field Army with their collected POWs, on the one hand, and the receiving Stalags in the Home Command, on the other hand, was handled by the Department of Wehrmacht Casualties and POW Administration in the OKW. This allocation of responsibilities remained in effect during the “French campaign” (*Frankreichfeldzug*); it did not change until October 1, 1940.

8 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

The Quartermaster General Department (*Abteilung "Generalquartiermeister"*) had been in existence in the Army General Staff since August 1939. It also had a Group 2 for Questions of Executive Authority (*Fragen der vollziehbenden Gewalt*), with a focus on POW affairs. Now, however, it was reorganized. The previous Quartermaster General, Generalleutnant Eugen Müller, assumed responsibility for the administration of justice in the Field Army, as General z.b.V. Next, Generalmajor Eduard Wagner was named the new Quartermaster General, a position he retained until his suicide on July 23, 1944. The new Military Administration Department (*Abteilung Kriegsverwaltung*) now acquired a Group Qu4, which developed into the Field Army's central executive organ for POW administration. It oversaw two theaters of war: (1) France and Belgium in the west and (2) the theater of operations in the east, whose POW organization is discussed below.⁴³

THE PRISONER OF WAR ORGANIZATION IN THE EAST

For the Military Administration Department, the Army Groups (*Heeresgruppen*) in the eastern theater of war, as the highest military staffs, should have been the immediate points of contact in the field forces. These staffs, however, were designed as operational commands and had no quartermaster departments at first. Supply issues, therefore, were a subject of negotiation between the Military Administration Department and the armies. Considering that there were 11 armies, which were attacking in an area spanning more than 1,000 kilometers (600 miles), this procedure soon proved impractical. As a result, outposts of the Military Administration Department were set up in the army groups to serve as intermediary bodies. Later, in December 1941, they were absorbed into the staffs of the army groups as Departments of the Senior Quartermaster (*Oberquartiermeisterabteilungen, OQU-Abteilungen*); such departments also had a Group Qu2, which was responsible for POW affairs. The armies, on the other hand, had always had Departments of the Senior Quartermaster—and thus also the subject group known as Qu2. Because the subordinate staffs—corps and divisions—did not possess such specialized departments for POW affairs, the Senior Quartermaster Departments of the army staffs represented the forwardmost expert bodies in the POW administration system; they developed into the key positions that were responsible for the organization of POW administration in the eastern theater of war.⁴⁴

Thus, there did exist a chain of command for administrative concerns in the system of POW administration, but, at the same time, there was a need for functional supervision. In preparation for the invasion of the Soviet Union, the Wehrmacht had already begun to set up new POW district commanders' staffs (*Kriegsgefangenenbezirkskommandanten-Stäbe*), identified by alphabet letters, for deployment in the east in the summer of 1940. Three of them were created in the summer of 1940, 10 followed in the winter of 1940–1941, and 5

more were added in September and October 1941. In total, there were 18 such commands (*Führungsstäbe*) that were intended for cooperation with the army staffs or the rear commanders, as had been arranged in the "French campaign" as well.⁴⁵

Just as there were initially no senior quartermaster departments in the army group staffs, there were no POW staffs for this command level either. Beginning with the commander of the Rear Army Area South in January 1942, by July 1942, all the army groups were equipped with commanders of POWs. Thus a differentiation was made that had not existed until then: commanders of POWs were installed at each topmost command level, that is, with the army groups, the commanders of the rear Wehrmacht areas (*Wehrmachtgebiete*), and the Wehrmacht commanders. Subordinate to them in turn were several POW district commanders, each of whom operated at the level of an army.⁴⁶

Both types of POW commands were utilized flexibly. In some cases, a commander of POWs served as the adviser of the commander of an army group, while at the same time a POW district commandant was integrated into the staff of the army group as head of a subject group for POW administration. Even more frequently, district commandants were incorporated into the army staffs. In the rear areas, however, in some cases the district commandants were dependent on cooperation with individual security divisions, which in turn provided the guards for the camps that were under the authority of the district commandant. The chains of command varied widely. The closer to the front a POW facility was deployed, the more tightly it was incorporated into the command structures of the frontline troops. In rear areas, however, the commanders could, indeed, also be the immediate superiors of their camps. Only the functional oversight was always theirs to perform. The situation thus differed markedly from that in the Home Command, where the commanders were always the immediate superiors of their camps.

An additional point of contrast: in the Home Command, the Commanders of POWs were responsible neither for the evacuation of POWs nor for their labor deployment. In the Army's theater of operations, however, this was precisely the chief task of the leadership entities (*Führungsinstanzen*) in the system of POW administration. Important topics were the assignment of POW labor detachments to construction projects of the Organisation Todt, the Luftwaffe, or even the Army itself. Such projects could include repairing roads or rail lines, clearing snow, building fortifications, or the like. At the same time, the forwarding of the POWs from the army prisoner collection points (*Armeegefangenensammelstellen*) to the camps and their further evacuation to the army rear areas (*Armeegebiete*) or Army areas (*Heeresgebiete*), or to the OKW area, had to be arranged.⁴⁷

For carrying out these tasks, that is, both for the transfer of the POWs and for labor deployment, various types of POW camps were allocated to the Field Army, as the table on the following page indicates:⁴⁸

Type	Before June 22, 1941	Remainder of 1941	1942 and later	Total
AGSSt	22	0	20	42
Dulag	37	8	9	54
Oflag in the east	5	0	6	11
Oflag in the Reich	7	0	0	7
Stalag in the east	37	9	17	63
Stalag in the Reich	13	1	0	14
Total	121	18	52	191

In all, 191 camps were activated for deployment in the Soviet Union, 121 of them before the invasion began and the rest later. Seven Oflags and 13 Stalags that originally were also established for the eastern theater of war were kept in the Home Command. The most common type of camp was the Stalag—an indication that the labor deployment of the POWs in the theater of operations played an important role. In addition to the facilities listed above, other camps, originally established for other operational areas, were redeployed to the east. They also included camps with Roman numerals as identifiers; however, within six months they all were reorganized as camps with Arabic numeral identifiers.⁴⁹

In contrast to the Home Command, the commandants had no directly subordinate guard battalions available for guarding these camps. One of the tasks of the POW district commandants, therefore, was always to ensure the guarding of the camps and the transports. This may explain why AGSSts and Dulags, as the forwardmost points, were equipped with a budgeted guard platoon, beginning in 1943. Otherwise, guards who were not subordinate to the camp personnel were provided to the camps in accordance with availability.⁵⁰

The following table may give an impression of the size of the guard forces:⁵¹

Date	German soldiers	Volunteers	Total	POWs
January 1, 1942	14,000	4,000	18,000	450,000
September 1, 1943	13,000	11,000	24,000	213,000
September 1, 1944	13,000	3,000	16,000	90,000

Strikingly, the table above reveals that volunteers—Ukrainians, generally—were used for guarding their comrades. In the Home Command, this would not have been possible, but here—with Hitler's official permission—it could be done. Equally surprising is the small number of guards relative to the total number of prisoners. In early 1940, the prisoner-to-guard

ratio was four guards per 100 prisoners. This finding is confirmed by descriptions in reports stating that three soldiers had “guarded” 1,000 POWs on a march.⁵² As the front receded, beginning in approximately 1943, the POW organization also changed.

THE FINAL PHASE OF THE FIELD ARMY'S POW ADMINISTRATION

In 1942, after losing ground in the winter, the Wehrmacht had managed to conquer sizable eastward territories in the spring. Beginning in 1943, however, conquest gave way to retreat. This development compelled changes throughout the POW organization. They began first at the command level: the offices of the POW district commandants and the commanders of POWs were abolished in late 1943 and early 1944. In Army Group Center and Army Group North, their range of duties, in part, continued to be performed at first by “representatives for POW administration” (*Beauftragte für das Kriegsgefangenenwesen*). Six months later, however, these posts also were axed. The tasks of the commanders or district commandants were assumed by the Qu2 groups of the senior quartermasters. The reason for the cuts—besides the shortage of personnel—was probably the fact that, by the fall of 1944, there was hardly an Army theater of operations outside the territory of the Reich.⁵³

At the level of the camps, too, major changes took place. First, a shortage of auxiliary personnel arose, because the frontline units were bringing in fewer and fewer POWs. Consequently, Italian military prisoners were taken from the Home Command to the eastern front, so that in this sense the flow of POWs was reversed.⁵⁴

In addition, the quartermaster general decided to reorganize the fundamental structure of POW administration. Many Dulags and the Stalags designed for permanence were closed; on the other hand, 20 new AGSSts were established. Now the POWs were supposed to be taken by the AGSSts directly to the Stalags in the territory of the Reich, without having passed through Dulags.

On October 1, 1944, when the POW administration systems of the Armed Forces High Command, the Luftwaffe, and the Navy were reorganized, the POW organization of the Field Army was not affected by these changes—for all practical purposes, it hardly existed anymore. Also, in October 1944, the Quartermaster General Department was restructured, and Subject Group Qu4 in the Military Administration Department, which until then had been in charge, was eliminated. The remaining tasks of POW administration were now discharged by Section Qu2 in the staff of the Quartermaster General. The result was a return to the organizational form of POW administration that had existed in the Field Army up until 1940.⁵⁵

THE PRISONER OF WAR ADMINISTRATION OF THE LUFTWAFFE

As previously mentioned, during the initial planning for POW administration before the war began, central

10 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

responsibility had been assigned not to the Army but rather to the Armed Forces High Command (OKW), because the Navy and the Luftwaffe did not want the POWs to be completely removed from their influence. Nonetheless, only at the outset was the Commander in Chief of the Luftwaffe, Hermann Göring, content with unified POW administration under the leadership of the OKW. By the end of 1939, the first Luftwaffe POW camps were activated, but after such camps began to increase in number in 1942, a separate POW organization of the Luftwaffe also came into being.⁵⁶ It differed in several crucial points from the POW organizations of the OKW and the other branches of the Wehrmacht:

- While the leading organizations under the OKW and the other Wehrmacht branches experienced only a few changes in POW administration and exhibited substantial continuity in personnel, the Luftwaffe presented a quite different picture.
- The Luftwaffe had responsibility only for the maintenance of the foreign POWs in its own custody but not for the welfare of German members of the Luftwaffe in enemy hands.
- The Luftwaffe had POW camps only within the territory of the Reich but not outside its borders.
- The number of Luftwaffe camps was small; for the forwarding of "Luftwaffe POWs" from the time they were captured to the moment they entered a Luftwaffe camp, or for their transport between various camps or deployment locations, the Luftwaffe had to either rely on other organizational sectors—generally the Army—or create ad hoc structures itself.
- In contrast to the POWs of the Armed Forces High Command, the POWs in Luftwaffe custody were classified in three different status groups.

The fate of these three status groups are discussed first. Thereafter, the top-level organization will be addressed, because the change in the top-level structure resulted from the changes in the individual status groups.

THE PRISONERS OF WAR OF THE LUFTWAFFE

The first group consisted of the members of enemy air forces. It included not only air crews that had been shot down but also all other members of enemy air forces who had been taken into German custody in other ways. They were confined in camps of the "Stalag Luft" type, the POW camps of the Luftwaffe. Quantitatively, this was the smallest group; nonetheless, it was always at the center of public interest.⁵⁷ The second group, beginning in 1941, was made up of POWs—mostly Soviet citizens, but, from 1943, Italians as well—who were deployed in supply and labor units of the Luftwaffe. In the third group were the Soviet POWs who, beginning in 1942, served as "auxiliary personnel" (*Behelfspersonal*) in regular posts, chiefly in air defense, where they

replaced up to 30 percent of the German personnel, who could then be deployed at the front.⁵⁸

Two additional groups deserve mention:

- Labor detachments of POWs who were detailed from Stalags for specific jobs but fundamentally remained the responsibility of the Stalags. The remarks on the Army's Stalags provide information about this group.
- Released, primarily Soviet, POWs who worked in the service of the Wehrmacht in return for payment. This group is not part of the subject area of the present work.⁵⁹

Airmen

To begin with, Dulag Luft in Oberursel and Stalag Luft in Barth were established for this first group.⁶⁰ Until the Dulag Luft in the East were set up in 1943, all POWs in Luftwaffe custody passed first through Dulag Luft, where they were interrogated before being transferred to the Stalag. The chains of command for the first Luftwaffe camps corresponded to those of the Army in the territory of the Reich:

- For service matters, the camps were subordinate to the respective territorial Luftwaffe staff, the administrative command headquarters (*Luftgaukommando*).
- For prevention of sabotage and espionage, the respective counterintelligence office (*Abwehrstelle*) was responsible.
- Collection and evaluation of intelligence took place in association with Luftwaffe Operations Staff/Ic (*Luftwaffenführungsstab/Ic*).
- The physicians of the administrative command headquarters oversaw medical services.
- Reserve (*Landesschützen*) companies and platoons of the Luftwaffe were responsible for guarding the camps. These units were not subordinate to a POW camp but rather to the quartermaster department (*Quartiermeisterabteilung*) of the administrative command headquarters.⁶¹

These airmen, or "fliers," differed from the POWs of the Army in terms of their personnel composition. The proportion of officers was approximately 25 percent, around 10 times that of the Army's POWs. In contrast to the Army, the Luftwaffe did not house officers and NCOs in separate camps. The officers were not required to work, and the NCOs could be used only for supervisory duties. Because these camps lacked enlisted personnel—apart from the orderlies—whose work the NCOs could have supervised, only a few Luftwaffe POWs performed any work in the Stalags of this branch, and then only on a voluntary basis. Consequently, the Stalag Luft camp areas were the permanent location of the POWs and were comparable to the officer camps of the Army, in which

the POWs also did not work and, therefore, spent all their time in the camp area. The Stalags of the Army, in contrast, housed only a fraction of the POWs in their camp areas.⁶²

The length of the war and the associated increase in the numbers of POWs made it necessary to activate additional camps for POWs: Stalag Luft 1 in 1941 as well as Stalag Luft 3 and Stalag Luft 4 in 1942. A further increase took place in 1943, when three more camps in the Stalag Luft category were established: 5, 6, and 7. At Army Stalag XVII B, in Gneixendorf, a subcamp for Luftwaffe POWs, under Luftwaffe command, was set up within the Stalag.⁶³

In September 1943, when Hitler launched Operation Axis (*Fall "Achse"*), triggering the occupation of Italy, there was a change in the situation of POWs. Until then, the Italian army had taken care of all Allied servicemen captured in Italy, but now they were seized by the Germans and became the responsibility of the Wehrmacht. To gather those prisoners who were airmen and transport them in a body to Germany, the Luftwaffe set up its own forwarding center in Verona—though, not until February 1945, a startlingly late point in time.

Prisoners of War in the Labor Units of the Luftwaffe

The second group of POWs in Luftwaffe hands consisted of Soviet POWs who were used as auxiliaries in supply and construction units. With the change in subordination from the Army to the Luftwaffe, they were regarded as Luftwaffe POWs.⁶⁴

Such POW contingents had been utilized since 1941, principally to work on construction projects of the Luftwaffe (on the eastern front, in most cases). But because the Luftwaffe, unlike the Army, had no POW camps outside the territory of the Reich, it developed a type of POW camp that, from an organizational standpoint, falls somewhere between a regular Stalag and a labor detachment: the POW labor camps of the Luftwaffe. These camps were designed for longer-term deployment; that is, their structure went beyond that of a labor detachment. They exercised the personnel management function of a Stalag but were not budgeted and did not have staff who were specially trained to manage POWs.⁶⁵ They had a distribution function for the labor deployment of POWs locally and, if necessary, also within a larger geographic area. Subordinated to these labor camps, there were, if needed, also labor detachments with their own housing areas, but they had none of the earmarks of a regular camp. For dealing with these POWs, who were not airmen but rather “labor” prisoners, the Luftwaffe had no treatment guidelines of its own; therefore, the relevant orders of the Field Army were applied here.⁶⁶ As the boundaries between such Luftwaffe POW labor camps and Army camps with labor detachments that occasionally performed work for the Luftwaffe appear to have been fluid, we may not always have succeeded in making this differentiation correctly in every setting covered in this volume.

Alongside the POW labor contingents that served as labor detachments in support of Luftwaffe duty stations, the Luftwaffe began in 1943 to organize Luftwaffe (K) construction battalions (*Luftwaffenbauabataillone [K]*)—to a significant extent, at least, by putting the POWs deployed as auxiliaries into these new units. Beginning in July 1943, most of the units were formed by restructuring existing construction battalions as (K) construction battalions with German framework staff and POWs (primarily Soviet) as labor. Most of these units were deployed on the eastern front and in Norway or Finland.⁶⁷ To organize this deployment administratively, the Luftwaffe established the Central Control Center for Prisoners of War (*Zentralleitstelle für Kriegsgefangene*) in Finland.

Weighty changes took effect on May 1, 1944, when the Luftwaffe construction organization was restructured.⁶⁸ Until that time, Organisation Todt, acting virtually as a general contractor, had implemented the Luftwaffe’s construction projects; now, with the designation “Chief of Luftwaffe Construction” (*Chef des Luftwaffenbauwesens*), it also assumed managerial responsibility. Organisation Todt directed the deployment of the construction units, and thus of the POWs as well. For the service-related command and control of the construction troops, a new department was created: the General of the Luftwaffe Construction Forces, Chief of Luftwaffe Construction (*General der Luftwaffenbauabtruppen beim Chef des Luftwaffenbauwesens*).⁶⁹

Prisoners of War as Auxiliaries

The third status group, the auxiliary personnel, came into being during the second half of 1942. POWs of the Army were “temporarily” transferred to Luftwaffe duty stations, particularly to the antiaircraft artillery units, and to the signal communication troops and other units. They were released from the sphere of authority of the Army—and from that of the OKW as well—and handed over to the Luftwaffe. In these units, up to 30 percent of the positions could be filled with POWs, thus freeing up German soldiers for use elsewhere. While the prisoners retained their status permanently, after a two-month probationary period they could be treated in the same way as prisoners who had been released for deployment as auxiliary volunteers in noncombat roles (Hiwis).⁷⁰

At this point, no transfer organization existed that carried out the forwarding and distribution (and, if need be, also the retransfer) of the POWs from the Army Stalags to the Luftwaffe units. The Luftwaffe had several POW camps in the territory of the Reich, but they were reserved for airmen; furthermore, by no means did they constitute a comprehensive network. Originally, it had been envisaged that each Luftwaffe administrative command headquarters would establish a collection camp (*Sammellager*) for the distribution process, but we could only verify the existence of a central distribution center—the (F) replacement camp (*Ergänzungslager [F]*) for Soviet POWs in Wolfen—and a small number of camps in the territory of the Reich. In the spoken and written language of

12 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

the Wehrmacht as well as the civilian offices, these collection camps were sometimes termed “transit camps” (*Durchgangslager*). The typical features of a regular camp— inclusion in the budget and a personnel management function—were absent in these cases, however.

In the summer of 1944, there was a change in the chain of command. Generalleutnant Walther Grosch, until then the head of Luftwaffe Inspectorate 17, was assigned command of the Office of the General for Foreign Personnel of the Luftwaffe (*General für ausländisches Personal der Luftwaffe*) on June 29, 1944. He was principally responsible for the POWs deployed in antiaircraft artillery units. To reduce his workload, the Inspector for Foreign Personnel East (*Inspizient für ausländisches Personal Ost*), Generalleutnant Heinrich Aschenbrenner, was assigned to him. In December 1944, Aschenbrenner’s position was renamed Inspector of Ostland Personnel (*Inspekteur des ostländischen Personals*). This chain of command remained unaltered until the end of the war.⁷¹

THE TOP-LEVEL STRUCTURE OF THE LUFTWAFFE

When the war began, the Luftwaffe had no POW organization, considering the small number of camps. Initially, the camps were subordinate to the department of the Armed Forces High Command that had responsibility for POW administration. By 1942, however, the expansion of the camp system made it necessary to institute a coordinating office. As a result, in April 1942, the commandant of the newly established Stalag Luft 3, Oberst Freiherr Friedrich-Wilhelm von Lindeiner-Wildau, was simultaneously named commander of the POW camps of the Luftwaffe. In the service chain of command, the camps remained subordinate to the respective Luftwaffe administrative command headquarters (*Luftgaukommando*), but functionally they were now under the management of von Lindeiner-Wildau. This development was the first step toward establishing an independent POW administration for the Luftwaffe. The very first expansion of the Luftwaffe’s POW organization took the same course as the subsequent ones. The first step was not the establishment of a leadership organization that then guided and gave a particular form to the expansion; rather, the leadership organization developed in reaction to the demands made by practical experience.⁷²

In addition, however, from 1941, and particularly from 1943, the Luftwaffe assumed responsibility for another status group: POWs who were transferred from the Army to the Luftwaffe. Presumably, as a result of this expansion of the scope of duties, the dual function of commandant of Stalag Luft 3 and commander of the Luftwaffe’s POW camps was abolished on October 21, 1942, and the office of the Inspector of POW Administration for the Luftwaffe (*Inspizient des Kriegsgefangenenwesens der Luftwaffe*) was created.⁷³

The Inspectorate of Luftwaffe Construction Troops (LIn 17) had already been created on June 8, 1942, originally for the construction troops who were not POWs. As POWs were

now included in the budgeted personnel strength of the Luftwaffe construction and labor units, and thus were permanently subordinate to the Luftwaffe personnel structure, it made sense also to put LIn 17 in charge of the POWs deployed there. Therefore, on May 1, 1943, the responsibility for all POWs of the Luftwaffe, including the airmen in the Luftwaffe Stalags, was transferred, and the name was accordingly changed to “Luftwaffe Inspectorate for Construction Troops and POWs” (*Luftwaffeninspektion für Baustruppen und Kriegsgefangene*, LIn 17). Luftwaffe Inspectorate 17, as the managerial authority of the POW administration of the Luftwaffe, was, in principle, on an equal footing with the POW administration in the Armed Forces High Command. The POW camps and units were functionally subordinate to it. With respect to service matters, the camps and labor units were subordinate to the respective territorial command authorities of the Luftwaffe; the labor units received their orders from the local Luftwaffe construction staffs.⁷⁴

A purely nominal change took place as of May 1, 1944: in recognition of their accomplishments, all units, forces, and administrative offices of the Wehrmacht whose names contained the word “construction” (*Bau*) were awarded in its place the term “engineer” (*Pionier*). Accordingly, Luftwaffe Inspectorate 17 received a new name: Luftwaffe Inspectorate for Luftwaffe Engineers and Prisoner of War Camps (*Luftwaffeninspektion für Luftwaffen-Pioniere und Kriegsgefangenenlager*).⁷⁵

Weightier changes appeared in the summer of 1944. As a result of the restructuring of Luftwaffe construction, LIn 17 lost its responsibility for the construction units. The same applied to the POWs deployed as auxiliaries with antiaircraft artillery units; they were subordinated to the General for Foreign Personnel of the Luftwaffe. Thus, Luftwaffe Inspectorate 17 had lost responsibility for a large part of “its” POWs by the summer of 1944. Consequently, LIn 17 received a new name in October 1944: Inspectorate of the Luftwaffe Engineers, Reserve, and Transport Escort Detachments (*Inspektion der Luftwaffen-Pioniere, Landesschützen und Transportbegleitkommandos*).⁷⁶

At first, LIn 17 still retained responsibility for the Luftwaffe’s POWs in the narrow sense, that is, the airmen in the Stalag Luft camps. Here, the situation had already begun to heat up by the spring of 1944 when the mass escape of 76 Western POWs from Stalag Luft 3 (Sagan/Žagań) reinforced the impression that the Wehrmacht, generally, was unable to cope with guarding the prisoners. In March 1944, Göring proposed to Hitler that all POW administration be made the responsibility of the Reich Security Main Office (*Reichssicherheitshauptamt*, RSHA). The final precipitating event for the reorganization of the entire system of POW administration, however, was the attempt on Hitler’s life on July 20, 1944. All POW camps—not only those of the Army but also those of the Luftwaffe and the Navy—were made subordinate to the already existing office: Chief of POW Administration, which, in turn, was no longer directly under the control of the OKW but of the commander of the Replacement Army—the

Reichsführer-SS, Heinrich Himmler. In service-related matters, all the camps were under the authority of the commander of POWs in the respective Army Defense District—and thus, in the final analysis, also under that of Himmler as the commander of the Replacement Army. With that, the phase of independent POW administration by the Luftwaffe had ended.⁷⁷

However, by no means did this imply that all the Luftwaffe's POWs had now been put under the control of the Army. The POWs deployed in the Luftwaffe units continued to be under the authority of the General of Luftwaffe Construction Troops, Chief of Luftwaffe Construction, or, alternatively, under that of the General for Ostland Personnel of the Luftwaffe. It can only be assumed that the POWs deployed in the supply units were also subordinate to the General for Ostland Personnel.

THE PRISONER OF WAR ORGANIZATION OF THE NAVY

Anyone familiar with the names "Marlag Sandbostel" and "Milag Westertimke" (*Marinelager*, for naval military personnel; *Marineinterniertenlager*, for interned merchant seamen) denoting POW camps used for naval personnel would assume that the German Navy must have had a POW organization. The literature, however, contains no facts about the concrete configuration of such an organization. Furthermore, the numerous statements about POW affairs prepared by Wehrmacht officers during the International Military Tribunal in Nuremberg mention only the corresponding organizations of the Armed Forces High Command, the Field Army, and the Luftwaffe; no reference is made to a Navy POW administration.⁷⁸

Research in the collections of the German Federal Archives (*Bundesarchiv*) yielded the same result: no routine order for the administration of POWs, no instructions for an office with central responsibility, no announcement of the appointment of a corresponding superior officer could be traced. Relevant Navy rules and regulations did exist, but they are merely Army manuals that had been given a Navy identifier without a single word of the text having been changed. Only the existing official correspondence between the camps and other administrative offices, in addition to the bulletins of "daily orders" (*Stationstagesbefehle*) that were published at regular intervals by the Navy's Station Commands, provides one clue or another. Given the sketchiness of the available information, we approach here the nature of the Navy's POW administration through inductive reasoning, based on the available records, without any effort to obscure the fact that "blank areas" remain.⁷⁹

Regarding the POWs in Navy hands, the focus has been, and continues to be, on the navy captives, but they were by no means the only prisoner category. There existed two additional groups of prisoners, quite different in status:

- Civilian internees—in the case of the Navy, primarily the crews or passengers of enemy civilian vessels that had been captured by German warships

- POWs—Soviets at first, later Italians too—who were transferred from Army camps to the Navy to serve as auxiliaries in Navy units to replace German personnel. Similar steps were taken by the Luftwaffe.

Two other categories are not addressed here. The first consists of the enemy army or air force personnel who were captured by German naval forces. They were transferred directly to the Army or the Luftwaffe. The second group includes POWs who, on orders from the offices in charge of labor deployment, were removed from Army Stalags and assigned to Navy labor detachments (*Arbeitskommandos*). These POWs performed work for the Navy—limited to the duration of the project—but without being permanently transferred to the custody of this branch of the Wehrmacht. Their fate, therefore, is discussed in the section dealing with the Army camps. As with the Luftwaffe, however, inadequate information sometimes makes it difficult to distinguish between Soviet POWs who worked permanently in Navy organizations as auxiliary personnel and members of labor detachments from Army Stalags who were deployed there for a limited time.

NAVAL PRISONERS OF WAR AND CIVILIAN INTERNEES

When World War II began, there were no guidelines from the Navy leadership for dealing with POWs and selecting the places of confinement for POWs in Navy custody. Such instructions were not issued until one month later, in early October 1939. In them, the Navy made it clear that it was not planning to set up POW camps of its own.⁸⁰

With respect to the procedures for dealing with the prisoners, differences developed between Station Command North Sea and Station Command Baltic. In the sphere of the former—albeit not until February 1, 1940—one accommodation facility in each of the nine section commands (*Abschnittskommandos*) was named as a temporary holding site for POWs. Station Command Baltic firmly declined to name collection points.⁸¹

The interim accommodations were not incorporated into the budget as permanent establishments for the administration of POWs but rather were improvised installations. They were used not only to house but also to interrogate the POWs, and, thus, they had an additional role as evaluation and interrogation centers. Once the questioning was at an end, the prisoners were transferred to Army POW camps as their destination.

As the number of POWs who were naval personnel was small, in the Navy's view it presumably was not worth the effort to create a POW organization of its own. Nonetheless it is astonishing that the naval POWs, after the temporary accommodation period, were taken to three different Oflags and three different Stalags. These facilities even included one located in Bavaria, Stalag VII A (Moosburg). This form of

14 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

organization was far from convenient, should the Navy at some point be inclined to retrieve "its" POWs. Even so, five months after the onset of the war—and, thus, belatedly—the Navy now had, for its sphere, a fixed procedure. As in the case of the Luftwaffe, labor deployment of the POWs was not envisaged.⁸²

From mid-1940, the expansion of the war to Western Europe meant that the Navy had ports abroad, particularly along France's Atlantic coast, where German warships could dock and bring captured naval personnel and civilian ships' crews, possibly passengers as well, on land. Orders regarding their treatment and transport to Germany are not known but reports by former POWs and internees provide a clear picture. The first sizable group of this kind consisted of the approximately 400 members of civilian ships' crews who arrived in Bordeaux aboard the supply ship *Rio Grande* in mid-December 1940. They were accommodated in Frontstalag 221 (St. Médard), an Army camp, near Bordeaux. A similar collection point, presumably for prisoners who had been brought on land in Lorient or Saint-Nazaire, was in Vannes, in Frontstalag 183. POWs arriving in Brest, however, were housed in a makeshift camp, guarded by the Army. After a stopover in one of the Frontstalags (111, 112, or 220 near Paris) they were transported from their respective collection sites into the territory of the Reich. Similar transport routes developed for prisoner groups from Norway via Dulag Gotenhafen (today Gdynia, Poland) and from Greece via Thessaloniki. In this interrogation and transit arrangement, the Navy appears merely to have supplied the interrogation teams; regarding the camp infrastructure of the transportation system, however, it relied heavily on the Army.⁸³

The Navy did not have a POW camp system of its own until the beginning of 1941. First, in February 1941, Marlag Milag Sandbostel was established. It was followed, in May 1941, in the west by Marine Dulag Nord, and, in June 1941, in the east by Marine Dulag Gotenhafen for Soviet naval personnel. The reason for this development may have been the growing number of naval POWs and civilian internees. Presumably, however, intelligence-related considerations also played a role. Indeed, at first the temporary accommodation sites on the Baltic and North Sea coasts had been designed as evaluation and interrogation centers. Over the course of 1940, additional collection sites had arisen in foreign countries, thus increasing the need to concentrate the capacities for evaluation and interrogation. While the Army used Dulags primarily as transit facilities, the Navy's two Dulags had the same function as the Dulags run by the Luftwaffe. The prisoners were not sent elsewhere until the questioning had been concluded. From mid-1941, however, their final destination, the place where they were to spend the remainder of their captivity in Germany, was no longer an Army POW camp; rather, it was Marlag Milag Sandbostel, which very soon was relocated to Westertimke, not far from Sandbostel.⁸⁴

In the service chain of command, the earliest camp, Marlag Milag Sandbostel, was under the control of the Commander of Prisoners of War in Defense District X

(Hamburg), that is, an Army administrative office, during the entire period of its existence, until its closure in the fall of 1942. In fact, the camp was merely a subdivision of Army Stalag X B. Only from late 1941, with the relocation from Sandbostel to Westertimke, did the Navy emancipate itself from the Army to the extent that Station Command North Sea now assumed responsibility for the camp. In any case, from the time of their initial organization, the two Dulags had already been under the control of Station Command North Sea or Station Command Baltic. The Navy's POW administration thus consisted of one Dulag in the west and one in the east as well as a main camp as the "final destination" for all naval POWs. Thus, it had reached its final stage of development, which continued unchanged until the termination of the Navy's administration of POWs in the fall of 1944.

In service-related matters, the camps were directly subordinate to Station Command North Sea or Station Command Baltic. Functional management was evidently in the hands of the Naval Defense Office (*Marinewehramt*), though this entity seems to have had no central responsibility and no department or group for POW affairs. Orders of the Chief of POW Administration in the OKW were passed on—generally, with no change in content—to the camps by the functionally responsible departments of the Station Commands. Not even a centralized, Navy-wide personnel management function is identifiable. In general, the Navy seems to have been anxious to keep its own administrative spending for the POWs as low as possible, in part, by repeatedly calling on the Army for support.⁸⁵

In only one area does the Navy appear to have had a prerogative of its own, one that was respected by the other organizations concerned with POW affairs: the Navy was always brought in when the capture or release of naval POWs and civilian internees was at issue.⁸⁶

NONNAVAL PRISONERS OF WAR

Unfortunately, the evolution of the labor deployment of POWs within the Navy can be only sketchily illustrated here. Regarding the Luftwaffe, we know that POWs permanently assigned to the Luftwaffe began to be deployed in that branch as early as 1941. It is unclear when such transfers to the Navy began, as the fundamental provisions for that development are not known. Orders of the Armed Forces High Command dated October 1, 1942, and October 29, 1942, containing standard operating procedures for requesting the services of POWs are available to us, however, and they refer to a practice already in existence: the deployment of Soviet Army POWs with the Luftwaffe and the Navy. Presumably, therefore, the Navy began at some point in 1942, if not earlier, to deploy Soviet POWs as auxiliaries for the Navy.⁸⁷

As in the case of POWs who were naval personnel, there seems to have been no office with central responsibility for auxiliary personnel. The workforce requests submitted by the administrative offices were sent through the Station Commands to the Naval Defense Office/Naval Defense

Department/Section af (*Marinewebramt/Marinewebrabteilung/Referat af*) and forwarded from there to the Chief of POW Administration. Then “Section af” also undertook the distribution of the assigned POWs to the Station Commands.⁸⁸

The allocated POWs were duly registered by the Station Commands, but this was done only for counterintelligence and propaganda purposes. Initially, there seems to have been no centralized personnel administration function within the Navy. Such a function also may not have been necessary at the outset, because the responsibility for personnel, including the POWs transferred to the Navy, remained in the Army’s hands. In other words, the Stalags that assigned the POWs continued to perform partial functions of both a parent unit and a replacement unit. Accordingly, changes in personal data were reported to the Wehrmacht Information Office by the “home” Stalags rather than the Navy. In addition, once the current deployment of a POW was at an end, he returned to “his” Stalag rather than “his” Navy unit.⁸⁹

From the spring of 1942, however, tendencies toward a greater centralization of the personnel administration system can be discerned. For the entities under its operational control, Station Command North Sea required the submission of reports listing the POW camps and labor detachments in the area and stating whose control they were under, what their composition was in terms of nationality, and what the occupancy figures were. Then, from May 1943, card files for the auxiliary personnel were created in the offices of the Second Admirals of the command areas. In the fall of 1943, these offices also began to control deployment.⁹⁰

To perform the task, Station Command Baltic—meanwhile renamed Navy High Command East (*Marineoberkommando Ost*)—employed a parent company established for this purpose. For the Soviet POWs deployed in Norway as auxiliary personnel, Dulag Gotenhafen carried out this task. For the area of Navy High Command West (*Marineoberkommando West*), no distributing point of this kind is known.⁹¹

At first, the POWs were deployed primarily in logistic installations and state-owned enterprises. Then, in April 1943, Soviet POWs also began to be used as auxiliary personnel in naval antiaircraft warfare. Toward the end of 1944, POWs worked for the Navy in AAA units, artillery units, stand-by construction detachments, motor transport battalions, and fortress engineer headquarters and units. They also served as workmen for Navy organizations and ration supply offices.⁹²

After September 1943, another group of POWs, Italian military prisoners, was added. Again, little is known about the particulars of their deployment; it probably differed only slightly from that of the Soviet POWs, however. In the course of 1944, the Italians who were deployed as auxiliaries were given an opportunity (of unknown extent) to be released from captivity by switching to the status of auxiliary volunteer (*Hilfsvilliger*, Hiwi) or Italian soldier in the Wehrmacht. If they refused to resume the fight on the German side, they were sent back to Stalag X B (Sandbostel). The Soviets and

the Italians are the only nationalities known to have been deployed with the Navy.⁹³

The POWs who were deployed as auxiliaries constituted only a part, often a small one, of the personnel; hence, these were not POW units featured in this volume. However, because of either reading too much into existing orders or receiving new orders not available to us, a few Navy POW labor units were formed and thus could be included here.⁹⁴

THE END OF THE NAVY’S PRISONER OF WAR ADMINISTRATION

From mid-1944, significant changes began in the Navy, and they also affected the POWs. The Navy Construction Office (*Marinebauwesen*), like its Luftwaffe counterpart, was made accountable to Organisation Todt. The effect of this development on the reporting lines of the POWs working in these units is not known. Then, on the effective date of October 1, 1944, the POW administration system of the entire Wehrmacht was reorganized, and, as a result, all the Navy’s POW camps came under the control of the respective commanders of POWs in the Defense Districts.⁹⁵

In conclusion, if one compares the Navy’s POW administration with the corresponding organizations of the Luftwaffe and the Field Army, on the one hand, and with the organization of the Armed Forces High Command, on the other hand, several parallels between the POW organizations of the Luftwaffe and the Navy become discernible. They include:

- In the case of both the Luftwaffe and the Navy, the administrative offices concerned with POW affairs dealt solely with foreign POWs in German custody; they were not responsible for the corresponding group, the German POWs in enemy hands. The POW administration of the OKW, however, was always concerned with both groups at the same time.
- The Navy and the Luftwaffe had no permanent POW camps outside the territory of the Reich.
- Neither the Navy nor the Luftwaffe viewed the “own-branch” POWs, that is, the members of hostile naval or air forces, respectively, as a significant labor reserve. For such purposes, POWs were transferred by the Army to both other branches of the Wehrmacht.

There are specific distinguishing features also, however:

- Labor units that, apart from the supervisory personnel, consisted exclusively of POWs were a rare exception in the Navy.
- In handling the tasks associated with the POWs, the Navy relied to some extent on the Army, in an apparently amicable collaboration, which was not the case with the Luftwaffe, where the relationship was characterized by competition.

16 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

- The Navy was the only organizational sector in which there was no centralized responsibility for the enemy POWs.

Thus, among the comparable organizations, the POW administration of the Navy was probably the least clearly developed. Overall, however, it must be said that at the same time it is probably the part of the POW administration system that remains most in need of further research.

THE REORGANIZATION OF THE PRISONER OF WAR ADMINISTRATION IN THE FALL OF 1944

Until October 1944, the POWs of the Field Army, the Luftwaffe, and the Navy were under the authority of the respective commands. In the Reich and the areas under German occupation authorities, the functional command authority was the Office of the Chief of POW Administration. In the Reich the POW organizations and the POWs themselves, however, were subordinate in the service chain of command to the Commander of the Replacement Army, or, alternatively, to the commanders in the areas under occupation. When Heinrich Himmler was named commander of the Replacement Army on July 21, 1944, after the dismissal of the previous BdE, General Friedrich Fromm, he simultaneously accepted service-related responsibility for the administrative offices of the POW administration system and for the POWs in the Replacement Army itself—and not just on October 1, 1944, but three months earlier. This change did not create a great sensation, and it also did not alter the subordination of the soldiers affected by the change of command.⁹⁶

Then, as of October 1, 1944, the Office of the Chief of POW Administration, until then assigned to the OKW, was placed under the authority of the Commander of the Replacement Army, and thus transformed into an Army administrative office. Gottlob Berger, simultaneously the head of the SS Main Office, was named to the position of Chief of POW Administration. Because he hardly had the time to perform this additional duty in a meaningful way, he named an Army officer, Oberst Kurt Meurer, as his permanent representative. This organizational change involved a truly pivotal innovation: all the POW camps of the Wehrmacht were put under the authority of the BdE—and, thus, of his subordinate, the Chief of POW Administration. In this way, a unified Wehrmacht POW administration was created, of a kind that had not existed until then. This reorganization is frequently interpreted to mean that POW administration was transferred to the SS.

The new Chief of POW Administration, however, assumed only part of the previous duties.⁹⁷ His staff consisted of:

Group I: Planning on a large-scale (mission of the offices of the POW administration system,

distribution, and accommodation of the POWs, guarding the camp, notification system)

Group II: Personnel

Group III: Labor deployment and transports

Group IVa: Administration

Group IVb: Medical services

Group V: Camp oversight, counterintelligence issues

Group VI: Leadership (National Socialist leadership officer, NSFO)

Essentially, this was the Organization Department of the previous staff of the Chief of POW Administration. Berger, who held the position of chief, and his deputy, Meurer, were physically located in the office of the head of the SS Main Office in Berlin-Grunewald; their staff, however, remained in Torgau roughly 109 kilometers (68 miles) away, where they had been ever since the relocation from Berlin in early 1944.⁹⁸

The repercussions for the individual branches of the Wehrmacht took different forms. In the Navy, Marlag-Milag Nord came under the authority of the Commander of POWs in Defense District X, who had territorial responsibility. The second Navy camp, Dulag Nord, remained under Navy control because it also served as an evaluation and interrogation center. The personnel, except for the officers, were transferred to the Army.⁹⁹

The situation in the Luftwaffe was similar. The camps were subordinated to the commander of POWs who had territorial responsibility, with the exceptions of Dulag Luft and Stalag Luft 5 (Wolfen), which had special functions that the Luftwaffe was unwilling to relinquish. The personnel were transferred to the Army, according to the same rules in effect for the Navy.¹⁰⁰

The most serious changes took place in the Army, particularly in the Replacement Army, which was the most important area in terms of number of personnel and economic significance. Here, the dualism between the functional leadership by the Armed Forces High Command and the service subordination to the Commander of the Replacement Army was abolished and changed into a uniform subordination to the BdE.

An additional command level, the Higher Commanders of POWs (*Höhere Kommandeure der Kriegsgefangenen*), was inserted between the intermediary authority of POW administration, the commanders of POWs, on the one hand, and the Chief of POW Administration, on the other hand. This job was entrusted to the Higher SS and Police Leaders with territorial responsibility in each case; in this function, they were subordinate to the Chief of POW Administration. Their primary focus was supposed to be on ensuring internal security and on coordination between and among the Wehrmacht, the Nazi Party, and civilian agencies.¹⁰¹

The commanders of POWs now changed their subordination from the Defense District commanders to the Higher SS and Police Leaders. On their part, they had authority over all

POW camps as well as the guard and POW labor units in their area.¹⁰²

Also, on October 1, 1944, the position of Inspector for POW Administration, vacant since April 1, 1944, was reactivated. Oberst Adolf Westhoff, until then Chief of POW Administration, took on this job. He was subordinate to the deputy office head of the AWA, Generalmajor Kurt Linde. Territorially, his area of responsibility was coextensive with that of the Chief of POW Administration; his mission, however, was different:

- Previously he had been responsible only for Army camps; now he was given the right of control over all camps.
- Support of the aid organizations and protecting powers had already been his task previously; now he was given a staff and full responsibility for this area.
- He lacked direct influence on the subordinated area; he had to route all his directives through the Chief of POW Administration.¹⁰³

His staff covered the following range of duties:

- Administrative Area Gen. Ib: Domestic political implications, cooperation with the NSDAP and civil authorities
- Administrative Area Gen. Ic: Religious support
- Administrative Area Gen. Id: Criminal acts committed by POWs
- Administrative Area Gen. IIa: Communication with the Reich Ministry of Foreign Affairs, the protecting powers, and the aid societies
- Administrative Area Gen. IV: Administration

Essentially this was the General POW Administration Department of the previous staff of the Chief of POW Administration. The inspector and his staff had their joint office in Torgau.¹⁰⁴

Comparison of the areas of responsibility of the two managing entities reveals a bifurcation: “inward” administration was under the authority of the Chief of POW Administration, while “outward” contact was the task of the inspector. This was no longer consistent with the previous classical division of tasks between a staff and the inspector in question.

In a statement on February 16, 1945, the new Chief of POW Administration tried to address concerns that new privations and harshness in dealing with POWs might be ordered as a result of an SS-General’s “takeover” of the sphere of POW administration:

In total misapprehension of the attitude of the RF-SS [Reichsführer-SS] and the Commander of the Replacement Army toward issues of the treatment of alien peoples, a certain smear campaign has gained ground in civilian circles and also in the sphere of POW administration itself. This effort to

manipulate public opinion interferes with political measures, recruitment campaigns, and increased efficiency, and therefore absolutely must be stopped.

The treatment of the POWs serves a threefold purpose:

1. to guarantee the security of the Reich,
2. to enhance work performance, and
3. to generate as positive an attitude as possible toward the Reich.¹⁰⁵

This statement seems not to have been governed exclusively by propagandistic motives; Gottlob Berger cannot be accused of having seriously toughened the orders to the disadvantage of the POWs. To the contrary, Berger was not involved in the most sensational crime in the POW administration in the final phase of the war: the murder of French general Maurice Mesny.¹⁰⁶

The implementation of the reorganization was far from trouble free. The problems began with the handover of the official matters because negotiations with the SS Leadership Main Office (*SS-Führungs-Hauptamt*), the SS Economic Main Office (*SS-Wirtschaftsverwaltungs-Hauptamt*, SS-WVHA), and the RSHA became necessary. As a result, the handover of official matters did not occur until October 23, 1944.¹⁰⁷

Admittedly, the commanders of POWs were under the authority of the Higher Commanders in every respect; conversely, it would have been appropriate for the Higher Commanders to be required to supply the subordinate area. And such an arrangement had been envisaged, but “provisionally”—and, thus, for the duration of the war, the responsibility for supply remained with the Defense Districts (*Wehrkreise*), which no longer felt obligated in the same way as previously, when they were still directly responsible.¹⁰⁸

The Chief of POW Administration and his deputy had their office in Berlin, but their staff members were in Torgau, 109 kilometers (68 miles) away, a distance that was hard to bridge at a time when traffic and communications were impaired by the war to an increasing extent. The inspector, however, was in Torgau, where both staffs were based.

It was barely possible for the Chief of POW Administration to communicate with his staff, but the Inspector's superiors—the leadership of the General Office of the Armed Forces—were available to him as contact persons in Berlin. The inspector lacked the link to “the top,” but he had both staffs available to him. The communication structures developed in accordance with these conditions, and, thus, to the disadvantage of the Chief of POW Administration, all the way to the point of his marginalization. One pertinent example: in late 1944, the NSDAP had complained that Polish officer POWs, pursuant to the provisions of the international law of war, continued to be exempt from use as a labor force. This politically awkward event was dealt with in a process of cooperation between the Armed Forces High Command and the Inspector for POW Administration, without involving the Chief of POW Administration.¹⁰⁹

18 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

For the POWs in Wehrmacht camps these organizational changes did not mean much. Their daily life was increasingly dominated by air raids, deteriorating infrastructure, and collapsing supply lines. Thus, most POWs in German hands experienced the final six months of the war as the time period of greatest suffering.

KEY TERMS ASSOCIATED WITH POW ADMINISTRATION

For some readers who are not conversant with military terminology, many of the terms used in this volume will be unfamiliar. The following remarks attempt to close this gap with respect to terms specific to war imprisonment that readers cannot be expected to know. For other, more general terms and concepts, the extensive body of specialized literature in the field of military history can be helpful.

GROUPS OF PERSONS IN WEHRMACHT CUSTODY

The POW camps of the Wehrmacht contained not only soldiers but also various groups of civilians held in captivity for a variety of reasons. Without discussing in full the legal differences among these groups, we will indicate below which of these prisoner categories are considered in the present work and to what extent.

Prisoners of War (POWs)

Neither the Hague Land Warfare Convention nor the Geneva Conventions offer a legal definition of the term “prisoner of war”; these agreements merely enumerate the groups they cover. According to international law during World War II, soldiers were the principal group, but members of militia forces were also included if they met the conditions of the international law of war. The central criterion in every respect was the uniform the prisoner wore. The deciding factor in

assignment to a home country was not the nationality or citizenship, but the uniform. For this reason, Poles, Norwegians, and others who continued to fight under the British flag after the occupation of their homelands were classified by the Wehrmacht as British, not as Poles or Norwegians.¹¹⁰

In addition, there were the civilians who took up arms during the occupation process and fought against the enemy: the *levée en masse*, or mass uprising. The status of “prisoner of war” was also accorded to the civilian members of armed forces, such as the employees of the military administrations or even accredited war correspondents.¹¹¹

Under the Geneva Convention of 1929, captive partisans were not classified as POWs, because they did not satisfy the conditions for this status. The same was true for soldiers serving governments that were not recognized under international law, such as the Free French (*Comité national français*) under the leadership of Charles de Gaulle. During the war, however, several groups previously classified as partisans were recognized as de facto combatants by the German government and, hence, granted the status of POWs.

On a large scale, the status of POWs changed even as the war progressed. If they were not released permanently—as, most notably, many French soldiers were—but merely temporarily, on various terms, the Wehrmacht’s POW administration continued to keep records on them.¹¹²

Other POWs—especially Soviets and Italians—were indeed released from captivity, but nonetheless they did not acquire civilian status. Rather, they remained under Wehrmacht authority to serve as auxiliary volunteers (Hiwis) in exchange for payment or as soldiers in collaborationist units. These groups and the administrative offices that kept records on them are not considered in the present work, because these individuals were no longer POWs, and these organizational units were not under the control of the POW administration.

The approach taken in the present volume is a pragmatic one: all those who were classified and registered by the Wehrmacht as POWs are included, with no attempt made to evaluate this classification.

Protected Personnel

Physicians, medics, pharmacists, and the personnel of civilian aid societies occupied a special status under Article 9 of the Geneva Convention, which dealt with protection and care of the wounded and sick. As protected personnel, they had to look after their comrades, but they were subject to less harsh rules than the POWs. They were housed in POW camps, and they are considered in the present work.

Civilian Internees

Specifically, these internees were, in the early stages, civilian subjects of the enemy countries who were in hostile territory when the war began. Frequently they were vacationers or individuals who had married a foreign national and retained their original citizenship. In dealing with this category, the governments of the belligerent nations generally limited themselves

Captured Soviet soldiers being searched and questioned upon their arrival at the POW camp in Lida, July 1941.
USHMM WS #81525, COURTESY OF NARA.

to sending only the males fit for military service to camps, while the elderly, women, and children were spared. Later, over the course of the war, the internees came to include the crews of civilian ships that had been captured by the German Navy and, where applicable, the passengers of such ships.

The status of this group under international law was unclear at the onset of World War II. They tended to be treated as POWs, although they were mostly accommodated in separate camps, the Ilags (*Internierungslager*). The major differences were:

- The POWs were required to do work, whereas such activity was prohibited for the internees, with a few exceptions.
- The internees received no payment from the German government comparable to the service pay or wages of the POWs.

Because the Wehrmacht viewed the detention of the civilian internees in principle as its function, they are taken into consideration in the present work in the same way as the POWs. That applies to internment camps also, provided they were under Wehrmacht control.¹¹³

Civilian Prisoners

When a country is occupied, the customary practices of the international law of war permit the confinement of persons who potentially pose a security risk for the occupying power. In accordance with these customary practices, such civilian prisoners did not have the same status under international law as the civilian internees. Occasionally, however, civilian prisoners were classified as civilian internees for political reasons and, thus, were accorded privileged treatment. Usually the category of civilian internee was extended to the members of all those countries that had German citizens at their mercy and, therefore, were able to retaliate; citizens of other countries often were not so lucky.¹¹⁴

At first, especially in the eastern theater of war, the Germans frequently put civilians into POW camps. At times, there were also temporary camps that were the responsibility of the Wehrmacht, in which only civilians were housed. In addition, over the course of the war, POW camps were used as transit facilities for the deportation of forced laborers or the mandatory evacuation of the population. It is inherently difficult, however, to distinguish reliably between:

- Camps for civilian internees
- Camps for civilian prisoners
- POW camps temporarily used for civilian prisoners

Because the detention of civilians was not one of the original functions of the POW administration, however, this group of prisoners and any camps established for them are not considered in the POW section.

CHAINS OF COMMAND

In the Wehrmacht, a superior authority was inherently both authorized to give instructions to the units subordinate to it and responsible for their supply. For example, a division not only led its subordinate forces (*Verbände*) but also supplied them. Nonetheless, the Wehrmacht was simultaneously organized on a basis of division of labor as well, and parallel to the fundamental subordination there also existed specific, function-related powers to issue instructions. Among the entities to which this applied were the counterintelligence stations, which were responsible for protection against espionage and sabotage at all duty stations within the area of their territorial authority, and the medical service, with its responsibility for health-related matters.

As a result of the war and the associated deployment of units over great distances, a division—to stay with the example cited above—sometimes was no longer able to supply all its units, because the distances between the various sites had become too great. Ultimately, the increasing complexity of these organizational relationships produced a multitude of chains of command, associated with various forms of subordination, such as:

- service-related
- military
- disciplinary
- operational
- strategic
- tactical
- military judicial
- local or regional
- medical
- administrative
- economic
- function-related
- technical
- individual

Initially, the system of subordinate relationships was so obvious to the members of the Wehrmacht that it apparently was deemed unnecessary to define the term “subordination” (*Unterstellung*). Then, in December 1941, the Navy endeavored to define the various subordinate relationships, or chains of command. The Armed Forces High Command aligned itself with this course of action in March 1943, so that a uniform arrangement now prevailed throughout the Wehrmacht. The following types of subordination were distinguishable:

- “Subordination” without any restrictive adjective meant a subordination in every respect, apart from specific function-related authorities and responsibilities, such as those of the counterintelligence service or the medical service.

20 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

- General subordination could be—and often was—split up into partially subordinate relationships. That pertained particularly to the following:
 - o Service-related subordination (*truppendifenstliche Unterstellung*), that is, responsibility for training, education, support, personnel management
 - o Operational subordination (*einsatzmässige Unterstellung*), that is, the specific military use of the respective unit
 - o Function-related subordination (*fachliche Unterstellung*), that is, guidance of the subordinate unit by a professional organization in its specialized military activity
 - o Territorial subordination (*territoriale Unterstellung*), that is, support in matters of supply or administration, etc.
- Attachment (*Angliederung*), that is, the subordination of a unit to an “outside” organization regarding special functions, such as administration.

Even at the time the orders were issued, however, it was pointed out that the new arrangements were by no means to be regarded as fixed and inflexible. Consequently, variations, particularly additional splitting up of the chains of command, remained possible.¹¹⁵

Regarding the duty stations of the POW administration, two additional aspects contributed to an unusually pronounced differentiation of the subordinate relationships. Within the POW administration, subordinate relationships did not exist in all respects: the superior authorities under no circumstances had the capability to supply the subordinate duty stations. In addition, as special troops, the units of the POW administration usually were not permanently assigned to a larger military grouping (*Verband*), and the subordinate relationships changed in accordance with the circumstances. Therefore, typical forms of subordination in the POW administration that are important for the purposes of the present account were as follows:

- POW camps in the theater of war generally were functionally under the control of a POW district commandant (*Kriegsgefangenenbezirkskommandant*); for service-related and operational purposes, they were subordinate to a combat unit (*Kampfverband*); and economically they were dependent on a duty station that was located in physical proximity to the camp.
- Camps in the territory of the Reich were subordinate to the respective Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) in ordinary service-related matters as well as operationally and functionally. For supply, they were dependent on duty stations tasked by the Defense District (*Wehrkreis*).
- The intermediate authorities in the POW administration, that is, the Commanders of POWs or POW

district commanders, were subordinate to a command or headquarters (*Kommandobehörde*) in every respect, with the exception of function-related matters of the treatment of POWs.

Even though the great number of dependent relationships may be difficult for the layperson to grasp, the statement made at the beginning should be repeated here: The Wehrmacht was an organization based on the division of labor, and the offices for POW administration were able to deal with the plethora of persons in charge.

TYPES OF POW CAMPS

In Nazi Germany there existed a great many camps and camp organizations for foreigners, including the POW camps of the Wehrmacht. SS-run concentration camps were designed to be stationary; if they were shut down at their original location, their existence ended. The Wehrmacht’s camp system, in contrast, was characterized by its mobility. When a Wehrmacht camp was relocated from one place to another, it retained its identifier and all its personnel, and the POWs generally were transferred to the new location along with the camp’s organization. In such cases, POWs who were away from a Stalag as part of an outside work detachment generally stayed at their work site, but, in organizational terms, they continued to be assigned to that Stalag. Only when a camp was relocated from one theater of war to another, often far away, did the POWs stay behind. Then they became organizationally affiliated with other camps.¹¹⁶

This principle of mobility affected the naming of the camps as well. POW camps, as a rule, were not named for the place where they were initially organized or stationed; instead, they had numerical identifiers.¹¹⁷ They kept these “names” unless their mission changed. If it did, the camp received a new identifier. The present section also adheres to this organizational principle: it is organized not by location but rather by the military designation of the camp in question.¹¹⁸

At the same time, the term “camp,” as used in the present volume, needs to be defined more precisely. It includes only facilities that were initially organized “in accordance with the budget” (*etatmäßig*) and thus had a Table of Organization, meaning that they were designed to exist on a permanent basis.¹¹⁹ To be clearly distinguished from these permanent camps is a second group: the temporary camps. These were facilities created ad hoc on-site, by entrusting some unit that happened to be available with the running of such a camp. The following three types of temporary camps are distinguishable, based on their intended purpose:

Collection Camp (*Sammellager*)

Enemy soldiers, after their capture, were taken to improvised collection points by combat elements.

The next stop may have been the collection site of a division, from which they were then sent on to the

collection site of the corps. Not until they were handed over to an army prisoner collection point (*Armee-Gefangenensammelstelle*, AGSS) did they reach a POW facility in the sense of the present section, that is, a unit of the POW administration that was anchored in the budget. The camps through which the soldier had passed before were improvised facilities—collection camps. According to regulations, they were supposed to exist only if they were needed in the specific situation, but in individual cases it could even take months to close them down. One example is the camps on Crete after the Wehrmacht took control of the island in May 1941. Because the enemy's command of the sea made it impossible for the time being to transport the Allied POWs, however, the camps remained in existence until December 1941. The transit camp in the port of Piraeus existed for a corresponding length of time, as it had been set up for forwarding the prisoners to Germany.

Forwarding Camp (*Weiterleitungslager*)

Only the Army had such a dense network of permanent camps that no separate facilities were needed for the regional redistribution of prisoner groups. That was not true for the Luftwaffe and the Navy, whose few camps were reserved for members of enemy air or naval forces, respectively. If these two branches of the Wehrmacht wanted to distribute the POWs given to them as a workforce by the Army and allocate them to the designated “receiver” duty stations, they needed camps as intermediate stops where they could house the prisoners. For the Navy, no such intermediate detention sites are known to have existed; presumably, this branch relied on the Army’s support. The Luftwaffe, however, established its own forwarding camps for this purpose, including those in Büchen, Kaiserslautern, Lechfeld, and Olgeste.

Soviet POWs captured in battle east of Kiev under German guard in an internment camp, September 1942.

Labor Camp (*Arbeitslager*)

Because the Army had an extensive network of POW camps and the Navy deployed its POW workforce in a highly decentralized manner, these two Wehrmacht branches needed no camps of this kind. In addition to the decentralized distribution of POWs, the Luftwaffe also handled its POW labor force flexibly, deploying large contingents at varying locations. For this purpose, it set up labor camps, that is, improvised camps, from which the distribution to work sites was managed. These camps were semipermanent structures, representing a middle position between a classical permanent camp and a temporary detention center.

These three types of temporary camps are not classified as part of the POW administration in the present section, because they were not permanent, budgeted facilities and were not subordinate to the POW administration.

In organizational terms, at the level below the labor camps—or, for the Army and the Navy, below the Stalag level—were the accommodations of the labor detachments, where the prisoners slept when they were deployed outside the POW camp, which applied to the majority of them. These quarters might be a room diverted from its original use for a small number of POWs, or even an accommodation facility with infrastructure for many occupants. The number of these residential sites—with reference to the territory of the German Reich alone—is estimated to be in the tens of thousands. Given the futility of trying to list even an appreciable part of them, it was decided not to provide information on these sites in the present section.¹²⁰

Improvised camps and housing areas for labor detachments—especially if the facilities were sizable—were indeed called “POW camps” and, where applicable, “Stalags” in the spoken and written language of the Wehrmacht, and in the common parlance of the civilian world as well, although the term was properly applied only to the permanent camps. In individual cases, therefore, it can be difficult to distinguish an “improved” POW camp from an “authentic” POW camp.¹²¹

But let us return to the permanent camps, the focus of the present consideration. In this context, several terms employed by the Wehrmacht or in the relevant literature need clarification:

Main Camp/Subcamp/Branch Camp

Essentially, a camp had a single camp area (*Lagerbereich*), in which all the facilities of the camp were situated. If a part of it was separated off for special purposes, perhaps for the housing of officers in a camp for enlisted personnel, this section was known as the “subcamp” (*Teillager*, TL), while the core area was referred to as the “main camp” (*Hauptlager*). If the subcamp was located at a physical distance from the central area but remained under the administration of the main camp, it was termed a “branch camp” (*Zweiglager*, ZL).¹²²

Satellite Camp (*Nebenlager*)

This term was initially used as a synonym for “branch camp” but later officially deleted from Wehrmacht usage.¹²³

Entrance Camp; Recruitment Camp (*Vorlager*)

In the Wehrmacht, this term was employed for two different situations. First, it designated the space occupied by a specific part of a POW camp.¹²⁴

Second, the term referred to special camps for POWs who were candidates for deployment in non-German volunteer units. They were assembled in recruitment camps before being released from war captivity and transferred to the camps for the “eastern legions” and other “volunteer” troops (*Legionärlager*).

Organizationally, they generally were subcamps or branch camps of Stalags subordinate to the POW administration.

German Camp (*deutsches Lager*)

This term refers to the part of the camp’s territory that was reserved for the German administration.

Shadow Camp (*Schattenlager*)

This term was used for POW camps that lacked a housing area of their own but merely managed POWs, who were not centralized but rather accommodated in various labor detachments.

General Officer Camp (*Generalslager*)

This term was in common use, although it was not part of official Wehrmacht terminology. Primarily, general officers, from the Wehrmacht’s perspective, did not constitute a distinct status group; they were merely high-ranking officers whose ranks entitled them to privileged treatment. Only two camps—Oflag IV B and Oflag 64/Z—were set aside explicitly for general officers. Eight other camps also were used to imprison generals for shorter or longer periods of time.¹²⁵

Special Camp (*Sonderlager*)

This was an official term for regular camps or for sections of such a camp in which special groups were consolidated, such as the French officers from Corsica who hoped to win the support of the Italian government for their Corsica plans, or the anti-German and/or Jewish French officers, whom the POW administration wanted to have concentrated at one place.¹²⁶

Non-German Volunteers Camp (*Legionärlager*)

These were camps for volunteers (*Freiwillige*) recruited for service in collaborationist units. They were under the authority of the offices responsible for organizing such units, rather than the POW administration.

Penal Camp (*Straflager*)

POW camps that had especially harsh living conditions were known as penal, or punishment, camps, both among the POWs and in the academic literature.

The terminology of the Wehrmacht did not contain

such a term; however, punishment facilities existed in every POW camp.¹²⁷

SS POW Camp (*SS-Kriegsgefangenenlager*)

The SS had no POW organization of its own, nor did it have permanent (budgeted) POW camps. Labor camps of POWs who had been made available to the SS for projects, such as the Beisfjord camp (Norway) and the sectors for “labor Russians” (*Arbeitsrussen*) in the concentration camps, were erroneously known colloquially as SS POW camps, for the reasons given above.¹²⁸

In the following remarks, the various types of permanent POW camps are described in greater detail while entries in this volume provide information about each individual camp. One problem must be pointed out in advance: the naming of the camps and the dates of their organization and closure obviously follow rules. Unfortunately, in almost no case do documents exist that address the underlying decision-making. Therefore, in the following, the rules usually had to be inferred from the known data by a process of inductive reasoning.

The order in which the camps are presented is determined by the sequence in which a POW might have experienced them:

Camp for temporary stay (*Transitlager*):

- Reception camp (*Auffanglager*)
- Army prisoner collection point (AGSSt)
- Transit camp (Dulag)

Camp for permanent stay:

- Camp for enlisted personnel and NCOs (Stalag), also forward camp of this type (Frontstalag)
- Officer camp (Oflag)
- Internment camp (Ilag)
- Special camp: repatriation camp (Heilag)

The Stalags and the Oflags are the basic types of Wehrmacht camps; this section’s “Stalag” entry also contains a description of the internal organization of a Stalag, which can be applied to some degree to the other types of camps.

Reception Camp (*Auffanglager*)

At the onset of the war in 1939, only transit camps and camps for permanent accommodation of POWs were organized within the Reich. Later, once the campaign in the west had begun, a new type of camp was created: the reception camp. It existed only in the case of the Army, however, not the Luftwaffe or the Navy.

These camps, deployed closer to the combat units, were intended to function as the interface between the temporary collection camps of the field elements and the facilities of the POW administration, located farther behind the lines. Here,

the POWs were recorded merely in terms of the headcount. Nothing is known about the internal composition of such a camp, as no Table of Organization (*Kriegsstärkenachweisung, KStN*) has been discovered thus far.

In May and June 1940, seven reception camps in total—the first six of which had the additional descriptor “mobile” (*bewegliches Auffanglager*)—were organized. Only one of them, however, was deployed in the POW administration. In early 1941, they were all, with one exception, restructured as Army prisoner collection points, AGSSts.¹²⁹

In the spring of 1941, before the invasion of the Soviet Union, additional reception camps with the numbers 8 through 20 were planned, but only nine of them came into being. Four of them did exist for a short time, but, in the end, they all were organized as AGSSts between February and July 1941 or were restructured accordingly. These camps were unsuccessful.¹³⁰

Army Prisoner Collection Point (*Armee-Gefangenensammelstelle, AGSSt*)

Regarding the history of its formation, this type of camp was the successor to the reception camp; it also was used only in the Army, not the Luftwaffe or the Navy. Because no Table of Organization is available for reception camps, nothing can be stated about differences between these two types of facilities; possibly AGSSt was just a new term, considered more appropriate, for a type of camp that otherwise differed only in unimportant ways from a reception camp. The task of the AGSSt likewise was to accept prisoner groups that had only temporarily been in the custody of the field forces and put them into the professional POW system. Then, in accordance with the orders of the commanders of the POW administration, the AGSSt channeled the prisoner streams to a Dulag or a Stalag; for these purposes, it was sufficient just to record the numbers of prisoners.

The small number of personnel provided to the AGSSt—approximately 20 German soldiers—was in keeping with this limited range of duties. Without the help of other units, an AGSSt was, thus, not even able to control and guard its own POWs. Not until 1944 were newly organized AGSSts given a permanent guard platoon; as a result, the number of personnel increased to around 100 soldiers.¹³¹

In the last months before the invasion of the Soviet Union began, 22 AGSSts with the numbers 1 through 22 were organized. Ten of them resulted from the reorganization of existing reception camps, 11 from the reorganization of forward Stalags that had been freed up in France. Only one was newly created. In the years 1942 and 1943, only a few new camps of the AGSSt type—six in all—were added, for specific purposes.¹³² During the final phase of the war, between August and November 1944, establishment of a larger number of these camps resumed. Of 36 camps in total, with consecutive numbers beginning at 31, two-thirds (24) resulted from reorganization of Dulags and Stalags that were closed. Only 12 were completely new creations.

Unless destroyed by combat action, the vast majority continued to exist until the war ended. In the ever-diminishing territory controlled by the Wehrmacht, Dulags were more likely to be “pared down” than AGSSts, and the POWs were transferred directly from the AGSSts to the Stalags.

Transit Camp (*Durchgangslager, Dulag*)

This type of camp performed diverse functions, depending on which branch of the Wehrmacht operated it. First, the Army camps: for prisoners of the field units, transit camps usually were the second stop in the sequence of regular camps—or the first, if the field forces transferred the prisoners directly to Dulags rather than AGSSts. The Dulags not only held POWs in custody until their further transport but also housed civilians who, by order of military or police authorities, were held under arrest. Officers, NCOs, and enlisted men were joined but separated in different accommodations.

According to regulations, the Dulags were supposed to hold their prisoners in safekeeping during the first weeks of a war, until the Stalags, located farther behind the lines, were ready for operation. The maximum occupancy envisaged was 5,000 POWs—a number that in reality was far exceeded as a rule. For guarding the camp and escorting transports, two Reserve Battalions with around 1,500 soldiers in total were deemed necessary.¹³³

In the Dulags, although the POWs were recorded on lists in the order of their arrival, they still were not registered in accordance with the requirements of the international law of war; that step did not take place, apart from some exceptions, until they reached the Stalag. Even though postal traffic from the Dulag was generally not possible, the POWs were able to send the first notification postcard to the International Committee of the Red Cross, as stipulated by international law.¹³⁴

Initially, Dulags were set up in August and September 1939 in connection with the invasion of Poland. Apparently, a fixed and definitive rule for naming the camps of this first wave did not yet exist. Four different approaches are discernible:

- Place of organization (Dulags Döllersheim, Gneixendorf, Halbau)
- Alphabet (Dulags A-L)
- Roman numerals in combination with a letter of the alphabet
- Arabic numbers in numerical sequence.

In view of the mobility of Wehrmacht POW camps, naming the camp after its original location was not a helpful approach, and the alphabet did not offer enough possible combinations. Therefore, a third naming convention came into use, one that was to become prevalent for all the camps in the territory of the Reich. As the first part of its name, every camp used the number of the Defense District (*Wehrkreis*) in which it was located, in Roman numerals, followed by an alphabet letter for distinguishing the camps within a Defense District.¹³⁵ All the Dulags in the first wave of organization

had one thing in common: they were deployed in the territory of the Reich. Over the course of the winter of 1939–1940, to the extent that the Polish POWs were distributed to the Stalags, the Dulags became obsolete. Beginning in early 1940, almost all of them—with two exceptions—were reorganized as Stalags or Oflags.¹³⁶

In 1940, in a second wave, a special group of Dulags was organized: the “Sea Lion” (*Seelöwe*) transit camps. These camps, which included seven Dulags and eight “downstream” alternate camps (*Ausweichlager*), were organized in September 1940 in preparation for the planned invasion of Great Britain. Rather unusually by Wehrmacht standards, the alternate camps became physically operational within the shortest possible time, and the Dulags were even completely established physically and fully manned as well. After the plan for the invasion was dropped, the camps were shut down in February 1941 without ever having been used.

The third wave of Dulags consisted of the camps with Arabic numerals, which began to be organized in March 1941 in preparation for the attack on the Soviet Union. There were 48 Dulags in total at first, and 8 more were added in 1942. These were not newly established camps but rather forward Stalags no longer needed in France. Depending on the date of release in France, these Frontstalags were gradually moved into the territory of the Reich in phases and then reorganized there as transit camps. In the process, the camps retained their numbers; that is, Frontstalag 100 became Dulag 100. Correspondingly, the numbering began at 100 and went up—skipping a few numbers—to 241. Gaps in the sequence are often attributable to the fact that no forward Stalag with this number had existed either. A further group of Dulags with numbers beginning at 300 was created by reorganizing existing camps of the Stalag, Oflag, or Heilag types that presumably had become superfluous. These camps, almost without exception, were deployed in the eastern theater of the war.

In a fourth organizational wave, in September 1943, five Dulags with numbers beginning at 400 were organized for deployment in southeastern Europe.

Unless the Dulags—primarily in the east—were destroyed by the enemy, the POW administration began shutting down the transit camps at the end of 1942, and it accelerated the closure process at the end of 1943. As stated in the section on the AGSSts, in the diminishing German sphere of power, POWs were increasingly handed over directly to the Stalags by the AGSSts, bypassing the transit camps altogether.

In addition to the Army, the Luftwaffe and the Navy also operated camps of the Dulag type, although their tasks were different to some extent. They also served the purpose of collecting the POWs and distributing them to the final camps, but at the same time they were also evaluation and interrogation camps, where expert interrogators from the respective branch sought to gather intelligence from the prisoners. Only when this phase was concluded could the prisoners be sent on to a permanent camp.

Camp for Enlisted Personnel and NCOs (*Stammlager, Stalag*)/Forward Camp for Enlisted Personnel and NCOs (*Frontstammlager, Frontstalag*)

In their structure and the scope of their tasks, the Frontstalags did not differ in any major way from the Stalags, and, therefore, they are discussed jointly here. In total, 263 of these two types of camps were in existence at some point during the war, including 7 Luftwaffe camps (Stalag Luft), 2 Navy camps (Marlag/Milag), and 254 that were operated by the Army.¹³⁷ Thus, the Stalag was by far the most common type of camp in the POW system of the Wehrmacht. Considering also that most POWs spent nearly all of their period of imprisonment in a Stalag, the Stalag was the typical camp of the Wehrmacht. In the following, therefore, its structure and organization are examined in greater detail than those of the other types of camps.

Kriegsgefangenen-Mannschafts-Stammlager, the full, official name of these camps, were used for permanent confinement of POWs. But the branches of the Wehrmacht differed as to which rank groups were to be accommodated together or separately. The Army Stalags held enlisted personnel and non-commissioned officers; separate camps existed for officers. The camps of the Luftwaffe and the Navy held personnel of all ranks at the same time, but the enlisted men and officers were housed separately within the camps.

In general, enlisted personnel could be used for labor under the terms of the regulations pertaining to the international law of war. NCOs, however, could be used only for supervisory purposes, unless they volunteered to work. The Luftwaffe and the Navy refrained from using captive air force and naval personnel entirely, as a labor force, but that did not hold true for the members of the enemy army units. Naturally, the structure of the camps also reflected this disparity.

In addition, the fact that the organization of a Stalag was subject to very substantial changes over the course of the war must not be understated. Moreover, these changes could take completely different directions, depending on the theater of war. More detailed information on this subject is found in the sections on the individual theaters of war. The following remarks depict the ideal type of an Army Stalag, a camp in the territory of the Reich in 1942:

At the head of the Stalag was the commandant. His staff included:

- The commandant group (*Gruppe Kommandant*)
It included, among others, the deputy and the adjutant of the commandant, and was responsible for camp personnel.
- The legal officer (*Gerichtsoffizier*)
He not only advised the commandant regarding in-camp disciplinary action when infringements occurred but also handled the forwarding of more serious offenses to the military court.

- The camp leader (*Lagerführer*)

He was responsible for the everyday operation of the camp. He oversaw the heads of the POW units; for activity within the camp, the POWs—separated by nationality—were arranged in squads (*Korporalschaften*) headed by a POW. These squads, in turn, were subordinate to a POW company, which could consist of as many as 250 men, led by either a POW or a German NCO. Several companies then constituted a battalion, under the leadership of a German officer.

- The labor deployment group (*Gruppe Arbeitseinsatz*)

It did not control the deployment of labor but merely administered it. Responsibility for control was in the hands of a field office of the Employment Office (*Arbeitsamt*). Such a field office existed in every Stalag.

- The medical officer (*Sanitätsoffizier*)

He advised the commandant on matters related to medical services and was the superior officer of his medical orderlies. Functionally, he was responsible for the medical care of the POWs, and physician POWs from the relevant countries generally lent him their support in this undertaking.

- The counterintelligence officer (*Abwehroffizier*)

His range of duties included defense against sabotage and espionage as well as exposure of resistance organizations. In addition, the postal censorship office (*Postprüfstelle*), which censored the prisoners' mail, was under his authority.

- The administration (*Verwaltung*)

It was responsible for providing supplies to the Stalag, particularly food supplies.

- The motor pool (*Fahrbereitschaft*)

As POW labor detachments were increasingly deployed far outside the camps, it became necessary to use vehicles to maintain the connection to the camp.¹³⁸

In the first version of the Table of Organization, dated 1938, the Stalag staff consisted, in total, of approximately 14 officers and around 120 civil servants, NCOs, and enlisted men, with a planned camp capacity of 10,000 POWs. Two Reserve Battalions, with a strength of around 1,500 men, were budgeted for as the guard force. By 1942, the number of personnel on the staff had risen to 214 soldiers and the capacity to 30,000 POWs. In the final phase of the war, Stalags with occupancy numbers in the high five figures existed in the territory of the Reich. These numbers say little about the situation in the camp area, because as the war progressed, more and more POWs lived in labor detachments outside the camp rather than in the Stalag itself.¹³⁹

The intended physical layout of the camp area (*Lagerbereich*) was as follows: the commandant's office was to be built apart from the rest, so that it would not be immediately

threatened in the event of unrest or rioting. The guard and administration buildings were in the frontmost area, enclosed only by a single fence—the zone also known as the “German camp.” Next came the entrance camp, with the functional buildings for the POWs: the barracks for reception, detention, disinfection, latrines, and workshops, the infirmary, and the ration supply depot. Most of the area was occupied by the main camp, where the prisoners' quarters were located, which was secured by double rows of barbed wire. The main camp was supposed to consist of 10 groups of buildings, with four barracks for 250 men each in each group. At the center were the kitchens and the camp canteens, which sold various items to the prisoners. A hospital for 300 patients and the quarters of the guard battalions were to stand apart, off to one side of the camp. If such a camp could not be set up within already existing facilities, the POWs themselves were supposed to build it. The goal was to have all inhabited barracks erected within 90 days and the rest of the camp completed within an additional 30 days.¹⁴⁰

The space requirement allotted to each POW was 2.5 square meters (27 square feet); by contrast, each guard was entitled to 3 square meters (32 square feet). The living conditions were thus very confined, even though the complex was extensive. With around 30 hectares (74 acres) for the camp, 5 hectares (12 acres) for the hospital, and 6 hectares (15 acres) for the guards' quarters, the complex occupied approximately 40 hectares (99 acres), about the size of 60 soccer fields.¹⁴¹

Various approaches were taken to naming the camps, depending on the planned deployment region. Camps for deployment in the Reich were named in accordance with the principle outlined above: “Defense District number + alphabet letter,” with the letter assigned according to the planned sequence in which the camps were to be organized; the actual organization, however, might take place in a different order, depending on possible problems in implementation.

The first 35 Stalags of this type were erected within the territory of the Reich beginning in August 1939, concurrently with the invasion of Poland. Because many of these camps did not even exist at the time their staffs arrived on site, the POWs themselves had to build them. In 1940, 25 more camps within the Reich followed, most of which also were not built before the invasion of France, but only during or after the conclusion of the operations. In 1941, 10 more camps were organized, but without any discernible sign of a connection with the invasion of the Soviet Union. However, this is to be interpreted more likely as a reaction to specific demands, such as changes in the manpower requirement. In part, these were shadow camps. A last, smaller organizational series of four camps followed in 1942. Oflags with Arabic numerals were used for this purpose; they were originally scheduled for deployment in the east, but then probably not needed. After that, that is, during the entire second half of the war, there was no further new organization of Stalags designated for deployment within the Reich.

Stalags outside the territory of the Reich were not envisaged at first, and none were created in Poland in 1939. A

different picture emerged after the occupation of Belgium and the Netherlands: Stalags were needed, but the absence of Defense Districts there made it impossible to follow the previously adopted naming method. Like the Dulags, they were initially designated with letters of the alphabet—an obviously inadequate system, given the plans for further expansion that were in the offing. This naming convention, therefore, was in use for only a few months.¹⁴²

The third naming scheme—Arabic numbers in numerical sequence for POW facilities intended for deployment outside the Reich—was first used during the “French campaign.” The camps designated for deployment there were referred to not simply as Stalags but as forward Stalags, or Frontstalags, perhaps because they were planned for deployment in the occupied territory rather than within the Reich.¹⁴³

Between June and August 1940, in a first wave, 69 Frontstalags were activated, beginning with the number 100, and continuing, skipping a few numbers, to 241. These camps were deployed exclusively in France. Often the POWs were not taken to the sites of the newly erected camps; instead, the Frontstalags took over camp areas that had already been set up by field units and, until then, administered by those same units. As French POWs began to be transferred from France to Germany, the Wehrmacht began closing Frontstalags in March 1941, mostly by restructuring them as Dulags while retaining the identifying numbers of the camps.

Independently of that measure, a second wave of activations followed in April 1941: an additional 19 Frontstalags with numbers beginning at 300. However, these camps were not immediately deployed; instead, within a few months, they were converted into Stalags. Apart from seven Frontstalags that continued to be deployed in France, camps with this name no longer existed after mid-1942. Only one, Frontstalag 194, remained in existence through the end of the war.¹⁴⁴

In preparation for the attack on the Soviet Union, POW camps were established on a large scale. In this case, the term “forward” was not employed. The first deployment wave included 30 camps, which were to be activated within three weeks; the second wave consisted of another 30 camps with a more generous deadline for completion.

They were given numbers beginning at 301 and continuing upward; those formed from Frontstalags that had been planned but never realized kept their original numbers. Four of these camps, however—obviously contrary to the original plans—were nonetheless deployed in the territory of the Reich. To make the classification clear, they were given, in addition to their Arabic numeral, the designation they would have received if they had been scheduled from the outset for deployment in the Reich. For example, Stalag 304, which was stationed in Zeithain, received the identifier 304 (IV H)—but only while it remained in the territory of the Reich. Upon transfer to a theater of war outside the Reich, the added identifier was dropped again. This special arrangement, however, applied only to the camps of the first and second waves, and only in 1941. “Arabic” Stalags that were deployed in Reich territory after that date did not receive the

added designation. Ultimately, however, most of the “Arabic” Stalags that were deployed at some point in the territory of the Reich did receive the supplemental identifier.¹⁴⁵

In 1942, 16 “Arabic” camps were established, followed by 4 others in 1943 and 1 last camp in 1944. In total, of the 88 “Arabic” Stalags, 4 were not deployed but instead were promptly restructured, and 5 others were deployed in Scandinavia. The vast majority, however, were destined for the eastern theater of war. As this theater gradually shrank in the post-1943 period, “Arabic” Stalags were destroyed, closed, or transferred into the territory of the Reich. Only ten of them continued to exist until the end of the war.

Officer Camp (*Offizierlager, Oflag*)

Because the Army was the only branch that did not put officers into the Stalags, it was also the only branch that set up special camps for officers—the Oflags, 80 of which were activated during the war. In principle, their structure was the same as that of the Stalags, but they had no department for labor deployment, because officers were not required to perform labor that would benefit the enemy. In addition, the authorized size of the camps was only 1,000 officers, a tenth of the standard occupancy for a Stalag, although this limit was exceeded with increasing frequency and to an increasing extent over the course of the war. Correspondingly, the German permanent staff consisted of only 79 persons, 12 of them officers. Once the POW strength reached a level of 500 officers, at least one guard company was considered necessary. In addition, there were the orderlies for the officers and workers for the camp’s maintenance—in all, around 10 to 20 percent of the officer personnel strength. For the auxiliary personnel, the regulations of a Stalag were in force; for the officers, those of the Oflag applied.¹⁴⁶

The history of the activations took a course like that of the Stalags. At first, Oflags were established only in Reich

Allied POWs cheer as tanks from the American 6th armored division arrive to liberate them, Bad Sulza, April 1945.

territory and were named in accordance with the combination described above: "Defense District number + alphabet letter." In the first wave were 24 camps, some of which were set up even before the war began, with most established by the end of 1939.¹⁴⁷ They were unevenly distributed across the territory of the Reich: in the Defense Districts located farthest to the east, districts I, XX, and XXI, not a single Oflag was deployed.

Then, in a second wave in May and June 1940, immediately after the occupation of Belgium and the Netherlands, the Army established officer camps in a foreign country for the first time: Oflag Holland A and Oflag Holland B. After that, letters of the alphabet were no longer used to identify the Oflags, presumably for the same reasons as in the case of the Stalags.

In the third deployment wave, between May and September 1940, another 25 Oflags were added to house the large number of French, Belgian, and Dutch officers who were taken to Germany after the fighting ended. In the remaining years, only four more Oflags were activated in the territory of the Reich.

The fourth wave saw the creation of 12 Oflags, created in preparation for the operation in the east. Like the corresponding Stalags, they received an Arabic number as an identifier, beginning at 52, skipping a few numbers, and ending at 78. Three of them remained in Reich territory and were given the Defense District/alphabet letter combination as a supplement; however, most of them—one of them later shifted back into Reich territory—did not receive the add-on.¹⁴⁸

All the Oflags of 1941 were new organizations. Half of them, however, were not used for housing officers; instead, they held NCOs and enlisted ranks, apparently because the Wehrmacht granted the appropriate treatment to far fewer officers than it originally had planned. In this respect, it was logical that these Oflags, from October 1941, were either converted into Stalags or closed.

In 1943, four more "Arabic" Oflags came into being, including three with numbers from 6 to 10, skipping some numbers; they did not follow the count that had been customary until then. These camps were established for special purposes, such as housing Polish POWs from the 1944 Warsaw Uprising.¹⁴⁹

The sixth wave consisted of eight "Arabic" Oflags, initially organized in 1944 and interlocking with the old counting system, starting at 52. Thus, in the result, around one-third of all Oflags with Arabic numerals were not established until 1944—an unusually large share, in comparison with the activation history of other camp types.

Considering the history of the closure figures, it is striking that around a third of all Oflags were closed or reorganized in 1942—presumably, the result of a process of adapting the system to altered circumstances. Another third of the camps were closed in 1943 and 1944. The final third of them remained in operation until the end of the war.

Internment Camp (*Internierungslager*, Ilag)

Camps of this type existed only for the Army and the Navy, not for the Luftwaffe. Because the international laws of war

did not include a convention on the treatment of interned civilians, there were also no rules specifying what tasks the internment camps were to perform and which individuals were to be imprisoned there. A list of instructions titled "Service Regulations for the Commandant of an Internment Camp (Camp for Civilians Subject to Military Service)," in which such matters could have been regulated, was announced but never published.¹⁵⁰ Therefore, the organizational type known as the Ilag did not develop in close adherence to conceptual guidelines; rather, its development was guided by practical necessities. In this process, three organizations had a say in the treatment of the internees:

- The Wehrmacht asserted its interest when it was a matter of detaining or releasing individuals who were essentially able-bodied and, therefore, capable of serving the enemy as soldiers. The same thing applied to individuals who had knowledge that might be of interest to the enemy.
- The Reich Ministry of Foreign Affairs was responsible for communication with the enemy, the protecting power, and the International Committee of the Red Cross. It paid attention primarily to the reciprocity of the treatment, with a view to preventing, if possible, the emergence of any reasons for reprisals against German civilian internees in enemy custody.
- The RSHA laid claim to a voice in all matters of Germany's internal security.

Since each of the three organizations accepted the claims of the other two in principle, the result was a mostly amicable but also complicated form of cooperation.¹⁵¹

The question of who was responsible for which Ilags is answered in quite different ways in the relevant literature. The reason lies in the complex history of the camps' origins. The first people to be interned were citizens of enemy nations who were on German territory when the war began. They were taken by the police to police-run internment camps. The second group was made up of crew members and passengers of ships taken captive by the Navy. They were transferred by the Wehrmacht to its own internment camps, but they had the same legal status as the members of the first group. Other groups followed later, such as the British citizens of the German-occupied Channel Islands. Some of them were deported at the request of the Wehrmacht; under international law, they were to be regarded "only" as civilian prisoners. For political reasons, they were nonetheless recognized as civilian internees, although they were not housed in Wehrmacht camps.

The Ilags that had been set up by the Wehrmacht were located as a matter of principle in the territory of the Reich. Apart from Marlag-Milag Sandbostel and Marlag-Milag Nord, they were subordinate to the POW organization of the Armed Forces High Command and thus to the Commanders of Prisoners of War in the respective Defense Districts.

28 WEHRMACHT PRISONER OF WAR CAMPS INTRODUCTION

Generally, the number of the Defense District in which the camps were stationed served as their identifier. Sometimes they also were named for the place where they were stationed or by a combination of both methods, without the reasons for this being known.¹⁵²

Ilags differed from Wehrmacht POW camps in the following ways:

- They generally held fewer than 1,000 internees.
- Families were also interned there, in addition to individuals.
- Civilian internees generally were not permitted to work outside the camp, while enlisted POWs, as a rule, were required to do so.
- As a matter of principle, civilian internees received no financial benefits from the Reich, whether service pay, wages, or the like.

Otherwise, the living conditions—communication by letter or telegram; transfer of money; inspections by the ICRC, the protecting powers, and the charitable organizations; distribution of charitable donations—were comparable to those of a POW camp.

In the present volume, all the Ilags that were under Wehrmacht control are covered. Specifically, they include:

- Ilag VII, Laufen
- Ilag VIII/H, Tost (Toszek)
- Ilag XIII, Nuremberg
- Ilag XIII, Wülbzburg
- Ilag XVIII, Spittal
- Ilag Giromagny

In addition, there were internment camps that were run as subcamps of POW camps. They are:

- Milag Sandbostel (subcamp of Marlag-Milag Sandbostel)
- Milag Nord (subcamp of Marlag-Milag Nord Westertimke)
- Ilag VIII/Z, Kreuzburg (Kružberk), a branch camp of Ilag VIII/H
- Ilag Kreuzburg (subcamp of Oflag 6, Tost)
- Ilag Kreuzburg (subcamp of Stalag 344)
- Ilag Tittmoning (subcamp of Ilag VII)¹⁵³

The opposite constellation—a POW subcamp in an Ilag—also existed.¹⁵⁴

Sometimes civilian internees were also housed in subsections of POW camps, although in this case they were not designated as internee subcamps. This was especially common in the final phase of the war. These camps include:

- Frontstalag 111, Drancy
- Stalag VI F, ZL Dorsten
- Stalag 317, ZL Landeck
- Stalag V B, Villingen

The Navy essentially used Army camps as intermediate stops for forwarding civilian internees of the Navy from the ports along the Atlantic coast to Marlag-Milags in northern Germany, without building special subcamps for this purpose.

Regarding the Ilags or subcamps for internees that were under Wehrmacht authority, the present volume seeks to provide exhaustive information on them. In addition, internees were accommodated in other camps, which were not subordinate to the Wehrmacht, even though in some cases their designations might suggest an affiliation with the Wehrmacht. Such camps generally came into existence through the conversion of former Wehrmacht camps, which retained their previous designation. The Wehrmacht provided support services for the following camps without having overall responsibility for them:

- Besançon
- Compiègne
- Konstanz
- St. Denis.¹⁵⁵

Most of these camps were in France, where the Wehrmacht was the only organization that had enough personnel to guard and administer a camp.

Repatriation Camp (*Heimkehrerlager*, Heilag)

As the regulations for the repatriation camps, Army Manual (*Heeresdienstvorschrift*, H.Dv.) 38/8a explained the purpose of this facility, “The Heilag is the receiving center for German repatriates and the distributing center for enemy repatriates.” For German returnees, however, a Heilag was not only a place of welcome but also a screening site, for it was “to be anticipated that undesirable elements will also try to come to Germany via the Heilag.”¹⁵⁶

The following were candidates for repatriation even before the end of the hostilities:

- Seriously ill and wounded men who had been proposed for repatriation by medical commissions
- Protected personnel, that is, physicians, medical orderlies, and clergymen
- Civilians whose retention was no longer of interest.

The repatriation camps in the territory of the Reich were subordinate to the Defense Districts, and those in occupied territory to the military commanders. No such camps existed in the Army’s zone of operations or in the Luftwaffe and Navy.¹⁵⁷

During the hostilities, Heilags were supposed to have a capacity of 150 persons per transit direction, that is, 300 in total. After the end of the fighting, the transit number was supposed to increase to 1,000 persons per direction. In exceptional cases, civilian internees were also supposed to be exchanged through these camps. In terms of their equipment, repatriation camps were not designed to accommodate people waiting for exchange for a lengthy period; their stay was

intended to be as short as possible. The number of personnel at a Heilag was correspondingly small: 30 people, including 9 officers.¹⁵⁸ In addition, Heilags were, if at all possible, supposed to be stationed near the border with a neutral state through which the exchange could then be handled.

As the repatriation camps are presumably the group of POW camps on which the least research has been done thus far, the level of knowledge about them is rudimentary at best. The author is not even aware of a complete list of all the Heilags—only those in which foreign POWs were housed could be verified. The following remarks, in accordance with the basic approach of the present section, confine themselves to the repatriation camps that were used for the transit of foreign POWs. Camps for German repatriates are taken into consideration only if they are important for the understanding of systematic relationships.

Empirical findings suggest that the reality did not correspond to the standards of the regulations, which preserved the spirit of World War I, during which exchanges of small contingents of POWs had repeatedly been carried out. The camps were indeed planned for transit in both directions; however, that seems to have hardly ever been the case. The progress of events also served as an obstacle to transit of that kind. After the capitulations or ceasefires in Poland in September and October 1939, and in the Netherlands, Belgium, and France in May and June 1940, the German POWs had to be immediately set free by their detaining powers. Heilags did not yet exist at this time; they were not activated until June 1940. For this reason, most of the Polish POWs were released into their homeland even before the beginning of the invasion of France, without being channeled through repatriation camps.

The first Heilags were organized in June and July 1940 in Defense District V, at the border with France, for the repatriation of the French POWs who were permitted to return home after only a few months of captivity.¹⁵⁹ The same is true for Heilag XVII A, in the southeastern part of the Reich, with respect to the Yugoslav POWs. For naming the camps, the tried-and-true pattern of “Defense District + alphabet letter” was employed.¹⁶⁰ After only a few months, the Heilags in Defense District V were shut down again, and camps in occupied France for transfer into the unoccupied zone were created instead—named for towns, because these were camps in a foreign country.¹⁶¹

As of 1942, camps were activated for foreign POWs in transit only in Defense Districts IV, VIII, and XXI. Some received Roman numerals as identifiers, while others were named for the deployment site. No reasons for the differences in naming methods are known.

The first camps organized still tended to comply with the demand that Heilags should be located near the border—they had a spatial link to the departing POWs’ country of destination. However, the subsequent camps, beginning in 1942, were established in the eastern and southeastern parts of the Reich without any geographic connection to an exchange route. Only one Heilag was stationed in a port city.¹⁶²

Because the Heilags were sparsely manned—with too few personnel to handle the regular camp operations alone—they

generally had organizational support from other POW camps, although they retained their independence in terms of management. In addition, there were Heilags that were designated as subcamps or branch camps and, hence, were not independent. The question why they were not all run as subcamps, given their small scale, remains unanswered.¹⁶³

Besides the 12 independent repatriation camps for foreign POWs, there existed other Heilags that were subcamps:

- Heilag Lissa (Leszno), Grune subcamp of Oflag XXI C, Schildberg (Ostrzeszów)
- Heilag Mühlberg, subcamp of Stalag IV B, Mühlberg
- Heilag Schildberg, subcamp Heilag XXI of Oflag XXI C, Schildberg.

For the few Heilags below, documents indicate that they were used for transit in both directions:

- Heilag Lissa
- Heilag V B, Strasbourg

For the sake of completeness, mention is made here of the following repatriation camps for German soldiers, verified during the research:

- Heilag II A, Güstrow
- Heilag VII/2, Traunstein
- Heilag Heilbronn
- Heilag Stettin (Szczecin)

Finally, it should be pointed out once again that a considerable amount of research remains to be done on the topic of repatriation camps.

Allied POWs, imprisoned in a camp near Hammelburg, cheer as an American tank crashes through the barbed wire enclosure of the prison camp, April 8, 1945.

USHMM WS #83801, COURTESY OF NARA.

Quantitative Comparison of Camp Types

In conclusion, the author intends to show the development of the POW administration of the Wehrmacht and its focal points in quantitative terms. At the same time, the following tables are to be interpreted with caution. They are based exclusively on the official designation of the camps. For the Wehrmacht, however, consistently sustained principles did not play a particularly important role. Thus, there were Oflags that were used for housing enlisted ranks as well as Stalags in which officers were accommodated. Several POW camps were also co-opted for use outside the system of POW administration, for administrative tasks.

The Wehrmacht established 541 POW camps in total, although by no means were they all in existence at the same time. Quite the contrary, in many cases new camps were created by renaming and restructuring old ones. The table below gives an overview of the frequency of each type of camp:¹⁶⁴

Type	Army	Luftwaffe	Navy	Total
AGSSt	76 (14%)	—	—	76 (14%)
Dulag	98 (18%)	3 (<1%)	2 (<1%)	103 (19%)
Stalag/ Frontstalag	254 (47%)	7 (1%)	2 (<1%)	263 (49%)
Oflag	80 (15%)	—	—	80 (15%)
Ilag	6 (1%)	—	—	6 (1%)
Heilag	12 (2%)	—	—	12 (2%)
Total	526 (97%)	10 (2%)	4 (1%)	540 (100%)

The table above clearly shows the dominance of the Stalag/Frontstalag type. Considering also that the number of POWs managed by a Stalag was in the tens of thousands—and remained at such a level over several years—while an Ilag scarcely ever had a number of internees that even reached 1,000, and that the length of stay in an AGSSt was generally measured in days, the outstanding importance of the Stalag/Frontstalag for POW administration becomes even more apparent.

The table below shows key points in time for the activation of POW camps.

The result is clear: almost two-thirds of all camps were established in the years 1940 and 1941. The purposes they

served are addressed in the remarks on the organizational history of POW administration.

NOTES

1. In total, approximately 1,000 German POW camps and POW labor units existed during World War II—not simultaneously. If no more than 500 such installations were in existence at the same time, and each duty station had a strength of 100 soldiers, then around 50,000 personnel were involved in POW administration. Given the fluctuation that occurred over the six-year period, the number of German soldiers deployed within the system of POW administration at some point during the war was probably around 100,000. In addition, there were the guard units, the number of which has not been established thus far.

2. The publications by Alfred Streim and Christian Streit are frequently used as the basis for portrayals of organizational history. Both, however, focus on the early stage of the war and end around 1943; OKW/Chef Kriegsgef./ Org (IV), Az. 2 f 24.12 a, Betr.: Behandlung von Akten des Kriegsgefangenenwesens bei Verlegung von Dienststellen, mit Bestätigungsvermerk Luftgaukommando VI, BA-MA, RL 19/65; Gottlob Berger, Kriegsgefangenenwesen, December 7, 1946, IMT-Dokument NO 1103.

3. Rü IVc, file note, June 15, 1938, BA-MA, RW 19/2140; file note, Major Breyer, November 10, 1938, BA-MA, RH 13/2; RdL u ObdL/GenStQu. 2, Nr. 77990/39 geh. (III C) Betr.: Kriegsgefangenenlager der Luftwaffe, November 9, 1939, BA-MA, RW 19/2141.

4. See the essay by Raffael Scheck on POW administration in France.

5. Between 1942 und 1944, Stalags 304 and 315 were indeed deployed in these countries; nonetheless, there was no Commander of POWs there. Thus, there can be no discussion of a POW organization.

6. The following were stationed in Romania at various times: POW District Commandant A, Dulags 11, 123, 137, 160, 162, 180, 181, 191, 231, 241, AGSSts 11, 12, 15, and 16, as well as various POW construction and labor units, see Deutsche Heeresmission/ Ib, Fernschreiben September 27, 1941, BA-MA, RH 20-11/381.

7. Schramm, *Kriegstagebuch des Oberkommandos der Wehrmacht*, vol. 1/2, pp. 892–893.

8. Der Führer und Oberste Befehlshaber der Wehrmacht, Befehl über das Kriegsgefangenenwesen, May 30, 1943, BA-MA, RW 41/13; OKW/ ChefKriegsgef./ Org. (Ic), Az 2f24.12.c, Nr. 6222/43 Organisationsbefehl Nr. 51, November 18, 1943, BA-MA, RW 6/273.

9. Readers may note the absence of one theater of war from the list above: North Africa. Here, however, all POWs were the responsibility of the Italians. Only the Indian soldiers of the British Armed Forces were taken to Germany, see, Overmans, *German Policy on Prisoners of War*, p. 789.

29. This restructuring seems to have taken place only in some of the Defense Districts. Divisions for Special Assignment 406, 410, and 411 in Defense Districts VI, X, and XI were not disbanded for the time being. At least in Defense District XI, the previous chain of command continued to be in effect; see Wehrkreiskommando XI/ Abt. Kgf, Az 9b (I/37, I/74, I/4), Betr.: Kontroll-Offiziere; Verhältnis zu den Landesschützeneinheiten; Betreuung der Kriegsgefangenen-Arbeitskommandos, January 9, 1943, HStA Hann., 122a-7061; Wehrkreiskommando XI/ Abt. Kgf, Az 9b (I/37, I/74, I/4), Betr.: Kontroll-Offiziere; Verhältnis zu den Landesschützeneinheiten; Betreuung der Kriegsgefangenen-Arbeitskommandos, March 9, 1943, HStA Hann., 122a-7061.
30. ChefHRüundBdE/ AHA/ Ia (I), geh. Betr. DivKdre z.b.V., December 13, 1939, BA-MA, RH 15/78; Stalag VIIIB, Stalagbefehl Nr. 19, May 9, 1942, BA-MA, MFB 2/1273; OKW/ Chef Kriegsgefangenenwesen, *Befehlssammlung*, No. 14, June 26, 1942, Item 2: Disziplinarbefugnisse gegenüber Kriegsgefangenen; Wehrkreiskommando VI/ Ib Org, Az. K 5, Betr.: Gliederung des Arbeitseinsatzes von Kriegsgefangenen im Wehrkreis VI, StA OS, Rep. 675, 1061 AE, WK VI.
31. The table is based exclusively on the formal criterion of which camps existed at any time in a Defense District. Divergent dates for establishment and closure are not considered, nor are subcamps and branch camps, as well as camps with arabic numbers.
32. Because of the small number of cases, there is no need to perform a quantitative analysis of the Ilags.
33. Stalags were indeed occasionally used for other purposes also. Stalags XVII A and XVII C were initially used as Dulags; Stalags IV A, IV D, IV E, IV F, and IV G served on occasion as shadow camps; the Zeithain branch camp of Stalag IV was primarily used as a hospital.
34. Wehrkreiskommando VI/ Ib Org, Az. K 5, Betr.: Gliederung des Arbeitseinsatzes von Kriegsgefangenen im Wehrkreis VI, StA OS, Rep. 675, 1061 AE, WK VI.

54. One of the consequences was that communication channels had to be created for the POWs' mail. Until then there had been no postal traffic from AGSSts. AGSSt 39 was subsequently tasked with postal censorship for the entire area of Army Group Center.

55. Generalquartiermeister—Gliederung und Aufgabenverteilung, Stand 1945, BA-MA, RH 3/389.

56. File note, Major Breyer, November 10, 1938, BA-MA, RH 13/2; RdL u ObdL/ GenStQu. 2, Nr. 77990/39 geh. (III C) Betr.: Kriegsgefangenenlager der Luftwaffe, November 9, 1939, BA-MA, RW 19/2141; Rü IVc, file note, June 15, 1938, BA-MA, RW 19/2140; Kurt Linde, Kriegsgefangenenwesen OKW, BA-MA, N 133/v. 6, p. 20. In general, it should be noted that the sources on the organizational history of the Luftwaffe are disparate and contradictory. This is due first to the sparseness of the records and the small scale of the Luftwaffe's POW administration, and second to the fact that the associated remarks frequently are based on statements and reports by contemporary witnesses, who wrote them after the war from memory, without being able to rely on documents.

57. This group also included naval airmen as well as members of enemy air forces who voluntarily went into German captivity. They were called *Überflieger* rather than *Überläufer*, the usual term for deserters, see OKL/ FSt/ Ic, statements by Romanian deserters, January 19, 1945, BA-MA, RH 2/2786.

58. RMdL u. ObdL/ Chef der Luftwehr, *Merkblatt für den Arbeitseinsatz der sowjetischen Kriegsgefangenen im Bereich der Luftwaffe (Merkblatt 205)*, December 10, 1943, BA-MA, RL 2 II/4390; this pamphlet replaces *Merkblatt* No. 117, February 1942; Reichssicherheitshauptamt/ IV B 5, No. 33065g, Einsatz sowjetrussischer Kriegsgefangener zur aktiven Luftverteidigung im Heimatluftgebiet, June 24, 1943, BArch, R 58/9806.

63. Speckner, *In der Gewalt des Feindes*, pp. 229–230.

64. Although the Luftwaffe certainly had a supply system, which resembled that of the Army in its main features, little is known about it. This is especially true for the supply troops. Although it is highly likely that the Luftwaffe possessed POW supply units like those of the Army, we were unable to identify them. With respect to construction, the POW units involved are indeed known, though little data is available on their deployment.

65. In individual cases, they also created personnel records and identification tags; it can be assumed, however, that this was done only temporarily, as a replacement for lost records.

66. See Feldluftzeuggruppe Moskau, BrB.Nr. 581/43 geh. Verw./ Gr. I, Betr.: Einstellung von Hilfswilligen und Behelfspersonal, February 22, 1943, BA-MA, RL 24/178.

67. Of 33 units in total that were deployed, 21 were deployed predominantly or exclusively on the eastern front, 4 in Finland or Norway, and 8 in the territory of the Reich or in the west.

68. The files do not reveal a substantive connection to the reorganization of the entire POW administration as of October 1, 1944. Because this change in the construction organization had a substantial effect on the Luftwaffe but applied to the POW administration only in part, such a connection can probably be ruled out.

69. Reichsminister Göring is said to have placed the entire Luftwaffe construction apparatus at the disposal of the Organisation Todt on May 3, 1944; on July 20, 1944, the commander in chief of the Navy, Grossadmiral Dönitz, followed

suit. As of May 1, 1944, the construction sectors of the Luftwaffe and the Navy were subordinate to the Organisation Todt, see Figge, *Organisation Todt*, p. 82. The personnel strength of the Luftwaffe construction troops was approximately 40,000 men, the majority of them Soviet volunteers and POWs, see Boog, *Luftwaffenführung*, pp. 288, 333; Hildebrand, *Luftwaffengenerale*, vol. 3, pp. 562–564; Oberst Dr. W. Walther, Die Luftwaffeninspektion 17, July 30, 1945, BA-MA, RL 2 VI/10; Die Gliederung der deutschen Luftwaffe (Kriegsspitzenlagerung und Gliederung der Höheren Kommandobehörden von 1933–1945), November 25, 1945, BA-MA, RL 2 VI/175; Inspizient für ausländisches Personal der Luftwaffe Ost, Brb.Nr. 229/44 geh. (I), Betr.: Vortragsnotiz, October 1944, BA-MA, RL 2 III/459.

70. Der Chef der Luftwehr, Vorläufiges Merkblatt über die Behandlung der als Behelfspersonal in der Flakartillerie verwendeten sowjetischen Kriegsgefangenen, IMT-Dokument No. 5798; A274: RdL u. ObdL Az 3p20, Betr.: Einsparung von Personal bei den Lw.Bautruppen, October 29, 1942, BArch, R 3201/20173.

71. There were around 80,000 POWs; see Boog, *Luftwaffenführung*, p. 289; Die Gliederung der deutschen Luftwaffe (Kriegsspitzenlagerung und Gliederung der Höheren Kommandobehörden von 1933–1945), November 25, 1945, BA-MA, RL 2 VI/175. On February 17, 1945, Generalleutnant Grosch was transferred to the Leaders Reserve (*Führerreserve*); his successor was Generalleutnant Schulz. On June 28, 1944, Generalmajor—as of August 1, 1944, Generalleutnant—Heinrich Aschenbrenner was appointed Inspector for Foreign Personnel East, Boog, *Luftwaffenführung*, pp. 289, 624–628; Hildebrand, *Luftwaffengenerale*, vol. 1, pp. 27–28, 397–398; Inspizient für ausländisches Personal der Luftwaffe Ost, Brb.Nr. 229/44 geh. (I), Betr.: Vortragsnotiz, October 1944, BA-MA, RL 2 III/459; OKL/ LwOrgStab/ GenSt-GenQu/ 2. Abt. Nr. 2029/45 geh. Vorläufiger Dienst- und Stellenplan für die Inspekteur des ostvölkischen Personals der Luftwaffe, February 1, 1945, BA-MA, RL 2 III/32.

72. According to Geck, *Kriegsgefangenewesen*, p. 16, there existed—analogous to the situation in the Army—a commander of POWs in every Luftwaffe administrative command headquarters that oversaw a POW camp. Geck does not cite evidence for his statement, and thus far no indication of such a function has been found in the files. Von Lindeiner was named commandant of Stalag Luft 3 on April 24, 1942. It is not known when the construction of the camp was complete. The date was close to the time when the commandant was appointed, however, see also Personalakte von Lindeiner-Wildau, Friedrich-Wilhelm, BA-MA, Pers 6/153948; Friedrich Wilhelm von Lindeiner-Wildau, Im Dienst der deutschen Luftwaffe, BA-MA, MSg 2/1517.

73. According to the report by von Lindeiner-Wildau, he was relieved on October 10, 1942; according to his personnel file, the corresponding order is dated November 3, 1942. Von Lindeiner-Wildau attributes the removal of the function of Commander of Prisoners of War of the Luftwaffe to a conflict between him and the department above him. As he depicts it, his function was taken over by an Inspectorate of Prisoner of War Administration for the Luftwaffe, of which there is no evidence in the records. It must be assumed that von Lindeiner-Wildau, who had no opportunity to refer to documents when writing his manuscript, suffered a memory

lapse and mixed up the terms “Inspector” (*Inspizient*) and “Inspectorate” (*Inspektion*). Some sources, such as the testimony of Generalleutnant Grosch before the International Military Tribunal at Nuremberg, ignore the existence of the Inspector and postulate the replacement of the Commander of the POW Camps of the Luftwaffe directly by Luftwaffe Inspectorate 17 (LIn 17); see Feldluftzeuggruppe Moskau, BrB.Nr. 581/43 geh. Verw./ Gr. I, Betr.: Einstellung von Hilfswilligen und Behelfspersonal, February 22, 1943, BA-MA, RL 24/178; LgKdo Moskau/ Qu, Stobau Az. 11 Nr. 2183/43 geh., Betr.: Neugliederung der Luftwaffenbautruppe, March 17, 1943, BA-MA, RL 24/178; Friedrich Wilhelm von Lindeiner-Wildau, Im Dienst der deutschen Luftwaffe, BA-MA, MSg 2/1517; Personalakte von Lindeiner-Wildau, Friedrich-Wilhelm, BA-MA, Pers 6/153948.

74. Before the expansion of the area of responsibility, LIn 17 was commanded by Oberst Hamel; after the expansion occurred, as of May 1, 1943, he was replaced by Generalleutnant Grosch, who occupied this position until June 28, 1944, see Hildebrand, *Luftwaffengenerale*, vol. 1, pp. 397–398; Boog, *Luftwaffenführung*, pp. 259, 570; OKW/ ChefKriegsgef./ Org. (Ic), Az 2f24.12.c, Nr. 6222/43 Organisationsbefehl Nr. 51, November 18, 1943, BA-MA, RW 6/273. It was not possible to determine the previous subordination of the Soviet POWs who had already served in the antiaircraft artillery and construction units, see Boog, *Luftwaffenführung*, pp. 259, 596–597; Oberst Dr. W. Walther, Die Luftwaffeninspektion 17, July 30, 1945, BA-MA, RL 2 VI/10; Die Gliederung der deutschen Luftwaffe (Kriegsspitzenlagerung und Gliederung der Höheren Kommandobehörden von 1933–1945), November 25, 1945, BA-MA, RL 2 VI/175; LgKdo Moskau/ Qu, Stobau Az. 11 Nr. 2183/43 geh., Betr.: Neugliederung der Luftwaffenbautruppe, March 17, 1943, BA-MA, RL 24/178.

75. According to Boog, *Luftwaffenführung*, p. 570, this name change applied also to the construction units. However, according to Tessin, *Verbände und Truppen*, vol. 15, 1979, p. 381, and the documents available, this change did not apply to the POW units.

76. Die Gliederung der deutschen Luftwaffe (Kriegsspitzenlagerung und Gliederung der Höheren Kommandobehörden von 1933–1945), November 25, 1945, BA-MA, RL 2 VI/175.

77. Only Stalag Luft 5 (Wolfen) was exempt from this reorganization, because it functioned as a replacement unit for the Army POWs deployed with the Luftwaffe units. The same was true for Dulag West, which, after a few months under the Chief of POW Administration, was subordinated to the Luftwaffe again, because it was primarily an interrogation camp, rather than a POW camp.

78. For example, Westhoff, Summary of the Questioning of General Adolf Westhoff by Colonel Curtis L. Williams, IGD dated November 2, 1945, IMT-Dokument RF 145 C, BA-MA, N 54/36. Only Geck, *Kriegsgefangenewesen*, p. 16, takes the view that there was a commander of POWs in every Naval Group Command (*Marinegruppenkommando*), but cites no supporting documents. It was not possible to verify the existence of such a post.

79. Painfully evident here is the fact that scarcely any Naval Defense Office files have survived. The Navy's two large territorial commands—Station Command North Sea and Station Command Baltic, already in existence when the war

began—published official bulletins, the *Stationstagesbefehle*. Beginning in 1939, a classified edition also was issued.

80. See “Richtlinien über die Behandlung von Kriegsgefangenen und Bergung von Leichen feindlicher Wehrmachtangehöriger,” published for Station Command Baltic in *OTB*, No. 248/1939, Item IV: Übergabe der KfGefMarine an das Heer, and Annex 1, for the North Sea in *MdN, NTB* No. 226/1939. The instructions for the North Sea Station seemingly have not survived anywhere. Therefore, references in this text pertain to a revised version of these instructions dated November 28, 1939, on the assumption that no significant change was made in the brief interim, see *MdN, NTB* 1939, No. 276, November 28, 1939, Item VII and Annex 1.

81. *MdN, NTB*, No. 27/1940, No. 27, February 1, 1940, Item VI: Zwischenunterkünfte Marine; *MdO, gOTB*, No. 51/1941, July 2, 1941, Item V: Dulag Gotenhafen.

82. In the Station Command North Sea area, Stalag X A (Sandbostel) was earmarked as the POW camp for NCOs and enlisted ranks, while officers were to be confined in Oflag X C (Itzehoe) and Oflag X B (Nienburg). As early as January 11, 1940, there was a change to this plan: all NCOs and enlisted personnel now were to be transferred to Stalag VII A (Moosburg) and officers to Oflag IX A (Spangenberg); see *MdN, NTB* No. 8/1940, January 11, 1940, Item III: Behandlung von KrGef. In the Station Command Baltic area, various camps were envisaged, according to Defense District. In Defense District I, these camps were Stalag I A (Stabrack) for NCOs and enlisted men, and Oflag Stabrack for officers. The latter, though planned, never came into being. In Defense District II, NCOs and enlisted men were to be held in Stalag II A (Neubrandenburg) and officers in Oflag II A (Prenzlau). In Defense District X, the camp for NCOs and enlisted men was Stalag X A (Sandbostel); officers were to be confined in Oflag X C (Itzehoe), see *MdO, OTB*, No. 248/1939, October 11, 1939, No. IV: Übergabe der KrGef Marine an das Heer, and Annex 1. Special instructions for civilian internees existed only to the extent that ship officers, like officer POWs, were taken to Oflag IX A (Spangenberg), while the other members of the ship's crew were placed in Stalags; see *MdN, NTB*, No. 5/1940, January 7, 1940, Item IV: Marineinternierte im Offizierrang; *MdO, gOTB*, No. 2/1941, January 9, 1941, Item VI: Meldung Zivilinternierter von Schiffen.

83. The available reports about the evacuation routes date primarily from the years 1940 and 1941. It can be assumed that the procedure remained unchanged in the following years; see Thomas, *MILAG: Captives of the Kriegsmarine*, pp. 64–65, 75, 91.

84. Naval aviators occupied an intermediate position—they were sent to Navy, rather than Luftwaffe, camps. However, the interrogation of these aviators was conducted by a Luftwaffe interrogation group, which was deployed inside Dulag Nord.

85. The provision of the infrastructure for housing the Navy prisoners in France and in Sandbostel was mentioned previously. Also noteworthy is the administrative support of Dulag Gotenhafen by Stalag XX B and the assistance during the exchange of the POWs' camp money for Reichsmarks; see *MdO, OTB*, No. 18/1944, February 8, 1944, BVA, Item IV: Versorgung der Kriegsgefangenen im Heimatskriegsgebiet mit Tabakwaren; *MdO, OTB*, No. 138/1944, November 9, 1944, Item VI: Fleisch und Fleischwaren, Fisch und

Fischwaren für Kriegsgefangene; *MdO, OTB*, No. 150/1944, December 2, 1944, Item VI: Versorgung der Kriegsgefangenen im Heimatskriegsgebiet mit Tabakwaren.

86. For example: *OKW/AWA/Krgef* (IIIa), Nr. 588/40, March 18, 1940, Betr.: Behandlung von Besatzungsangehörigen und Fahrgästen feindlicher Schiffe, *BA-MA*, RW 5/27; *OKM/MarWehr/TR Ib*, Nr. 25 246/44g, Betr.: Überführung der Kriegsgefangenen- und Interniertenlager der Kriegsmarine an Reichsführer-SS und Befehlshaber des Ersatzheeres/Chef des Kriegsgefangenenwesens, October 26, 1944, *PAAA*, R 40971.

87. *OKW/Chef Kriegsgef Org III b*, Nr. 3932, October 10, 1942, in: *MdO, OTB*, No. 200/1942, December 3, 1942, Item II: Anforderungen von kriegsgefangenen Arbeitskräften; *MdO, OTB*, No. 183/1942, October 31, 1942, Item IX: Einsatz von Kriegsgefangenen, Rückführung erkrankter Kriegsgefangener nach ihrer Genesung auf den alten Arbeitsplatz.

88. *OKM, Kriegsgeschäftsverteilungsplan*, April 1, 1942, *BA-MA*, RM 6/3397.

89. For this reason, the Army POWs who were transferred to the Navy were also not shown under “Navy” in the Wehrmacht statistics; thus, in contrast to the Luftwaffe, the number of personnel in this group is not statistically recorded. In the area of Station Command North Sea, Stalag X B (Sandbostel) carried out the personnel management function centrally for all the Stalags; see *OKM [Navy High Command], Bestimmungen Be helfspersonal*, p. 6; *MdO, OTB*, No. 183/1942, October 31, 1942, Item IX: Einsatz von Kriegsgefangenen, Rückführung erkrankter Kriegsgefangener nach ihrer Genesung auf den alten Arbeitsplatz; *MdO, OTB*, No. 200/1942, December 3, 1942, Item II: Anforderungen von kriegsgefangenen Arbeitskräften; *MdO, OTB*, No. 116/1943, July 26, 1943, Item VI: Einsatz sowjetischer Kriegsgefangener als Be helfspersonal bei der Marine; *MdO, gOTB*, No. 40/1943, May 31, 1943, Item IX: Sowjetische Kriegsgefangene auf Soldatenplanstellen; *MdN, NTB*, No. 132/1944, December 18, 1944, *BVA*, Item IV: Bezahlung von Kriegsgefangenenarbeit.

90. This instruction to register the auxiliary personnel makes it clear how little the Station Command knew about the POWs deployed in its own area, see *MdN, NTB*, No. 25/1942, February 7, 1942, Item VIII: Kriegsgefangenenlager und Lager ausländischer Arbeiter im Befehlsbereich des Kommandos der Marinestation der Nordsee; *MdO, OTB*, No. 150/1943, October 6, 1943, Item IV: Steuerung des Einsatzes der russischen Kriegsgefangenen; *MdO, gOTB*, No. 40/1943, May 31, 1943, Item IX: Personelle Erfassung der in Soldatenplanstellen eingesetzten sowjetischen Kriegsgefangenen.

91. As of February 1, 1943, the Station Commands were given new names: Naval Command East and Naval Command West. The Naval Defense Office was redesignated the Naval Troop Office (*Marinetruppenamt*) as of May 1, 1944; see Lohmann and Hildebrand, *Die deutsche Kriegsmarine*, No. 33, pp. 3–5.

92. The organization of this labor deployment took place, among other things, as part of the programs “Atlantic I,” “Atlantic II,” and “Atlantic III,” which ended no later than December 1944; see *MdN, NTB*, No. 132/1944, December 18, 1944, Item VI: Bezahlung von Kriegsgefangenenarbeit; *MdO, OTB*, No. 200/1942, December 3, 1942, Item II:

Anforderung von kriegsgefangenen Arbeitskräften. With the handover of the Navy Construction Office to the Organisation Todt in the summer of 1944, a portion of the deployment areas of the POWs was discontinued, see Deutsche Dienststelle, Ordre de Bataille de l'Ex-Wehrmacht: Oberkommando der Kriegsmarine, Part III, p. 108, BA-MA, RW 48/323.

93. Numerous special provisions are found for the Italians; see MdN, *gNTB*, No. 30/1944, July 25, Item XII: Gesundheitliche Überwachung bei italienischen Militärinternierten; MdN, *NTB*, No. 44/1944, November 10, 1944, Item XV: Beurlaubung italienischer Soldaten in der deutschen Wehrmacht; MdO, *OTB*, No. 144/1943, September 27, 1943, BVA, Item II: Verpflegung eingegliederter italienischer Einheiten; MdO, *OTB*, No. 156/1943, October 16, 1943, Item III: Verpflegung italienischer Kriegsgefangener; MdO, *OTB*, No. 157/1943, October 19, 1943, Item X: Merkblatt über die Behandlung bündnistreuer italienischer Soldaten; MdO, *OTB*, No. 179/1943, December 4, 1943, Item II: Abfindung der italienischen Soldaten, die sich zur Fortsetzung des Kampfes an der Seite der deutschen Wehrmacht bereit erklären; MdO, *gOTB*, No. 51/1944, October 14, 1944, Item XV: Beurlaubung italienischer Soldaten in der deutschen Wehrmacht; MdO, *gOTB*, No. 55/1944, November 9, 1944, Item XV: Beurlaubung italienischer Soldaten in der deutschen Wehrmacht; MdO, *gOTB*, No. 60/1944, December 6, 1944, Item XI: Urlaub von Angehörigen der ital.-republikanischen Wehrmacht nach Italien; MdO, *gOTB*, No. 18/1945, April 11, 1945, Item XI: Überführung in Wehrmachtdienststellen eingesetzter ital. Militärinternierter als ital. Soldaten in die deutsche Wehrmacht. In 1942, Station Command North Sea ordered reports to be made on the nationalities of the POWs deployed as auxiliary personnel; therefore, it is possible that the Soviets were not the only nationality to perform this function. One could conjecture that French POWs might have been involved as well, although labor deployments of French prisoners in the Navy are not mentioned in the literature.

94. See the chapter on the Navy in this volume.

95. See Deutsche Dienststelle, Ordre de Bataille de l'Ex-Wehrmacht, Part III, p. 108, BA-MA, RW 48/323.

96. Moll, *Führer-Erlasse*, pp. 460–461. Since 1941, Hitler had been trying to extend his influence over the administration of POWs, with a view to eventually taking it over completely; see Overmans, *German Policy on Prisoners of War*, pp. 858–861.

97. Overmans, *German Policy on Prisoners of War*, pp. 861–867.

98. Kommandeur der Kriegsgefangenen im Wehrkreis VII/Ia, Az AII/1, Betr: Abgrenzung der Aufgaben im Kriegsgefangenenwesen zwischen Oberkommando der Wehrmacht und Befehlshaber des Ersatzheeres, November 6, 1944, BA-MA, RH 53-7/724.

99. OKM / Mar.Wehr/ TR Ib, Nr. 25 246/44g, Betr.: Überführung der Kriegsgefangenen- und Interniertenlager der Kriegsmarine an Reichsführer-SS und Befehlshaber des Ersatzheeres/Chef des Kriegsgefangenenwesens, October 26, 1944, PAAA, R 4097; OKW/ Abt. Wehrmachtverluste und Kriegsgefangenenwesen, Az 2f24 10 geheim, Betr.: Geschäftsverteilungsplan, October 1, 1939, BA-MA, RW 19/2141.

100. Dulag Luft was also transferred to the Army at first, but as early as December 1944, it was reincorporated into the

Luftwaffe. The guard units were given Army designations with numbers above 1,000; see StvGenKdo XVII/ Ib/ Org (2), Betr.: Eingliederung der Kommandanturen und des Wachpersonals der Kriegsgefangenenlager der Luftwaffe in das Heer, January 7, 1944, BA-MA, RH 53-17/80.

101. Befehlshaber der Ersatzheeres/ Chef Kriegsgefangenenwesen, Betr.: Vorläufige Dienstanweisung für den "Höheren Kommandeur der Kriegsgefangenen im Wehrkreis," BA-MA, RH 53-7/724.

102. Befehlshaber des Ersatzheeres/ Chef Kriegsgefangenenwesen, Betr.: Neue Organisation des Kriegsgefangenenwesens, November 17, 1944, BA-MA, RH 49/111.

103. Accordingly, the official publication of orders, the *Befehlssammlung*, contained two sections on November 15, 1944: the orders of the Inspector for POW Administration and the order of the Chief of POW Administration; see OKW/ Chef Kriegsgefangenenwesen, *Befehlssammlung*, No. 46, November 15, 1944.

104. Kommandeur der Kriegsgefangenen im Wehrkreis VII/Ia, Az AII/1, Betr: Abgrenzung der Aufgaben im Kriegsgefangenenwesen zwischen Oberkommando der Wehrmacht und Befehlshaber des Ersatzheeres, November 6, 1944, BA-MA, RH 53-7/724.

105. The only evidence of this declaration is found in the *Nordseestationstagesbefehle*, but it must be assumed that the order was addressed to the whole of the subordinate area and that there are simply gaps in the historical record; see MdN, *NTB*, No. 18/1945, February 16, 1945, Item VII: Behandlung von Kriegsgefangenen.

106. Toward the end of 1944, the OKW ordered the murder of a French general who was a POW in reprisal for the murder of a German general who was a prisoner in French hands. This order was carried out in a collaborative arrangement between the Reich Ministry of Foreign Affairs and the leadership of the system of POW administration—albeit without the involvement of the Chief of POW Administration or his deputy; see Weitkamp, *Mord mit reiner Weste*, pp. 31–35.

110. OKW/ Abteilung Kriegsgefangenenwesen, *Sammelmitteilungen*, No. 1, June 16, 1941, Item I/1: Kr.Gef. fremder Volkszugehörigkeit in feindlichen Heeren.

111. Hinz, *Kriegsgefangenenrecht*, p. 22.

112. See the section of this volume on the POW organization in France.

113. A conference planned for 1940, which was supposed to reach an agreement under international humanitarian law to regulate the status of the civilian internees, never took place because of the war; see Favez, *Internationale Rote Kreuz*, p. 577.

114. Thus, all US and British citizens in Germany were treated as civilian internees, although, for example, the civilians who were deported from the German-occupied Channel Islands by request of the Wehrmacht should have been classified as civilian prisoners. Over time, this principle seems to have been applied to additional categories of people; see OKW/ Chef Kriegsgefangenenwesen, *Befehlssammlung*, No. 15, August 10, 1942, Item 116: Festsetzung und Überführung feindlicher Staatsangehöriger in deutsche Lager.

115. Marinestation der Ostsee, *Geheimer Ostseestationstagesbefehl*, No. 4/1942, January 14, 1942, Item VI: Begriff der Unterstellung; Marinestation der Ostsee, *Geheimer Ostseestationstagesbefehl*, No. 5/1942, January 20, 1942, Item IV: Begriff der Unterstellung; OKH, *Allgemeine Heeresmitteilungen*, No. 9/1943, April 7, 1943, Item 308: Begriff der Unterstellung, in reference to Order of OKW/AWA/WAllg(IIc), No. 161/43g, March 9, 1943.

116. An exception is Stalag 304, which was transferred from Germany to Belgium in 1942 along with its prisoners.

117. Exceptions include Oflag 67, which as “Oflag 67 Neubrandenburg” used the designation of its duty station in its name for a time. Other such camps were Dulag Döllersheim, Dulag Gneixendorf, and Dulag Halbau as well as the alternate camps of the Operation Sea Lion transit camps.

118. Organizational regulations were not followed strictly in the Wehrmacht. Thus, there was hardly any rule without an exception. Two examples: the Stalag Luft camps were defined as fixed in place. Nonetheless, except for Stalag Luft 5, they all were moved at least once, without any change in their names. The Navy's first Stalag Milag was located initially in Sandbostel and named for this place. Then, along with the commandant's office and the POWs, it was moved to the newly built Marlag-Milag Nord in Westertimke.

119. The Table of Organization (*Kriegsstärkenachweisung*, KStN) specifies the tasks, organization, permanent staffing, and equipment of a military unit.

120. In the territory of the Reich, there were approximately 80 Stalags, each of which may have maintained 400–500 labor detachments—varying in strength between one POW and several hundreds, if not thousands, of POWs—during 1943 and 1944, the years of the most extensive deployment of labor in quantitative terms. Thus, there were approximately 30,000–40,000 labor detachments. Considering, in addition, that such detachments were also disbanded or newly activated over the course of the war, it can be assumed that the number of labor detachments for the overall war period might well have been in the upper tens of thousands.

121. For the purview of the Navy, the unauthorized use of the term “camp” (*Lager*) was prohibited; see Marinestation der Nordsee, *Nordseestationstagesbefehl*, No. 148/1943, September 20, 1943, Item XXII: Bezeichnung von Kriegsgefangenen-Arbeitskommandos. In the other branches of the Wehrmacht, similar regulations may well have existed, evidently without success.

122. Der Führer und Oberste Befehlshaber der Wehrmacht, Befehl über das Kriegsgefangenenwesen, May 30, 1943, BA-MA, RW 41/13.

123. OKW/ Chef Kriegsgefangenenwesen, *Befehlssammlung*, No. 15, August 10, 1942, Item 133: Bezeichnung der Lager.

124. On this, see the remarks in the section on Stalags.

125. These included Ilag Wülbzburg/ TL Oflag; Oflags IV B, VII C, XIII B, and XIII D; Stalag III D/ ZL Wuhlheide and ZL Wustrau I, Stalag XX A.

126. Overmans, *Jewish POWs*, p. 48.

127. See, for example, OKW, *Befehlssammlung*, No. 35, May 1, 1944, Item 535: Arbeitsverweigernde und wiederergriffene italienische Militär-Internierte. The special camp (*Sonderlager*) of the Mauthausen concentration camp occupied a special position. The camp held “legion” members who had been removed from this service and returned to the status of POW for reasons such as crimes, unreliability, etc. The special camp thus served as a penal facility for POWs. POWs who had been sentenced by Wehrmacht courts to prison terms for “normal” offenses served their time as “guests” in Wehrmacht prisons, which were meant for German soldiers.

128. Streim, *Sowjetische Kriegsgefangene*, p. 6; Otto and Keller, *Sowjetische Kriegsgefangene im System der Konzentrationslager*, pp. 48–84.

129. Only Auffanglager 6 was separated. The meaning and weight of the supplemental term “mobile” is unclear. Auffanglager 7 was restructured as an Oflag as early as 1940.

130. Auffanglager 13, 14, 15, and 16 were in existence only for a few months.

131. AHA, *KStN Heer*, No. 7811, August 27, 1944; Gehrke von Pawel-Rammingen, war memoirs, entries dated September 24, 1941, and October 27, 1941, BA-MA, N 322/1.

132. AGSSt 23: western front, AGSSt 25: North Africa (not implemented), AGSSt 102, 103, 105, 107: assigned to the 2nd Hungarian Army on the eastern front.

133. OKW, *H.Dv. No. 38/4, Dienstanweisung für den Kommandanten eines Kriegsgefangenen-Durchgangslagers*, pp. 7–11.

134. To be recorded in the Dulag: deaths, successful escapes, and POWs who were deployed in labor detachments or in the camp on a long-term basis, OKW, *H.Dv. No. 38/4, Dienstanweisung für den Kommandanten eines Kriegsgefangenen-Durchgangslagers*, pp. 11–13.

135. The territory of the Reich was divided into 13 Defense Districts with the numbers I–XIII, as well as XVII and XVIII, added in 1938 for the newly incorporated Austrian territories. After the conquest of Poland, the two additional Defense Districts, XX and XXI, were created. They include the northern Polish territories, which were incorporated into the Reich.

136. OffzDulag XII existed until July 1940. Dulag B even longer, until its closure in October 1940.

137. Arabic numerals: 88; Roman numerals: 74; alphabet letters: 4; Frontstalags: 87.

138. AHA, *KStN Heer Nr. 7805*, August 1, 1942; OKW, *H.Dv. 38/5, Dienstanweisung für den Kommandeur eines Kriegsgefangenen-Mannschaftsstammlagers*, pp. 7, 15, 18–19, 22–23.

139. For every additional 10,000 POWs, the staff could be increased by 60 soldiers, including 6 officers; see AHA, *KStN Nr. 7805*, September 1, 1938, and August 1, 1942; OKW, *H.Dv. 38/5, Dienstanweisung für den Kommandeur eines Kriegsgefangenen-Mannschaftsstammlagers*, pp. 9–13; Der Führer und Oberste Befehlshaber der Wehrmacht, Befehl über das Kriegsgefangenenwesen, May 30, 1943, BA-MA, RW 41/13.

140. OKW, *H.Dv. 38/5, Dienstanweisung für den Kommandeur eines Kriegsgefangenen-Mannschaftsstammlagers*, p. 9; Otto, *Wehrmacht, Gestapo und sowjetische Kriegsgefangene*, p. 29.

141. OKW, *H.Dv. 38/12, Dienstanweisung über Raumbedarf Bau und Einrichtung eines Kriegsgefangenenlagers*, p. 5.
142. Stalag Holland A–Stalag Holland D.
143. Regarding personnel, the Frontstalags—in comparison with the Table of Organization for Stalags (*Stalag KStN*) dated 1938—were better staffed, especially in enlisted ranks; see AHA, *KStN Nr. 7805*, September 1, 1938; AHA, *KStN Nr. 7809*, January 31, 1941.
144. Including two “latecomers,” which were not activated until November 1941, but, like the others, were renamed as Stalags within a few weeks.
145. OKW/ Chef Kriegsgefangenenwesen, *Befehlssammlung*, No. 12, April 8, 1942, Item 50: Bezeichnung der KrGef-Lager, names 12 camps. In addition, there were Stalags 315 and 323, which had already been transferred out of Reich territory at the time of the order. Among others, Stalags 344, 383, and 389 did not receive a supplemental identifier after their transfer into the territory of the Reich; see Otto, *Wehrmacht, Gestapo und sowjetische Kriegsgefangene*, pp. 35–39.
146. In the army manual published before the war began, the maximum occupancy is given as 1,000 officers; the Table of Organization dated 1942 already provides for a maximum occupancy of 1,500; see AHA, *KStN 7803*, August 1, 1942; Streim, *Sowjetische Kriegsgefangene*, p. 11; OKW, *H.Dv 38/5, Dienstanweisung für den Kommandeur eines Kriegsgefangenen-Offizierlagers*, pp. 5, 10, 13.
147. Oflags II A, X A, and XI were established before the war began.
148. The supplemental identifier was given to Oflags 54, 55, and 62; Oflags 6, 8, 10, 52, 57, 60, 63, 64, 66, 67, 68, 78, 79, 80, and 83 were not given supplemental identifiers.
149. In addition, Oflag 52 was set up in 1942.
150. OKL, *Merkblatt für die Verwaltung im Kriegsgefangenenwesen*, Annex 2, p. 3; only for the counterintelligence officer of an Ilag did instructions exist, *H.Dv. Nr. 38/10, Dienstvorschrift für den Abwehroffizier in den Kriegsgefangenen- und Interniertenlagern der Wehrmacht*.
151. Even the actors at the time were not always aware of the division of responsibilities. For example, the Armed Forces High Command protests in a letter dated May 19, 1944, saying that it is not responsible for Milag Nord. The Reich Ministry of Foreign Affairs had to point out that this perception was completely incorrect; see AA/ R XIII/ GK Lautz i.V., Aufzeichnung für Herrn Assessor Scholl, August 2, 1944, PAAA, R 40971.
152. Only Ilag Giromany was in France. It had been moved there from Reich territory due to housing problems.
153. Ilag Kreuzburg appears three times in the list, although it was, in fact, a single camp. However, it changed its organizational connection several times. Initially, it was subordinate to Ilag XIII, then to Oflag 6, and finally to Stalag 344.
154. Ilag XIII in Wülbzburg had a subcamp, an Oflag for Soviet staff officers.
155. It was also possible to verify that the Wehrmacht provided support services for a civilian prisoners’ camp (*Zivilgefangenenlager*), the Fort de Romainville police detention camp (*Polizeihaftlager*).
156. OKW, *H.Dv. 38/8a, Dienstanweisung für den Kommandanten eines Heimkehrlagers während der Feindseligkeiten*, pp. 9, 11.
157. OKW, *H.Dv. 38/8a, Dienstanweisung für den Kommandanten eines Heimkehrlagers während der Feindseligkeiten*, pp. 14, 28–31.
158. OKW, *H.Dv. 38/8a, Dienstanweisung für den Kommandanten eines Heimkehrlagers während der Feindseligkeiten*, pp. 9, 16, 55.
159. Heilags V A, V B, and V C.
160. Heilags V A, V B, and V C.
161. Heilags Chalon-sur-Saône, Compiègne, and Rouen.
162. Heilag Stettin for German repatriates.
163. OKW, *H.Dv. 38/8a, Dienstanweisung für den Kommandanten eines Heimkehrlagers während der Feindseligkeiten*, pp. 28–29.
164. The two tables shown here are based on the following information:
- The percentages show the shares for the entire table. Because of rounding, they do not necessarily add up to 100%.
 - Subcamps are not included. An exception is Ilag Kreuzburg, which was subordinate to three different main camps in succession.
 - Reestablishments are not considered.
 - Auffanglager (Auff.Lg.) are included in the category AGSSt.
 - Luftwaffe camps and Marlag Milag are included in the category Stalag/Frontstalag.
 - Zweig- and Teillager are not counted separately.

ARMEE-GEFANGENENSAMMELSTELLE [AGSSt] 1

The Wehrmacht formed AGSSt 1 on June 11, 1941, from the Mobile Reception Camp for Prisoners of War (*Bewegliches Auffanglager für Kriegsgefangene, Auflag*) 1.¹ The unit received field post number (*Feldpostnummer*) 20 083 between February 16 and July 18, 1941; the number was struck between February 10 and August 23, 1943. AGSSt 1 was under the jurisdiction of the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585). The staff consisted of 80 to 100 men and 6 to 8 officers, including a commander (Hauptmann Hermann Knabe), an adjutant (Leutnant Hans Elven), two other officers, and two doctors.

AGSSt 1 deployed to the occupied Soviet Union. Among other locations, the unit was deployed to the city of Poltava (map 9f) in the autumn of 1941 and the winter of 1941–1942² and to the city of Belgorod (9d) in the spring of 1942.³ Thereafter, the unit changed locations roughly every four weeks, until it was destroyed during the Battle of Stalingrad in February 1943.

AGSSt 1 held Soviet prisoners of war. The conditions in the camp were the same as those in other camps for Soviet prisoners. Overcrowding, malnutrition, poor sanitation, lack of proper medical care, and harassment from the German guards led to widespread malnutrition and disease, which produced a high death rate. The Germans handed sick Soviet soldiers over to Soviet army doctors and orderlies for treatment but presumably failed to provide them with adequate medical supplies. Many Soviet prisoners reportedly died from typhus.

As in other camps, the Germans carried out selections to weed out Jews and political commissars among the prisoners. Those selected were then shot by the guards or Security Service (*Sicherheitsdienst*, SD).

SOURCES Primary source material about AGSSt 1 is located in BA-MA (RH 49/3: Armee-Kriegsgefangenensammelstelle; RH 23: 319–329, Korück 585); BArch B 162/8501, 7188; WASt; and GAKhO collection r-3086.

Additional information about AGSSt 1 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 28.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 2

The Wehrmacht formed AGSSt 2 on March 27, 1941. It received field post number (*Feldpostnummer*) 04 764 between February 1 and July 11, 1941. The number was struck on June 16, 1944. From June 1941 onward, AGSSt 2 fell under the jurisdiction of the Fourth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 559). Between 1941 and 1942, Hauptmann Reeber served as commandant of AGSSt 2. AGSSt 2 deployed to different localities in Belarusia and Russia, including the cities of Minsk (map 9b), Shklov (today Shklou, Belarus) (9b), Roslavl' (9c), Smolensk (9c), Spas-Demensk (9c), Iukhnov (9c), and Mikhailovka (9c). During deployment in the Smolensk region, AGSSt 2 subcamps operated in the cities of El'nia (9c) and Krasn'i.¹

As of October 10, 1941, AGSSt 2 was located in the city of Iukhnov. The camp remained here for a significant period of time. In Iukhnov, it served as a gathering place and transit point for Soviet soldiers and officers who had been taken captive in the Viaz'ma region. The camp was located on a sandy hill, and the prisoners lived in huts. Each hut contained three brick furnaces.² The camp was designed to hold 10,000 prisoners, but the number of prisoners delivered to the camp was significantly higher. Most of the prisoners were transferred through AGSSt 2 on their way to camps in the cities of Smolensk and Roslavl'. Registration records from October 17, 1941, show 5,500 prisoners registered in the camp. Another

19,500 prisoners were on a foot march toward Roslavl', and camp authorities expected the arrival altogether of 150,000 new prisoners.³

AGSSt 2 prisoners endured overcrowding, extremely meager and unpalatable food, including horsemeat and rotten potatoes, and mistreatment by the guards. In the absence of proper medical care, these conditions caused illness and high mortality rates.⁴ Similar conditions prevailed in other localities where AGSSt 2 was deployed. The Wehrmacht disbanded AGSSt 2 on February 11, 1944.⁵

SOURCES Primary source material about AGSSt 2 is located at BA-MA, RH 23: 122 (26), 124 (6, 21, 36), 125 (18), 126 (16, 34–35), 129 (347, 381, 419), 146 (23–24), 148 (3), 150 (87), 151 (55), 154 (61), 161 (35), 194 (231), 251, 322 (11); also, GASmO, collection r-1630: inventory 1, file 303, document 560b; file 305, document 45; inventory 2, file 6, documents 57, 58, 59; file 19, document 35.

Additional information about AGSSt 2 can be found in the following publication: V. I. Adamuschko et al., *Lager sowjetischer Kriegsgefangener in Belarus 1941–1944. Ein Nachschlagewerk* (Minsk: NARB, 2004).

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 3

The Wehrmacht formed AGSSt 3 from the Mobile Reception Camp for Prisoners of War (*Bewegliches Auffanglager für Kriegsgefangene, Auflag*) 3 on May 6, 1941.¹ AGSSt 3 received field post number (*Feldpostnummer*) 06 183 between February 1 and July 11, 1941. The number was struck on February 25, 1944. Initially, AGSSt 3 deployed to the Warsaw region, where it remained until June 22, 1941. It then redeployed to the city of Brest (map 9e), on the western border of the USSR, where fighting was still going on. Until July 3, 1941, AGSSt 3 was under the jurisdiction of Security Division (*Sicherungsdivision*) 286, under the Fourth Army in Army Group Center. From July 4, 1941, onward, it came under the command of the Second Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 580) and deployed to different localities in Belarusia, Ukraine, and

Russia.² Hauptmann Kurt Udo Hagen Friedrich von Westernhagen (1891–1945) served as the camp's first commandant, until August 3, 1941. He was succeeded by Hauptmann Finster on August 4, 1941, followed by Hauptmann Wilhelm Klages on August 23, 1941.

In July 1941, AGSSt 3 operated prisoner of war camps, and possibly subcamps, in the cities of Kobryn (9e), Slonim (9b), Baranovichi (July 6–10) (9b), Slutsk (July 11–24) (9b), and Bobruisk (July 25–August 14) (9b).³ A subcamp of Bobruisk operated in the city of Staryi Bykhov on July 25, 1941. At the end of July, the camp in Bobruisk had 8,000 prisoners.⁴ In Belorussia, AGSSt 3 also deployed to Gomel' (9c), with a subcamp in Zhlobin, Zhuravichi (9c), Kapliche (9c), Rechitsa (9c), and Chaplin (9e). In Ukraine, AGSSt 3 deployed to Berezna (9e), Glukhov (today Hlukhiv) (9c), Konotop (9f), Nezhin (today Nizhyn) (9e), Seredyna-Buda (9c), and Chaplino (9f). In Russia, AGSSt 3 deployed to Volovo (9d), Droskovo (9d), Zhizdra (9c), Kromy (9d), Livny (9d), Ponyri (9d), Ryl'sk (9c), Unecha (9c), and Shchigry (9d).⁵

The conditions at AGSSt 3 camps were similar to those in other camps for Soviet prisoners in Belorussia, Ukraine, and Russia. Prisoners endured tremendous overcrowding and horrible sanitary conditions without proper medical care. They suffered from hunger, malnutrition, exhaustion, and abuse at the hand of the German guards, which led to high mortality rates among prisoners. Oberleutnant Franz Keiner, a German military intelligence officer of the Intelligence office (*Abwehr*), aided by prisoner informants, led selections of Jews and Communists from the newly arrived prisoners. Those selected were then passed on to the Security Service (*Sicherheitsdienst*, SD) to be shot. After October 1941, the SD took over the selections.

The Wehrmacht ordered the dissolution of AGSSt 3 on January 2, 1944. In 1967, the Central Office for State Justice Administration (*Zentrale Stelle der Landesjustizverwaltungen*, ZDL) began a preliminary inquiry into former members of AGSSt 3 suspected of murder or accessory to murder of so-called undesirable prisoners, mainly Jews and Communists. By that time, however, 19 former members of AGSSt 3, including 3 of the commandants, were dead, and 10 members remained unidentified. The ZDL interrogated 18 former members of AGSSt 3 as witnesses. Only the former orderly Wilhelm Becker revealed that selections had taken place at AGSSt 3. The preliminary inquiry was terminated on July 20, 1972, without results.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 4

The Wehrmacht formed AGSSt 4 on May 6, 1941. Beginning in June 1941, AGSSt 4 fell under the jurisdiction of the Second Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 580). AGSSt 4 received field post number (*Feldpostnummer*) 04 013 between February 1 and July 11, 1941. Hauptmann der Reserve Schmitz served as commandant of AGSSt 4. The guards came from the 974th Reserve Battalion (*Landesschützenbataillon*) and the 551st and 581st Guard Battalions (*Wachbataillonen*).

AGSSt 4 deployed to different localities in Poland, Ukraine, Belorussia, and Russia. In Poland, AGSSt 4 deployed to Bełz (today Belz, Ukraine) (map 5). In Belorussia, AGSSt 4 deployed to the cities of Baranovichi (9b), Bragin (today Brahin) (9e), Volkovysk (4c), Gomel' (9c), Krichev 9c, Krupki (9b), Minsk (9b), Mogilev (9b), Mstislavl' (9c), and Khoinski (9e). In Ukraine, AGSSt 4 deployed to the cities of Belopol'e (today Bilopillia) (9f), Buryn' (9f), Vorozhba (9c), Novgorod-Severskii (today Novhorod-Sivers'kiy) (9c), and Repki (today Ripky) (9e). In Russia, AGSSt 4 deployed to the cities of Briansk (9c), Dubrovka (9c), Kastornoe (9d), Kursk (9d), Shchigry (9d), Glushkovo (9c), and Gorshechnoe (9d).¹

From late 1941 and continuing through 1942, AGSSt 4 operated in the city of Kursk. In addition to prisoners of war, male civilians from the city were also detained in the camp. According to Soviet intelligence, 15,000 people were registered at the site on November 30, 1941, and as many as 10,000 people on January 20, 1942. The majority of the prisoners were lightly dressed and without shoes after the Germans seized their hats and warm outerwear. Dead bodies remained in the barracks for weeks.² According to the People's Commissariat for Internal Affairs (UNKVD report from November 12, 1941), "There was no food given out in the camp. The prisoners ate only that which their relatives passed to them."³ An intelligence report from February 13, 1942, stated that the camp in Kursk held many prisoners, the majority of whom were male civilians. The men were kept in the barracks of military warehouse No. 311 and in the twine factory. According to the report, "The prisoners are half-naked, the barracks are not heated, and they eat soup made with potato peels and meat from fallen cattle. There is a great deal of death in the camp."⁴ At one point, AGSSt 4 reported that the

SS had taken about 20 prisoners out of the camp and hanged them in a public square in Kursk, where their bodies remained for weeks.

Men from the civilian population were also imprisoned during the deployment of AGSSt 4 to the area surrounding the city of Shchigry. They suffered exhaustion, hunger, and abuse. Many were executed in the courtyard. According to the recollections of the surviving prisoners, the dead were thrown into a large hole in the ice on the pond. Many of the bodies froze in the ice and reappeared during spring thaw. The Germans also shot large groups of prisoners in a ravine behind the village.⁵ Similar conditions prevailed in most places in which AGSSt 4 was deployed. The Germans ordered the camp's disbandment on February 11, 1944, and its field post number was struck on February 25, 1944.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 5

The Wehrmacht formed AGSSt 5 on May 6, 1941, under the jurisdiction of the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585).¹ Major zur besonderen Verfügung Ludwig Euler served as camp commander. The adjutant was Oberleutnant Schmidt, and the aide-de-camp was Oberleutnant Richard Kossatz. Dr. Carl Abels served as camp doctor until the spring of 1942, when he was succeeded by Dr. Andorf. AGSSt 5 received field post number (*Feldpostnummer*) 23 895 between February 16 and July 18, 1941. The number was struck on February 12, 1945. The official order to disband AGSSt 5 was dated January 27, 1943.

AGSSt 5 first deployed to the Lublin area in Poland (map 5). Beginning in July 1941, the camp operated in various localities in Ukraine and Russia. In July and August 1941, the camp was located in Fastov (today Fastiv) (9e). In the fall of 1941, it deployed to Pirogovo (9f) and Poltava (9f). Between November 1941 and June 1942, AGSSt 5 was located in Volchansk (today Vovchans'k) (9d), and between September and November 1942, in Kalach (9d). At the end of 1942, during the Battle of Stalingrad, the camp was dispersed, and its remnants were gathered at Morozovsk (9d). AGSSt 5 was then transferred to the town of Shakhty (9d), where it was disbanded as an independent camp and was consolidated with Dulag 201 on February 11, 1943.

AGSSt 5 held Soviet prisoners of war. The camp featured the same overcrowding and catastrophic sanitary conditions that prevailed in other camps for Soviet prisoners. Prisoners endured malnutrition, exhaustion, and abuse and, in the absence of proper medical care, suffered extremely high sickness and mortality rates. As in other camps, the Germans conducted a selection of Jews and Communists among the prisoners. Those selected were then shot by the Security Service (*Sicherheitsdienst*, SD) or guards near the camp.²

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 6

The Wehrmacht formed AGSSt 6 on March 27, 1941, from Frontstalag 136. It received field post number (*Feldpostnummer*) 05 738 between February 1 and July 11, 1941. From July 1941, AGSSt 6 fell under the command of the Fourth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 559).

The staff consisted of approximately 20 men, of whom approximately a dozen at any given point were officers. The first commander of the unit was Hauptmann Nicolai who remained in that position until August 16, 1942. His

successor was Hauptmann Herrmann, and the third commander, beginning in September 1944, was Oberst Burkhardt.

From 1941 to 1943, AGSSt 6 deployed to different localities in Belorussia and Russia. In Belorussia, AGSSt 6 deployed to the city of Minsk (map 9b) and, in September 1941, near the city of Orsha (9b). In Russia, the unit deployed to the cities of El'nia (9c), Malojaroslavets (9c), Medyn' (9c), Ostér (9c), Roslavl' (9c), Smolensk (9c), and Iukhnov (9c).¹ By September 11, 1941, the camp, which was then located 3 to 4 kilometers (1.8 to 2.5 miles) to the south of Orsha (9b), held 5,000 prisoners of war.² From the start of 1942 until the fall, the camp had relocated back toward Smolensk and operated just to the northwest of the city, in Ost'e (9c). From there, it was moved further west and spent most of 1943 in the Mogilev region of Belorussia (9b).³

The conditions in AGSSt 6 during its deployment to different localities in Belorussia and Russia were the same as those in other camps for Soviet prisoners of war. The tremendous overcrowding in small spaces, small quantities of barely edible food, horrible sanitation, and lack of proper medical care brought about famine and disease, which led to an extremely high mortality rate, especially in the first year or so of the camp's existence. Abuse by the guards made the situation still worse.

While stationed in Ostér, the unit interacted with a forced labor camp of Jews who were made to work in peat mining. The extent to which AGSSt 6 actually administered or oversaw the camp is unknown, but it is clear from postwar testimony that officers exhibited some control over the camp and personally handled the prisoners. The camp consisted of three dilapidated wooden barracks housing approximately 80–100 Jews who were in "extremely poor physical condition."⁴

According to one former member of the unit, they were tasked with carrying out executions of those prisoners deemed unfit for work. In his postwar testimony, Walter Beer stated:

I can remember 3 to 4 instances in which Kompanie-Feldwebel Schulz organized shootings of some 2 to 3 Jews each who were no longer capable of work and disabled. . . . The shootings were carried out by soldiers of our AGSSt 6. I myself was supposed to take part on one occasion. But because I had urgent work to tend to as a driver, I was able to get myself out of this task. I'm of the opinion that the Jews who were shot were not deathly ill, but rather that they could have become fully healthy again with appropriate care and treatment.⁵

These allegations resulted in an extensive investigation during the 1960s into the executions of Jews, as well as other groups, by the personnel of AGSSt 6, but the small size of the unit and the few postwar survivors limited West German efforts to prosecute.

The Germans disbanded the unit at the end of 1943.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 7

The Wehrmacht formed AGSSt 7 on March 27, 1941. The unit received field post number (*Feldpostnummer*) 46 893 between February 28 and July 29, 1941. In June 1941, AGSSt 7 came under the jurisdiction of the Ninth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 582).

From 1941 to 1943, AGSSt 7 deployed to different localities in Belorussia and Russia. In Belorussia, AGSSt 7 deployed to the cities of Vileika (July 1941) (map 9b), Postavy (July 1941) (9b), Polotsk (August 1941) (9b), and Disna (August 1941)(9b). In Russia, the unit was stationed in the cities of Velikiye Luki (September 1941) (9a), Zubtsov (9c), Kromy (9d), Rzhev (9c), Rudnia (9b), Smolensk (9c), Staritsa (9c), Sychëvka (9c), Toropets (9a), and Iartsevo (9c).¹

In 1943, the unit came under the command of Prisoner of War Commandant (*Kriegsgefangenen-Bezirkskommandant*) A. Conditions in the camp were the same as those in most other camps for Soviet prisoners of war. Tremendous overcrowding in a small space, food that was inadequate in both quality and quantity, and a lack of proper housing, sanitation, or medical care led to an extremely high death rate, which abuse by the guards only exacerbated. Thus, 342 prisoners died in the camp between June and October 1941 alone. They accounted for 76 percent of all the prisoners who died during this period in all the camps in the Ninth Army Rear Area. From October 2 until November 15, 580 additional prisoners died in the camp.² As in other camps, Jews and Communists from among the prisoners and the Security Service (*Sicherheitsdienst*, SD) or guards shot them near the camp.³

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 8

The Wehrmacht formed AGSSt 8 on March 27, 1941, in Defense District (*Wehrkreis*) IV.¹ The unit received field post number (*Feldpostnummer*) 44 285 between February 28 and July 29, 1941. Beginning in June 1941, AGSSt 8 fell under the jurisdiction of the Ninth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 582). At the end of June, AGSSt 8 was stationed for a time in Wilna (today: Vilnius, Lithuania) (map 9b). After this, AGSSt 8 deployed to different localities in Belorussia and Russia. In Belorussia, these localities included the cities of Vileika (9b), Vitebsk (9b), and Lepel' (9b). Locations in Russia included the cities of Viaz'ma (9c), Demidov (9b), Staritsa (9c), Sychëvka (9c), and Iartsevo (9c).²

For a long period in 1942, AGSSt 8 was located in the city of Sychëvka. In Sychëvka, the unit was stationed on the outskirts of the city, in 9 to 10 stone and wooden buildings formerly used as a vocational-technical school. Three of the buildings were used as baths, laundry facilities, and commandant headquarters; the rest were used for the prisoners of war (POWs). On December 17, 1941, one of the buildings was destroyed by Soviet aircraft. The camp was surrounded by two rows of barbed wire. Guards with dogs patrolled the area between the rows of barbed wire.

There was a Russian police force in the camp, which comprised about 20 people. In addition, seven others were called sergeants. They wore German uniforms, but their clothing lacked shoulder straps. At times, they acted in the role of duty attendant. They were considered superior to the police in the camp, since distinguished policemen were promoted to

sergeant. The camp commandant was an officer in the rank of Oberleutnant. His translator from January through May 1942 was a man named Chernov. The commandant was a German from the Volga German Autonomous Soviet Socialist Republic (ASSR) who was personally involved in the shooting of POWs. Two of the translators and another one of the Germans were also from the Volga German ASSR. According to former POW Vladimir Galinin, who was in the camp in September 1942, the POWs in the camp during that period numbered around 18,000.

The conditions in the camp during its deployment in various towns of Belorussia and Russia were the same as those in other camps for Soviet POWs. Enormous overcrowding in a small area, food that was inadequate in both quantity and quality, and a lack of proper housing, sanitation, and medical care all combined to cause an extremely high death rate, which abuse by the guards only made worse. For example, between June 22 and November 15, 1941, 18 prisoners died in the camp, and 187 prisoners were shot “as partisans.”³

The daily routine in the camp was as follows: prisoners arose at five o’clock in the morning, ate breakfast, and went to work; from noon to one o’clock, they had lunch; they ate dinner after returning from work; after dusk, roll call, all-clear signal, and sleep. The prisoners received a tin of soup and 200 grams (about 7 ounces) of bread at each meal. The male POWs were used for loading-unloading work, for road repair, and in the quarry. Women worked inside the camp. There was recruitment in the camp for intelligence, sabotage, and counterintelligence schools of the Abwehr, for the “Eastern Battalions,” for the Secret Field Police (*Geheime Feldpolizei*, GFP), and for use inside the camp.⁴ As in other camps, prisoners were screened to weed out Jews and Communists, whom a Security Service (*Sicherheitsdienst*, SD) or guard detachment then shot near the camp.⁵

SOURCES Primary source material about AGSSt 8 is located in BA-MA, RH 23: 20 (12), 219, 220 (76, 83), 221 (4–49, 245), 223 (13–14, 75), 224 (65, 106, 112), 225, 232 (7), 239 (127, 140, 149), 241 (31, 46); and BArch B 162/27756–27757: Überprüfung der im Raum Smolensk-Rschew-Wizebsk (Witebsk) eingesetzten Armeefangenensammelstelle 8 wg. des Verdachts der Aussonderung sowjet. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 9

The Wehrmacht formed AGSSt 9 on March 26, 1941. The unit received field post number (*Feldpostnummer*) 40 086 between February 28 and July 29, 1941. The number was struck on March 1, 1944. Beginning in June 1941, AGSSt 9 fell under the command of the 87th Infantry Division. It was later assigned to the 221st Security Division and then to the 286th Security Division of the Army Group Center Rear Area Command. Major Siehler served as camp commandant.

From 1941 to 1942, AGSSt 9 was deployed to different sites in Belorussia and Russia. In Belorussia, AGSSt 9 was stationed in the cities of Garadok (today Gródek, Poland) (map 4c), Grodno (4c), Baranovichi (9b), Biaroza-Katuzskaia (today Biaroza) (9e), Borisov (German: Borissow; today Barysaw, Belarus) (9b), and Orsha (9b). In Russia, AGSSt 9 was stationed in the cities of Mozhaisk (9c) and Iartsevo (9c) and in the village of Tëmkino (9c).¹ In Mozhaisk, the camp was located in a monastery. As of August 22, 1941, 22,500 prisoners were confined in AGSSt 9 in the city of Borisov.² AGSSt 9 held approximately 64,000 prisoners in total.³

AGSSt 9 held Soviet prisoners of war (POWs). Conditions were similar to those in other camps for Soviet prisoners in Belorussia and Russia. Prisoners endured malnutrition, exhaustion, and abuse and, in the absence of proper medical care, suffered extremely high sickness and mortality rates. As in other camps, the Germans conducted a selection of Jews and Communists among the prisoners. A Security Service (*Sicherheitsdienst*, SD) detachment or guards then shot those selected near the camp.

In the spring of 1942, AGSSt 9 deployed to the village of Vyskokoe (Vitebskaia voblasts'). During this time, the camp was not used for POWs. Instead, it served for the formation of

subdivisions composed of recuperating German soldiers.⁴ The Wehrmacht ordered AGSSt 9 disbanded on February 11, 1944.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 10

The Wehrmacht formed AGSSt 10 on March 20, 1941.¹ Following the outbreak of war with the Soviet Union in June, AGSSt 10 initially followed the 102nd Infantry Division as it invaded Lithuania. For several weeks in July, the camp operated near Wilna (today: Vilnius, Lithuania) (map 9b). By July 25, they had deployed further east, near Švenčionys (9b). By late fall, the unit had moved into Belorussia and spent much of the winter in Orsha (9b); however, other accounts have it in Disna (9b) in late July and early August 1941, and then in the towns of Nevel' (9e), Sychëvka (9c), Vitebsk (9b), and, in February 1942, in Orsha (9b). From the end of April 1942 until February 1943, the camp was located in Gzhatsk (now Gagarin) (9c), and then it was redeployed to El'nia (9c). In August 1943, the camp was moved via Smolensk (9c) to Orsha again.² AGSSt 10 received the field post number (*Feldpostnummer*) 40 635 between February 28 and July 27, 1941; the number was struck on December 7, 1943.

Starting on July 15, 1941, AGSSt 10 was subordinate to the 403rd Security Division (*Sicherungsdivision*). As of July 28, 1941, it was the responsibility of the 102nd Infantry Division. On August 6, 1941, responsibility for the camp returned to the 403rd Security Division and, in February 1, 1942, to the 286th Security Division. As of April 27, 1942, it was subordinate to the Third Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 590), part of Army Group Center.³

The camp's German military personnel included about 20 people. The camp commandant was Hauptmann Dr. Ludwig Prinz until November 18, 1942, when he was replaced by

Hauptmann Dr. Leonhard Jorres. Until March 31, 1942, the camp adjutant was Hauptmann Wilhelm Dahm; the camp officers (*Lageroffizier*) were Hauptmann Karl Genzel and Leutnant Leopold Jüttner; the aide-de-camp (*Ordonnanzoffizier*) was Hauptmann Gustav Martens; and the camp physicians were Dr. Karl Schorndorff, Dr. Berthold Collatz (from December 1941 until November 1942), Oberarzt Dr. Alexander Draeger, and Oberarzt Dr. Otto Frank (from the end of January until June 1943). The physicians' assistants were Dr. Rudolf Alberti (until February 1943) and Dr. Karl Krauhs (from October 1942 until August 1943).⁴

The conditions in AGSSt 10 were the same as those in other camps for Soviet prisoners of war. Enormous overcrowding in a small area, lack of shelter, food that was inadequate in both quality and quantity, dreadfully unsanitary conditions, and lack of proper medical aid led to mass starvation and disease, which in turn produced a high mortality rate. Abuse by the guards made matters still worse. The Germans regularly screened the prisoners to separate out "undesirables" (Communists and Jews), who were then executed near the camp.⁵

The camp was disbanded by an order of Army Group Center, dated November 19, 1943.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 11

The Wehrmacht established AGSSt 11 on March 26, 1941, from Frontstalag 186. Its field post number (*Feldpostnummer*), 41 024, was issued between February 28 and July 29, 1941, and struck on December 27, 1944. It received a new number, 00 082, on December 4, 1944.

From 1941 to 1942, AGSSt 11 was assigned to the Eleventh Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 553) and moved frequently as that army advanced or redeployed to other sectors of the front. In July 1941, AGSSt 11 was stationed first in the city of Bel'tsy (now Bălți, Moldova) (map 9g) and then in Orgeev (now Orhei, Moldova) (9g).¹ At the end of August and beginning of September 1941, it was deployed in Varvarovka (now Varvarivka, Ukraine) (9g), and from September 8 it was in Berislav (now Beryslav) (9g). From September 28 until the end of October 1941, it was located in Chaplinka (9g).

From November 1941 until July 1942, AGSSt 11 was deployed to Crimea, specifically to the cities of Simferopol' and Feodosiia (9h), where it oversaw a large population of prisoners, in cooperation with other units. On June 11, 1942, the unit was stationed in the village of Tole (now Dachne) (9h). At that time, camp personnel consisted of 6 officers and officials, and 17 noncommissioned officers and privates.² In the beginning of July 1942, during the unit's deployment in Tole, an SD (*Sicherheitsdienst*) detachment carried out a selection in the camp and killed a significant number of Jews.³ In August 1942, the camp was stationed for some length of time in Kerch (9h).

In August 1942, AGSSt 11 came under the command of the First Armored Army Rear Area Command (Korück 531). Throughout the second half of 1942 and the beginning of 1943, it deployed to different localities in the northern Caucasus, in particular Mineral'nye Vody, midway between the Black and the Caspian Seas (9i). At the end of October 1942, it was stationed in the city of Prokhladnyi (9i). At that time, camp administrative personnel consisted of 21 Germans and 23 guards from the local population.⁴ In mid-1943, the camp was deployed to the city of Barvenkovo (9f). In 1943 and 1944, it was stationed in various cities in Ukraine, Romania, Hungary, and Austria.

Conditions within camps were primitive and highly dependent on the number of prisoners and existing infrastructure. At the Berislav camp, the Germans held 3,000 prisoners in a schoolhouse. By contrast, according to statements gathered by postwar Soviet investigators, the camp in Varvarovka was open air with few structures of any kind. One prisoner described conditions as "inhumane." Despite the hot summer months in which this camp operated, prisoners received almost no water. "The sick and wounded in the camp," one former prisoner recalled, "received no medical aid, and each day several died . . . On the march to the camp, German soldiers shot those POWs who had fallen behind, with automatic weapons."⁵

Another former prisoner at the Berislav camp recalled several thousand prisoners held under brutal conditions. He also recalled incidents of routine mass executions, stating: "In this camp, the Germans daily conducted selections of Communists, commissars, and Jews. Thereafter these were led in groups of 20–30 men to a hill, which was 200–300 meters [about 660–980 feet] from the barbed-wire fence of the camp, and there they were shot. These actions—that is to say, the

shootings—were carried out by German soldiers, if I'm not mistaken.”⁶

AGSSt 11 was overrun by the Red Army and destroyed in late 1944. On December 15, the Wehrmacht reestablished it; a new field post number 00 082 was assigned already on December 4. The date of the unit's final disbanding or destruction is unknown.

SOURCES Primary source material about AGSSt 11 is located in BA-MA (RH 23/62-97: Korück 553; RH 23/13-17: Korück 531) and BArch B 162/27760-27761: *Überprüfung der in der Ukraine eingesetzten Armeegefangenensammelstelle 11 wg. des Verdachts der Aussonderung sowjet. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 12

The Wehrmacht established AGSSt 12 on March 26, 1941. From 1941 to 1942, AGSSt 12 was assigned to the Eleventh Army, which was part of Army Group South (*Heeresgruppe Süd*) during the invasion of the Soviet Union, fighting in Bessarabia, southern Ukraine, and Crimea. AGSSt 12 moved in accordance with the movements of the Eleventh Army. During the period when AGSSt 12 was assigned to the Eleventh Army, the unit fell under the jurisdiction of that army's Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 553). In August 1942, AGSSt 12 was reassigned to the First Panzer Army. While the unit was assigned to the First Panzer Army, it came under the jurisdiction of Korück 531. AGSSt 12 received the field post

number (*Feldpostnummer*) 41 656 between February 28 and July 29, 1941.

AGSSt 12's primary role was the initial processing and treatment of captured Soviet prisoners of war (POWs), who were shortly thereafter transferred to transit camps (Dulags) and main POW camps (Stalags). There were generally between 500 and 1,000 prisoners at a time in AGSSt 12, although the population varied widely, and at times as many as 3,000 prisoners were present. The prisoners were sorted and segregated by nationality and religion. In some cases, the “weeding out” (*Aussonderung*) of “undesirable” prisoners (such as Jews and political commissars) was performed by Security Service (*Sicherheitsdienst*, SD) personnel accompanying AGSSt 12, but sometimes this was not done until the prisoners arrived at other camps.¹

German personnel at AGSSt 12 consisted of 6 officers, 3 noncommissioned officers, and 10 privates.² The commandant of AGSSt 12 from 1941 to 1942 was Hauptmann Phillip Hund. In 1942, Hund was succeeded by Major Raestas, a Baltic German who spoke both German and Russian, whose adjutant was Hauptmann Volkmar. Witnesses stated that Volkmar was responsible for the weeding out of Jews and political commissars during this time. Raestas remained in this position through at least 1944. The 2nd Company of the 49th Guard Battalion (*Wachbataillon*) guarded the camp. This company consisted of 4 officers, 22 noncommissioned officers, and 222 privates. The commander of the 2nd Company was Hauptmann Kuch. Dr. Metz served as the chief doctor in the unit for a time, followed by Dr. Walter Gass and Dr. Raabe (who had previously been a missionary in China, according to former staff member Johann Hagen). As Leutnant Julius von Wowern Matthiesen—who was part of the staff of AGSSt 12 in 1943—recalled, the unit's personnel, particularly the medical staff, changed frequently.³

In June 1941, AGSSt 12 was sent to Giurgiu, Romania (map 7), with the Eleventh Army in anticipation of the invasion of Bessarabia, which commenced on July 2, 1941. During the summer of 1941, the unit moved rapidly with Army Group South's advance through Bessarabia and southern Ukraine: on July 27, 1941, the unit was located in the city of Bel'tsy (today Bălți, Moldova) (9g); on August 10, it redeployed to the city of Kodyma (9g); and at the end of August, the unit redeployed to the village of Varvarovka, near the city of Nikolaev (today Mykolaiv, Ukraine) (9g).⁴ From about mid-September to September 25, 1941, AGSSt 12 was located in the village of Snigirevka (today Snihuriivka, Ukraine). From September 26 on, the camp was in the village of Kalga (9h), and then in the city of Melitopol' (9h), where it arrived soon after the occupation of the city, on October 6; it remained there until October 21. On October 20, Korück 553 gave the order to transfer AGSSt 12 to the city of Armiansk (9h).⁵

Several instances of weeding out and shooting of Jews and political commissars were documented during this time. In Snigirevka, 20 Jewish prisoners were removed from the camp and shot by the SD. In Melitopol', Jewish prisoners were transferred to Sonderkommando 10a to be shot. On October 10, the administration handed over 49 Jewish prisoners to the

Sonderkommando, and on October 15, another 26.⁶ Existing AGSSt 12 reports from October 12 show that another 54 Jewish prisoners were removed on that day.⁷ Thus, there is evidence that at least 129 Jewish prisoners were given to Sonderkommando 10a to be shot. Between October 11 and October 21, 1941, while the camp was at Melitopol', 18,475 prisoners were evacuated to the west from AGSSt 12. Another 192 prisoners died in AGSSt 12 during this period.⁸ In early November 1941, the camp was deployed to Dzhankoi (9h), in Crimea. From November 13 until December 29, 1941, AGSSt 12 was deployed to the city of Feodosia, also in Crimea (9h).⁹ AGSSt 12 continued to be stationed in Crimea throughout the first half of 1942, during the Axis offensive in that area.

In August 1942, AGSSt 12 was transferred to the First Panzer Army. Throughout the second half of 1942, the camp was stationed in different locations in the northern Caucasus. For example, at the end of October 1942, AGSSt 12 was deployed to the city of Prokhladnyi (9i). In Prokhladnyi, its staff was temporarily reduced to only nine people.¹⁰ From late 1942 through 1943, AGSSt 12 moved westward as German forces retreated back through Ukraine. In November 1942, it was located in Ordzhonikidze (today Yenakiieve, Ukraine) (9f). By April 1943, it had relocated to Shepetovka (today Shepetivka, Ukraine) (9e); in September of that year, it was in the village of Ivankov (today Ivankiv, Ukraine) (9e), about 80 kilometers (50 miles) northwest of Kiev; and by the end of 1943, it was in Zhitomir (today Zhytomyr, Ukraine) (9e).¹¹ AGSSt 12 was disbanded in early 1945 as German forces withdrew to the west.¹²

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 13

The Wehrmacht reorganized Auflag 13 to form AGSSt 13 in Defense District (*Wehrkreis*) X on March 21, 1941. AGSSt 13 received field post number (*Feldpostnummer*) 24 511 between February 16 and July 18, 1941. From June 1941 onward, AGSSt 13 came under the jurisdiction of the Sixteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 584). Between 1941 and 1943, AGSSt 13 deployed to at least ten locations behind the Eastern front, including the village of Loknia (map 9a).¹ As of May 15, 1942, the camp personnel consisted of 20 people, including six officers, four noncommissioned officers, and ten privates.²

During its deployment to Loknia, AGSSt 13 featured the same overcrowding and catastrophic sanitary conditions that prevailed in most such camps for Soviet prisoners of war in Belorussia and Russia. Prisoners endured malnutrition, exhaustion, and abuse. In the absence of proper medical care, they suffered extremely high sickness and mortality rates. As in other camps, the Germans conducted selections of Jews and Communists among the prisoners. A Security Service (*Sicherheitsdienst*, SD) detachment or guards then shot those selected near the camp.³ The Wehrmacht disbanded AGSSt 13 in October 1944 and transferred its remaining prisoners to Dulag 110.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 14

The Wehrmacht formed AGSSt 14 in Defense District (*Wehrkreis*) X on March 21, 1941, from Auflag 14.¹ It received the field post number (*Feldpostnummer*) 25 346 between February 16 and July 18, 1941. From June 1941 onward, AGSSt 14 came under the command of the Sixteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 584).

From 1941 to 1943, AGSSt 14 deployed to various locations behind the eastern front, including the city of Demiansk (map 9a).² As of May 15, 1942, German camp personnel consisted of 13 people (6 officers, 3 noncommissioned officers, and 4 privates).³ The camp commandant was Hauptmann Saeger at first, then later Hauptmann Xanke. The adjutants were Oberleutnant Theuring from Schleswig and, later, Oberleutnant Reitz from Harburg.⁴

During AGSSt 14's deployment in Demiansk, the conditions of confinement for prisoners of war (POWs) were the same as in other camps for Soviet POWs. From September 13, 1941, onward, the camp was located in an area known as the "Popovo Swamp." This area had always carried an evil reputation among local residents. It was always shrouded in fog, and nothing grew there except for moss and lichen. The prisoners lived in 16 underground bunkers without windows. The combination of overcrowding, malnutrition, exhaustion, and the lack of sanitation and medical care led to mass illness and tremendous mortality. Abuse by German guards only exacerbated these conditions.⁵ As in other camps, selections of Jews and Communists among the prisoners took place, first by the camp personnel, and later by the Security Service (*Sicherheitsdienst*, SD). In the latter case, an SD or guard detachment then shot those selected near the camp. Camp personnel testified after the war that they knew nothing of such actions, and that the high number of prisoner deaths was due to "natural causes."⁶

The Germans disbanded the camp on March 18, 1945.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 15

The Wehrmacht formed AGSSt 15 on March 21, 1941, from the nonoperational Prisoner of War Reception Camp (*Kriegsgefangenen-Auffanglager*) 15. AGSSt 15 received field post number (*Feldpostnummer*) 26 100 between February 16 and July 18, 1941.¹ Beginning in May 1941, the camp was under the jurisdiction of the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 550).

Between 1941 and 1942, AGSSt 15 deployed to various populated areas of Ukraine. From late 1941 through mid-1942, AGSSt 15 was located in Nikitovka (today Mykytivka) (map 9f).² Beginning in August 1942, the camp was located in the northern Caucasus. During the fall of 1942, AGSSt 15 operated in Novorossiisk (9h).³

AGSSt 15 held Soviet prisoners of war (POWs). Conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners endured malnutrition, exhaustion, abuse and, in the absence of proper medical care, suffered extremely high sickness and mortality rates. As in other camps, the Germans conducted selections of Jews and Communists from among the prisoners. A Security Service (*Sicherheitsdienst*, SD) detachment or guards then shot these prisoners near the camp.

AGSSt 15 was overrun by the Red Army and destroyed in 1944.

SOURCES Primary source material about AGSSt 15 is available in BA-MA (RH 49/3) and WASt.

Additional information about AGSSt 15 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 31.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 16

The Wehrmacht formed AGSSt 16 on March 21, 1941, from the nonoperational Prisoner of War Reception Camp (*Kriegsgefangenen-Auffanglager*) 16. AGSSt 16 received field post number (*Feldpostnummer*) 02 858 between February 1 and July 11, 1941.¹ Under the authority of the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583), AGSSt 16 was deployed to Ukraine.² For example, in August 1941, it operated in the city of Uman (map 9e). From the end of 1941 through mid-1942, it was located in Druzhkovka (9f).³ From August 1942 on, AGSSt 16 operated in the northern Caucasus. For example, in the fall of 1942, it was located in Apsheronsk and Khadyzhensk (9h)⁴

AGSSt 16 featured the same overcrowding and catastrophic sanitary conditions that prevailed in most such camps for Soviet prisoners of war in Ukraine and the northern Caucasus. Prisoners endured malnutrition, exhaustion, and abuse, and in the absence of proper medical care, they suffered extremely high sickness and mortality rates. As in other camps, the Germans conducted selections of Jews and Communists among the prisoners. Those selected were then shot by the Security Service (*Sicherheitsdienst*, SD) or guards near the camp.

AGSSt 16 was overrun by the Red Army and destroyed in 1944.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 17

The Wehrmacht formed AGSSt 17 in Defense District (*Wehrkreis*) XI on March 24, 1941, from the staff of Frontstalag 196.¹ AGSSt 17 received field post number (*Feldpostnummer*) 40 285 between February 28 and July 29, 1941. Beginning in

April 1941, the unit was under the jurisdiction of the Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583). Following the invasion of the Soviet Union on June 22, 1941, AGSSt 17 was moved from East Prussia to Lithuania. In the late summer of 1941, AGSSt 17 was stationed in Krasnoe Selo and then in Vyritsa (both in map 9a), among other places.² In early 1942, the unit was reinforced with members of the 10th Reserve Battalion (*Landesschützenbataillon*). Throughout the rest of 1942, AGSSt 17 was moved to several locations, including Volkov and Finëv Lug (map 9a). Finally, the unit absorbed a prisoner of war (POW) volunteers camp (*Hilfswilligenlager*), including three companies of Russians, in Vyritsa. The commandant was Hauptmann Ernst Lauckert for most of the camp's existence, until late 1944.³

AGSSt 17 featured the same overcrowding and catastrophic sanitary conditions that prevailed in most such camps for Soviet POWs, especially during its operation in Krasnoe Selo and Vyritsa. Prisoners endured malnutrition, exhaustion, and abuse and, in the absence of proper medical care, suffered extremely high sickness and mortality rates. As in other camps, the Germans conducted selections of Jews and Communists among the prisoners. A Security Service (*Sicherheitsdienst*, SD) detachment or guards then shot those selected, near the camp.⁴ In 1944, AGSSt 17 was pulled back through the Baltics and disbanded in the village of Stablaak (today, Stabławki, Poland) (4c).⁵

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 18

The Wehrmacht formed AGSSt 18 in Defense District (*Wehrkreis*) XI on March 24, 1941. AGSSt 18 received field post number (*Feldpostnummer*) 41 033 between February 28 and July 29, 1941. From April 1941 onward, AGSSt 18 fell under the jurisdiction of the Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583). Between 1941 and 1943, AGSSt 18 was deployed in Liuban' (map 9a), among other places.¹

AGSSt 18 featured the same overcrowding and catastrophic sanitary conditions that prevailed in other camps for Soviet prisoners of war. AGSSt 18's prisoners endured

malnutrition, exhaustion, and abuse and, in the absence of proper medical care, suffered extremely high sickness and mortality rates. However, a report by a German doctor, Oberstabsarzt Dr. Hartung, who visited the camp at Liuban' on June 17, 1942, reported that the barracks and bunkers in which the prisoners lived were "clean and dry" and that the prisoners and camp facilities had been properly deloused. He also noted that there was a hospital on the site with three wards, one for noncontagious diseases, one for typhus, and one for local civilians.² As in other camps, the camp administration conducted selections of Jews and Communists among the prisoners to be shot near the camp. After October 1941, the Security Service (*Sicherheitsdienst*, SD) took over the selection and execution process.³

The Wehrmacht disbanded the camp on December 2, 1944. Its field post number was struck on December 18, 1944.

SOURCES Primary source material about AGSSt 18 is located in BA-MA (RH 22 and RH 23/ 277–288); GARF (file 7021-34-764: Liuban'); and WASt.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 19

The Wehrmacht established AGSSt 19 on March 7, 1941. From June 1941 onward, the unit was subordinate to the Second Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 580). It received the field post number (*Feldpostnummer*) 41 706 between February 28 and July 29, 1941.¹ AGSSt 19 deployed to different sites in Belorussia, Russia, and Ukraine. In Belorussia, it was stationed in Bobruisk (map 9b), Kalinkovichi (9e), Rechitsa (9c), Slutsk (9b), and Chaplin (9e). In Russia, AGSSt 19 was stationed in Klintsy and Unecha (both 9c). In Ukraine, the camp was located in Glukhov (today Hlukhiv) (9c), Mena (9e), Khutor Mikhailovskii (today part of Druzhba, Sumy oblast') (9c), Novgorod-Severskii (9c), Romny(9f), Sumy (9f), and Shchors (today Snovsk) (9e).²

The conditions in AGSSt 19 were much the same as those in other camps for Soviet prisoners of war (POWs). Overcrowding, forced labor, and the lack of adequate food, shelter, clothing, sanitation, or medical care all contributed to high death rates from exhaustion, starvation, and disease. Abuse by the guards exacerbated the conditions. To illustrate: during a visit to AGSSt 19 in Khutor Mikhailovskii in early December 1941, Kriegsgefängener-Bezirkskommandant Oberst Marschall ascertained that 144 people out of 10,400 prisoners (1.4 percent) had been killed the previous night. Only 5,000

prisoners were placed in "proper, heated dwellings." The prisoners slept on boards without straw. Those fit for work supposedly received 200 grams (7 ounces) of bread, 1,000 grams (35 ounces) of potatoes, and 200 grams of cabbage (1,415 calories). Conversely, those who did not work received 125 grams (4.4 ounces) of bread, 500 grams (17.6 ounces) of potatoes, and 100 grams (3.5 ounces) of vegetables (770 calories). However, an inspection of the food allocation showed that, in the majority of cases, the prisoners received far less than those totals. At that time, an SS company managed the camp, and its members treated the prisoners with extraordinary cruelty.³

At Khutor Mikhailovskii, the camp was located on the grounds of a sugar refinery and in the plant's dormitory, clubhouse, and several nearby buildings. According to a witness, Valentina Riazantseva (a 13-year-old girl at the time), when the number of prisoners increased, the Germans enclosed the entire camp area with a barbed-wire fence. They set up towers with searchlights and began to patrol all the campgrounds with dogs.

Behind the barbed wire, a terrible life began. Winter came. Although the temperatures reached minus 40 degrees [F or C] and lower, the buildings were not heated. The prisoners were fed some sort of watery soup, or *balanda*, and buckwheat still in the hull. From such food, soldiers died in torment. The Germans herded around 800 people into the plant's clubhouse. They stabbed many with bayonets, and then burned them. The village inhabitants saw the Germans, whose uniforms were splashed with blood. When they were burning the soldiers, it was impossible to be out on the streets of the town—screams were heard, and in the air was the acrid smell of burnt hair and human flesh.⁴

Riazantseva remembered the barbed-wire fence well. From time to time, the dead bodies of Red Army soldiers who had tried to escape appeared on the fence. As a warning, the bodies were not removed from the barbed wire for a long time. "The concentration camp [*sic*] was located not far from our house. At night we used to hear cries and shots coming from that direction. Nonetheless, many POWs managed to escape from the camp. The local inhabitants hid them in their homes and nursed them back to health. After this, they took them to Kovpak's partisan detachment. From a leaflet put out by the underground, we learned that during November–December 1941 the Germans killed several thousand POWs by means of starvation and cold. Many of them were burned."⁵

On the night of February 20–21, 1942, the partisans attacked the camp, killing 60 Germans and freeing 200 prisoners. The news about the partisans quickly spread through town. Children ran into the liberated camp.

All over the grounds of the camp, naked corpses lay about. At the center stood large vats of unhusked buckwheat. It was terrible to look at the corpses, as

you could see right through them. In the hope of finding someone alive, we walked around the entire camp area, checking all the barracks. The doors and windows of the buildings had been boarded up and nailed shut. And suddenly, we heard voices coming from the cellar of one of the buildings. This building had been doused with gasoline. Apparently the Germans were getting ready to set it on fire, along with the people, but they didn't have enough time—the POWs were liberated.⁶

According to another account,

in the camp for captured Red Army soldiers at Khutor Mikhailovskii in Chernigov oblast', there were about 18,000 persons. They were subjected to cruel beatings for every offence, and the Germans could define anything and everything as an offence: sometimes a prisoner didn't stand up or sit down the right way, or didn't lie down or get up the right way, or didn't approach or walk away the right way. The fascists gave each prisoner half a mess tin of water per day, containing some potato peelings. People swelled up from hunger, cold, and various illnesses. The number of dead totaled 150–180 per day. . . . In February 1942, the Germans decided to liquidate the camp, because partisan detachments were intensifying their operations in this area. And so the Germans selected all those who had fallen ill with typhus and other diseases, as well as weak prisoners who could not walk, and ordered them to be moved to a separate barracks, a barn. As many as 2,000 such prisoners were gathered together. They burned them all to death. The remaining prisoners, one frosty day, were formed into columns and, without coats and in their bare feet, were forced to march westward. They had to walk 35 to 40 km [about 22 to 25 miles] per day, with no food or water. The Germans immediately shot anyone who bent over to pick up some snow and anyone who lagged behind. The whole route taken by the Red Army POWs was strewn with the corpses of men who had been shot.⁷

In total, from November 1941 to February 1942, 17,500 POWs perished in the camp, according to the camp memorial. As in other camps, the authorities carried out selections to separate out Jews and Communists among the new arrivals. According to the postwar testimony of some camp personnel, the camp's counterintelligence officer (*Abwehr*) took part in these selections, with assistance from informants within the prisoner population.⁸ Those selected were handed over to a Security Service (*Sicherheitsdienst*, SD) commando to be shot. The Germans dissolved AGSSt 19 at the end of 1944.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 20

The Wehrmacht issued the order to form AGSSt 20 on March 7, 1941. Before June, the unit was assigned to the Rear Area Commander of the Second Armored Group (redesignated Second Armored Army from October 5, 1941, onward) (*Kommandant rückwärtiges Armeegebiet*, Korück, 532). AGSSt 20 deployed to different sites in Belorussia and Russia, including the cities of Borisov (German: Borissow; today Barysaw, Belarus) (map 9b), Roslavl' (9c), and, from 1942 to 1943, Orël (9c).¹ The unit received field post number (*Feldpostnummer*) 42 355 between February 28 and July 29, 1941; the number was struck on February 17, 1944.

During deployment in Orël, AGSSt 20 was located in the city jail, on Krasnoarmeiskaia Street. The camp held both prisoners of war (POWs) and civilians. We know about the conditions of confinement from the Extraordinary State Commission's Report on the Crimes of German-Fascist Invaders in Orël and the Orlovskaia oblast'.² The report notes in particular that

the nourishment of the prisoners of war did not even ensure a hungry existence. Per day, the prisoners were given 200 grams [7 ounces] of bread with an

admixture of sawdust and a liter of soup made with decayed soy and rotten flour. Major Hoffman, the camp boss, beat the prisoners of war and forced those exhausted by hunger to carry out heavy physical labor in the stone quarry and in the unloading of machines. The prisoners' boots were taken away, and they were given wooden shoes. In wintertime, the shoes were very slippery to walk in, and, as they climbed to the second and third floors especially, the prisoners fell on the stairs and suffered serious injuries.

Doctor Kh. I. Tsvetkov, who was in the POW camp, gave the following statement:

From my own stay in the Orlovskii camp, I can characterize the attitude of the German command toward the prisoners of war as a deliberate destruction of living strength. Food containing a maximum of 700 calories, coupled with exhausting heavy labor, resulted in complete depletion of the body (cachexia) and led to death, occurrences of starvation edemas, and irreversible intestinal disorders. Despite our categorical protests and struggle against this massive murder of the Soviet people, the German camp doctors Kuper and Bekel' maintained that the nourishment was quite satisfactory. Moreover, they denied that hunger was the origin of the prisoners' edemas, and, with complete coolness, they classified [the edemas] as being due to cardiac or kidney phenomena. In their diagnosis, it was forbidden to note "hunger edema." There was massive mortality in the camp. From the total number of the dead, 3,000 prisoners died as a result of starvation and complications caused by malnutrition. The prisoners of war lived in horrid conditions which defied description: complete lack of fuel, water, tremendous lousiness, unbelievable crowding in the prison cells—an indoor area of 15–20 square meters [about 160 to 215 square feet] housed between 50 and 80 people. There were 5–6 prisoners dead in the cell, and the living slept on the dead.

The assistant to Hauptmann Matern, the camp boss, placed some of the POWs and activists from the civilian population into the first building. They were housed together regardless of their sex or age. The prisoners called it the "Death Block." Academician N. N. Burdenko, a member of the ChGK, determined that POWs were deliberately killed in the "infirmary." Burdenko reported that

"Pictures, which I had to see, surpass any imagination. The joy at the sight of the liberated people was darkened by the fact that their faces were in stupor.... Obviously, the suffering of their past experience put them in a state between life and death. I

observed these people for three days, bandaging them, evacuating—the psychological stupor did not change. In the first days, something similar also lay in the faces of the doctors. The patients died in the camp from disease, from hunger, from beatings, they died in the 'infirmary'—prison from infected wounds, from sepsis, from hunger. Civilians died from shootings carried out in the prison courtyard with German punctuality, on schedule—on Tuesdays and Fridays, with groups of 5–6 people. The Germans also took the condemned out to a distant place, where there was a trench the Russian troops had made before leaving the city, and shot them there. Those shot in the city were taken away and thrown into the trench, primarily in a wooded area. Executions in the jail were carried out as follows: men stood facing the wall and a gendarme shot them in the occipital region with a pistol. With this shot, the vital centers were damaged, and death occurred instantaneously. In most cases, women lay face down on the ground, and the gendarme shot them in the occipital region. The second method: a group of people were driven to a trench and, turning to face one side, they were shot with automatic weapons. The weapons were also aimed at the occipital region. Children's corpses were discovered in the trenches. According to witness testimony, these children were buried alive." According to witnesses and eyewitnesses, "no less than 5,000 prisoners of war and peaceful Soviet citizens were buried in the cemetery near the city prison during the German occupation of Orel."

The books of registered dead prisoners contain the names of 1,828 prisoners who died between December 3, 1941, and July 19, 1943. The date of death is known for 1,747 prisoners, while it is unknown for 81 others. Of the prisoners for whom the date of death is recorded, 254 died in December 1941, 1,365 in 1942, and 128 in 1943.³ In addition to the prisoners who died from hunger and disease, a number of prisoners were shot as "undesirables" (Jews and Communists).

The Germans disbanded the camp on December 23, 1943.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 21

The Wehrmacht established AGSSt 21 on April 17, 1941, in Defense District (*Wehrkreis*) XII, and incorporated Kriegsgefangenen-Auffanglager (Auflag) 6 into it. From June 1941 onward, AGSSt 21 fell under the jurisdiction of the Second Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 580). AGSSt 21 deployed to different sites in Belorussia, Russia, and Ukraine. In Belorussia, it was stationed in the settlement of Vorontsevichi (map 9b). In Russia, AGSSt 21 deployed to the cities of Zhizdra and Klintsy (both 9c). In Ukraine, the unit was located in the city of Konotop (9f).¹ Later, the camp deployed to the Balkans, possibly Croatia, although information on this phase of its existence is lacking. AGSSt 21 received field post number (*Feldpostnummer*) 24 095 between February 16 and July 18, 1941. The number was struck on April 4, 1945.

The conditions in AGSSt 21 while it was on the eastern front were the same as those in other camps for Soviet prisoners of war. Tremendous overcrowding in a small area, continual malnutrition and the inevitable exhaustion that resulted from it, lack of sanitation, and lack of proper medical care led to massive starvation and illness and, in turn, to great mortality. Abuse by the guards exacerbated the conditions. Kriegsgefangener-Bezirkskommandant J Oberst Marschall visited the camp in December 1941, while it was stationed in the city of Konotop, and determined that the prisoners’ nourishment was “on the whole, good,” rations were observed and “death kept within bounds.”² The new camp commandant, however, reported in his January 19, 1942, account that “prisoner housing is deplorable and beneath human dignity; for instance, 120 prisoners are still huddled in dugouts.” He further reported that “the state of health is catastrophic. In the sick bay, there are currently 600 prisoners who are likely to die, and it should be noted that there are still more sick people in the camp who will likely meet the same fate.” In the commandant’s opinion, the primary reason for such a state was the widely held view that it would be best if all the

prisoners disappeared—either were shot or died from other causes.³

As in other camps, an officer of the counterintelligence (*Abwehr*) office separated Jews and Communists from the rest of the newly arrived prisoners. The officer was aided by informants from the prisoner population. The selected prisoners were then shot. On December 1, 1941, a detachment of the 1st SS Motorized Infantry Brigade shot 95 Jewish prisoners from the camp.⁴ There was at least one incident in which the camp commandant, Major von Knigge, tried to prevent the SS from taking a Jewish prisoner out of the camp on the grounds that the man was “indispensable”—although, in the end, his efforts were unsuccessful. On December 5, 1941, there were 5,250 prisoners in the camp; on November 28, 1941, there were 5,919 prisoners; and on November 14, 1941, there were 8,375 prisoners in the camp.⁵

In March 1942, AGSSt 21 redeployed to the city of Klintsy. In Klintsy, it was subordinated to the 203rd Sicherungsbrigade and initially was not used as a prisoner of war camp.⁶ On October 24, 1944, the Germans ordered the camp disbanded. Dulag 161 took control of its prisoners.⁷ On February 15, 1945, the Wehrmacht placed the camp back in operation. The field post number 34 670 had already been issued on February 10. There is no record of the camp’s second disbandment.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 22

The Wehrmacht established AGSSt 22 on May 1, 1941, in Defense District (*Wehrkreis*) VI, on the basis of Mobile Reception Camp (*bewegliches Auffanglager für Kriegsgefangene*, Auflag) 2.¹ From the end of May 1941 until the end of July 1941, the camp was deployed in Poland, in the Zakopane area (map 5). Beginning at the end of July 1941, the camp moved to the town of Berezino (today in Belarus) (9b). In the fall of 1941, the camp was located in Bobruisk (9b); November 1941 to March 1942, in Novgorod-Severskii (9c); March 1942 to June 1942, once again in Bobruisk; beginning in the summer of 1942, in various localities in the rear area of the Fourth Armored Army, in particular in the village of Isakovo (9d), the village of Remontnoe (9i), and the town of Millerovo (9d). In December 1942, the camp returned to Bobruisk and from there, after a short period, transferred via Romania, Sarajevo, and Hungary to Czechoslovakia, where it was disbanded on November 24, 1944.² Its field post number (*Feldpostnummer*) was 10 466, which it received between February 1 and July 11, 1941 (struck on November 26, 1944).

The camp was subordinate to, in chronological order, Security Division (*Sicherungsdivision*) 403, Security Division 221, the 339th Infantry Division, Security Brigade (*Sicherungsbrigade*) 203, Army Group South (*Heeresgruppe Süd*), the Fourth Armored Army, and the Rear Area Commander, Army Group Don (*Befehlshaber d. Heeresgebiet Don*).

The first camp commandant was Major Hugo Winckel (1875–1951). In October–November 1941, the commandant was Hauptmann Eugen Diekel (1892–1950), who was replaced by Major Helmuth Schulz (1894–?). The camp adjutants were, in turn, Hauptmann Ernst Blum (1891–1963) and Hauptmann Baumann (beginning in January 1942).³ According to one of the camp's personnel, there were 22 men on the staff.

The conditions in the camp during its deployment to the various localities in Belorussia, Ukraine, and Russia were the same as those in other camps for Soviet prisoners of war. Enormous overcrowding in a small area, food that was inadequate in both quantity and quality, lack of shelter or proper medical care, and overwork that led to mass starvation and illness, which in turn produced a high mortality rate. Abuse by the German guards only added to the untenable conditions. For example, although Oberst Marschall, Prisoner of War District Commandant (*Kriegsgefangenen-Bezirkskommandant*) J, during his visit to AGSSt 22 in Novgorod-Severskii (Chernigov oblast', Ukraine) in early December 1941, ascertained that the

prisoners' food was "satisfactory," this assessment seems highly questionable, since the daily mortality rate in the camp was 2 percent, and 40 percent of the prisoners who were not assigned to work were "candidates for death."⁴ At that time (on December 5, 1941) the camp contained 3,795 prisoners,⁵ while on November 28, 1941, there were 4,685,⁶ and on November 14, 1941, 7,044.⁷ Thus, over the course of only three weeks, 3,250 prisoners "vanished." According to ChGK data, during the deployment of the camp in Novgorod-Severskii, allegedly 50,000 prisoners passed through it, of whom around 20,000 are said to have perished.⁸

As in other camps, newly arrived prisoners were screened by the counterintelligence officer (*Abwehr*), with the help of informers, to separate out the Jews and Communists, who then were shot.⁹

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 23

The Germans established AGSSt 23 on November 13, 1943. On November 30, 1943, it was assigned field post number

(*Feldpostnummer*) 56 561. The camp was in existence for a year; it was disbanded in the fall of 1944. The field post number was struck from the list on December 1, 1944.¹ The camp was subordinated to the Armed Forces Commander Netherlands (*Wehrmachtbefehlshaber Niederlande*).

From February to May 1944, AGSSt 23 was deployed in Amersfoort (map 2).² At that time, there were only a small number of British and American prisoners in the Netherlands, whom the Germans probably held in AGSSt 23. The table below shows the number of prisoners in the camp from the end of 1943 until mid-1944.³

Date	Americans	British
December 1, 1943	16	5
January 1, 1944	2	1
February 1, 1944	3	—
April 1, 1944	13	1
May 1, 1944	13	1
June 1, 1944	13	1

The confinement conditions of the prisoners were satisfactory on the whole, and largely in keeping with the Geneva Convention relative to the Treatment of Prisoners of War (1929).

The camp was disbanded by an order on November 8, 1944.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 25

The Wehrmacht established AGSSt 25 on February 2, 1943. On May 5, 1943, it was converted into Dulag 226. AGSSt 25 received field post number (*Feldpostnummer*) 29 950 between February 15 and August 23, 1943; the number was struck sometime before February 12, 1945.

Dallas Michelbacher

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 31

The Wehrmacht formed AGSSt 31 on August 27, 1944, from former personnel of Dulag 101 and Dulag 110, together with their guard companies.¹ On October 27, 1944, it was assigned field post number (*Feldpostnummer*) 37 042. The camp was in existence until the end of 1944 or early 1945, when it was disbanded.² AGSSt 31 was deployed in various locations in the rear area of Army Group North (*Heeresgruppe Nord*).

The camp held Soviet prisoners of war. Information about the camp is sparse, but it can be safely assumed that conditions were inhumane, as they were in other camps for Soviet prisoners.

SOURCES Primary source material about the AGSSt 31 is located in BA-MA; WASt; and BArch B 162/28897–28898: Ermittlungen gg. ehem. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 32

The Wehrmacht formed AGSSt 32 on August 27, 1944, in Danzig (today Gdańsk, Poland) (map 4c) from 23 former staff of Dulag 375 and 7 members of its guard company, as well as 54 members of the 894th Reserve Battalion (*Landesschützenbataillon*).¹ On October 27, 1944, it was assigned field post number (*Feldpostnummer*) 20 693. On February 8, 1945, the camp was given a new number: 40 527.² The camp existed until the spring of 1945, when it was disbanded.

AGSSt 32 deployed to various locations in the rear area of Army Group (*Heeresgruppe*) G, which was then defending Lorraine, Alsace, and the West Wall against the Americans.³

The camp held American and British prisoners.

SOURCES Primary source material about AGSSt 32 is located in BA-MA; WASt; and BArch B 162/28899–28900: Ermittlungen gg. ehem. Angehörige der Armeegefangenensammelstelle 32 wg. des Verdachts der Beteiligung an NS-Verbrechen; files 28819–28820: Anforderung von Erkennungsmarkenverzeichnissen und Urlisten bei der Deutschen Dienststelle (WASt) zur Überprüfung von Armeegefangenensammelstellen.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 33

The Wehrmacht established AGSSt 33 on August 27, 1944, in Danzig (now Gdańsk), Poland (map 4c), from 73 former personnel of the 894th Reserve Battalion (*Landesschützenbataillon*).¹ On October 27, 1944, it was assigned field post number (*Feldpostnummer*) 24 456.²

In the fall of 1944, AGSSt 33 deployed to Poland. At some point after February 1945, it may have been deployed to Germany in the rear area of Army Group (*Heeresgruppe*) G, which was defending the upper Rhine Valley from the Americans; however, the existing sources are not entirely clear. While deployed in Poland, the camp held Soviet prisoners of war. During the deployment in Germany, it held American and British prisoners.

The camp disbanded in the spring of 1945.

SOURCES Primary source material about AGSSt 33 is located in BA-MA; WASt; and BArch B 162/28902: Ermittlungen gg. ehem. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 34

The Wehrmacht formed AGSSt 34 on August 27, 1944, in Pomlau (today: Pomlewo, Poland) (map 4c) from 70 former personnel of Dulag 154 and its associated guard company as well as 23 men from the 3rd Company of the 894th Reserve Battalion (*Landesschützenbataillon*).¹ On October 27, 1944, it was assigned field post number (*Feldpostnummer*) 27 513.² AGSSt 34 was deployed in Pomlau until November 15, 1944. From November 17, 1944, onward, it was in Tarnów (5). At the end of December 1944, the camp was transferred to Landstuhl (4d), and, until March 18, 1945, it was located between the towns of Landstuhl and Ramstein. Later, the camp was located in Munich (4f).³ While deployed in Landstuhl, the camp operated under the authority of the First Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 535).

The camp commandant was Oberstleutnant Ralph Folkert from Berlin; the deputy commandant was Hauptmann Eugen Krägeloh from Schalksmühle; the camp doctor was Dr. Hans-Dietrich Hoppe; the commander of the guard company was Hauptmann Heinrich Kramer; and the counterintelligence (*Abwehr*) officer was Hauptmann Wilhelm Kreck.⁴

During the deployment in Tarnów, the camp was used to hold Soviet prisoners of war. While located near Landstuhl, it held American prisoners. There is no documentation on the conditions in the camp. After the war, the German federal prosecutor investigated allegations that the camp staff had murdered Soviet prisoners, but former members of the staff denied ever having heard of or participated in such actions. One witness testified that some prisoners volunteered to be trained as helpers (*Hiwis*) for the Wehrmacht.

The camp was disbanded in the spring of 1945.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 35

The Wehrmacht established AGSSt 35 on August 27, 1944. The unit was assigned to Army Group North (*Heeresgruppe Nord*) and was still in operation as of the end of 1944.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 36

The Wehrmacht established AGSSt 36 on August 27, 1944. The unit was assigned to Army Group North (*Heeresgruppe Nord*) and was still in operation as of the end of 1944.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 37

The Germans formed AGSSt 37 on September 15, 1944, probably from the personnel of Dulag 131.¹ On September 22, 1944, it was assigned field post number (*Feldpostnummer*) 31 444.² The unit existed until the end of 1944, when it was disbanded. AGSSt 37 was deployed in various locations in Poland, in the rear area of Army Group Center (*Heeresgruppe Mitte*).

AGSSt held Soviet prisoners of war. There is no documentation available on the conditions in the camp. In general, by this late point in the war, conditions had improved compared to 1941 and 1942, but Soviet prisoners were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the same quality as those afforded to Western Allied prisoners.

SOURCES Primary source material about AGSSt 37 is located in BA-MA; WASt; and BArch B 162/6367–6370: Tötung sowjetischer Kriegsgefangener des Dulag 131 bzw. der AGSSt 37 in Slonim, Bobruisk und Baranowicze; files 28819–28820: Anforderung von Erkennungsmarkenverzeichnissen und Urlisten bei der Deutschen Dienststelle (WASt) zur Überprüfung von Armeefangeneinsammelstellen.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 38

The Wehrmacht established AGSSt 38 on September 15, 1944, from Dulag 142. It received field post number (*Feldpostnummer*) 03 999 on September 22, 1944.¹ Advancing Soviet forces overran the camp in January 1945, enabling the prisoners to escape on foot and resulting in the capture of many of the German personnel.² The unit was under the Ninth Army

Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 532). AGSSt 38 was assigned to various locations in Poland, mainly in the Warsaw area (map 5).

Postwar investigations indicated that the camp held several hundred Soviet prisoners, though the precise numbers are unknown. Documentation regarding the conditions in the camp is not available, except to establish that the camp was crowded.³ In general, by this late point in the war, conditions had improved over those in 1941 and 1942, but Soviet prisoners were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the same quality as was afforded to Western Allied prisoners.

SOURCES Primary source material about AGSSt 38 is located in BA-MA; WASt; and BArch B 162/28909: Ermittlungen gg. ehem. Angehörige der Armeefangenensammelstelle 38 wg. des Verdachts der Beteiligung an NS-Verbrechen.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 39

The Wehrmacht formed AGSSt 39 on September 1, 1944, based on an order from Army Group Center dated August 27. It received field post number (*Feldpostnummer*) 03 603 on September 22, 1944.¹ AGSSt 39 was under the Representative for Prisoner of War Affairs with the High Command of Army Group Center (*Beauftragter für Kriegsgefangenenwesen beim Oberkommando Heeresgruppe Mitte*) and operated in the rear area of Army Group Center.²

The camp held Italian military prisoners.³ Details on conditions in the camp are lacking, but, in general, the Germans tended to treat Italian prisoners harshly.

There is no record of the date on which the Wehrmacht disbanded this camp.

SOURCES Primary source material about AGSSt 39 is located in BA-MA and WASt Berlin.

Additional information about AGSSt 39 can be found in the following publications: Carlo Gentile, *Elenco delle truppe e dei comandi delle FFAA tedesche in Italia 1943–1945* (Rome:

German Historical Institute, 2004); Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 40

The Germans established AGSSt 40 on September 20, 1944, from the staff of Dulag 314. It received field post number (*Feldpostnummer*) 41 454 on September 22.¹ The unit was under the Second Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 580). AGSSt 40 was deployed in various locations in central Poland and western Prussia.

AGSSt 40 held Soviet prisoners of war (POWs). Documentation regarding the conditions in the camp are not available. In general, by this late point in the war, conditions had improved over the terrible conditions that were prevalent in 1941 and 1942, but Soviet POWs were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the quality that Western Allied prisoners received.

The date on which the Germans disbanded the camp is unknown; existing records indicate that it was still operating as of the end of 1944.

SOURCES Primary source material about AGSSt 40 is located in BA-MA; WASt Berlin; and BArch B 162/28912: Ermittlungen gg. ehem. Angehörige der Armeefangenensammelstelle 40 wg. des Verdachts der Beteiligung an NS-Verbrechen.

Additional information about AGSSt 40 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz, self-published, 1987), p. 34.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 41

The Wehrmacht formed AGSSt 41 on September 15, 1944, from personnel of Dulag 126. It received field post number (*Feldpostnummer*) 33 413 on September 22.¹ Initially, the unit was under the Fourth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 559). However, after only three months, on December 15, it was reassigned to the Fifteenth Army (Korück 517), then fighting in western Germany.

Documentation on the prisoner population and conditions in the camp are lacking. German legal authorities did investigate allegations that Soviet prisoners of war were selected and killed, but they could find no firm evidence. It is not even certain if the Germans kept Soviet prisoners in the camp during its brief subordination to Korück 559, since, by that point in the war, the Wehrmacht was in retreat and no longer capturing large numbers of prisoners.

SOURCES Primary source material about AGSSt 41 is located in BA-MA; WAST; and BArch B 162/28913: Ermittlungen gg. ehem. Angehörige der Armeefangenensammelstelle 41 wg. des Verdachts der Beteiligung an NS-Verbrechen.

Additional information about AGSSt 41 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 34.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 42

The Wehrmacht formed AGSSt 42 on September 20, 1944. It was assigned field post number (*Feldpostnummer*) 30 439 on September 22.¹ The camp was subordinate to the Fourth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 559). AGSSt 42 was deployed in various locations in East Prussia.

AGSSt 42 held Soviet prisoners of war (POWs). No documentation regarding camp conditions is available. In general, by this late point in the war, conditions had improved over those that were prevalent in 1941 and 1942, but Soviet POWs were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the quality that Western Allied POWs received.

The date on which the Germans disbanded the camp is unknown; existing records indicate that it was still in operation at the end of 1944.

SOURCES Primary source material about AGSSt 42 is located in BA-MA; WAST; and BArch B 162/28914: Ermittlungen gg. ehem. Angehörige der Armeefangenensammelstelle 42 wg. des Verdachts der Beteiligung an NS-Verbrechen; files 28819–28820: Anforderung von Erkennungsmarkenverzeichnissen und Urlisten bei der Deutschen Dienststelle (WAST) zur Überprüfung von Armeefangenensammelstellen.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 43

The Germans established AGSSt 43 on September 19, 1944, using staff from Dulag 130 as a basis. It received field post number (*Feldpostnummer*) 30 959 on September 22.¹ For a short time, AGSSt 43 was under the Third Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 590), but, from October 23, 1944, it was under the Fourth Army Rear Area Command (Korück 559).² AGSSt 43 was deployed to various locations in East Prussia.

AGSSt 43 held Soviet prisoners of war (POWs). Specific information about the conditions in this camp is unavailable. By this point in the war, conditions in camps for Soviet POWs were generally better than they had been in 1941 and 1942, but they still received worse food, housing, and medical care than Western Allied POWs.

Records indicate that the unit was in operation until the end of the war.

SOURCES Primary source material about AGSSt 43 is located in BA-MA and WAST.

Additional information about AGSSt 43 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 45

The Germans formed AGSSt 45 on September 15, 1944, from the staff of Dulag 125. It received field post number (*Feldpostnummer*) 25 079 on September 22.¹ The camp was under the Third Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 590). AGSSt 45 was deployed to various locations in East Prussia.

The camp held Soviet prisoners of war (POWs). Documentation regarding the conditions in the camp is not available. In general, by this late point in the war, conditions had improved over those prevalent in 1941 and 1942, but Soviet POWs were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the same quality that Western Allied POWs received.

The camp's field post number was struck on or after November 10, 1944, and given to AGSSt Samland; AGSSt 45 was probably redesignated as AGSSt Samland.

SOURCES Primary source material about AGSSt 45 is located in BA-MA; WASt; and BArch B 162/28917: Ermittlungen gg. ehem. Angehörige der Armeegefangenensammelstelle 45 wg. des Verdachts der Beteiligung an NS-Verbrechen.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 51

The Wehrmacht ordered the establishment of AGSSt 51 on August 27, 1944, possibly from Dulag 102 (although the records are somewhat contradictory). On September 29, 1944, it was assigned field post number (*Feldpostnummer*) 18 991.¹ The camp existed until late 1944, when it was disbanded. AGSSt 51 was subordinate to the Fourth Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585), part of Army Group (*Heeresgruppe*) A. AGSSt 51 was deployed to various locations in Poland.

The camp held Soviet prisoners of war (POWs). Documentation regarding the conditions in the camp is not available. In general, by this late point in the war, conditions had improved over those that were prevalent in 1941 and 1942, but Soviet POWs were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the quality that Western Allied prisoners received.

The date on which the Wehrmacht disbanded the camp is unknown; existing records indicate that it was still in operation as of the end of 1944.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 56

The Wehrmacht formed AGSSt 56 with an order dated August 27, 1944, using staff from Dulag 191. On November 17, 1944, the camp received field post number (*Feldpostnummer*) 66 998.¹ AGSSt 56 deployed to various localities in Hungary, Slovakia, and the Protectorate of Bohemia and Moravia. The camp was subordinate to the Eighth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 558).

The camp held Romanian and Slovak prisoners of war (POWs). Documentation regarding the conditions in the camp is not available. In general, by this late point in the war, conditions had improved over those that were prevalent in 1941 and 1942, but these prisoners were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the quality that Western Allied POWs received.

On May 11, 1945, members of AGSSt 56 in Nesselbach (today Větrná, Czech Republic) were captured by American forces.²

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 57

The Wehrmacht formed AGSSt 57 on October 11, 1944, using the personnel from Dulag 231. It received field post number (*Feldpostnummer*) 65 586 on November 17.¹ The camp was subordinate to the Eighth Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 558). AGSSt 57 was located in various locations in Hungary.

The camp held Soviet prisoners of war (POWs). Documentation regarding the conditions in the camp is not available. In general, by this late point in the war, conditions had improved over those that were prevalent in 1941 and 1942, but Soviet POWs were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the quality that Western Allied POWs received.

The date on which the Wehrmacht disbanded the camp is unknown; existing records indicate that it was still in operation as of the end of 1944.

SOURCES Primary source material about AGSSt 57 is located in BA-MA; WASt; and BArch B 162/28931: Ermittlungen gg. ehem. Angehörige der Armeegefangenensammelstelle 57 wg. des Verdachts der Beteiligung an NS-Verbrechen.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 58

The Wehrmacht established AGSSt 58 on September 25, 1944. On October 10, 1944, it received field post number (*Feldpostnummer*) 22 379.¹ The camp was under the authority of the Eighth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 558). AGSSt 58 was deployed to various locations in Hungary.

The camp held Soviet prisoners of war (POWs). Documentation regarding the conditions in the camp is not available. In general, by this late point in the war, conditions had improved over those that were prevalent in 1941 and 1942, but Soviet POWs were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the quality that Western Allied POWs received.

The date on which the Wehrmacht disbanded the camp is unknown; existing records indicate that it was still in operation as of the end of 1944.

SOURCES Primary source material about AGSSt 58 is located in BA-MA; WASt; and BArch B 162/28932: Ermittlungen gg. ehem. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 59

The Wehrmacht formed AGSSt 59 on September 25, 1944. It received field post number (*Feldpostnummer*) 31 703 on October 10.¹ The unit was under the Nineteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 536). AGSSt 59 was located in Strassburg (today: Strasbourg) (map 4f) in October and November 1944 and then in various locations in western Germany. While in Strassburg, it absorbed Dulag Strassburg.

The camp held French and American prisoners. Conditions were generally satisfactory.

The last order pertaining to the camp was dated January 7, 1945, with the remark “missing.” The field post number was struck on March 20.

SOURCES Primary source material about AGSSt 59 is located in BA-MA (RH 49/3 and RH 49/93) and WASt.

Additional information about AGSSt 59 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 60

The Wehrmacht formed AGSSt 60 on September 25, 1944, from part of the staff of Stalag 122, in Defense District (*Wehrkreis*) VI, probably in the town of Honnef. It received field post number (*Feldpostnummer*) 65 076 on November 6.¹ The unit was under the Fifth Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, Panzer AOK 5) or possibly the Fifth SS Armored Army Rear Area Commander; the records are not clear.

AGSSt 60 was located at as many as 12 different sites in Germany (and possibly in the Netherlands as well) and was responsible for more than one camp simultaneously. Former members of the staff named several locations in Nordrhein-Westfalen, including Flammersheim (today: part of the town of Euskirchen), Nettersheim, Firmenich, Düren, and Emmerich am Rhein (map 4a).²

According to one former member of the camp staff, the commandant was Oberstleutnant Viehoff; another named Oberstleutnant Posseckel. The unit controlled, at one time or another, up to 2,000 Soviet prisoners as well as American and British prisoners.³

Information on conditions in the camp is not available. From the testimony of former camp staff, prisoners rotated through the camps quickly and were marched to larger camps farther east.

The camp apparently remained in operation until the end of the war.

SOURCES Primary source material about AGSSt 60 is located in BA-MA; WASt; and BArch B 162/28933: Ermittlungen gg. ehem. Angehörige der Armeefangeneinsammelstelle 60 wg. des Verdachts der Beteiligung an NS-Verbrechen.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 61

The Wehrmacht created AGSSt 61 on September 25, 1944. On November 2, 1944, it was assigned field post number (*Feldpostnummer*) 67 824.¹ AGSSt 61 deployed to various locations in Hungary.

The camp held Soviet prisoners of war (POWs). Documentation regarding the conditions in the camp is not available. In general, by this late point in the war, conditions had improved over those that were prevalent in 1941 and 1942, but Soviet POWs were still not given housing, food, clothing, or medical care of sufficient quality or quantity, and certainly not of the quality that Western Allied POWs received.

The date on which the Wehrmacht disbanded the camp is unknown; existing records indicate that it was still in operation as of the end of 1944.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 63

The Wehrmacht created AGSSt 63 on November 28, 1944. On December 20, 1944, it was given field post number (*Feldpostnummer*) 66 775.¹ AGSSt 63 was subordinate to the Tenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 594).² AGSSt 63 was deployed at various locations in Italy until its disbandment, which occurred no later than May 2, 1945, with the surrender of the Tenth Army. As for the prisoner population and conditions of confinement, the camp held Allied prisoners of war, and their conditions of confinement, by and large, were satisfactory and basically in keeping with the Geneva Convention relative to the Treatment of Prisoners of War.

SOURCES Primary source material about AGSSt 63 is located in the BA-MA and WASt.

Additional information about AGSSt 63 can be found in the following publications: Carlo Gentile, *Elenco delle truppe e dei comandi delle FFAA tedesche in Italia 1943–1945* (Rome: Deutsches Historisches Institut, 2004), and Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) 65

The Wehrmacht established AGSSt 65 on November 28, 1944. On December 20, 1944, it was assigned field post number (*Feldpostnummer*) 67 858.¹ AGSSt 65 was subordinate to the commander of the rear area of Army Ligurien (AOK Ligurien).² It had a small staff of about 35 men, many of whom had been previously employed at Dulag 226 in Pissignano.

AGSSt 65 was deployed near Turin, Italy (map 6), and held prisoners of war from Western Allied countries, such as France, who were subsequently transferred to permanent prisoner of war camps. Their conditions of imprisonment were, by and large, satisfactory and basically in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War. According to former staff member Josef Schätmüller, by 1945, the prisoners could no longer be transferred out of the camp because transportation routes had been cut off by Allied advances, so the prisoners remained in the camp until they were liberated in early May 1945. (German records indicate that the camp was still in

operation as late as March 23.) The same witness claims that several of the German camp staff were executed by French and Italian partisans after the camp was liberated.³

SOURCES Primary source material about AGSSt 65 is located in BArch B 162/28937 (copy at USHMM RG-14.101M. 2674.00000261-00000316); BA-MA; and WASt Berlin.

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) BRESLAU

The Wehrmacht established AGSSt Breslau in 1945 in Breslau (today: Wrocław, Poland) (map 4e). It was assigned field post number (*Feldpostnummer*) 22 390 on February 17, 1945. The unit was disbanded on or before May 6, 1945.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

ARMEE-GEFANGENENSAMMELSTELLE (AGSSt) SAMLAND

The Wehrmacht established AGSSt Samland on the Samland Peninsula (today the Kaliningrad Peninsula in Russia) (map 4c) in late 1944. It received field post number (*Feldpostnummer*) 25 079 on or after November 10, 1944, taking over this designation from the former AGSSt 43. The Germans disbanded the unit on or before May 8, 1945.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

KRIEGSGEFANGENEN-AUFFANGLAGER (AUFLAG) 1

The Wehrmacht formed Auflag 1 on May 31, 1940, in Defense District (*Wehrkreis*) VI. It received field post number (*Feldpostnummer*) 20 083 between April 28 and September 14. From June to September 1940, the unit was deployed in various locations in France. Information on further deployments is lacking. In France, the unit was subordinate to the Armed Forces Commander France (*Wehrmachtbefehlshaber Frankreich*).

The camp was used for reception and short-term confinement of French prisoners of war. The prisoners' conditions of confinement were generally satisfactory and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War.

On June 11, 1941, the Wehrmacht issued the order to disband the unit and convert it into AGSSt 1. Its field post number was struck between February 16 and July 18, 1941.

SOURCES Primary source material about Auflag 1 is located in the BA-MA, RH 49/4: Auffanglager.

Additional information about Kriegsgefangenen-Auffanglager 1 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. KRIEGSGEFANGENEN-AUFFANGLAGER (AUFLAG) 3

The Germans formed Auflag 3 on May 31, 1940, in Defense District (*Wehrkreis*) IX. It received field post number (*Feldpostnummer*) 06 183. On May 6, 1941, the unit was reorganized as AGSSt 3. From June 1940 to June 1941, the unit deployed to various locations in France and Belgium. Initially, Auflag 3 was subordinate to the Sixth Army. Starting on July 11, 1940, it was subordinate to the Armed Forces Commander France (*Wehrmachtbefehlshaber Frankreich*) and, as of September 17, 1940, to the Commander of Prisoner of War District (*Kommandant des Kriegsgefangenen-Bezirks*) F Brussels.

The Germans used the camp for the reception and short-term confinement of French and Belgian prisoners of war. The conditions of imprisonment were generally satisfactory and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War.

SOURCES Primary source material about Auflag 3 is located in the BA-MA, RH 49/4: Auffanglager.

Additional information about Auflag 3 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. KRIEGSGEFANGENEN-AUFFANGLAGER (AUFLAG) 5

The Wehrmacht established Auflag 5 on June 1, 1940, in Defense District (*Wehrkreis*) XII. It received field post number (*Feldpostnummer*) 23 895. On May 6, 1941, the unit was converted into AGSSt 5. From June 1940 to June 1941, the unit was deployed to various locations in France and Belgium. Starting on June 16, 1940, Auflag 5 was subordinate to the Second Army. As of July 7, 1940, it was subordinate to the Armed Forces Commander France/Commander of Prisoner of War District (*Wehrmachtbefehlshaber Frankreich/Kommandant des Kriegsgefangenen-Bezirks*) II, as of August 21, 1940, to the Armed Forces Commander France/Commander of Prisoner of War District VIII, and from September 17, 1940, to the Armed Forces Commander France/Commander of Prisoner of War District F Brussels.

The Germans used the camp for the reception and short-term confinement of French and Belgian prisoners of war. The conditions were generally satisfactory and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War.

KRIEGSGEFANGENEN-AUFFANGLAGER (AUFLAG) 6

The Wehrmacht established Auflag 6 on June 1, 1940. It received the field post number (*Feldpostnummer*) 24 095 between April 28 and September 14, 1940. Its area of deployment is unknown. On April 17, 1941, it was renamed Armee-Gefangenensammelstelle (AGSSt) 21. Its field post number was struck between February 16 and July 18, 1941.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

DURCHGANGSLAGER (DULAG) 100

The Wehrmacht formed Dulag 100 on March 16, 1941, in Görinnen, in Defense District (*Wehrkreis*) I, from the personnel of Frontstalag 100. Dulag 100 received field post number (*Feldpostnummer*) 36 090 between March 1 and September 9, 1942; it was struck on October 27, 1944. Initially, the unit deployed to the Generalgouvernement. In June 1941, the unit came under the jurisdiction of the 281st Security Division (*Sicherungsdivision*).

From July to August 1941, Dulag 100 was located in the city of Kauen (Kaunas, Lithuania), in Fort IV (map 9b). The camp's capacity was 6,000 prisoners, but on July 3, 1941, there were already 8,050 prisoners in the camp. Of these, 5,000 prisoners were transferred to the camp in Ebenrode, East Prussia (today Nesterov, Russia) (4c). The prisoners were immediately used for forced labor.¹ The number of prisoners in the camp quickly grew again, as some of the prisoners who were captured in the Białystok-Minsk region were transferred to Lithuania. In the autumn of 1941, Dulag 100 redeployed to the city of Porkhov (9a), a tank manufacturing center. There was a subcamp in the town of Dno. As of April 1, 1943, the camp held 1,416 prisoners of war (POWs).

The camp at Porkhov was located on a site formerly used by the Red Army. There were several unfinished three- or four-story brick houses near the campgrounds; however, the prisoners were forced to sleep outdoors, so close together that one prisoner's head rested against another's feet, in an area enclosed by a fence and guard towers.² The conditions for the camp's POWs during the time Dulag 100 was deployed in Porkhov were the same as those in other camps for Soviet POWs. They received minimal rations, consisting of thin soup and one-twelfth of a loaf of bread per man per day.³ The tremendous overcrowding, the malnutrition and inevitable exhaustion which resulted, and the lack of sanitation or proper medical care led to a high mortality rate.⁴ Abuse by the German guards only made matters worse. Witness Peter Davydov recounted:

I worked as a stevedore in the prisoner of war camp located in the military town Porkhov and I saw what happened there. In the Soviet prisoner of war camp,

complete tyranny reigned. Soviet people were deliberately annihilated on a massive scale. To this end, there were starvation rations in the camp, and the Soviet people were abused in every way and systematically beaten. The conditions were established to be inhumane, and a great number of deaths occurred among the prisoners as a result. The Germans gave the Soviets in the camp less than 200 grams [7 ounces] of bread and 0.5 liters [a little over 2 cups] of gruel instead of soup. The gruel had water and a small number of brown potatoes. Such rations could not support a person's life for one month. In addition, the Germans forced the prisoners to perform backbreaking work, namely loading and unloading heavy cargo. When one or another person became completely weakened from malnutrition and fatigue, the German guards beat him with sticks. In order to hasten the exhaustion of a person's body in the absence of work, the Germans forced people to drive wheelbarrows of snow from place to place so that they would not be able to rest. In free time from work, the prisoners were set on tree stumps and high stacks of firewood so that the wind would blow strongly upon them, and they were forced to stand there for a long time. I personally saw such abuse. I know of a case when, in 1942, a German officer broke a prisoner's arm at the elbow joint. The German officer explained that his brutal act was committed because the prisoner was trying to pass from the large camp. There was tremendous overcrowding of people in the camp: I saw prisoners forced to sleep on the roof of the barracks in autumn 1942. Also, prisoners lived in wooden sheds in summer and winter. As a result of the unbearable conditions and brutal abuse, there was a very high prisoner mortality rate throughout the entire time the camp existed. Over 110 people died every day in the camp.⁵

From the recollections of witness Pavel Mikhailov:

"There were cases when the Germans buried living Soviets. In 1942, autumn, the Germans transported five prisoners' corpses from the station in wagons. I stood in my house and watched as a man lying in one wagon waved his arm, sticking up from above the dead bodies, letting me know that he was still alive. This German saw, but did not pay attention. The prisoners of war were held in three-story buildings, the windows of which were bricked up and had openings of about 10 to 15 cm. [4 to 6 inches] In 1941, in spite of the strong frost, the Red Army men were forced to stay outside all day and night. They gathered in groups of 20 people and lay in the snow, nestled close to each other, and slept this way all night. Many of the prisoners did not have coats or boots, sat in the cold, and wrapped their feet with

rags. One day," continued Mikhailov, "the Germans led a group of prisoners around the city of Porkhov. There was one man in the rear who could not walk on his own, and he asked if he could lie down on the ground and have a rest. Seeing this, the convoy guard shot him. This I personally saw."⁶

Witness Leonid Nikulin, who worked in the camp from October 1941 until August 1943 as a pipe fitter and plumber, reported that there was tremendous overcrowding of people in the camp. In addition, he stated the following:

When the buildings were vacated by people, then the German guards came and collected bodies. The prisoners walked on them and lay on them, because there was nowhere to move around. I saw how the Germans collected no fewer than 20 corpses every day from one of the buildings, and there were five buildings total in the camp. In my presence, the Germans approached, took the Red Army man who was lying motionless, and carried him to the car. This man began to wiggle his arms and legs. Seeing this, I said, "He's still alive." They answered me, "Nothing living comes as far as there." They threw the living man on the corpses they had brought to the cemetery. Such instances, where they threw out living prisoners, I personally observed 5 or 6 times.⁷

The order to dissolve the camp was given on August 27, 1944.

DURCHGANGSLAGER (DULAG) 101

The Wehrmacht established Dulag 101 on June 13, 1941, from the staff of Frontstalag 101.¹ It received field post number (*Feldpostnummer*) 37 042 between February 28 and July 27, 1941; the number was struck on October 27, 1944. Dulag 101 soon moved to Poland. Between 1941 and 1943, it operated in various populated localities in the rear area of the Eighteenth Army, specifically in the city of Narva, the town of Volosovo, in the village of Kotly, and in the town of Kingisepp (all map 9a). Dulag 101 was disbanded on August 27, 1944.²

The unit was first subordinate to the 207th Security Division (*Sicherungsdivision*), and, on August 1, 1942, it was placed under the authority of the Commander of Prisoners of War in Operations Area (*Kommandeur der Kriegsgefangenen im Operationsgebiet*) IV.

The camp held Soviet prisoners of war. The conditions, particularly during the time when the camp was located in Kotly, were inhumane. Extremely meager and unpalatable food, enormous congestion in a small area, and lack of proper hygiene or medical aid led to mass famine and disease, which in turn produced a high death rate. Abuse by the guards only worsened matters. As in the other camps, the newly arrived prisoners were screened to separate out the Jews and Communists, who were then shot by the guards or Security Service (*Sicherheitsdienst*, SD).³

SOURCES Primary source material about Dulag 101 is located in the BA-MA RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens and in BArch B 162/8626–8630: Aussonderung von Kriegsgefangenen im Dulag 101 in Kotly.

DURCHGANGSLAGER (DULAG) 102

The Wehrmacht established Dulag 102 on March 17, 1941, from the staff of Frontstalag 102.¹ Its first provisional deployment was to Poland. It received field post number

(*Feldpostnummer*) 38 028 between February 28 and July 27, 1941; the number was struck on November 8, 1944.

The first camp commandant was Oberstleutnant Georg Böhm. Two others followed, but their names are unknown. The unit came under the jurisdiction of the Security Division (*Sicherungsdivision*) 207 in May 1941 and deployed to different locations in the Army Group North Rear Area (*Heeresgebiet Nord*). In July and August 1941, Dulag 102 deployed to the city of Šiauliai (map 9b), where the camp personnel also participated in the massacres of Jews.² They guarded the small synagogue in which the Jews were imprisoned and then transported them in trucks to the execution site. An execution squad from the unit shot a Soviet commissar and other prisoners in Šiauliai.³ In the autumn of 1941, Dulag 102 deployed to the town of Rakvere and then to the village of Volosovo (9a).⁴

In July 1942, the unit was transferred to the Army Group A Rear Area (*Heeresgebiet A*) and fell under the jurisdiction of the 454th Security Division. In August 1942, the unit deployed to the city of Makeevka (today Makiivka) (9f).⁵ It was then stationed in the northern Caucasus; first in Petrovskoe (today Makhachkala) (9i) with a branch in Stavropol⁶ and then in Kavkazskaia (9h).⁷

In 1943, Dulag 102 deployed to different locations in Russia and Ukraine under the Fourth Panzer Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 593, later 585). For example, in the autumn of 1943, the unit was stationed in the village of Kustovoe (9d).⁸ In late 1943 and early 1944 the camp was located in various places in Ukraine. In August 1943, Dulag 102 was stationed in the village of Nikolaevo (today Mykolaivka, Sums'ka oblast') (9f) with subcamps in the cities of Vorozhba, Buryn', and Konotop. In September 1943, the unit deployed to the village of Dmitrievka (today Dmytrivka, Chernihivs'ka oblast') (9f) with branches in the villages of Khmelev (today Khmeliv, Sums'ka oblast') and Velikii Sambor (today Velykyi Sambir, Sums'ka oblast'). At the end of 1943, Dulag 102 deployed to the city of Novograd-Volynskii (today Novohrad Volyns'kyi) (9e).⁹

The conditions in the camp were the same as those in other camps for Soviet prisoners, and they were particularly bad while the camp was located in Volosovo. The prisoners had to endure scarce food, overcrowding, lack of proper medical care, and harassment by the guards, which led to massive hunger and illness and a high mortality rate. As in other camps, the Germans separated out from among the newly arrived prisoners the Jews and Communists, who were then shot near the camp by the guards or a Security Service (*Sicherheitsdienst*, SD) detachment.

The order for the camp's disbandment was issued on November 14, 1944.

SOURCES Primary source material about the Dulag 102 is located in the BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens) and in BArch B (162/9216–9219: Verdachts der Aussonderung sogenannter untragbarer sowjetischer Kriegsgefangener [Juden, politische Kommissare]

durch Angehörige des Dulag 102 1941 bis Herbst 1944 in Polen und der Sowjetunion und 28925: Fotografien von Angehörigen des Dulag 102 [o.D.].

DURCHGANGSLAGER (DULAG) 110

The Wehrmacht formed Dulag 110 on March 16, 1941, from the staff of Frontstalag 110 and deployed it to the General government. It received field post number (*Feldpostnummer*) 12 601 between January 27 and July 14, 1942; the number was struck on October 27, 1944.

From June 1941 onward, Dulag 110 was under the jurisdiction of the Sixteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 584), part of Army Group North. The unit deployed to different localities in the Novgorodskaja oblast', such as the town of Staraja Russa (map 9a), with a subcamp in the village of Volot, from 1941 to 1943. As of April 1, 1943, the camp held 1,194 prisoners and German camp personnel consisted of 129 men.¹ As of May 1, 1943, the camp held 1,088 prisoners and the German personnel numbered 185 people.²

In the second half of 1943, Dulag 110 deployed to the town of Tapa (9a) and a branch existed in the city of Tallinn. In the first half of 1944, the unit was located in the city of

Walk (today: Valga, Estonia) (9a), and, in the latter part of 1944, it was stationed in the city of Kulm (today Chełm, Poland) (5).

Dulag 110 held Soviet prisoners of war (POWs). Conditions were similar to those in other camps for Soviet POWs. The camp was severely overcrowded and the prisoners did not receive adequate food rations or medical care. Abuse by the guards only exacerbated the situation. As in other camps, newly arrived prisoners were screened to separate out Jews and Communists, who were then shot by the camp guards or Security Service (*Sicherheitsdienst*, SD) personnel near the camp.³

The order to disband the camp was issued on August 27, 1944.

SOURCES Primary source material about Dulag 110 is located in BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens); in BArch B (162/9281–9284: Aussonderung von Kriegsgefangenen durch Angehörige des Dulag 110 in Staraja-Russa in den Jahren 1941 bis 1943); and in GARF (file 7021-34-361, 765: The city of Staraya Russa).

Additional information about Dulag 110 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987).

DURCHGANGSLAGER (DULAG) 111

The Wehrmacht created Dulag 111 on August 13, 1941, from the staff of Frontstalag 111. As of that date, the unit was temporarily located in Poland. Dulag 111 received field post number (*Feldpostnummer*) 13 492 between July 15, 1942, and January 24, 1943. The number was struck on November 9, 1944. Dulag 111 was deployed to various locations in Ukraine, specifically Kremenchug, Lozovaia (today Lozova), Sinel'nikovo,¹ Pavlograd,² and Gorlovka (today Horlivka) (all map 9f). The unit was disbanded on November 14, 1944.³

During the period of the camp's deployment to Poland, it was subordinate to the Armed Forces Commander in the General Government Poland (*Wehrmachtbefehlshaber im Generalgouvernement Polen*). As of September 22, 1941, the unit was subordinate to the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 550), part of Army Group South (*Heeresgruppe Süd*).⁴ As of July

1942, the unit was subordinate to the Army Group B Rear Area Command (*Heeresgebiet B*).⁵

Dulag 111 held Soviet prisoners of war (POWs). The conditions of confinement, especially when the camp was in the towns of Sinel'nikovo and Pavlograd, were the very same as in the other camps for Soviet POWs. Meager food, overcrowding, forced labor, and lack of proper medical aid led to malnutrition, disease, and exhaustion, which produced a high death rate. Abuse by the guards exacerbated the already terrible conditions. As in other such camps, the staff screened newly arrived prisoners to separate out Jews and political commissars, who were then shot by the guards or Security Service (*Sicherheitsdienst*, SD) personnel.⁶

SOURCES Primary source material about Dulag 111 is located in the BA-MA (RW 6: Allgemeines Wehrmachtamt/Chef des Kriegsgefangenenwesens) and in BA-L B 162/8766–8771: “Aussonderung” von Kriegsgefangenen im Dulag 111 in Krementschug, Losowaja, Pawlograd, Gorlowka und anderen Orten, 1941 bis 1944.

DURCHGANGSLAGER (DULAG) 112

The Wehrmacht established Dulag 112 on March 14, 1941, from the staff of Frontstalag 112 and deployed it to the Generalgouvernement. Its field post number (*Feldpostnummer*) was 14 588 (assigned between January 27 and July 14, 1942, and struck on May 22, 1944). The 663rd Reserve Battalion (*Landesschützenbataillon*) guarded the prisoners.

In July 1941, the unit was deployed to the city of Varëna and then to Molodechno and Vitebsk (all map 9b). During this time, the unit operated under the 403rd Security

Division (*Sicherungsdivision*). As of July 3, 1941, the camp held 2,900 prisoners, and, on July 27, 1941, it held 7,000 prisoners.¹ In October 1941, the camp deployed to the cities of Maloiaroslavets and Iukhnov (both map 9c). On November 30, 1941, the camp was assigned to the Fourth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 559).² On April 1, 1942, the unit was deployed to the village of Shui (9c).³ In June 1942, it was relocated to the city of Romny (9f), where it was deactivated as a prisoner of war camp on June 10. The center of the formation of the Georgian Eastern Legion (*Ost-Legion*) was formed on its base.⁴ The unit was formally disbanded on December 17, 1942.

Dulag 112 held Soviet prisoners of war. Conditions in the camp were similar to those in other camps for Soviet prisoners. Overcrowding, minimal food rations and medical care, and deliberate abuse by the guards led to a high death rate. As in other camps, the Germans screened newly arrived prisoners to separate out Jews and political commissars, who were shot by the guards or Security Service (*Sicherheitsdienst*, SD) personnel near the camp.

DURCHGANGSLAGER (DULAG) 113

The Wehrmacht established Dulag 113 on November 20, 1943, and issued an order on June 28, 1944, for it to be disbanded. It received field post number (*Feldpostnummer*) 24 885 on June 27, 1944.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

DURCHGANGSLAGER (DULAG) 120

The Wehrmacht created Dulag 120 on May 23, 1941, from the staff of Frontstalag 120. In June 1941, the unit was located in the city of Iași (map 9g). After the invasion of the Soviet Union, it was deployed in various locations in Ukraine, such as Kherson (9g) in the fall of 1941 and Zaporozh'e (9f) as of May 1942.¹ On July 4, 1942, Dulag 120, then located in the

city of Mirgorod (9f), became the headquarters of the 2nd Turkestan Eastern Legion (*Ost-Legion*).² Dulag 120 was assigned field post number (*Feldpostnummer*) 22 203 between July 31, 1942, and July 9, 1943; the number was struck on October 4, 1943.

As of the fall of 1941, the unit was subordinate to the Senior Quartermaster Black Sea (*Oberquartiermeister Schwarzes Meer*) Major Ernst Merk. In the spring of 1942, Dulag 120 was transferred to the Army Group South Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Süd*, Berück Süd). The command staff included Hauptmann Kleme, Hauptmann W. Holz, and Hauptmann Worbs. The counterintelligence (*Abwehr*) officer was Hauptmann Kanenberg, the interpreter was Sonderführer Popov, and the deputy commandant (*Lageroffizier*) was Leutnant Wolfgang Orlich.

Dulag 120 held Soviet prisoners of war (POWs). The conditions in the camp were the same as those in the other camps for Soviet POWs. Meager food rations, overcrowding, and the absence of proper medical aid led to malnutrition and disease, which led to a high mortality rate. The prisoners' suffering was exacerbated by deliberate abuse from the guards. As in other such camps, the Abwehr personnel screened the newly arrived prisoners for Jews and Communists, who were then shot by the camp guards or Security Service (*Sicherheitsdienst*, SD).³ When the Soviets interrogated him on February 22, 1946, Lageroffizier Orlich said:

The camp was located in a former prison, which was 1.5 km [less than a mile] north of Kherson, near a brewery; there were two big buildings there, in which Red Army POWs were housed. The number of POWs varied from 1,000 to 13,000, and in the buildings there was great overcrowding, filth, lice, a lack of space, and as a result typhus and other diseases were rampant. . . . In mid-February 1942, over the course of 10 to 15 days, we sent 10 to 15 POWs to the sick quarters every day, and on other days we also sent people there who had caught cold or fallen ill as a result of the cold weather, but a somewhat smaller number, such as 3 to 5 persons. In addition, at Lager 120 we had no bath and disinfection chamber for the POWs, there was no medical and disinfection treatment of any kind, we never washed the POWs in the bath-house, never changed their underwear, never disinfected their outer clothing and premises, and as a result of this a typhus epidemic flared up several times in the camp. That caused a quarantine to be declared in the camp in February and March 1942. No medical work at all was done in the camp during the quarantine. The POWs were left to their own devices; anyone who fell ill was taken to sick quarters, while the others waited their turn, as no disinfection was carried out. The POWs were not taken out to work, and we administrative personnel were not allowed access to the camp, and this was called quarantine . . . according to the

accounts given by other camp personnel, I expect that no fewer than 300 persons came down with typhus in Camp 120 in Kherson during February and March 1942. As for the mortality rate, I myself saw more than once, several times in February and in early March 1942, 70 to 80 dead POWs being buried in the mornings in pits at the former fortress. They were buried in a common pit, which was prepared beforehand by the appropriate work party. Transports carrying POWs came to the camp, but these trains were left standing in the station for several days. I know that the POWs in them were starving, and some had already frozen or starved to death. For example, in early February 1942, a train came to the station. For some reason, our camp could not accept the POWs into the camp. Three or four days later, when we did admit these POWs, approximately 2,000 in number, we immediately sent about 200 of them to sick quarters, as they were exhausted from malnutrition, and some were frostbitten and wounded. In addition, three to five corpses of POWs who had died on the train were brought into the camp by truck. Among the POWs in our camp, there was also exhaustion from malnutrition, because we issued each prisoner, per day, 1 liter [4.2 cups] of soup made from vetch plants and some bread, but I don't remember how much. During the time of my service at Camp 120 as the assistant of the camp commandant, approximately 2,000 POWs, Red Army soldiers and officers, were wiped out by the spread of diseases and by failure to take steps to eradicate these diseases.⁴

On March 30, 1946, Orlich was convicted of war crimes and sentenced to death; he was executed shortly thereafter.

DURCHGANGSLAGER (DULAG) 121

The Wehrmacht established Dulag 121 on November 10, 1941, from the staff of Frontstalag 121. It was subordinate to the 203rd Security Division (*Sicherungsdivision*). The camp received field post number (*Feldpostnummer*) 22 933 between February 15 and July 30, 1942. Dulag 112 deployed to different locations in Belorussia and Russia, including Unecha and Klintsy (map 9c). In January 1942, Dulag 121 deployed to the city of Gomel’ (9c) to replace Dulag 220.¹ In the second half of 1944, the unit deployed to Pruszków, in Poland (5). The camp commandant, at least for part of 1941–1942, was Major Verhülsdonk, and the adjutant was Oberleutnant Sieroks. In 1944, the camp commandant was Oberst Kurt Sieber.

Dulag 112 held Soviet prisoners of war (POWs). Conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, forced labor, and lack of proper medical care led to widespread malnutrition and disease, which resulted in a high mortality rate. On arrival in the camp, the prisoners were divided into groups: Russians, Ukrainians, Belarusians, Caucasians, Asians, Muslims, and Jews. All of the commanding officers, regardless of national origin, were murdered right away.² As in other camps, the counterintelligence (*Abwehr*) personnel conducted selections of new arrivals to separate out Jews and political commissars, who were then executed by the guards or Security Service (*Sicherheitsdienst*, SD).³

In the second half of 1944, the camp was deployed to Pruszków, where it was located in the city’s train repair shops (*Zakłady naprawcze taboru kolejowego*). During the suppression of the Warsaw Uprising, the Germans deported approximately 550,000 of the city’s residents and approximately 100,000 more civilians from its outskirts to Dulag 121. The Sicherheitspolizei and the SS segregated the deportees and decided their fate. Approximately 650,000 people passed through the Pruszków camp between August and October 1944, of whom about 55,000 were sent to concentration camps, including 13,000 who were sent to Auschwitz. They included people from a variety of social classes, occupations, physical conditions, and ages. Evacuees ranged from infants only a few weeks old to elderly people; the oldest known evacuee was at least 86 years old. The deportees also included a small number of people of non-Polish ethnicity, such as Jews with forged “Aryan” papers.⁴

The date of the camp’s disbandment is unknown, and it may have continued operating right up to the German capitulation on May 8, 1945. After the war, former commandant Kurt Sieber was sentenced to death in Belgrade, Yugoslavia, and executed on December 20, 1946.

DURCHGANGSLAGER (DULAG) 123

The Wehrmacht established Dulag 123 on March 1, 1941, from the staff of Frontstalag 123, which was located in Defense District (*Wehrkreis*) XVII at the time. Dulag 123 received field post number (*Feldpostnummer*) 23 914 between July 31, 1942, and February 9, 1943. The unit was disbanded on October 5, 1943.¹ Its field post number was struck on October 30.

From April to July 1941, Dulag 123 was deployed in Romania, and, in August 1941, it was deployed in Ukraine. On August 1, 1941, the unit was located in Soroki (today Soroca, Moldova) (map 9g), where it replaced AGSSt 12.² On September 9, 1941, the camp was deployed in Varvarovka (today Varvarivka, Ukraine) (9g), and, as of September 27, 1941, it was located in Berislav (today Beryslav) (9g), where it replaced AGSSt 11. While located in Berislav, the camp had a subcamp (*Nebenlager*) in the village of Tiaginka (today Tyahynka),³ and, as of October 21, 1941, a subcamp in the city of Kherson.⁴ As of November 12, 1941, the unit was located in the town of Dzhankoi (9h).⁵ While it was located in Dzhankoi, Dulag 123 had subcamps in Voinka and Armians'k. The unit remained in Dzhankoi until September 1942, when it was replaced by Stalag 370.

From September 1942 until October 1943, the unit was deployed in various localities in Russia and Ukraine, initially in the rear area of the Sixth Army. In the fall of 1942, the unit was located in the village of Novomaksimovskii (9d).⁶ In the spring of 1943, having escaped the destruction of the Sixth Army, the camp deployed to Makeevka (today Makiivka) (9f), with a reception camp (*Auffanglager*) at Malo Chistiakovo (today Chystiakove).⁷

Beginning on April 6, 1941, Dulag 123 was under the Twelfth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 560) in Romania; from June 18, 1941, it was under the Senior Quartermaster Romania/Commander of Prisoner of War District A (*Oberquartiermeister Rumänien/Kommandeur der Kriegsgefangenen-Bezirk A*). From July 28, 1941, it was subordinate to the Commander of the Eighth Army Rear Area (Korück 553), and from September 21, 1942, it was under the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*) and the Sixth Army Rear Area Commander (Korück 593).⁸

The camp commandant was Major Springen. On July 27, 1941, the headquarters included 11 officers, 10 government officials, 27 noncommissioned officers, and 70 enlisted men, for a total of 118 personnel.⁹ On June 12, 1942, the headquarters included 20 officers and government officials and 98 noncommissioned officers and enlisted men (including Tatars).¹⁰ The camp was guarded by 2nd Company of the 836th Reserve Battalion (*Landesschützenbataillon*), with a strength of 2 officers and 180 men, including 27 Tatars.¹¹

Dulag 123 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, and lack of shelter or proper medical aid led to widespread malnutrition

and disease, which produced a high death rate. Abuse by the guards exacerbated the terrible conditions. According to the Soviet Extraordinary State Commission (ChGK) materials, 1,146 people in Dulag 123 perished in Dzhankoi,¹² more than 1,000 in Armiansk,¹³ and 120 in Voinka;¹⁴ however, casualty figures from the ChGK are often significantly inflated and should be treated accordingly.

A report from a People's Commissariat of Internal Affairs (NKVD) special section on the Southern Front to the Administration of Special Sections of the NKVD of the USSR from January 24, 1943, provides information about the conditions in the camp at Novomaksimovskii. The report states specifically:

During the liberation of temporarily occupied Soviet territory by the spec[ial] organs, a number of facts were documented with respect to atrocities committed by the German fascist occupiers against the civilian population of the large Cossack villages on the Don and against prisoners of war. Having liberated the small village of Novomaksimovskii in Stalingrad oblast', our soldiers detected, in two brick buildings with walled-up windows and doors nailed shut, 76 Soviet POWs, 60 of whom had starved to death, and some of the corpses were decomposed. The remaining POWs were half-alive, most of them unable to stand up because of great exhaustion. As it turned out, the prisoners were in the walled-up building for about two months—the Germans gradually starved them to death, only very occasionally tossing in pieces of rotten horseflesh and giving them salted water to drink.

As in other such camps for Soviet POWs, the authorities screened new arrivals to separate out Jews and political commissars, who were shot nearby by the guards or Security Service (*Sicherheitsdienst*, SD) personnel.¹⁵

DURCHGANGSLAGER (DULAG) 124

The Wehrmacht established Dulag 124 from Frontstalag 124 at the end of August 1941. It was deployed to the eastern front, where it was subordinate to the Army Group Center Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Mitte*, Berück Mitte) and then to the Fourth Panzer Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 593, later 585). It was relocated several times as the Fourth Panzer Army moved through Russia and Ukraine. It carried the field post number (*Feldpostnummer*) 24 402, which was assigned between February 15 and July 30, 1942, and struck on December 12, 1944, and assigned again on April 13, 1945.

The commandant of the camp was Oberst Oscar Lohse, co-owner of the Lohse perfume factory, and his deputy was Hauptmann Dr. Johannes Schmalfuss. Former members of the camp staff claimed that Lohse was largely uninterested in the prisoners and concerned himself instead with music and his horses. He was succeeded as commandant in September 1942 by Oberstleutnant Hermann Pösche.¹ As of July 11, 1943, the camp staff consisted of 116 members, along with 94 guard personnel and 202 Soviet prisoner of war (POW) volunteers (*Hilfswillige*, Hiwis).²

Dulag 124 deployed to Rudnia (map 9b) in November and December 1941, and then to Gzhatsk (today Gagarin) (9c) in January 1942. While it was in Gzhatsk, the camp was located on the southern edge of the town. It occupied the grounds of a church, a pedigree livestock center, and a receiving point for

hay, where several dilapidated structures remained, fenced off by rows of barbed wire. The prisoners were awakened at 5:00 a.m. and forced to stand outside for up to two hours in the cold while roll was called; this procedure was repeated in the evening. They were assigned to exhausting labor in the work commandos (*Arbeitskommandos*), unloading freight cars of munitions at a large, secret depot in the area of the present-day Sel'khozkhimiia agricultural chemical factory, and loading munitions onto trucks. The enfeebled prisoners were often at the brink of death from exhaustion and beatings, and some never made it back to the camp. Scores of prisoners froze to death in the camp, where they slept side by side on the ground. Every morning, special teams using wooden sledges took away the frozen corpses and then threw them into pits outside the camp or into holes cut in the ice in the Gzhat' River. Frequently, prisoners who were still alive were thrown into the pits along with the dead. In total, at least 5,000 prisoners are believed to have perished in the camp.³ In addition to the deaths from the horrible conditions in the camp, "undesirables," such as Jews and political commissars, were taken out of the camp to be executed by Security Service (*Sicherheitsdienst*, SD) personnel.

Dulag 124 remained at Gzhatsk until April 1942, when it was relocated several times as it followed the Fourth Panzer Army during its advance through southern Soviet Union. In late 1942, it was located near the village of Remontnoe (9i). During this time, at least 25 Jews were shot by Ukrainian Hiwis near the camp.⁴ In the spring and summer of 1943, the camp was located in Pavlograd (today Pavlohrad, Ukraine) (9f). Witness testimony recounts brutal treatment of the prisoners during this time, including constant beatings by the guards and Hiwis and shootings of Jewish prisoners.⁵ In August and September 1943, the unit was located in the town of Gadiach (today Hadiach, Ukraine) (9f) and had a subcamp in the town of Romny. The camp in Gadiach had a maximum population of 842 (including 11 officers), while the maximum population of the subcamp in Romny was 2,125 (including 30 officers).⁶

In the fall of 1943, the camp was relocated several more times to locations including Millerovo (9d) and Poltava (9f). In December 1943 and early January 1944, the unit was located in Slavuta (9e).⁷ The unit withdrew westward through Poland with the German army in 1944, eventually relocating to Hoyerswerda (4e).⁸

The exact date of the camp's disbandment is unknown; records indicate that it was still in service as of March 5, 1945.

DURCHGANGSLAGER (DULAG) 125

The Wehrmacht created Dulag 125 on March 16, 1941. In July 1941, the camp was located in the village of Lososno (map 4c). From August 1941 to mid-1942, it was in Polotsk (9b); from July to December 1942, it was in Millerovo (9d); and, in the first half of 1943, it was in the village of Sinezërki (9c). It carried field post number (*Feldpostnummer*) 25 079, which was assigned between February 15 and July 30, 1942, and struck on September 22, 1944. While it was in Polotsk, the camp was subordinate to the 201st Security Division (*Sicherungsdivision*). While it was in Millerovo, it was under the 403rd Security Division.

The staff of Dulag 125 consisted of 25 officers and non-commissioned officers and around 40 enlisted men. The camp commandant in 1943 was Oberstleutnant (later Oberst) Hensel, and his deputy was Oberleutnant von Saher; the names of previous and subsequent commandants are unknown. The counterintelligence (*Abwehr*) officer was Hauptmann Neiss.¹ The camp doctors were Dr. Reinert, Dr. Gaedke, and Dr. Klopsch. The camp's other officers included Major Hans Blank, Hauptmann Starke, and Oberleutnant Feldheim.²

In Polotsk, the camp was located on the grounds of the former Eisenbahn-Regiment 5 (today: Titov Street). It consisted of several dilapidated barracks no longer suitable for habitation, which were located on either side of a gully and surrounded by barbed wire. The conditions in the camp were similar to those in other camps for Soviet prisoners of war (POWs). Overcrowding, inadequate food, absence of proper medical care, and abuse from the guards led to widespread malnutrition and disease, resulting in a high mortality rate. During the period from September 1941 to April 1942, as many as 12,000 prisoners (of a population of 15,000) died in the camp. In April 1942, nine railroad cars with prisoners supposedly were sent to Frankfurt am Main.³

In Millerovo, the camp was located on the southern outskirts of the town, in a natural hollow, on the Glubokaia River. The camp was in the open, and around 40,000–50,000 people occupied it at one point. The camp population turned over continually; as new prisoners arrived, those already in the camp were sent west by rail. The camp was so overcrowded that the prisoners drank nearly all the water in the Glubokaia River and ate all the vegetation in the region, including the large blackthorn shrubs and their roots. Once every six or seven days, the camp inmates were given mess tins of burnt wheat, each tin to be shared by three prisoners. Prisoners who were malnourished or too exhausted to work were shot. For example, according to a statement on December 29, 1945, by former Generalleutnant Kurt von Oesterreich, who in 1942 was Commander of Prisoners of War with the Commander of the Army Group B Rear Area (*Kommandeur der Kriegsgefangenen beim Befehlshaber Heeresgebiet B*), “During a visit in summer 1942 to Dulag 125 in Millerovo, the camp commandant, in reply to my question about how he treated the Russian POWs who were not fit for work, reported that over the course of the past eight days they had shot around 400 Russian POWs for the above-mentioned reasons.”⁴

A Russian auxiliary police force was formed in the camp to maintain order, and it was notable for special cruelty toward the other prisoners. Shoes and boots of good quality were taken away from the prisoners by the police. If a prisoner resisted, he was dragged off to the “police station” and dealt with there: two policemen undressed him and tied him to a plank, and each policeman gave him 10 lashes. They beat him almost to the point of death and then took his shoes. The prisoners would deliberately damage their footwear (make holes, tears, and cuts on the outside), but if the police noticed that this had been done, they beat the prisoner. The policemen in the camps meted out punishments for the slightest offenses, such as getting too close to the barbed wire, failing to salute a policeman, cutting in line when the *balanda* (watery soup) was being distributed, or wasting time getting into formation for roll call. Former prisoner S. Fisher recalled:

At Millerovo, no fewer than 50 people were punished in a day. The guilty man had to strip naked

and lie down on a bench. When the man on duty gave the order, 10 or 15 whiplashes were administered. If the person resisted, they added on 10 more. But if he “snapped and cursed,” then 4 policemen beat him and he got 40 lashes. After such corporal punishment, the person no longer moved; he was carried to one side and doused with water. For the police, this was entertainment. A senior policeman had 3 whips. Each one had its own name. The first was the “magic whip,” up to 50 blows could be given with it, and it “magically” cured, so reasoned the senior policeman. The second was the “officer’s whip,” and with it one could strike the face for no reason, just for amusement. The third was the “royal whip,” a special whip. It consisted of multiple metal switches, and at the tip of each was intertwined a little tin ball. If you were slashed with it once, you wouldn’t ask for a repeat...⁵

Female prisoners were also held in the camp. The commandant of the women’s barracks was a Volga German woman. The conditions in the women’s camp were also dreadful: S. Fisher recalled that “the police often dropped in there. Every day, in return for half a liter, the commandant would give a policeman any girl of his choosing for two hours. The policeman could take her to his room in the barracks. They lived two to a room. For these two hours he could use her like an object, commit outrages, humiliate her, do everything he could think of.”⁶ Women who resisted faced torture at the hands of the commandant.

The Germans disbanded the camp on September 15, 1944.

DURCHGANGSLAGER (DULAG) 126

The Wehrmacht formed Dulag 126 on March 13, 1941, from Frontstalag 126 and deployed it to the Generalgouvernement. It received the field post number (*Feldpostnummer*) 33 413 between March 1 and September 7, 1942.

From June 1941 on, the camp was subordinate to Army Group Center (*Heeresgruppe Mitte*) and deployed to various localities in Belorussia and Russia. In Belorussia, in the summer and fall of 1941, the camp operated in the towns of Minsk, Borisov (German: Borissow; today Barysaw, Belarus), and Orsha (all map 9b). In Russia, the camp operated in the town of Maloiaroslavets, then, as of November 1941, in the town of Smolensk (both 9c). The camp commandant was Major Ritscher.

As many as 100,000 prisoners—military and civilian—were held in the camp while it was in Minsk and Smolensk. The conditions were horrendous, especially in the winter of 1941–1942. Extremely meager and substandard food, enormous overcrowding in a small area, epidemic disease, and the lack of proper medical aid led to an extremely high death rate, which the actions of the guards only exacerbated.¹ For example, in mid-December 1941, 200 to 250 prisoners were dying each day in the camp.² As many as 10,000 prisoners died that winter.³ As in the other camps, the prisoners were screened to separate out Jews and political commissars, as well as other members of the Communist Party, whom detachments of the Security Service (*Sicherheitsdienst*, SD) or camp guards then shot.

The Germans disbanded the camp on September 15, 1944, but assigned its administrators to create an army prisoner collecting point, Armee-Gefangenensammelstelle (AGSSt) 41, in German territory.⁴ Dulag 126’s field post number was struck on September 22.

DURCHGANGSLAGER (DULAG) 127

The Wehrmacht created Dulag 127 on March 22, 1941, from Frontstalag 127, then located in Sagan (today Zagań, Poland) (map 4e). After the invasion of the Soviet Union, it was deployed to various locations in Belorussia (including Minsk, Orsha, and Mogilev) (all 9b) and Russia (including Kaluga) (9c). In June 1942, the headquarters of Dulag 127 was transferred to Likhvitsa (9f) and used to form the Armenian Eastern Legion (*Ost-Legion*) of the Wehrmacht.¹ It carried field post number (*Feldpostnummer*) 34 545, which was assigned between February 28 and July 29, 1941, and struck on December 29, 1943.

From February 13, 1941, initially as Frontstalag 127, the headquarters was subordinated for some time to the Commander of Prisoners of War in Defense District (*Wehrkreis*) VIII. The camp was initially subordinate to 286th Security Division (*Sicherungsdivision*), from November 1941 to the Fourth Army, and from January 1942 once again to Security

Division 286. The camp commandant in 1941 was Major Engholm. The adjutant was Hauptmann Schrader.

Dulag 127 held Soviet prisoners of war (POWs). On July 6, 1941, the headquarters of Dulag 127 took charge of a camp in Drozdy (today part of Minsk) that held around 100,000 prisoners. In the period from July 7–11, 40,000 of these prisoners were moved to the west, and on July 14, 54,000 prisoners remained in the camp. In the next four days, the population dropped further, to 28,000.

The prisoners' diet consisted of a liter (1 quart) of watery soup and 160 grams (5.6 ounces) of bread per day, when food was available at all. The quality of the food was extremely poor. These starvation rations, combined with extreme overcrowding, inadequate shelter, and exhaustion from forced labor, produced epidemics of disease, for which there was no significant medical care. Abuse by the guards heightened the misery and further increased the mortality rate.² As in other such camps, Jews and Communists were separated out and executed.

From August to October 1941, the camp was located in Orsha. According to the report on camp activities dated September 25, 1941, in the period from August 25 to September 24, 1941, 200 prisoners died; a total of 100,000 prisoners had passed through the camp by this time.³ From November to December 1941, the camp was deployed in Kaluga. A commandant's report from that time indicates that the Germans made minimal effort to provide medical care to the prisoners. An old school was repurposed as a camp hospital, though German reports described the facility as "primitive." Given the poor health of many upon arrival in the camp, these conditions certainly contributed to the high mortality rate among prisoners.⁴

After a breakthrough by Soviet forces on December 21, 1941, during the Red Army's winter counteroffensive, the camp, with 3,500 prisoners, left Kaluga and reached Roslavl' with great difficulty on December 30–31, 1941.⁵ The camp only remained in Roslavl' for a brief time and was then relocated to Mogilev until June 1942. The camp was disbanded in July 1942.

DURCHGANGSLAGER (DULAG) 130

The Wehrmacht formed Dulag 130 on April 8, 1941, from the staff of Frontstalag 130, and deployed it to the General-gouvernement. After the invasion of the Soviet Union on June 22, 1941, the camp was assigned to Army Group Center (*Heeresgruppe Mitte*) and deployed to various locations in Belorussia and Russia. In Belorussia, the camp was located in the village of Linevo (today Linova) (map 9e); and in the city of Zhlobin (9b). In Russia, the camp was located in the village of Ostér (9c), where it replaced AGSSt 6, and in the town of Roslavl' (9c). The camp carried field post number (*Feldpostnummer*) 30 959, which was assigned between July 31, 1942, and February 9, 1943, and struck on September 22, 1944. The Germans disbanded Dulag 130 on September 19, 1944. The camp was subordinate to the 221st and 286th Security Divisions (*Sicherungdivisionen*) and to the Fourth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 559).

In Roslavl', the camp was situated on the southwestern outskirts of the town in two large two-story buildings, which had been a school for junior-grade commanders of the People's Commissariat for Internal Affairs (NKVD) border troops before the war. In addition to these buildings, the associated outbuildings around them, as well as several apartment buildings near the Warsaw highway, were used for the camp. Two rows of barbed wire surrounded the grounds of the camp, which were about 800–900 meters long (874–984 yards) and 600–700 meters (656–766 yards) wide. The camp commandant may have been Major Martinson; the records are not entirely clear. Internal control was in the hands of the camp police force, which had 150–250 members. The kitchen police numbered 20–30 and the sick bay police included 15–20 people. Each camp building housed 1,800–2,000 prisoners.

Dulag 130 held Soviet prisoners of war (POWs). In September 1941, there were approximately 15,000 POWs in the

camp. During the Red Army's counteroffensive in December 1941, the Germans closed the forward-area camps and forced the prisoners to walk to Roslavl', Smolensk, and Prudki (Smolenskaia oblast'). As a result of this large-scale withdrawal, prisoners from Orël, Kaluga, Viaz'ma, Iukhnov, and other places arrived in the camp in Roslavl'. By the end of December 1941, the camp population reached 100,000.

The conditions were similar to those in other camps for Soviet prisoners. Twice a day in the camp, the prisoners were given half a liter (1 pint) of *balanda* (a spoonful of rye flour with bran, floating in a liter of water), and once every four or five days each person got 150–200 grams (5.3–7 ounces) of bread. To get food, the prisoners had to line up for an hour to an hour and a half before distribution began. The food distribution itself lasted an average of four hours. Consequently, a prisoner had to spend 10 to 11 hours per day to obtain a spoonful of flour and, on average, 40 grams (1.4 ounces) of poor-quality bread. The prisoners had to stand outdoors for the entire 11-hour period (sitting was forbidden), regardless of the weather, calf-deep in mud in fall and in snow in winter.

Although the prisoners lived in the warehouses and barracks of the former school for NKVD troops, the conditions were still very poor. As former prisoner S. Golubkov recalled:

In the camp itself at Roslavl', there were several barracks. The majority of them were of the semi-dugout type, with earth floors below ground level. Water from above and below the ground flooded these barracks, and in October 1941 their floors were a filthy mire, in which the prisoners were ankle-deep. There were no plank beds, boards, or straw, and the prisoners were compelled to lie right in the dirt. In winter, the floor was an icy surface, covered with snow that was wafted in and carried in by people's feet. The wind moved freely through these barracks, because the roofs rested on posts and did not reach all the way to the ground. There was fighting for the two barracks with stone floors. Every day several men were killed there. People were crammed in there, packed in like sardines. A living wall of prisoners swayed from side to side. The weakened hearts of many comrades could not withstand it. The crushed and lifeless corpses swayed, like live men, in the mass of the living, and in the morning they fell to the ground, no longer held upright by the bodies of their comrades who were still alive. Not one of the barracks was heated. It was forbidden to make fires, and besides, there was nothing to make them with. In October, all the prisoners, without exception, were dripping wet. There was nowhere to get dry. The wind penetrated to the bone. In winter, people froze by the dozen every day. This was an agonizing way of executing the prisoners. Making the barracks winter-proof and heating them presented no difficulties. Hundreds and thousands of peasants were

willing to bring wood. The fascist monsters deliberately did not have that done.¹

In two of the camp buildings, a sick bay for the prisoners was set up. The conditions in which the patients were kept in this infirmary were described by the newspaper *Pravda* as follows:

In the Roslavl' camp, the wounded occupy two stone buildings. The windowpanes in them are broken, and the window openings are boarded up with plywood and boards. The buildings were not heated in fall or in winter. The wounded experience hunger just as severe as that of the "healthy." Until December, they sometimes were given horseflesh, and then even that was deemed an excessive luxury. The physician S.N. Afrikanova stated that the wounded suffered cruelly from thirst. They managed to supply—and that with great difficulty—one or two tablespoons of water every 24 hours, only for the seriously wounded. Their parched lips cracked, their tongues were swollen from thirst. There is no medical service; there are no medications and bandaging materials. For a ward with 60 wounded, they hand out two bandages per day. Wounds are not dressed for a month. When they remove the dressing, the wounds are seen to be full of maggots, which are picked out by the handful. Frostbitten limbs are black stumps, the flesh and bones have fallen off in black chunks. The limbs of many POWs became frostbitten right there in the wards. There is no iodine for those who are to be operated on; it is replaced with a type of cleaning fluid. They operated on Lieutenant Bondarenko's foot, and later, because no dressing was applied for weeks, they cut off his leg up to his knee, and then the entire leg up to his torso, and finally he died. The wounded rotted while still alive and died in terrible agony. Many begged to be shot and thus delivered from their sufferings. The odor of rotting flesh and the putrid smell of the dead bodies that have not been removed fill the wards. They do not bathe the wounded, do not launder and change the bed linen, and do not use disinfectants. As a result, the wounded are lice-ridden. When the splints and bandages are removed, the wounds are teeming with lice . . . The death rate in the camp from starvation, cold, disease, and shooting reached 3 to 4 percent per day. This means that in a month, the entire prisoner population died. Over two and one-half fall months—October, November, and part of December—along with the civilian prisoners, who made up the majority, 8,500 people died in the camp: that is, more than 100 people per day, on average. In the winter months, 400 to 600 people died each day. On a daily basis, 30 to 40 long dray carts were loaded with the corpses of those who had died and froze. In

the piles of corpses, stacked up like wood beside the barracks, there were live men as well. Frequently arms and legs in these piles would move, eyes would open, lips would whisper, "I'm still alive." They buried the dying along with the dead.²

The death rate in the camp was enormous. Especially in the winter of 1941 to 1942, 500–600 corpses were taken away each day. From December 26, 1941, to January 2, 1942, 16,564 corpses were removed from the camp, including 1,850 on December 28, 1941, alone.³ In April 1943, the Germans set up a transit point for sending workers to Germany. They divided the camp into two parts with barbed wire. They took old men, women, and children to the transit point, fenced off from the prisoners by barbed wire and guarded by police. The camp was evacuated in early September 1943, on the eve of the town's liberation by Soviet troops.⁴ Propaganda Minister Joseph Goebbels himself knew what awaited the Red Army after the liberation of the town, stating that "at Roslavl', the Soviets will discover large mass graves."⁵

There was a resistance movement in the camp. An underground group, which formed in mid-1942, planned to attack the guardroom, seize the weapons and equipment located there, free other prisoners, and, along with them, join the partisans. However, the German Sicherheitspolizei, with the help of their informers among the prisoners, managed to get wind of this group and arrested nine of its members.⁶ The prisoners would nonetheless attempt individual escapes at the first opportunity, often aided by local civilians.

According to Soviet Extraordinary State Commission (ChGK) documents from April 12, 1944, in the southern part of the Voznesensk cemetery, 47 mass burial sites were discovered, measuring 5–6 meters (5.5–6.6 yards) by 9–38 meters (9.8–41.6 yards) in length and 3–4 meters (3.2–4.4 yards) in depth. Each of the graves was filled over the course of a few days, and the corpses were arranged in 3–6 rows.⁷

DURCHGANGSLAGER (DULAG) 131

The Wehrmacht formed Dulag 131 on March 25, 1941, from Frontstalag 131. Following the invasion of the Soviet Union, the camp was deployed to Slonim and Baranovichi (both on map 9b). From September 1941 to August 1942, it was in Bobruisk (9b). In the following months it was deployed in various locations in Russia, including Komarichi and Unecha, and possibly also Klintsy (all 9c), before returning to Bobruisk at the end of September 1943. At the end of June 1944, Dulag 131 was caught up in the Soviet offensive against Army Group Center but managed to withdraw to East Prussia and then to Modlin (today Nowy Dwór Mazowiecki, in Poland) (4c). On September 15, 1944, the Germans disbanded the camp and probably reorganized it as AGSSt 37.¹ The camp held field post number (*Feldpostnummer*) 31 444 (assigned between February 15 and July 30, 1942, and struck on September 22, 1944).

From 1941 to 1943, the camp operated under the authority of the 203rd and 231st Security Divisions (*Sicherungsdivisionen*) as well as the 252nd and 339th Infantry Divisions. The camp commandant for part of 1941 was Major Dr. August Egenolf Freiherr Roeder von Diersburg (1891–1968), the deputy commandant was Hauptmann Carl Languth, the adjutant was Hauptmann Pfenzig, and the counterintelligence (*Abwehr*) officer was Hauptmann Heinrich.

Dulag 131 held Soviet prisoners of war. On July 7, 1941, there were 6,700 prisoners in the camp; on July 24, 1941, there were 4,000; on August 6, 1941, 6,298; on August 26, 1941, 29,000; on September 16, 1941, 18,136; and on September 29, 1941, 15,050.² By November 1941, as many as 60,000 prisoners were crammed into the camp, exceeding its capacity several times over.³ Conditions in the camp were very poor, particularly in 1941. The prisoners were transported to the camp in open wagons, exposed to the elements, without food or water and as much as 20 percent of the prisoners in some transports died before they reached the camp. The prisoners slept in overcrowded, poorly ventilated barracks, which facilitated the spread of infectious disease. They were also severely malnourished. A November 20, 1941, report estimated that the prisoners received around 1,039 calories per day, well below the basic caloric needs of an adult man and below even the starvation rations prescribed by the Army High Command (*Oberkommando des Heeres*, OKH). The same report indicated that the food situation in the camp was so dire that some prisoners had resorted to eating their dead comrades.⁴ Abuse by the German guards only exacerbated these problems. As in

other camps for Soviet prisoners of war (POWs), camp counterintelligence personnel and a local Security Service (*Sicherheitsdienst*, SD) unit identified Jews and political commissars among the prisoners and executed them.⁵ By November 20, 1941, a total of 158,000 prisoners had passed through the camp and 14,777 prisoners had died of hunger or disease or had been killed. In one section of the camp, 430 prisoners died on the night of November 20, 1941, alone.⁶

On November 9, 1941, the Germans carried out a massacre of prisoners in Dulag 131. On that evening, a fire broke out in the barracks in the Bobruisk Fortress, in which there were 17,000 prisoners (in the camp as a whole, there were 60,000 prisoners). According to a statement by the camp's counterintelligence officer, Hauptmann Heinrich, fires had been started at two different places, ostensibly by "terrorists," so that a mass escape could take place. To block this escape, subunits of the 692nd Infantry Regiment of the 339th Infantry Division used machine-gun barrage fire on the prisoners, and as a result 1,700 prisoners were found dead in the square on the next morning. According to written statements by the former deputy camp commandant, Hauptmann Carl Languth, dated December 21, 1945, the fire in the attic of the barracks was set by the Germans themselves, at the order of Prisoner of War District Commandant K (*Kriegsgefangenen-Bezirkskommandant K*), Oberst Sturm, to simulate a rebellion and escape attempt. Ostensibly, only Languth and the camp commandant, Oberstleutnant Dr. August Egenolf Freiherr Roeder von Diersburg, knew that the fire had been set deliberately.⁷ In total, around 20,000 prisoners died of starvation or disease or were murdered while the camp was in Bobruisk.⁸

In 1968 and 1969, the Stuttgart public prosecutor's office conducted an inquiry regarding former camp commandant von Diersburg and the former counterintelligence officer in the camp, Heinrich, but this investigation was inconclusive. Languth was tried in Minsk in January 1946 and sentenced to death; he was executed on January 30, 1946.

DURCHGANGSLAGER (DULAG) 132

The Wehrmacht established Dulag 132 on May 15, 1942, from Frontstalag 132. From May to July 1942, the camp was located in Lubny (map 9f), where it replaced Dulag 171. In July 1942, the camp in Lubny was replaced by a camp for officers, Oflag 65.¹ From late August 1942 to February 1943, Dulag 132 was located in Krasnodar (9h). After leaving Krasnodar, the headquarters of the camp was in Kerch (9h), in the spring of 1943, and then in Kherson (9g). On June 10 and July 10, 1943, the camp was located in Lozovaia (today Lozova, Ukraine) (9f); on August 10 and September 10, 1943, it was in Khorol and then in Shpolia (both 9f). From Shpolia, the headquarters of Dulag 132 was transferred to Italy in November 1943, and on December 4, 1943, it arrived in Arezzo (6). It was then relocated to Mirandola (6), where it took over a former Italian prisoner of war (POW) camp. The camp was disbanded on December 15, 1944, and converted into Armee-Gefangenensammelstellen (AGSSts) 63, 64, and 65 (the disbandment process lasted until January 8, 1945).² Dulag 132 received the field post number (*Feldpostnummer*) 31 979 between July 31, 1942, and February 9, 1943. The number was struck on January 23, 1945.

While located in Lubny, the camp was subordinate to the commander of POWs in the Army Group South Rear Area (*Heeresgebiet Süd*). Beginning in August 1942, the camp was under the authority of the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 550), still in Army Group South. In the spring and summer of 1943, the camp once again came under the authority of the

head of *Heeresgebiet Süd*. While deployed in Italy, the camp was subordinated to the Prisoner of War District Command K (*Kriegsgefangenen-Bezirks-Kommandantur K*).

The first commandant of the camp was Major Gustav Eckert (from August 1940 to the end of October 1941). He was succeeded by Major Josef Weber (November 4, 1941, to February 2, 1942). The camp commandant from February 23, 1942, to December 15, 1944, was Oberstleutnant (later Oberst) Heinrich Linhardt. The deputy commandants were Hauptmann Alexis Schumann and Major Max Meyer (from August 1943 to December 1944). The adjutant was Hauptmann Paul Kaden. The *Lageroffizier* was Hauptmann Adolf Hartung, and the officer for special assignments was Hauptmann Berthold Bamberg (until December 1, 1942). The counterintelligence (*Abwehr*) officer was Hauptmann Dr. Hahn, and his deputies were Hauptmann Dr. Johannes Kluge (who died on May 5, 1944) and Oberleutnant Karl Gauss (who perished on February 22, 1944). The camp doctors were Dr. Artur Axt (until April 18, 1942), Dr. Wilhelm Rasche (from November 26, 1941, until December 26, 1942), and Dr. Julius Schütz (from October 16, 1942, to September 10, 1944).³ On January 1, 1943, the camp headquarters staff (commandant's office) included 8 officers, 8 government officials, 19 noncommissioned officers, and 56 enlisted men: 91 persons in all. As the security force, the camp used 247 Soviet auxiliary guards (*Hiwis*).⁴ The commander of this guard company until October 1942 and then from early December 1942 was Hauptmann Johannes Götz.

The conditions in Dulag 132, especially in the first year, were horrific. Food supplies were insufficient in quality and quantity, housing was inadequate, the camp was overcrowded, there was little medical care provided, and the guards were abusive. As a result, the mortality rate was very high. For example, during the deployment in Lubny, about 600 prisoners died of starvation and illness. A separate section of the camp in Lubny held around 500 Jewish civilians, later massacred by the Security Service (*Sicherheitsdienst*, SD).⁵

In Krasnodar, the camp was located on the southeastern edge of town. According to the daily reports of Korück 550's Quartermaster Branch (*Abteilung Quartiermeister*), the camp population dropped from 5,876 POWs and 316 civilians on November 9, 1942 to 4,229 POWs and 226 civilians on November 30. The population of the subcamp (*Zweiglager*) at Krymskoe grew from 1,242 to 1,535 POWs in the same period.⁶ The prisoners who remained alive—about 2,000, according to the testimony of the commander of the guard company, Hauptmann Johannes Götz—were evacuated shortly before the city was liberated by the Red Army on February 12, 1943. They were taken across the Taman Peninsula in the direction of Kerch.⁷ Prisoners who were unable to take part in the march were shot and buried in a mass grave. After the town was liberated, the prisoners' remains were reinterred, and a small tombstone was placed on the grave.

DURCHGANGSLAGER (DULAG) 134

The Wehrmacht established Dulag 134 on March 15, 1941, from Frontstalag 134.¹ The camp deployed to Poland initially. Dulag 134 was assigned field post number (*Feldpostnummer*) 33 911 between March 1 and September 7, 1942; the number was struck on December 4, 1944.

As of June 1941, the camp commandant was Major Laasch. His adjutant was Oberleutnant der Reserve Richter, the officers on assignment were Hauptmann der Reserve Fugmann and Leutnant der Reserve Etzold, the physicians were Oberarzt Dr. Orland and Unterarzt Dr. Haderer, the counterintelligence (*Abwehr*) officer was Oberleutnant der Reserve Hopperdietzel, and his deputy was Leutnant der Landwehr Knöfel.²

Dulag 134 held Soviet prisoners of war (POWs). From May 1941, Dulag 134 was under the control of the 285th Security Division (*Sicherungsdivision*). After Germany invaded the Soviet Union, the camp deployed to various towns in the rear area of Army Group North (*Heeresgruppe Nord*). In August 1941, the camp was located in the city of Pleskau (map 9a).³ It then relocated to Sablino (today Ul'ianovka, Leningradskaya oblast') (9a).⁴ As of June 1942, the camp was located in L'gov (9d).

In July 1942, Dulag 134 was transferred to the rear area of Army Group A and placed under the control of the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 550). From September 1942 to January 1943, the camp was deployed in the town of Armavir (9h), with a subcamp (*Nebenlager*) in Cherkessk (today

Starocherkasskaia, Rostovskaia oblast'). Dulag 134 was a relatively small camp, with a maximum population of 3,443 in the main camp in Armavir and a maximum population of 848 in the subcamp in Cherkessk.⁵

On January 14, 1943, the Cherkessk camp was closed, and the prisoners were sent to Armavir. Between January 18 and January 20, 1943, the prisoners were transferred out of the main camp in Armavir. On January 18, 1,500 prisoners were sent to Dulag 132 in Krasnodar, followed by the remaining prisoners on January 20. In 1943, the camp was deployed to various towns in occupied Ukraine.

The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding and improper medical care facilitated the spread of disease, while insufficient food rations led to malnutrition, resulting in a high mortality rate. As in other camps, the newly arrived prisoners were screened to weed out "undesirable" prisoners, such as Jews and political commissars, who were executed near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).

The exact date of the camp's disbanding is unknown; it was still in operation as of February 10, 1945.

SOURCES Primary source material about Dulag 134 is located in BA-MA (RW 6), BNF, NARA, and BA-L B 162/8934–8937, *Aussonderung von Kriegsgefangenen im Dulag 134 in Armavir (Sowjetunion)*.

to the rear area of Army Group A, where it came under the authority of the 454th Security Division (*Sicherungsdivision*). As of August 30, 1942, the camp was located in the village of Peschanokopskoe (map 9i).² In 1943, the camp deployed to various locations in Ukraine. In the fall of 1943, the camp deployed to the Balkans, first in Nea-Kokkinia (today Nikaia) (8) and later in Zagreb (7); a branch of the camp, Dulag 135/I, was located in Athens, where it served as an internment camp for Allied civilians. During this period, it was subordinate to Army Group E. The Germans ordered the camp disbanded on November 9, 1944. The camp carried field post number (*Feldpostnummer*) 34 670, which was assigned between March 1 and September 7, 1942, and struck on November 28, 1944.

Dulag 135 first held Soviet prisoners of war (POWs). Detailed statements on the conditions there are not available. In general, conditions for Soviet POWs had improved over the murderous circumstances that existed from the summer of 1941 through the winter of 1942. Still, the prisoners received rations and treatment that was far below the standards for Western Allied POWs, and the mortality rate was generally high.

While deployed in Greece and Croatia, the camp held Italian military prisoners. Information on conditions for these prisoners is also not available, but the Germans generally treated Italian prisoners harshly.

While Dulag 135 was in operation in Athens, it also held 14 American civilian internees prior to their relocation to an official civilian internment camp. International observers noted that these civilians were "extremely poor" and had by and large been forced out of their homes without being able to bring any personal effects with them to the camp as was customary for civilians. To meet their basic needs, these American internees relied on food and clothing from the International Red Cross.³

DURCHGANGSLAGER (DULAG) 137

The Wehrmacht created Dulag 137 on March 22, 1941, from Frontstalag 137. It deployed to Romania and from there to various locations in Ukraine, including Nikolaev (today: Mykolaiv) (map 9g) in the fall of 1941 and Zaporozh'e (9f) as of May 1942.¹ On July 4, 1942, while the camp was in the town of Romny (9f), it was converted into the headquarters of the 1st Turkestan Eastern Legion (*Ost-Legion*).² The camp carried field post number (*Feldpostnummer*) 22 717, which was assigned between April 19, 1941, and February 14, 1942, and struck between February 10 and August 23, 1943.

In the fall of 1941, the camp was subordinate to the Senior Quartermaster Black Sea (*Oberquartiermeister Schwarzes Meer*), Major Ernst Merk. From the spring of 1942 on, the camp was subordinate to the Army Group South Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Süd*, Berück Süd).

The camp held Soviet prisoners of war (POWs). The conditions, especially while the camp was located in Nikolaev, were the same as those in the other camps for Soviet POWs. Meager food rations, overcrowding, and lack of proper medical care resulted in widespread malnutrition and disease, which produced a high mortality rate. Abuse by the guards exacerbated the prisoners' plight. As in other such camps, the Germans screened newly arrived prisoners to separate out Jews and Communists, who were then shot nearby by the guards or the Security Service (*Sicherheitsdienst*, SD).³

SOURCES Primary source material about Dulag 137 is located in the BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens) and in BArch B (162/9601–9604: Ermittlungen gg. P. Schneider u.a. Angehörige des Dulag 137 wg. Verdachts auf Mord durch "Aussonderung" sog. untragbarer Kriegsgefangener in Nikolajew).

DURCHGANGSLAGER (DULAG) 140

The Wehrmacht established Dulag 140 on March 19, 1941, from Frontstalag 140. After a temporary initial deployment in Defense District (*Wehrkreis*) X, in July 1941, the camp deployed to various locations in Russia in the rear area of Army Group North (*Heeresgruppe Nord*), specifically in the village of Maloe Verevo (map 9a).¹ The camp carried field post number (*Feldpostnummer*) 01 274, which was assigned between February 1 and July 11, 1941, and struck on October 29, 1943. The Germans disbanded the camp on October 5, 1943.

As of May 1941, the camp was subordinate to the 285th Security Division (*Sicherungsdivision*) and, starting on August 1, 1942, to the Commander of Prisoners of War in Operations Area IV (*Kommandeur der Kriegsgefangenen im Operationsgebiet IV*).²

While deployed in Russia, the camp held Soviet prisoners of war. The conditions in the camp were inhumane and the mortality rate was high. However, an official from Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583) who visited the camp stated in a report dated May 18, 1942, that conditions had been improved in the camp as much as the material situation allowed. He reported that large heating stoves had been built in the camp's barracks and that the delousing facilities in the camp were good. The camp commandant was allegedly making efforts to ensure that the prisoners remained healthy so that they would be able to work.³ As in other camps, the Germans screened newly arrived prisoners to separate out Jews and Communists, who were then shot by the guards or the Security Service (*Sicherheitsdienst*, SD).⁴

DURCHGANGSLAGER (DULAG) 142

The Wehrmacht established Dulag 142 on August 13, 1941, from Frontstalag 142. Dulag 142 deployed to various locations in the occupied Soviet Union. It initially deployed to Chernigov (today Chernihiv, Ukraine) (map 9e), and then to Briansk (9c) in October 1941. Because of heavy rainfall, the conditions at the camp in Briansk deteriorated to such an extent that, on November 3, its 11,000 prisoners were transferred to a former railway depot near Uritskii (9c).¹ Beginning on August 26, it was subordinate to the Army Group Center Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Mitte*, Berück, Mitte).² While the camp was located in Briansk, it was subordinate to the Prisoner of War District Commander J (*Kriegsgefangenen-Bezirkskommandant J*). As of June 9, 1942, it was under the authority of the Second Panzer Army, and from July 2, 1942, it was subordinate to the Second Panzer Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 532).³ As of August 13, 1943, the camp was subordinate to the Ninth Army Rear Area Commander (Korück 582).⁴ It received the field post number (*Feldpostnummer*) 03 999 between January 27 and July 14, 1942.

The camp commandants, in chronological order, were Oberstleutnant z. V. Friedrich Holtz (until December 11, 1941), Major der Reserve Dr. Kurt Hettler (until March 20, 1942), Major der Reserve Dr. Martin Weise, and Oberstleutnant Gerhard Idel (starting on January 15, 1944). The deputy commandants, in chronological order, were Major der Reserve Dr. Martin Weise (starting in 1942, the commandant), Major der Reserve Emil Kaiser (from April 1942 to February 1943), and Hauptmann der Reserve z. V. Adolf Prell (1943–1944). The camp adjutants in 1941–1944 were Hauptmann Zinnecker, Hauptmann Wilhelm Eicheler, and Hauptmann der Reserve zur Verfügung Friedrich Schmidberger. The camp doctors were Dr. Valentin Maier (February 1943 to April 1944) and Dr. Alfred Düllmann.

Conditions in Dulag 142 were terrible, particularly in the first year of the war. The camp was located on the grounds of a former repair shop. Six buildings were turned into barracks, but the vast majority of the prisoners of war (POWs) were out in the open. On November 3, 1941, Dulag 142 held 24,600 prisoners.⁵ The prisoners received very little food, leading some prisoners to resort to cannibalism, although the camp administration insisted that enough food was being issued.⁶ The camp was overcrowded, and there was little or no shelter at most locations. The prisoners received very little medical care. As a result, the mortality rate in the camp was very high. According to the Soviet Extraordinary State Commission, ChGK, 40,000 prisoners died in Dulag 142; however, this

figure is substantially exaggerated, and the actual death toll was probably closer to 15,000.⁷ As in other camps for Soviet prisoners, the Germans screened newly arrived prisoners to weed out “undesirables,” such as Jews and political commissioners, who were executed near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).

In addition to the POWs, about 5,000 civilians passed through the camp.⁸ On May 13, 1942, the camp held 5,288 prisoners, a majority of whom were civilians captured in sweeps of “partisans.” A total of 156 inmates had died during the previous two months, a mortality rate of around 1.5 percent.⁹ In the first half of October 1942, men of military age captured in antipartisan operations by the Hungarian Army were held in the camp.¹⁰ In 1943, Dulag 142 was located in Belorussia, first in Bobruisk and later in Mar’ina Gorka (both 9b). In the fall of 1943, Italian military internees were brought to the camp. In 1944, the camp was located in Skierwice, Poland (5), where it held prisoners captured during the Warsaw Uprising. About 3,000 people, including several hundred who were ill, passed through the camp during this period.¹¹

On September 15, 1944, Dulag 142 was disbanded and converted into Armee-Gefangenensammelstelle (AGSSt) 38.¹²

DURCHGANGSLAGER (DULAG) 150

The Wehrmacht established Dulag 150 on April 1, 1941, in Poland, from Frontstalag 150. As of June 1941, the camp deployed to various localities in the Army Group North Rear Area (*Heeresgebiet Nord*). Specifically, in July 1941, the camp deployed to Dünaburg (today: Daugavpils, Latvia) (map 9b); as of September 6, 1941, it was in Staraja Russa, Russia (9a); and then it moved to Idritsa, Russia (9b). The camp was disbanded on September 20, 1943.³ Dulag 150 received field post number (*Feldpostnummer*) 25 628 between February 15 and July 30, 1942. The number was struck on October 15, 1943.

Starting in May 1941, the camp was subordinate to Security Division (*Sicherungsdivision*) 281, and, as of August 1, 1942, to the Commander of Prisoners of War in Operations Area IV (*Kommandeur der Kriegsgefangenen im Operationsgebiet IV*) and the Sixteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 584).⁴ On April 1, 1943, there were 96 German personnel at the camp, and, on May 1, 1943, there were 69 German personnel.⁵

While deployed in the occupied Soviet Union, the camp held Soviet prisoners of war (POWs). There were several thousand prisoners in the camp in Staraja Russa, while the camp in Idritsa held only a small number. On April 1, 1943, there were only 44 prisoners in the camp, and, on May 1, 1943, there were 91.⁶ The conditions, especially while the camp was in Staraja Russa, were similar to those in other camps for Soviet POWs. Overcrowding, inadequate food and medical care, and deliberate abuse by the guards led to widespread malnutrition and disease and a high mortality rate. As in other camps, the Germans screened newly arrived prisoners to identify Jews and Communists who were then shot by Sicherheitsdienst personnel or the camp guards.⁷

DURCHGANGSLAGER (DULAG) 151

The Wehrmacht established Dulag 151 on April 24, 1942, from Frontstalag 151. It deployed to the Army Group South Rear Area (*Heeresgebiet Süd*) in various locations in Ukraine. From late April 1942, the camp was deployed in Poltava (map 9f).¹ In August 1942, the camp deployed to Stalino (today Donets'k) (9f) and Shakhty (9i). In the fall of 1942, the camp was deployed near Kalatsch (today Kalach-na-Donu) (9d) and near Tschir (Russian: Chir) (9d). Soviet troops destroyed the camp during the retreat in late 1942 and early 1943, and in the spring of 1943 it was disbanded and its personnel were transferred to AGSSt 11. Dulag 151 received field post number (*Feldpostnummer*) 26 047 between July 31, 1942, and February 9, 1943. The number was struck between February 10 and August 23, 1943.

Starting in April 1942, the camp was subordinate to the Army Group South Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebiet Süd*, Berück Süd), and as of July 1942 to the Army Group B Rear Area Commander (Berück B). The commandant of the camp was Major von Donop.

Dulag 151 held Soviet prisoners of war (POWs). The conditions in the camp were similar to other camps for Soviet POWs. Meager food rations, overcrowding, and lack of proper housing or medical care led to malnutrition and disease, which in turn produced a high mortality rate. Abuse by the German guards exacerbated the prisoners' suffering. As in other camps, the Germans screened newly arrived prisoners to identify Jews and Communists, who were then shot by the camp guards or the Security Service (*Sicherheitsdienst*, SD).²

DURCHGANGSLAGER (DULAG) 152

The Wehrmacht formed Dulag 152 on March 21, 1941, from Frontstalag 152. The camp carried the field post number (*Feldpostnummer*) 26 714, which was assigned between July 31, 1942, and February 9, 1943, and struck on March 20, 1945. The Germans ordered the camp disbanded on November 19, 1944.

As of May 1941, the camp was subordinate to the 444th Security Division (*Sicherungsdivision*), and after Germany's attack on the USSR on June 22, it deployed to various towns in the Ukraine. In particular, from November 1941 to mid-1942, the camp was located in the town of Mariupol' (Ukraine) (map 9h).¹ As of the second half of 1942, the camp was subordinate to the First Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 531), and in the fall of 1942 it deployed to the town of Georgievsk (North Caucasus) (9i). At that time, the German personnel in the camp numbered 117, and, in addition, there were 276 so-called *Hilfswillige* (Soviet soldiers working as noncombatants for the Germans), who were used to guard the camp.² In early 1943, the camp was located for a short time in the town of Voroshilovsk (Ukraine) (9i), and then in the town of Zaporozh'e (Ukraine) (9f).

Conditions for Soviet prisoners were horrible, especially while the camp was located in Mariupol' and in the North

Caucasus. There, conditions were identical to those in other such camps. Food was in extremely short supply and of the very worst quality. The prisoners were crowded together and exposed to the elements. Medical care was all but nonexistent. The guards were abusive. Starvation, exposure, exhaustion, and disease, as well as outright murder, all contributed to an extremely high death rate.

In Mariupol', the camp was located in the building of a former training complex for the Il'ich Metallurgical Plant, near a slag heap, and in a sanatorium for tuberculosis patients (at Poselok imeni Voroshilov). Recollections of former prisoner Aleksandr Telegin, describe the conditions as follows:

They sent me to the “sanchast” [medical unit]. The “sanchast” was located at the other end of the camp, and it occupied approximately 1/4–1/3 of the overall camp territory. It comprised about ten barracks, each of which housed as many as 500 people, and several small one-story houses where the sick were placed. In the same area were located the food distribution center and the baths with disinfection chambers. There were around 30,000 people in the camp. People lay on the floor and on plank beds, in two tiers, with no straw or mattresses. In addition to the commandant's office, there was a camp police force, made up of criminals. The camp guards and leadership changed frequently. The first conspicuous thing was that in the mornings, thousands of ragged and hungry people were driven out of the barracks by the shouts of policemen and the whistling sound of whips, and they formed a column to be sent off to various types of hard labor. We were fed *balanda*, which was black in color and in which there swam little pieces of all kinds of “meat” scraps (boiled heads of horses that had been killed). To boost its “caloric value,” the *balanda* sometimes was supplemented with broken pieces of moldy Dutch cheese with maggots. . . . That's the kind of food they gave us twice a day. . . . To get it, people stood in long lines. . . . After such food, one was always hungry. No treatment of the wounded and sick was undertaken. In place of bandages, they used rags, and in place of cotton wool, they used packing material: loose hemp or jute fiber. As a result, the death rate was high.

The POWs were divided into various categories: officers were kept separately from the rank and file soldiers. In accordance with this division, the occupiers planned the order of priority for eliminating the prisoners. The concentration camps were enclosed by a fence 3 meters [almost 10 feet] high, the top of which was woven with barbed wire. At the corners, machine guns were set up. Besides the guard force, which consisted of Germans and Italians, a camp police force was created in the

camps. It was made up of POWs who had expressed a wish to collaborate with the invaders. Among the people they were called “volunteers.” The camp police were armed with clubs. In December 1941, the POWs were fed rotten fish; gastric problems broke out on a large scale and the number of dead increased continuously. When the frosts began—and the winter of 1941–1942 was severe—the death rate grew even more. Every morning at 10:00 on the dot, a string of sledges left the gates of the camp with a dreadful load. Visible on many of the corpses were traces of torture and bullet wounds. Not infrequently they carried out and buried in common graves people who were emaciated, dying, but still alive.³

In the area of these camps, after the war, were discovered three cemeteries with 120 graves each, in which around 36,000 people appear to have been buried.⁴

As in other camps, the Germans screened newly arrived prisoners to find Jews and Communists, whom an SD detachment or camp guards then shot near the camp.

DURCHGANGSLAGER (DULAG) 154

The Wehrmacht established Dulag 154 on March 21, 1941, from Frontstalag 154. From June 1941 to September 1944, the camp was deployed to various locations in the occupied Soviet Union. In the summer of 1941, the camp was deployed in Mitau (today Jelgava, Latvia) and Riga (both map 9b). From September 1941 to November 1941, it was deployed to Fellin (today Viljandi, Estonia) (9a), with subcamps in Pärnu and Tartu. From November 1941 to early 1944, the camp was

deployed in Lindemannstadt (earlier Krasnogvardeisk, today Gatchina) (9a). From the end of January 1944 until September 16, 1944, the camp was deployed in Tapa, Estonia (9a). On October 18, 1944, the camp, along with the prisoners, was evacuated to Danzig (today Gdańsk, Poland) (4c) and converted into AGSSt 34 (the order to dissolve Dulag 154 had been given on August 27).¹ The camp was initially subordinated to the 207th Security Division (*Sicherungsdivision*), and then to the Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583). Dulag 154 received field post number (*Feldpostnummer*) 27 513 between February 16 and July 17, 1941. The number was struck on October 27, 1944.

The camp commandants were: Oberst Ulbricht (1940–1941), Major Mollnäus (1941–1943), and Oberstleutnant Ralph Folkert (1943–1944). The adjutant was Hauptmann Peter Alef; the deputy camp commandants were Major Pfister and Hauptmann Eugen Krägeloh; the counterintelligence (*Abwehr*) officer was Hauptmann Wilhelm Kreck; the deputy commandant (*Lageroffizier*) was Hauptmann Richard Hartwig; the commanders of the guard company were Hauptmann Orthmann and Hauptmann Heinrich Kramer; the doctor was Stabsarzt Dr. Hans-Dietrich Hoppe (from May 11, 1942, to September 16, 1944); and the translator/interpreter was a Soviet German (a native of Leningrad), Sonderführer (Z) Georg Weghorn.

Dulag 154 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs.² Overcrowding, constant malnutrition, unsanitary living quarters, and lack of proper medical care led to malnutrition and disease, which produced a high mortality rate. Abuse by the German guards increased the prisoners’ suffering. As in other such camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).³

DURCHGANGSLAGER (DULAG) 155

The Wehrmacht created Dulag 155 on April 4, 1941, from Frontstalag 155.¹ The camp carried field post number (*Feldpostnummer*) 27 986, which was assigned between February 15 and July 30, 1942, and struck on November 21, 1944. From the summer of 1941 to 1943, the camp deployed to various towns in the occupied Soviet Union. The camp first deployed to Wilna (today: Vilnius, Lithuania) (map 9b), where on July 5, 1941, it held 2,200 prisoners, 700 of whom were working as forced laborers.² In August and September 1941, the camp was located in Lida (9b). Beginning in October 1941, the camp was deployed in various locations in the Smolenskaia oblast', including Dorogobuzh, Viaz'ma, Gusino, and Roslavl' (all 9c). In 1943, the camp was deployed in the rear area of the Sixth Army at various places in Ukraine, mainly in the Donets'k oblast'. In the spring and summer of 1943, the camp was located in the town of Ordzhonikidze (today Ienakiieve) (9f).³

In the summer of 1941, the camp was under the command of the 403rd Security Division (*Sicherungsdivision*). In the fall of 1941, the camp transferred to the control of the Fourth Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585). In 1943, the camp was subordinate to the Sixth Army Rear Area Commander (Korück 593). The camp commandant in 1941 was Major von Treuenfels; the names of his successors are unknown. The camp was guarded by personnel from the 564th Reserve Battalion (*Landesschützenbataillon*). In July 1943, the camp staff consisted of 85 men.⁴

Dulag 155 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, and lack of proper medical care led to widespread malnutrition and disease, which in turn produced a high mortality rate. Abuse by the German guards exacerbated the prisoners' suffering. As in other such camps, the Germans screened newly arrived prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD). On August 21, 1941, the camp commandant reported to the Prisoner of War District Commandant J (*Kriegsgefangenen-Bezirkskommandant* J), Oberst Marschall, that on August 7, he had "exposed" 50 "commissars" and "acted accordingly" (i.e., had them executed), and by August 21, he had dealt similarly with 75 more.⁵

The Germans disbanded the camp on November 19, 1943.

DURCHGANGSLAGER (DULAG) 160

The Wehrmacht established Dulag 160 on March 15, 1941. After an initial deployment in the Balkans, from September 1941 to July 1942, Dulag 160 operated in the town of Khorol' (map 9f). In July 1942, the camp came under the authority of the First Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 531). As of late August 1942, the camp was located in a glassworks six kilometers (3.7 miles) from Mineral'nye Vody (9i). It was later relocated to Prokhladnyi (9i). From April 1943 to March 1944, the camp was located in Operations Area (*Operationsgebiet*) II, which was headquartered in Kherson, Ukraine. The camp carried field post number (*Feldpostnummer*) 01 322, which was assigned between July 15, 1942, and January 24, 1943, and struck on December 4, 1944. The Germans ordered the camp disbanded on August 27, 1944.

During the period of its deployment in Khorol', the camp was subordinate to the Commander of Prisoners of War with the Commander of the Army Group South Rear Area (*Kommandeur der Kriegsgefangenen beim Befehlshaber des Heeresgebiets Süd*). The camp commandant was Oberstleutnant Dr. Lepple.

While it was deployed in occupied Soviet Union, Dulag 160 held Soviet prisoners of war (POWs). On December 20, 1941, the camp held 12,959 POWs,¹ and, in late January 1942,

there were 12,702 prisoners. By the end of February, the number had dropped slightly to 12,357, and at the end of March it had decreased further, to 11,961. At the end of April, after 7,700 prisoners were sent to forced labor in Germany, the camp's prisoner population was 3,969.²

By October 1941, the camp was severely overcrowded and 20,000 prisoners were transferred to Kremenchug. Along the way, the guards shot any prisoners who were unable to walk.³ Dulag 160 was located on the grounds of a former brickyard. The camp had subcamps on the premises of a grain elevator, in the building of the raion executive committee, and in Secondary School No. 2. The prisoners quartered on the grounds of the brickyard lived in an open quarry with no permanent shelter. In the lower part of the quarry, people used their hands and mess tins to dig small dens in an attempt to protect themselves from the elements. Newly arrived prisoners were given no food for several days, after which they were almost always on the brink of death. The prisoners' rations consisted of salty *balanda*, a watery soup in which small bits of beet and a little grain floated. A 2-kilogram (4.4 pound) loaf of bread was intended to be shared by 100 to 150 people.⁴

These starvation rations, combined with overcrowding and lack of proper medical care, led to a high rate of death from malnutrition and disease. For example, according to the report of the Commander of the Rear Area of Army Group South (*Befehlshaber des rückwärtigen Heeresgebietes Süd*, Berück Süd) on December 21, 1941, 10 people died in the camp each day, mainly of typhus (in total, there were 300 deaths in December).⁵ According to the report of the Berück Süd on January 31, 1942, 102 prisoners died of typhus alone in the camp in that month (out of approximately 750 total deaths), with a total of 576 people afflicted with typhus.⁶ In February 1942, 707 prisoners died in the camp, and 339 died in March.⁷ In total, in the period from December 1941 to the end of April 1942 alone, about 2,500 prisoners died in the camp, and during the entire period of the existence of the camp in Khorol, from the end of September 1941 to July 1942, up to 10,000 people died. According to a report on the crimes of the occupiers in Khorol at Dulag 160, German statistics indicated that 37,650 people died between September 22, 1941, and May 1, 1942.⁸

When a new transport of prisoners arrived the camp staff divided them according to nationality: Russians, Ukrainians, Jews, and "Mongol peoples" (those of Asian ethnicity). The Jews were marked with a Star of David. The Jews were the main target of violence on the part of the camp personnel and guards, who beat them constantly, killing and maiming numerous prisoners. In early March 1942, a Sonderkommando took all of the Jews out of the camp and shot them. Gravely injured men who were unable to walk were moved out of the camp in trucks. The prisoners first had to undress and then, wearing only underpants, they went to their executions.⁹ According to the testimony of the former assistant camp doctor, Hans Fruechte, a mass shooting of Jewish prisoners took place on May 15, 1942. The Germans shot about 500 people at that time: around 450 Jewish prisoners and "suspicious

characters" from the camp, and 50 Jewish craftsmen from Khorol.¹⁰

DURCHGANGSLAGER (DULAG) 161

The Wehrmacht formed Dulag 161 in September 1941 from Frontstalag 161. It was deployed to various localities in the rear area of Army Group Center (*Heeresgruppe Mitte*), including Klintsy (map 9c).¹ In 1943, the camp was deployed to various locations in the rear area of Army Group South (*Heeresgruppe Süd*). At the end of the war, the camp was deployed in Zagreb (7). It received field post number (*Feldpostnummer*) 02 462 between January 27 and July 14, 1942. From April 1942, the camp was subordinated to the 203rd Security Division (*Sicherungsdivision*).² During the camp's deployment in the rear area of Army Group South, it was subordinated to the Commander of the Rear Area of Army Group South (*Befehlshaber rückwärtiges Heeresgebiets Süd*, Berück Süd).

Dulag 161 held Soviet prisoners of war (POWs). The conditions in the camp were inhumane. As in other such camps, newly arrived POWs were screened to separate out Jews and Communists, who were then shot by the guards or the Security Service (*Sicherheitsdienst*, SD).³

DURCHGANGSLAGER (DULAG) 162

The Wehrmacht established Dulag 162 on March 26, 1941, from the staff of Frontstalag 162. It received field post number (*Feldpostnummer*) 03 536 between July 15, 1942, and January 24, 1943; the number was struck on November 11, 1944. The camp was initially deployed to Poland, but after the invasion

of the Soviet Union, the camp was moved to various locations in Ukraine. In the summer of 1941, the camp was deployed in Vinnitsa (map 9e), and from late 1941 to mid-1942, it was located in Stalino (now Donets'k) (9f).¹ From August 15, 1942, the camp was deployed in Shakhty (9i),² and then in various towns in the northern Caucasus, including the Stantsiia railway station near Apsheronsk (9i). From the spring of 1943, it was once again deployed in Ukraine. From November 1943 to the end of March 1944, it was located in Nikolaev (now Mykolaiv) (9g),³ where it replaced Stalag 364. On August 27, 1944, the camp was disbanded.

From May 1941, the camp was subordinated to the 444th Security Division (*Sicherungsdivision*), and then to the First Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 531). In July 1942, the camp was transferred to the rear area of Army Group A (*Heeresgruppe A*) and subordinated to the 454th Security Division and then to the Seventeenth Army Rear Area Commander (Korück 550). From October 1943, the camp was under the authority of the Army Group South Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Süd*, Berück Süd).

On January 1, 1943, the camp personnel included 12 officers, 6 civilian officials, 30 noncommissioned officers, and 95 men, 143 people in total. Their ranks were bolstered by 212 *Hilfswillige*, who were used as the camp's guard force.⁴ The first camp commandant was Hauptmann der Reserve Schellhorn. From November 1943, the commandant was Oberstleutnant Gustav Herold.⁵

Dulag 162 held Soviet prisoners of war (POWs). On October 14, 1942, while the camp was located in Apsheronsk, it held 1,342 prisoners; by the following day, the population had increased to 1,464. While it was deployed in Nikolaev, the camp held about 1,000 POWs as well as between 15,000 and 18,000 civilians who had been evacuated from the area near the front.⁶

The conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, forced labor, and lack of proper medical care led to widespread malnutrition and disease, which produced a high mortality rate. Abuse by the guards exacerbated the prisoners' suffering. As in other camps, counterintelligence (*Abwehr*) personnel screened newly arrived prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).⁷

DURCHGANGSLAGER (DULAG) 170

The Wehrmacht established Dulag 170 on April 21, 1941. After Germany invaded the Soviet Union, it was deployed to various locations in Ukraine and Russia. From August 1, 1941, to September 11, 1941, the camp was deployed in Belaia Tserkov' (today Bila Tserkva) (map 9e).¹ From October 1941 to January 1942, it was in Poltava (9f).² Beginning in January 1942, it was deployed in Sumy (9f);³ as of June 1942, it was in Belgorod (9d);⁴ and in the second half of 1942, it was in Kantemirovka (9d).⁵ In 1943 and 1944, the camp was once again deployed in various locations in Ukraine. In the spring of 1943, the camp was located in Shpola; however, by this time, it was no longer being used as a prisoner of war (POW) camp. The unit received field post number (*Feldpostnummer*) 04 443 between July 15, 1942, and January 24, 1943. The number was struck on May 25, 1944. On November 19, 1943, the Germans ordered the camp disbanded.

The camp was initially subordinate to the 454th Security Division (*Sicherungsdivision*). Beginning in October 1941, the camp was subordinate to the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585). Beginning on December 29, 1942, the camp was under the authority of the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*).⁶ As of February 1943, it was subordinate to the Army Group South Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebiets Süd*, Berück Süd). The first camp commandant was Oberstleutnant von Donop; he was succeeded by Oberstleutnant Fritz Reinkober. The camp doctors were Oberarzt Stocklesza and Oberarzt Dr. Willi Schöpper.⁷ While it was deployed in Belaia Tserkov' in 1941, the camp was guarded by a company of the 415th Reserve Battalion (*Landesschützenbataillon*).⁸

Dulag 170 primarily held Soviet POWs. The conditions in the camp were similar to those in other camps for Soviet

POWs. Meager and low-quality food rations, overcrowding, and lack of proper medical care led to malnutrition and disease, which created a high mortality rate. Abuse by the German guards exacerbated the prisoners' suffering. As in other camps, the Germans screened newly arrived prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).⁹

In early 1970, the public prosecutor's office in Hannover (Germany) conducted an investigation of the former commandant of Dulag 170, Fritz Reinkober for murder of so-called “undesirable” prisoners. The investigation was closed in 1975 because of insufficient evidence.

SOURCES Primary source material about Dulag 170 is located in the BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens); BArch B (162/8927–8933: “Aussonderung” von Kriegsgefangenen im Dulag 170 in Biala Cierkiew, Kiew, Shitomir u.a.O.); and GARF (file 7021-22-494: Kantemirovka).

DURCHGANGSLAGER (DULAG) 171

The Wehrmacht formed Dulag 171 on March 22, 1941, from Frontstalag 171. It received field post number (*Feldpostnummer*) 05 476 between July 15, 1942, and January 24, 1943. The number was struck on November 9, 1944. As of May 1941, the camp was subordinate to the 213th Security Division (*Sicherungsdivision*). After Germany invaded the Soviet Union, the camp deployed to various locations in Ukraine. In early July 1941, the camp was located in Torczyn (map 9e). From late

July to August 1941, it was in Kirovograd (9f), where it was subsequently replaced by Stalag 305. From late 1941 until May 1942, the camp was located in Lubny (9f), where it was later replaced by Dulag 132. In May and June 1942, the camp was located in Charkow (Russian: Khar'kov; today Kharkiv, Ukraine) (9f), where it was replaced by Stalag 362 on June 12, 1942. In June and July 1942, the camp was in the village of Bespalovka (today: Bezpalivka, Khar'kiv oblast') (9f). From late July 1942 to January 27, 1943, the camp was located near the Kastornaia-Novaia railroad station (9d). (There is some dispute about the camp's location in 1942; some sources put it in Smolensk (9c), Viaz'ma (9c), and Millerovo (9d).) In 1943 and 1944, the camp was again deployed in Ukraine. In October 1943, it was deployed in Kiev (9e); in November-December 1943, in Zhitomir (9e); in January and February 1944, in Vinnitsa (9e); and from April to July 1944, in Kovel' (9e). The camp was disbanded on August 27, 1944.¹

The camp commandant was Oberstleutnant Vilmar; the deputy camp commandants were Major Giese and Hauptmann Martin Hermersdorf (in 1942); the camp commandant's adjutant was Hauptmann Britzel; the chiefs of the motor vehicle section (*Kfz. Staffel*) were Hauptmann Weber and Oberleutnant Mether; the counterintelligence (*Abwehr*) officer was Hauptmann Link; and the camp physicians were Dr. Marbach, Dr. Franz Lukas, Dr. Waldemar Schneider, and Dr. Franz Heymann. A company of about 150 Russian auxiliary police (*Hiwis*) was attached to the camp. From March 1943, the camp was guarded by personnel from Company 4 of the 321st Reserve Battalion (*Landesschützenbataillon*).²

Dulag 171 held Soviet prisoners of war (POWs). The camp held 967 prisoners at the end of January 1942, while it was in Lubny. In late February, there were 2,582 prisoners in the camp. At the end of March, there were 4,196 prisoners, and, at the end of April 1942, there were 4,246.³ The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, inadequate food, forced labor, and the absence of proper medical care led to widespread malnutrition and disease, which produced a high mortality rate. Abuse by the guards exacerbated the situation. In February 1942, 50 prisoners died in the camp; the following month, 82 died.⁴ In total, from the end of January to the end of April 1942, more than 200 prisoners died in the camp. In addition, in early April 1942, the Germans shot 350 "undesirable" prisoners (Jews and Communists) in the nearby area, and in May they shot another 150 "undesirables."⁵ These executions were most likely carried out by SD-Sonderkommando Plath.

While it was located at Kastornaia-Novaia, the camp also held civilians who had been evacuated from the area near the front. The prisoners were kept outdoors. The women and children faced particularly difficult circumstances. Deaths from starvation, as well as random executions, were commonplace. The death toll in the camp at Kastornaia-Novaia is estimated to be around 7,000.⁶

DURCHGANGSLAGER (DULAG) 172

The Wehrmacht established Dulag 172 on March 15, 1941, from Frontstalag 172. After Germany invaded the Soviet Union on June 22, 1941, it was deployed to various locations in Ukraine, including Zhitomir (map 9e), Novograd-Volynskii (today Novohrad-Volyn's'kyi) (9e), Belaia Tserkov' (today Bila Tserkva) (9e), Krasnograd (9f), and Lozovaia (today Lozova) (9f). In late 1941, the camp deployed to Konstantinovka (today Kostiantynivka) (9f).¹ On August 15, 1942, the camp was relocated in Taganrog (9f), and then to Mariupol' (9h).² From November 1942 to February 1943, the camp deployed to Krymskaia (today Krymsk) (9h).³ In the spring and summer of 1943, the camp was deployed in Anapa (9h). In late September 1943, it was relocated to Kherson (9g).⁴ In 1944, the camp deployed to Smederevo in occupied Serbia (7). The unit

received field post number (*Feldpostnummer*) 06 066 between July 15, 1942, and January 24, 1943.

While it was deployed in the occupied Soviet Union, the camp was under the 213th Security Division (*Sicherungsdivision*) from June to October 1941, and then under the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet, Korück, 550*). Beginning in October 1943, the camp was subordinate to the Army Group South Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Süd, Berück Süd*). While deployed in Serbia, the camp was under the authority of the Military Commander Southeast (*Militärbefehlshaber Südost*).

The known camp commandants were, in chronological order, Major Salkowski (d. 1942), Major Theissen, Major der Reserve (until July 30, 1943), and Major Gustav Herold (August–October 1943). The counterintelligence (*Abwehr*) officers in the camp were Oberleutnant Hoffenreich and Hauptmann Dr. Polzer; the camp officer (*Lageroffizier*) was Leutnant Ziercz; the adjutants were Leutnant Geisler and Leutnant Ramthun; and the camp doctor was Dr. Hans Hegemann.⁵ On January 1, 1943, the camp personnel included 80 Germans (10 officers, 4 civil servants, 22 noncommissioned officers, and 44 enlisted men) and 191 local *Hilfswillige*.⁶

While it was deployed in the occupied Soviet Union, Dulag 172 held Soviet prisoners of war (POWs). The conditions were similar to those in other camps for Soviet POWs. In the camp at Krymskaia stanitsa, around 300 people were confined, but the population later rose to between 5,000 and 6,000 men. Many prisoners were barefoot and had no coats, and they were quartered in cold warehouses on a cement floor, in basements, or in the open air, even in winter. The prisoners were given one small tin can of bran with tiny pieces of plum or pear per day, when they were fed at all; these poor rations rapidly led to malnutrition. Often, the residents of the Krymskaia area brought foodstuffs to the camp and tried to give them to the prisoners, but the German soldiers and police banned this practice and beat those who attempted to pass food to the prisoners. They also beat prisoners who came close to the fence to get the food. Poor sanitary conditions and medical care led to frequent outbreaks of infectious diseases.

The combination of exposure, malnutrition, disease, and deliberate abuse by the guards led to a high mortality rate. For example, while the camp was deployed in Konstantinovka, around 5,000 prisoners are said to have passed through it, and approximately 4,000 of those prisoners died.⁷ While the camp was in Krymskaia, between 10 and 15 prisoners died in the camp each day. There was no time to dig graves for the dead; the prisoners were instead forced to dig an enormous mass grave, 10 meters long, 8 meters wide, and 2.5 meters deep (about 33 by 26 by 8 feet). At least 907 prisoners are known to have died in the camp in Krymskaia.⁸ As in other such camps, the Germans screened newly arrived prisoners to separate out the Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst, SD*).⁹

While it was deployed in Serbia, Dulag 172 held Italian military prisoners. The conditions in the camp remained

poor. The prisoners' rations were inadequate and poor sanitary conditions and medical care led to a widespread typhus epidemic in which 380 prisoners were infected and 34 died.¹⁰

Specific information about the date of the camp's dissolution is unavailable, and it may have continued operating until the capitulation on May 8, 1945.

DURCHGANGSLAGER (DULAG) 180

The Wehrmacht established Dulag 180 on March 26, 1941, from Frontstalag 180. It deployed initially to the Generalgouvernement. It received the field post number (*Feldpostnummer*) 00 082 between July 15, 1942, and January 24, 1943. The number was struck on December 4, 1944. After Germany invaded Russia on June 22, 1941, the camp deployed to various locations in Ukraine. In July 1941, Dulag 180 was located in Lutsk (map 9e). In the fall of 1941, it first deployed to Dnepropetrovsk (today Dnipro) (9f) and then Paniutino

(today Paniutyne) (9f). In early 1942, the camp was deployed to Kramatorskaia (today Kramators'k) (9f), and then to Novoekonomicheskoe (today part of Myrnohrad) (9f), Gorlovka (today Horlivka) (9f), and Debal'tsevo (9d). In the fall of 1942, the camp deployed to the northern Caucasus. In October 1942, the camp was located in Lysogorskia (9i),¹ and in December 1942, it was in Piatigorsk (9i).² In 1943 and 1944, the camp again deployed to Ukraine. The Germans disbanded the unit on August 27, 1944.³

Dulag 180 was initially under the 213th Security Division (*Sicherungsdivision*). Beginning in the fall of 1941, it was subordinate to the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 550). From August 11, 1942, the camp was under the authority of the Sixth Army Rear Area Commander (Korück 531).⁴ As of February 10, 1943, the camp was subordinate to the Commander of Prisoners of War District E (*Kommandeur des Kriegsgefangenen-Bezirks E*), and, as of April 4, 1943, it was placed under the Commander of Prisoners of War District W. Beginning on January 1, 1944, it was under the authority of the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*), and, as of February 1, 1944, it was subordinate to the Sixth Army High Command (*Armee Oberkommando*, AOK, 6). On February 12, 1944, it was reassigned to Korück 593 (then under the Sixth Army).⁵

The known camp commandants were Oberst Hans Gaul, Oberstleutnant Friedrich von Mutius (in the camp until June 9, 1942; died in Berlin on February 4, 1945), and Major Hans Vick (at the camp as of June 11, 1942). The deputy camp commanders were Major Fritz Mähnert and Major Alfred Schneider (at the camp until October 25, 1943). The adjutants of the camp commandant were, in chronological order, Hauptmann Hans Theuring (at the camp until June 15, 1941) and Hauptmann Paul Kowaczek (at the camp beginning on August 1, 1941). The counterintelligence (*Abwehr*) officers at the camp were Hauptmann Andreas Beierwaltes, Hauptmann Theodor Krüger, and Hauptmann Karl Machleit (at the camp beginning on March 26, 1941). The camp doctor was Dr. Hermann Siebold. The camp was guarded by personnel from Guard Battalion (*Wachbataillon*) 602; the commander of this battalion, as of February 3, 1942, was Hauptmann Österreich.⁶ In October 1942, the camp staff included 102 men. A total of 215 *Hilfswillige* also served as camp guards.⁷

Dulag 180 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, and lack of proper medical care led to malnutrition and disease, which produced a high mortality rate. Abuse by the guards exacerbated the prisoners' suffering. The Germans regularly screened prisoners in the camp to separate out "undesirables," such as Jews and political commissars, who were shot by the guards. While it was located in Gorlovka, the camp also held accused partisans captured by the Military Police (*Feldgendarmerie*); they were also subsequently shot by the guards.⁸

In the late 1960s and early 1970s, 12 former members of the staff of Dulag 180, including counterintelligence officer Krüger were investigated by the prosecutor's office in Frankfurt am Main. The investigation was dropped on January 27, 1975, due to lack of evidence.⁹

SOURCES Primary source material about Dulag 180 is located in the BA-MA (RW 6: Allgemeines Wehrmachtamt/ Chef des Kriegsgefangenenwesens) and in BArch B (162/8459–8462: "Aussonderung" von Kriegsgefangenen im Dulag 180 in Luck, Dnjepropetrowsk und Gorlowka in den Jahren 1942/43).

DURCHGANGSLAGER (DULAG) 181

The Germans formed Dulag 181 in Germany on June 12, 1942, from Frontstalag 181. It deployed to various locations in Ukraine, including Zaporozh'e (map 9f), Stalino (today: Donets'k) (9f), where it replaced Dulag 162, and Zugres (today Zuhres) (9d). From September to December 1942, the

camp was deployed in Maikop (9h). In the spring of 1943, the camp deployed to Kerch (9h), and, in the spring of 1944, it was in Sevastopol' (9h). The unit received field post number (*Feldpostnummer*) 00 894 between July 15, 1942, and January 24, 1943. The number was struck on July 8, 1944. The Germans disbanded the camp on June 16, 1944.¹ As of August 11, 1942, the camp was subordinate to the Seventeenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 550).²

Dulag 181 held Soviet prisoners of war (POWs). The conditions were similar to those in other camps for Soviet POWs. Meager and poor-quality food rations, overcrowding, and lack of proper medical care led to widespread malnutrition and disease, which led to a high mortality rate. Deliberate abuse by the guards exacerbated the prisoners' suffering. As in other such camps, the Germans screened newly arrived prisoners to separate out Jews and political commissars, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).³

DURCHGANGSLAGER (DULAG) 182

The Wehrmacht established Dulag 182 on April 2, 1941, from Frontstalag 182. The unit was deployed to the occupied Soviet Union following the German invasion on June 22, 1941. From

the end of October 1941 to August 1942, the camp was located in Zaporozh'e (map 9f), with a subcamp in the town of Orekhov (today Orikhiv). In the fall of 1942, the camp was located in Yasinovataya (today: Yasynuvata) (9f). In early 1943, it was in Stalino (today Donets'k) (9f). The camp received field post number (*Feldpostnummer*) 01 265 between July 15, 1942, and January 24, 1943. The number was struck on November 11, 1944.

In the summer of 1941, the camp was subordinate to the 444th Security Division (*Sicherungsdivision*). During the deployment in Zaporozh'e, the camp was subordinate to the Commander of Prisoners of War of the Commander of the Army Group South Rear Area (*Kommandeur der Kriegsgefangenen beim Befehlshaber Heeresgebiet Süd*).

Dulag 182 held Soviet prisoners of war (POWs). On December 20, 1941, the camp held 7,507 prisoners.¹ In late January 1942, there were 4,100, in late February, there were 4,143 prisoners, and in late March, there were 6,207. In late April 1942, 5,166 remained.² The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, inadequate food supplies, forced labor, and a lack of proper shelter or medical care all contributed to a high mortality rate. For example, according to the report of the Commander of the Army Group South Rear Area (*Befehlshaber rückwärtiges Heeresgebiet Süd*) on December 21, 1941, an average of 18 people were dying each day of typhus; in total, there were about 540 deaths in December 1941 alone.³ According to the report of the Commander of the Army Group South Rear Area on January 31, 1942, 12 people were dying in the camp each day; the total was 360 for that month.⁴ In February 1942, 125 prisoners died in the camp, and in March, 157 died.⁵ Overall, from December 1941 to the end of April 1942, around 1,300 prisoners died in the camp; for the entire period of the camp's deployment in Zaporozh'e from late October 1941 until August 1942, the death toll may have been as high as 5,000.

The Germans disbanded the camp on August 5, 1944. During the postwar-West German investigation of crimes committed at the camp in Yasinovataya (which later became Stalag 397), one witness stated that the former commandant of Dulag 182 committed suicide after he learned that he was being investigated for murder, although he did not provide the commandant's name or the date of his supposed death.⁶

SOURCES Primary source material about Dulag 182 is located in BA-MA (RW 6: Allgemeines Wehrmachtamt/Chef des Kriegsgefangenenwesens); BArch B (162/6594; copy at USHMM RG-14.101M.2225.00001983-00002302); GARF (7021-61-63); and DAZPO (r1662-1-4, 9; r1443-1-26, 45, 62, 66, 69).

DURCHGANGSLAGER (DULAG) 183

The Wehrmacht established Dulag 183 on April 8, 1941, from Frontstalag 183.¹ From July to September 1941, the camp was located in Salonika (Thessaloniki) (map 8), and in late September 1941 to late March 1942, it was in Šabac, in occupied Serbia (7). From late March until July 1942, the camp deployed to Defense District (*Wehrkreis*) V (4f). In September 1942, the camp deployed to the occupied Soviet Union, where it was initially located in Kanevskia and then in Eisk (both 9h).² In November and December 1942, the camp deployed to Prokhladnyi (9i).³ In early 1943, the camp deployed to the Taman Peninsula (9h). The order to disband the camp was issued on August 26, 1943.⁴ Dulag 183 inherited Frontstalag 183's field post number (*Feldpostnummer*), 02 457.

During its deployment in Greece, Dulag 183 was subordinate to the Twelfth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 560), and then, as of July 1, 1941, it was under the authority of the Armed Forces Commander, Aegean/Salonika (*Wehrmachtbefehlshaber Ägäis/Saloniki*). While deployed in Serbia, the camp was subordinate to the Armed Forces Commander of Serbia (*Wehrmachtbefehlshaber Serbien*).⁵ While deployed in Defense District V, beginning on March 31, 1942, the camp was under the authority of the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW).⁶ From August 1942, the camp was under the Army Group A Rear Area Commander and the Prisoner of War District Commandant P (*Kriegsgefangenen-Bezirkskommandant P*).⁷ Beginning on November 17, 1942, the camp was subordinate to the First Panzer Army Rear Area

Commander (Korück 531), and, as of January 8, 1943, it was under the authority of the Seventeenth Army Rear Area Commander (Korück 550).⁸

In 1940 and 1941, the camp commandant was Major Georg Pohl, who was replaced by Major (later Oberstleutnant) Altmann. The deputy commandant was Hauptmann Sahler. The camp adjutant was, initially, Oberleutnant Hugo Radke, whose replacement was Oberleutnant Thümmel. The camp officer (from August 1942) was Hauptmann Ernst Herlikofer, the head of the administrative staff was Oberzahlmeister Ludwig Graf, the counterintelligence (*Abwehr*) officer was Hauptmann Dr. Bastian, the camp physician was Oberstabsarzt Dr. Ludwig Schott, his deputy was Unterarzt Dr. Gerhard Pfeiffer, and the commander of the guard company was Hauptmann Wilhelm Vömel. On March 1, 1943, there were 167 persons in headquarters, and the guards consisted of 172 Russian volunteers (*Hilfsswillige*, Hiwis).⁹ On May 22, 1943, there were 159 headquarters personnel, and the camp guard force consisted of 119 Hiwis.¹⁰

While deployed in Serbia and Greece, the camp held British, Greek, and Serbian prisoners. While it was located at Salonika in mid-1941, the camp held British and Greek prisoners who had been captured on Crete. These prisoners were transported to Athens by air, then marched or driven in cattle trucks to Salonika. They were housed in old Turkish army barracks, surrounded by barbed wire. These barracks were in poor shape and lacked electric lights and plumbing. A report from May 27, 1941, indicated that the camp held 10,836 British soldiers (including 359 officers) and 1,530 Serbian prisoners (467 officers), for a total of 12,366 men.¹¹ Additional prisoners were transferred to the camp from other locations in Greece, such as Corinth and Crete, in early June 1941.

Upon their arrival at the camp, the prisoners were faced with inadequate shelter, poor sanitation, overcrowding, poor food supply, and, consequently, disease. The water supply at the camp was contaminated. The prisoners' rations consisted of ersatz tea in the morning, a thin soup (little more than "greasy hot water" according to some prisoners) at noon, and between a fifth and a tenth of a loaf of rye bread, along with three quarters of a biscuit in the evening. These rations amounted to less than 1,000 calories a day, which caused dramatic weight loss among the prisoners; some lost as much as 50 pounds in 3 months. Many also suffered from vitamin deficiency and resultant diseases, such as beriberi.

In an attempt to alleviate their hunger, some prisoners attempted to obtain food from the local Greek population, while others were reduced to selling their possessions in order to get something to eat. The lack of food (as well as other goods, such as tobacco) led to theft, conflict, and distrust among the prisoners. There were additional tensions along ethnic lines; for example, between British and Palestinian or Cypriot prisoners.

The commandant of the camp was described by the British prisoners as "sadistic."¹² Prisoners who were seen outside of the barracks at night, for whatever reason, were frequently shot. Anyone who attempted to escape was shot, and their bodies were left out in plain view of other prisoners as "an object

lesson.”¹³ In the summer and fall of 1941, the prisoners from Salonika were sent to camps in the Greater Reich by train, usually in cattle cars. British and Serbian prisoners were generally sent to camps such as Stalag XVIII D in Marburg (today Maribor, Slovenia) or Stalag XVII A in Kaisersteinbruch, Austria; many prisoners’ final destinations were Stalag VIII B in Lamsdorf (today Łambinowice, Poland) or Stalag VII A in Moosburg, two of the largest prisoner of war (POW) camps in Germany. By August 20, 1941, only 1,800 prisoners remained in the camp.¹⁴

After it deployed to the Soviet Union in August 1942, the camp held Soviet POWs. On October 20, 1942, there were 1,098 Soviet prisoners in the camp, all of whom were in permanent work parties (*Dauerkommandos*).¹⁵ During its deployment in Prokhladnyi, the camp was guarded by subunits of the 836th Reserve Battalion (*Landesschützenbataillon*).¹⁶

In January 1943, the camp sent about 1,000 prisoners from Terek to Krasnodar (792 of whom arrived there alive on January 27, 1943) and the headquarters was transferred via Prokhladnyi, Georgievsk, Mineral’nye Vody, and Armavir to Krasnodar. On January 14, 1943, the advance party of the headquarters reached Korück 550 in Krasnodar and was sent to the Cossack village of Varenikovskaia.¹⁷ On January 19, 1943, the railroad station Krasnaia Strela (near Temriuk, Krasnodarskii krai) was assigned to the camp as the location of the main camp. In early February 1943, 6,904 prisoners from various camps were en route to this camp.¹⁸ Several days later, the Krasnaia Strela site was disbanded, and the main camp was built in the village of Temriuk.

The camp headquarters was primarily occupied with the evacuation of the prisoners through the Kerch Strait to Crimea. Also held in the camp, from March 2, 1943, were civilians who were subject to evacuation to Crimea, including women and children. For the evacuation to Crimea, the prisoners and civilians were sent from the camp to the village of Il’ich or the village of Primorskii, and from there they were transferred to Kerch’, where a reception camp had been set up. The officer in charge of conveying the prisoners from Il’ich to Kerch’ was Hauptmann Otto. Strong points for the transport of the prisoners were also created in the villages of Golubitskaia, Akhtanizovskaia, Fontalovskaia, and Zaporozhskaia. By April 15, 1943, 15,342 prisoners and 5,087 civilians had passed through the camp, of whom 10,977 prisoners and 4,255 civilians were transferred to Crimea.¹⁹

The conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, lack of proper medical care, and mistreatment by the German guards led to malnutrition and disease, which resulted in a high mortality rate. As in other camps, newly arrived prisoners were screened to separate out Jews and Communists, who then were shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD) personnel.²⁰

DURCHGANGSLAGER (DULAG) 184

The Wehrmacht established Dulag 184 on November 23, 1941, from Frontstalag 184.¹ It deployed to various locations in Russia and Belorussia. In Russia, the camp deployed first in the town of Rudnia (map 9b), and, before the end of November 1941, it was transferred to the town of Volokolamsk (9c).² On January 27, 1942,³ and on February 10, 1942,⁴ the camp deployed to the village of Ledna (no location), on April 1, 1942, it was at the Dorogobuzh station (9c),⁵ and on May 20, 1942, it was in Smolensk (9c) in support of Dulag 126.⁶ From July 1942 to January 1943, it was located in Viaz'ma (9c). In Belorussia, the camp deployed to Borisov (German: Borissow; today Barysaw, Belarus) (9b) and Pinsk (9e). The camp received the field post number (*Feldpostnummer*) 03 603 between January 27 and July 14, 1942. The number was struck on September 22, 1944.

The camp was under the control of Army Group Center (*Heeresgruppe Mitte*). Until mid-1942, it was subordinate to the commandant of Smolensk, and, as of July 1, 1942, to the Third Armored Army, and, as of January 22, 1943, to the Fourth Army and Commander of Prisoners of War in Operations Area III (*Kommandeur der Kriegsgefangenen im Operationsgebiet III*). The camp commandant was Major von Rüdiger.

Dulag 184 held Soviet prisoners of war and, at certain times, civilian internees. The conditions in the camp were similar to those in other camps for Soviet prisoners. Overcrowding, malnutrition, unsanitary conditions, and lack of proper medical care led to a high death rate. Abuse by the guards exacerbated the already terrible conditions. While the camp was located in Viaz'ma, 160 prisoners died in July 1942, 520 in August, 760 in September, and 227 in October.⁷ In five weeks alone—from August 15 to September 22, 1942—1,248 prisoners died in the camp. At that time, there were 5,400 prisoners in the camp, of whom 3,500 were deemed “more or less fit for work.” In accordance with the established dietary standards for the period September 21 to 30, 1942, the prisoners were supposed to receive, each week, an average of 1,742 calories, but owing to difficulties with provisions, the number of calories actually totaled 1,500 to 1,600.⁸

Analysis of prisoners’ identification cards that have been preserved suggests that as of August 1943 at least 15,213 prisoners had passed through Dulag 184, and by March and April 1944 at least 4,491 civilians had been in the camp. Analysis of these cards also indicates that in 1943, there was a special camp (*Sonderlager*) in Osintorf (today Dubrouna raën, Vitebsk voblasts’), which was subordinate to Dulag 184.⁹ As in other camps, the Germans screened prisoners to separate out Jews and political commissars, who were then shot near the camp by the guards or the Security Service (*Sicherheitsdienst*, SD).

The exact date on which the Germans disbanded the camp is unknown; it was still in operation as of October 4, 1944.

DURCHGANGSLAGER (DULAG) 185

The Germans established Dulag 185 on March 23, 1941, from Frontstalag 185.¹ After Germany invaded the USSR on June 22, 1941, the unit was deployed to various locations in Belorussia and Russia. In the summer and fall of 1941, the camp deployed to Białystok (map 4c), Stolbtsy (9b), and Mogilev (9b). It was later stationed in Orël and Karachev (both 9c). Beginning in late 1943, the camp was deployed in various towns in Greece, and then in Zagreb (7). The unit received field post number (*Feldpostnummer*) 10 427 between July 15, 1942, and January 24, 1943. The number was struck on March 1, 1945. On November 15, 1944, the Germans ordered the camp to be disbanded.

Beginning in June 1941, the camp was under the 221st Security Division (*Sicherungsdivision*). As of February 1943, the camp was subordinate to the Commander of Prisoners of War

in Operations Area III (*Kommandeur der Kriegsgefangenen im Operationsgebiet III*), and as of November 20, 1943, to the Army Group F Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebiets*, Berück, F). Later it was under the Commander of the Rear Area of Army Group E.² The camp commandant, at least in 1941 and 1942, was Major Wittmer. In 1941 and 1942, the camp was guarded by the 302nd Reserve Battalion (*Landesschützenbataillon*).

While deployed in the occupied Soviet Union, the camp held Soviet prisoners of war (POWs). Conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners were severely undernourished; according to one estimate in November 1941, the prisoners who were assigned to work received around 1,600 calories a day, while the prisoners who were not working received around 1,400. The food in the camp at that time consisted of potatoes, potato flour, millet, and salt. Medical care was also minimal. In November 1941, a delousing station was installed in the camp hospital (*Lazarett*) in an attempt to prevent the spread of typhus among the prisoners; however, its capacity was only about 360 prisoners per day, and therefore only a small percentage of the prisoners could be deloused.³ By the winter of that year, typhus was rampant. The prisoners' housing was also substandard, and shortages of wood meant that the prisoners had no fuel available for heating during the coldest months of the year. Abuse by the German guards exacerbated their problems. This was especially true in the fall of 1941 and the winter of 1941–1942.⁴ For example, between October 21 and November 18, 1941, alone, 1,500 of the 30,000 prisoners died, a death rate of 50 prisoners per day.⁵

As in other camps, the Germans screened prisoners to weed out Jews and political commissars, who they then shot near the camp.⁶ For example, while the camp was deployed in Białystok, 3rd Company of the 322nd Police Battalion, which guarded the camp from July 9 to July 16, 1941, shot 64 Jewish prisoners who were "attempting to escape." In another incident in July 1941, members of Police Battalion 309 shot five prisoners who were also allegedly "trying to escape." On July 10, 1941, the head of the Order Police (*Ordnungspolizei*), Kurt Daluge, visited the camp, accompanied by Generalleutnant der Polizei Riege and SS-Gruppenführer Erich von dem Bach-Zelewski. Daluge gave instructions to form a company of prisoners of Ukrainian nationality to assist in guarding the camp. At that time there were 14,000 prisoners in the camp; 11,000 more arrived on the night of July 12, 1941.⁷

While the camp was stationed in Mogilev in November 1941, "with the commandant's consent," the camp was inspected by Security Service (*Sicherheitsdienst*, SD) Einsatzkommando 8 "for the purpose of bringing to light Jews and active members of political organizations; 196 persons were unmasked and shot."⁸ However, a conflict arose between the camp commandant and the SD as a result of the commandant's reluctance to cooperate with the SD in the matter of handing over "undesirable" prisoners. After the SD lodged a complaint against the camp commandant, Heinrich Himmler ordered an

investigation. This investigation, however, was unsuccessful, evidently because Wittmer was acquainted with Daluge and his wife. The investigation had no effect on Wittmer's career; in 1943 he was already an Oberstleutnant and the deputy Prisoner of War District Commander P (*Kriegsgefangenen-Bezirks-Kommandant P*).

Little information came to light on the unit's time in Greece, but from December 12, 1943, to March 26, 1944, it had a branch camp (*Zweiglager*) on the island of Leros.

DURCHGANGSLAGER (DULAG) 190

The Wehrmacht established Dulag 190 on June 27, 1942, from Frontstalag 190.¹ In June and July 1942, it was deployed to Sumy (map 9f). After it was replaced there by Stalag 308,² in late 1942 and early 1943, the camp deployed to Mariupol' (9h). In the spring and summer of 1943, the camp was

stationed in Kuteinikovo (today Kuteinykove) (9f) with a reception camp (*Auffanglager*) in Amvrosievka (today Amvrosiivka).³ The unit received field post number (*Feldpostnummer*) 32 147 between March 1 and September 7, 1942. The number was struck on February 7, 1944. The Germans disbanded the camp in February 1944. Beginning in the summer of 1942, the camp was subordinate to the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 593), and the Prisoner of War District Commandant E (*Kriegsgefangenen-Bezirkskommandant E*).

Dulag 190 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Meager and low-quality food rations, overcrowding, and lack of proper medical care led to malnutrition and disease, which produced a high mortality rate. Abuse by the guards exacerbated the prisoners' suffering. As in other such camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).⁴

DURCHGANGSLAGER (DULAG) 191

The Wehrmacht formed Dulag 191 on March 22, 1941, and deployed it to Romania.¹ In the spring of 1942, the unit was

located in Dnepropetrovsk (today Dnipro) (map 9f).² Beginning in July 1942, the camp was located in Ostrogozhsk (9d). In the fall of 1943, the camp was located in Zhashkov (today Zhashkiv) (9e).³ The camp received the field post number (*Feldpostnummer*) 32 768 between March 1 and September 7, 1942. The number was struck on December 6, 1944. Beginning in May 1941, the camp was under the authority of the German Military Mission in Romania (*Deutsche Heeresmission Rumänien*); as of May 1942, it was subordinate to the Seventeenth Army; as of June 1942, to the Second Army; and in 1943, to the Fourth Panzer Army.

While deployed in the occupied Soviet Union, the camp held Soviet prisoners of war (POWs). The conditions in the camp, especially while it was located in Ostrogozhsk, were the same as those in other camps for Soviet prisoners. Extremely meager and repulsive food, enormous overcrowding in a small area, lack of proper medical aid, and abuse by the German guards led to mass famine and disease, which in turn produced a high death rate. A former prisoner, Military Physician 3rd Rank Vasili Mamchenko, said the following about conditions in the camp at Ostrogozhsk:

The Germans designated a brickyard for the purpose of housing the Russian POWs, although there were no buildings fit for habitation there. Prisoners were simply herded into the brick-drying shed, which had no windows and no ceiling. The prisoners were not given even a bit of straw for covering the floor. They slept on the bare ground. The sick and wounded found themselves in exactly the same circumstances. The infirmary had no medication and bandaging materials, despite the large number of POWs who fell ill. There were at least 200 patients in the infirmary at all times. From time to time a very small quantity of substitute bandages, made of paper, was handed out. The patients' wounds festered, they became infested with maggots, and gas gangrene developed; there were frequent instances of tetanus. The camp routine was very cruel. The prisoners worked 10 to 12 hours per day, doing excavation work. They were fed *balanda* in the morning and evening: warm water with millet or rye flour, and only a few spoonfuls for each prisoner. Occasionally, as a sop, they cooked the flesh of a dead horse, whose carcass gave off a stench. The German camp doctor, Oberarzt Steinbach, said: "For Russian dogs, the quality of this meat is completely fine." Without possessing qualifications as a surgeon, he practiced surgical operations on the prisoners and killed many. If wounded and sick POWs refused to work, they were beaten half to death. . . . When hungry soldiers stooped on the way to work in order to pick up from the road a beet or potato that had dropped from a cart, the Hungarian escorts shot them. . . . The mortality rate was 30 to 60 persons per day. They died of exhaustion, dysentery, typhus,

and neglected wounds. The total number of dead from the end of August to mid-January was approximately 8,000.⁴

The camp was disbanded on August 27, 1944.⁵

DURCHGANGSLAGER (DULAG) 192

The Germans created Dulag 192 in March 1942, from Frontstalag 192. In April, the camp was transferred to Ukraine and deployed to Konotop (map 9f).¹ As of August 21, 1942, Dulag 192 deployed to Rostov (9i).² In 1943, the camp was stationed in eastern and southern Ukraine. The Germans disbanded the camp on September 15, 1943.³ The unit received field post number (*Feldpostnummer*) 33 063 between March 1 and September 7, 1942. The number was struck on October 25, 1943.

From April to July 1942, the camp was subordinate to the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 580). After a transfer in July to the rear area of Army Group A, the camp was subordinate into 1943 to the 454th Security Division (*Sicherungsdivision*), Prisoner of War District Commander P (*Kriegsgefangenen-Bezirkskommandant P*), Commander of Prisoners of War in

Operations Area I (*Kommandeur der Kriegsgefangenen im Operationsgebiet I*), and Commander of Prisoners of War in Operations Area II.

Dulag 192 was used to hold Soviet prisoners of war (POWs). As of October 20, 1942, there were 3,629 prisoners in the main camp and 4,570 prisoners in permanent labor detachments (*Dauerkommandos*).⁴ The conditions in the camp were similar to those in other camps for Soviet POWs. Meager and low-quality food rations, severe overcrowding, and lack of proper medical aid led to mass starvation and disease, which led in turn to a high mortality rate. Abuse by the German guards exacerbated the prisoners' suffering. As in other such camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).⁵

DURCHGANGSLAGER (DULAG) 200

The Wehrmacht formed Dulag 200 on August 13, 1941, from Frontstalag 200, and transferred it to the Army Group North Rear Area (*Heeresgebiet Nord*).¹ Until June 1942, it deployed to Narva (map 9a),² with a subcamp in Kingisepp. In June 1942, the camp moved to Priluki, in Ukraine (9f). Dulag 200 received field post number (*Feldpostnummer*) 28 846 between February 15 and July 30, 1942. The number was struck on

August 30, 1943. While it was located in Narva, the camp was subordinate to the Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583).

Dulag 200 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, malnutrition, unsanitary conditions, and lack of proper medical care led to widespread starvation and disease, which produced a high mortality rate. Abuse by the guards exacerbated the prisoners' suffering. However, a German official who visited the camp in Narva reported on May 20, 1942, that the prisoners' quarters, the kitchen, and the delousing facilities in the camp were in good shape. The camp was guarded by Estonian Selbstschutz personnel.³

On July 4, 1942, the camp was redesignated as the headquarters of the Azerbaijani Eastern Legion (*Ost-Legion*) and ceased to function as a POW camp.

DURCHGANGSLAGER (DULAG) 201

The Wehrmacht formed Dulag 201 in March 1941, and for the next two years it deployed to various locations in occupied Poland and the Soviet Union. On July 11, 1941, the camp deployed to Lubień Małopolska (map 5); as of July 15, 1941, it was in Przemyślany (today Peremyshliany, Ukraine) (5); from July 18 to September 19, in Zhitomir (9e); and on September 25, 1941, in Kiev (9e).¹ On October 11, 1941, the camp was replaced by Stalag 339, but the staff remained in Kiev until the end of the month. On October 30, 1941, the unit was en route to Romny (9f). On November 30, 1941, it redeployed to Char'kov (Russian: Khar'kov; today Kharkiv, Ukraine) (9f), where it remained until the end of May 1942. Between June 1 and June 26, 1942, the camp was located in Taranovka (today Taranyivka, Khar'kiv's'ka oblast') (9f). On July 13, 1942, it was in Rossosh' (9d); on July 16, 1942, in Nikolaevka (9f); and on

July 24, 1942, it was en route to Bokovskaya (9d). The camp operated in Bokovskaya from July 26 to August 7, 1942. On August 11, 1942, the unit was three kilometers (under two miles) northeast of Chistiakovo (9d); from August 15 to September 7, 1942, in Manoilin (9d); and from September 25 to October 9, 1942, in Ermokhin (no location), with a subcamp (*Nebenlager*) in Manoilin. In February 1943, AGSSt 5, which had been disbanded, was merged with the camp. In the spring of 1943, the camp was deployed in Mariupol' (9h) and had a reception camp (*Auffanglager*) in Fedorovka (Rostovskaya oblast'). As of July 23, 1943, the camp was located in Pavlograd (9f).² From the fall of 1943 until the summer of 1944, the camp's deployment sites were Marganets (9h), Voznesens'k (9g), Vinnitsa (9e), Proskurov (today: Khmelnytskyi) (9e), Przemyśl (5), Galich (today Halych) (5), Drohobych (5), and Turka (5). From the summer of 1944 to the beginning of 1945, it was in Uzhhorod, Košice, and Krakau (today: Kraków, Poland) (all 5). In 1945, the camp was deployed first to Löhnberg (4d) and then in March to Elmenhorst (4a) and Gross Kummerfeld (4a), where it was disbanded, perhaps as late as May 8, 1945.³ In any case, records indicate that it was still in service on February 1, 1945. Dulag 201 received field post number (*Feldpostnummer*) 29 176 between July 31, 1942, and February 9, 1943. The number was struck on March 22, 1945.

In June–October 1941, the camp was subordinate to the 454th Security Division (*Sicherungsdivision*), and then to the Sixth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 585).

As of June 3, 1941, the headquarters of the camp included 8 officers, 4 government officials, and 85 noncommissioned officers and enlisted men. The headquarters had 15 trucks, 5 motorcycles, 10 horse teams, and 20 horses.⁴ The first commandant of the camp was Major der Landwehr Reiche; he was succeeded in September 1941 by Major zur Verfügung Pawliska. In 1942, the commandant was Major Dr. Eugen Witt. He was replaced at the end of February 1943 by Major zur besonderen Verfügung Ludwig Euler, who was succeeded in the summer of 1944 by Oberstleutnant Dr. Erwin Topf. As of September 20, 1941, the deputy commandant was Hauptmann zur Verfügung Renovanz; the adjutant was Oberleutnant der Reserve Behr; the camp doctor was Stabsarzt der Reserve Dr. Pechtold; the assistant camp doctor was Dr. Hesselmann; the head of the "Arbeit" group was Hauptmann zur Verfügung Leinemann; the head of the "Abwehr" group was Hauptmann der Reserve zur Verfügung Bernstorff; Bernstorff's assistant was Oberleutnant der Reserve zur Verfügung Kulow; the 1st aide-de-camp (1. *Ordonnanz Offizier*) was Hauptmann der Landwehr zur Verfügung Reinhold; the 2nd aide-de-camp (2. *Ordonnanz Offizier*) was Oberleutnant der Reserve zur Verfügung Kortlüke; the 3rd aide-de-camp (3. *Ordonnanz Offizier*) was Oberleutnant zur Verfügung Dr. Riesenberger; the head of the mail censorship (*Postkontrolle*) group was Oberleutnant zur Verfügung Dr. Fichtner, whose deputy was Oberleutnant zur Verfügung de Angelis.⁵

Dulag 201 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for

Soviet POWs. Overcrowding, malnourishment, unsanitary conditions, lack of proper medical care, and abuse by the guards led to malnutrition and disease, which produced a high mortality rate. As in other camps, the Germans screened the prisoners to separate out Jews and political commissars, who were then shot near the camp by a Security Service (*Sicherheitsdienst*, SD) detachment or the camp guards.⁶

DURCHGANGSLAGER (DULAG) 202

The Germans established Dulag 202 on March 28, 1941, from Frontstalag 202, in Deutsch-Neuwelt, in Defense District (*Wehrkreis*) XXI. The unit received the field post number (*Feldpostnummer*) 29 731 between February 15 and July 30, 1942; that number was struck on April 11, 1944. On April 19, 1941, the camp deployed to occupied Serbia, where by May it was located in Nisch (Serbian: Niš) (map 7). (Some confusion arises from internal correspondence that refers to the camp as Stalag 202 or Frontstalag 202 at this time. Those designations are not accurate.) On September 21, 1941, the camp deployed to Budești, Romania (9g).

In April 1942, the unit moved to Ukraine and initially deployed to Dniprozherzhinsk (today Kamians'ke) (9f). In May 1942, it was in Dnepropetrovsk (today Dnipro) (9f), and from June 6 to July 15, 1942, in Nikitovka-Slaviansk (today Mykityivka, Donets'ka oblast') (9f), where it may have also operated a camp for civilian internees (records on this matter are unclear). Next, it was deployed in Lisichansk (9d), with a branch camp in Artëmovsk (today Artemivs'k, Luhans'ka oblast'). On September 18, 1942, the camp was located in Pavloskaia (9i); on October 4, 1942, it was in Tikhoretsk (9i); on October 7, 1942, it was in Atamanskaia (9h); on October 21, 1942, it was once again in Pavloskaia, and then in Voroshilovsk (today Stavropol') (9i).² In 1943, the camp was deployed in the rear area of the Ninth Army.³ As of May 29, 1943, the camp was deployed in Briansk (9c), and, in the summer of 1943, it was in the village of Uleml' (9c). The camp was disbanded on November 19, 1943.

The first Dulag 202 camp commandant was Major Walter von Nerè. From January 22 to March 10, 1942, the commandant was Major Ernst Morre. He was succeeded by Oberstleutnant Wilhelm Kniebe, Oberst Max Capesius, and Oberstleutnant Gerhard Idel. The counterintelligence (*Abwehr*) officers were Hauptmann Carl Baumann, Hauptmann Dr. Walter Besemüller, Hauptmann Dr. Hermann Bode, Hauptmann Albert Fahlbusch, and Hauptmann Hermann Knörr. The head of the labor deployment group was Hauptmann Adolf Springer. The camp doctor was Oberstabsarzt Dr. Paul Dehnicke.⁴

During the unit's deployment in Serbia, it was under the authority of the Armed Forces Commander Serbia (*Wehrmachtbefehlshaber Serbien*). While stationed in Romania, the camp was subordinate to the German Military Mission in Romania (*Deutsche Heeresmission Rumänen*) and Prisoner of War District Commander A (*Kriegsgefangenen-Bezirkskommandant A*). From May 15, 1942, the camp was under the authority of the Commander of the Rear Area of the Seventeenth Army (*Kommandant rückwärtiges Armeegebiet*, Korück, 550). While stationed in the northern Caucasus, the camp was subordinate to the 454th Security Division (*Sicherungsdivision*) and the Prisoner of War District Commandant P (*Kriegsgefangenen-Bezirkskommandant P*). In 1943, the camp was subordinate to the Ninth Army Rear Area Commander (Korück 582).

From April to June 1941, the camp held Serbian prisoners of war (POWs). Beginning in July 1941, the camp held Soviet prisoners. As of October 20, 1942, in the camp at Voroshilovsk, 988 prisoners were in the main camp and 380 were in permanent work detachments (*Dauerkommandos*).⁵ At that time, the camp was guarded by Company 1 of the 876th Reserve Battalion (*Landesshützenbataillon*).⁶ The conditions in the camp were similar to those in other camps for Soviet prisoners. Meager and low-quality food rations, overcrowding, and lack of proper medical care led to widespread malnutrition and disease, which produced a high mortality rate. Abuse by the guards exacerbated the prisoners' suffering. As in other camps, the Germans screened the prisoners to separate out

Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).⁷ For example, on August 20, 1942, an SD detachment shot 122 Jewish prisoners in Lissichansk.⁸

DURCHGANGSLAGER (DULAG) 203

The Wehrmacht formed Dulag 203 on March 14, 1941, from Frontstalag 203. The camp deployed to Grünhagen (today Kowalewo, Poland) (map 4c), in Defense District (*Wehrkreis*) XXI. In late May 1941, the camp headquarters was moved to Otwock, in the Generalgouvernement (5). In early 1941, the camp headquarters was located in Góra Puławska (5), and in late June and early July 1941, it was in Bielsk Podlaski (4c), where it began to operate as a prisoner of war (POW) camp. At that time, the camp was guarded by personnel from Company 2 of the 974th Reserve Battalion (*Landesschützenbataillon*). On

July 9, 1941, the camp headquarters was transferred to Slutsk (9b), where it stayed for several days. From July 20 to mid-September 1941, the camp deployed to Kokhanovo (today Kokhanava, Vitebsk voblasts') (no location) and then in Zhuravichi (9c). Finally, beginning in October 1941, it was in Krichev (9c).¹ In early 1943, the camp was transferred to Mogilev (9b), where the Germans disbanded it on September 20, 1944. Dulag 203 received field post number (*Feldpostnummer*) 30 439 between February 15 and September 21, 1942. The number was struck on September 22, 1944.

In the second half of March 1941, the camp was subordinate to the Commander of Prisoners of War in Defense District XII. Beginning on March 28, 1941, the camp was under the Commander of POWs in Defense District XXI. From July 3 to September 17, 1941, and from December 10, 1941 to February 5, 1943, the camp was under the authority of the 286th Security Division (*Sicherungsdivision*); between September 18 and December 9, 1941, it was subordinate to the 221st Security Division. From February 6, 1943, to June 9, 1944, the camp was subordinate to the Commander of Prisoners of War in Operations Area III (*Kommandeur der Kriegsgefangenen im Operationsgebiet III*). From June 10 to September 20, 1944, the camp was under the authority of the Representative for Prisoner of War Affairs with the High Command of Army Group Center (*Beauftragter für das Kriegsgefangenenwesen beim Oberkommando der Heeresgruppe Mitte*).²

The camp commandant from December 1940 to the end of November 1941 was 65-year-old Major Johannes Gut-schmidt (d. 1961). His successor, from December 1941 to September 1943, was 57-year-old Major Hartwig von Stietencron (d. 1952). From September 18, 1943, to September 20, 1944, the camp commandant was Oberstleutnant Johannes Burkhardt (d. 1950). The camp adjutant from July 1941 to December 1942 was Hauptmann Dr. Floess (d. 1945). The counterintelligence (*Abwehr*) officer from late July 1940 to April 1943 was Hauptmann Adolf Thias (d. 1960). The camp doctors were Dr. Adolf Frese, Dr. Werner Gerhardus, Dr. Gernot Grieben, Dr. Johannes Kiske, Dr. Peesker, and Dr. Johannes Roeder.³

Dulag 203 held Soviet POWs. The conditions in the camp were similar to those in other camps for Soviet POWs. Meager and low-quality food rations, overcrowding, and lack of proper medical care led to widespread malnutrition and disease, which produced a high mortality rate. Abuse by the German guards exacerbated the prisoners' suffering.

While the camp was deployed at Krichev, the prisoners lived in wooden barracks. Wood and straw were in short supply, so the prisoners had to sleep on the floor of the barracks. As of November 1941, the Germans planned to decrease the number of prisoners in the camp to around 6,000, so that enough beds would be available for all prisoners; however, it is unclear whether enough prisoners were deported from the camp during the last weeks of 1941 to reach this target. The prisoners were on the brink of starvation by mid-November, as the prison bakery was unable to obtain enough grain to make bread to feed all of the prisoners.⁴

In the camp in Krichev in late 1941, 60 to 70 prisoners died every day; around 18,000 prisoners are estimated to have died in Dulag 203 at Krichev.⁵ As in other such camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).⁶ One witness testified that Commandant Gutschmidt became very agitated about these selections but his misgivings had no effect on policy.

In 1970, the public prosecutor's office in Hannover initiated an investigation of former members of the camp staff suspected of participating in the selections of "undesirable" prisoners. In 1980, the investigation was discontinued for lack of evidence.⁷

DURCHGANGSLAGER (DULAG) 205

The Wehrmacht established Dulag 205 from Frontstalag 205 on March 18, 1941.¹ From 1941 to 1943, the camp deployed to the occupied eastern territories. On July 11, 1941, the camp was located in Lubień Wielkopolska (map 4c); on July 15, 1941, it was in Przemysłany (today Peremyshliany, Ukraine) (5); from July 25 to September 19, 1941, it was in Berdichev (9e); and on September 25, 1941, it was in Darnitsa (9e).² From mid-October 1941 to May 1942, the camp was deployed in Poltava (9f), and then in Krasnograd (9f) and in the village of Dergachi (today Derhachi) (9f). From July to November 1942, it was in Rossosh' (9d), and, in late fall 1942 and winter of 1942–1943, it was in the village of Alekseevka (9d). Dulag 205 received field post number (*Feldpostnummer*) 18 035 between July 31, 1942, and February 9, 1943. The number was struck between February 10 and August 23, 1943.

In the summer of 1941, the camp was subordinate to the 454th Security Division (*Sicherungsdivision*). While it was deployed in Poltava, the camp was subordinate to the Commander of Prisoners of War with the Commander of the Army Group South Rear Area (*Kommandeur der Kriegsgefangenen beim Befehlhaber Heeresgebiet Süd*). From May 1942 on, the camp was under the authority of the Sixth Army.

As of May 29, 1941, the camp staff consisted of 11 officers and 124 noncommissioned officers and men; it had 14 motor vehicles, 10 horse teams, 2 horses, and 21 motorcycles. The first commandant of the camp, from September 1940 until May 1942, was Oberst Hans Jauch (1883–1965). He was replaced by Oberst Rudolf Kerpert (1886–1944; taken prisoner at Stalingrad on January 31, 1943, and sentenced to death on October 10, 1944, by the military tribunal of the 3rd Baltic Front). At least in the summer of 1941, the deputy commandant of the camp was Hauptmann der Reserve (d. R.) Schwenke, the adjutant was Oberleutnant d. R. zur Verfügung Eckhoff, the camp doctor was Oberarzt d. R. Braun, the assistant camp doctor was Dr. R. R. Ficus, the head of the labor group was Oberleutnant d. R. zur Verfügung Krausbauer, the head of the counterintelligence (*Abwehr*) group was Oberleutnant d. R. zur Verfügung Stieghorst, the 1st aide-de-camp (*Ordonnanzoffizier*) was Oberleutnant d. R. Richter, the 2nd aide-de-camp was Oberleutnant d. R. Ebert, the 3rd aide-de-camp was Oberleutnant d. R. Schulz. In 1942, Hauptmann Wilhelm Langheld (1891–1943; sentenced to death by the military tribunal of the Fourth Ukrainian Front and hanged in Khar'kov on December 19, 1943) became head of the counterintelligence group, and Oberleutnant Otto Meder became the camp adjutant.

Dulag 205 held Soviet prisoners of war (POWs). As of October 9, 1941, the camp contained 20,000 prisoners,³ and on December 20, 1941, there were 9,271.⁴ At the end of January 1942, after more than 2,000 prisoners were taken away, there were 5,835. At the end of January, 5,414 prisoners were in the camp, and, at the end of March, 5,769. At the end of April, after more than 1,000 prisoners were sent to Germany for forced labor, there were 4,774 prisoners.⁵

The conditions in the camp were similar to those in other camps for Soviet prisoners. Overcrowding, malnutrition, unsanitary conditions, lack of proper medical care, and abuse by the German guards led to widespread starvation and disease, which produced an extremely high mortality rate. For example, according to a report by the commander of the Army Group South Rear Area, dated December 21, 1941, 21 people were dying in the camp each day, mainly of typhus. In total, there were about 630 deaths in December.⁶ That number had increased to 42 per day as of January 31, 1942, and 1,260 for the entire month.⁷ In February 1942, 565 prisoners died in the camp, and in March there were 267 deaths.⁸ In total, from December 1941 to the end of April 1942, around 3,000 prisoners died in the camp. About 5,000 prisoners are estimated to have died during the camp's deployment in Poltava.

A resident of Rossosh', Vasilii Skorik, reveals the conditions in the camp while it was deployed there in his testimony, which he gave on September 5, 1943:

After the taking of the town of Rossosh by the German fascist occupiers, on the grounds of our kolkhoz—"Put' Lenina" [Lenin's Way]—the military authorities of the German fascist occupiers set up a concentration camp. Kolkhoz buildings were used for this concentration camp: the stable, the cowshed, the pigpen, the forge, and four granaries. All these structures and the yard in their midst, which had an area of around 2 to 2.5 hectares [about 5 to 6 acres], were surrounded by barbed wire. In this concentration camp, by July 10, 1942, were confined Red Army soldiers and civilians, around 10,000 to 11,000 persons in all. From July 10, 1942, through September 1, 1942, an average of about 12,000 to 13,000 persons were imprisoned in this concentration camp on a daily basis, with minor fluctuations in these numbers. From September 1, 1942, through November 20, 1942, the daily average was about 5,000, and from November 20, 1942, to the day of the liberation of Rossosh' by the Red Army, the average number of prisoners was about 1,000, 700, and 500. Until November 20, 1942, this concentration camp was run by the Germans, but from November 20, 1942, until January 15, 1943, it was run by the Italians. . . . The majority of the prisoners, because of the shortage of accommodations, were outdoors in the yard of the concentration camp, even in cold or wet weather. They fed the prisoners poorly. They forced the prisoners to do

various kinds of heavy work involving moving large quantities of soil. For the slightest disobedience toward the concentration camp guards and for refusal to work, the prisoners were beaten terribly in every way, shot, and hanged. . . . Overall, I can't say precisely how many of the prisoners in the concentration camp on the grounds of the "Put' Lenina" kolkhoz were shot by the fascist dogs, but the total was at least 1,500.⁹

A report by the chief of the Main Administration of Counterintelligence (SMERSH), Viktor Abakumov, to the deputy chairman of the Council of People's Commissars of the USSR, Andrei Vyshinskii, dated September 2, 1943, reveals information about the conditions in the camp in Alekseevka:

In the Alekseevka camp, planned for 1,200 persons, were imprisoned up to 4,000 Soviet POWs, accommodated in incredibly crowded and horrible, unsanitary conditions. As stated by the German officers Kerpert, Kunowski, Langheld, and Meder, the Soviet POWs present in Dulag 205 were half-starved, and starting in early December 1942 the command of the German Sixth Army, in the person of chief of staff Generalleutnant Schmidt, completely ceased supplying the camp with provisions; the result was a massive death rate, due to starvation, among the POWs. After December 5, 1942, the prisoners' death rate from starvation reached 50 to 60 persons per day, and by the time of the camp's liberation by Red Army troops, around 3,000 had died.

The former camp commandant, Kerpert, stated when examined on July 23 of the same year: "The POWs were accommodated in incredibly crowded conditions. They had absolutely no possibility of lying down and slept in a seated position. . . . Starting on December 5, 1942, real starvation began among the prisoners, and as a result of that the death rate soared. From December 10 on, around 50 people died each day. The corpses of the POWs who had died in the night were tossed out of the dugouts every morning, and they were taken outside the boundaries of the camp and buried."

This is confirmed by Oberleutnant Meder, who also stated that he reported more than once on the situation created in the camp to the Oberquartiermeister of the German Sixth Army, Kunowski, but the latter took no steps at all to provide the camp with food and told Meder on one occasion that the prisoners had to be killed. In addition, Kerpert, Langheld, and Meder testified that German guards beat the Soviet prisoners for minor infractions, for sluggishness at work, and also when they were guilty of nothing at all. The prisoners, driven mad by hunger, were tormented by dogs to establish "order" during the distribution of food, prepared from various types of carrion. Langheld said that while conducting interrogations of the prisoners, he himself, his Feldwebel, and the interpreter beat the Russian prisoners of war to obtain

information of military significance from them. Langheld admitted that he, through his agents, provoked escape attempts, after which the prisoners were shot. Such practices of violence, humiliation, murder, and provocation were employed not only in the Alekseevka camp but also, as was well known to Kunowski, Langheld, and Meder, in other camps.

In the process of the investigation of Kerpert, Langheld, and Meder, former Red Army servicemen were placed in the Stalingrad special camp and examined, for instance, K. S. Krupachenko, K. K. Pisanovskii, I. D. Kasinov, S. M. Kucheriaev, and A. A. Alekseev were held in Dulag 205 for an extended period of time while in German captivity. These individuals testified to the very high death rate among the prisoners as a result of starvation and savage treatment of the Russian prisoners of war on the part of the German command. For example, A. A. Alekseev, a former Red Army serviceman, stated when examined on August 10, 1943:

There was a high death rate in the camp, the reason for which was as follows: during the entire time of my presence in the camp, the prisoners were given no bread or water at all. . . . Instead of water, they gathered dirty, bloodstained snow in the area of the camp, after which the POWs fell sick en masse. There was no medical aid. I personally had four wounds, and despite my repeated requests, no aid was provided, and my wounds festered. The German sentries fired at the POWs without warning. I personally saw one POW, whose name I don't know, attempting during the food distribution to cut off a bit of horsehide with a knife—he was noticed by a sentry, who fired at point-blank range at the POW and killed him. There were many such instances. We slept on the ground in the dirt, and there was absolutely no place to get warm in cold weather. They took away the POWs' felt boots and warm clothing and in exchange gave us torn shoes and clothes removed from people who had been killed and who had died. . . . Many of the POWs, unable to endure the horrors of the situation in the camp, went mad. Around 150 people died each day, and during the first part of January 1943, 216 died in a single day, as I was told by workers in the camp medical unit. The German command of the camp tormented the prisoners with dogs, German Shepherds. The dogs knocked down POWs who had become weak and dragged them through the snow, while the Germans stood there and laughed at them. Public shootings of POWs were practiced in the camp . . .¹⁰

Oberleutnant Meder was taken prisoner on January 31, 1943, at Stalingrad, and sentenced to death on October 10, 1944, by the military tribunal of the Third Baltic Front.

DURCHGANGSLAGER (DULAG) 220

The Wehrmacht established Dulag 220 on July 18, 1941, from Frontstalag 220.¹ On August 1, 1941, the unit was redesignated as Dulag 220 z.b.V. (*zur besonderen Verwendung*: “for special employment”) and was deployed to Gomel’ (map 9c).² In 1943, the camp was located in the village of Shui (9c). The order to disband the camp was dated September 25, 1943, but records indicate that it was still in operation as late as November 15. Dulag 220 received the field post number (*Feldpostnummer*) 01 813 between January 27 and July 14, 1942. The number was struck on December 17, 1943.

While deployed in the USSR, the camp was subordinate to the Fourth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 559), to Security Brigade (*Sicherungsbrigade*) 203, and to the Prisoner of War District Command J (*Kriegsgefangenen-Bezirks-Kommandant* J). The camp commandant was Oberstleutnant Schmidt; the adjutant was Hauptmann Both.

Dulag 220 held Soviet prisoners of war (POWs). In Gomel’, the camp held 8,500 POWs at the beginning of September 1941, of whom 3,000 slept under a roof and 5,000 stayed out in the open. Two thousand five hundred of the prisoners were employed as forced laborers. Only 30 soldiers guarded the camp.³ Those who lived inside were only marginally better off than those outside. The camp was located on the grounds of a former cavalry barracks. Prisoners were housed in the stables, which had no doors, no panes in the windows, and no heat. In these stables, the prisoners slept on bare plank beds, side by side.

The prisoners were fed a soup (*balanda*) made of chaff and flour dust from buckwheat husks, and 140 grams (5 ounces) of bread baked from the same flour twice a day. From time to time the soup was made from rotten, frozen, unpeeled potatoes with the addition of horse bones and the flesh of unborn foals and calves taken from the wombs of animals that had been killed. No medical aid was provided to the prisoners, although a “hospital” was set up in the camp for the sake of appearance. The leather shoes of all the prisoners were taken away from them and many suffered from frostbite during the winter. Both sick and healthy prisoners were used for forced labor, building fortifications around the town and repairing the railroad tracks. Prisoners who lagged along the way or collapsed from exhaustion while at work were shot or stabbed with bayonets by the escorts.⁴ Malnutrition and disease were widespread, leading to a high mortality rate. In November 1941, an average of 350 people died per day,⁵ and, in early December 1941, the death rate reached 400 a day. On some days it was as high as 700.⁶ At that time there were 12,857 prisoners in the camp, of whom 5,000 were working as forced laborers.⁷ During the deployment in Gomel’, the headquarters of Dulag 220 was also used, at least in the spring of 1942, for fighting against partisans.

In 1943, the camp was located in the village of Shui. A former POW, Evgenii Belousov, recalled his stay in the camp at Shui:

On March 23 [1943], we reached the village of Shui, at the edge of which was located a camp for prisoners of war. The camp was surrounded by 2 rows of barbed wire, with towers at the corners. On the gates of the camp was written “Dulag-220.” Behind the barbed wire were 2 barracks, in which POWs were housed. There was also a barracks standing off to one side, which contained a bath with a place for drying clothes, a washbasin, and a medical unit with beds for the sick and wounded. Next to the gates stood a house for the guards and the camp commandant. In the camp there was a square where all the POWs could be lined up. Here, every day, they all were counted and taken away to work. In the commandant’s office, all those who had arrived were recorded in a register: last name, first name, patronymic, military rank, unit number, place of residence. The officers were immediately sorted out and sent to another camp. In the barracks, which had been knocked together from boards, were solid plank beds in two tiers, made of round, small logs. On top of them was some straw. If a prisoner had no clothes, or if his clothes were tattered, they gave him used German army clothing. The prisoners were forced to work every day, with the exception of Saturday and Sunday. They worked in the forest, felled birch trees, sawed them into rough chunks, and split the big ones. The meter-long chunks were piled up in stacks and burned to make charcoal, which was sent to Germany. I worked in this camp until June 10, 1943. Then some of us, including me, were sent to the town of El’nia.⁸

DURCHGANGSLAGER (DULAG) 226

The Wehrmacht created Dulag 226 on May 5, 1943, from AGSSt 25 in Defense District (*Wehrkreis*) I. In November 1943, the camp deployed to northern Italy. While there, the camp was located in Pissignano and in Campello sul Clitunno (map 6), having taken over the facilities of the Italian-run Prisoner of War Camp (*Prigione di Guerra*, P.G.) 77. Dulag 226 received field post number (*Feldpostnummer*) 29 950 between February 10 and August 23, 1943; the number was struck on February 12, 1945. The camp was subordinate to the Tenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 594). The camp commandant was Oberst Heinrich Lehnard until February 1944.

The Italian camp P.G. 77 appears to have been principally a tent camp with few permanent structures.¹ Under German control, the camp held both Italian military internees and Allied prisoners of war (POWs), many of whom had been there at the time of the Italian capitulation, and some of whom were recaptured escapees from other camps.

Allied prisoners reported inadequate conditions after the Germans took over: overcrowded tents with no beds (though that situation improved later on), small rations of low-quality food, little protection against the cold, and primitive latrine facilities. No records survive of the treatment that Italian prisoners received, but Italian internees were generally treated harshly by the Germans. Most prisoners remained only for a short time before being transferred to Germany.

The Germans disbanded the camp on November 19, 1944.

DURCHGANGSLAGER (DULAG) 230

The Wehrmacht formed Dulag 230 in September 1941 from Frontstalag 230. It deployed to Viaz'ma (map 9c) and then, in April 1942, to Orsha (9b). In Orsha, it was not initially used as a prisoner of war (POW) camp but instead as a site for equipping and managing sites for quartering military units.¹ Later, it deployed to Vitebsk (9b) and Rzhev (9c), and at one time it had a subcamp in Iartsevo (Iartsevskii raion, Smolenskaia oblast') and in the village of Prechistoe (Dukhovshchinskii raion, Smolenskaia oblast').² On September 20, 1944, the camp was reorganized as AGSSt 44.³ Dulag 230 received field post number (*Feldpostnummer*) 20 054 between February 15 and July 30, 1942. The number was struck on September 22, 1944.

The camp was subordinate to the 3rd Panzer Army and Prisoner of War District Commandant J (*Kriegsgefangenen-Bezirks-Kommandant J*), the 286th Security Division (*Sicherungsdivision*), and, in 1944, to the Commander of Prisoners of War in Operations Area III (*Kommandeur der Kriegsgefangenen im Operationsgebiet III*).

Dulag 230 held Soviet POWs. The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, malnutrition, unsanitary conditions, and lack of proper medical care, led to widespread starvation and disease, which produced a high mortality rate. For example, while the camp was deployed in Viaz'ma in mid-January 1942, it held 5,000 prisoners, of whom 60–100 died each day. There were no stocks of winter supplies, the camp received no food supplies, and 4,200 prisoners were classified as unfit to work.⁴ In the camp's three infirmaries, according to the lists of deceased prisoners, 2,153 prisoners died in January 1942, 643 died in February, and 949 died in March.⁵ As in other such camps, the Germans screened the prisoners to separate out Jews and political commissars, who were executed near the camp by the guards or the Security Service (*Sicherheitsdienst*, SD).

In late 1943 and in early 1944, the camp was located in Vitebsk and was used as both a prisoner of war camp and a transit camp for members of the civilian population who were suspected of giving aid to the partisans. After interrogation by the SD, the civilians held in the camp were deported to the Majdanek or Auschwitz concentration camps.⁶

In early 1944, all residents of Vitebsk who were unfit for work were placed in the camp. In total, there were approximately 12,000 prisoners, including people who had typhus and other infectious diseases. By order of General Friedrich Gollwitzer, the commander of the LIII Army Corps, and Oberst Schmidt, the corps chief of staff, the surviving prisoners in the camp were used as human shields during the Soviet offensive of that spring; for this purpose, they were placed in another camp closer to the front line, near the Krynska railroad station (Liozno raen, Vitsebskaia voblasts'). About 4,000 people perished in this camp; the remaining prisoners were liberated by the attacking Soviet troops. A witness questioned in this case, I. Solov'ev, testified that "in April 1944, I and my family, consisting of my wife and four children, came down with typhus. From the Letsy station they took us all to Vitebsk and put us in the same hospital, where we received no treatment at all. In early June, we and other typhus patients were sent to the Vitebsk station, where we were loaded into a train and taken to the front line." Witness A. Zhuravskii testified that "in March 1944, the Germans established a death camp in Vitebsk. In early June 1944, I was one of 12,000 people who were taken to the front line, to the Aleksandrovskii forest, where the Germans killed 4,000 people, while the rest were herded to the front line, as a 'human shield,' and consequently found themselves on the side of the Soviet troops."⁷

DURCHGANGSLAGER (DULAG) 231

The Wehrmacht formed Dulag 231 on March 19, 1941, from Frontstalag 231.¹ It was first deployed in Poland in Defense District (*Wehrkreis*) XXI. After the German invasion of the Soviet Union on June 22, 1941, it deployed to occupied Belarus. In July 1941, the camp was located in Volkovysk (map 4c); in August 1941, it was in Dokshitsy (9b); and in October and November 1941, it was in Viaz'ma (9c).

From December 1941 to April 1942, Dulag 231 was in Smolensk, but it was not used as a prisoner of war [POW] camp there. The camp commandant, Major Gutschmidt, was appointed commandant of one of the defensive sectors of the town of Smolensk on January 10, 1942, and he spent the following two months mainly preparing his sector and training the rear area soldiers in his sector to function as defensive forces.²

From April to June 1942, the camp was once again deployed at Viaz'ma.³ From July 1942 to the spring of 1944, the camp was located in Millerovo (9d), Volchansk (today Vovchansk) (9d), Poltava (9f), Kremenchug (9f), Charkow (Russian: Khar'kov; today Kharkiv, Ukraine) (9f), Kirovograd (today Kropyvnyts'kyi) (9f), and Pervomais'k (9g).⁴ The camp was disbanded on October 11, 1944 (although the order to disband it had been issued on August 27, 1944) and converted into AGSSt 57.⁵ Dulag 231 received field post number (*Feldpostnummer*) 21 260 between February 15 and July 30, 1942. The number was struck on December 4, 1944.

As of July 1, 1941, the camp was subordinate to Army Group Center (*Heeresgruppe Mitte*), and later to the Third Armored Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 590). As of June 27, 1942, the camp was subordinate to Army Group B,⁶ specifically to the Second Army, II Hungarian Army Corps, *Armeeabteilung Lanz* (later, *Armeeabteilung Kempf*). As of August 16, 1943, it was subordinate to the German Eighth Army. In 1944, the camp was subordinate to the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*).⁷

The camp commandant from December 1940 until the end of November 1941 was 57-year-old Major Hartwig von Stietencron (1884–1952) and, later, 65-year-old Major Johannes Gutschmidt (1876–1961). The names of additional commandants and other camp personnel are unknown.

Dulag 231 held Soviet POWs. Conditions in the camp were similar to those in other camps for Soviet POWs.

Overcrowding, malnutrition, exhaustion from forced labor, unsanitary conditions, and lack of proper medical care led to widespread starvation and disease, which produced a high mortality rate. Abuse by the German guards made the situation even worse. The first prisoners to arrive in the camp in Volkovysk, which was initially located in the former Red Army barracks, were given no food or water for several days, nor did they receive any form of medical care.

In the camp at Viaz'ma, where there were 27,000 prisoners at the end of October 1941 and 34,000 in early November 1941, the conditions were particularly inhumane. Every day, dozens of prisoners died in the camp. Driven to despair, the prisoners made attempts to escape en masse, only to be shot by the guards. The procedures in the camp aroused the indignation of even the Fourth Army Rear Area Commander (Korück 559), and the local military commandant. They complained to the Army Group Center Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Mitte*, Berück Mitte) about the camp commandant, accusing him of poor leadership.⁸ The commander, General Max von Schenkendorff (1875–1943), inspected the camp at Viaz'ma on November 20, 1941, and was astonished by the mortality rate (4,000 deaths in November alone) and, in a conference on November 23, 1941, declared that he had given instructions for an investigation of the activity of the camp commandant, who was removed from his position and transferred to Dulag 203.⁹

As in other camps, the Germans screened the prisoners to separate out Jews, political commissars, and Communist Party members, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD). Jewish-Soviet prisoner Lev Frankfurt witnessed such an execution soon after his arrival in the camp at the beginning of July 1941. He stated that the Jews and commissars were machine-gunned by the Germans in full sight of the other prisoners. Frankfurt, who was both a Jew and a political commissar, avoided the same fate only because he had, by coincidence, not been circumcised at birth (the method by which the Germans identified Jews), and he had lost his Army uniform shirt (which bore the identifying red star of the political commissars) and had been given a new one by a peasant family.¹⁰ These executions occurred every time a new transport of prisoners arrived in the camp. In November 1941, a selection operation (*Aussonderung*) conducted by *Einsatzkommando* 9 uncovered 117 Jews, who were subsequently shot.¹¹

DURCHGANGSLAGER (DULAG) 240

The Wehrmacht formed Dulag 240 on March 26, 1941, from Frontstalag 240. From March to July 1941, the camp deployed to Litzmannstadt (today: Łódź, Poland) (map 4c), and, in July 1941, it was in Jabłonna (5).¹ Beginning in the summer of 1941, the camp deployed to various locations in the occupied Soviet Union. From August to November 1941, the camp was in Smolensk (9c); from late November 1941 until January 1942, it was in Rzhev (9c), where it replaced AGSSt 7; and from January 1942 until mid-1944, it was in Borisow (Russian: Borisov; today Barysaw, Belarus) (9b). The Germans disbanded the camp in September 1944. Dulag 240 received field post number (*Feldpostnummer*) 00 251 between January 27 and July 14, 1942.

Beginning on July 27, 1941, the camp was subordinate to the Ninth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 582), part of Army Group Center (*Heeresgruppe Mitte*).² From 1942 to 1944, it was subordinate to the 286th Security Division (*Sicherungsdivision*). The camp commandant was Oberstleutnant Milentz.

Dulag 240 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, and lack of proper medical care led to malnutrition and disease, which

produced a high mortality rate, particularly in the winter of 1941–1942.³ On November 23, 1941, the headquarters took over the camp in Rzhev, with 5,582 prisoners, from AGSSt 7. The death rate among the prisoners at this time was about 2 percent per day, and on November 27, 1941, it reached 125 men per day. On December 4, 1941, the camp commandant announced that it was now possible to give the prisoners food twice a day; the “really catastrophic food situation” improved, as did the prisoners’ capacity for work. As the air temperature dropped, however, the death rate increased once again. In total, from November 25, 1941 to December 14, 1941, 1,191 prisoners (around 22 percent of the camp population) died. During the very cold days from December 5–7, 1941, the death rate grew from 88 to 119 persons per day, though with the moderation of the freezing temperatures it dropped to 62 on December 8, and continued to decline. On December 9, 47 prisoners died, and on December 10 and 11, there were 30 deaths each day. When the air temperature dropped again, the death rate began to rise once more. On December 12, 35 prisoners died, and there were 38 deaths on December 13 and 53 on December 14.

The camp commandant sought to reduce the death rate by improving the prisoners’ food and accommodations. According to his report on December 14, 1941, sick prisoners who were able to recover were moved into a newly created, heated hospital barracks, while sick prisoners for whom there was no hope of recovery were left in their previous situation. According to the commandant’s report on December 9, 1941, each prisoner was receiving daily rations of 300 grams (10.6 ounces) of bread, 30 grams (1 ounce) of horseflesh, and 175 grams (6.2 ounces) of other food products (1,435 calories).⁴ Jewish-Soviet prisoner Lev Frankfurt, who was interned in Dulag 240 from December 1942 to May 1943, remembers that he weighed only 44 kilos (97 pounds) at a height of 185 centimeters (6 feet) when he was taken into the camp hospital (*Lazarett*) for the treatment of an infected wound. He was so emaciated that he was able to touch his thumb to his forefinger around his knee.

While the camp was deployed in Smolensk, a large transport of prisoners had to be turned away due to overcrowding and taken to the city; the incident which followed this decision is typical of the behavior of German guards toward Soviet prisoners during this time. The camp commandant’s report dated October 25, 1941, describing the events noted that “[o]n the night of October 19–20, 1941, 30,000 prisoners of war, who could not be admitted to the Smolensk North camp because there was no space, were redirected to the city. On the morning of October 20, 125 dead POWs were counted on the route from the railroad station to the north camp alone; most of them lay close to the march route, with shots to the head. In most cases, therefore, it cannot have been a matter either of attempted escape or of actual defiance.”⁵ As in other such camps, the Germans screened the prisoners to separate out Jews and political commissars, who were then shot by the guards or Security Service (*Sicherheitsdienst*, SD).

While the camp was located in Borisov in the winter of 1943–1944, it held 1,000 Italian military prisoners. By order of the German Armed Forces High Command (*Oberkommando der Wehrmacht*) on September 15, 1943, Italian prisoners were to be sent to the east and used for labor. About 70 of the Italians were still alive by the spring of 1944. On January 19, 1944, 16 wagons of Italian internees were deported from the camp to the Zubry railroad station (Mogilev voblasts').⁶

Based on prisoner identification cards, as of the end of June 1944, no fewer than 14,209 prisoners had passed through the camp system. From June 14–26, 1944, alone, the Germans brought at least 1,062 people to the camp, both POWs and civilians. The civilians, natives of the Minsk area, were mostly between the ages of 14 and 18. On July 19, 1944, a large group of prisoners was sent to Stalag III A in Luckenwalde.⁷

DURCHGANGSLAGER (DULAG) 241

The Wehrmacht formed Dulag 241 on April 5, 1941, from Frontstalag 241. It first deployed to the Generalgouvernement. Beginning in June 1941, the camp was subordinate to the Eleventh Army and deployed to various locations in occupied Ukraine and Crimea. On September 9, 1941, the camp was located in Berezovka (today Berezivka) (map 9g); on September 29, 1941, it was in Snigirevka (today Snihurivka) (9g), where it replaced AGSSt 12; and on October 10, 1941, it was in Kalga (9h), with a subcamp in Kherson, where it once again replaced AGSSt 12.¹ On October 21, 1941, the camp replaced AGSSt 12 in Melitopol' (9h), but after the occupation of Crimea in early November 1941, it moved to Simferopol' (9h), with a subcamp in Qurman (today Krasnohvardiis'ke), where it remained until September 1942, when it was replaced by Stalag 370. The Germans disbanded the camp on August 22, 1944. Dulag 241 received field post number (*Feldpostnummer*) 01 068 between July 15, 1942, and January 24, 1943. The number was struck on November 25, 1944, and allocated again on February 8, 1945.

As of June 12, 1942, the camp staff included 21 officers and officials and 112 noncommissioned officers and men.² The camp was guarded by Company 1 of the 836th Reserve Battalion (*Landesschützenbataillon*), which consisted of 2 German officers and 114 enlisted men as well as 30 Tatars.³ On July 1, 1942, the command of the Eleventh Army ordered the commander of the army rear area to create a subcamp in Sevastopol', starting on July 3, 1942.⁴ Hauptmann Dr. Reithoffer and Oberleutnant Luschützky are known to have been part of the camp's leadership.

Dulag 241 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. Meager food rations, overcrowding, and lack of proper medical care resulted in malnutrition and disease, which produced a high mortality rate. Abuse by the German guards exacerbated the prisoners' suffering. As in other camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*, SD).

SOURCES Primary source material about Dulag 241 is located in BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens); NARA (RG 242); NARB (4683-3-917); and BArch B 162 (319 AR-Z 41/71: Verfahren gegen ehem. Angehörige des Dulag 314).

DURCHGANGSLAGER (DULAG) 314

The Wehrmacht established Dulag 314 on April 15, 1941. Beginning in August 1941, the camp was first under Security Division (*Sicherungsdivision*) 221 and then the 339th Infantry Division (Rear Area, Army Group Center), and deployed to Bobruisk, in occupied Belorussia (map 9b). From 1942 to 1944, the camp was under the Second Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 580), and continued to be deployed in the occupied Soviet Union. In the first half of 1942, the camp was located in Vorozhba (9c), then in Konotop (9c), and then, starting in May 1942, in Kursk (9d).¹ In 1943, the camp deployed to Kalinkovichi and then to Brest (both 9e). In July 1944, the camp was located near Warsaw, and, on September 20, 1944, it was disbanded in East Prussia.²

From April 1941 to March 1944, the camp commandant was Oberstleutnant Ernst Meley. Dulag 314 received the field post number (*Feldpostnummer*) 41 454 between March 1 and September 7, 1942. The number was struck on September 22, 1944.

While deployed in Bobruisk, Dulag 314 held Soviet prisoners of war (POWs). For example, on September 15, 1941, the camp held 12,265 POWs, and, on September 29, there were 5,157 prisoners.³ The conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners did not receive adequate housing, food, or medical care, resulting in a high death rate, primarily due to malnutrition and disease. As in other camps, the Germans conducted selections to weed out "undesirable" prisoners, such as Jews and political commissars, who were executed near the camp by the guards or Security Service (*Sicherheitsdienst*, SD) personnel.

During the deployment in Brest, the camp held Italian servicemen who refused to fight on the side of Germany. Details on conditions for those prisoners is lacking, but, if the general pattern prevailed, they were harsh.

SOURCES Primary source material about Dulag 314 is located in BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens); NARA (RG 242); NARB (4683-3-917); and BArch B 162 (319 AR-Z 41/71: Verfahren gegen ehem. Angehörige des Dulag 314).

DURCHGANGSLAGER (DULAG) 320

The Wehrmacht formed Dulag 320 on May 30, 1941, in Defense District (*Wehrkreis*) X, from Stalag 320.¹ In 1942 and 1943, the camp was deployed in Luga (map 9a).² The Germans disbanded the camp on October 5, 1943. Dulag 320 received field post number (*Feldpostnummer*) 09 968 between January 27 and July 14, 1942. The number was struck on October 20, 1943.

Beginning in June 1941, the camp was under the authority of the 285th Security Division (*Sicherungsdivision*). On August 1, 1942, it was transferred to the Commander of Prisoners of War in Operations Area IV (*Kommandeur der Kriegsgefangenen im Operationsgebiet IV*).³

Dulag 320 held Soviet prisoners of war (POWs). The conditions were similar to those in other camps for Soviet POWs. The prisoners suffered from overcrowding, insufficient food, and inadequate medical care. Malnutrition and disease led to a high mortality rate. As in other such camps, the Germans screened newly arrived prisoners to separate out Jews and political commissars, who were executed by the guards or Security Service (*Sicherheitsdienst*, SD).⁴

DURCHGANGSLAGER (DULAG) 339

The Wehrmacht established Dulag 339 on April 25, 1944, from the staff of Stalags 337 and 339. The camp was located in Mantua (map 6).¹ The camp commandant, Menz, noted that the “appellation of Stalag [was] wrongly given to the camp,” since it was in effect, if not in title, a Dulag.² Both Stalag 337 and 339 functioned as assembly points for troops captured in their respective regions of Italy. In the spring of 1944, the Germans merged the camps in Mantua to form Dulag 339.³ The unit received the field post number (*Feldpostnummer*) 46 895 on June 5, 1944. The camp was under the control of the Prisoner of War District Command K (*Kriegsgefangenen-Bezirkskommandant K*).

Dulag 339 was located on the outskirts of Mantua, near the shores of Lake Inferiore. It occupied a group of buildings that had previously been used as garages and repair shops for Italian artillery. When it first opened, the conditions were primitive. Few dormitories had been created, beds were hastily constructed of wooden planks, latrines were adequate in number but unsanitary, and there was no kitchen. All food at that time was brought in from the town twice daily. Work was underway on a new section across town intended for Allied prisoners of war (POWs).

By November 1944, substantial changes had taken place within the camp. Four buildings had been fully converted to use. Two were dedicated dormitories with separate rooms for officers. Though the officers’ rooms had stove heaters, the main facilities had no heat but were otherwise well ventilated. Another building served as a storeroom, and the last contained workshops for the carpenters and tailors as well as showers and receiving rooms for new prisoner arrivals. The buildings surrounded a central courtyard that the prisoners used for recreation. In the center of the courtyard, a new kitchen had been erected, and its cellar served as an air-raid shelter with a capacity of up to 500.

The camp had an overall capacity of nearly 2,000 at its peak, though the prisoner count rarely exceeded 500. The principal purpose of the camp was to hold Allied POWs and Italian partisans prior to their relocation to permanent camps in Germany. In the fall of 1943, an estimated 50–100 British, 100–200 Italian partisans, and a collection of Americans, French, Greeks, and Yugoslavs passed through the camp each week. Generally, prisoners were only held at the camp for a matter of days before undergoing transport to Germany. Two to three convoys of 200 prisoners each typically emptied the Dulag every month. By November 1944, the camp had been repurposed primarily to hold Allied POWs, the only such camp in Italy.⁴

The camp was not created to hold prisoners for long periods. At times, particularly toward the later months of the war in northern Italy, communications and transportation delays created supply problems within the camp. In November 1944, several hundred men had been in the camp for more than three weeks owing to air raids and close fighting; the camp had recently been hit in an Allied air raid, killing one

prisoner. At the same time, Red Cross shipments had not arrived for over a month because of bombardments. This created a crisis in the overcrowded and undersupplied camp.

The date on which the camp was closed is unknown. It was still open as of March 1, 1945, but must have been closed on or before April 25, when the Allies captured Mantua.

SOURCES Primary source material about Dulag 339 is located in BA-MA (RH 49); WAST; NARA (RG 389: Records of World War II Prisoners of War, created 1942–1947, documenting the period 12/7/1941–11/19/1946, 7 partial records for Stalag 339); and TNA (World War II Prisoner of War Camps, Code 901: Stalag #339 [formerly #337] Mantua Italy 45-10).

DURCHGANGSLAGER (DULAG) 375

The Wehrmacht established Dulag 375 on September 1, 1942, in Defense District (*Wehrkreis*) VIII. It was then subordinated to the Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583).¹ The camp first deployed to Sablino (today: part of Ul'ianovka, Tosnenskii raion, Leningradskaiia oblast') (map 9a). From May 1943 until mid-1944, the camp was located in Fellin (today: Viljandi, Estonia) (9a), where it replaced Stalag 332. While it was deployed in Viljandi, it was under the Army Group North Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Nord*, Berück Nord). Dulag 375 received field post number (*Feldpostnummer*) 40 527 between March 10 and September 7, 1942. The number was struck on January 25, 1945.

Dulag 375 held Soviet prisoners of war (POWs). Conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, insufficient food, unsanitary conditions, and lack of proper medical care resulted in widespread malnutrition and disease, which produced a high

mortality rate. Abuse by the German guards added to the prisoners' suffering. As in other such camps, the Germans screened the prisoners to separate out Jews and political commissars, who were then shot by the guards or the Security Service (*Sicherheitsdienst*, SD).²

The Germans disbanded the camp on August 27, 1944.³

DURCHGANGSLAGER (DULAG) 376

The Wehrmacht established Dulag 376 on September 1, 1942, in Defense District (*Wehrkreis*) VIII, from the staff of Oflag VIII H in Oberlangendorf (map 4e).¹ The camp then deployed to Rogavka (today in Finëv Lug, Novgorodskii raion, Novgorodskaiia oblast') (9a) and was subordinate to the Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583). In October 1943, the camp deployed to Pleskau (today Pskov, Russia) (9a), where it replaced Stalag 372, and was subordinate to the Army Group North Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Nord*, Berück Nord). In March 1944, the camp relocated to Kauen (Kaunas, Lithuania) (9b), where it replaced Stalag 336.² While in Kauen, the camp was under the Commander of Prisoners of War of the Military Commander Ostland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ostland*). The unit received the field post number (*Feldpostnummer*) 41 014 between March 1 and September 7, 1942. The number was struck on November 23, 1944.

The camp commandant was Major Weber until March 1944, when he was replaced by Oberstleutnant Sieber.³ The deputy commandant was Hauptmann Schäfer, the adjutant was Hauptmann Schmidtborn, and the head of the office was Stabsfeldwebel Seidel. The camp headquarters consisted of five groups.

Group I (*Stabsgruppe*—Staff Group) included five sections: Ia, Ib, Ic, Id, Ie. Section Ia, led by Hauptmann Schäfer, was in charge of the guard and security service. The guard subunit was headed by Hauptmann Klein. Section Ib, led by

Hauptmann Schmidtborn and Hauptmann Langner, was the personnel section. Section Ic, also headed by Hauptmann Schmidtborn and Hauptmann Langner, managed the weapons and ammunition. Section Id, led by Hauptmann Langner and Rittmeister von Enkevort, was in charge of antiaircraft defense, antichemical protection, and fire protection. Section Ie, led by Sonderführer Matschke, was responsible for the investigation of various kinds of misconduct among the German personnel in the camp.

Group II (*Lagerführung*—Camp Leadership) had four sections: IIa, IIb, IIc, IId. Section IIa, headed by Hauptmann Langner and Oberleutnant Jenkner, was responsible for accounting for the prisoners and maintaining order inside the camp; the camp police force was subordinated to this section. Section IIb, led by Rittmeister von Enkevort and Oberleutnant Karlos, was in charge of the deployment of the prisoners as a workforce both inside the camp and outside its boundaries. Section IIc, led by Stabsfeldwebel Zahn and Stabsfeldwebel Seidel, managed the vehicle fleet. Finally, Section IId, under Feldwebel Tarks and Unteroffizier Günther worked on building, expanding, and refurbishing the camp.

Group III (*Abwehr*—Counterintelligence) was also made up of four sections: IIIa, IIIb, IIIc, IIId. The group was headed by Rittmeister Scholz, whose deputy was Sonderführer Lenz, and it dealt with all counterintelligence issues and also was responsible for cooperation with the Sicherheitsdienst, Gestapo, local police, and military police (*Feldgendarmerie*). The group had its own agents among the prisoners, and with their help it brought to light the “unreliables” among the prisoner population in order to prevent escapes, sabotage, and diversionary activities.

Group IVa (*Verwaltung*—Administration) was the camp’s bookkeeping department. This group also was responsible for supplying the German personnel and prisoners with food and clothing. The group was headed by Oberzahlmeister Krause, and his deputy was Oberzahlmeister Malecha.

Finally, Group IVb (*Sanitätsföfizier*—Sanitary Officer) was in charge of medical services for the German personnel and the prisoners. This group was headed by Oberarzt Dr. Franz.⁴

Dulag 376 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. The camp was severely overcrowded, and the prisoners suffered from malnutrition and inadequate medical care, exacerbated by deliberate abuse at the hands of the guards.

The Germans disbanded the camp on November 9, 1944.

SOURCES Primary source material about Dulag 376 is located in BA-MA, WASt Berlin, and BArch B (162/19279: Verfahren VI 319 AR-Z 118/70: Proceedings against K. Sieber, accused of killing Soviet prisoners of war in Dulag 376 in Kauen).

DURCHGANGSLAGER (DULAG) 377

The Wehrmacht established Dulag 377 on September 1, 1942, in Defense District (*Wehrkreis*) XVII. It was subsequently deployed to the occupied Soviet Union.¹ At first the camp deployed to Kohtla-Järve (map 9a) and was subordinate to the Eighteenth Army Rear Area Commander (*Kommandant rückwärtiges Armeegebiet*, Korück, 583). From April 1943 until mid-1944, the camp was deployed in Kiviõli, Estonia (9a), and was subordinate to the Army Group North Rear Area Commander (*Befehlshaber des rückwärtigen Heeresgebietes Nord*, Berück Nord). While located in Kiviõli, Dulag 377 had five subcamps, in Kohtla, Küttejõu, Ahtme, Käva, and Kukruse. The unit received the field post number (*Feldpostnummer*) 10 632 between July 15, 1942, and January 24, 1943. The date on which the Germans disbanded the camp is not known; it may have operated until the end of the war.

The testimony of former prisoner Konstantin Kiliakov reveals the nature of the conditions in the camp at Kiviõli:

The camp was guarded by German soldiers. Its commandant was a German major; I don’t know his last name. Inside the camp, the sentry consisted of three German NCOs and policemen who were Russian POWs. . . . For any action that displeased an NCO or a policeman, a POW was punished in the most ruthless way. Usually in such cases, the POW at fault, and often all the men living in the same room or barracks as well, were driven with sticks into the courtyard and forced to do “physical training”—run, lie down, stand up, lie down again, etc. This mistreatment, which usually continued until 2 a.m., reduced the men to complete exhaustion. After all, all this was done to people who were tired from 12 hours of wearisome work at the construction site, where they were also beaten and forcibly compelled to work; this was done to people who were weak from hunger and backbreaking toil. It is no wonder that many, utterly exhausted, fell to the ground. With blows from sticks, they were forced to

rise. In addition, the camp commandant, on the basis of denunciations from police and German skilled craftsmen, punished POWs by locking them in a punishment cell for a period of 7 to 21 days. Only bread and boiled water were given to a prisoner in the punishment cell, along with half a liter [2 cups] of soup every 2 days. For attempted escape and special offenses, POWs, by order of the camp commandant, were sent to the penal camp in Kohtla-Järve, where conditions were especially dreadful. . . . The daily ration of a POW consisted of 350 grams [12.3 ounces] of bread, 1 liter [1 quart] of soup made from potato peels, and 1 liter of flour *boltushka* [a thin, sticky gruel] without any fat.²

As in other such camps, the Germans screened the prisoners to separate out Jews and Communists, who were then shot by the guards or Security Service (*Sicherheitsdienst*, SD).³

SOURCES Primary source material about Dulag 377 is located in BA-MA, WAST, BArch B (162/16783–16784: *Aussonderung von Kriegsgefangenen im Dulag 377*), and GARF (files 7021-97-2, 4, 17, 20, 882).

DURCHGANGSLAGER (DULAG) 402

The Wehrmacht formed Dulag 402 on September 14, 1943, in Defense District (*Wehrkreis*) II. It first deployed to Zagreb, Croatia (map 7) and then to Bitola (then Bulgaria, today North Macedonia) (8). In November 1943, the unit returned to Defense District II, where it was disbanded.¹ Dulag 402 received field post number (*Feldpostnummer*) 00 522 on September 25, 1943. The camp was subordinate to the Commander of Prisoner of War District Z (*Kriegsgefangenen-Bezirkskommandant Z*) in Belgrade.

The camp commandant in September–November 1943 was Oberstleutnant Fritz von Bernuth (previously commandant of

Stalag II B). The deputy camp commandant was Major der Reserve Dr. Karl Franzen (previously deputy commandant of Stalag II E).²

Dulag 402 held Italian military prisoners. Information about the conditions in the camp is unavailable, but, in general, the Germans treated Italian prisoners harshly.

SOURCES Primary source material about Dulag 402 is located in BA-MA (RW 6) and BArch B (162/16751).

Additional information about Dulag 402 can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. DURCHGANGSLAGER (DULAG) 404

The Wehrmacht formed Dulag 404 on September 14, 1943, in Defense District (*Wehrkreis*) IV. It was deployed to the Independent State of Croatia, initially in Slavonski Brod and then in Zagreb (both map 7). At the end of 1943, the unit was replaced by Stalag 345 and returned to Defense District IV, where it was disbanded.¹ Dulag 404 received field post number (*Feldpostnummer*) 06 134 on September 22, 1943; it was struck on April 20, 1944. The camp was under the command of the Prisoner of War District Commander (*Kriegsgefangenen-Bezirkskommandant Z*) in Belgrade.

The camp commandant from September 1943 to January 1944 was Oberst Theodor Lorentzen, and the deputy camp commandant was Oberstleutnant der Reserve Heinrich Giesse (previously deputy commandant of Stalag IV G).²

Dulag 404 held Italian military prisoners. The prisoners were supposed to be sent to the eastern front for forced labor. Specific information about the conditions in the camp is not available, but, in general, the Germans treated Italian prisoners harshly.

SOURCES Primary source material about Dulag 404 is located in BA-MA (RW 6) and BArch B (162/16646).

Additional information about Dulag 404 can be found in the following publication: Gerhard Schreiber, *Die italienischen Militärinternierten im deutschen Machtbereich 1943 bis 1945* (Munich: R. Oldenbourg, 1990), p. 246.

DURCHGANGSLAGER (DULAG) 410

The Wehrmacht formed Dulag 410 on September 14, 1943, in Defense District (*Wehrkreis*) X and deployed it to Salonika (today Thessaloniki) (map 8). In December 1943, the unit was replaced by Dulag 185 and returned to Defense District X, where it was disbanded.¹ Dulag 410 received field post number (*Feldpostnummer*) 13 985 on October 2, 1943. The number was struck on March 8, 1944. The camp was under the command of the Prisoner of War District Commander Z (*Kriegsgefangenen-Bezirkskommandant Z*) in Belgrade.

The camp commandant from September to December 1943 was Oberstleutnant der Reserve Kurt Petroschky (previously commandant of Stalag X A) and the deputy camp commandant was Major der Reserve Dr. Georg Müller-Jürgens (previously deputy commandant of Stalag 370).²

Dulag 410 held Italian military prisoners. The prisoners were supposed to be sent to the eastern front for forced labor. Specific information about the conditions in the camp is not available, but, in general, the Germans treated Italian prisoners harshly.

SOURCES Primary source material about Dulag 410 is located in BA-MA (RW 6) and BArch B (162/16647).

Additional information about Dulag 410 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 60.

DURCHGANGSLAGER (DULAG) 413

The Wehrmacht formed Dulag 413 on September 14, 1943, in Defense District (*Wehrkreis*) XIII. It deployed to Nisch (Serbian: Niš), in occupied Serbia (map 8). In December 1943, the unit was replaced by Dulag 161 and returned to Defense District XIII, where it was disbanded.¹ Dulag 413 received field post number (*Feldpostnummer*) 04 766 on September 30, 1943. The number was struck on December 21, 1943. The camp was under the command of the Prisoner of War District Commander Z (*Kriegsgefangenen-Bezirkskommandant Z*) in Belgrade.

Commander Z (*Kriegsgefangenen-Bezirkskommandant Z*) in Belgrade.

The camp commandant in September–November 1943 was Oberstleutnant Rudolf Bischoff (previously deputy commandant of Oflag XIII B) and the deputy commandant was Major der Reserve Johann Sir (previously deputy commandant of Stalag XIII D).²

Dulag 413 held Italian military prisoners. The prisoners were supposed to be sent to the eastern front for forced labor. Specific information about the conditions in the camp is not available, but, in general, the Germans treated Italian prisoners harshly.

SOURCES Primary source material about Dulag 413 is located in BA-MA (RW 6) and BArch B (162/16750).

DURCHGANGSLAGER (DULAG) 420

The Wehrmacht formed Dulag 420 on September 14, 1943, in the Generalgouvernement. It then deployed to Zemun, in occupied Serbia (map 7). In November 1943, the unit was replaced by Dulag 172 and returned to the Generalgouvernement, where it was disbanded.¹ The unit received the field post number (*Feldpostnummer*) 13 351 on October 10, 1943. The number was struck on July 10, 1944. The camp was under the command of the Prisoner of War District Commander Z (*Kriegsgefangenen-Bezirkskommandant Z*) in Belgrade.

Dulag 420 held Italian military prisoners. The prisoners were supposed to be sent to the eastern front for forced labor. Specific information about the conditions in the camp is not available, but, in general, the Germans treated Italian prisoners harshly.

SOURCES Primary source material about Dulag 420 is located in BA-MA (RW 6) and BArch B (162/16726: Aussendung von Kriegsgefangenen im Dulag 420).

Additional information about Dulag 420 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. DURCHGANGSLAGER (DULAG) VIII A

The Wehrmacht created Dulag VIII A on August 26, 1939, in Defense District (*Wehrkreis*) VIII and deployed it to Görlitz (map 4e). (Because of bureaucratic confusion, the designations "Dulag C" and "Dulag Reichenbach" are also associated with this camp.) On September 23, 1939, the camp was converted into a permanent enlisted men's camp, Stalag VIII A.¹ Dulag VIII A was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

Dulag VIII A held Polish prisoners of war captured during the German invasion of Poland in September 1939. Specific information about the conditions in this camp is not available. Generally speaking, Polish prisoners of war were treated poorly at this stage in the war; they often did not receive adequate food and were usually sent to work as agricultural laborers shortly after their arrival in the camps.

SOURCES Primary source material about Dulag VIII A is located in BA-MA (RH 49), WASt Berlin, and the State Archive of Wrocław.

Additional information about Dulag VIII A can be found in the following publications: Stanisław Senft and Horst Więcek, *Obozy jenieckie na obszarze śląskiego okręgu Wehrmachtu 1939–1945* (Wrocław: Zakład Narodowy im. Ossolińskich, 1972); Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. DURCHGANGSLAGER (DULAG) VIII B / DULAG LAMSDORF

The Wehrmacht created Dulag VIII B on August 26, 1939, in Lamsdorf (today Łambinowice, Poland), in Defense District (*Wehrkreis*) VIII (map 4e). The camp was also commonly known as Dulag Lamsdorf. On October 4, 1939, the Germans converted the camp into Stalag VIII B.¹ The camp was

subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

Dulag VIII B held Polish prisoners of war. Specific information about conditions in the camp is unavailable, but conditions in such camps were generally poor, with inadequate shelter and food supplies. Most of the prisoners were immediately sent to forced labor, mainly agricultural labor.

SOURCES Primary source material about Dulag VIII B is located in BA-MA (RH 49), WASt, and WAP-W.

Additional information about Dulag VIII B can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 68; Rüdiger Overmans, "Die Kriegsgefangenenpolitik des Deutschen Reiches 1939 bis 1945," *Das Deutsche Reich und der Zweite Weltkrieg*, vol. IX/2, (Stuttgart: Deutsche Verlags-Anstalt, 2005), pp. 729–875; Juliusz Pollack, *Jeńcy polscy w hitlerowskiej niewoli* (Warsaw: MON, 1986); and Stanisław Senft and Horst Więcek, *Obozy jenieckie na obszarze śląskiego okręgu Wehrmachtu 1939–1945* (Wrocław: Zakład Narodowy im. Ossolińskich, 1972).

DURCHGANGSLAGER (DULAG) XVII / DULAG DÖLLERSHEIM

The Wehrmacht created Dulag XVII on September 22, 1939, in Defense District (*Wehrkreis*) XVII. The camp was located on the military parade ground (*Truppenübungsplatz*) in Döllersheim, while the headquarters were about 10 kilometers (6.2 miles) to the north in Kaufholz (map 4f). Two designations, Dulag XVII and Dulag Döllersheim, were in use simultaneously, according to the camp records. On October 20, 1939, the Germans converted the camp into Stalag XVII C.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XVII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVII*).

Dulag XVII held Polish prisoners of war. Specific information about the quality of life in the camp is unavailable, but conditions in such camps were generally poor, with inadequate shelter and food supplies. Most of the prisoners were immediately sent to forced labor, mainly agricultural labor.

SOURCES Primary source material about Dulag XVII is located in BA-MA (RH 49) and WASt.

Additional information about Dulag XVII can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz:

self-published, 1987), pp. 63 and 68; Rüdiger Overmans, "Die Kriegsgefangenenpolitik des Deutschen Reiches 1939 bis 1945," *Das Deutsche Reich und der Zweite Weltkrieg*, vol. IX/2 (Stuttgart: Deutsche Verlags-Anstalt, 2005), pp. 729–875; Juliusz Pollack, *Jeńcy polscy w hitlerowskiej niewoli* (Warsaw: MON, 1986); and Hubert Speckner, *In der Gewalt des Feindes: Kriegsgefangenenlager in der "Ostmark" 1939–1945* (Vienna: R. Oldenbourg Verlag, 2003), p. 265.

DURCHGANGSLAGER (DULAG) A

The Wehrmacht created Dulag A on September 14, 1939, in Halbau (today Iłowa, Poland) (map 4e), in Defense District (*Wehrkreis*) VIII, from Dulag Halbau.¹ On October 4, 1939, the camp was converted into Stalag VIII C.² The camp was under the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

Dulag A served as a transit camp for Polish prisoners of war captured during the German invasion of Poland in September 1939. No specific information about conditions in this camp is available, but, in general, Polish prisoners were treated poorly at this point in the war; most of the camps in which they were confined had no permanent housing, and food supplies and medical care were similarly inadequate. Most of the prisoners were quickly sent out to labor detachments, primarily in agriculture.

SOURCES Primary source material about Dulag A is located in BA-MA (RH 49), WASt Berlin, and the State Archive of Wrocław.

Additional information about Dulag A can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 68; and Stanisław Senft and Horst Więcek, *Obozy jenieckie na obszarze śląskiego okręgu Wehrmachtu 1939–1945* (Wrocław, Zakład Narodowy im. Ossolińskich, 1972).

Alexander Kruglov
Trans. Kathleen Luft

NOTES

1. BArch RM 7/873. Note that Dulag Halbau never actually held any prisoners, and so it is not included here.
2. Mattiello and Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen*, p. 68.

DURCHGANGSLAGER (DULAG) B

The Wehrmacht established Dulag B in Halbau (map 4e) on September 14, 1939. The camp closed in October 1940.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

DURCHGANGSLAGER (DULAG) D

The Wehrmacht established Dulag D on August 26, 1939, in Amtitz (today Gębice Gubinskie, Poland) (map 4b), in Defense District (*Wehrkreis*) III. On December 6, 1939, the camp was moved to Fürstenberg an der Oder (4b) and reorganized as Stalag III B.¹ The camp was under the authority of the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*).

Dulag D held Polish prisoners of war captured during the invasion of Poland in September 1939. No specific information on conditions in this camp is available, but, in general, the Germans treated Polish prisoners very poorly at this stage of the war. Housing and rations were probably both inadequate.

SOURCES Primary source material about Dulag D is located in BA-MA (RH 49), WASt Berlin, and the State Archive of Wrocław.

Additional information about Dulag D can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 68; and Juliusz Pollack, *Jeńcy polscy w hitlerowskiej niewoli* (Warsaw: MON, 1986).

DURCHGANGSLAGER (DULAG) E/ DULAG II E

The Wehrmacht established Dulag E on August 26, 1939, in Gross-Born-Rederitz (today Borne-Sulinowo, Poland) (map 4b).¹ The camp functioned from September to November of that year. Dulag E held Polish prisoners of war (POWs) as well as a large number of civilian prisoners (*Zivilgefange*).² On September 18, 1939, the camp contained 8,298 enlisted men and noncommissioned officers, 123 officers, and 2,458 civilians. In October 1939, there were 7,300 prisoners in total, including 2,229 civilians.³ On November 9, 1939, the camp was converted into an enlisted men's POW camp, designated Stalag II E.⁴

SOURCES Primary source material about Dulag E/Dulag II E is located in BA-MA (RW 6: 450), WASt, and APP.

Additional information about Dulag E/Dulag II E can be found in the following publications: Iwona Bieguna, "Obozy w Gross Born w zasobie archiwalnym Centralnego Muzeum Jeńców Wojennych w Łambinowicach-Opolu,"

DURCHGANGSLAGER (DULAG) F/ (DULAG) VI F

The Germans established Dulag F in late August 1939 in the Deutz district of Köln (Cologne) (map 4a), in Defense District (*Wehrkreis*) VI; the camp was actually in operation on September 10.¹ The camp also operated under the designation Dulag VI F. The camp was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*).

On October 3, 1939, the German Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) ordered the camp's conversion into Stalag VI F; a follow-on order of October 7 directed the camp staff to take on the functions of a Stalag. On November 5, the OKW ordered the camp to move to Bocholt as Stalag VI F as soon as the facilities there were complete, but, as of December 1, Dulag F was still in operation in Köln-Deutz.

Dulag F held Polish prisoners of war. Specific information about conditions in the camp is unavailable, but conditions in such camps were generally poor, with inadequate shelter and food supplies. Most of the prisoners were immediately sent to forced labor, mainly agricultural labor.

SOURCES Primary source material about Dulag F is located in BA-MA (RH 49) and WASt.

Additional information about Dulag F can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, 2 vols. (Koblenz: self-published, 1987), vol. 1: p. 12; vol. 2: pp. 67, 69; and Rüdiger Overmans, “Die

Kriegsgefangenenpolitik des Deutschen Reiches 1939 bis 1945,” *Das Deutsche Reich und der Zweite Weltkrieg*, vol. IX/2 (Stuttgart: Deutsche Verlags-Anstalt, 2005), pp. 729–875.

Trans. Kathleen Luft

NOTE

1. Mattiello and Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen*, vol. 2: p. 69; the alternate name of the camp is erroneously given as “IV F” instead of “VI F.”

DURCHGANGSLAGER (DULAG) G

The Wehrmacht created Dulag G on August 26, 1939, in Limburg an der Lahn, in Defense District (*Wehrkreis*) XII (map 4d). The Germans disbanded the camp on January 21, 1941.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

Dulag G held Polish prisoners of war (POWs). Specific information about conditions in this camp are not available, but, in general, conditions in camps for Polish POWs at that time were poor, with inadequate housing and food supplies. Most of the prisoners were immediately sent to forced labor detachments, mainly for agricultural labor.

SOURCES Primary source material about Dulag G is located in BA-MA (RH 49) and WASt.

Additional information about Dulag G can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 69; and Rüdiger Overmans, “Die Kriegsgefangenenpolitik des Deutschen Reiches 1939 bis 1945,” *Das Deutsche Reich und der Zweite Weltkrieg*, vol. IX/2 (Stuttgart: Deutsche Verlags-Anstalt, 2005), pp. 729–875.

NOTE

1. Mattiello and Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen*, p. 69.

DURCHGANGSLAGER (DULAG) GNEIXENDORF

The Wehrmacht established Dulag Gneixendorf on September 25, 1939, in the village of Gneixendorf near Krems (Austria), in Defense District (*Wehrkreis*) XVII (see map 4f). In this period, the camp operated under the authority of the Commander of Prisoners of War in Defense District XVII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVII*). On October 2, 1939, the camp took over Dulag Döllersheim as a subcamp (*Zweiglager*). On October 26, 1939, the authorities converted Dulag Gneixendorf into Stalag XVII B.¹

The camp commandant was Generalleutnant Hugo Schäfer (b. 1899). In 1945, a Soviet military tribunal sentenced Schäfer to execution by shooting.

The camp held Polish army servicemen whom the Germans captured in the course of their invasion of Poland in September 1939.

Details on conditions in the camp are unavailable, but generally speaking, the Germans did not treat Polish prisoners of war (POWs) well at this early stage of the war. Conditions in Dulag Gneixendorf are likely to have been primitive, at best.

SOURCES Primary source material about Dulag Gneixendorf is located in BA-MA (RH 49) and WASt Berlin.

Additional information about Dulag Gneixendorf can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 64; Juliusz Pollack, *Jeńcy polscy w hitlerowskiej niewoli* (Warsaw: MON, 1986); and Hubert Speckner, *In der Gewalt des Feindes. Kriegsgefangenenlager in der "Ostmark" 1939–1945* (Vienna: Oldenbourg, 2003), p. 228.

DURCHGANGSLAGER (DULAG) H

The Wehrmacht established Dulag H on August 26, 1939, in Ludwigsburg, in Defense District (*Wehrkreis*) V (map 4f). It may have deployed for a time to the troop training area (*Truppenübungsplatz*) at Heuberg (Pfedelbach, Hohenlohekreis, Baden-Württemberg), but the details are unclear. The camp operated under the authority of the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*). On October 16, 1939, the camp was converted into Stalag VA, again in Ludwigsburg.¹

Dulag H held Polish prisoners of war (POWs). Specific information about conditions in this camp are not available, but, in general, conditions in camps for Polish POWs at that time were poor, with inadequate housing and food supplies. Most of the prisoners were immediately sent to forced labor detachments, mainly for agricultural labor.

SOURCES Primary source material about Dulag H is located in BA-MA (RH 49) and WASt.

Additional information about Dulag H can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 69; Rüdiger Overmans, “Die Kriegsgefangenenpolitik des Deutschen Reiches 1939 bis 1945,” *Das Deutsche Reich und der Zweite*

Weltkrieg, vol. IX/2 (Stuttgart: Deutsche Verlags-Anstalt, 2005), pp. 729–875; and Juliusz Pollack, *Jeńcy polscy w hitlerowskiej niewoli* (Warsaw: MON, 1986).

DURCHGANGSLAGER (DULAG) J

The Wehrmacht created Dulag J on August 26, 1939, in Defense District (*Wehrkreis*) XVII. The camp was located in Kaisersteinbruch (map 4f). It was under the authority of the Commander of Prisoners of War in Defense District XVII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVII*). On September 30, 1939, the camp was converted into Stalag XVII A.¹

Dulag J held Polish prisoners of war (POWs). Specific information about conditions in this camp are not available, but, in general, conditions for Polish POWs at that time were poor, with inadequate housing and food supplies. Most of the prisoners were immediately sent to forced labor detachments, mainly for agricultural labor.

DURCHGANGSLAGER (DULAG) K

The Wehrmacht established Dulag K on September 8, 1939, in Defense District (*Wehrkreis*) I. The camp was located in Hohenstein (today Olsztynek, Poland) (map 4c). It was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*). On October 10, 1939, the camp was converted into Stalag I B.¹

Dulag K held Polish prisoners of war (POWs). Specific information about conditions in this camp are not available, but, in general, conditions for Polish POWs at that time were poor, with inadequate housing and food supplies. Most of the

prisoners were immediately sent to forced labor detachments, mainly for agricultural labor.

DURCHGANGSLAGER (DULAG) L

The Wehrmacht established Dulag L on September 8, 1939, in Defense District (*Wehrkreis*) II and deployed it to Stargard in Pommern (today Poland) (map 4b), 30 kilometers (18.6 miles) east of Stettin (today Szczecin, Poland). The camp was located on the western outskirts of Stargard, approximately 2.5 kilometers (1.6 miles) from the railway station, in the vicinity of army barracks and grounds. Dulag L was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis* II).

Dulag L held Polish prisoners of war (POWs) and persons interned during the September 1939 campaign in Poland. A significant number of camp inmates had been taken prisoner on the Baltic coastline in the vicinity of Gdynia, Oksywie, Kępa Oksywska, Gdańsk, Wejherowo, and Bożepole Wielkie. Among them were soldiers and civil internees (including policemen, clergymen, and adolescent males). Some of them were from Gdynia.¹ Officers came to Dulag L from Bożepole Wielkie, Gdynia, Hel, Oksywie, and Tomaszów Lubelski, among other locations.²

The arrival date of the first transport is uncertain, but was probably September 15, 1939. The Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) report from that day indicates that there were 8,655 prisoners in Dulag L (including 1,960 civilians). The following day, the population was listed as 6,003 (13 officers, 5,945 rank-and-file soldiers, and 45 civilians).³ Prisoner accounts state that a large transport of prisoners arrived on September 20.⁴ On September 23, 1939, Dulag L held 11,350 prisoners (441 officers, 10,002 rank-and-file soldiers, and 907 civilians), and a day later there were 10,851 (20 officers, 9,924 rank-and-file soldiers, and 907 civilians).⁵ On September 30, 1939, there were 10,410

prisoners (9,582 rank-and-file soldiers and 828 civilians).⁶ Officers from Dulag L were mainly sent to Oflags in Defense District II and Oflag XI A in Osterode.⁷

The prisoners were transported to Stargard by rail, then led to the camp on foot. During the march, the prisoners encountered hostile attitudes from the German civilian population. Upon arrival at the camp, money, compasses, maps, flashlights, matches, and sharp objects (including razors and penknives), as well as canteens, spoons, and cups, were taken away from the prisoners.⁸ Prisoners were segregated according to whether they were civilian or military and by rank (officer or enlisted). The prisoners slept in tents, although there were instances when they were put in army garages or warehouses for a short time.⁹ Jews and prisoners with German ancestry lived in separate tents, away from the other civilians and POWs. The exact number of tents is not known. One prisoner wrote about three rows of 30 tents, for a total of 90.¹⁰ The tents were numbered with Arabic numerals, and the highest number assigned was 53.¹¹ The tents were intended to hold 250 people. Some tents had straw for bedding, but most prisoners slept on the bare ground. Only some of them received blankets, but even that did not provide sufficient protection from the cold. Witness accounts say that there were tables in some tents (but probably only in the officers’ tents).¹² No one was allowed out of the tents from 7:00 p.m. to 6:00 a.m. The camp was surrounded by a high barbed-wire fence and entanglements. Watchtowers were located inside the fence. Regulations forbade prisoners from getting close to the fence. Prisoners could be shot by the guards for breaking these rules.

The camp infrastructure was very simple. It contained rudimentary bathing and disinfecting facilities, a kitchen, and administrative buildings. The infirmary was located in one of the tents. There was a post office, from which prisoners could send (censored) postcards printed with information about the camp and whether they were sick or healthy.¹³ The sanitary conditions in the camp were primitive. There was only one water pump and the latrines were uncovered.¹⁴ Camp regulations provided for three meals. Prisoner accounts confirm that the food did not provide adequate nutrition or calories. The prisoners received bread and ersatz coffee for breakfast and a watery rutabaga soup for dinner.

No records from any prisoners from Dulag L have come to light. Prisoners who were sent to work probably received identification cards with a stamp reading “Prisoner of War, Durchgangslager L, Stargard in Pommern.”¹⁵ These prisoners were required to undergo delousing and receive vaccinations. Many prisoners volunteered for work, hoping to receive more food. Prisoners assigned to the labor units (*Arbeitskommandos*) were used primarily as agricultural laborers. Prisoners worked on the land of estates in the surrounding counties, mainly Kreis Saatzig (today Szadzko) and Kreis Pyritz (today Pyrzyce). They were guarded by German soldiers while at work. The exact number of prisoners who were sent to work from Dulag L is not known, but reports from October 1939 indicate figures between 71 percent and 86 percent.¹⁶

The garrison officer (*Standortoffizier*), Major Joachim von Hellermann, oversaw prisoner burials. The *Neues Gesellschaftshaus* (New Society House) building, where there was purportedly a hospital, was recorded as the prisoners' place of death.¹⁷ The first deaths among prisoners were reported on September 23, 1939. Prisoners were buried in a cemetery near the camp, which was later known as the Russian cemetery (*Russenfriedhof*), since most of the prisoners who were buried there were Soviet POWs who died in Stalag II D. The site is now known as the International Military Cemetery.¹⁸

Dulag L was converted into Stalag II D on October 20, 1939.¹⁹

DURCHGANGSLAGER (DULAG) LUFT INSTERBURG

The Luftwaffe established Dulag Luft Insterburg in the town of Insterburg, East Prussia (today Chernyakhovsk, Kaliningradskaya oblast', Russia) (map 4c) in April 1943. The camp was closed in November 1944.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

DURCHGANGSLAGER (DULAG) LUFT OST

The Luftwaffe established Dulag Luft Ost in 1943. The camp was located in Karlsbad (today Karlovy Vary, Czech Republic), then in Haid (today Bor, Tachov District, Czech Republic), and finally in Gross Meierhöfen (today Velké Dvorce, Czech Republic) (all map 4d). It was disbanded on or before May 8, 1945.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

DURCHGANGSLAGER (DULAG) LUFT WEST

Dulag Luft West performed a dual function. First, it served as a transit camp for air crews of the Western Allies as a part of the prisoner of war (POW) administration. Second, it was

also the military intelligence center of Luftwaffe Operations Staff Ic/Foreign Air Forces West (*Luftwaffenführungsstabs Ic/Fremde Luftwaffen West*) for the western theater of war: Evaluation Site West (*Auswertestelle West*). Both facilities were located on the same campgrounds in the small town of Oberursel, in what today is the federal state of Hesse (map 4d). However, while Evaluation Site West, along with its interrogation camp, remained in that location until the spring of 1945, Dulag Luft West moved twice.

Only a few days after the beginning of the war in 1939, the Luftwaffe set up several centers for prisoner interrogations. One of these improvised facilities was located in Oberursel, where the authorities used the infrastructure of an assembly point for army officers. When the assembly point shut down, the Luftwaffe took over the property and set up a camp.¹ In this way, Dulag Luft West came into being in mid-November 1939. The camp was disciplinarily subordinate to Luftwaffe Administrative Command Headquarters (*Luftgaukommando XII*) in Wiesbaden, while the superior military-intelligence authority was Luftwaffe Operations Staff Ic in Potsdam.² As a result of restructuring, Dulag Luft West was, from early 1941, part of the newly created Luftwaffe Administrative Command XII/XIII before it was placed under the control of Luftwaffe Administrative Command VII in April 1944.

In the spring of 1940, the actual transit camp came into being—a fenced area, secured with guard towers, with three barracks, two of which served to house a maximum of 150 prisoners. In September 1943, Dulag Luft West was separated from the compound at the Oberursel site when the transit camp reached its limits in terms of logistics. At the instigation of Hermann Göring and with the approval of the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW), the camp was moved, in violation of international law, to a newly constructed building designed for 500 POWs, in the center of Frankfurt am Main, not far from the main railroad station (Grüneburgpark/Palmengarten) (4d). The Allied POWs, it was assumed, would serve as human shields to prevent the bombing of the city, but during the night of March 22–23, 1944, Dulag Luft West was destroyed by fire during a Royal Air Force raid, and two POWs died. Once again, there was a change of location, this time to Wetzlar, 50 kilometers (31 miles) north, to a military barracks formerly occupied by an antiaircraft unit, in the Klosterwald (4d). This facility was gradually enlarged to accommodate a capacity of almost 800 prisoners.³

Throughout the war, the prisoners in Dulag Luft West were almost exclusively military personnel from the forces of the Western Allies. Their status under international law as POWs had been verified and registered before they were sent on to the transit camp. As the transit camp for an interrogation center, in which the POWs stayed only briefly, Dulag Luft West was not subject to the control of the Reich Labor Deployment Administration (*Reichsarbeitsatzverwaltung*). In any case, since many flying personnel were officers, they could only be deployed at labor to a limited extent or not at all.

Nonetheless, starting in July 1942, a voluntary British work detachment came into being on a trial basis. It had its own duty roster, and its members gave written promises that they would neither escape nor speak with German civilians during the construction work in the camp area, in exchange for the “privilege to work in full liberty without any guard.”⁴ In April 1943, the protecting power’s representatives learned of its existence through the senior British officer. As a result, the volunteers unanimously requested that they be transferred to Stalag Luft 1 in Barth: They feared that, if their pledge were to become known, the Air Ministry would block their pay. Whether a Western Allied work detachment existed again after this event is not indicated by the sources.

At the beginning of July 1942, the unit’s war diary noted the impending arrival of a group from Litzmannstadt (today: Łódź, Poland), consisting of 31 Soviet POWs, to be deployed as a work detachment.⁵ These men probably were members of the Red Air Force who were transferred from Evaluation Site East/Dulag Luft East to Oberursel as a result of a previous labor force requisition. The existence of a sectioned-off “Russian camp” of unknown size, with its own guard force, is documented for the first time in November 1942. With the transfer of the transit sector to Frankfurt, the former Dulag area in Oberursel was changed, beginning in the fall of 1943, into a camp for the Soviet POWs involved in internal Luftwaffe labor deployment, who worked on the grounds of Evaluation Site West.⁶

In total, 42,000 (and, in 1944, 29,000) POWs—bomber crews, fighter pilots, paratroopers, and air landing troops—passed through Dulag Luft West at its sites in Oberursel, Frankfurt, and Wetzlar; around 25,000 of them were interrogated at Evaluation Site West. Until the summer of 1940, the number of POWs in Dulag Luft West usually was below 100. After the conclusion of the campaign in the west, most of the French Air Force (*Armée de l’air*) personnel were transferred. The next phase of the air war led to an increase in Royal Air Force personnel; in July 1941, around 200 POWs passed through the camp.⁷ On a regular basis, they were removed from the transit sector, where only the permanent camp staff (around 25 officers and noncommissioned officers) remained. Demographically, the British were the largest national contingent until the fall of 1943. They included men from every part of the Commonwealth and the Dominions, from Canada, Australia, New Zealand, South Africa, Rhodesia, and the British West Indies as well as volunteers from Poland, Czechoslovakia, and the Netherlands. At the end of September 1942 (monthly admissions were around 400), the presence of American POWs was ascertainable during an inspection visit by the Swiss legation. In March 1943, with constantly increasing admission figures in the following months (May: 574, June: 619, August: 1,278) and an even faster pace of transit, the numbers of British and Americans were approximately equal for the first time.⁸ The participation of the United States Army Air Forces in the Allied Combined Bomber Offensive resulted in a shift in the proportion: with 1,500 new arrivals in October 1943, the US aircrews became

the largest group (72 percent) in the Dulag Luft in Frankfurt. When the last camp inspection at the Wetzlar site took place in March 1945, 826 POWs were present there—during the previous month, around 40 new arrivals were still being registered each day.⁹ The intake always included soldiers who had been wounded or injured when their plane was shot down or crashed or when they made a parachute descent. Their medical care was provided primarily by the Hohemark Reserve Military Hospital, located in Oberursel and equipped with around 50 beds. No deaths are known.

The first commandant of Dulag Luft West was Oberstleutnant Peterpaul von Donat. He had served in the German air service since 1915, in part as an intelligence officer and interpreter, and spoke several foreign languages. He had also been a member of the SA.

Von Donat's successor, Major Theodor Rumpel, was the commandant of Dulag Luft West between June 1940 and November 1941; he had been an interrogation officer there since the end of 1939. He, too, spoke various languages. After tensions with the Reich Security Main Office and under pressure from Heinrich Himmler for treating POWs in Dulag Luft West "too well," Rumpel was replaced in 1941, with a failed escape attempt made months earlier used as the ostensible reason.

Oberstleutnant Erich Killinger assumed command of Dulag Luft West in the winter of 1941 and ran it until the fall of 1943; Evaluation Site West remained under his command until the end of the war. Killinger also had experience in intelligence work.

Oberstleutnant Otto Becker became commandant of the new Dulag Luft West in Frankfurt in September 1943 and coordinated its establishment. In 1936, Becker had joined the Foreign Organization (*Auslandsorganisation*) of the NSDAP. By the early summer of 1943, Becker was an interrogation officer in Oberursel.

Air Fleet Command 4 detailed the three platoons of Reserve Company 14/XVII, which in May 1940 was commanded by Oberleutnant d. R. Erhard Denzler, to guard Dulag Luft West. Leutnant (later Hauptmann) Wilhelm Beer, commander of the 2nd Platoon in December 1941, took command of the company one year later. After the transit camp was relocated, the unit remained in Oberursel as a guard force for Evaluation Site West. The expansion of Dulag Luft West in Frankfurt to more than three times its previous capacity required an increase in the guard forces, so that, in the end, 14 platoons of Reserve troops (*Landesschützen*) were on site; at the beginning of 1944, one company was under the command of Hauptmann Hardje.

The difference between Dulag Luft West and other facilities for POWs was not primarily the existence of a unique camp society made up of Allied prisoners but rather the presence, within the German camp administration, of a camp culture that was quite critical of the regime.¹⁰ This culture sought to evade the exertions of increasingly dominant influence by the Reich Main Security Office (*Reichssicherheits-hauptamt*) in particular, and the endeavor led to escalation.

After one commandant, Rumpel, had been removed for being "too prisoner-friendly," the Gestapo pursued an action before a special military court in the fall of 1944 against his successor, Killinger, accusing the officer corps of political unreliability and alleged subversion of the war effort. The proceeding ended in a verdict of acquittal. To the last, the commandant, who was influenced by Christianity and had contacts to the Confessing Church, transferred into Dulag Luft West prisoners whose lives were at risk because of their unresolved or uncertain status as POWs. In Wetzlar, in turn, the POWs remained protected, even in the final phase of the war, from the consequences of arbitrary orders, which probably was due not least to the exploitation of individual room for maneuver by the camp commandant there, Becker.¹¹

Morale in the main camp was generally high. Prisoners typically spent no more than several days in the camp before transfer to another location, though those recovering from injuries would often remain some considerable time.¹² Overall, the prisoners found the camp guards to be kind and conditions to be more than adequate. In the summer of 1943, several American POWs wrote about the "excellent food" and "eating like a hog." Another stated, "You sometimes wonder if you are a prisoner of war."¹³

Before they could enjoy such conditions, however, prisoners often had to pass through the trial of interrogation in the Evaluation Site. One international observer "believed that the exceptionally good treatment given prisoners at [the Dulag] is an effort to make them forget the treatment they received at Oberursel."¹⁴ While that treatment did not approach the kind of torture that some other German prisoners experienced, it could include threats, inadequate rations, and extremes of heat and cold.

Owing to the high turnover and short stay of the prisoners, prearranged escape attempts long remained the exception in Dulag Luft West, in contrast to the Stalags. During the entire war, there was only one large-scale escape attempt, by a group of 18 British officers who fled during Pentecost, on the night of June 1, 1941, through a tunnel dug in advance. All the escapees from Oberursel were captured again after a few days. For the other locations (Frankfurt and Wetzlar), three escape attempts, all ending in failure, are known to have occurred.¹⁵

A few hours after the bombing of Frankfurt, Dulag Luft West, almost completely consumed by flames, was evacuated on the morning of March 23, 1944. A special train took the POWs and the camp personnel to Wetzlar, where Dulag Luft West was constructed anew. The last inspection report by the protecting power's representative documents the fact that the camp was operational until mid-March 1945, with a supply situation that was relatively good overall. A final POW transport from Evaluation Site West to Dulag Luft took place at the same time.¹⁶ Presumably, the majority of the more than 800 POWs in Dulag Luft were liberated on March 27, 1945, by American units that entered Wetzlar.

At the end of 1945, with the authorization of the United Nations War Crimes Commission in the British Zone of Occupation (Wuppertal), the military court for prosecution of

war crimes put five former officers from Dulag Luft West/Evaluation Site West on trial for ill-treatment of POWs, committed in May 1943 and in the time period between June and November 1944. The initial plans of the British Foreign Office for passing sentence on those responsible date from the fall of 1944. On December 3, 1945, the military court sentenced the former camp commandant, Killinger, and his deputy, Junge, to five years in prison. Lieutenant Eberhard received a sentence of three years, while two of the accused were acquitted. Those who were convicted were imprisoned in Werl Prison and later granted early release after serving two-thirds of the term imposed. The main count in the proceeding was the extortion of interrogation statements, in violation of international law, through targeted overheating of the solitary confinement cells in the interrogation section of Evaluation Site West. The tribunal took it as demonstrated that the camp leadership had been guilty of violations of administrative supervision and, even after initiation of an investigation following a protest by the British government in 1943, had adopted only inadequate countermeasures.

Although hundreds of former POWs were interviewed in the run-up to the trial, only 14 provided evidence for the breach of the Geneva Convention; the indictment is based on 12 witness statements. Even if one assumes that a high number of cases of additional violations went undetected, probably fewer than 1 percent of the Allied POWs channeled through Dulag Luft (West) during the war were subject to treatment that contravened international law. In the US Zone of Occupation, on the basis of an investigation in the spring of 1945 headed by Colonel Allan B. Richardson and conducted by the Army Counter-Intelligence Corps ("I not only found no evidence of war criminality but abundant evidence to the contrary."), no efforts were made to open an analogous proceeding or to participate in the British trial.

OFFIZIER-DURCHGANGSLAGER (OFFIZIER-DULAG) XII

The Wehrmacht established Offizier-Dulag XII (referred to simply as Dulag XII in some sources) on November 15, 1939, in Mainz, in Defense District (*Wehrkreis*) XII (map 4d).¹ It was located in the seventeenth-century Mainz Citadel (*Mainzer Zitadelle*), close to the Rhine River in the center of the city. The camp was subordinate to the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

Offizier-Dulag XII held Polish officers who had been captured during the German invasion of Poland in September 1939. These prisoners were presumably brought to Offizier-Dulag XII from another camp or camps, but their place of origin is unclear. No information about the conditions in the camp is available, but, in general, conditions in camps for Polish prisoners in the early months of the war were poor, with insufficient food supplies and medical care being the norm. It is possible that some French, Belgian, and British prisoners were brought to the camp in the weeks before its closure.

The order to disband Offizier-Dulag XII was issued on July 25, 1940. The camp was then converted into Oflag XII B, which was also located in the Mainz citadel.² Since Oflag XII B only held Western Allied officers, the Polish officers in Offizier-Dulag XII were presumably transferred to other camps on or before July 25, 1940.

SOURCES Additional information about Offizier-Dulag XII can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 68 [listed as Dulag XII].

FRONTSTAMMLAGER (FRONTSTALAGS) INTRODUCTION

[Editor's Note: Within the section of this volume that deals with prisoner of war (POW) camps, the Frontstalags occupy a unique position. There is little information on most of the individual camps. At the same time, there is important material on the camp category as a whole, more than fits logically into the introduction on the POW camp system and also more than we have for any of the other categories. For that reason, in contrast to what we have done with the other types of POW camps, and in order to provide information that would not be available otherwise, we have chosen to include a broad introduction to this group of camps.]

The German army established approximately 70 Frontstalags in France during and shortly after the campaign of

May–June 1940 as well as perhaps another 50 related temporary detention sites. The function of these camps, like the Dulags, was to serve as intermediate stations, to hold prisoners temporarily until they could be sent back to permanent POW camps. In fact, many Frontstalag staffs were later used to form Dulags on the eastern front. Contrary to their original mission, however, some Frontstalags remained in operation throughout most of the war.

Many Frontstalags were installed in French barracks or internment camps that had previously housed French or Allied troops and refugees from the Spanish Civil War or Nazi Germany.¹ Some early camps consisted simply of tents surrounded by barbed wire. All camps were overcrowded, poorly supplied, and unhygienic in the summer and early fall of 1940. By November, however, the departure of all British and most metropolitan French prisoners of war to camps in Germany had mitigated the overcrowding, even though nearly 40,000 colonial prisoners who had initially been brought to Germany returned to the Frontstalags in France.

Until the late summer of 1944, the Frontstalags served primarily as the internment center for French colonial prisoners as well as hundreds of soldiers of color who lived in France and had French citizenship.² In 1943–1944, between 6,000 and 9,000 British colonial soldiers captured in North Africa and Italy also arrived in the Frontstalags. Most of them came from South Africa and British India. They were usually confined to separate facilities and came into contact with the French colonial prisoners mostly inside the hospitals and camp infirmaries. In the summer and fall of 1944, several Frontstalags briefly served as transit camps for Frontstalag prisoners being evacuated to Germany and for Allied soldiers captured in Normandy.

The Frontstalags and work commandos (*Arbeitskommandos*) covered the initial German-occupied section of France with the exception of the two northernmost departments of France, which belonged to the administrative area of the German military commander in Belgium, and Alsace-Lorraine, which the Germans informally annexed. Frontstalags were never in the “free” zone of France, although the German army temporarily deployed a few work commandos there after the Germans and Italians occupied this area on November 11, 1942. Prisoners who escaped to the “free” zone of France were generally safe from recapture, even after November 1942.

Many Frontstalags consisted, in fact, of a number of branch camps (*Zweiglager* and *Teillager*), one of which (the main camp, or *Hauptlager*) served as the administrative center and held the commander and his staff. The staff deployed and supervised guard units, kept a registry of prisoners, and organized the reception and distribution of aid packages and mail. All Frontstalags supervised work commandos, generally between 10 and 100 of them, whose size varied from 1 to 1,000 prisoners. The commandos were dispersed across a large region around the main camp, often encompassing several French departments. In accordance with Article 43 of the Geneva Convention on Prisoners of War (1929), every camp and

every commando had a “man of confidence” (French: *homme de confiance*) who was the prisoners’ spokesperson to the camp commander, the protective power, and the International Committee of the Red Cross (ICRC). In theory, the prisoners were supposed to select the man of confidence, but, in practice, the Frontstalag commander often appointed him.

The network of Frontstalags in France was constantly in flux. The Frontstalag administration might move from one subcamp to another, and the same subcamp or commando could belong to two or three different Frontstalags between 1940 and 1944. Most of the 120 early Frontstalag administrations, few of which left archival traces, were disbanded or returned to Germany in late 1940 and early 1941, once the vast majority of metropolitan French and Allied prisoners had left for Germany. Only 20 Frontstalags survived the first wave of Frontstalag closures, which came to an end in July 1941, but another round of consolidations occurred in late 1941 and early 1942, leaving no more than 8 camps (numbered Frontstalag 133, 141, 153, 194, 195, 204, 221, and 222). Some of these Frontstalags absorbed other camps in the second half of 1943, leaving only Frontstalags 133, 194, 221 (with two separate sections), and 222.

Detailed occupancy numbers exist from July 1941 on. At this time, the Frontstalags held approximately 70,000 French colonial prisoners (down from an estimated 90,000–100,000 colonial soldiers at the end of June 1940) and a few hundred metropolitan French prisoners, mostly officers and translators. Between 2,000 and 3,000 colonial prisoners were still in Germany, either because they were assigned to propaganda camps or because they were overlooked; the majority of them returned to France over the next two years. North Africans (foremost Algerians, but also Moroccans and Tunisians) were the largest group among the colonial prisoners (approximately two-thirds until December 1941), followed by the tirailleurs sénégalaïs, who came predominantly from French West Africa but included some people from Central Africa (20%).

In addition, the Frontstalags housed a few thousand Madagascans and Indochinese as well as several hundred prisoners from the French Caribbean (called *Martinicans* or *Antillais*). A few prisoners came from the French territories in East Africa, India, and the southern Pacific. The Germans also considered prisoners of color living in France as colonial prisoners, even though most of these people, like some inhabitants of the French colonies, had French citizenship. The classification of Jewish prisoners by the German army was inconsistent: a number of North African Jews (predominantly from Algeria) as well as some French Jews were kept in the Frontstalags as “colonial” prisoners, while others were sent to Germany.

Perhaps the most famous Frontstalag prisoner was Léopold Sédar Senghor, later an eminent poet, philosopher, and the first president of the Republic of Senegal (1960–1980). Senghor spent some time in poorly installed provisional camps before arriving in Frontstalag 230 (Poitiers) in October 1940. He was transferred to Frontstalag 221 in Saint-Médard-en-Jalles

in November 1941 and dismissed from captivity on the grounds of a faked illness on February 14, 1942. After his release, Senghor wrote an anonymous report on his last two camps, highlighting German propaganda efforts and the susceptibility of some North African prisoners to German pro-Islamic messages.³ Other well-known prisoners were Guy Tirolien, a poet and colonial administrator from Guadeloupe who spent some time with Senghor in Poitiers, Édouard Kouka Ouédraogo, who became minister of education in Burkina Faso and was interned in Frontstalag 221 until his escape in August 1942, and Papa Guèye Fall, a teacher from Dakar who escaped from Frontstalag 121 in Épinal on January 2, 1941, after German secret service officers had asked him whether he would support a future German administration in French West Africa. In 1956, Guèye Fall founded and directed a school in Dakar that is still named after him (Institution Papa Guèye Fall).

The capture of nearly 1.8 million French and 40,000 British prisoners during the western campaign of 1940 created a vast organizational challenge for the German army. The great majority fell into German hands in the last two weeks of the campaign, June 11–25. The prisoners experienced overcrowded transit camps with poor water and food supplies, and most of them had to march to Germany under appalling conditions. German guards targeted them for random violence. Diseases related to poor nutrition and hygiene became rampant. The barracks and fortresses used as camps were sometimes in poor shape due to damage caused by the retreating French troops or by the fighting. French colonial prisoners, particularly prisoners of color, suffered the worst abuses and received the poorest supplies and accommodations, as German soldiers were still under the influence of a Nazi propaganda campaign that had helped to trigger widespread massacres of black French prisoners during the fighting.⁴

In July 1940, the transport of French prisoners to Germany slowed down because of a clogged infrastructure, leaving over 400,000 prisoners from metropolitan France as well as 50,000 to 60,000 French colonial soldiers in France for the time being. Most of the approximately 40,000 French colonial soldiers who had already arrived in Germany were sent back to the Frontstalags in France in the remaining months of 1940 following an order by Hitler, who did not want prisoners of color on German soil. Meanwhile, the majority of the metropolitan French prisoners remaining in France, after helping to bring in the harvest, were transferred to Germany. Escapes succeeded frequently in the early phase of the Frontstalags, particularly among white French prisoners who, unlike colonial soldiers at this time, could work outside the camps.

Conditions in the Frontstalags remained precarious throughout the summer of 1940, even though changing German propaganda and colonial interests helped to improve the treatment of the colonial prisoners.⁵ The German authorities refused to allow the protective power of French prisoners at this time, the United States, to inspect the Frontstalags in France because they argued that France was still a war zone

(in anticipation of an invasion of Britain). At the insistence of the American diplomat charged with prisoner of war matters at the embassy in Berlin, Jefferson Patterson, the Germans permitted Patterson and an American physician to visit 10 camps in northeastern France in September 1940, but they did not agree to Patterson's demand to allow the American embassy and consulate personnel in France to inspect nearby camps regularly (as was the practice in Germany).

The diplomatic impasse was only overcome when Hitler requested that Vichy France replace the United States as the protecting power for its own prisoners in German captivity, leading to the Agreement of November 16, 1940, signed by Hitler himself.⁶ The Diplomatic Service of Prisoners of War (*Service diplomatique des prisonniers de guerre*, SDPG, also called the Scapini Mission) in Paris, under the leadership of Ambassador Georges Scapini, received the right to inspect all camps containing French prisoners and to negotiate with the German authorities. Scapini, a blind World War I veteran with connections to some German officials, finalized procedures for camp visits in France with the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) in January 1941, and the first inspections of Frontstalags by the Scapini Mission took place a few weeks later. The Scapini Mission gathered detailed information on most camps based on its official inspection reports and on informal letters from aid workers, local officials, and the prisoners themselves. A major exception was the crisis in the wake of the escape of General Henri Giraud from captivity in Germany in April 1942, which threw Hitler into a fit of rage and induced him to prohibit inspections of camps with French prisoners in Germany and France from May to October 1942. In a personal letter to Hitler, Scapini offered himself as a prisoner instead of Giraud if Hitler withdrew his prohibition, but Hitler turned down the offer.⁷

Conditions in the Frontstalags improved markedly in early 1941. The Germans began to allow colonial prisoners to work outside the camps in commandos, giving them access to better food supplies. A new group of German camp commanders reined in the abuses and worked hard to improve the physical conditions of captivity. Moreover, new Home Guard Battalions, consisting of men who were too old or unfit for frontline service (*Landesschützen*) took over the guard duty, and they were much friendlier than the frontline troops and the military police (*Feldgendarmerie*) units that had at first guarded the prisoners.⁸ The camp commanders often hired local companies and deployed the prisoners in improving the setup of the camps (drainage work; insulation of barracks; repairs or creation of medical facilities; sports fields), as Senghor describes in his captivity report with reference to Frontstalag 230.⁹

French colonial prisoners in the Frontstalags did not generally benefit from concessions the German government made in Franco-German negotiations on POWs. According to the Agreement of November 16, 1940, for example, fathers with four children living in poverty had to be dismissed from captivity. Yet, the German authorities balked at applying this

agreement to colonial prisoners by arguing that almost all colonial prisoners were poor by European standards and by claiming that documentation would be impossible. Pressed hard by the Scapini Mission, which consistently requested the dismissal of *all* colonial prisoners, the Germans only let go a few North Africans under this agreement.

In May 1941, Hitler rewarded some French concessions with the decision to dismiss French World War I veterans with the exception of professional officers, but, once more, the agreement benefited only a few French colonial prisoners, mostly North Africans. On July 3, 1941, the German Military Command in France decided to dismiss most remaining metropolitan French prisoners from the Frontstalags (approximately 2,800—and with the exception of Jews), a measure that irritated many Frontstalag prisoners, especially those who had French citizenship and lived in France but had to remain in captivity as prisoners of color. Colonial prisoners also did not benefit from the relief (*relève*) program of 1942, which liberated one French prisoner for every three French workers who were transferred to Germany. Although German officials were responsible for these discriminatory acts, colonial prisoners often blamed the French authorities for them. The discrimination fed demands for equal treatment, especially in light of the fact that the colonial troops had fought hard in May–June 1940. As many prisoners argued, bullets had not distinguished between white and nonwhite soldiers, and decrees should not do so either.

The Germans did, however, dismiss a large number of colonial prisoners due to health and propaganda considerations. Pulmonary disease, including tuberculosis, was widespread among the colonial prisoners. While it remains unproven that non-European soldiers had a special susceptibility to pulmonary diseases (European and African prisoners held in cramped and unsanitary conditions in 1940 became sick at very similar rates), there is no doubt that the Scapini Mission used the widespread belief in this susceptibility as an argument for the wholesale dismissal of colonial prisoners. The Germans, though aware through intelligence reports that the French were dramatizing the health situation of the colonial prisoners, became surprisingly generous in letting sick prisoners go.

In addition, the Germans decided in December 1941 to dismiss 10,000 North Africans as a propaganda measure. German agents and propaganda specialists, with the assistance of Arab nationalists inside and outside the prisoner of war camps, had developed an intense propaganda campaign that highlighted Germany's championship of Islam, vilified France and Britain as colonial powers, and asked the prisoners to come to terms with an allegedly inevitable German victory. German propaganda won over a few North Africans, particularly among the more educated prisoners and religious persons, and also a few West Africans. The French secret service and police interviewed the dismissed and escaped prisoners, especially the North Africans, to identify spies and to confirm the prisoners' loyalty to France.

Together, the dismissals due to disease and propaganda reduced occupancy in the Frontstalags by approximately 50 percent from July 1941 to July 1944. Moreover, several thousand prisoners managed to escape. As a result, nearly two-thirds of the colonial prisoners captured in 1940 were free by July 1944. Of the remaining one-third (30,000 to 33,000), over half were liberated in the summer of 1944. The Germans transferred only approximately 13,500 French colonial prisoners—as well as several thousand British colonial prisoners—to Germany in August and September 1944. Despite the discriminatory policies on prisoner dismissals, French colonial prisoners were therefore much more likely to be free before the end of the war than French prisoners in Germany (with nearly one million still in the Reich in April 1945). Dismissal or escape from captivity, however, rarely meant a return home for colonial prisoners. It sometimes led them straight into a colonial labor battalion under Vichy command, some of which had to work for the German army or the Organisation Todt after November 1942—often under worse conditions than they had experienced as prisoners of war.

Frontstalag prisoners worked predominantly in agriculture, forestry, and public works, sectors that were particularly hurt by the absence of French laborers in German prisoner of war camps. As was the practice in the German Stalags, the German army in France hired the prisoners out to private companies, farms, and public employers such as town administrations. The vast majority of Frontstalag prisoners therefore stayed in the labor commandos. There was some seasonal shifting, especially from agriculture to forestry at the end of the fall and back in the spring. Prisoners received a daily wage for their labor by the employer (usually 10 francs a day, of which the Frontstalag withheld 1 or 2 francs for administrative costs). In addition to paying this small wage, the employer often also had to contribute to the feeding and accommodation of the prisoners.

Work commandos generally offered more freedom but fewer services than large camps. Guarding was lax in most commandos, but prisoners had less access to medical and religious services and fewer opportunities to enjoy sports and entertainment. Agriculture offered the best conditions in terms of food because the farmers often helped feed the prisoners. Forestry commandos demanded hard work, usually in isolated and hence poorly supplied locations. Given that most forestry work was performed in the winter, prisoners—who were always short of mittens, shoes, and warm clothing—also suffered greatly from the cold. The German army required large amounts of wood for construction purposes and as fuel, and the exploitation of the French forests with the help of colonial prisoner labor was therefore a high priority of the German Military Command in France. Prisoners staying in big camps often worked for the upkeep of the camp (a labor that did not have to be paid according to the Geneva Convention) or in nearby work sites, for example, factories or public works.

Many colonial prisoners (and some metropolitan French prisoners in Germany) had to perform war-related work, in

violation of Article 31 of the Geneva Convention; for example, prisoners worked in armaments factories or directly for the German armed forces. The Vichy government tacitly condoned this practice—at least until 1943. Prisoners working for the Wehrmacht and armaments factories usually received the highest wages (up to 40 francs a day) and decent supplies. In 1943–1944, however, many colonial prisoners had to load and unload munitions at train stations and airports—workplaces that exposed them to frequent air attacks, sometimes with deadly consequences. In the same period, the German army also forced several hundred French colonial prisoners to work on fortifications in Belgium and the Netherlands under harsh and unhealthy conditions. The Scapini Mission was not allowed to inspect these commandos and protested repeatedly until the Germans withdrew the prisoners in the spring of 1944.

The food supply of the Frontstalag prisoners was uneven. Prisoners in agricultural commandos, the majority, fared well, but the situation was worse in some large camps and in isolated commandos. According to the Geneva Convention, the detaining power was responsible for feeding and accommodating the prisoners, but, in practice, the German army increasingly relied on French employers and a range of official and nonofficial charitable organizations to supplement and sometimes replace German supplies. The French authorities grudgingly noted this trend but did not oppose it resolutely because they saw in the care for the colonial prisoners a precious tool of French counterpropaganda.¹⁰ Yet, French agencies often could not keep up with prisoner transfers, and their increased role in supplying the prisoners meant that prisoners blamed them for glitches in the system. In addition, the aid deliveries sent to prisoner groups varied by territory of origin. North Africans, especially Moroccans, always received the most generous supplies, and this created jealousies and conflicts.

Corruption networks among the prisoners and sometimes the guards existed in many camps and commandos and made conditions worse by plundering aid packages and selling their contents to the other prisoners or to civilians at inflated prices. A particular supply problem affected the three Frontstalags in the Southwest of France (195, 221, and 222) in 1941–1942. Pressed by the Scapini Mission and the ICRC to house colonial prisoners in milder climates, the Germans transferred too many people to these camps in the arguably warmest zone of German-occupied France. When the German secret services in the fall of 1941 discovered that the most important aid organization supplying these three camps, the French Red Cross section in Périgueux, had smuggled people and letters across the demarcation line, they ordered a halt to the deliveries, exacerbating the shortages for several months.

Guard behavior in the Frontstalags was generally decent after the harsh first phase. In some small work commandos, guards and prisoners even developed a comradely relationship. There were very few guards, and prisoners had much freedom; for example, they could go to town after work and on the weekends without guards. Wherever the supervision

of guards was tighter—and this was particularly the case in northeastern France, where many commandos worked for the German agrarian organization Ostland—the guards tended to be harsher. Camp commanders often found their guards (“good old Papas”) too lenient and tried to enforce stricter guard behavior, especially during escape attempts, but to no avail.¹¹ In January 1943, the Military Command in France, faced with persistent personnel shortages, requested that the French government provide cadres for the colonial prisoners. The Vichy government agreed, hoping to offer the prisoners better conditions and to counter the effects of German propaganda.

Some French cadres, however, were corrupt and abusive, and French-led commandos in general did not offer better conditions than German-led commandos. In some places, the prisoners under French cadres even asked to get their German guards back. Civilians frequently insulted and attacked the French cadres. Views of this arrangement varied among the 6,000 colonial prisoners affected by it: some saw it as a betrayal by France, while others appreciated the French cadres and found that they allowed them more freedom than the German guards. The Germans ended the arrangement soon after the Allied invasion of Normandy on June 6, 1944, because they feared that French-led commandos might defect to the resistance, as occasionally happened.¹²

Relations among the prisoners in the Frontstalags were often tense. Soldiers who were serving in separate territorial units were suddenly mixed with people from all areas of the French empire and initially from France itself.¹³ The Germans tried to keep commandos homogeneous by territory of origin, but there also were tensions among prisoners from different ethnic groups from the same territory. In larger camps, moreover, prisoners remained mixed, although they were often housed in separate barracks. Strong tensions existed in particular between North Africans and blacks from West Africa. But Moroccans, Tunisians, and Algerians also did not always get along with each other. Corruption networks centering on the man of confidence from a particular ethnic group, unequal supplies, and the divisive effects of German propaganda exacerbated these tensions. In some camps, ethnic gangs who controlled the camp police terrorized the other prisoners. A particularly bad case was Frontstalag 221 in Saint-Médard, which Senghor and other prominent prisoners experienced. Usually, such abuses came to the attention of the Scapini Mission and the German authorities, who tried to stop them.

The prisoners of the Frontstalags were members of the French army and also foreigners in France. While it was generally possible for North Africans to communicate with their homes, many prisoners from the more distant colonies had no contact with their families for the entire duration of the war. This strongly affected the mood, in particular, of the Indo-chinese, Madagascans, and West Africans. Relations with French civilians could mitigate homesickness, however. Some

prisoners were very close to the farmer family on whose land they worked. The French authorities also encouraged a “war godmother” program, whereby French women would send letters and packages to a prisoner. Sometimes, the prisoner could visit the war godmother. Several of these relationships became amorous.

In general, the lax guarding in the commandos made relations between prisoners and French women relatively easy even outside the war godmother program. A number of colonial prisoners, cut off for years from their homes, decided to marry French women and hoped to settle down in France. Such plans were difficult to carry out, however, because the prisoners were still mobilized soldiers and therefore required official permission to marry. Although pregnant French women or their mothers urged Ambassador Scapini to secure permission for Frontstalag prisoners to marry, the Vichy administration (and later the Free French authorities) rarely granted the permission, because they saw these amorous relationships as a threat to French prestige in the colonies. For that reason, some prisoners got married without official papers, and some couples had children.

Relations between French civilians and colonial prisoners were generally friendly. There were cases of racism and rejection, and mixed couples often suffered ostracism, but many civilians were grateful for the contribution the colonial soldiers had made to France’s defense in 1940. The Scapini Mission and the other French agencies responsible for prisoners of war actively encouraged supportive relations between civilians and prisoners (short of amorous relationships). The Scapini Mission, for example, admonished town mayors and department prefects if colonial prisoners in their area suffered public hostility or received inadequate supplies. Mayors and prefects sometimes countered the criticism by arguing that the labor of the colonial prisoners was not needed in their area and that the prisoners were not as diligent as hired workers in peacetime.

Escapes from the Frontstalags were frequent, particularly among the North African prisoners, who had good chances of reaching their homes until the Allied landings in North Africa in November 1942. Blacks and other prisoners from the more distant colonies were less likely to flee. Escape was dangerous because German guards had strict orders to fire immediately on every prisoner making an escape attempt, and guards undoubtedly shot and killed a number of prisoners during escape attempts (which was legal) and in a few cases after recapture (which was a war crime). However, the laxity of the guards as well as their poor marksmanship in most cases allowed escapes to succeed, and very few prisoners were ever recaptured. Early resistance networks helped to hide the prisoners and escorted them to the “free” zone of France.¹⁴ Several escaped prisoners joined resistance groups. The most famous was Addi Bâ, a black soldier who escaped soon after capture and founded a resistance network in the Vosges Mountains. He was arrested on November 18, 1943, and executed a month later in Épinal.¹⁵ Most escaped prisoners either

took up a civilian job in wartime France or were integrated into a labor battalion under the Vichy authorities.

In September 1943, the Germans transferred many British colonial prisoners held in Italy to France after a short stay in German Stalags. At least 2,000 soldiers from Africa and British India arrived in four camps in France in October 1943 (Frontstalag 133, 194, 221, and 222), and more than 3,000 Indians came to Stalag 315 in Épinal in the first months of 1944. Most of these prisoners were in poor health because they had to undertake long marches in Italy without adequate supplies. The German Frontstalag commanders ordered that all British colonial prisoners receive rations for heavy workers to restore their strength. The inspection reports of the ICRC and the Swiss government (as protecting power) suggest that conditions were fairly good for them. They performed work similar to that done by the French colonial prisoners, although usually in separate commandos.¹⁶

After the Allied invasion of Normandy, the Germans began to concentrate the prisoners from commandos in the bigger camps. In proximity to the fighting, French colonial prisoners often had to perform war-related work under dangerous conditions, such as digging antitank trenches and clearing bombed streets and towns. In August 1944, with the German position in France rapidly crumbling, the German army tried to evacuate the Frontstalag prisoners to Germany. On their way to Germany, the prisoners (both French and British colonial soldiers) spent time in the camps in the northeast of France, closest to the German border (mostly the camps of Charleville and Nancy, as well as some older campsites that were revived as transit camps, such as Châlons-sur-Marne and Vesoul).

Allied soldiers captured on the Normandy front also passed through these camps on their way to Germany. The transfers and disruptions due to the fighting affected the supply chain for the prisoners, who experienced much hardship during this period. Trains with prisoners became targets of air attacks, which killed many prisoners. In western, southwestern, and central France, the Germans were unable to evacuate most prisoners before the arrival of Allied troops. In some cases, the French resistance liberated the prisoners. The destruction of bridges by the resistance also held up the prisoner transfers, leading to liberation.

A few of the Frontstalags became part of the network of centers for French colonial ex-prisoners awaiting repatriation. The conditions in these centers were bad because the new French authorities could neither repatriate them quickly nor care for them adequately. Whereas most prisoners had worked and earned money under the Frontstalag administration, they were now idle and unemployed. The French authorities often could not procure them their military pay and their premiums. Some prisoners compared their frustrating situation with the “time under the Germans,” which they now tended to idealize. The discontent among ex-prisoners triggered many riots in France, Britain (where some ex-prisoners were sent before returning to Africa), and Africa itself.

A complicating issue was that a number of ex-prisoners had “married” French women and sometimes had children with them; these prisoners wanted to stay in France and settle there, and French women occasionally started riots when these soldiers were forcefully repatriated. The French administration did not recognize most of these marriages, and some officials feared miscegenation and social problems if the ex-prisoners were allowed to settle in France. On the other hand, the colonial governors did not want these couples in the colonies because they feared that marriages of colonial “subjects” and white French women would undermine colonial prestige. In light of these considerations, the commander of France’s “indigenous” troops even went so far as to suggest resettling the mixed couples in Madagascar, but his proposal was deemed illegal. The bloodiest clash involving ex-prisoners occurred in Thiaroye outside of Dakar on December 1, 1944, when the French army command and police opened fire on a crowd of 1,280 ex-prisoners who demanded immediate pay, killing at least 35 of them.¹⁷

The experience of Frontstalag prisoners in France, after a dismal start in 1940–1941, was not altogether terrible. Although there were periods of hunger and hardship in the Frontstalags, the guards in general treated the prisoners in a humane way, and the camp commanders often made great efforts to enhance the infrastructure and supply of the camps. Some of the prisoners’ suffering was due to internal rivalries and corruption. The prisoners’ prolonged stay in German-occupied France created significant problems for a French administration intent on reintegrating the prisoners into a colonial routine, based on discrimination, after 1944.

FRONTSTAMMLAGER (FRONTSTALAG) 100

The Wehrmacht established Frontstalag 100 on July 20, 1940. The camp existed only briefly to accommodate the masses of prisoners captured in France and Belgium in May and June 1940 before they were marched to Germany. The Wehrmacht dissolved the camp on March 18, 1941, and used its personnel to form Dulag 100. Frontstalag 100 received field post number (*Feldpostnummer*) 36 090 between April 28 and September 19, 1940; the number was struck between March 1 and September 7, 1942.

Frontstalag 100 was initially located in the Collège Saint Jacques Prairie du Séminaire in Hazebrouck (map 2). The camp appears to have moved for a short time to Amiens in early 1941, where it coexisted with several other Frontstalags in fortresses and barracks formerly used by the French Army. It housed predominantly French prisoners of war but likely also some British soldiers captured near Dunkirk. No records of this camp are known to have survived.

SOURCES Additional information about Frontstalag 100 can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierungseinrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, 2 vols. (Koblenz: self-published, 1987).

FRONTSTAMMLAGER (FRONTSTALAG) 110

The Wehrmacht established Frontstalag 110 on July 20, 1940, in Defense District (*Wehrkreis*) II. From August 1940 to February 1941, the camp was stationed in Brussels (map 2). On February 9, 1941, the camp headquarters was recalled to Defense District II and on March 16, 1941, it was converted into Dulag 110. While deployed in Belgium, the camp was subordinate to the Military Commander of France (*Wehrmachtsbefehlshaber Frankreich*) and Commander of Prisoner of War District VII (*Kommandeur des Kriegsgefangenen-Bezirks VII*).

Frontstalag 110 held French prisoners of war. The conditions were satisfactory and generally in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).

SOURCES Primary source material about Frontstalag 110 is located in BA-MA (RW6—Allgemeines Wehrmachtamt/Chef des Kriegsgefangenenwesens); BArch B (162/9281–9284); and AN (file 619/MI/4–5).

Additional information about Frontstalag 110 can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierungseinrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 71; and Georg Tessin, *Verbände und Truppen der deutschen Wehrmacht und Waffen-SS im Zweiten Weltkrieg 1939–1945. Vol. 7: Die Landstreitkräfte 71–130* (Osnabrück: Biblio, 1972), p. 229.

Alexander Kruglov

FRONTSTAMMLAGER (FRONTSTALAG) 101

The Wehrmacht established Frontstalag 101 on July 19, 1940, and deployed it in Cambrai in northern France (map 2) during the summer and fall of that year. The camp received field post number (*Feldpostnummer*) 37 042 between April 28 and September 19, 1940; it was struck between March 1 and September 27, 1941. The Germans dissolved the camp on March 13, 1941.

Little is known about this Frontstalag. It likely served as an assembly and transit camp for French and British prisoners of war on their way to more permanent camps in Germany.

SOURCES Additional information about Frontstalag 101 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierungseinrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*. 2 vols. (Koblenz: self-published, 1987).

FRONTSTAMMLAGER (FRONTSTALAG) 102

The Wehrmacht established Frontstalag 102 on July 20, 1940. It was one of many Frontstalags that the Germans created in northern France; these camps were used predominantly as assembly and transit camps for the large number of French prisoners whom they transferred to more permanent camps in Germany during that summer and fall. It existed briefly in Lille, where it was located in a large fortress, and it appears to have moved to Amiens in early 1941 (map 2). The Germans disbanded the camps on March 17, 1941. Frontstalag 102 received field post number (*Feldpostnummer*) 38 028 between April 28 and September 19, 1940; the number was struck between March 1 and September 27, 1941.

No records concerning this camp seem to have survived.

SOURCES Additional information about Frontstalag 102 can be found in the following publication: Gianfranco Mattiello

FRONTSTAMMLAGER (FRONTSTALAG) 111

The Germans established Frontstalag 111 on July 22, 1940, and deployed it in Drancy, in the northeastern suburbs of Paris (map 2). It functioned as a transit camp for French prisoners of war (POWs). The Wehrmacht requisitioned a former French army barracks as well as a low-cost housing project that had been built between 1931 and 1934. This vast U-shaped building, called the *Cité de la Muette* (city of the mute) was a logical choice for a detention center because the shape made it easy to guard. Frontstalag 111 received field post number (*Feldpostnummer*) 13 492 between April 28 and September 14, 1940. It was struck between July 15, 1942, and January 24, 1943. The Germans dissolved the camp on August 13, 1941.

Very little documentation exists on the early phase of the camp. On October 11, 1940, an informal inspection reported

that 4,849 prisoners were held at Frontstalag 111, the vast majority of them (3,346) North African colonial POWs. The second largest group were soldiers from metropolitan France (1,226), who were almost certainly transferred to Germany in the weeks following this inspection. The camp also held 128 *tirailleurs sénégalais* (a general term for soldiers from French West Africa, regardless of whether they were actually of Senegalese nationality) as well as 31 prisoners from the French Antilles and 8 from French Indochina. In addition, there were 79 prisoners without registered nationality, who were probably British. Thirty-one of the North Africans claimed to have been detained by mistake, insisting that they were civilian migrant laborers rather than soldiers. The German authorities often arrested “foreign” laborers in France at the end of the 1940 campaign, on the assumption that they were colonial soldiers who had taken on civilian clothes. Most of these workers contacted French aid agencies and obtained release after a couple of months, which is likely what happened to the 31 North Africans in Drancy, because they no longer appear on the notes of an inspection on December 14, 1940. This inspection mentions the presence of 160 black prisoners (most likely *tirailleurs sénégalais*), 300 French soldiers, and 350 British civilians, probably interned civilians who had been stranded in France.¹ According to French government sources, the Germans spread a great deal of pro-Islamic propaganda in this camp, promising independence for Arab countries.²

Frontstalag 111 held very few POWs by the end of 1940, and soon thereafter it was no longer a prisoner camp. In August 1941, the U-shaped building of the *Cité de la Muette* became a detention center and served as one of the main transit camps for Jews. Because of its initial character as a POW camp, some family members of Jews deported to Drancy and later to Auschwitz contacted the French POW services asking for information about the deported family members—to no avail.

The correspondence concerning the former prisoner of war Jacob Abecassis, who was born on January 15, 1908, in Mascara, in French Algeria, illustrates the confusion between the POW camp and the later transit camp for Jews in Drancy. Abecassis was a North African Jew residing in Paris. He had served in the French army, was captured by the Germans on June 17, 1940, and was released from captivity on December 19, 1941, probably as part of the liberation of 10,000 North African prisoners from the Frontstalags on that day. On April 3, 1942, however, the Gestapo arrested Abecassis in Paris because he had not registered himself as a Jew. The Germans interned Abecassis in Tourcelles and then sent him on to Drancy, where he arrived on April 13, 1942. The Scapini Mission, prompted by inquiries from relatives, found that the Germans had sent him to a camp near Krakau (today: Kraków, Poland) with a name similar to “Husswicht” (which was, in reality, Auschwitz) in June 1942 and asked the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) about his whereabouts. Ambassador Georges Scapini pointed out that according to French police records this man had

committed no crime. Scapini urged the OKW to ensure that he would at least be transferred to a POW camp, so that he could communicate with his relatives. No response seems to have arrived.³

FRONTSTAMMLAGER (FRONTSTALAG) 112

The Wehrmacht established Frontstalag 112 on July 17, 1940. It received field post number (*Feldpostnummer*) 14 588 between April 28 and September 14, 1940. The Germans disbanded the camp on March 14, 1941. The field post number was struck between January 27 and July 14, 1942.

Frontstalag 112 was located in La Celle-Saint-Cloud, in the western suburbs of Paris (map 2). It served as a transit camp for French prisoners of war (POWs). On November 2, 1940, it housed 2,365 colonial POWs—listed as “blacks” although there were certainly also some North Africans among them—as well as 1,131 metropolitan French prisoners. The work commandos of this camp were spread over a large area west and south of Paris. One work commando with 110 French prisoners had to load heavy bombs at the airport of Étampes-Mondésir, 70 kilometers (43.5 miles) south of the main camp, and unload coal from trains at a train station in early 1941. An anonymous informer mentioned that discipline was very harsh in this commando. The prisoners had no rest, and the guards would kick them with their boots or strike them with bayonets if they did not stand in a perfectly straight line. One prisoner had to go to the infirmary with a bleeding wound.¹

More commandos appear to have been transferred to Étampes later on. The city archives contain announcements by the local German commander and the Military Commander in France (*Militärbefehlshaber Frankreich*) encouraging civilians to request prisoners for paid labor to bring in the harvest of 1940. Several hundred colonial prisoners indeed went to work mostly in agricultural commandos, likely under much better circumstances than the ones described in the report about the airport commando in Étampes-Mondésir. A photo of a guard with black prisoners, likely at the airport in Étampes, seems to show a friendly relationship between them.² Other pictures from the same collection show black prisoners doing agricultural work near Étampes.

No detailed information exists about the dissolution of the Frontstalag. The metropolitan French prisoners must have left for Germany by the end of 1940, and the remaining

colonial prisoners could easily have been integrated into the Frontstalags close to Étampes, such as Frontstalags 151 and 153.

FRONTSTAMMLAGER (FRONTSTALAG) 120

The Germans established Frontstalag 120 on July 19, 1940. It received field post number (*Feldpostnummer*) 22 203 between April 28 and September 14, 1940. The unit was disbanded on March 23, 1941, and the field post number struck between July 31, 1942, and October 4, 1943.

The camp was located in Mirecourt, a small town of the Vosges department, not far from Épinal (map 2). The prisoners probably worked at the airport of Épinal, which is located on land belonging to the town of Mirecourt, and in work commandos on farms in the area around Mirecourt. The Germans appear to have dissolved the camp after most metropolitan French prisoners had been sent to Germany. Some of the camp's work commandos, however, remained in the area and became formally part of Frontstalag 121.

Raffael Scheck

FRONTSTAMMLAGER (FRONTSTALAG) 121

The Wehrmacht established Frontstalag 121 on July 19, 1940, and disbanded it on November 10, 1941. It received field post number 22 933 between April 28 and September 14, 1940; the number was struck between February 15 and July 30, 1942.

The Germans installed this camp in the barracks of the French 22nd Algerian Infantry Regiment and in two additional sites in the town of Épinal (map 2).

According to one source, the camp also had a section in Cambrai, possibly established before the camp in Épinal and lasting as a branch camp (*Zweiglager*) until December 1940.¹ It integrated work commandos from Frontstalag 120 in nearby Mirecourt when the Wehrmacht dissolved that camp. The German army closed down Frontstalag 121 for administrative purposes, but the main camp in Épinal and the surrounding work commandos continued to operate under the auspices of Frontstalag 141 in Vesoul. A substantial number of prisoners slept in the main camp in Épinal; one (declining) part of them performed services and repairs within the camp, and a larger number worked in a wide variety of jobs in town, marching to work and returning to the camp for the night. These

Frontstalag 121 at Épinal.
COURTESY OF ICRC.

prisoners were assigned to public works or to local businesses. The majority of prisoners listed under Frontstalag 121, however, belonged to commandos in the villages and forests outside of the town. Many prisoners worked in agriculture in the warmer months and in forestry during the winter. Some commandos did public utility work such as repairing roads and bridges. Given the strong presence of the German organization Ostland (*Ostdeutsche Landbewirtschaftungsgesellschaft*) in the northeast of France, several work commandos were assigned to abandoned farms, where they worked under the direction of Ostland officials (responsible for administering Polish forest and farmland that the Germans had appropriated and transferring it to ethnic German owners). Through the Military Commander in France (*Militärbefehlshaber Frankreich*), it also played a role in administering forestry and farming operations in northern and eastern France.

Frontstalag 121 was one of the 10 camps that the American diplomat Jefferson Patterson was allowed to visit in September 1940. According to the German officers in charge of the camp, Oberleutnant Puhl and Leutnant von Thielen, the barracks had been in extremely dirty condition when the Wehrmacht took them over. Given the proximity of Épinal to the German border, the site had served as a transit camp in the summer of 1940 and had become extremely overcrowded, at one point housing 40,000 prisoners (four times the permissible maximum). By the time of Patterson's visit, however, the camp housed only 4,442 prisoners and had 1,250 men assigned to work commandos in villages. The majority of the prisoners were from mainland France, but the camp also had a substantial number of Muslim prisoners, probably from North Africa and West Africa. Patterson and the accompanying physician drew a positive picture of the camp, stressing that it was not overcrowded, that there were no complaints about the food, and that the health of the prisoners seemed good. They expressed concern, however, regarding the vulnerability of the colonial prisoners to disease and urged the Germans to transfer them to the south of France.²

The ethnic composition of the camp population soon changed because of the resumption of transfers of metropolitan French prisoners to Germany and the return of colonial prisoners to France. The first inspection by the Scapini Mission on March 27, 1941, found the main camp to be overcrowded. The Frontstalag altogether had 8,437 prisoners: 7,451 "indigenous" prisoners and 986 Frenchmen. The majority (5,237) lived in the main camp, whereas the remaining 3,200 prisoners belonged to work commandos. The camp inspector found that the mood of the prisoners was not very good because the camp offered no leisure activities and because the men of confidence (*hommes de confiance*) among the colonial prisoners seemed to be completely ignorant of the Geneva Convention.³

The situation improved very much in the following weeks. When inspector Jean Detryat returned to Épinal on May 22, 1941, he found the main camp much less crowded because a larger number of prisoners had been sent to work commandos in the surrounding villages. The German authorities had installed a decent library and organized courses, film screenings, and concerts. The main camp at this time held 1,977 prisoners: 650 Indochinese, 621 "blacks" (i.e., West Africans), 222 Madagascans, 210 Moroccans, 138 Algerians, 84 Frenchmen, 40 Tunisians, and 12 Martinicans. The food supply was good: the camp authorities had built a small farm on ground adjacent to the camp, and the French Red Cross was generously supplying the camp with packages. The inspector bemoaned, however, that the "indigenous" prisoners were not always receiving food supplies matching their cooking habits, such as couscous, rice, dates, and figs, and he also pointed out that the postal connections were a source of complaints. The latter issue was a general problem related to the disruption of postal service within France and between France and the empire. Whereas the food supply was good, the inspector found that the clothing and the shoes of the prisoners would soon need to be replaced. Prisoners in the main camp and in the work commandos were deployed in agriculture and forestry as well as public works. An undetermined number of prisoners worked for Ostland.⁴

Detryat was able to visit several work commandos in the area north and west of Épinal during the following days. In the village of Bussières, 101 West Africans and Madagascans were working in forestry for a French state enterprise and a private company. The inspector found the living quarters too cramped but was impressed by the food situation and the warm relationships between the prisoners and the local civilians. Many other colonial prisoners performed work on farms, often under the direction of Ostland officials. The food situation was generally good in the work commandos, but the inspector noted deficits with respect to clothing, shoes, accommodations, tobacco, and religious services. The prisoners working for Ostland often had particularly long workdays.⁵

By the end of June 1941, an inspection by a delegation from the International Committee of the Red Cross (ICRC) confirmed the good impression. Almost all metropolitan

French prisoners had left Frontstalag 121, the food supply was beyond reproach, and the health situation—aside from a small number of prisoners with tuberculosis—was good. The delegation concluded that "the camp of Épinal is in very good shape. The men of confidence and the prisoners themselves agree that they are being treated very well." The only critical suggestion of the prisoners was that the winters in the Vosges Mountains were hard for people from warm climates and that the camp should be transferred to the warmer region of Bordeaux before the onset of winter.⁶ An unofficial visit of the Frontstalag by a French philanthropic group in late October and early November 1941 reported similarly positive observations and confirmed that the prisoners were treated well.⁷

Informal observations by women driving supply trucks for the French Red Cross add information on some work commandos. In the region of Épinal, for example, they found that most of the commandos received supplies from a section of the German Red Cross stationed in Mirecourt. The drivers noticed, however, that the mayor of Gouécourt (Vosges) seemed to take supplies out of the aid packages sent to the prisoners in order to feed the local population. In Xaronval, the drivers noted particularly generous and benevolent German guards in a work commando of 10 West Africans and 10 Antillean prisoners. In Pierremont, the prisoners had to cut the grass at a local airport used by the Luftwaffe.⁸

Épinal played a significant role in German propaganda efforts directed toward African prisoners. One of the prisoners, the West African officer Papa Guèye Fall, reported that a German intelligence officer asked him in early 1941 what he would do for Germany should Germany establish a colonial empire in West Africa. In the spring of 1941, the German commander assured the North African prisoners of his solidarity with the Arab anti-British uprising in Iraq. Given its proximity to the German border, Épinal was a station on the way of North African prisoners who had been to special propaganda camps in Germany and were then sent back to France to spread the message in the Frontstalags.⁹

FRONTSTAMMLAGER (FRONTSTALAG) 122

The Wehrmacht created Frontstalag 122 on July 9, 1940. From August 1940 until February 1941, the camp was deployed to Chaumont, Haute-Marne. From February to June 1941, it was located in Dijon, Côte d'Or. Finally, from the end of June 1941 until August 28, 1944, it was located in Royallieu, Compiègne (all map 2). In Compiègne, the camp replaced Frontstalag 170, which had been located there from October to December 1940. Frontstalag 122 received field post number (*Feldpostnummer*) 23 376 sometime between April 28 and September 14, 1940; the number was struck sometime between July 31, 1942, and February 9, 1943. The Wehrmacht ordered the camp disbanded on March 8, 1944.

American diplomat Jefferson Patterson and army physician Dr. Vance Murray visited Frontstalag 122 in Chaumont on September 17, 1940. The Germans initially kept French prisoners of war (POWs) in a former French artillery barrack outside of town but moved them into infantry barracks in town on the day after the American visit because the Wehrmacht wanted to take over the first site for its own use.

At the time of the American inspection of Frontstalag 122, the conditions in the camp were very good. The maximum capacity of the camp was 10,000. Although the camp had been at full capacity soon after the Armistice (June 22, 1940), there were only 4,090 French and 2 Belgian prisoners in the camp in September 1940. A small number of the French prisoners were colonial soldiers. While many metropolitan French and Belgian soldiers performed agricultural work in the surrounding villages and were housed with the farmers, the colonial soldiers worked inside the camp or on commandos nearby, returning to the main camp every evening. The camp commander was Oberstleutnant Kurt Pelzer. The food supply, with supplemental deliveries of French aid organizations, was good, and the health of the prisoners was very good. The planned new location of the camp in town was smaller, but the American inspectors agreed that the present location was too large for the number of prisoners.¹

Frontstalag 122 moved again in early 1941, this time to Dijon, to the south of Chaumont. In Dijon, the camp occupied two different locations: for a short time (perhaps only a month), it came to Longvic, a suburb of Dijon near the city's airport, and then it moved to an abandoned fort in Hauteville-lès-Dijon, a few kilometers northwest of the city. At the time of the first inspection by the Scapini Mission, on March 20, 1941, the camp held 2,566 prisoners (2,482 metropolitan French and 84 colonial prisoners) and was still under Pelzer's command. The vast majority of the prisoners were working in small agricultural commandos (three to four men per farm) in the surrounding countryside. The main camp in the fort housed only 130 prisoners (90 metropolitan French and 40 colonial prisoners). The inspector, Dr. Jean Bonnau, complained above all the poor leisure and entertainment infrastructure in the main camp (inadequate sports facilities, no educational courses, and hardly any games and books). The inspector heard that the large number of escapes had motivated the camp's recent moves.²

According to a second inspection by the Scapini Mission in May 1941, the shortages in the leisure sector had not improved and the camp received excellent grades in most other categories. There were only 47 prisoners in the fort (40 metropolitan French soldiers and 7 colonial soldiers, all of them Martinicans) and an unknown number on work commandos. The inspector claimed that 2,512 "indigenous" prisoners had been dismissed over the course of the previous month, but this appears unlikely in light of the fact that there had been mostly metropolitan French prisoners in Frontstalag 122 before.³

In an unusual move, the Frontstalag 122 administration relocated to Compiègne, where it ran a site that functioned as a police internment camp (*Polizeibaftlager*) rather than a POW camp. Between June 1941 and August 1944, more than 54,000 people passed through the camp and more than 40,000 of them were deported to concentration camps in Germany and occupied Poland. More than 20,000 of these deportees perished. Among the deportees were 2,112 Jews, of whom only 51 survived.

The camp in Compiègne occupied a large quadrangle, which was encircled by walls and a wooden fence. Wehrmacht soldiers patrolled the outer perimeter of the camp and the circular road inside the outer walls as well as manning watchtowers from which searchlights illuminated the camp at night. The head of the camp was still Oberstleutnant Pelzer. Some 30 officers and junior officers were stationed in the camp. SS-Hauptsturmführer Dr. Illers of the Security Service (*Sicherheitsdienst*) also had a role. The two German doctors in the camp were majors, Dr. Buckard and Dr. Fürtwangler.

The camp consisted of three sections (known as Camps A, B, and C) separated by barbed wire. Camp A was for political prisoners, Resistance fighters, and those suspected of subversive activities. Most of the prisoners were French citizens. Many of them were Communists. Often, prisoners who were arrested in reprisal for attacks on German soldiers were held as hostages in Compiègne and shot at Mont Valerien, a

fortress in Paris. Most of the prisoners suspected of subversive activities were deported to concentration camps in Germany such as Dachau, Buchenwald, Ravensbrück, Sachshausen, Mauthausen, and Neuengamme. Apart from French citizens, prisoners in Compiègne included Belgian, Dutch, Spanish, Italian, Polish, and Russian nationals. Prisoners were brought to Compiègne from French prisons or from Drancy and were sometimes transferred from Compiègne to Drancy. Camp A consisted of eight buildings (blocks) and included an infirmary, offices, a library, a kitchen and canteen, a chapel, and a small prison.

Camp B was smaller than Camp A. It housed British, American, South American, and Soviet prisoners as well as some of the administrative offices of the internment camp. Russians living in France, including about 180 Jews, were arrested and brought to Compiègne after the German invasion of the Soviet Union on June 22, 1941. The barracks in which they were housed, bordering on Camp B, came to be known as the Russian camp. Women and children were housed separately from the men. There were two American doctors in the camp. M. Schlissman was appointed chief of the American camp.

On the night of December 12–13, 1941, about 1,000 Jews were brought to Compiègne and housed in Camp C, which became known as the Jewish camp. Of the new arrivals, 743 were French Jews, many of them professionals and distinguished citizens of France, while 300 were foreign Jews, mostly Polish or Russian, many of them workers or artisans, who had been arrested and interned in Drancy in August 1941. They were included in the train to Compiègne to bring the total number of Jewish prisoners to 1,000. Jews were subsequently brought to Compiègne from the internment camps Pithiviers and Beaune-la-Rolande, from Drancy, and from prisons in France.

Prisoners in Camps A and B were forbidden to visit Camp C. At first, the Germans tried to keep the existence of Camp C secret. Prisoners in Camp C were not allowed to write to their families or to receive packages. At the end of February 1942, as a result of pressure from the French Red Cross and the Vichy government, families were allowed to write to prisoners in Camp C and to send them packages of clothing but not food or medications. As of December 1941, the head of Camp C was a German named Kuntze.

During the first months of Camp C's existence, Russian prisoners in Camp B and Communist prisoners in Camp A sent food to the prisoners there. They also smuggled letters to Camp C. After a kitchen was established in Camp C, the quality and quantity of food declined. Russian and French prisoners could no longer smuggle packages to the camp as the Germans now limited the number and weight of packages they could receive. Many prisoners in Camp C subsequently died from hunger and cold.

Although external work was not obligatory in Compiègne, prisoners had to help clean and maintain the camp and perform chores such as peeling vegetables. Prisoners who volunteered for labor worked outside the camp for Organisation

Todt or inside the camp as electricians, warehouse workers, or other specialists. Jews were not allowed to work outside the camp.

Each camp had a chief (doyen) appointed by the Germans. The Germans also appointed heads of blocks, deputy heads of blocks, and heads of barracks rooms, who distributed the food to the prisoners. Since a large percentage of the prisoners in Camp A were Communists, they monopolized the positions in the camp. The doyen of Camp A, Georges Cogniot, who was fluent in German, helped organize the delivery of food to the prisoners in the Jewish camp. In 1943, after the percentage of Communists in the camp had declined, the Germans replaced them with prisoners who held pro-Fascist views. The "police," whom these prisoners appointed to help maintain order, often beat other prisoners.

Apart from the twice-daily roll call, prisoners had little contact with Germans. From time to time the commandant would make a night inspection and call for a general roll call. The junior officer Erich Jaeger would promenade in the camp with two dogs on a leash and slap the faces of prisoners who did not lift their hats quickly enough.

Conditions were better in Camp B than in Camps A or C. Food was more plentiful, and British and American prisoners received packages from the British and American Red Cross.

On July 6, 1942, Camp C was liquidated. Some 18 Jews remaining in Camp C were transferred to Camp A; 147 Russian Jews were sent to Drancy.

The chief doctor in the camp, Hauptmann Fürtwangler, treated the Jewish internees particularly harshly. He would not provide medication for them and refused to send even those who were seriously ill to the hospital. After a report of terrible conditions in Camp C was sent to German authorities in early 1942, about 30 sick Jews were released. At first, two doctors from Camp A served Camp C. For a brief period, a small infirmary was organized in Camp C by Jewish doctors who were prisoners in the camp. After Camp C was liquidated, prisoner doctors worked in the infirmary in Camp A under Fürtwangler. The infirmary in Camp A was known for the kindness of the doctors and for the good conditions there. Prisoners were given clean sleeping bags, and they could sleep until ten or eleven o'clock in the morning. They received meals at noon and at six o'clock in the evening, a snack at four o'clock in the afternoon and milk several times a day. Doctors offered very weak internees an opportunity to come to the infirmary to regain their strength. Very sick prisoners were sent to the hospital in Compiègne. Doctors struggled with the lack of medication and the reluctance of the German doctor to transfer prisoners to the hospital.

Camp A had a small chapel, with one corner for Catholics, the other for different denominations. There were two masses every day conducted by priests who were themselves prisoners. About 100 people participated. After an attempted escape through a tunnel underneath the chapel, the chapel was closed and religious services were banned for a time. Eventually, the Germans permitted a mass on Sunday without a sermon. Monsignor Theas, the bishop of Montauban, who gave

sermons in the camp in favor of liberty, was eventually arrested by the Germans.

About 120 prisoners escaped from Compiègne in total. Some hid in trucks leaving the camp, others built tunnels or climbed over the barbed wire, and some escaped while outside the camp. Most of the escape attempts failed. In mid-August 1944, the consul general of Sweden in France tried to negotiate an agreement with the Germans to take control of political prisoners in Paris, Compiègne, and Drancy together with the Red Cross, but the SS refused. On August 31, 1944, the last Germans left the city of Compiègne. American troops arrived the following day and liberated the camp.

FRONTSTAMMLAGER (FRONTSTALAG) 123

The Wehrmacht established Frontstalag 123 on July 19, 1940, in Defense District (*Wehrkreis*) III.¹ From August 1940 to January 1941, the camp was located in Langres (map 2).² In February 1941, the headquarters was located for some time in Defense District XVII and was attached to Stalag XVII B in Gneixendorf.³ As of March 1, 1941, the Germans converted the camp into a Dulag. Frontstalag 123 received the field post number (*Feldpostnummer*) 23 914 between April 28 and September 14, 1940. The number was struck between July 31, 1942, and February 9, 1943.

While deployed in France, the camp was under the authority of the Military Commander of France and Military Administration District C (*Wehrmachtbefehlshaber Frankreich/Militärverwaltungsbezirk C*). Beginning on February 10, 1941, the headquarters was subordinated for some period of time to the Commander of Prisoners of War in Defense District XVII.

During the deployment in France, the camp held French prisoners. The maximum number of prisoners was 2,000.⁴ The conditions of the French prisoners' confinement were satisfactory on the whole and in conformity with the major provisions of the Geneva Convention relating to the Treatment of Prisoners of War.

FRONTSTAMMLAGER (FRONTSTALAG) 124

The Wehrmacht established Frontstalag 124 on July 19, 1940, and disbanded the camp in August 1941. It received field post number (*Feldpostnummer*) 24 402 between April 28 and September 14, 1940; the number was struck between February 15 and July 30, 1942.

Frontstalag 124 was initially located in Troyes (Aube) (map 2), where at least three camp sites were in use simultaneously in the summer of 1940, all of which were terribly overcrowded. Léopold Sédar Senghor passed through one of these camps at this time. One site, located in the small suburb Saint-Julien, had 45,000 prisoners in July 1940.¹ The American officials Jefferson Patterson and Dr. Murray Vance, as representatives of the protective power for French prisoners, were allowed to visit another camp (Pont Hubert) on September 17, 1940, but by that time the vast majority of the prisoners were working in rural work commandos and only 977 Frenchmen lived in the camp, a former tank depot of the French army. Conditions were good, but the inspectors heard that not long ago 15,000 prisoners had been crowded into the tank garages. The commander of the Frontstalag was Oberstleutnant Gobbin, and the camp Troyes-Pont Hubert was commanded by Lieutenant Wegener.²

On March 14, 1941, Frontstalag 124, still under the command of Gobbin, moved to the garrison town Joigny. It admitted a large group of prisoners arriving from a branch camp of Frontstalag 150 in nearby Cravant and took over the work commandos of Frontstalag 150 in this area. Frontstalag 124 now included 1,683 colonial prisoners (1,156 North Africans, 428 Indochinese, and 99 West Africans), 1,112 metropolitan French prisoners, and 4 members of the French Foreign Legion from Hungary and Czechoslovakia. Of these 2,799 men, 1,620 (roughly half metropolitan French and half colonial prisoners) were working in small work commandos on farms. The conditions in the main camp, located in the former barracks of the French 3rd Artillery Regiment in Joigny, left much to be desired. The metropolitan French prisoners lived in a reasonably well-built and recently painted building, but the African prisoners had to sleep in poorly ventilated halls and the Indochinese soldiers lived in horse stables. The colonial prisoners had bags of straw as mattresses, while the metropolitan French prisoners had to sleep on loose straw. The latrines were dirty and poorly constructed. The camp lacked equipment for sports and games, and it had poor food and tobacco supplies. Eight colonial prisoners were in the camp prison after other prisoners accused them of theft. The camp inspector noted approximately 100 sick Indochinese prisoners. He also bemoaned that the prisoners had not been allowed to send money to their families. The physical structure of the camp was generally in bad shape, but the fact that most of the prisoners in the main camp were working on the development of the camp suggested that it would soon improve.³

When the Scapini Mission returned to Joigny in early May, the main camp had indeed experienced major renovations, and all prisoners had received straw bags as mattresses. The formation of new work commandos in the countryside and in local industry and mining had reduced occupancy in the main camp from 1,179 to 610 (268 North Africans, 185 Indochinese, and 157 metropolitan French). The inspector emphasized that the prisoners appreciated the improvements even though they still missed cigarettes and needed new clothing, shoes, and more plentiful food supplies. The problems with the money transfer to the families and the lack of leisure opportunities also remained unresolved. The inspector was able to see seven agricultural work commandos nearby, which were in good shape.⁴ An inspection by the International Committee of the Red Cross (ICRC) in June 1941 confirmed the improvements. At this time, however, only 140 prisoners were still living in the main camp. The majority of the metropolitan French prisoners had likely been transferred to Germany, and most of the remaining colonial prisoners were probably sent to work commandos in the countryside.⁵ The camp had 2,281 colonial prisoners plus a small number of metropolitan French prisoners. Among the colonial prisoners, West Africans predominated (1,513). In addition, Frontstalag 124 had 536 North African, 185 Indochinese, and 47 Madagascan prisoners.⁶

Frontstalag 124 maintained a military hospital in nearby Auxerre. With a staff of six French physicians and a pharmacist, as well as nine medical assistants, this hospital served 489 prisoners from February to September 1941. Only 41 prisoners were left in September 1941. A German chief physician, who was well regarded by the French staff, led the hospital. As in most other places, the French medical personnel complained that the Germans allowed them to leave the camp only with a guard even though the Geneva Convention on the Wounded and Sick (1929) stipulated that medical personnel were not prisoners of war.⁷

In early September 1941, Frontstalag 124 held approximately 3,000 prisoners. Occupancy in the site of Joigny was reduced to 134 prisoners (50 Algerians, 30 Moroccans, 25 Indochinese, 12 West Africans, 12 metropolitan French, 3 foreigners—probably Foreign Legion members—and one prisoner each from Madagascar and Martinique), and the camp was in good shape. The latrines were clean and better installed, shower facilities existed, and most prisoners had received new clothing and shoes. Prisoners were able to play soccer in the courtyard of the barracks, and they had a library. Money transfers were now permitted (although this likely did not help many colonial prisoners given the precarious state of overseas communications). The food supply was good thanks to deliveries of aid packages. The tobacco supply was still inadequate and religious services were not available. The Catholic priests who had previously offered masses had all left, and the Muslim prisoners lacked a room for worship. Nonetheless, the morale of the prisoners was very good, although many complained about having no postal connections with their homes. Thirteen prisoners were under arrest, most of

them as a result of disputes with their French employers in the work commandos. Some arrested prisoners were noncommissioned officers who had refused to work (on the basis of Article 27 of the Geneva Convention on the Treatment of Prisoners of War) but who had apparently signed work contracts with French employers before. The inspector, Jean Detroyat, hinted that there were irregularities in the distribution of aid packages in the camp, indicating that there might be corruption networks.⁸

The report of Algerian prisoner Brahim ben Driss confirms this impression. Ben Driss escaped in August 1941 and wrote to the French authorities that the German camp administration, in conjunction with some pro-German North African prisoners, requisitioned aid packages and sold their contents to the prisoners. He also criticized the North Africans working as camp policemen, who were so brutal that the prisoners preferred dealing with the German guards. Ben Driss's escape almost failed because a French farmer betrayed his intention to flee to the Germans. Another farmer, however, helped him by giving him civilian clothing.⁹

Evidence of corruption is also revealed in the documents of the prefect of the Yonne Département. In August 1941, for example, the commander of Frontstalag 124 complained that the camp was not receiving adequate tobacco supplies. The prefect thereupon sent a list of all the deliveries, showing that the camp had been supplied at the prescribed level.¹⁰

Aside from the main camp, Detroyat inspected 19 work commandos in the area around Joigny. The state of the prisoners' clothing and shoes was worse in the commandos, while the food deliveries were uneven. In several commandos, Detroyat found much animosity among prisoners from different territories. The housing of the prisoners was sometimes in poor shape and not heatable. In Cosnes (Nièvre), 47 Algerians working for the German army were living in an abandoned factory with broken windows. A large work commando of 271 prisoners (169 West Africans, 55 North Africans, 42 Indochinese, and others) stationed in Fourchambault (Nièvre) had to load and unload trains at the local rail yard. The prisoners needed new shoes and clothes but were adequately supplied and showed good morale. Most prisoners of the work commandos visited by Detroyat worked for local farmers, and they were generally well fed.¹¹

Like many other camps in France, Frontstalag 124 was closed in the latter half of 1941. The camp of Joigny and its work commandos became part of Frontstalag 141 in Vesoul on October 24, 1941.¹²

SOURCES Additional information about Frontstalag 124 can be found in the following publication: Janet G. Vaillant, *Black, French, and African: A Life of Léopold Sédar Senghor* (Cambridge: Harvard University Press, 1990).

FRONTSTAMMLAGER (FRONTSTALAG) 125

The Wehrmacht established Frontstalag 125 on July 19, 1940, and deactivated it on March 16, 1941. Frontstalag 125 received field post number (*Feldpostnummer*) 25 079 between April 28 and September 14, 1940; the number was struck between February 15 and July 30, 1942.

Frontstalag 125 existed only for a few months in Melun, southeast of Paris (map 2). It functioned as a transit camp for prisoners of war from July to December 1940. No record of camp inspections has survived. The International Committee of the Red Cross (ICRC) did receive a summary report about camps in the region of Paris in August 1940 that almost certainly referred to this camp. According to the author of the report, French army physician Dr. Marquezy, the camps in the area of Paris were overcrowded and offered very poor accommodations to approximately 45,000 prisoners, of whom almost a third were colonial prisoners. Initially, the Germans kept thousands unprotected in open fields, later quartering them in tents. Dysentery and other intestinal diseases were rampant. The food and lodging situation quickly improved by August, however, and an increasing number of prisoners were being moved into barracks.¹

FRONTSTAMMLAGER (FRONTSTALAG) 126

The Wehrmacht formed Frontstalag 126 on August 26, 1940, and disbanded it on March 13, 1941. It received the field post number (*Feldpostnummer*) 33 413 between April 28 and September 19, 1940; the number was struck between March 1 and September 7, 1942.

Frontstalag 126 was a short-term camp located in the cities Dinan and Saint-Brieuc on the northern coast of Brittany (map 1). Saint-Brieuc also had a separate camp (Frontstalag 134) for a short time. The main sites of these camps became work detachments of Frontstalag 133 in Rennes in late 1940 and early 1941. The majority of the prisoners in these details worked for the German armed forces. There appear to have been no inspections of Frontstalag 126 before it became part of Frontstalag 133.

SOURCES Primary source information about Frontstalag 126 can be found in BArch B 162/28913 (copy at USHMM RG-14.101M.2672).

FRONTSTAMMLAGER (FRONTSTALAG) 127

The Wehrmacht established Frontstalag 127 on August 26, 1940, in Defense District (*Wehrkreis*) III.¹ From mid-September 1940 to February 1941, the camp was located in Rennes (map 1). In February 1941, the headquarters was briefly relocated to Defense District VIII and then deployed to Sagan (today Żagań, Poland).² On March 22, 1941, the Germans redesignated the unit as a Dulag. Frontstalag 127 received field post number (*Feldpostnummer*) 34 545 between April 28 and September 19, 1940. The number was struck between February 28 and September 27, 1941.

While deployed in France, the camp was subordinate to the Military Commander of France and the Military Administration District B (*Wehrmachtbefehlshaber Frankreich/Militärverwaltungsbezirk B*). Between February 13 and March 22, 1941, the headquarters was subordinate to the Commander of Prisoners of War in Defense District VIII.

During the deployment in France, the camp held French prisoners of war (POWs). The confinement conditions of the French POWs were satisfactory and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War.

SOURCES Primary source material about Frontstalag 127 is located in BA-MA (RW6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens) and BArch B (162/8542–8544).

FRONTSTAMMLAGER (FRONTSTALAG) 130

The Wehrmacht established Frontstalag 130 on July 20, 1940, and deactivated it on April 8, 1941. Frontstalag 130 received field post number (*Feldpostnummer*) 30 959 between April 28 and September 14, 1940; the number was struck between July 31, 1942, and February 9, 1943.

Frontstalag 130 operated in Caen (map 1) during the German campaign in France but moved to Amiens (2) in the fall of 1940. It served as a transit camp for French prisoners of war in the first months after the campaign and was dissolved before regular camp inspections began. In Amiens, the camp occupied several sites including the large citadel at the northern fringe of the old town; all of these sites became part of Frontstalag 204 sometime before March 1941.

FRONTSTAMMLAGER (FRONTSTALAG) 131

The Wehrmacht formed Frontstalag 131 on July 20, 1940, in Defense District (*Wehrkreis*) IV. From August 1940 to March 1941, the camp was located in Saint-Lô (map 1).¹

It was assigned field post number (*Feldpostnummer*) 31 444 and operated under the authority of the Armed Forces Commander of France (*Wehrmachtbefehlshaber Frankreich*).

Frontstalag 131 at Saint-Lô. POW labor detachment, May, 1941.
COURTESY OF ICRC.

Frontstalag 131 held French prisoners of war. A subcamp with 1,500 French prisoners existed in a pyrotechnics factory in Cormelles-le-Royal, near Caen; these prisoners were sent to Germany in March 1941. On March 29, the camp was disbanded and Frontstalag 133 in Rennes took over the administration of the remaining work commandos.

FRONTSTAMMLAGER (FRONTSTALAG) 132

The Wehrmacht established Frontstalag 132 on July 20, 1940, and disbanded the camp on May 15, 1941, making it the basis of Dulag 132. Frontstalag 132 received field post number (*Feldpostnummer*) 31 979 between April 28 and September 14, 1940; the number was struck between July 31, 1942, and February 9, 1943.

Frontstalag 132 was an important camp in the first phase of the German occupation of France. In early 1941, it held approximately 10,000 French prisoners, half in Laval (Mayenne) and the other half in Mulsanne (map 1). The camp in Laval was located in the Schneider Barracks (*Caserne Schneider*). The camp in Mulsanne was also a French barracks, which had been occupied by British troops in 1939 and 1940. After the arrival of German troops in June 1940, Mulsanne was part of Frontstalag 203, which was headquartered in Le Mans, but it was integrated into Frontstalag 132 before April 1941.

In the winter and spring of 1941, the camp in Laval was severely overcrowded. In March 1941, the commander, Major Eckert, wrote to mayors in the surrounding communities asking them to request prisoners for labor.¹ By April 1, 1941, 1,400 prisoners had thus been sent to work commandos, but the camp was still overcrowded and conditions were poor. It had no showers, no library, and only a poorly stocked canteen. At this time, the camp in Laval was holding 4,826 colonial and 100 metropolitan French prisoners. Religious services for Christians and Muslims were well organized. The prisoners performed construction work at a nearby airport and inside the camp, contributing to an improvement of conditions. The camp in Mulsanne held approximately 5,000 prisoners at this time, all colonial soldiers except for 65 metropolitan French soldiers. Many prisoners were assigned to work commandos in the countryside, but the inspector of the Scapini Mission heard that many local farmers did not appreciate having North African prisoners as a labor force. The camp itself offered inadequate accommodations. 900 prisoners had to sleep on the bare floor for lack of mattresses.²

Conditions improved rapidly, however. In May 1941, when the International Committee of the Red Cross (ICRC) visited Laval, the Germans had reduced occupancy at the local camp

Frontstalag 132 at Laval. Camp entrance, May, 1941.
COURTESY OF ICRC.

to 3,459 colonial prisoners (3,112 "men of color," predominantly North Africans and a few Indochinese, as well as 347 "blacks," i.e., West Africans and Martinicans) and a few metropolitan French prisoners. Most prisoners worked outside the camp during the day, mostly on farms surrounding the town. A Muslim prisoner told the inspectors that the metropolitan French man of confidence (*homme de confiance*) gave preference to his countrymen in the distribution of food parcels; the inspectors suggested that a colonial soldier be appointed as the man of confidence, and the Germans concurred. Whether this actually happened is unclear.

The Scapini Mission learned that conditions were rapidly improving in Frontstalag 132 during its second visit to the camps and work commandos on June 19–21, 1941. The camp in Laval only housed 1,932 prisoners at this time (mostly North Africans but also including 46 metropolitan Frenchmen), and it had showers and better sleeping quarters. The same was true for Mulsanne, which housed 2,420 North Africans and a few metropolitan Frenchmen and Indochinese (some of whom were actually civilian workers who had erroneously been detained as prisoners of war [POWs] and were released not much later). The Frontstalag had work commandos up to 100 kilometers (62 miles) north and east of Laval in Mayenne, Vautorte, Ambrières, La Baroche, Evron, Averton (Château Lorges), Bais, St. Pierre-sur-Orthe, Bernay, Savigné-l'Evesque, Ballon, and Beaumont. The prisoners in these commandos were predominantly North Africans. They worked in agriculture, forestry, and public works (maintenance of roads and bridges). Conditions were generally good, but many prisoners needed new shoes. In some commandos

the prisoners complained that the French employers had not yet paid them for their labor. The health situation in the camps of Laval and Mulsanne was not very good. The ICRC inspection noted in May 1941 that 10 percent of the prisoners in Laval showed signs of tuberculosis. The inspector of the Scapini Mission found 15–18 percent of the prisoners there to be affected by tuberculosis in June, in particular those prisoners who had spent the fall of 1940 in Germany.³

The camp in Mulsanne received several visits from Oberstleutnant Johannes Gutschmidt, who was in charge of several Frontstalags at the time. In his diary, Gutschmidt mentions that, in December 1940, the camp held some French civilians who had been mistaken for soldiers; he ordered their immediate dismissal. On Christmas 1940, Gutschmidt organized a celebration with the Catholic priest and some officers from the camp. In regular intervals, four women from the French Red Cross section in Paris drove two trucks to Mulsanne loaded with supplies for the prisoners. Gutschmidt, faced with a shortage of guards, ordered a better fence installed around the camp and launched several construction projects, but some prisoners took advantage of the construction and escaped. During one of his frequent visits, Gutschmidt talked to the Algerian imam of the camp, who organized frequent Muslim services in a mosque installed on the campgrounds. Gutschmidt ordered that a small tower be built so that the muezzin could call the prisoners to prayer.⁴

After Gutschmidt left, several reports indicate tensions between the French noncommissioned officers (NCOs) and the colonial prisoners as well as abuses by guards who were becoming nervous because of frequent escapes. A violent incident occurred in a commando in Bernay (Sarthe): during a dispute with the other prisoners, the French NCO Jardinie, who was the man of confidence of the local commando, attacked the African soldier Faki-Boukakeur with a chair, hitting him so hard that Faki-Boukakeur was sent to the hospital and lost an eye.⁵

Another incident occurred in a commando of five North Africans near Laval on September 3, 1941. After a prisoner escaped, the German guard assembled the other four prisoners. Farmers heard five shots and then saw the guard ride away on his bicycle. Later on, they found the corpses of three prisoners. The Scapini Mission requested an investigation, and Ambassador Scapini made it clear that he took a personal interest in this matter. The German embassy, however, delayed an investigation on procedural grounds, pointing out that the Scapini Mission had sent some letters to the wrong addresses. It appears that the incident was never investigated due to this minor technicality. The guard probably claimed that he shot the prisoners during another escape attempt.⁶

In September 1941, a German guard shot and killed three North African prisoners on a farm in retaliation for a successful escape of another prisoner even though the murdered prisoners had not tried to escape. This incident triggered a sustained inquiry by the Scapini Mission. The Germans were evasive, however, even though Ambassador Scapini himself was deeply concerned and took a personal interest in the case.⁷

In December 1941, another scandal erupted in Laval, this time involving two French NCOs who were in charge of 600 colonial prisoners. The prisoners complained that the two NCOs had taken money from them and treated them brutally. To the inspector from the Scapini Mission who investigated the case, the accused NCOs claimed that the prisoners had become unruly because of widespread gambling and that confiscating their money had been the only way to restore calm. The inspector found the NCOs untrustworthy but also argued that the accusations of the prisoners were exaggerated, as allegedly had to be expected from “indigenous” people.⁸ It is unclear how the conflict was resolved.

In the summer of 1941, the Germans made intensive propaganda efforts in Frontstalag 132 because of the strong presence of North Africans, who were the principal target of German pro-Islamic propaganda. Some German officers appeared and told the prisoners: “You were Frenchmen for fighting, for letting yourselves get killed, for becoming prisoners. You are no longer considered Frenchmen when it comes to liberation.” The German officers pretended that Germany would be happy to let the North African prisoners go but that the French government was objecting to their release.⁹

The last POWs left the camp of Mulsanne in the summer of 1941. The site became an internment camp for Gypsies and, in October 1942, for Jews on their way to the Drancy camp. The camp in Laval and the work commandos remained part of Frontstalag 132 until it was administratively dissolved and integrated into Frontstalag 133 at the end of 1941.

FRONTSTAMMLAGER (FRONTSTALAG) 133

The Wehrmacht established Frontstalag 133 on July 20, 1940, and disbanded it on August 16, 1944. It received several different field post numbers (*Feldpostnummer*): 32 312, assigned between April 28 and September 19, 1940, struck between March 1 and September 7, 1942; 18 129 D, assigned between January 10 and September 29, 1943, struck on December 28, 1944; 11 750 Z, assigned between January 10 and September 26, 1943, struck on January 30, 1945; and 64 674, assigned on December 4, 1944.

Frontstalag 133 was one of eight prisoner of war (POW) camps in France that existed until the end of the German occupation. Headquartered initially in the city of Rennes (map 1), an important traffic junction on the eastern side of Brittany, Frontstalag 133 absorbed all other camps from Normandy to the lower Loire valley, including Frontstalags 132 (Laval), one part of 135 (Quimper), 181 (Saumur), and 232 (Savenay), before April 1942. After this consolidation process, Frontstalag 133 was the largest camp in France, holding 8,375 men (including 2,005 West Africans, 1,760 Algerians, 733 Madagascans, 655 Moroccans, 468 Indochinese, 307 Tunisians, and 153 Martinicans). In 1943–1944, Frontstalag 133 also received several thousand British colonial prisoners, especially soldiers from South Africa and British India. These prisoners occupied the camps in Morancez near Chartres and various camps in and near Orléans. In the fall of 1943, the administration of Frontstalag 133 moved to Orléans and Chartres.

Shortly after occupying Rennes, the Germans took over several barracks and camps, most prominently the Camp de la Marne and the adjacent Camp de Verdun in the southwestern suburbs of the city. Little is known about the first months of Frontstalag 133, except that 9,500 French POWs had been sent to Germany from the camps in Rennes by November 12, 1940.¹

The Scapini Mission carried out the first thorough inspection of the camps of Frontstalag 133 in March and April 1941. In the Camp de Verdun, also listed as Frontstalag 133A, the inspector found 3,336 French colonial prisoners, 64 Frenchmen, and 2 foreigners. The vast majority of the prisoners worked on commandos in the countryside around the city. The camp was in unusually good shape, a fact for which the inspectors credited the commander, Hauptfeldwebel Polatzeck, whom they described as unusually understanding and caring. The camp had an excellent library, some films and film projectors, and a soccer field. The Camp de la Marne, also listed as Frontstalag 133D, received even more lavish praise. The Camp de la Marne at this point had 1,378 West African prisoners, 708 North Africans, 151 Frenchmen, and 2 Poles who had fought in French uniform. The only drop of bitterness was the state of health of some colonial prisoners: a doctor reported that 12.5 percent of the black prisoners displayed symptoms of tuberculosis.² The camps in Rennes by mistake also held 150 civilian workers from the French empire and one Belgian civilian. As in many similar cases, the German army had interned these people in POW camps on the suspicion that they were soldiers who had discarded their uniforms. It usually took several months and repeated protests by the Scapini Mission to get them liberated.

In June 1941, for the first time, the Scapini Mission also visited branch camps and work commandos of Frontstalag 133 in Brittany, the most remote of them being over 250 kilometers (155 miles) from Rennes. The largest subcamp was in Dinan (1,381 prisoners, including 879 West Africans and 489 Indochinese), where the prisoners worked in agriculture and on the local airport. This camp offered religious services for Muslims and Catholics and was in good condition. Most other work commandos belonging to Frontstalag 133 were small (20–30 prisoners) and deployed in agriculture and public services (foremost road building or maintenance and bridge repairs). Conditions and supplies varied given that local employers (farmers or town administrations) were

responsible for lodging and feeding the prisoners. Many prisoners needed clothing and shoes.³

A new round of inspections in December 1941 noted that most prisoners in the coastal regions of Brittany were now employed by the German armed forces. Due to reasons of military secrecy, the inspection reports could not describe their occupation, but it appears that many prisoners performed construction work on forts, airports, and submarine bunkers. In some cases, prisoners grew food for German servicemen. The range in the quality of lodging and supplies persisted; the inspectors noted that the prisoners working for the Luftwaffe generally had the best food rations. The German armed forces offered higher daily wages than French employers. One of the largest work commandos in December 1941 was still in Dinan, albeit reduced to 520 prisoners (including 450 West Africans and 61 Indochinese). Among the larger work commandos figured also some recently incorporated camps and commandos, for example, in Brest, Vannes, and the fort of Crozon (formerly belonging to Frontstalag 135), as well as in Champagne near Le Mans (the Camp d'Auvours) and Laval (both formerly part of Frontstalag 132).⁴

Corruption and abuses seem to have been a prominent feature of Frontstalag 133 in 1941–1943. In the Camp d'Auvours, for example, a Tunisian sergeant acting as the French camp commander allegedly used his free time to cycle into town to buy vast quantities of alcohol and food that he sold for excessive prices in the camp. The sergeant enchainèd critics among the prisoners; the German commander, who did not speak French, was either ignorant or complicit. A year later, the man of confidence in this camp accused the German commander of robbing aid packages himself. In Rennes, several prisoners complained about aid packages not arriving or being robbed of their most precious contents (such as chocolate, coffee, sugar, and cigarettes). In the Camp de la Marne, the French camp commander, a noncommissioned officer from Martinique, demanded money for prisoner clothing from aid packages sent by charities; the soldier Hassou Azontondji was thrown into prison without food after he protested against this practice.⁵ Sometimes, prisoners directed their anger at North African Jewish prisoners in positions of authority.⁶

In March 1943, the prisoners of several camps belonging to Frontstalag 133 undertook a work slowdown in protest against the nonconsideration of colonial prisoners by the relief (*relève*) program, in which French POWs were released in exchange for the dispatch of qualified French workers to Germany. The Frontstalag commander heard that French civilians had told the colonial prisoners to insist on being dismissed under the relief, and he asked the Scapini Mission to urge the prisoners to resume work at full speed. The Scapini Mission rejected this demand, however.⁷

In 1943 and 1944, Frontstalag 133 was providing much labor for military purposes. Prisoners worked in armaments factories, carried out construction or maintenance work for military installations, and handled ammunition in train stations or airports. After bombardments, prisoners often had to perform the dangerous cleanup and reconstruction work. In

some places, the local population resented the colonial prisoners because they were working for the Germans instead of escaping and joining the resistance.⁸ Deployment for military purposes, moreover, almost always implied an increased risk of being attacked by Allied bombers at a time of intensifying bombardments of France. Bombings did kill or severely wound dozens of prisoners in Frontstalag 133. Generally, the French camp inspectors insisted on the availability of air raid shelters, but sometimes the prisoners could not reach them in time, and some commandos lacked adequate shelters despite repeated protests by the Scapini Mission.⁹ At the airport of Orléans, for example, a bombing attack killed 7 members of a work commando of 130 prisoners (mostly North Africans) on February 7, 1944. In La Ferté-Saint-Aubin, Vierzon, Bourges, and Salbris, prisoners worked in ammunition factories, sometimes guarded by French personnel. Many of these prisoners also experienced bombing attacks that caused several deaths among them.

Beginning in April 1943, and particularly after the Italian surrender in September, British colonial prisoners from Italy began arriving in Frontstalag 133. They usually occupied separate sections of existing camps for French colonial prisoners, but they had contacts with French prisoners and civilians. The camp of Orléans had 1,400 South Africans who worked in town in November 1943, and the camp of Morancez (Eure-et-Loir) also held 800 (later 900) British colonial soldiers, together with 228 soldiers from French North Africa. In a large commando in the Camp Marguerite in Rennes, 840 British Hindu prisoners worked together with 416 French West Africans; relations between the two groups were very good. Six hundred South Africans belonged to the camp at Chartres in November 1943, where they also performed work in town. These South Africans had arrived badly nourished and engaged in intense trading with French colonial prisoners, apparently to the latter's advantage. The (French) camp inspectors hoped that Red Cross parcels for the South Africans would arrive soon and put an end to this trade, and the situation did indeed improve rapidly. In April 1944, Chartres had 1,700 British colonial prisoners situated in relatively good conditions. Many of the South Africans in Frontstalag 133, described as "half-Indians" in the inspection reports, had been captured by the Axis forces in North Africa.

The British prisoners appear to have been better supplied than the French colonial prisoners, at least after the first weeks following their arrival in France. They received parcels from the International Committee of the Red Cross (ICRC) and the French Red Cross, and the Germans gave them new French uniforms from the stocks earmarked for French colonial prisoners. Although the Germans initially used some British prisoners for war-related labor, for example, at the airport of Orléans, a Swiss inspector visiting Frontstalag 133 in early 1944 insisted with success that the British prisoners not be deployed for military purposes.¹⁰ Sick British prisoners were treated by French and German doctors in hospitals that also served French prisoners.¹¹ By June 1944, however, the Scapini Mission urged the Germans

to separate British and French colonial prisoners; the fact that the British prisoners received twice as many aid parcels and enjoyed better work conditions had triggered jealousy among the French colonial soldiers, who blamed France for their inferior conditions.¹² Inspections of the camps, commandos, and hospitals with British colonial prisoners reveal generally good conditions. The German camp commanders gave them heavy worker rations when they arrived from Italy in poor condition, and the inspectors noted few reasons for complaints.¹³

In 1943, Frontstalag 133 took over several sites east of Rennes that had long been occupied by other Frontstalags, most notably Orléans and Chartres, which had been the headquarters of Frontstalag 153. The organizational center of Frontstalag 133 moved from Rennes to a large camp in the Dunois quarter in Orléans in 1943, and the camp commander during the last months of the German occupation was Oberst Freiherr von Kanitz. A small officer camp was established on a section of the larger camp, holding 18 French colonial officers under very good conditions (as usual, these officers had servants drafted from the rank-and-file prisoners, received better food, and did not have to work). That the Germans in this case respected the provisions of the Geneva Convention for officers (separate housing from rank-and-file troops; no obligation to work) is surprising, given that the few "indigenous" officers were almost always kept together with privates and had to work.¹⁴

For unknown reasons, the German army opened a subcamp of Frontstalag 133 in Beauvais, north of Paris. Installed in old French army barracks, this camp held 435 "colored" South African POWs who worked at the nearby airport, although apparently not in violation of Article 31 of the Geneva Convention. Conditions in this camp were excellent. The prisoners had good recreational facilities, musical instruments, and excellent medical and dental care. The Swiss camp inspector praised the German commander and his staff for their effort to improve the lot of the prisoners.¹⁵ It appears that these prisoners were later sent to camps in Laon, Sedan, Charleville-Mézières, and Nancy.¹⁶

In 1943–1944, another distant subcamp of Frontstalag 133 existed in Charleville-Mézières (northeastern France). This camp held an unknown number of British colonial prisoners (including a commando of 103 British colonial soldiers in Sedan) and (in June 1944) nine work commandos under French cadres with a total of 483 prisoners.¹⁷

As is true for all camps in German-occupied France, little documentation exists for the last weeks of Frontstalag 133. A detailed inspection occurred only in the camp of Morancez, a few kilometers south of Chartres, which housed 307 British colonial prisoners and oversaw work commandos with 957 other British colonial prisoners. The prisoners had to load and unload trucks and perform clearing work after bombings, possibly in violation of Article 31 (although neither the inspector nor the man of confidence [*homme de confiance*] complained). The German commander promised to withdraw the prisoners from areas threatening to become war zones. The

food supply of the prisoners had declined because the aid parcels from the Red Cross no longer arrived due to the fighting. The clothes and the shoes of the prisoners were in poor shape. The inspector noted tensions among the prisoners that sometimes erupted into stabbings. Still, the conditions in the camp were good overall.¹⁸

French colonial prisoners experienced increasing pressure to perform war-related work as the fighting front approached. In July 1944, the Scapini Mission protested to the Military Commander (*Militärbefehlshaber*) because West African prisoners from the Camp de la Marne in Rennes had to load and unload ammunition for the troops fighting in Normandy.¹⁹ With Allied forces advancing on central France in early August 1944, the German army ordered the transfer of remaining Frontstalag prisoners to Germany. The French Resistance, however, held up several trains with prisoners from the region of Chartres and Orléans and liberated some of the local camps, thus sparing these prisoners the dangerous transfer to Germany.²⁰ Almost certainly, the French and British prisoners from Frontstalag 133 who were in Charleville-Mézières were sent to Stalags in southern Germany and Austria, where they experienced severe food shortages and heavy bombings. A special case was a commando of 115 North African prisoners from Frontstalag 133 working for the Organisation Todt on the British Channel Islands. The Germans were unable to evacuate this commando during the Allied invasion of Normandy, and the prisoners kept working on the islands, which were German-occupied until the end of the war. An ICRC representative visited them in early 1945 and found that they urgently needed food and clothing, which they received through a neutral ship. These prisoners were likely the last French POWs in German hands to be liberated—on May 9, 1945.²¹

FRONTSTAMMLAGER (FRONTSTALAG) 134

The Wehrmacht established Frontstalag 134 on July 20, 1940, as a temporary camp for French prisoners of war in Saint-Brieuc, on the coast of Brittany (map 1). They disbanded the camp on March 15, 1941, after most of the prisoners were sent to Germany. Its remaining work commandos were integrated into Frontstalag 133 in Rennes. No records of this camp seem to have survived. The camp received field post number (*Feldpostnummer*) 33 911 between April 28 and September 19, 1940. The number was struck between March 1 and September 7, 1942.

Raffael Scheck

FRONTSTAMMLAGER (FRONTSTALAG) 135

The Wehrmacht established Frontstalag 135 on July 20, 1940, and disbanded the camp on June 12, 1942. It received field post number (*Feldpostnummer*) 34 670 between April 28 and September 19, 1940. The number was struck between March 1 and September 7, 1942.

The main camp of Frontstalag 135 was located at the southwestern edge of the town of Quimper, along the Odet River in a section called Lanniron (map 1). The commander of the Frontstalag was an Oberst von Vignau (also spelled du Vigneau in French sources), and the castle of Lanniron housed the camp's German staff. Through its control of a network of subcamps and work commandos in Brittany, Frontstalag 135 provided labor for the local agricultural economy and for the German armed forces on the coastline. Frontstalag 135 had many small agricultural work commandos as well as some large commandos in the metropolitan area of Brest, Vannes, and other places near the Atlantic coast, where the prisoners were working for the Wehrmacht.

Some camps of Frontstalag 135 held large numbers of civilian workers whom the Germans had mistaken for colonial soldiers. Perhaps because many of them had to work on secret military sites, the Germans only released the civilian workers of Frontstalag 135 after a long delay. After the Wehrmacht deactivated Frontstalag 135, Frontstalag 133 in Rennes took over its subcamps and work commandos.

In May 1941, Frontstalag 135 held 7,746 prisoners, including 6,943 colonial prisoners and 803 metropolitan Frenchmen. A total of 2,300 prisoners stayed in the main camp in Quimper-Lanniron, and 666 lived in the abandoned Saint-Charles School in Quimper. Frontstalag 135 oversaw 79 work commandos, all but 6 of which had fewer than 100 prisoners. The main camp in Lanniron had 30 barracks housing up to

Frontstalag 135 at Quimper. May, 1941.
COURTESY OF ICRC.

90 men each. It had a mosque and an excellent library. Unlike in most other camps, where the German army took over an existing site (usually French army barracks), the camp of Lanniron was mostly of new construction. To build the camp and to procure wood for the barracks, the German army requisitioned land and cut down 800 apple trees, much to the outrage of the owners, who requested indemnification during and after the war.¹ The International Committee of the Red Cross (ICRC) inspectors who visited the camp in May 1941 noted that the Germans separated soldiers from different territories to mitigate tensions, especially between Algerians and Moroccans. The Algerians were jealous because the Moroccans had a supply organization that provided more for them than for the other prisoners (a frequent problem in Frontstalags). Altogether, however, the ICRC inspectors rated the camp as "excellent," with the only major complaint being the low tobacco distributions. Tuberculosis was less frequent than in other camps, with an estimated rate below 3 percent, and the sick prisoners received good treatment in a hospital in nearby Brizeux.²

In June 1941, the population of the Frontstalag had declined to 6,497, partly because of the transfer of most metropolitan French soldiers to camps in Germany and partly because the Germans had dispatched 500 prisoners to Frontstalag 153 in Chartres, which needed more laborers.³ The vast majority of the prisoners (5,188) were deployed in work commandos; only 1,276 prisoners remained in the main camp in Quimper, many of them working at a nearby airport for the Luftwaffe. The camp still held 108 Indochinese and 25 North African civilian workers. Although the inspector of the Scapini Mission confirmed that conditions in the main camp were good, he found that prisoners in some work commandos

experienced great hardship. In a large commando at the Poumic Air Base near Brest, the tensions between the 302 Moroccan and 230 Algerian prisoners led to violence, and an unusually brutal camp police force, which Algerians dominated, terrorized the camp. Every week, prisoners were treated at the hospital for severe wounds from beatings with sticks that the camp police had administered. Although the food rations and medical care in this commando were good, the barracks were in poor shape, many of them having broken windows. Hygiene was poor, partly because the camp had no fresh water supply (drinking water had to be transported to the camp in large buckets).⁴

Another large commando, with 2,045 North Africans, was located in a former military camp in Brest-Pontanézen. As was the case elsewhere in the Brest region, the prisoners performed construction work for the Wehrmacht and Kriegsmarine, possibly for submarine bases in the town. As in other camps belonging to Frontstalag 135, the Germans interned civilians from the empire here by mistake (86 Moroccans and 60 Indochinese). Conditions in this work commando were good; as was frequently the case in commandos working for the German armed forces, the food supply was better than average.⁵

Another work commando was located in Fort de Crozon, a military base on the southern side of the estuary facing the port of Brest. The 586 prisoners (420 Algerians, 162 Moroccans, 2 Tunisians, and 2 metropolitan Frenchmen) performed unspecified construction work for military purposes. The prisoners were comfortably housed, but the food deliveries arrived somewhat irregularly. The work commando included 30 Moroccan civilian workers whom the Germans interned by mistake.⁶

In the Camp at Coëtquidan, near Guer in eastern Brittany, the Germans placed 574 North African prisoners in a former French military facility. The ICRC inspectors who visited the camp in May 1941 were impressed by the excellent housing and food supply. They pointed out that the prisoners even received barrels of apple cider, a Breton specialty. The inspectors considered the camp "magnificent" and praised its "exemplary cleanliness."⁷ When the French camp inspector arrived a month later, there were 565 prisoners in the commando, including 363 Algerians, 175 Moroccans, and 20 Tunisians. The inspector concurred with the ICRC report about the good lodging but pointed out that the camp had recently experienced irregular food deliveries.⁸

In Vannes, a coastal city in southeastern Brittany, 607 prisoners, including 360 Algerians, 139 Tunisians, 17 Moroccans, 7 French North Africans, 3 West Africans, and 1 Martinican, were working under good conditions. They were comfortably housed in former barracks, and their food supply was very good.⁹ In August 1941, a German guard in Vannes fatally shot a prisoner named Abdallah ben Salah. Apparently, a group of prisoners had refused to obey the orders of the guard and walked defiantly toward him. The guard felt threatened and shot into the group without aiming at anybody in particular. The incident triggered an investigation, but there never was a trial.¹⁰

FRONTSTAMMLAGER (FRONTSTALAG) 136

The Wehrmacht formed Frontstalag 136 on August 17, 1940, in Defense District (*Wehrkreis*) IV and, beginning in August 1940, was deployed in France.¹ On March 27, 1941, the Germans disbanded the unit and used its personnel to create AGSSt 2, 6, 7, and 8.² The unit received field post number (*Feldpostnummer*) 20 586 between April 28 and September 14, 1940. The number was struck between February 16 and July 18, 1942. While deployed in France, the camp was under the Armed Forces Commander of France (*Wehrmachtbefehlshaber Frankreich*).

Frontstalag 136 held French prisoners of war. Specific information on the conditions in the camp are not available, but indications are that they were satisfactory and complied with the Geneva Convention relative to the Treatment of Prisoners of War.

SOURCES Primary source material about Frontstalag 136 is located in BA-MA, RW6—Allgemeines Wehrmachtamt/Chef des Kriegsgefangenenwesens.

Additional information about Frontstalag 136 can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und*

FRONTSTAMMLAGER (FRONTSTALAG) 137

The Wehrmacht established Frontstalag 137 in Giromagny, in the Vosges (map 2), on August 18, 1940, and disbanded the camp on March 22, 1941. Frontstalag 137 received field post number (*Feldpostnummer*) 22 717 between April 28 and September 24, 1940. The number was struck between July 19, 1941, and February 14, 1942.

Frontstalag 137 probably held French soldiers who had occupied the large fortress complex south of Giromagny, which was part of the Maginot Line. No records of this Frontstalag are known to have survived.

Raffael Scheck

FRONTSTAMMLAGER (FRONTSTALAG) 140

The Wehrmacht established Frontstalag 140 on July 27, 1940, and disbanded the camp on March 19, 1941. Frontstalag 140 received field post number (*Feldpostnummer*) 02 274 between April 28 and September 14, 1940. The number was struck between February 1 and July 11, 1941.

Frontstalag 140 was one of the short-lived camps that housed the large numbers of French prisoners of war (POWs) taken by the Germans after the fall of France in June 1940. They captured many POWs in the region of Belfort (map 2), an important fortress town, at the very end of the campaign; the prisoners in Frontstalag 140 were probably soldiers responsible for the defenses of the local forts and the nearby Maginot Line. The Germans deactivated Frontstalag 140 after the departure of the metropolitan French prisoners to permanent camps in Germany. No records of conditions in this camp are known to have survived.

Raffael Scheck

FRONTSTAMMLAGER (FRONTSTALAG) 141

The Wehrmacht established Frontstalag 141 on July 26, 1940, in the small town of Vesoul (Haute-Saône Département), in

the Franche-Comté region of northeastern France (map 2). It was the smallest of the eight camps remaining after the large consolidation of Frontstalags in late 1941 and early 1942. By April 1942, Frontstalag 141 had absorbed the former Frontstalags 121 (Épinal) and 124 (Joigny) and had 2,602 prisoners. Most of the prisoners worked in agriculture and forestry, in a large area from the Swiss border to the upper Saône and upper Marne valleys; others worked for the Peugeot car company. Frontstalag 141 had a mix of prisoners in April 1942 (1,095 West Africans, 547 Indochinese, 441 Madagascans, 211 Algerians, 178 Moroccans, 57 Tunisians, and 21 Martinicans), but, by that summer, it held predominantly Indochinese prisoners; the camp population had also increased to 2,903 prisoners. Frontstalag 141 received field post number (*Feldpostnummer*) 03 219 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943.

In 1943, Frontstalag 141 was one of the two first camps that saw a partial substitution of French cadres for German guards. In the second half of 1943 (sometime after August 21), the camp was integrated into Frontstalag 194 (headquartered in Châlons-sur-Marne and later Nancy). At that point, the Vesoul camp was divided into two sections: one for French colonial prisoners captured in 1940 and one for colonial prisoners who had been recaptured after an escape. Most of the prisoners in the second category were soldiers with mixed racial background whom the Germans had transferred from the prisoner of war (POW) penal camp in Rawa Ruska (part of Stalag 325). In late 1943, the Germans also established a section for prisoners of color from the Free French forces in Vesoul, but this section seems to have been already administered by Frontstalag 194. Given the proximity of Vesoul to Germany, most of the prisoners from this camp went to Germany in the fall of 1944, although a few escaped in time or were liberated by the French Resistance.

Early information on Frontstalag Vesoul was very positive. The local Red Cross section reported in August 1940 that the civilians in town were exceptionally helpful toward the prisoners, and the first inspection by the Scapini Mission in March 1941 pointed out that the prisoners enjoyed more freedom than elsewhere and seemed to be "privileged." Another French camp inspector visiting Vesoul in May 1941 also drew a positive picture. At this time, the main camp had 326 Frenchmen, 270 Tunisians, and 30 Moroccans. Some of the prisoners worked inside the camp improving the physical plant, and 369 prisoners worked in forestry around the town. The camp report lists two German commanders, a Major von Seutter-Lotzen and a Hauptmann [sometimes listed as Major] Wagner. Wagner, who might have been in charge specifically of the main camp in Vesoul, received special praise for his efforts to organize plays, film showings, concerts, and sports events. The camp existed in a former army barracks in Vesoul that had belonged to the French 11th *bataillon des chasseurs*. It offered very good physical conditions, an excellent canteen, and a large library. The prisoners' food supply was very good, thanks in part to a noble lady associated with the local section

of the French Red Cross, who generously complemented the rations of the prisoners. The only problem reported was a lack of tobacco.¹

By September 1941, the Frontstalag, then commanded by Major Reizt, oversaw over 50 work commandos from the Swiss border to the foot of the Morvan Mountains, a region with a diameter of approximately 250 kilometers (155 miles). Almost all of the commandos were small (7 to 22 prisoners) and deployed in agriculture or forestry. One large commando existed at the military camp of Valdahon (Doubs), with 313 prisoners (129 Moroccans, 75 Tunisians, 49 West Africans, 29 Madagascans, 25 Algerians, and 6 "white" prisoners). Conditions in this camp were good, and when the inspector suggested that a room be assigned to serve as a mosque, the German authorities complied immediately.² Later, an African sergeant denounced several of his fellow prisoners from this camp for displaying an "unpatriotic spirit," implying that they might have spied on other prisoners and betrayed escape plans to the Germans.³ Generally, the small commandos, dominated by West Africans and Indochinese prisoners, were in good shape. In Gray (Haute-Saône), a work commando of six Indochinese produced artistic paper flowers during their free time and sold them to the local population. In Pesmes (Jura), 10 Indochinese prisoners had established a vegetable garden to supplement their own food supply. In many cases, civilians supported the prisoners despite the occasional complaints of farmers about the prisoners' excessive pay. In some cases, the inspector warned that the prisoners' housing was not fit for the cold season, but the Germans often withdrew the small commandos to the large camps during the winter.⁴ Guard duty in the small commandos of Frontstalag 141 was very lax, probably because the German army knew that black and Indochinese prisoners were least likely to escape. In some villages in the Jura Mountains, a single guard made a tour of farms on his bicycle every day just to make sure that all the prisoners (usually one or two per farm) were still there.⁵

In September 1941, the main camp in Vesoul held 249 prisoners (175 North Africans, 36 Frenchmen, 28 Indochinese, 6 West Africans, 2 Madagascans as well as 1 Russian and 1 Pole captured in French uniform). The conditions were still very good, and the inspector noted that the camp was well prepared to accommodate prisoners who would be withdrawn from the agricultural commandos during the winter. The inspector only bemoaned that the tobacco supplies were low and that there were no Christian religious services even though the Muslims had several Imams and a room reserved for worship.⁶

A new round of inspections of the work commandos in December 1941 revealed that many small commandos had been consolidated into larger ones for the winter, and it also reflected the seasonal shift of focus from agriculture to forestry. Religious services for Muslims were available everywhere, but there was a lack of clothing in a few commandos and a problem with delays in the payments of the prisoners. A large forestry commando in the Chaux forest near Dole (Jura) seemed to offer the worst conditions: the 153 prisoners (133

West Africans, 16 Algerians, 2 Moroccans, and 2 Tunisians) lived in cramped barracks and had no access to fresh water (they collected and drank rain water). Their health was not good, and they needed shoes, socks, gloves, soap, and lamps. In another forestry commando, in Auberive (Haute-Marne), conditions for the 100 West African and 15 Indochinese prisoners were very good; nevertheless, 11 West Africans had escaped from the camp the day preceding the inspection. In nearby Arc-en-Barrois (Haute-Marne), a forestry commando of 104 West Africans and 3 Martinicans occupied an idyllic château.⁷

In the spring of 1942, the Armed Forces High Command (OKW) began transferring almost all Indochinese prisoners to the Frontstalag in Vesoul. The French authorities had pressed the Germans for some time to concentrate prisoners from the same colony in the same camps, so as to facilitate their supply with food that fit their cooking habits (e.g., rice for the Indochinese and couscous for the North Africans). But why the OKW chose the region of Vesoul for the Indochinese prisoners remains unclear. Perhaps the OKW considered the fact that in April 1942 Frontstalag 141 already had more Indochinese prisoners than any other Frontstalag and that it would be easiest to bring all the Indochinese there.⁸ It is obvious from the documents that German and French officials believed that Indochinese men were physically weaker than Africans and could not do hard labor, and an International Committee of the Red Cross (ICRC) report of November 1942 mentioned this argument as the reason for the concentration of Indochinese prisoners in Frontstalag 141.⁹ This was counterintuitive, however, because Vesoul had many forestry work detachments, and forestry was the hardest form of physical labor in the Frontstalag. Moreover, the climate in parts of the region, particularly along the Jura Mountains, was one of the coldest of German-occupied France. Still, by July 1942, 2,355 of a total 2,553 Indochinese prisoners in France were sent to Frontstalag 141.¹⁰ They constituted the majority of the prisoners in this Frontstalag (approximately 80%), sharing it with several hundred West and North Africans and some “white” prisoners.

The transfer of the Indochinese prisoners led to a tragic incident on May 20, 1942, when 350 prisoners en route from Rennes to Vesoul took advantage of a sleeping guard and tried to escape. Other guards, however, opened fire, killing seven prisoners and severely wounding three others before recapturing most of the escaped prisoners. According to witnesses, the prisoners believed that they were being brought to Germany and decided that they would rather die.¹¹

Conditions in Frontstalag 141 remained stable in 1942, as a six-day inspection of the commandos by René Scapini in October 1942 demonstrated. Only one commando, in Montarlot (Côte d’Or), was poorly supplied with food.¹² An ICRC team visiting the Frontstalag in November 1942 confirmed the good impressions of the physical conditions and the supply of this camp.¹³ As René Scapini pointed out, however, the insecurity of postal connections with the colonies lowered the morale of most prisoners in Frontstalag 141. This difficulty

tended to affect the prisoners from the more distant colonies the hardest; most Indochinese prisoners never heard from their families for the entire duration of the war. Another inspection tour by Dr. Bonnaud from February 3 through February 7, 1943, revealed that the Indochinese were treated particularly well by the Germans. They had good food supplies and relatively light work. The Germans even decreed a three-day holiday so that the Indochinese could celebrate Tet, the Vietnamese New Year. By contrast, the inspector found that the Germans treated the North Africans with more severity.¹⁴

The archives of the Yonne Département in Auxerre offer a close look at the labor deployment of prisoners in this area, formerly controlled by Frontstalag 124. While the German authorities urged French employers (farmers, businessmen, and town mayors) to hire POWs, many employers balked because they argued that the POWs, especially the Indochinese, were not as useful as the peacetime laborers and because they hated having to pay the prisoners during periods of low-intensity labor, especially during the winter. The mayor of Gisy-les-Nobles complained to the prefect of the department that the Indochinese prisoners “do not satisfy the farmers. They leave work whenever they please and even threaten employers who ask them to stay.” The mayor of Pont-sur-Yonne complained to a colleague: “These men are good for nothing. The farmers need to employ all sorts of pressure short of physical violence to make them work. It is pointless; they are gourmets and lazybones, incapable of all work. This is a nuisance that is setting a bad example because the unwillingness of the prisoners to work affects the other workers as well.”¹⁵

In late 1942 and early 1943, two new developments affected Frontstalag 141. First, a section of the camp in Vesoul became a detention center for prisoners of color who were subject to disciplinary measures, and second, the Frontstalag became one of the first camps in which commandos of colonial prisoners received French cadres instead of German guards.

The disciplinary section of the camp included a group of 250 prisoners who had initially been held in Stalags in Germany. Most of them were punished for repeated escapes, and a few of them were noncommissioned officers (NCOs) who had refused to work (the Germans did not recognize the French NCOs as officers, whom the Geneva Convention exempted from labor, and thus required them to work). The Germans considered many of the Frontstalag’s new prisoners to be of mixed race (mostly North African and French) and had interned them for a few months in the harsh reprisal camp in Rawa Ruska near Lemberg (Polish: Lwów; today, L’viv, Ukraine) in German-occupied Poland, but the OKW sent them back to France in November 1942 because the climate in Poland was too harsh for them. The Scapini Mission tried to learn as much as possible about these prisoners and to help them, but the Germans kept them under particularly strict guard and allowed access to them only with severe restrictions. These prisoners suffered a harsher

regimen than the majority of prisoners in Frontstalag 141, who continued to work under relatively good conditions and lax guarding.¹⁶

The program that replaced German guards with French officers and NCOs, to which the Germans agreed in January 1943, started in the Frontstalags of Vesoul and Nancy in March. By September, 1,117 colonial prisoners in Vesoul were under French cadres (887 Indochinese and 230 North Africans).¹⁷ The prisoners' reaction was mixed. Even before the arrival of French cadres, some prisoners in Frontstalag 141 had complained about the attitude of the white officers in captivity with them. For example, in February 1943, some North Africans complained to a POW organization in Paris that their French officers were fraternizing with German officers and enjoying a leisurely time in the spa town of Vittel, while treating the African prisoners with contempt.¹⁸ The arrival of other white officers guarding colonial soldiers on behalf of the enemy deepened the animosity of these prisoners toward white French officers. Other prisoners, however, appreciated their French guards because they felt even freer than before and because being guarded by officers and NCOs from their own army made them feel less homesick.¹⁹

There is no doubt, however, that the presence of French guards for colonial prisoners triggered hostility from the local population, particularly in Vesoul. When the French cadres arrived, pamphlets circulated in town saying: "Hold tight: The bootlickers of the debacle have arrived." When a French NCO hit a colonial prisoner at the train station, townspeople yelled at the French cadres: "You bunch of lazybones, what are you doing here? You will all be hanged." In a restaurant, French cadres triggered a fistfight with the locals when they complained about the high prices, and civilians insulted them as cowards who had done nothing to defend France in 1940. The French officer in charge of the cadres in Vesoul defended their behavior and argued that the public hostility was merely the result of Communist propaganda.²⁰

In 1943, more prisoners in Frontstalag 141 began working in industrial facilities and, therefore, became more vulnerable to bombing attacks. Several work detachments of Frontstalag 141 were employed by the Peugeot car company. Although this company had ties to the French Resistance and British agents and was therefore rarely bombed, one prisoner in a work unit of 156 North Africans deployed in the Peugeot factory in Montbéliard was killed by bombs on June 16, 1943.²¹

Sometime in the second half of 1943, Frontstalag 194 took over the administration of Frontstalag 141. The work detachments, the disciplinary section of the Vesoul camp, and the French cadres remained.

FRONTSTAMMLAGER (FRONTSTALAG) 142

The Wehrmacht established Frontstalag 142 on July 26, 1940, and disbanded the camp on August 13, 1941. Frontstalag 142 received field post number (*Feldpostnummer*) 03 999 between April 28 and September 14, 1940. The number was struck between January 27 and July 14, 1942.

There is some uncertainty concerning the camp's history. The Wehrmacht installed Frontstalag 142 in the town of Besançon (map 2), where the numerous fortresses provided the Germans with quarters for the large numbers of French prisoners of war (POWs) captured along the Maginot Line and near the Swiss border. One of the buildings the Germans used was the Vauban Barracks (*Caserne Vauban*) in Besançon, near the train station. This building complex later became an internment center for British civilians in occupied France. Approximately 3,900 British women, some with babies, arrived in Besançon in December 1940. One of them described very poor sanitary conditions and piles of trash and dirt in the camp.¹ The POWs had already been transferred to permanent camps in Germany, but the camp was apparently still designated as a Frontstalag.

Little is known about conditions in Frontstalag 142, but they were apparently very poor early on, as was the case in most Frontstalags before the departure of most metropolitan French prisoners for camps in Germany. A summary report by a French official from September 1940 pointed out that the prisoners in Besançon screamed to passersby that they were starving and urgently needed bread.²

The Germans apparently placed some work commandos under the administration of Frontstalag 141 in Vesoul, even though they continued operating in Besançon. One commando with 18 North Africans and 11 West Africans was quartered in the Fort des Justices in September 1941 and performed forestry work outside of the town for a private company.³

North Africans in December: Inspection report, Frontstalag 141, commando *Fort des Justices*, by René Scapini, December 16, 1941, PAAA, R 40991.

FRONTSTAMMLAGER (FRONTSTALAG) 150

The Germans established Frontstalag 150 on July 20, 1940, and dissolved it on April 1, 1941. It received field post number (*Feldpostnummer*) 25 628 between April 28 and September 24, 1940. The number was struck between February 15 and July 30, 1942.

Frontstalag 150 held French prisoners of war (POWs). It was located in the Yonne Département, southeast of Paris. Its headquarters was in Auxerre in September and in Saint-Florentin in October 1940 (map 2), with subcamps in Auxerre, Sens, Cravant, Saint-Florentin, Joigny, and Clamecy (Nièvre). Some of its camps were dissolved after the departure of most metropolitan French prisoners for Germany, and the others were absorbed by Frontstalag 124 in Joigny and later by Frontstalag 141 in Vesoul.

Little information exists on the history of Frontstalag 150. Some prisoners whom the Germans transferred to Joigny from the camp in Cravant, which had belonged to Frontstalag 150, on March 14, 1941, mentioned that they liked their old camp better even though it occasionally flooded in the winter and suffered from mosquitoes in the summer. The camp in Cravant permitted many escapes, which may explain why the Germans closed it and perhaps also why it was more popular with the prisoners than the camp in Joigny.¹ The camp site in Auxerre, together with a nearby hospital, continued to operate under the direction of Frontstalag 124, as did a work detachment in Saint-Florentin.² The camp in Saint-Florentin received a visit from Lt. Colonel Johannes Gutschmidt, commander of Frontstalags in the region of Central France, in July 1940. Gutschmidt found the camp severely overcrowded, with 15,000 prisoners, and in poor shape. Many prisoners lived in tents and shacks they had built themselves, although barracks were under construction. Gutschmidt found equally deficient conditions in Auxerre and Clamecy.³

About a month before the establishment of Frontstalag 150, when there was a collection point (*Sammelstelle*) operating in Clamecy, a massacre took place. On June 18, in reaction to a prisoner attacking a German officer, the guards lined up the attacker together with 20 randomly chosen African prisoners (West Africans and some North Africans) for execution. The Germans also shot 20 other African prisoners when they refused to dig graves for the group that had been executed. A few days later, German guards shot two African prisoners in Clamecy after finding razor blades on them.⁴ The massacre of Clamecy inspired a French documentary film seeking to trace the origins of some victims, *Les 43 tirailleurs* (*The 43 Sharpshooters*) by Mireille Hannon (2010). The townspeople in Clamecy knew of the massacre, and there are indications that the guards at the site remained quite nervous

about it for some time thereafter, probably extending into Frontstalag 150's tenure.

The majority of the metropolitan French prisoners from Frontstalag 150 worked in farms and forestry from July to December 1940. A detailed dossier with correspondence concerning their placement and payment for their needs can be found in the Archives of the Yonne Département in Auxerre.⁵

FRONTSTAMMLAGER (FRONTSTALAG) 151

The Wehrmacht established Frontstalag 151 on July 22, 1940, in Aachen, in Defense District (*Wehrkreis*) VI.¹ From the fall of 1940 until January 1942, the camp was deployed in Montargis (map 2).² In January 1942, the camp was redeployed to occupied Poland, where it remained until April 1942 because of a typhus epidemic at its intended deployment site in occupied Ukraine; during this period it did not hold prisoners. On April 24, 1942, the camp was disbanded and converted into Dulag 151. Frontstalag 151 received field post number (*Feldpostnummer*) 26 047 between April 28 and September 14, 1940; the number was struck between July 31, 1942, and February 9, 1943.

Frontstalag 151 held French prisoners of war (POWs). The Wehrmacht took a very large number of prisoners in the last days of the French campaign (June 15–22, 1940) in the region near Montargis, covering the area south of Paris around the Loire bend up to the demarcation line. Its main camps were in Montargis, Orléans, and Bourges. In these cities, the Germans took over French military barracks and used them as POW camps. Frontstalag 151 also had work commandos covering the Loiret, Cher, and Loire-et-Cher Départements.

An unusual source exists for some camps of Frontstalag 151 as well as for some neighboring camps: the diary of the Prisoner of War District Commandant (*Kriegsgefangenenbezirkskommandant*), Oberstleutnant Johannes Gutschmidt,

who commanded all of the POW camps in the region of Orléans. Gutschmidt was stationed in Montargis and Orléans from July to September 1940 before he was transferred to Frontstalag 133 in Rennes. He provides detailed information on some camps belonging to Frontstalag 151 as well as neighboring areas. His diary conveys a fairly typical impression of the POW camps in France during the first months of their existence.

Gutschmidt, who was a monarchist and had contact with the exiled Kaiser Wilhelm II, reports about some generous measures in his contacts with members of the French elites. For example, he knew the famous actor Louis Jouvet and made sure that Jouvet could visit his son, who was a POW. Gutschmidt also fostered contacts with French aristocratic ladies who organized aid for the prisoners. He very much enjoyed his life in France, reporting frequently about wonderful culinary experiences, and dreaded being reassigned to Germany.³

Gutschmidt reports chaotic conditions in Frontstalag 151 and its subcamps in July and August 1940, including overcrowding, deficient lodging (self-made huts, shacks, and tents), poor hygiene (with many cases of dysentery), lack of toilets and running water, and insufficient food. He reflects on the complicated transfer of metropolitan French prisoners to Germany and the return of prisoners of color to France in August, which caused many administrative headaches because some of the metropolitan French prisoners living in the area had been allowed to work at home for a while and were difficult to reassemble when Gutschmidt received orders to transfer them to Germany. Gutschmidt expressed a high opinion of the black prisoners: "The cleanest, most compliant, and best-mannered prisoners are the Blacks. They are extraordinarily thankful if one gives them a friendly word or a cigarette. They are the only ones who perform the correct military salute in every camp." By contrast, Gutschmidt had a low opinion of the North Africans, calling Moroccans "the laziest riff-raff." He was unhappy when he received orders from Hitler to give North Africans the best treatment, for propaganda reasons.⁴ Gutschmidt frequently encountered drunken, lazy, and sloppy guards. He complained about the lack of guards and on their poor military training and discipline, a problem that haunted the German military administration in France.⁵

Frontstalag 151 in Montargis was one of the camps that the personnel of the American Embassy in Berlin were allowed to visit in September 1940. Gutschmidt had already left, and the camp was under the command of Major von Dorst. Conditions were not very good when the Americans arrived on September 19. The camp was no longer overcrowded (it had fewer than 8,000 prisoners, with a capacity of 10,000) and was not as dirty as prisoners reported it to have been at first, but the food supply was still insufficient, and the prisoners seemed not to be cared for adequately. Many colonial prisoners had recently arrived from camps in Pomerania, as part of the return of colonial prisoners from German camps to Frontstalags in France. Interestingly, the American

inspectors, Jefferson Patterson and Dr. Murray Vance, also reflected Gutschmidt's prejudices about the prisoners: "At this camp Moroccans were described as the most troublesome of the colored troops, these being combative and quick with their knives. The Anamites [Indochinese] were pictured as great gamblers, and the Senegalese [West Africans] were viewed as being cleanly, industrious and chivalrous."⁶ Patterson and Murray noticed the usual discrimination in the housing of the colonial prisoners, who lived in the stables and riding halls of the barracks, while the metropolitan French prisoners occupied the more comfortable dormitories. The camp inspectors noticed that diarrhea and other symptoms were widespread, particularly among the colonial prisoners. They noted that "in the course of the visit, a number of colored men were seen in dejected attitudes as if they might be ill. It seems likely that these prisoners are the most likely to be neglected and their language not understood, which would favor such neglect."⁷

The American inspectors also observed a number of Alsatian prisoners held in the camp in Montargis. Apparently, these men had received permission to return home but had insulted the Wehrmacht personnel and were therefore condemned to stay in confinement for a year. Patterson and Murray also observed that the Muslim prisoners had facilities for worship and that they had formed an orchestra. The prisoners were allowed to play soccer on a large courtyard inside the camp, and they received support from local civilians. The mayor of Montargis spearheaded these aid efforts.⁸

A prisoner testimony exists from one of the other camps belonging to Frontstalag 151: the French sergeant Boyer, deployed in a work commando on the airport of Bourges, sent a detailed report about the camp to the French authorities after his escape. Boyer singled out a particularly brutal German guard, a noncommissioned officer (NCO) named Spieth. Spieth had the habit of hitting prisoners with a stick. Once, he hit a Frenchman so hard that he severed his ear. Spieth and other guards also randomly shot into the camp during morning assembly to accelerate the roll call; they killed or severely wounded several North African prisoners. Once, Spieth hit a French prisoner in the face because the prisoner had asked a civilian for bed sheets. Spieth was also known to beat up recaptured prisoners after an escape. Another German NCO, named Rath, was not brutal but corrupt. He robbed aid packages and sold their contents in town. Boyer further mentioned a Czech prisoner named Eduard Yendrisiak who had served in French uniform and acted as a translator. According to Boyer, Yendrisiak was a spy who betrayed escape plans to the Germans and beat up North African prisoners. As a reward, Yendrisiak was released in March 1941. According to Boyer, the camp commander, an Oberleutnant Heinz, was aware of all the problems but did not interfere. Boyer did note a drastic change, however, after a new commander, Oberleutnant Dr. Stenernagel, arrived on March 1, 1941, and stopped the abuses at once.⁹

Frontstalag 151 was the first camp in France visited by the Scapini Mission, right after procedures for French camp visits

had been worked out. On February 12–13, 1941, Ambassador Georges Scapini himself led an inspection team to the camp of Montargis. Some high-ranking German officials accompanied them. At this time, the Frontstalag had 6,200 colonial prisoners, mostly North Africans and West Africans, and 800 metropolitan Frenchmen. Most prisoners did not yet work outside of the camps, but their men of confidence expressed their wish to do so as soon as possible. Scapini noted that he found the camp in far better shape than expected. It was much less crowded than during Gutschmidt's time, when the barracks in Montargis alone had housed 13,000 prisoners.¹⁰ In some work commandos, the prisoners complained about not receiving any pay in March 1941, and this led to a high-level intervention by the French minister of war Charles Huntziger, apparently to the satisfaction of the prisoners.¹¹

Another round of inspections by the Scapini Mission took place in June 1941. The mission had a very good impression of the camp of Orléans: "The organization of the camp is perfect in all respects. The German officers are very benevolent and just; the prisoners are treated well." The camp held 641 Algerians, 435 Tunisians, 165 Moroccans, 124 Indochinese, and 102 West Africans. Religious services were available for Muslims and Christians.¹² In the camp in Montargis, which housed 560 North Africans and 120 metropolitan Frenchmen, the inspectors found the ventilation of the prisoners' quarters to be insufficient and bemoaned that Muslim services were not available. Still, they concluded that "the prisoners are treated well and do not complain about their way of life."

The work commandos were mostly employed in agricultural labor. In Amilly, outside of Montargis, 1,010 West Africans worked in the vineyards and fields. In La Chaussée-Saint-Victor and Saint-Gervais-la-Forêt, both near Blois, commandos worked in quarries (200 Moroccans in the former, 180 Madagascans and 18 prisoners from Martinique, Guadeloupe, and Réunion in the latter). In Bourges, the prisoners still worked on the local airport, which was a base for the Luftwaffe. The other commandos were small (around 20 prisoners). Most camps and commandos seemed to be in excellent condition.¹³ An International Committee of the Red Cross (ICRC) inspection a few days later came to a similarly positive conclusion, although they did note that approximately 9 percent of the prisoners in Montargis showed some symptoms of tuberculosis. The ICRC inspectors also noted that many West Africans had not received any news from their families.¹⁴

In June 1941, some North African prisoners arrived in Montargis from Stalag II D, accompanied by a German officer who spoke Arabic with a Syrian accent and who was very close to the recently arrived prisoners. These prisoners talked about a German victory in the war and predicted the collapse of Britain. They ate with the guards and enjoyed special freedoms.¹⁵

In the summer of 1941, after the dismissal of the last metropolitan French prisoners, Frontstalag 151 held 5,025 colonial prisoners, predominantly North Africans (3,139) and West

Africans (1,744) as well as 124 Indochinese, and 18 Martiniacs.¹⁶ The last news from Frontstalag 151 is a complaint about corruption in the camp in Hanneman, near Salbris, where a French man of confidence robbed Red Cross packages and sold their contents to the prisoners (245 West Africans). The problem seems to have stopped when the German camp command agreed to distribute the content of the packages itself and when the guilty prisoner was sent to a camp in Germany.¹⁷ Many of the subcamps and work commandos of Frontstalag 151 continued to operate under the direction of Frontstalag 153.

SOURCES Primary source material about Frontstalag 151 is located in AN, BA-MA, BNF, CNIP, ICRC Archives, NACP, and PAAA.

FRONTSTAMMLAGER (FRONTSTALAG) 152

The Wehrmacht founded Frontstalag 152 on July 20, 1940, and disbanded the camp on March 21, 1941. Frontstalag 152 received field post number (*Feldpostnummer*) 26 714 between April 28 and September 24, 1940. The number was struck between July 31, 1942, and February 9, 1943.

Frontstalag 152 held French prisoners of war (POWs). It was located in a zone where large numbers of POWs were taken during the last days of the French campaign in June 1940. There were two main sites, the first in Pithiviers and the second in Beaune-la-Rolande (map 2), which later became notorious as internment camps for Jews and political prisoners. Little is known about the time during which these camps held POWs, however.

In July 1940, Oberstleutnant Johannes Gutschmidt, who commanded a number of camps in this region, visited both camps and found that they each had approximately 13,000 prisoners and were vastly overcrowded. Gutschmidt made efforts to transfer some prisoners to less crowded camps. The guard units in Pithiviers were the 450th and 451st Reserve Battalions (*Landesschützenbataillone*). Gutschmidt noted that a prisoner was shot while trying to escape on August 23, 1940.¹

A woman working for a French aid organization visited Pithiviers on July 26, 1940, and found 18,000 prisoners distributed over three different campsites. All the prisoners seemed to be hungry, although many prisoners were working on farms in the countryside and were better nourished than the prisoners

confined to the big camps (probably mostly colonial soldiers, who were not yet allowed to work outside the main camps at this time). In Beaune-la-Rolande, she found 14,000 prisoners, many with dysentery. As she wrote, "Here, they [the prisoners] lack everything. Some prisoners tell me with a sad voice that they have a little too much for dying but not enough for living." In addition to food, the camp urgently needed medicine.²

Other information collected by the French authorities confirms that the prisoners in Beaune-la-Rolande, mostly Algerians and Moroccans, were near starvation in the late summer of 1940.³ The colonial prisoners in Frontstalag 152 were likely transferred to neighboring Frontstalags 151 and 153; most of the metropolitan French prisoners were transferred to camps in Germany.

SOURCES Primary source information about Frontstalag 152 is located in AN and BA-MA.

FRONTSTAMMLAGER (FRONTSTALAG) 153

The Wehrmacht established Frontstalag 153 (see map 2) on July 20, 1940. It was headquartered in the city of Chartres (Eure-et-Loir Département), southwest of Paris. It absorbed Frontstalags 200 and 151 in the second half of 1941 and existed until August 12, 1943, when it was taken over by Frontstalag 133 (Rennes Département).

The main camps and commandos of Frontstalag 153 were located in Chartres and nearby Morancez; it also controlled three additional subcamps in Orléans, Salbris, and Bourges, which were inherited from Frontstalag 151.

Frontstalag 153 received field post number (*Feldpostnummer*) 27 278 between April 28 and September 24, 1940. The number was struck between July 31, 1942, and February 9, 1943. The branch field post number (*Sammelfeldpostnummer*) for Chartres, 18 129 E, issued between May 1 and October 19, 1942, and struck between January 10 and September 26, 1943, was also applicable.

Little is known about the first months of Frontstalag 153. The first round of inspections by the Scapini Mission occurred in March 1941 and revealed several problems. The camp in Morancez then held 1,112 North Africans and 267 Frenchmen working in agriculture and construction. Although the prisoners' wooden barracks were in good shape, the camp had poor hygiene and insufficient food supplies, especially for the Frenchmen. The fact that the North Africans were receiving more aid packages created jealousy, and the

Frontstalag 153 at Chartres. Camp entrance, May, 1941.
COURTESY OF ICRC.

inspector was alarmed by the strong tensions between the two groups. The morale of the North African prisoners was good, but the Frenchmen were unhappy.¹ A letter from a former man of confidence in Morancez, Sergeant-chef Durieux, offered more detail on the situation inside the camp. Durieux pointed out that the prisoners had no dishes and needed to eat their soup either out of metal boxes or out of the bowls that they also used as urinals. He confirmed that hygiene was very bad and that the barracks and sleeping bags urgently needed disinfection. Durieux put a different light on the animosity between French and North African prisoners by pointing out that the latter resented the fact that Frenchmen who were fathers of "children-rich" families were obtaining dismissal under the Agreement of November 16, 1940, whereas North Africans generally did not.²

Further south, in Voves (Eure-et-Loir Département), a commando of 2,700 North Africans complained about insufficient food and tobacco deliveries. The camp inspector told the prisoners that their rations were not worse than in other camps and that they had no right to free tobacco (which was correct because Article 11 of the Geneva Convention of 1929 only stipulated that the use of tobacco must be allowed, not that the detaining power was responsible for providing it). The inspector acknowledged that the German camp authorities were highly committed to improving the prisoners' situation.³ In general, the French camp inspectors were impressed by the Frontstalag commander, Major Schwabe, who received much praise for his efforts to improve the conditions in the Frontstalag.⁴ Another aspect noted by the inspector of Morancez and confirmed later on was the fact that the

high school (*lycée*) of Chartres was exceptionally helpful with the prisoners in Morancez and Chartres by sending them shipments of food and books.⁵

In May 1941, Frontstalag 153 received a transport of 800 prisoners from Montargis. The German administration felt overwhelmed because the ambiguous spelling of many prisoners' names made their registration difficult. This was a frequent problem with colonial prisoners because most of them were illiterate and were registered under different spellings of their last names. The Frontstalag command suspected that the colonial prisoners deliberately used different spellings and names in order to fool the authorities and prevent potential punishments.⁶ A transport of 500 prisoners from Frontstalag 135 (Quimper) arrived a few weeks later, revealing that the German authorities perceived a major need for labor in the region of Chartres.⁷

An International Committee of the Red Cross (ICRC) inspection on May 21, 1941, noted that the Frontstalag had 3,375 prisoners, predominantly Algerians and some West Africans (144) and Madagascans (10). The ICRC inspectors noted that there were only 185 Frenchmen still in the camp. They did not work outside the camps but were mostly serving as cadres for the colonial prisoners.⁸ The next round of inspections by the Scapini Mission revealed that the number of prisoners in Frontstalag 153 was significantly higher, however (4,666 in July 1941, with 4,495 North Africans and 110 West Africans and a few prisoners from Madagascar, Indochina, and Martinique). The number of prisoners increased to 6,734 after the takeover of Frontstalag 151 in April 1942, including 2,885 Algerians, 1,350 West Africans, 1,137 Moroccans, 973 Tunisians, 214 Indochinese, and 113 Martinicans, but declined to 5,037 on December 1, 1942.⁹

By October 1941, the conditions in this Frontstalag had greatly improved, not least because of the efforts of Major Schwabe. The Frontstalag now controlled a vast number of small rural commandos (15–25 prisoners each) in the regions around Chartres, with some commandos up to 130 kilometers (81 miles) away. Conditions were good. Prisoners worked mostly for farmers, who also fed them. Sleeping quarters were in most cases simple but decent. The inspector noted the need for new shirts, underwear, socks, and sometimes shoes, and he heard many complaints from prisoners coming from the more distant areas of the French Empire about the lack of postal contact with their families. Only from one place (not visited in October) was the news not good. In Laverdines (Cher Département), a woman wrote to the Scapini Mission that the 28 West Africans in the local work unit had to do very hard work (tearing beets out of the ground) and were receiving too little food. The Scapini Mission started an inquiry, and conditions improved quickly.¹⁰ A large work detachment (1,000 prisoners, including 865 North Africans and 110 West Africans) existed in Chateaudun, a town northwest of Orléans that had a Luftwaffe base, but this work unit did not receive an inspection.¹¹

The camps in Orléans and Bourges, formerly part of Frontstalag 151, offered good conditions by the fall of 1941.

In November, Orléans had 1,426 prisoners, including 541 Moroccans, 312 West Africans, 206 Tunisians, 143 Algerians, 132 Indochinese, 59 Madagascans, and 15 Martinicans, who were working partly on the local airport, a major Luftwaffe base, or at a local silk factory. The barracks in which the prisoners slept were outdated but still serviceable. Religious services were available to Muslims and Christians. In Bourges, there were 985 prisoners, including 321 West Africans, 320 Algerians, 292 Tunisians, 32 Moroccans, 7 Frenchmen, 6 Martinicans, 5 Madagascans, and 2 people from Guadeloupe, working in agriculture around the town or in factories.¹² A fairly large commando existed also in Salbris (Loir-et-Cher Département). A woman driving trucks for an aid organization for African prisoners noted that the prisoners (149 Madagascans, 156 West Africans, 28 Martinicans, 13 Indochinese, and 1 Frenchman) had very good relations with their guards but seemed vulnerable to the cold and to diseases.¹³

A new round of inspections, in February 1942, revealed stable conditions but showed that the prisoners' shoes were deteriorating rapidly and that replacements were urgently needed. The diet of the prisoners working for farmers remained excellent. In some places, the prisoners received meat three times a day at a time when the average meat ration of French civilians was less than 30 grams (1 ounce) a day.¹⁴ A few prisoners who were involved in drainage projects had a much poorer food supply, however, because they were not fed daily by the farmers and were dependent on less regular food shipments from the German army and from aid organizations. In the military hospitals of Orléans and Chartres, the inspectors also noted an alarming reduction in the food rations for sick prisoners.¹⁵ In Morancez, which held only 546 prisoners at this time (mostly North Africans as well as 10 Frenchmen and 5 West Africans), the food supply was still bad. The inspectors reported also that the prisoners received Arabic newspapers printed in Berlin.¹⁶ The food supply had improved in the camp of Orléans by January 1943, but it was still bad in Chartres as a consequence of the arrival of 800 prisoners from a camp in Charleville.¹⁷ In the course of a reorganization of camps aiming to concentrate prisoners from the same territories in the same camps (among other reasons to facilitate food supplies fit for certain ethnic cooking habits), the Germans assembled 1,165 Madagascans in Frontstalag 153 in June 1942. It is not clear whether the arrival of the prisoners from Charleville had anything to do with this effort. In any case, Frontstalag 153 never included all of the Madagascans in German captivity.¹⁸

A unique collection of German headquarters (*Kommandantur*) orders for the region of Chartres offers a glimpse into the lives of the guards in this Frontstalag in 1942 and 1943. Major Schwabe, who became military commander of the entire district, became increasingly irritated by the guards' laxness. In many cases, guards either did not shoot at prisoners trying to escape or missed them from a short distance—perhaps deliberately. Schwabe repeatedly pointed out that regulations demanded that guards shoot immediately during escape attempts, and he punished several negligent guards

and ordered exercises to improve the guards' poor marksmanship. In one case, a guard allowed five prisoners to urinate behind some bushes and thereby let them escape. Schwabe's orders reveal countless problems with guards who drank too much and liked to play pranks. For example, several guards of Frontstalag 153 made a joke of putting fleas from POW camps into the letters to their families, causing alarm about the transfer of infectious diseases to Germany.¹⁹

Some orders offer insight into the guards' leisure activities, such as going to the cinema and singing in a chorale, which were activities that also involved German women stationed in France (*Fronthelferinnen*). Orders even included advice on where to bathe and a warning not to eat bird eggs found in the wilderness; instead, the order in all seriousness suggested that one should send dubious eggs by mail to the Wehrmacht veterinary services in Paris for examination before consuming them.²⁰

In 1943, two changes affected Frontstalag 153. First, prisoners were performing significantly more war-related work than before; second, several work detachments came under the guard of French officers or noncommissioned officers (NCOs). While prisoners in the war-related commandos, as elsewhere, received much higher pay and were fed well, especially if they worked for the Luftwaffe, their tasks were more dangerous than other types of work. In Salbris, for example, a Madagascan prisoner work detachment was loading and unloading ammunition in early 1943. Their food supply was unusually good, but they slept in barracks close to an ammunition depot. One prisoner was killed during a bombing attack later, at a time when the camp belonged to Frontstalag 133.²¹ In Salbris and in La-Guerche-sur-l'Aubois, some prisoners under French guards were also working in factories producing pieces for cannons and tanks.²² In Bourges, a work detail had to handle mines at the local airport. Conditions were good, apart from the dangers associated with the work. The archival files contain several photos from this detail depicting prisoners with soccer balls, apparently playing for a camp championship.²³ In La Ferté-Saint-Aubin (Loiret Département), a detail of 24 Algerians worked in an ammunition factory. They had two French officers and one German officer as cadres. The prisoners were allowed to go to town unaccompanied after work. In Bourges, another commando of 35 West Africans also worked in an ammunition factory. They were "guarded" by one German NCO but were allowed to go to town on their own after work and on Sundays. The factory fed the prisoners well. In Vierzon (Cher Département), a work detail under French cadres also worked in an ammunition factory.²⁴

In several cases, the camp inspectors criticized the French cadres for being indifferent and for having no understanding of the needs and mentalities of the colonial prisoners. The inspectors often compared the French cadres unfavorably to the German guards. In several places, the presence of French cadres for the colonial prisoners triggered public hostility because of immoral behavior. In Guérigny (Nièvre Département), for example, civilians accused two French officers of

exploiting and abusing the prisoners and of withholding tobacco from them. Possibly encouraged by outraged civilians, the prisoners went on strike, prompting the two French officers to arrest the suspected strike leaders and to call the Frontstalag command. Surprisingly, the Germans carefully investigated the case and, as a result, dismissed the French officers, sent German guards to the work detail, and restored order and propriety. Hearing about similar abuses in other work details, the Germans dismissed more French guards and replaced them with their own soldiers, much to the satisfaction of the prisoners and civilians. These cases were highly embarrassing for the reputation of the French army and caused concerns for the future of the French colonial empire.²⁵

The most notorious case of abuse by a French cadre happened in Salbris in the fall of 1943, when a French NCO named Desbois shot a prisoner named Abderhaman ben Amor. Desbois declared that he had felt threatened by the prisoner and that ben Amor had tried to escape. Desbois and another French NCO watched the wounded prisoner and then walked away, while ben Amor bled to death. The incident triggered an investigation during which the German authorities—as in similar cases involving German guards—supported Desbois, arguing that he had been right in suspecting an escape attempt and that he had warned ben Amor before firing. The Scapini Mission was outraged by Desbois's behavior and tried to punish him, apparently without success.²⁶

In 1943, Frontstalag 153 also received some British colonial prisoners transferred from Italy. In the hospital of Orléans, the French inspectors found a large number of undernourished South African soldiers having just arrived from Italy. They were treated together with sick French colonial prisoners, with whom they established good relations. An officer camp in Orléans also housed some British colonial officers alongside French officers. The French officers were jealous, however, because the British received far more letters and aid packages from home than they did.²⁷

Frontstalag 153 was administratively dissolved on August 12, 1943. Frontstalag 133, formerly based in Rennes, took over the camps and work detachments of Frontstalag 153 and moved its headquarters to Chartres and Orléans.

FRONTSTAMMLAGER (FRONTSTALAG) 154

The Wehrmacht established Frontstalag 154 on July 20, 1940, and disbanded the camp on March 31, 1941. Frontstalag 154 received field post number (*Feldpostnummer*) 27 513 between April 28 and September 24, 1940. The number was struck between February 16 and July 18, 1941.

Frontstalag 154 was a short-lived camp in Fourchambault (map 2). Little information about this camp exists. According to Oberstleutnant Johannes Gutschmidt, Fourchambault was the best camp in his district, which covered camps in much of central France including parts of Frontstalags 132, 133, 151, 152, and 153. Gutschmidt had an embarrassing moment, however, when he visited the camp of Fourchambault together with his superior officer, Generalleutnant Teschner, on August 3, 1940. To their surprise, they found the camp flooded with 600 to 700 civilians because the camp commander had generously allowed the relatives of the metropolitan French prisoners to visit them, leading Teschner into a fit of rage.¹

SOURCES Primary source information about Frontstalag 154 is located in BA-MA.

FRONTSTAMMLAGER (FRONTSTALAG) 155

The Wehrmacht created Frontstalag 155 on July 20, 1940, and disbanded the camp on April 4, 1941. Frontstalag 155 received field post number (*Feldpostnummer*) 27 986 between April 28 and September 24, 1940. The number was struck between February 15 and July 30, 1941.

Frontstalag 155 held French prisoners of war. It was located in a former aviation school at the Dijon-Longvic airport

(map 2). It was one of the camps that the Germans allowed Jefferson Patterson and Dr. Murray Vance to visit as representatives of the protecting power in September 1940. A local French initiative has collected and posted photos from Frontstalag 155 online.¹

The buildings of Frontstalag 155 were fairly modern but had suffered severe damage in June 1940, first from German bombings and then from a French attempt to destroy the facility before it fell into German hands. The commander of the Frontstalag was Major von Treuenfels. Until August 1940, Frontstalag 155 was severely overcrowded. With a maximum capacity of 12,000 soldiers, the camp at one point held between 20,000 and 43,000 prisoners, the lower number being given by the German command, the higher number coming from the men of confidence (*hommes de confiance*) in the camp (a French woman who visited the camp in July 1940 claimed that there were 35,000 prisoners, most of them camping outside and protecting themselves against the scorching sun with self-made tents).² Some pictures from the collection of the German Federal Archives, taken in August 1940, show black French prisoners in front of shaggy huts in a very depressing environment.³

During the American inspection, on September 17, 1940, the camp still housed 6,790 metropolitan French prisoners and 5,300 people of color, but 1,400 of the metropolitan French prisoners and 1,300 of the prisoners of color were assigned to work commandos outside the camp. The colonial prisoners were allowed to cook their own food, and they had access to Muslim worship services. The man of confidence of the camp told Patterson that the guards had killed two colonial prisoners during a dispute about the quality of the food at the time when the camp was severely overcrowded. The German camp officers admitted that there had been an incident but claimed "that no brutality had occurred." They pointed out that it had been very difficult to keep order with so many prisoners in the camp.⁴

The American inspection team bemoaned the poor water quality of the camp and noticed that the metropolitan French prisoners had superior accommodations, but they believed that colonial prisoners needed less comfort than European prisoners: "The camp left something to be desired, but it should be taken into consideration . . . that most of the men confined were colored troops."⁵

Several former prisoners reported that the Germans made intensive propaganda efforts among the colonial prisoners in Dijon and apparently took the prisoners with a French education (*évolués*) to a special camp for propaganda purposes. One prisoner observed during a prisoner transfer from Épinal to Dijon that a German noncommissioned officer (NCO) talked to two North African NCOs and told them that Germany would never tolerate the discrimination they had to suffer in the French army. The two North African NCOs then obtained privileged positions in the camp and belonged to a group of colonial prisoners whom the Germans trained in the use of wireless transmitters and prepared to work as spies after their release.⁶ There is evidence that the secret service of

the Wehrmacht, the *Abwehr*, operated a training facility in Dijon for North African prisoners willing to work for Germany. Some of these prisoners were later sent to North Africa via Spain and Spanish Morocco with instructions to report about troop movements, the situation of Jews, and the situation of Muslims in North Africa.⁷ This facility was probably not part of Frontstalag 155, but it is likely that the "*évolués*" from Frontstalag 155 mentioned by the former prisoner were among the prisoners sent to this facility.

Given the difficult conditions in the camp of Dijon, German propaganda certainly faced an uphill battle in the first months. As several prisoners confirmed, the guards in the camp of Dijon-Longvic were brutal; they frequently hit the prisoners, including the officers. British officers, housed in Dijon at the beginning, were apparently singled out for particularly harsh treatment. According to the NCO Mamadou Aliou, the Germans killed three West Africans, one Madagascan, and one Moroccan in December 1940 after a series of successful escapes, possibly as a reprisal. Prisoners agreed that conditions in Dijon became much better when the Germans launched a "wave of kindness" for propaganda purposes.⁸

Frontstalag 155 was administratively deactivated after the transfer of most of the metropolitan French prisoners to Germany.

FRONTSTAMMLAGER (FRONTSTALAG) 160

The Wehrmacht established Frontstalag 160 on July 20, 1940, and disbanded the camp on March 15, 1941. Frontstalag 160 received field post number (*Feldpostnummer*) 01 322 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943.

Frontstalag 160 was a short-lived camp for French prisoners of war in Lunéville, in northeastern France (map 2). It was one of the camps that the American inspection team visited in September 1940. The Frontstalag occupied three sites in Lunéville and another campsite in a neighboring town. In Lunéville, the Frontstalag occupied the Dragoons' Barracks (*Caserne des Dragons*), the Infantry Quarters (*Quartier de l'Infanterie*), and a military hospital. Lunéville was in an area close to the pre-1914 Franco-German border. Like several other cities in this area, it was a logical place for a Frontstalag because it had many military buildings constructed between 1871 and 1914 and also because it was ideally placed to serve as a transit camp for the masses of metropolitan French prisoners transferred to camps in Germany.

The conditions in the camps in Lunéville were terrible during the first months after the French capitulation. A woman working for a French aid organization sent a report to the International Committee of the Red Cross (ICRC) in Geneva on August 8, 1940, which mentioned starving prisoners in the camp.¹ The American inspectors, who visited the camp on September 15, 1940, heard that 14,000 prisoners had at one point been at the Caserne des Dragons, which was designed for a maximum occupancy of 1,500. Prisoners had to sleep in the stables and the garages. At the time of the visit, however, only 1,200 prisoners occupied this campsite; 700 of them worked in the town during the day. The food supply and the accommodations were good, but the inspectors heard from prisoners that the improvements had only happened after August 1 and that the conditions had been very bad in the beginning. The inspectors praised the commander, Lieutenant Seeger, for his efforts to improve the situation and concluded: "The camp, like all others visited in France, had apparently suffered from both overcrowding and inadequate food for two months but since August 1 had been reduced to manageable size under experienced camp management. . . . Camp made good impression. The commandant being apparently interested in his work and in the conditions of the men, no complaint could be made regarding their treatment."²

Some subcamps of Frontstalag 160 were closed at the end of the summer of 1940, after more metropolitan French prisoners had been transferred to Germany. The remaining facilities of Frontstalag 160 were integrated into Frontstalag 161 in nearby Nancy.

FRONTSTAMMLAGER (FRONTSTALAG) 161

The Germans founded Frontstalag 161 on July 19, 1940, and disbanded the camp in September 1941. Frontstalag 161 received field post number (*Feldpostnummer*) 02 462 between April 28 and September 14, 1940. The number was struck between January 27 and July 14, 1942.

At first, Frontstalag 161 comprised several camps for French prisoners of war (POWs) in and near Nancy (map 2). This area was close to the pre-World War I Franco-German border, and the Germans made use of the numerous military camps built there between 1871 and 1914. Given the proximity of Nancy to Germany, Frontstalag 161 initially served to a large extent as a transit camp for the masses of French POWs on their way to camps in Germany in the summer of 1940. Unlike most other camps in this zone, however, Frontstalag 161 remained in operation after the metropolitan French prisoners had left, and it absorbed Frontstalags 160 and 162.

A woman working for French aid organizations noted in August 1940 that the camps in and around Nancy were being quickly emptied, as many prisoners were transferred to Germany or obtained dismissal. She was not allowed to enter the rank-and-file camps, however, because of diseases among the prisoners. She did gain access to some officers in a separate building, and they seemed to enjoy good conditions.¹

The Frontstalag at Nancy was one of the first camps that the American inspection team visited in September 1940. They inspected a camp installed in a former French military barracks in a suburb of Nancy (for reasons of military secrecy, the Wehrmacht did not allow the Americans to use place names in their inspection reports). The camp commander was Oberst von Poschinger. The buildings were in bad shape because of damage done by retreating French troops in June 1940; the latrines and sewer system were largely nonoperational, causing serious sanitation problems. The camp had only 2,400 metropolitan French prisoners, including 200 officers, at the time of the visit, even though the maximum capacity of the camp in peacetime had been 10,000. In addition, 500 prisoners were working in commandos in Nancy or on nearby farms. Colonial prisoners had been present at this camp, but they had all been sent to camps further south before the inspection. The camp offered religious services for Christians, and prisoners could play soccer. The library was undersupplied, however. The prisoners did not complain about the food rations. Overall, the inspectors were confident

Frontstalag 161 at Nancy. POWs at work at the Four Winds Farm, June, 1941.

COURTESY OF ICRC.

that the camp commander, who made a very interested and engaged impression, would complete the necessary repairs and improve the physical plant in short order.²

The population of Frontstalag 161 had changed significantly at the time of the Scapini Mission's first inspection in March 1941. The camp now had 3,298 colonial prisoners and 261 metropolitan Frenchmen. Most prisoners were dispersed into work commandos in the countryside. Some prisoners were performing undisclosed work for the Wehrmacht (110 colonial soldiers and 108 metropolitan Frenchmen). Only 48 prisoners worked in industry. The Frontstalag received complementary food deliveries paid for by a wealthy local noblewoman, Countess Komornicka. The camp inspector found special praise for the German camp command, including the commander, Oberstleutnant Daniel, and his representative, Hauptmann von Favre du Faur.³

When the Scapini Mission came back to the camp in May, only 173 prisoners remained in the main camp (153 North Africans and 20 Martinicans), while the rest worked in approximately 50 commandos in northern Lorraine. The inspector bemoaned the poor condition of the shoes many prisoners were wearing, and he found that the Frontstalag did not have enough reserve clothing. In a few places, prisoners had no access to religious services and were lodged in buildings that were impossible to heat. The food supply was decent, although the inspector wished for more food deliveries matching the ethnic cuisines of the prisoners. In one commando with 38 Algerians and 2 Moroccans, in Romagnes-sous-les-Côtes, the inspector noted strong tensions between

the Arbas and the Kabyles among the Algerian prisoners. He suggested separating them.⁴

An International Committee of the Red Cross (ICRC) inspection at the end of June 1941 did not add much information, but it noted that the camp was in very good shape and one of the best the inspectors had so far seen in France. The ICRC inspectors listed 968 black and 391 metropolitan French prisoners, with 3,578 men of color (probably North Africans and people from colonies other than French West Africa).⁵

Frontstalag 161 was integrated into Frontstalag 194 in Châlons-sur-Marne in September 1941.

FRONTSTAMMLAGER (FRONTSTALAG) 162

The Wehrmacht established Frontstalag 162 on July 23, 1940, and disbanded the camp on March 26, 1941. Frontstalag 162 received field post number (*Feldpostnummer*) 03 536 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943.

Frontstalag 162 was a short-lived camp for French prisoners of war that occupied four sites in or near Toul (map 2) in northeastern France, not far from Nancy. In this region close to the pre-World War I Franco-German border, the Germans made use of the numerous military facilities built between 1871 and 1914. Frontstalag 162 used mostly former barracks from the French army, including the Luxembourg Barracks (*Caserne du Luxembourg*) and the Joan of Arc Barracks (*Caserne Jeanne d'Arc*), as well as a camp at the airport of Toul and one in the western suburb of Écrouves. Because of the proximity of Toul to Germany, the local Frontstalag served mainly as a transit camp for the masses of French prisoners on their way to camps in Germany in the summer of 1940.

The Frontstalag, like most others, was overcrowded and poorly supplied in the first few months. A woman organizing relief efforts visited Toul in the end of July 1940 and noted

that the local population was hungry itself and could do little to help the prisoners. Still, she felt this Frontstalag was in better shape than most others she had visited.¹

Propaganda efforts in this camp seem to have been well developed. Prisoners noticed that several German officers and soldiers who had been to the French colonies talked to the colonial prisoners in a very friendly tone. The Germans apparently exploited tensions between colonial prisoners and metropolitan French officers in one of the camps of Toul. They posed as friends of the colonial soldiers and tried to blame the French for the German atrocities against black soldiers during the campaign. A prisoner reported that a German lieutenant stood up to a Frenchman who said that the prisoners from the colonies would only work if they received beatings. The same lieutenant also criticized an Alsatian translator who told the Germans that the blacks among the prisoners were cannibals. Another prisoner, from Mali, reported that the Germans initially believed these stories told by some French men of confidence but that the treatment of black prisoners improved markedly when the Germans stopped believing the French. Apparently, the German guards told the black prisoners that French officers had told them that the blacks had mutilated German soldiers with their bush knives (*coupes-coupes*). Interestingly, these allegations were widespread during the campaign of May–June 1940 and often served as a “justification” for German massacres of black prisoners.²

Some of the camps in Toul were closed already in August 1940, as many metropolitan French prisoners had been sent to Germany. The remainder of Frontstalag 162 was absorbed by Frontstalag 161.

FRONTSTAMMLAGER (FRONTSTALAG) 170, 171, 172

In the Somme and Oise region in northern France, the German army operated a series of Frontstalags after the campaign of May–June 1940. Several Frontstalags used military

installations (barracks and forts) in the cities of Amiens, La Fère, Compiègne, and Doullens (all in map 2). The numbering of these Frontstalags was inconsistent and changed rapidly, and the same camp sites appear to have been listed under different numbers. Some of the sites may also have operated earlier as collection sites (*Sammelstellen*).

Frontstalag 170 (July 21, 1940–March 21, 1941) seems to have moved from Pont-Saint-Maxence to Compiègne and later to La Fère. Frontstalag 171 (July 21, 1940–March 22, 1941) existed in Rouen and Amiens, and the camp in Doullens seems to have been designated as Frontstalag 172 in the late summer of 1940. Yet, the site in Doullens was closed before the end of the year, and Frontstalag 172 briefly continued to exist in Amiens.¹ Some of these camps functioned primarily as transit camps after the start of the German offensive on the Somme on June 5, 1940, and very large numbers of French and British prisoners passed through these camps. Amiens also housed several other Frontstalags, such as 100, 102, 130, and 204, but only 204 seems to have existed for more than a few months. The site in La Fère operated later as Frontstalag 191 and 192.

The field post numbers (*Feldpostnummer*) for these camps were as follows: Frontstalag 170: 04 443, issued between April 28 and September 14, 1940, and struck between July 15, 1942, and January 24, 1943. Frontstalag 171: 05 476, same dates. Frontstalag 172: 06 066, issued between January 2 and April 27, 1940, and struck between July 15, 1942, and January 24, 1943.

Little is known about these camps. A report by Édouard Ouédraogo, a soldier from Upper Volta (today: Burkina Faso), who barely survived a massacre of West African soldiers by the German army on June 5–6, 1940, mentioned massive abuses against black prisoners and extreme overcrowding in Doullens. Prisoners were pushed into small rooms and literally had to sleep on top of each other; some prisoners died after being crushed by those sleeping on top of them. Prisoners had no food and no drink. The guards were extremely brutal, especially toward black prisoners.²

The French prisoner Paul Mansire spent two weeks in the same camp in August 1940. He, too, reported miserable conditions. At this time, the camp held “white” French prisoners and many Algerians, who apparently stole frequently and started many fights, and some black prisoners. To maintain order, the Germans had entrusted a giant black prisoner with a stick, and this prisoner used to brutally hit Algerian prisoners whenever a fight broke out. While some civilians were indifferent to the prisoners, others purchased bread for the prisoners who threw money across the camp fence, and some agreed to mail letters written by the prisoners. Mansire complained to the German authorities about the conditions in this camp, but the Germans answered that the site was only meant to be a short-lived transit camp.³

FRONTSTAMMLAGER (FRONTSTALAG) 180

The Wehrmacht established Frontstalag 180 on July 20, 1940, and disbanded the camp on March 26, 1941. Frontstalag 180 received field post number (*Feldpostnummer*) 00 082 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943.

Frontstalag 180 was a short-lived camp for French prisoners of war in Tours and Amboise in the Loire valley (map 1). Little information is known about the camp, except for a few informal reports by aid agency members. A woman working for the French Red Cross, for example, visited Amboise on July 26, 1940, and found four camp sites in and around the town. The German commander was very strict and requested a thorough examination of the aid packages, explaining to her that, previously, packages for the prisoners had contained arms, alcohol, and civilian clothing (to facilitate escapes). She estimated that the camps held approximately 14,000 prisoners. The conditions were very bad. The prisoners lacked food, clothing, shoes, and bed linens. The camps were infested with lice. The campgrounds were in poor condition; the high humidity in the area turned much of the ground into mud.

In December 1940, after the departure of most metropolitan French prisoners for Germany, another aid worker reported about a camp in Amboise that held 2,093 prisoners: 1,427 North Africans, 550 Indochinese, 85 prisoners defined as "blacks" (West Africans), 21 Antilleans, and 10 Madagascans. The prisoners were suffering from the cold and urgently requested a transfer to the warmer south of France.¹ In early 1941, Frontstalag 181 headquartered in Saumur, 70 kilometers (44 miles) west of Tours, took over what remained of the campsites belonging to Frontstalag 180.

SOURCES Primary source information about Frontstalag 180 is located in AN.

NOTE

1. "Rapport sur ma mission du 26 juillet 1940," and "Note pour Mr. Caron. Camp d'Amboise (No. 180)," December 16, 1940, AN, F9, 2810.

FRONTSTAMMLAGER (FRONTSTALAG) 181

The Germans created Frontstalag 181 on July 20, 1940, and disbanded the camp on June 12, 1942. Frontstalag 181 received field post number (*Feldpostnummer*) 00 894 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943.

Frontstalag 181 held French prisoners of war (POWs). It was located in the city of Saumur (map 1), which had been the site of heroic resistance by French officer cadets to superior numbers of German troops during the last days of the French campaign, and the surviving defenders were among the first prisoners interned in Frontstalag 181. As a sign of respect for their heroic fight, the first German commander, whose name was Eschig, released them after a few days. For several months thereafter, the camp then became a center for prisoners from France and from the empire.

The main camp of Frontstalag 181 occupied various locations, including the cavalry school in Saumur. Attached to it were two hospitals, the Hôpital Mixte and the Hôpital Desjardins. A note from an aid worker from the late summer of 1940 stated that the camp housed 3,700 metropolitan French and 1,500 colonial prisoners. Conditions were tolerable, thanks to the generous efforts of the local Red Cross, boy scout troops, and other organizations.¹ The sub-prefect of the department stated on January 2, 1941, that the prisoners were treated well, although the winter cold was hard to take for many soldiers from tropical regions. The German authorities allowed the families of the French prisoners and the war godmothers (*marraines de guerre*; women who corresponded particularly with colonial soldiers in order to replace to some extent their distant family) to visit them in the camp. In early January 1941, however, 3,700 metropolitan French prisoners were loaded onto cattle cars and sent to Germany in three convoys, and the camp population, henceforth, consisted mostly of colonial prisoners as well as a few French Jews.²

At the time of the Scapini Mission's first formal inspections, on April 2, 1941, Frontstalag 181 had 3,992 colonial prisoners and 238 Frenchmen and was under the command of Oberst Freiherr von Gall. The 600 prisoners remaining in the main camp were working on improving the grounds. Religious services were well organized. The camp had several marabouts and priests. There were 30 colonial officers in the camp who enjoyed some privileges, such as having personal servants and private rooms with washing facilities, although they were not housed separately from the rank-and-file troops, as the Geneva Convention required. For their entertainment, the prisoners organized variety shows. They requested pictures of Marshal Pétain, soccer balls, Arabic books, and teaching materials for French language courses. The inspector heard that tensions existed among the prisoners because the Moroccans, as in most other camps, received more generous aid packages than the others. The inspector found out, however, that supplies sent from Vichy were still in storage and had not been

Frontstalag 181 at Saumur. Former cavalry barracks, May, 1941.
COURTESY OF ICRC.

distributed to the needier prisoners. Most of the prisoners in the Frontstalag were deployed in small agriculture and road construction commandos outside the main camp. The inspector heard that there were larger commandos with 200 prisoners each in Tours and Amboise, likely the remnants of Frontstalag 180.³

The International Committee of the Red Cross (ICRC), visiting the camp on May 30, 1941, confirmed these impressions and found that conditions in the main camp were fairly good. The ICRC inspectors estimated the rate of tuberculosis to be 3–4 percent, which was comparatively low. The main camp housed 235 West Africans, 54 Antilleans, 27 Madagascans, and 30 Jews (it is unclear whether these were residents of France or North Africa).⁴

The Scapini Mission organized a more detailed inspection in July 1941, for the first time including a number of commandos. Most of the prisoners in these commandos worked for farmers, often at the request of the local mayor, and they enjoyed fairly good conditions. In the village of Thilouze, east of Saumur, the 14 Tunisians of the local commando ate lunch in a public restaurant and received four liters of wine every day, all at the expense of the local mayor. In nearby Azay-le-Rideau, another generous mayor paid for restaurant lunches for 37 Tunisians (although there is no mention of wine). In another small commando, the prisoners were housed in the local rectory and cared for by a woman paid by the town who cooked for them every day. In Angers, a commando of 230 West Africans existed, but the inspector made no comment on their work. In some places, the inspector criticized mayors or individual farmers who did not adequately care for the prisoners. Sometimes the rations provided by French

employers were significantly smaller than the ones previously distributed by the Germans, a fact that alarmed the French authorities because they feared that such experiences would help German propaganda and loosen the ties of the colonial prisoners to France.⁵

In Saumur itself, the camp had far more prisoners in July than in the spring: 2,526 prisoners, among them 1,825 people from the French Antilles, North Africa, and Indochina as well as 615 West Africans and 86 metropolitan French. Conditions in Saumur were very good, even though the inspectors noted strong tensions among the prisoners from different territories (or “races,” as they said). Everywhere in the Frontstalag, the colonial prisoners resented the recently announced dismissal of metropolitan French prisoners in the Frontstalags. People from the empire who had French citizenship were particularly outraged about not being considered Frenchmen.⁶

German propaganda toward North Africans was very active in Frontstalag 181. Escaped prisoners reported that the Germans used North African collaborators as camp police to prevent escapes and showed films about the successes of the Wehrmacht, which apparently left a vivid impression on many prisoners. German-edited Arabic newspapers were widely distributed, and German agents told North African prisoners that the Germans would pay them more and treat them better than the French. Escaped pro-French prisoners asked the Vichy police and secret service to closely monitor all prisoners dismissed or escaped from Saumur because German propaganda there had been quite successful among the Algerians and Tunisians, though apparently not among the Moroccans.⁷

From the beginning, Frontstalag 181 faced a major problem with escapes. In the first months, it was mostly the metropolitan French prisoners who ran away, especially once they understood that they might be transported to Germany. Later, colonial prisoners also escaped in large numbers. In September 1941, for example, 60 colonial prisoners dug a tunnel beneath the barbed wire in Saumur and escaped.⁸ Altogether, 1,500 prisoners appear to have fled from the camp from July 1940 to January 1942. The proximity of the demarcation line made escapes particularly attractive (the Germans did not insist on a return of POWs having reached the “free zone”). An early resistance network in Saumur, assisted by French Red Cross drivers, hid escaped prisoners and guided them across the demarcation line.⁹ German guards killed several prisoners during escape attempts, and Freiherr von Gall protested repeatedly to the mayors of Saumur and other towns, demanding that they suppress solidarity networks and prevent civilians from talking to the prisoners. In March 1941, the German *Ortskommandantur* of Saumur even forced the towns Saumur and Saint-Hilaire-Saint-Florent to pay a large sum (500,000 francs for the former, 100,000 francs for the latter) as a fine for allegedly supporting prisoner escapes, but the Germans returned the money in August after having been unable to prove any official complicity in prisoner escapes.¹⁰

In the second half of 1941, Frontstalag 181 was absorbed by Frontstalag 232 in Savenay. The camp in Saumur and many

work commandos continued operating under Frontstalag 232 for a few months, but the German authorities closed the camp in January 1942, probably because of the large number of escapes. Many prisoners from the former Frontstalag 181 were transferred to Frontstalag 133 in Rennes, and others were sent to Frontstalag 195 in Onesse-et-Laharie.¹¹

FRONTSTAMMLAGER (FRONTSTALAG) 182

The Germans established Frontstalag 182 on July 20, 1940, and disbanded the camp on April 2, 1941. Frontstalag 182 received field post number (*Feldpostnummer*) 01 265 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943.

Frontstalag 182 was a short-lived camp for French prisoners of war in the lower Loire valley, based in the towns Savenay and Nantes (map 1). In the area of Savenay, two camps existed: one in a racecourse for horses called "Touchelais" northeast of the town and one in a village called La Berthelais, belonging to the town La Chapelle-Launay just west of Savenay. British troops had used both camps in 1939 and 1940. Both camps were severely overcrowded during the summer of 1940, with Touchelais holding 13,000 to 15,000 prisoners and La Berthelais holding approximately 14,000. The majority of these prisoners were Frenchmen, but there were also many colonial soldiers. The camps offered religious services for Muslims and Christians. The food supply was bad, there were no adequate washing facilities, and lice spread quickly. As a French aid worker noted, the prisoners in Savenay lived "in inhuman conditions," with many prisoners suffering from dysentery.¹ In September 1940, the first convoys of metropolitan French prisoners left for Germany, while many colonial prisoners were sent to the southwest of France. The remaining prisoners worked partly outside the camps; one work commando existed in Saint-Nazaire on the Atlantic Coast. Escapes were frequent, and the Germans at one point executed recaptured prisoners in a quarry located in the Vallée des Soupirs section of Savenay, at the southeastern edge of the town.²

Frontstalag 182 closed in early 1941, but the campsites of Savenay and some other camps became part of Frontstalag 232, formerly based in Luçon and La-Roche-sur-Yon. Frontstalag 232 closed in early 1942, and most of the prisoners were transferred to Frontstalag 133 (Rennes).³

FRONTSTAMMLAGER (FRONTSTALAG) 183

The Germans established Frontstalag 183 on July 20, 1940, and disbanded the camp on April 8, 1941. Frontstalag 183

received field post number (*Feldpostnummer*) 02 457 between April 28 and September 14, 1940. The number was struck on October 5, 1943.

Frontstalag 183 was a short-lived camp for French prisoners of war in the southern part of Brittany. It was based in Vannes, Chateaubriant, and Hennebont, with branches in some smaller towns in the Morbihan Département (map 1). Little is known about this camp, which was deactivated before regular camp inspections started.

A summary report from a French aid worker mentioned that the camp in Chateaubriant had 14,000 prisoners in the summer of 1940, housed in barracks and tents.¹ In Vannes, 992 prisoners stayed in the Caserne des Trente, and there were camps in Saint-Avé (405 prisoners), Hennebont (700 prisoners), Camp de Coëtquidan (605 prisoners), and Meucon (290 prisoners).² Two women working for the French Red Cross visited Camp de Coëtquidan on August 12, 1940, and found 800 prisoners in relatively good condition, except that they needed new clothing.³ The same women drove to the camps of Vannes, Redon, and Saint-Avé, concluding that "in this entire region, the soldiers are not in too bad shape, but, like everywhere, they do not have enough food, and they request clothing and complementary food rations."⁴

Frontstalag 183 was dissolved following the departure of the metropolitan French prisoners to Germany. The campsite in Vannes became part of Frontstalag 135 and later Frontstalag 133, while the camp in Chateaubriant operated as a part of Frontstalag 232 in the second half of 1941.

FRONTSTAMMLAGER (FRONTSTALAG) 184

The Germans established Frontstalag 184 on July 20, 1940, and disbanded the camp on November 23, 1941. Frontstalag 184 received field post number (*Feldpostnummer*) 03 603 between April 28 and September 14, 1940. The number was struck between January 27 and July 14, 1942.

Frontstalag 184 held French prisoners of war. It was located in Angoulême (map 1). For unknown reasons, many of the work commandos of this Frontstalag were deployed much farther to the south, in the Gironde and Landes Départements, about 250 kilometers (155 miles) south of Angoulême. In this region, the subcamp of Frontstalag 184 (sometimes listed as Frontstalag 184A) with several commandos existed in

Mont-de-Marsan and later in Sore (Landes).¹ This region, the southwestern tip of France, was considered warmer and healthier for prisoners from tropical climates, and it therefore became overcrowded with colonial prisoners.

Little is known about the early history of the camp. On November 30, 1940, the prefect of the Charente Département reported that there were 2,600 prisoners in Angoulême in a camp that could house 10,000. The prefect supplied complementary rations including meat, fish, and fresh vegetables to the prisoners.² The first inspection by the Scapini Mission occurred on April 19, 1941. At this time, the Frontstalag held 1,700 Algerians, 1,500 West Africans, 1,100 Tunisians, 850 Moroccans, and 400 Madagascans. The metropolitan Frenchmen had all been transferred out. The Frontstalag commander was Major Schuren. The housing of the prisoners was less than satisfactory, and the inspector suggested various improvements. He also noted that the prisoners had no tobacco rations and needed to buy cigarettes in the canteen. He urged French aid agencies to include cigarettes in their deliveries.³

The International Committee of the Red Cross (ICRC) visited Angoulême in June 1941 and found that there were only 814 prisoners in the main camp, mostly Moroccans, as well as 46 West Africans, 27 Madagascans, and 27 Antilleans. The inspectors learned that many prisoners were concerned because they could not yet transfer payments to their families. The ICRC inspectors promised that they would try to make sure that such money transfers would become possible. As in other camps, the inspectors noted animosity toward the Moroccans, who received better supplies than the other prisoners.⁴

A round of inspections of work commandos in August 1941 revealed that most prisoners of Frontstalag 184 were working in forestry in the Landes and Gironde Départements. Many commandos suffered from insufficient supplies, and their accommodations were not prepared for the winter. As often was the case in isolated forestry commandos, no religious services and no entertainment activities were available in most places. In Lugos, a forestry commando of 234 Moroccans, 222 Algerians, 22 West Africans, 6 Tunisians, 5 Madagascans, and 3 Antilleans complained that they had no work insurance, no sports equipment, and no mosque. Their mail had not arrived since they had left Angoulême in July. One prisoner was an Algerian art student from Paris who had completed an elaborate portrait of Marshal Pétain and requested a 48-hour leave so that he could bring it to Ambassador Scapini in Paris.

In nearby Hostens, the commando of 124 Moroccans, 49 Algerians, 19 Madagascans, 13 West Africans, 5 Tunisians, and 1 Antillean lived under similar conditions. This commando had bad drinking water, which caused various diseases. The Tunisian man of confidence, Mohamed Brahim, appeared to be lethargic. In Daugnague (Landes), a commando of 212 Moroccans and 2 Algerians also suffered from bad water quality. The commando of Le Barp, consisting of 241 Algerians, 29 Moroccans, 23 Tunisians, as well as 2 doctors and a medical helper, urgently needed new clothing and shoes and had no shower facilities and a deficient sewer system.

176 FRONTSTAMMLAGER (FRONTSTALAG) 184

However, the prisoners had to work only from 7:00 a.m. until noon, an unusually short workday. The inspectors mentioned a French doctor named Tallec, who had been released by the Germans but had decided to stay in the commando to ensure the medical care for the prisoners. Tallec, however, was himself severely ill, and the inspector thought that he should leave the camp or else he might infect the prisoners. All the work commandos in this region received aid deliveries from the French Red Cross sections of Périgueux (in the unoccupied zone) and, to a lesser extent, Bordeaux. Almost everywhere, the housing seemed to be insufficient for the winter cold.⁵

The Frontstalag of Angoulême, holding a majority of North Africans, also became a platform for German pro-Islamic propaganda. In September 1941, the Vichy secret service reported that the German guards in Frontstalag 184 were talking openly about Germany soon expanding to French North Africa, and German agents tried to recruit North Africans for the campaign against the Soviet Union, apparently without success.⁶

Frontstalag 184 was dissolved in November 1941. Frontstalag 195 in Onesse-et-Laharie took over most of its work commandos. This made sense geographically, as most work commandos of Frontstalag 184 were much closer to Onesse-et-Laharie than to Angoulême. Most forestry commandos in the Gironde and Landes Départements continued to operate as part of Frontstalag 195 and were later integrated into Frontstalags 221 and 222.

FRONTSTAMMLAGER (FRONTSTALAG) 186

The Wehrmacht established Frontstalag 186 on August 22, 1940, in Lille (map 2). It was assigned field post number (*Feldpostnummer*) 11 558 between April 28 and September 14, 1940; the number was struck between February 1 and July 11, 1941.

Frontstalag 186 was a short-lived camp for French prisoners of war. Little is known about the camp. A note prepared for the French authorities mentions "horrible" conditions in Lille, with brutal guards, strict discipline, hard work, and insufficient food.¹

Frontstalag 186 was closed in March 1941 and converted into AGSSt 11. The metropolitan French and British prisoners were sent to Germany, and the French colonial prisoners to Frontstalags further south.

SOURCES Primary source information about Frontstalag 186 is located in AN.

FRONTSTAMMLAGER (FRONTSTALAG) 190

The Wehrmacht established Frontstalag 190 on July 20, 1940, and disbanded the camp on June 27, 1942. Frontstalag 190 received field post number (*Feldpostnummer*) 32 147 between April 28 and September 19, 1940. The number was struck between March 1 and September 7, 1942.

Headquartered in Charleville-Mézières (map 2), Frontstalag 190 held French prisoners of war. The camp became one of the most important providers of labor for the German Ostland Organization, which managed farms in northeastern France from which many farmers had fled in May and June 1940. The Ardennes Département was the region with the heaviest engagement in the Ostland, and the need for labor in this region was always very high, not least because the

rightful owners of the farms were often not allowed to return until after a major delay. Prisoners working in the Ostland were generally treated more harshly than other Frontstalag prisoners because the guards were constantly under the watch of German civilian officials (many of them eager Nazis) who made sure that the rules about strict treatment of the prisoners were enforced.

Little is known about the first months of the Frontstalag. When an inspector from the Scapini Mission inspected it for the first time, in March 1941, he noted that most metropolitan French prisoners were held in the barracks of the city Charleville-Mézières, whereas the colonial prisoners had been sent to commandos in the countryside. The metropolitan French prisoners had to work on the damaged citadel of Charleville. This involved dangerous work, such as handling ammunition and unexploded shells. The guards were very harsh and nervous because many prisoners had escaped in the previous weeks.¹ Later information revealed that the escape problem had continued and that the camp commander had allegedly threatened to execute recaptured prisoners. He also ended the deployment of metropolitan French prisoners outside the main camp and limited their daily walks to a small area surrounded by barbed wire.² French protests triggered an inquiry involving the German Foreign Office and the OKW, which denied all allegations.³

The rural work commandos were inspected in May 1941. Most of them performed farmwork on lands administered by the Ostland, while a few commandos were still removing barbed wire that the French army had rolled out on farmlands as part of its defensive preparations in 1940. Escapes were frequent, especially in commandos with “white” French prisoners. Most prisoners needed new clothing and new shoes. Medical care was difficult to get, especially in the countryside, and religious services were often not available. In some places, the prisoners had not been paid for their labor. The guards belonged to the 583rd, 817th, and 907th Reserve Battalions (*Landesschützenbataillone*) and the commandant was Major Meiweg. In the rural commandos, prisoners were usually housed in abandoned schools, farmhouses, and, in a few cases, military barracks or castles. While the food supply and the accommodations were generally adequate, there were some commandos with serious problems. In Banogne, near Rethel, a commando of 202 North Africans was very poorly supplied. The prisoners, although working on the land, were famished. In Mouzon, a commando of 82 prisoners removing barbed wire from fields also received insufficient food supplies.⁴

Meanwhile, many metropolitan French prisoners in Frontstalag 190 had signed private contracts with the Ostland or with French farmers. To the annoyance of the French government, who saw the Ostland’s presence (probably correctly) as an underhanded German attempt to colonize or annex French territory, these prisoners were excluded from the order of July 3, 1941, liberating all remaining metropolitan French prisoners in the Frontstalags. Despite repeated protests by the Scapini Mission, most of these metropolitan French prisoners had

to keep serving out their contracts. This was likely not a great hardship, however, given that they were relatively free, did not have to wear uniforms, and were treated well. Some even worked for local French farmers.⁵ Some colonial prisoners also had to work under these contracts, and it seems that their situation was less enviable. In early 1942, the prefect of the Meurthe-et-Moselle Département visited some groups of colonial contract laborers and noted that the colonial soldiers among the “free” laborers, although no longer guarded by German soldiers, felt abandoned and lonely. They apparently were happy to see a French official; the West African prisoners declared that they would still be willing to die for France.⁶ Another round of inspections in September 1941 revealed that the clothing of the prisoners in this Frontstalag was deteriorating quickly and that the Germans were not providing replacements. Overall, however, the food supply seemed to have improved.⁷

According to the documents of the Scapini Mission, Frontstalag 190 held approximately 4,245 prisoners in July 1941, not counting the metropolitan French prisoners still working under labor contracts. The largest group were the North Africans (2,400), followed by the West Africans (1,300), Madagascans (295), and Indochinese (250). The round figures for the two most numerous categories suggest that these were estimates, but they were probably fairly close. An International Committee of the Red Cross (ICRC) inspection team in June 1941 had found 4,371 prisoners of color in the Frontstalag, together with 745 metropolitan Frenchmen.⁸ Frontstalag 190 had subcamps in the cities Rethel and Sedan, but little is known about them.

The archives of the Ardennes Département in Charleville-Mézières hold uniquely rich materials about the camp and its work commandos, from both German and French officials. The German army gathered information on the mood of the prisoners and recorded many conversations between guards and colonial prisoners in the commandos, where many prisoners expressed admiration for Germany and veneration for Pétain and gave examples of “chivalrous” behavior; for example, by not taking advantage of the absence of a German guard to escape. Detailed lists with the number of prisoners in each work commando, the supplies sent to them, and their pay exist for certain periods. French documents about the camp include various decrees of the prefect and town mayors regarding the employment and lodging of the prisoners.⁹

Frontstalag 190 became part of Frontstalag 204 in Saint-Quentin in the second half of 1941. Most of the camp’s work commandos continued operating under Ostland control, with most of the locally produced food going to Germany.

SOURCES Primary source information about Frontstalag 190 is located in AD-Ans, AN, ICRC Archives, and PAAA.

COURTESY OF ICRC.

which was headquartered in Saint-Quentin, in the same department. Many camps, including the one in La Fère and the camp in the citadel of Laon, continued to operate. Frontstalag 192 received field post number (*Feldpostnummer*) 33 063 between April 28 and September 19, 1940. The number was struck between March 1 and September 7, 1942. The Wehrmacht operated the camp in La Fère (map 2), a small town on the Oise River where a French army barracks was located. At the time of the first official inspection, the camp in La Fère held only metropolitan French prisoners. The inspector from the Scapini Mission, Henri Dantan Merlin, reserved special praise for the camp commander, Oberstleutnant Ritter. According to the prisoners, Ritter did his utmost to improve the situation in the camp.¹ Frontstalag 191 was dissolved after the transfer of the metropolitan French prisoners to Germany, and its camps and commandos became part of Frontstalag 192, in Laon.

SOURCES Primary source material about Frontstalag 191 is located in AN.

Raffael Scheck

NOTE

1. Summary report of visit to camps in La Fère, by Dantan Merlin, March 18, 1941, AN, F9, 2354.

FRONTSTAMMLAGER (FRONTSTALAG) 192

On July 18, 1940, the Wehrmacht established Frontstalag 192 in Laon (map 2). In March 1941, the Germans consolidated Frontstalags 191 and 192 under the direction of Frontstalag 192, although both main camps and many work commandos continued to exist. In March 1942, the Germans dissolved Frontstalag 192 and placed its camps under Frontstalag 204,

At the time of their first official inspections, the camps of La Fère and Laon held only metropolitan French prisoners. The inspector from the Scapini Mission, Henri Dantan Merlin, found 2,901 French prisoners as well as a few Belgians and Spaniards (probably from the Foreign Legion) in the citadel of Laon.¹ In May 1941, when Dantan Merlin returned to Frontstalag 192, the Frontstalag still seemed to hold many French prisoners. Dantan Merlin visited several work commandos and noted the lack of shoes, clothing, soap, tobacco, and games. In June, the first International Committee of the Red Cross (ICRC) inspection noted, however, that colonial prisoners now predominated in Frontstalag 192. The sub-camp of Saint-Quentin, for example, held 84 West Africans and 35 Madagascan.² The summary of prisoners created by the Scapini Mission in July 1941 counted 3,634 prisoners in Frontstalag 192, of which the majority (2,650) were North Africans. The West Africans (740) were, as usual, the second largest group. In addition, the camp held 124 Madagascan and 120 Indochinese.³

The most detailed inspection of the Frontstalag occurred in early September 1941. Inspector René Scapini found the prisoners dispersed mostly into rural commandos covering the entire Aisne Département. French farmers employed most of them, but a few prisoners worked for the Ostland, which had taken over a number of abandoned farms in the northern half of the department. René Scapini stressed again

the poor state of the prisoners' clothing and pointed out that the tobacco rations they were receiving were too small. He was particularly concerned about differences in the supplies that the prisoners received from the farmers and the mayors of the small villages where they worked.

In Besny-et-Loizy just north of Laon, a farmer who employed 48 Indochinese prisoners received special praise because he gave the prisoners extra pay, extra food, and one package of tobacco every five days. In the village Clermont-les-Fermes, northeast of Laon, the farmer took such good care of his prisoners that Scapini went out of his way to thank him. In several villages, the German Ostland official also supplied the prisoners with extra rations. Yet, Scapini was alarmed by the number of farmers and town mayors who did not adequately care for the prisoners. In several commandos, he concluded that the prisoners were not receiving enough ration cards to buy food and that they had no tobacco supplies, to which Scapini paid special attention. These problems prompted Scapini to visit the prefect of the department and the representative of a committee for assistance to the prisoners in Saint-Quentin, urging them to write to mayors asking them to improve the supplies to prisoners in their villages.⁴

In a few places, complaints went beyond insufficient supplies. In a commando in Fresnes-en-Tardenois, Scapini noted severe tensions between the 15 prisoners (14 West Africans and 1 Algerian) and the farmer. The prisoners complained about having to work much too hard. The farmer, in turn, claimed that they did poor work and requested that they be withdrawn.⁵

Little is known about the main camp in La Fère at this time. A prisoner letter to the president of the Paris section of the Red Cross from October 22, 1941, claimed that a corruption network existed in La Fère, led by two Moroccan non-commissioned officers and a marabout. The letter accused these prisoners of being German spies, of withholding aid packages from the other prisoners, and of occasionally beating prisoners. The letter threatened that the prisoners would start a "revolution" if the Red Cross did not investigate the abuses.⁶ The archival documents do not disclose whether the Red Cross or the Scapini Mission took action.

SOURCES Primary source information about Frontstalag 192 is located in AN and ICRC Archives.

FRONTSTAMMLAGER (FRONTSTALAG) 193

The Wehrmacht established Frontstalag 193 on July 19, 1940, in Defense District (*Wehrkreis*) X and, in August 1940, deployed it in Sainte-Menehould, France (map 2).¹ Starting in September 1940, it was in Brussels.² In February 1941, the headquarters redeployed to Defense District X.³ On March 20, 1941, the Germans disbanded the camp and used the personnel to create AGSSt 13, 14, 15, and 16.⁴ Frontstalag 193 received field post number (*Feldpostnummer*) 33 609 between April 28 and September 14, 1940. It was struck between February 28 and July 29, 1941. While deployed in France and Belgium, the camp was under the authority of the Armed Forces Commander, France (*Wehrmachtbefehlshaber Frankreich*).

Frontstalag 193 held French prisoners of war. The conditions were generally satisfactory and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War.

FRONTSTAMMLAGER (FRONTSTALAG) 194

The Wehrmacht established Frontstalag 194 on July 22, 1940, in Defense District (*Wehrkreis*) X.¹ Frontstalag 194 first deployed to Châlons-sur-Marne (today: Châlons-en-Champagne)

(map 2), a town east of Paris in the upper Marne valley. Châlons-sur-Marne had been an important military center for some time, so it and the surrounding areas had many barracks and military installations that could accommodate large numbers of prisoners. Châlons became a transit center for prisoners on their way to Germany in the summer of 1940, and later it was the dismissal point for French prisoners released from German Stalags. In the second half of 1941, Frontstalag 194 absorbed Frontstalag 161. By 1943, Frontstalag 194, now headquartered in Nancy (2), was the largest of the remaining Frontstalags in France and covered the entire northeastern part of France. As one of the first camps to receive French cadres for colonial prisoners in early 1943, it attracted much attention from French prisoner of war (POW) agencies. In early 1944, Frontstalag 194 also housed several hundred British Indian prisoners, all Muslims. In the summer of 1944, the larger sites of Frontstalag 194 again became transit centers for colonial and Allied prisoners on their way to Germany during the German retreat from most of France. Some commandos of Frontstalag 194, under the name "Stalag 194," continued to operate in Southwestern Germany (Defense District V) in early 1945.

The camp received field post number (*Feldpostnummer*) 34 154 between April 28 and September 19, 1940. That number was struck between March 1 and September 7, 1943, but a series of other numbers were also associated with the unit: 07 244 AC (issued October 11, 1943, struck November 3, 1944); 19 375 AB (issued March 3, 1944, struck November 3, 1944); 22 151 B (issued October 10, 1943, struck November 3, 1944); and 64 737 (issued November 3, 1944).

While deployed in France, the camp was subordinate to the Armed Forces Commander, France (*Wehrmachtbefehlshaber Frankreich*).

Very little is known about the first months of Frontstalag 194. A report from the Central Assistance Committee for POWs in February 1941 mentioned that the Chanzy barracks in Châlons held 1,200 colonial soldiers and 150 Frenchmen. The camp was overcrowded, and many prisoners were in poor health. Over 500 of them were hospitalized. Among the Indochinese prisoners, tuberculosis was rampant.² A note from an unnamed aid worker claimed that the camp housed a large number of colonial prisoners on May 6, 1941, and that many of these prisoners were in poor health after having suffered through a severe winter. The prisoners stayed overnight in the barracks of Mourmelon-le-Grand, a village north of Châlons with large barracks. The wake-up call was at 5:00 a.m., and the prisoners were then driven in trucks to the train station of Châlons, where they worked from approximately 8:00 a.m. to 5:00 or 6:00 p.m.—sometimes to 8:30 p.m. The prisoners received soup for lunch and dinner at their workplace. The guards threatened prisoners weakened by disease with revolvers and kicked them. Few prisoners received complementary supplies from their families, and the packages that did arrive were often partially empty.³

The most detailed inspection of the Frontstalag occurred in August 1941. The commander at the time was Major Boetticher, and the guard units belonged to the 885th and 886th

Reserve Battalions (*Landesschützenbataillone*). The work commandos were mostly rural and spread over an area of up to 120 kilometers (75 miles) around Châlons-sur-Marne. Aside from the usual complaints regarding the lack of new clothing, shoes, and soap, most commandos were in good shape. Farmers provided enough fresh food, and the living quarters of the prisoners were decent. Even in remote villages, religious services for Muslims were often available through a room set aside for worship. The commandos that were in the many military camps of the region and assigned to work on the upkeep of the camps fared worse. They lacked fresh vegetables, and hygiene was sometimes bad. This was true for the commando housed in the Chanzy barracks of Châlons (167 Algerians, 55 West Africans, 46 Moroccans, 27 Madagascans, 11 Indochinese), where the prisoners seemed to be unusually unhealthy. Similar conditions existed in the camp of Mailly-le-Camp (Aube Département), south of Châlons, which housed 33 Tunisians, 28 Moroccans, and 5 Algerians, and in the camp of Suippes, which housed 32 Tunisians, 28 Algerians, and 22 Moroccans.⁴

A new round of inspections in January 1942 revealed that many prisoners in Frontstalag 194 lacked adequate protection against the cold weather. Most prisoners were idle because there was not much agricultural work in this season. The cold and the lack of news from their homes had created a depressed mood among the prisoners despite the dismissal of 593 North African and 250 Madagascan prisoners in December 1941 (for propaganda reasons, the inspector of the Scapini Mission made sure to mention to the prisoners that this dismissal was the result of diplomatic efforts by Ambassador Georges Scapini and the French government). The main camp in Châlons at this time held 458 prisoners, mostly North Africans (168 Moroccans, 122 Algerians, and 25 Tunisians) as well as 67 West Africans, 64 Indochinese, 11 Frenchmen, and 1 Martinican. The newly integrated camp of Nancy, formerly part of Frontstalag 161, housed 284 Algerians, 78 Moroccans, 47 Indochinese, 27 West Africans, 9 Tunisians, 2 Martinicans, 1 Guadeloupean, and 1 Haitian. In Nancy, a noncommissioned officer (NCO) offered French classes. Most prisoners worked in or near the camp in a variety of jobs, including the gathering and shelving of ammunition for the Wehrmacht. For lack of gasoline, inspector Jean Detroyat could not visit more than a few rural work commandos. He observed insufficient shelter and poor medical care in some of them. The commander of the Frontstalag now was Major Krebs, and the Frontstalag had a total of 5,017 prisoners.⁵

When the Scapini Mission was again able to visit the Frontstalag—after the enforced hiatus in the wake of the Giraud crisis—the general situation seemed to have further deteriorated. Clothing and shoes were in miserable condition, and there were widespread allegations of aid packages being plundered either en route to the camps or upon arrival. In a commando with 33 Algerians in Seicheprey (near Nancy), the German guards had taken for themselves the most precious contents of the aid packages (*colis du maréchal*) sent from Vichy. The affair was brought to the attention of the German

officer accompanying the inspector. The German officer identified one guard who was most responsible for the corruption and made sure that he was punished and transferred. In the region of Nancy, many prisoners now worked for the Ostland and suffered from strict, sometimes abusive, guards and officials.⁶

Several reports of abuses and neglect by German guards reached the French POW authorities in the second half of 1941. In some commandos, the abuses came not from the guards but from other prisoners. The frequent abuses reported from Frontstalag 194 may have to do with the fact that many of its commandos worked for Ostland, particularly in the region west of Nancy, which was previously under the command of Frontstalag 161. This meant that the prisoners—and their guards—were under the stricter supervision of somewhat more dedicated Nazis working for the Ostland and had less contact with French civilians. Guards were often more nervous under these conditions and under more pressure to enforce the regulations. Although there were important exceptions, prisoners working for the Ostland generally experienced a harsher regimen than others.

From February 1943 to June 1944, many commandos belonging to Frontstalag 194 received French cadres, including commandos working for the Ostland. The usual problems with the French cadres haunted the Frontstalag—unclear regulations in case of escape attempts by prisoners; incompetent cadres; corruption and mistreatment—and made it a showcase for what could go wrong with this arrangement. One glaring example came from a commando with French cadres in Vraux (Marne), where West African prisoners complained vividly about a French NCO who abused them and told everybody that they were cannibals and should not be treated well. The local civilians and town mayor apparently shared this hostile attitude.⁷ One particularly vocal NCO from the French Antilles, Jean Gernet, was held as a common rank-and-file prisoner in Frontstalag 194. In early 1943, he sent a letter to the French government complaining about being held back in a Frontstalag despite his French citizenship (the Germans, however, considered him a man of color and therefore did not let him go with the white French prisoners in July 1941) and about suffering the humiliation of being guarded by white French cadres. Gernet's letter served as ammunition for the Scapini Mission and those in the French war ministry who opposed the deployment of French cadres in the Frontstalags, although Scapini did manage to get Gernet released discreetly.⁸

Yet there are also reports about prisoners being upset about losing their French cadres when the Germans sent them home after D-Day. Prisoners in Talmay (Côte d'Or) and Dijon, for example, expressed great appreciation for the French cadres who apparently had done their utmost to mitigate the hardship of captivity. In Talmay, civilians seemed to have formed bonds of friendship with the prisoners and their French cadres.⁹ Letters of prisoners intercepted by Free French police in North Africa also occasionally made positive comments about the French cadres in Frontstalag 194. The

prisoner Omar ben Ahmed, for example, wrote to a friend in Mauritania: "I am in a tiny village where the civilians are very nice to us. For six months already, we have been with French cadres who know us well and really like us; they have been doing all they can to make things as good as possible for us."¹⁰ Some of the friendly attention by civilians, however, alarmed the Scapini Mission. In a large commando of Neuves-Maisons (outside of Nancy), the inspectors reported that the French cadres were barely able to protect the 212 prisoners from Mali from the "raids undertaken by women belonging to the lowest categories of prostitution."¹¹

Camps belonging to Frontstalag 194 suffered intense bombardments in 1944. In the night of May 3–4, 1944, Allied bombers attacked Mailly-le-Camp, killing at least 35 prisoners and severely wounding 17. According to an aid organization, the German camp authorities were not very helpful in transporting wounded prisoners to hospitals. Civilians stepped in and brought some of the wounded to the hospital of Troyes, 50 kilometers (over 30 miles) away. Some of the hospitalized prisoners died of their wounds. Seventeen prisoners used the chaos of the bombing to escape. The surviving prisoners were kept in barracks without a roof and windows.¹² Repeated bombings of the Peugeot motor factories in Montbéliard and other places also killed an unknown number of prisoners.¹³ A severe attack on the train station of Hirson (Aisne), near the Belgian border, killed 7 North African prisoners and wounded 15. The French railroad employees had been sent to shelters when the alarm went off, but the prisoners and their guards had stayed outside. During the funeral for the victims, the surviving prisoners expressed anger at the guards for not bringing them to shelters in time.¹⁴ In several places, the German army deployed colonial prisoners in clearing work after bombing attacks; this led to protests by the Scapini Mission to the military commander in France, as this deployment clearly violated Article 31 (war-related work) and 32 (dangerous work conditions) of the Geneva Convention.¹⁵

By the fall of 1943, Frontstalag 194 had absorbed almost all other camps in the northeastern quarter of France, including the sites of the former Frontstalags in Vesoul (141) and Dijon (122 and 151). It held 8,600 prisoners in September 1943.¹⁶ Inspections during this period generally revealed good conditions in the larger camps but major differences among the work commandos. In a commando in the village Eix near Verdun, German guards were accused of beating prisoners, plundering packages, and excessively restricting the freedom of prisoners to go out in the evenings and on weekends. The medical care of the 117 Madagascan prisoners was also a lacuna because the local doctor, although living just a few kilometers away, refused to treat the prisoners.¹⁷

In the first months of 1944, Frontstalag 194 housed some British colonial prisoners in addition to the French colonial soldiers. In March, a group of 257 Indian Muslim prisoners stayed in Nancy and performed construction work for the town. They had come from Stalag 315 in Épinal, a camp set up specifically for Indian prisoners that was overcrowded.

Their man of confidence was Sargent Ismail Khan. They slept in the same facilities and used the same mosque as French colonial prisoners but kept very much to themselves. The Indians requested English books and a medical examination before being sent to work. The German doctor dismissed their concerns: "It must be kept in mind that the coloured prisoners are much more sensitive than Europeans and that they always have a lot of complaints about the state of their health, mostly unfounded."¹⁸ An International Committee of the Red Cross (ICRC) inspection of Frontstalag 194 in June 1944 also reported the presence of British colonial prisoners. The Frontstalag now had 893 British Indian and 369 South African prisoners (the latter probably from the Beauvais branch camp of Frontstalag 133), although the inspector pointed out that the Indians normally belonged to Stalag 315 near Belfort and would soon return there.¹⁹ Many Indian prisoners had been sent to Nancy after the heavy bombing of Stalag 315 on May 11, 1944. Given the slow pace of repairs in Stalag 315, however, it is unlikely that these prisoners ever returned.

In the summer of 1944, the Germans sent the majority of the prisoners of Frontstalag 194 to Germany, and the camps in Châlons and Nancy became transit centers for newly captured Allied prisoners and for prisoners from other Frontstalags on their way to German Stalags. Men were held in the camp on average less than 10 days before they were sent to more permanent POW camps typically within Germany. On July 26, 1944, there were 1,037 British and American POWs at the camp in the morning, and, by afternoon, 230 had left for other camps.²⁰ The camp was a major transit center, with POWs sent there from other smaller camps prior to their transfer to Germany.²¹ It is likely that a large percentage of the 13,000–15,000 French colonial prisoners transferred to the Reich in 1944 came from here. Because of the short duration, the camp did not segregate prisoners according to nationality as was customary. Instead, the camp designated one compound for officers, and the other two for NCOs and privates. International observers regarded the facilities and hygiene as "excellent."²²

The transport was dangerous. In the station of Belfort, for example, a bombing attack killed 16 prisoners on a train. In this case, the German guards had apparently allowed the prisoners to leave the train after hearing the alarm, but not all prisoners had managed to get to safety.²³

The last record showing Frontstalag 194 in operation dates from April 15, 1945.

FRONTSTAMMLAGER (FRONTSTALAG) 195

The Germans established Frontstalag 195 on August 22, 1940, probably in Saint-Omer in the northernmost region of France (map 2). Given the pressure of the Scapini Mission and the International Committee of the Red Cross (ICRC) on the German army to send colonial prisoners to regions with a mild climate, the Germans transferred Frontstalag 195 to the Landes Département in the southwest of France, near the Atlantic coast, probably in December 1940. The camp headquarters was located in the village of Onesse-et-Laharie (1), near the road from Bordeaux to Bayonne, and work commandos performed predominantly forestry work in the surrounding region.¹ The camp received the field post number (*Feldpostnummer*) 12 656 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943.

As the history of Frontstalag 195 shows, the transfer of colonial prisoners to the three major camps located in southwestern France (Frontstalags 195, 221, and 222), although well intended, was not beneficial for the prisoners. The winters in this area, though milder than in northern France, were still harsh for people from tropical climates, as the Scapini Mission pointed out from the start. In addition, the transfer of colonial prisoners to the southwest created overcrowding and overburdened the local food supply. The German occupation zone in this region was narrow, and the demarcation line interrupted regional trade and supply lines. Throughout 1941, the French Red Cross section of Périgueux, in the unoccupied zone, gradually built up an efficient supply system for the three major camps in the southwest that complemented and at times replaced the meager German rations. This source of supply dried up, however, when the German secret service found out that the drivers had smuggled letters and persons across the demarcation line and engaged in resistance activities. The Red Cross trucks for a while lost permission to pass the demarcation line. As a consequence, the food supply of the prisoners in the three southwestern camps was often unsatisfactory from 1942 to 1944.

Generally, conditions in Frontstalag 195 were difficult. The guards, who with a few notable exceptions seemed to be generally correct and well intended (many of them received special praise from inspectors and prisoners), were not primarily responsible for the difficulties but rather the labor conditions. Forestry commandos required the hardest physical labor imposed on any Frontstalag prisoners. Prisoners in forestry commandos had less contact with French civilians, poorer medical care, and worse accommodations than prisoners in agriculture or public works. Food shortages had particularly harsh consequences on prisoners performing hard work, and the lack of decent clothing, including shoes and mittens, was particularly painful in forestry, where the work was most intense in the winter. The labor-intensive harvesting, cutting, and transporting of lumber required a large workforce. Work commandos in this part of France were, therefore, unusually large: an ICRC inspection of October 1942 mentioned an average size of 300 prisoners per commando, and one commando at one time had 574 prisoners. The conditions in the commandos of Frontstalag 195 created a very different atmosphere than the small work commandos of less than 20 prisoners assigned to individual farms that were common in other Frontstalags.

No information is available about the first phase of Frontstalag 195 in Saint-Omer. This region was incorporated into the German military district of Belgium, and the prisoners from Saint-Omer likely went to Germany in the fall of 1940. The first inspection of Frontstalag 195 occurred in April 1941, after the move to Onesse-et-Laharie. Ambassador Georges Scapini himself visited the camp in the company of inspector Jean Desbons and two German officers, including Major von Rosenberg, the Armed Forces High Command (OKW) representative in Paris. The main camp was located in the Laharie section of the village and held 560 colonial prisoners, including 42 North African officers. The inspectors criticized that the barracks were built on sandy soil and provided insufficient shelter from the wind, which tended to blow sand across the plains. The food supply was bad, the clothing of the prisoners was in poor shape, and washing facilities did not exist. The guards were fairly strict. In sum, the inspectors found Laharie "a very bad camp." They also noted in a later summary of camp visits that many prisoners were in poor health, possibly as a result of bad hygiene caused by the lack of washing facilities. No visit of work commandos took place in April 1941.²

Conditions in the main camp improved quickly, however. In July, shower facilities were made available, and the camp was less crowded because more prisoners were assigned to commandos, but the inspector, Dr. Bonnau, still criticized that some commandos did not offer satisfactory sanitary conditions. Bonnau reiterated that the 30 wooden barracks in Laharie did not protect the prisoners from the clouds of dust and sand created by the wind. The food supply had improved, largely thanks to the Red Cross of Périgueux. Religious services for Muslims were well set up, even in the remote work commandos, but the prisoners often requested copies of the

Quran, and some Christian prisoners complained about not having Catholic services in their camp or commando.

Major work commandos visited by Bonnaud were located in Escource, Sainte-Eulalie, Mimizan, Lue, Moncenx, Labouheyre, Solferino, Daugnague, and Ychoux. All of them performed forestry work. The commando in Mimizan had a dysfunctional sewer system and was too exposed to the wind. In Sainte-Eulalie, the 478 prisoners, mostly West Africans, were plagued by vermin. The commando of Daugnague (with 212 Moroccans and 2 Algerians) was in particularly bad shape: it had too little food, drinking water, and medicine. A German foreign ministry official, after reviewing the inspection reports, dismissed the problems as trivial, however.³

Conditions in the Frontstalag remained rather different from one commando to the other. In the fall of 1941, inspectors still noted the lack of food and warm winter clothing and commented on strict discipline in some commandos. In the main camp in Laharie, some prisoners had dug a tunnel under the fence surrounding the camp, but a prisoner had betrayed the project to the Germans. As a punishment, the Germans canceled Ramadan festivities and withheld letters and packages for four days.⁴ A woman working for the French Red Cross noted that several commandos had incompetent or corrupt men of confidence, and she confirmed that the German guards were very strict in some places (often in response to escapes), but, in other commandos, she specifically praised the German commanders and guards for their caring and friendliness (as in Arengosse, Mont-de-Marsan, Labouheyre, and Mimizan). The food supply was insufficient in several commandos (now reflecting the consequences of the sanctions against the Red Cross of Périgueux), and the prisoners often did not have enough blankets for the cold nights.⁵ In the commando of Solferino, an outraged North African prisoner denounced the Algerian man of confidence, whom he accused of corruption, exploitation of prisoners, and an unpatriotic attitude. Apparently, this man had pointed at the other prisoners and said to the guards (in German), "They are all swine."⁶

The prisoner population of Frontstalag 195 declined from the summer of 1941 to the spring of 1942. In July 1941, Frontstalag 195 was the second largest in France (after Frontstalag 135, with 5,518 prisoners), with a total of 5,420 prisoners (3,522 North Africans, 1,090 West Africans, 693 Madagascans, and 115 Martinicans), reflecting both the compliance of the Germans with French and ICRC requests for the transfer of colonial prisoners to a milder climate and the strong interest of the German military command in France in lumber production for construction projects and fuel. For lack of tools, carriage animals, and truck fuel, however, the lumber harvest lagged far behind expectations. As a consequence, occupancy of Frontstalag 195 declined due to reassessments of prisoners from this overcrowded camp to neighboring Frontstalags (221 and 222) and in part due to the dismissal of the 10,000 North Africans from the Frontstalags in December 1941. In April 1942, Frontstalag 195 held only 2,865 prisoners (943 Algerians, 709 West Africans, 414 Moroccans, 411

Tunisians, 288 Madagascans, 71 Indochinese, and 29 Martinicans)—even though it had just absorbed Frontstalag 184 in Angoulême. By contrast, Frontstalag 221 still had approximately the same number of prisoners, while Frontstalag 222 had nearly doubled in size.⁷

The reduced occupancy of the Frontstalag did not resolve its most prominent problems. The food supply, in particular, remained poor. In the work commando of Lue, for example, the 201 prisoners were on their feet for nine hours daily while receiving nothing but a piece of bread and a cup of tea. In Ychoux (330 prisoners), the sanitary conditions were precarious, and an abusive guard named Sudau had injured two prisoners who had claimed to be too sick for work. The German officer accompanying the camp inspector interrogated Sudau, who admitted everything, and started disciplinary procedures against him, but the outcome is unknown. In the commando of Sore (574 prisoners), the German guards had withheld the bulk of some rice deliveries sent to the Indochinese prisoners for the Tet holiday. After being confronted by the German officer and the French inspector, the guards handed the remaining rice to the prisoners. Reflecting the widespread veneration of Marshal Pétain among the colonial prisoners, the Indochinese prisoners in this commando had handcrafted an elaborate carpet that they had sent to Pétain.⁸

Information on the camp is sparse for the period after 1941. A renewed commitment of the German military command to intensifying the lumber harvest prompted new transfers of prisoners to Frontstalag 195, whose occupancy increased in the fall of 1942. An ICRC inspection in October 1942 found Frontstalag 195 to be in very good shape. The food supply had become "very good" thanks to deliveries from local French Red Cross sections (albeit the inspectors noticed that the section of Périgueux was no longer involved in the supply system). As elsewhere, the prisoners needed new shoes, but, overall, the ICRC rated the conditions as "good" and suggested that they would be "very good" after a few minor improvements. According to the ICRC report, the number of prisoners in the Frontstalag had increased to 5,800 (including commandos). The camp in Laharie alone housed 2,181 prisoners. Religious services were considered good for Muslims but less good for Catholics.⁹

Hardly any information exists for the last period of the Frontstalag, except for some correspondence regarding a corrupt man of confidence named Allah Akobabd in the commando of Solferino. This man, with a few accomplices among the prisoners, allegedly tempted others to engage in gambling and made much money in the process.¹⁰

The Germans disbanded the camp on August 12, 1943.

**FRONTSTAMMLAGER
(FRONTSTALAG) 200**

The Wehrmacht established Frontstalag 200 on July 22, 1940, and disbanded the camp on August 23, 1941. They installed it first in Évreux and then in the small town of Verneuil-sur-Avre (map 1). It received field post number (*Feldpostnummer*) 28 846 between April 28 and September 24, 1940; the number was struck between February 15 and July 30, 1942.

Frontstalag 200 held French prisoners of war. The prisoners were almost all assigned to work commandos that performed mostly agricultural labor in the Eure Département. The first major count of prisoners by the Scapini Mission from May to July 1941 revealed that Frontstalag 200 had 3,002 prisoners (2,400 North Africans, 452 West Africans, 100 Madagascans, and 50 Indochinese), but the camp was dissolved not much later. The guard unit was the 846th Reserve Battalion (*Landesschützenbataillon*) from Defense District (*Wehrkreis*) XIII. Some campsites and commandos, such as the camp of Verneuil-Cherbourg, were part of Frontstalag 153 in Chartres in 1942.¹

Little is known about the early history of Frontstalag 200, except that it held for several months a number of metropolitan

French prisoners who were transferred to Germany before July 1941. The main camp in Verneuil-sur-Avre was installed on an isolated school campus west of the town, the École des Roches. The Germans surrounded several buildings on the school with barbed wire and used them to house the prisoners. A second location of the Frontstalag was in Cherbourg, an eastern suburb of Verneuil. An unofficial report claimed that approximately 7,000 prisoners had fled from the camps and commandos of Frontstalag 200 in the first months; the vast majority were probably metropolitan French prisoners (escape figures for French prisoners held in France for a few months were extremely high), but the report mentioned that some colonial prisoners had also fled, including Moroccans. The German guards were not concerned about the escapes and often closed both eyes when a prisoner tried to escape. In one of the camps in Verneuil, the prisoners had in the first months even dug a tunnel under the fence and reproduced keys to the weapons depot of the guards; they were planning a mass escape, possibly with arms. Luckily, in the eyes of the inspector, this potentially dangerous escape never came to fruition because a prisoner shared the plan with the Germans.²

The farmers in the department had initially refused to employ prisoners, but when it became clear that the Germans would not release French prisoners soon, the local prisoners were suddenly in high demand. A number of farmers appear to have enriched themselves at the expense of the prisoners by keeping some of the money, food, and soap sent for them by the French authorities and aid organizations. The German personnel, too, seem to have seized supplies and aid shipments sent for the prisoners. Once, the Germans requisitioned an entire truckload of chocolate from the French Red Cross and gave the prisoners only two boxes. It seems that the first inspections in the spring of 1941 reined in these abuses.³

When the Scapini Mission visited Frontstalag 200 for the first time, on March 29, 1941, the camp had 261 metropolitan Frenchmen and an estimated 2,000 colonial prisoners. Most of the prisoners were already assigned to farms. The inspector stressed that the food supply of the prisoners in the main camp was insufficient, but the largest problem in the eyes of the prisoners was the lack of tobacco. The prisoners in one of the camps of Verneuil-sur-Avre (likely the metropolitan French prisoners) had formed a mutual aid society to support the poorest prisoners.⁴

As elsewhere, prisoners complained about the lack of mail, but, in the case of Frontstalag 200, the German army investigating the complaints found that this problem was exacerbated by a paralysis of the postal office in Verneuil, which in the spring of 1941 still had packages in storage that had been deposited in July 1940.⁵

The conditions in the camp and the commandos had significantly improved in June 1941, when the second round of inspections occurred, this time with visits to many rural work commandos. As in some other regions, a wealthy woman, the generous Countess de Choiselle, had volunteered to send the prisoners tobacco, soap, and other items twice per month, and this made a big difference. Some commandos still suffered

from inadequate food rations, but the inspector usually talked to the mayor or individual farmers and requested improved rations. Most commandos were small (20 to 25 prisoners) and worked on local farms. In Étrépagny, a commando of 33 Algerians worked in two sugar factories, and, in Breteuil, a commando of 25 Moroccans was employed in a quarry. The main camp in Verneuil (probably the camp in the school) at this time had 97 North Africans and 82 Frenchmen. As a punishment for an escape attempt—although the planned mass escape mentioned above is not noted—the Germans had closed down the canteen for a couple of days. The Catholic Frenchmen had access to religious services, but the Muslim North Africans apparently had no religious services. Still, the inspector noted that the camp was now very well installed and supplied; he rated the conditions as “excellent.” The camp commander, Oberst Woeltge, was friendly to the prisoners and highly respected by them.⁶

Frontstalag 200 was dissolved before the consolidation of numerous Frontstalags in late 1941. Many of its work commandos became part of Frontstalag 153 in Chartres, the closest major camp, in October 1941.

NOTES

1. Inspection of Frontstalag 153, Chartres-Morancez, February 6, 1942, by René Scapini, PAAA, R 40992. The commando in Cherbourg at this time had 1,024 prisoners. It was the largest commando in France.

2. “Frontstalag 200 Verneuil,” no date, but obviously written shortly after May 1941, AN, F9, 2810.

3. “Frontstalag 200 Verneuil,” AN, F9, 2810. German secret service officials, in a meeting in Paris on October 27, 1940, mentioned an escape problem in Frontstalag 200 and urgently requested tougher surveillance and more thorough investigations after successful escapes: “Besondere Anordnungen, no. 74,” October 27, 1940, AN, F9, 3657.

4. Inspection of Frontstalag 200, camp of Verneuil, March 29, 1941, by René Scapini, AN, F9, 2355.

5. OKW to Auswärtiges Amt, July 7, 1941, PAAA, R 40987.

6. Inspection of Frontstalag 200 with work commandos, June 14, 1941, by René Scapini, PAAA, R 40987, and AN, F9, 2355.

FRONTSTAMMLAGER (FRONTSTALAG) 201

The Wehrmacht established Frontstalag 201 on July 23, 1940. It received field post number (*Feldpostnummer*) 29 176 between April 28 and September 24, 1940; the unit disbanded, and the number was struck between July 31, 1942, and February 9, 1943.

Frontstalag 201 was located in Alençon (map 1). It existed only for a few months in the late summer and fall of 1940 and

functioned as an assembly and transit camp for French prisoners of war who would be sent to Germany. The camp was redesignated as Dulag 201 in March 1941.¹

SOURCES Additional information about Frontstalag 201 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierungseinrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 87.

NOTE

1. Mattiello and Vogt, *Deutsche Kriegsgefangenen- und Internierungseinrichtungen*, p. 87.

FRONTSTAMMLAGER (FRONTSTALAG) 202

The Wehrmacht established Frontstalag 202 on July 22, 1940, and disbanded the camp on March 28, 1941. It received field post number (*Feldpostnummer*) 29 731 between April 28 and September 24, 1940; the number was struck between February 15 and July 30, 1942.

The camp was located in Chartres (Eure-et-Loire Département), in north-central France (map 2). It existed most likely as an assembly and transit camp for French prisoners of war sent to permanent camps in Germany. The camp was redesignated as Dulag 202 in March 1941.

Raffael Scheck

FRONTSTAMMLAGER (FRONTSTALAG) 203

The Germans established Frontstalag 203 on July 23, 1940, and disbanded the camp on March 14, 1941. It received field post number (*Feldpostnummer*) 30 439 between April 28 and September 24, 1940. The number was struck between February 15 and July 30, 1942.

This camp, located in Le Mans (map 1), served as an assembly and transit camp for French prisoners of war sent to permanent camps in Germany in the late summer and fall of 1940. The camp was redesignated as Dulag 203 in March 1941.

Raffael Scheck

FRONTSTAMMLAGER (FRONTSTALAG) 204

The Wehrmacht established Frontstalag 204 on July 15, 1940, and disbanded the camp on August 12, 1943. It received field post number (*Feldpostnummer*) 31 503 between April 28 and September 24, 1940. The number was struck between July 31, 1942, and February 9, 1943. It received a second number, 11 750, between May 1 and October 19, 1942; it was struck between January 10 and September 26, 1943.

The Germans originally located Frontstalag 204 in Péronne and a little later in Amiens (Somme Département) (both map 2). In the second half of 1941, it absorbed Frontstalags 190 and 192, making it the key camp network in northern France. Frontstalag 204 was one of the eight Frontstalags that survived the reduction of camps in late 1941 and early 1942. The seat of its administration moved steadily east from Amiens to Saint-Quentin (spring of 1942), Laon (fall 1942), and, later, Charleville (1943) (all 2). The camp administration covered an area that lay largely within the so-called forbidden zone, a strip of territory in northern and northeastern France into which civilians who had left their homes during the fighting in 1940 could not easily return. Many of the prisoners of Frontstalag 204 worked for the Ostland, the German organization that exploited farms and lands abandoned in May 1940.

Very little is known about Frontstalag 204 before the first inspection on March 20, 1941. At that time, the campsite of Amiens served as a transit camp housing 800–1,000 French prisoners of war (POWs), who were either slated for dismissal (some wounded soldiers and people in particularly important professions) or awaiting transfer to Germany. Five hundred prisoners had obtained dismissal before the inspection. As usual for the early camps with French POWs in France itself, there had been many escapes (350 since the camp opened). Inspector Henri Dantan Merlin found the camp in good condition. The prisoners had no complaints. Between 5,000 and 6,000 prisoners, including colonial POWs, were assigned to work commandos in the area surrounding Amiens, but Dantan Merlin did not have time to visit them.¹

Independent information reached the Scapini Mission from the work commando in Combles, approximately 45 kilometers (28 miles) northeast of Amiens. This commando was under the command of an abusive German noncommissioned officer (NCO), who was promptly dismissed and punished by the camp's leadership.²

An inspection of the work commandos finally took place May 5–7, 1941. Dantan Merlin found problems in the commando of Péronne (64 prisoners), which had an abusive German guard, and in Devise (40 prisoners), where the commander locked up the prisoners in halls without bathrooms at night and where the Ostland officials for whom the prisoners were working did not provide adequate food. In several places, Dantan Merlin also criticized French farmers and local mayors for not ensuring decent supplies of food and cigarettes. Only in Cartigny did the inspector praise the mayor. At this time, the inspector counted 1,949 prisoners in the Frontstalag, predominantly North Africans (1,600) and "Senegalese" (300) as well as 49 Madagascan prisoners, although this does not account for the French prisoners awaiting release or transfer to Germany.³

The situation in Frontstalag 204 appears to have been relatively harsh in the winter of 1941–1942. The mayor of Sainghin-en-Weppes (Nord Département), approximately 100 kilometers (62 miles) north of Amiens, wrote to Scapini that a sizable local commando with Algerians, Tunisians, and "Senegalese" was suffering greatly from the cold. The Germans had

turned down their request to return to Amiens, where they had been better installed. Moreover, a group of prisoners complained anonymously about corruption networks, which were allegedly dominated by Jews who worked as translators and plundered aid packages.⁴ The West African prisoner René Camara also complained that only the white French soldiers and the North Africans were receiving aid packages in the Frontstalag; interestingly, his letter indicated an outrageously rebellious mind to the French authorities, who decided to watch him closely and to seek ways to discipline him.⁵ A new inspection in January 1942 noted that the mood of the prisoners was bad, particularly among the West Africans and the Indochinese, because of the dismissals of white prisoners (July 1941) and of North Africans (December 1941). The Scapini Mission also learned that German propaganda efforts were very active—with the help of men of confidence among the prisoners, who seemed to receive special benefits. Dantan Merlin, who also conducted this inspection, found that tuberculosis was rapidly spreading among the black prisoners. He did consider the food supply sufficient except in the fortress of Laon, one of the branch camps. An undated report from a doctor (probably written in the winter of 1941–1942) also noted a very unhygienic situation and strong tensions among prisoners belonging to different ethnic groups in Laon.⁶ Dantan Merlin, when visiting Laon, found out that the new German guard battalion that had taken over the camp on December 15, 1941, was much harsher than its predecessor and had antagonized the prisoners. Escape attempts had risen sharply, and the Germans had reacted by surrounding the camp with barbed wire outside the fortress walls.⁷ Alarmed about the situation in Laon, the Scapini Mission requested testing for tuberculosis and found that 31 of 250 West Africans had the disease. Most of the ill prisoners were released immediately.⁸

Conditions in Frontstalag 204 were not uniformly bad, however. In the village of Beuvraignes (Picardie Département), 534 North Africans were working on an airfield for the German air force in early 1942. The prisoners lived and worked under good conditions and had excellent relations with the German unit supervising them.⁹ In another fortress camp, in Amiens, the situation was much better than in Laon. Dantan Merlin found 700 North Africans, 40 blacks, and 28 Frenchmen here; he praised the initiative of one French soldier who was offering a literacy course to the other prisoners and had 80 students.¹⁰ In Saint-Quentin, also a fortress camp, conditions had improved since the last inspection because many prisoners had been transferred elsewhere, so that the camp in March 1942 only had 335 prisoners (289 West Africans, 27 Madagascans, 10 Indochinese, 7 Martinicans, and 2 French officers). After the transfer of the prisoners, mostly North Africans, the escape attempts had almost completely stopped. As a consequence, the guard regime had also relaxed. The inspector noted that the Indochinese prisoners were employed as adjutants of the German officers in the camp.¹¹ In the city of Charleville (Ardennes Département), site of the former Frontstalag 190, a subcamp installed in the military barracks of the town held 946 prisoners, predominantly North Africans. The inspector found

a penal company of 15 men who had made escape attempts, and he also took note of a special company of Jewish prisoners. Both of these companies were made to work inside the camp, but there was no information on their conditions being harsher than those for other prisoners. Five hundred and forty-four colonial prisoners had been dismissed from Charleville, almost exclusively North Africans benefiting from the German decision to free 10,000 North Africans for propaganda reasons. Interestingly, the inspection report also notes the dismissal of 10 West African prisoners according to the agreement on the dismissal of world war veterans (black prisoners rarely benefited from the Franco-German diplomatic agreements).¹²

By early 1942, Frontstalag 204 had changed its focus eastward into a region where many work commandos were employed by the Ostland, including Charleville and the surrounding communities of the Ardennes Département, the region of the heaviest Ostland engagement. As was common in commandos serving the Ostland, discipline was harsher than elsewhere. The guards were under constant watch of Ostland officials, many of them rigid Nazis, and they tended to open fire quickly during escape attempts. An inspection in May 1942 found that four Moroccan prisoners had been killed near Sedan after an escape attempt. Local witnesses mentioned that a furious German NCO had shot two of the prisoners through the head after they had surrendered. The case triggered an investigation that remained inconclusive because the civilian witnesses were afraid to testify in court.¹³ In Saint-Quentin, the inspector also noted that one prisoner had been killed during an escape attempt. The mood among the prisoners (108 Algerians, 45 Moroccans, 25 Tunisians, 20 Indochinese, 6 Frenchmen and 1 soldier each from Guadeloupe and Madagascar) was bad because of the length of captivity.¹⁴ In this phase, Frontstalag 204 was the second-largest camp in France among the eight camps that had survived the reduction of such camps in late 1941. According to the Scapini Mission, which admitted that its numbers were incomplete and therefore a bit too low, the complex held 7,556 prisoners, including 1,716 Algerians, 1,322 Moroccans, 819 "Senegalese," 441 Tunisians, 157 Indochinese, 32 Martinicans, and 27 Madagascans, in April 1942.¹⁵

When the Scapini Mission returned to Frontstalag 204 in September 1942, the situation had not changed very much. Inspector Jean Detryat found deteriorated clothing, overcrowding in some locations, and insufficient food supplies, and he noted that the prisoners seemed upset because of the harsh reaction of the guards to escape attempts.¹⁶ In the commando of Barby (Ardennes Département), a guard had shot to death the prisoner Ahmed Bouadju during an escape attempt even though Bouadju had stopped running as soon as the guards called him. In the commando of Sedan (204 Algerians, 115 Moroccans, 71 Tunisians, and 3 French medical personnel), the inspector observed that the prisoners were intimidated by the harshness of the guards during escape attempts (including the deadly episode mentioned above). The prisoners apparently directed much of their anger at the Scapini Mission for not protecting them better; one of the prisoners so vehemently criticized the Scapini Mission that the inspector called him to order. In

Sévigny-Waleppe, north of Reims, another work commando (86 Algerians, 34 Tunisians, and 3 Moroccans) complained about the brutality of some guards, although they did praise the German NCO in charge of the commando.¹⁷ Some prisoners in Frontstalag 204 even claimed that the Germans had randomly shot some prisoners as a collective punishment for escape attempts, but the German authorities vehemently denied this charge and the Scapini Mission itself considered it dubious.¹⁸

The camp in Charleville (in the Dubois-Crancé barracks) was apparently in better condition than the others. Its commander was Oberst von Dresky. It housed 519 Algerians, 404 Moroccans, 280 Tunisians, 19 "Senegalese," 5 Madagascans, and 1 Armenian serving in French uniform. In addition, it had 40 Frenchmen who were mostly prisoners recaptured after an escape or arrested because they had "broken" their work contracts with the Ostland. The soldier in charge of the camp treasury had fled and taken 7,000 francs with him. The prisoners appeared calm but resigned. There were no courses available because of the recent movements of prisoners, but the commander was planning to organize courses in the winter. The inspector noted that most work commandos around Charleville did not have a single literate prisoner, which complicated communications. Ironically, the inspector agreed to let the German guards in the commandos communicate prisoner demands and complaints to the man of confidence in the camp of Charleville, who was literate.¹⁹

An inspection team of the International Committee of the Red Cross visiting Charleville in November 1942 also pointed out that the prisoners urgently needed new clothing and shoes. The inspectors found good discipline in the camp and noted that religious services for Muslims were well installed (there was a mosque in the camp). Many prisoners played volleyball and handball. The food situation was satisfactory, thanks to regular deliveries from the French Red Cross and the city of Charleville.²⁰

When the Scapini Mission returned to Frontstalag 204 in January 1943, the situation had further improved, probably due to the efforts of the new commander, Oberst von Schierbrandt. The camp of Charleville, now the headquarters of the Frontstalag, housed 598 Algerians, 290 Tunisians, and 274 Moroccans. The prisoners were better clothed and had access to a theater and a cinema. Courses were still not being offered because von Schierbrandt was waiting for the prisoners to take the initiative. Most prisoners worked for the Ostland on farms outside the town (they slept in the camp of Charleville and marched to work every day). Some prisoners were employed by the Luftwaffe. Others had to load and unload animals for a local veterinary clinic administered by the German army. Despite widespread illiteracy, the prisoners requested the delivery of books in French and Arabic (in particular adventure novels).²¹ Documents from the departmental archives in Charleville-Mézières show an increase in service contracts for camp improvements and provide detailed lists of prisoners in the commandos, including their pay and menus.²²

A tour of subcamps and work commandos from January 12 to January 21, 1943, still showed problems with respect to

clothing and, in some cases, housing. In several places, the inspector also noted tense relations between the prisoners and Ostland officials as well as among the prisoners from different ethnic groups. The camp of Laon at this time housed 1,881 prisoners (1,038 Algerians, 367 Moroccans, 319 Tunisians, 141 "Senegalese," 9 Madagascans, and a few Frenchmen and people from Martinique). Nearly 500 prisoners worked outside the fortress every day, but the others were fairly idle despite the availability of a prisoner theater and a cinema. The situation in Laon seemed to have improved significantly under von Schierbrandt's leadership, but the Scapini Mission considered the camp to be overcrowded.²³

The overcrowding in the camps of northeastern France was probably due to increased German military activities in this strategically important region relatively close to the German border. In Laon, for example, many of the prisoners working outside the fortress were employed by the German air force. The German authorities repeatedly requested prisoner transfers to provide workers on military sites such as airports in this area.²⁴ The Organisation Todt (OT), which conducted many military construction projects, also became more heavily engaged in this region. As the German secret service observed, the more rigid supervision of the prisoners by OT officials increased escape rates. When the OT staff was partly replaced by French NCOs and German Reserve Battalions (*Landesschützenbataillone*) 503 and 581, the latter coming from Silesia, escape attempts sharply decreased. The German secret service appreciated this fact but worried about the risks of insufficient supervision of prisoners in this area, where many foreign forced laborers were deployed (including Jews, Poles, Dutchmen, and Belgians) and the underground Communist movement seemed well organized.²⁵

The pressure on the prisoners from the Ostland and OT officials seems also to have heightened the tensions among them, leading to complaints and denunciations. A French NCO, for example, criticized a Tunisian NCO in the camp of Laon for having frequently denounced West African prisoners to the Germans. Apparently, this Tunisian prisoner had already made life miserable for his West African coprisoners in the fortress of Saint-Quentin, where he was housed before coming to Laon. His denunciations had initially triggered some punishments, but the Germans had at some point stopped believing him. Other prisoners in the camps of Laon and in Margival (Aisne Département) also complained to French POW agencies about abusive French or North African NCOs.²⁶

FRONTSTAMMLAGER (FRONTSTALAG) 205

The Wehrmacht established Frontstalag 205 on August 21, 1940, in Defense District (*Wehrkreis*) XI,¹ in December 1940, it was deployed to Donges, France (map 1).² On March 18, 1941, it was redesignated as Dulag 205. Frontstalag 205 received field post number (*Feldpostnummer*) 18 305 between April 28 and September 24, 1940. The number was struck between July 31, 1942, and February 9, 1943.

While deployed in France, the camp was under the Armed Forces Commander, France/Administrative District B (*Wehrmachtbefehlshaber Frankreich/Verwaltungsbezirk B*).

The camp commandant from September 1940 to May 1942 was Oberst Hans Jauch (1883–1965). The deputy camp commandant was Hauptmann der Reserve Schwenke; the adjutant was Oberleutnant d. R. zur Verfügung Eckhoff; the camp doctor was Oberarzt d. R. Braun; the head of the counterintelligence (*Abwehr*) group was Oberleutnant d. R. zur Verfügung Stieghorst; the 1st Ordonnanzoffizier (aide-de-camp) was Oberleutnant d. R. Richter; the 2nd Ordonnanzoffizier was Oberleutnant d. R. Ebert; and the 3rd Ordonnanzoffizier was Oberleutnant zur Verfügung Schulz.³

Specific information about the conditions in this camp is unavailable.

FRONTSTAMMLAGER (FRONTSTALAG) 210

The Wehrmacht established Frontstalag 210 on July 20, 1940, in Defense District (*Wehrkreis*) XII. From September 1940, the camp was located in Strassburg (today: Strasbourg) (map 4f). Frontstalag 210 received field post number (*Feldpostnummer*) 09 691 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943. The

camp was subordinate to the Prisoner of War District Commander Alsace-Lorraine (*Kriegsgefangenen-Bezirkskommandant Elsass-Lothringen*).

Frontstalag 210 held French prisoners of war (POWs). It served as a transit camp for prisoners who were subsequently transferred to permanent POW camps (Stalags) in Defense District XII. No specific information about the conditions in this camp is available. While the Germans generally observed the terms of the Geneva Convention of 1929 in their treatment of French POWs, conditions in the Frontstalags were often worse than those in permanent camps for Western Allied prisoners.

On November 29, 1940, the camp was converted into Stalag V D.¹

FRONTSTAMMLAGER (FRONTSTALAG) 211

The Wehrmacht established Frontstalag 211 on August 7, 1940, in Defense District (*Wehrkreis*) XII. Starting in September 1940, the unit deployed to Saarburg (today: Sarrebourg, in France) (map 4d). On November 15, 1940, the camp was converted into Stalag XII F Saarburg.¹ The unit received field post number (*Feldpostnummer*) 10 082 between April 28 and September 14, 1940. The camp was subordinate to the Prisoner of War District Commander Alsace-Lorraine (*Kriegsgefangenen Bezirkskommandant Elsass-Lothringen*).

Frontstalag 211 held French prisoners of war. No specific information on conditions in this camp is available.

SOURCES Primary source material about Frontstalag 211 is located in BA-MA (RW 6), BNF, CNIP, and AN (file 619/MI/64).

FRONTSTAMMLAGER (FRONTSTALAG) 212

The Wehrmacht formed Frontstalag 212 on August 8, 1940, in Defense District (*Wehrkreis*) XII. As of September 1940, the unit was located in Metz, France (map 4d). On December 3, the Germans converted the camp into Stalag XII E Metz.¹ The unit received field post number (*Feldpostnummer*) 10 655 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943. The camp was subordinate to the Prisoner of War District Commander Alsace-Lorraine (*Kriegsgefangenen Bezirkskommandant Elsass-Lothringen*).

Frontstalag 212 held French prisoners of war. Specific information on conditions in the camp is not available.

SOURCES Primary source material about Frontstalag 212 is located in BA-MA (RW 6), BNF, CNIP, and AN (file 619/MI/89–90).

FRONTSTAMMLAGER (FRONTSTALAG) 213

The Germans formed Frontstalag 213 on August 7, 1940, in Defense District (*Wehrkreis*) XII. Starting in September 1940,

the camp was deployed in Mühlhausen (today: Mulhouse, France) (map 4f). On December 1, 1940, the Germans reorganized the camp as Stalag V E.¹ The unit received field post number (*Feldpostnummer*) 11 463 between April 28 and September 14, 1940. The number was struck between July 12, 1942, and January 26, 1943. The camp was subordinate to the Prisoner of War District Commander Alsace-Lorraine (*Kriegsgefangenen Bezirkskommandant Elsass-Lothringen*).

Frontstalag 212 held French prisoners of war. Specific information on conditions in the camp is not available.

SOURCES Primary source material about Frontstalag 213 is located in BA-MA (RW 6), BNF, CNIP, and AN (file 619/MI/89–90).

FRONTSTAMMLAGER (FRONTSTALAG) 220

The Wehrmacht established Frontstalag 220 on July 18, 1940. The unit received field post number (*Feldpostnummer*) 01 813 between April 28 and September 14, 1940. The number was struck between January 27 and July 14, 1942.

This camp, located in Saint-Denis (map 2), in the northern suburbs of Paris, served as an assembly and transit camp for French prisoners of war sent to permanent camps in Germany in the late summer and fall of 1940. The camp was disbanded on August 17, 1941, and moved to Poland, where it was renamed Dulag 220.¹

SOURCES Additional information about Frontstalag 220 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internerteneinrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 89.

FRONTSTAMMLAGER (FRONTSTALAG) 221

The Wehrmacht established Frontstalag 221 on July 17, 1940, and ordered its dissolution on March 8, 1944 (although it was not completely disbanded until July 7). The unit received three field post numbers (*Feldpostnummer*): 02 604, issued between April 28 and September 14, 1940 (struck between July 15, 1942, and January 24, 1943); 17 427 A, issued between January 10 and September 26, 1943 (struck on January 30, 1945); and 20 275 A, also issued between January 10 and September 26, 1943 (struck on January 30, 1945).

Frontstalag 221 included a series of camps in the area of Bordeaux in southwestern France. It was centered on land belonging to the town of Saint-Médard-en-Jalles and some neighboring communities, where a series of camps had been constructed over the years (map 1). The camp also controlled work commandos mostly devoted to forestry in the area around Bordeaux. It was often overpopulated, because the Scapini Mission and the International Committee of the Red Cross (ICRC) pressed the Germans to house colonial prisoners in the south of France, although the German occupation zone included only a small strip of land along France's southern Atlantic coast; the proximity of the demarcation line stifled economic exchange, exacerbating the supply situation in the three southwestern Frontstalags (195, 221, and 222).

Frontstalag 221 took over Frontstalag 230 and some prisoners from Frontstalag 135 in November 1941. It oversaw work commandos in many towns and villages, mostly in the Gironde Département, including Lugos, Saint-Symphorien, Lacanau, Langas, Saucats, Hourtin, Lanton, Moutchic, Lège, Andernos, Brach, and Carcans. In December 1942, Frontstalag 221 had 7,470 prisoners and was the largest of the eight camp complexes in France. The vast majority (75%) of the prisoners were North Africans; the second largest group were the "Senegalese" (i.e., West Africans; approximately 20%).¹ In the second half of 1943, the two sections of Frontstalag 221 in the region of Bordeaux and in Rennes together held almost 11,000 prisoners, making this Frontstalag by far the largest in France, with nearly a third of all remaining French colonial prisoners.²

In Saint-Médard, Frontstalag 221 included the Camp des As along the Jalle River. Other subcamps were the nearby Camp des Annamites, called after Indochinese civilian workers who had worked nearby, and various other sites around Saint-Médard and neighboring towns, such as the Camp de Souge to the west and the Camp de Germignan in Le-Taillan-Médoc, to the northeast.

Little documentation exists for the first months of Frontstalag 221's existence. Like most other camps during this early period, it appears to have been overpopulated and undersupplied. The French army physician Dr. Hollecker, who had witnessed some massacres of black French prisoners in June 1940 and worked in the camp hospital from January to November 1941, noted that the initial occupancy of the

camp complex was 8,000 but that it was reduced to 4,000 in March 1941.³

The physical structure of the camps belonging to Frontstalag 221 underwent significant improvements. In the period of December 1940 to October 1941, sewer systems were installed or upgraded; some buildings that had lacked power received electricity; toilets and washing facilities were built; inside walls received new paint, and the outer walls of barracks were covered with a coat of camouflage paint, probably to better protect the prisoners from air attacks and also to deprive British planes targeting the nearby airport of orientation markers.⁴ As the northernmost camp in the Southwest—which offered the warmest climate zone of German-occupied France—the camp complex of Saint-Médard became a reception area for prisoners transferred from Germany and elsewhere.

In the early months of 1941, German propaganda was particularly active in this Frontstalag, encouraging independence movements (particularly among the Tunisians). In the summer of 1941, the notorious Lieutenant Krebs, an Arabic-speaking German propaganda specialist, visited Saint-Médard and spoke with prisoners. Some North African nationalists, including students from Paris and Bordeaux, performed various services for the North African prisoners of Saint-Médard, such as medical care and letter writing for the illiterate, and edited a pro-German Arab newspaper, *Lisan-al-Asir (Voice of the Prisoner)*.

The first round of inspections, conducted by Ambassador Georges Scapini himself, occurred in April 1941. The Camp de Germignan, under the command of Oberstleutnant Hollmeier, had 1,066 French colonial prisoners, mostly North Africans, and 11 foreigners (Poles serving in French uniform and some Belgians). The prisoners worked in agriculture and forestry. They pointed out that their man of confidence, who had been chosen by the Germans, was incompetent. In the Camp des As, which held 1,385 prisoners of war (POWs) and was commanded by Oberleutnant Wolfensteller, the inspectors bemoaned the lack of straw mattresses and blankets, but the German officials claimed that the prisoners had burned the straw and sold the blankets. There were several cases of tuberculosis, particularly among the Madagascans and West Africans. The morale of the prisoners was poor, partly because of tensions between the West African and Indochinese prisoners, and because the man of confidence, Adjutant Mohamed Bel Aid, appeared to be unqualified for his task. To help mitigate tensions, the inspectors asked the German commander to assign separate barracks to prisoners from different ethnic groups.⁵

The Scapini Mission returned to the main camp in Saint-Médard (Camp des As) in July 1941. The commander of the Frontstalag at this time was Major de Ahna, and the camp had a new man of confidence (Adjutant-Chef Ben Aida). The camp complex in Saint-Médard housed 2,782 prisoners (1,448 Algerians, 532 Moroccans, 451 Indochinese, 302 "Senegalese," 32 Tunisians, 13 Madagascans, and a few other prisoners, including some Hindus, probably from the small French

territory in India); an additional 3,075 prisoners were in work commandos or branch camps. The inspector observed that the prisoners were upset about the lack of postal contact with their families, but he concluded that conditions in the camp had significantly improved since April. The Camp de Germignan was poorly supplied, however, and the prisoners urgently needed soap and new clothing. Germignan had 659 prisoners (521 Algerians, 72 Moroccans, 52 Tunisians, 13 recaptured Frenchmen, and one Hindu).⁶

Most prisoners in the commandos were working in forestry, which meant hard work often in isolated and therefore poorly supplied locations. Many forestry commandos had insufficient access to clean water, and the prisoners lacked clothing, soap, and everything necessary for leisure activities (balls, books, musical instruments). Another persistent problem was the lack of washing facilities. In Lugo, prisoners were allowed to use the showers of the German guards twice a week. Because the forestry commandos in this region were relatively large (150–300 prisoners), there usually was a marrabout among the prisoners and a room available for Muslim prayers, but prisoners in many commandos asked for copies of the Quran.⁷

Relations to civilians were strained in some places. In Saint-Laurent-du-Médoc, for example, a farmer repeatedly noticed that his chickens were disappearing at night. He alerted the police, and police officers searched a nearby castle where Algerian prisoners lived. The prisoners denied any wrongdoing, but the police found many chicken bones in the kitchen garbage (which the farmer promptly identified as the bones of *his* chickens!), and the Germans withdrew the commando in the face of public hostility after the police inquiry became known.⁸ In some places, local doctors claimed that the presence of the prisoners had led to an increase of diseases among civilians, including malaria.⁹ However, civilians also complained about the German army personnel, who could rarely resist the temptation to explore the wine cellars of the houses they had requisitioned.¹⁰

In November 1941, the combined effects of the influx of new prisoners from other Frontstalags and the interruption of supply deliveries from the French Red Cross created severe shortages in Frontstalag 221. Because of a denunciation by a female driver, the German secret service had discovered that the truck drivers of the French Red Cross section of Périgueux, which supplied all the camps in the Southwest, had smuggled letters and persons across the demarcation line. Therefore, they forbade the Red Cross trucks to enter the occupied zone of France.

The Camp des As was in the hands of North African mafia-style organizations that terrorized the black prisoners, robbed aid packages, and extracted bribes in anticipation of the liberation of the 10,000 North Africans in December 1941. Bel Aid and a Tunisian NCO named Ousseini were at the center of these rival networks. They had accomplices among the German personnel, although Senghor believed that the commander of the camp and the Frontstalag commander did not know about the extent of the corruption.

Some German guards kept encouraging the prisoners to complain, but this involved serious risks because Bel Aid had made sure that his companions were all drafted into the camp police. They arbitrarily beat and arrested other prisoners, especially black Africans.

By this time, the Scapini Mission had received numerous letters from prisoners and aid workers about corruption in Saint-Médard. The German authorities started an inquiry against Bel Aid, Ousseini, and others, leading to the arrest of several guards and prisoners, but the outcome of the case is unclear because of the interruption of inspections in May 1942 that came about as a consequence of the Giraud crisis. Bel Aid figures on a list of German collaborators prepared by the French secret service, which identified him as “very hard toward the other prisoners.”

The hospital situated in the Camp de Germignan was a special institution within the Frontstalag 221 complex. With Dr. Hollecker’s participation, this hospital established new X-ray testing procedures for tuberculosis that so impressed Scapini during his visit in April 1941 that the procedures were later adopted in other camps, too. Hollecker pointed out that the Germans were very generous in dismissing prisoners even though many diseases were feigned; he knew of prisoners rubbing sand, tobacco leaves, or quinine salt into their eyes or skin so that it looked as if they were developing a trachoma or a rash indicating a dangerous infectious disease. Hollecker also described the establishment of a special section in the hospital staffed by 12 German physicians who specialized in tropical diseases. Prisoners from other Frontstalags were often sent to this hospital for treatment. The French physicians worked together with the Germans.¹¹

Soon after Hollecker’s dismissal from captivity, however, the Germans separated one building of the hospital from the Frontstalag, closed it to the French physicians, and used it as a secret training and research facility. This hospital attracted Nazi researchers interested in demonstrating racial differences through physical and pathological characteristics, such as Dr. Wolfgang Abel, a physician from Vienna who had participated in the sterilization of children of French colonial soldiers and German women in the Rhineland (the so-called Rhineland bastards) during the mid-1930s. Abel was particularly interested in leprosy patients in Saint-Médard. His broader interest was in identifying distinctive racial characteristics, and he therefore took numerous photographs of healthy and sick colonial POWs and established a collection of their footprints without their consent.

While Abel’s research was degrading but not life threatening, another Austrian physician and “racial scientist,” Dr. Karl Horneck, conducted experiments that involved serious risks for his subjects. Horneck wanted to test race-specific reactions to disease and to explore the possibility of human-to-human immunization. He took blood from prisoners and injected a serum into them that contained antibodies from persons of a different race. His injections could cause life-threatening reactions such as an allergic shock, a hemolysis

(rupture of red blood cells), or a thrombosis (blood clot) and embolism. The Scapini Mission, which had inspected the entire hospital in 1941 and was still allowed to visit some of the hospital buildings in 1942, was denied access to the tropical medicine section on the grounds that it no longer belonged to the Frontstalag.¹²

In 1943, some commandos in the Southwest of France received French cadres. According to the French defense ministry, the selection of cadres was particularly arbitrary in the region of Bordeaux. German soldiers randomly rounded up some young Frenchmen, gave them hunting rifles, and told them to guard colonial prisoners. The French cadres remained in this area until several weeks after the Allied landings in Normandy on June 6, 1944.¹³

As elsewhere, severe tensions existed among prisoners in Frontstalag 221. There is unusually strong evidence for tensions between the Muslim prisoners and the Jews (mostly from Algeria) in Saint-Médard in 1943–1944. A German secret service report based on intercepted prisoner letters claimed that many French colonial prisoners in Frontstalag 221 resented the Jews among them, accusing them of black marketeering and lack of solidarity. Many prisoners apparently believed that their food and accommodations were so bad because of the presence of Jews in the Frontstalag. It is possible but not certain that the Germans at one time made efforts to concentrate North African Jews and French Jews (who were excluded from the liberation order of “white” prisoners on July 3, 1941) in Frontstalag 221.¹⁴

For unknown reasons, Frontstalag 221 also oversaw several work commandos in regions far away from Saint-Médard. In the late summer of 1943, a branch of Frontstalag 221 had installed itself in Rennes (Brittany) and taken over a number of commandos in northwestern and central France. The German lists of POWs for September 1, 1943, mention two camps designated as Frontstalag 221, one in Saint-Médard with 6,933 prisoners (including a few Soviet prisoners) and one in Rennes with 3,809 prisoners (including 43 British subjects); the existence of two separate camps with the same designation may explain the duplicate field post numbers. Information on the more distant commandos is fragmentary. A commando belonging to Frontstalag 221 also existed in Neufchatel-en-Saosnois (Sarthe), where 150 “Senegalese” and 100 North Africans were working for the Wehrmacht.¹⁵ Several commandos on the British Channel Islands Alderney and Jersey (54 and 35 North Africans, respectively) also belonged to Frontstalag 221 for some time.

There is no information on the liberation of Frontstalag 221, except that, as in other Frontstalags, the prisoners sometimes were put in charge of their former guards and that the camp complex of Saint-Médard was used for German POWs.

SOURCES Primary source information about Frontstalag 221 can be found in the following archival collections: Archives Nationales (AN), F9; BA-MA, RW 6: 451; SHD, 34 N 1097; PAAA, R 40989; Archives municipales de Saint-Médard,

dossiers Frontstalag 221 (1941); Archives départementales de la Gironde (Bordeaux), 45 W 10 and 32; TNA, WO 224/59.

FRONTSTAMMLAGER (FRONTSTALAG) 222

The Germans established Frontstalag 222 on July 18, 1940, and ordered it disbanded on March 8, 1944 (the process was not complete until June 15). The unit received field post number (*Feldpostnummer*) 03 532 between April 28 and September 14, 1940. The number was struck between July 15, 1942, and January 24, 1943. (There had been a plan to change Frontstalag 222 into Dulag 222 in 1942. That plan was never carried out, but the field post number was struck, nonetheless. From that point forward, Frontstalag 222 simply used the field post number for the nonexistent Dulag 222: 22 640 B.)

Frontstalag 222 in Bayonne (map 1) was one of the three large camps in the southwest corner of German-occupied France (together with Frontstalags 195 and 221). It shared most of the problems of the other two camps, such as overcrowding and irregular food supplies, as well as the problems typical for commandos employed in forestry (see Frontstalag 195). Frontstalag 222, located in the southwest corner of France on the Atlantic border to Spain, was the only camp that did not absorb another Frontstalag during the major consolidation of camps in late 1941 and early 1942. Its occupancy increased, however, due to the German efforts to bring more colonial prisoners to the milder climate of the Southwest and the decision by the German Military Command in France to prioritize timber harvesting. In late 1942, Frontstalag 222 absorbed most campsites of Frontstalag 195.

The commandos of Frontstalag 222 worked predominantly in forestry or for the German armed forces.¹ One important worksite was the border town of Hendaye, where goods arriving on trains from Spain had to be loaded onto German or French trains because of the different gauges. In late 1943, two commandos of Frontstalag 222, in Rion-des-Landes and Morsenx, were reserved for British colonial prisoners, mostly from British Africa. Frontstalag 222 existed until the withdrawal of the German forces from the area in August 1944. Among the guard units responsible for Frontstalag 222 were Reserve Battalions (*Landesschützenbataillone*) 527 (from Munich), 579 (Silesia), 690 and 691 (both from northwest Germany), as well as some units of Russian Cossacks and Indians converted to the German cause.²

Initially, Frontstalag 222 was headquartered in Peyrehorade, a small town 40 kilometers (25 miles) east of Bayonne; Peyrehorade likely served only as an administrative center and did not have an actual camp. No local record of a camp exists in this town.³ On August 27, 1940, however, the German army requisitioned some public land used as a polo facility in Beyris, on the western edge of Bayonne and on the

border to the town of Anglet. They built 50 wooden barracks, a freshwater line, and a sewer system. The first prisoners, mostly colonial soldiers returning from Germany, began arriving at the new site in October 1940. An orphanage in Bayonne was converted into a military hospital for the Frontstalag.⁴

French military physician Major Farinaud, who was in charge of the military hospital in the first months, reported after the war that the conditions in the new camp and the hospital were very bad upon his arrival on November 14, 1940. The barracks were overcrowded, hygiene was poor, and the prisoners had little protection from the cold. The installation of stoves proceeded only slowly, and there were not enough blankets. Most prisoners were plagued by lice. The hospital was also in bad shape. Farinaud considered the German physicians working with him poorly qualified, and he reported many cases of tuberculosis among the prisoners. He argued that the Germans considered the black prisoners to be animals, although he himself spoke disparagingly of colonial prisoners, mostly of North Africans, criticizing their sloppy military posture and poor hygiene.⁵

In April 1941, a high-ranking group of visitors inspected the camp of Bayonne-Beyris and the hospital. It included Ambassador Georges Scapini and Major Rosenberg, the OKW representative in Paris. At this time, the camp in Bayonne had 1,800 colonial prisoners, with a large contingent of West Africans and Indochinese prisoners. The inspectors judged the camp facilities and general conditions as good, but they noted that there were many sick prisoners afflicted mostly by tuberculosis. The infirmary of the main camp had 57 patients; the Germans had already dismissed 60 sick black prisoners, who were sent to Marseille in the free zone of France. The inspection team also visited the military hospital of Bayonne, finding 168 patients, including 70 prisoners afflicted by tuberculosis. Among the patients was an Indochinese lieutenant with dysentery who, the inspectors argued, should have long since been dismissed.⁶

A second inspection in July 1941 confirmed that conditions in the camp of Bayonne, led by Major Beste, were good. The camp housed 853 Algerians, 90 Moroccans, 78 Tunisians, 75 West Africans, 3 Martinicans, and 2 Madagascans. It had a camp orchestra and a small library. The inspector also visited three major work commandos; the commando in Buglose (just north of Dax) had 307 Moroccans, 190 West Africans, 97 Madagascans, and 4 Indochinese prisoners, who were cutting trees. The commando had an overcrowded infirmary, but the German authorities promptly transferred some sick prisoners to hospitals. In Messanges, 45 kilometers (28 miles) north of Bayonne, another commando of 183 West Africans was also occupied with timber harvesting. The quality of the water available to the prisoners was not good, and the Catholic prisoners asked that a priest visit them on Sundays. In Labenne, 20 kilometers (12.4 miles) north of Bayonne, 475 West Africans were cutting wood. The inspector noted above all deficiencies with respect to religious services. The commando had a marabout but no copies of the Quran; the Catholics

asked for a priest. Soon after the inspection, the Germans made arrangements for a Catholic priest to visit the work commandos.⁷

In October 1941, the food supplies of the southwestern camps of France suffered as a result of German sanctions against the Red Cross section of Périgueux (see Frontstalag 195). An inspector from the Scapini Mission requested more couscous especially for the commandos in Buglose and Labenne. The third round of inspections also considered commandos that had not been visited before. Many of them were similar to Buglose and Labenne, with 200–400 prisoners working predominantly in forestry and often suffering from food shortages. The inspectors also visited the commando at the train station of Hendaye and found 102 West African prisoners in good condition. The camp of Bayonne again received good marks despite a significant increase in the number of prisoners (approximately 3,600 prisoners: 1,310 Moroccans, 1,178 Algerians, 872 West Africans, 135 Tunisians, and 105 Madagascans, and a few soldiers from the French Antilles). The prisoners again expressed much respect for Major Beste. They had formed two additional orchestras. Many of the prisoners worked inside the camp.⁸

Conditions in the commandos belonging to Frontstalag 222 worsened during the winter of 1941–1942. The combination of insufficient food supplies and heavy labor began wearing the prisoners down. The water quality remained bad in many places, and diseases were on the rise, especially tuberculosis. As elsewhere, the dismissal of the 10,000 North Africans in December 1941 frustrated the remaining prisoners.⁹ During the hiatus of camp visits following the Giraud crisis, however, it appears that the German authorities did remedy some of the problems with the help of the French Red Cross. An International Committee of the Red Cross (ICRC) team found the Frontstalag in very good condition when it visited Bayonne and the commandos in Hendaye, Labenne, and Castets in October 1942. The ICRC inspectors considered this Frontstalag to be one of the best in France.

Frontstalag 222 had its share of corruption cases, which sometimes exacerbated the supply problems. An anonymous prisoner from the commando of Morsenx, for example, wrote to an aid organization accusing the Tunisian man of confidence and two accomplices of corruption. This network apparently plundered aid packages and caused 500 prisoners to starve. The letter, written very likely by a West African prisoner speaking for other West Africans, revealed strong ethnic animosities: "It is not the Germans who are hurting us. We are [badly] treated by your [French] officers and the secretary of the camp. . . . You should not let us die from hunger. We are your sons. First off, you should know the character of the Arabs: they are all unjust. They are all robbers. You need to come and check what is going on in the camp. . . . May France always [emphasis in original] live."¹⁰

Even in the camp of Bayonne, accusations of corruption centering on a man of confidence surfaced in early 1943. Apparently, the man of confidence, with some accomplices, conducted a lucrative black market operation with goods

plundered from aid packages, while the other prisoners suffered from hunger. Civilians were outraged about this situation and wondered why nothing was done to stop it.¹¹

Corruption did not necessarily have a political motive, but denunciations of collaboration often went hand in hand with accusations of corruption. In one typical case, a prisoner from Frontstalag 222 denounced another prisoner because he spoke disparagingly of France; this prisoner allegedly spied on his coprisoners in the service of the Germans and received extra food as a reward.¹² In Labenne, a large number of rank-and-file soldiers apparently collaborated with the Germans against their own NCOs; they made sure, for example, that the NCOs did not receive their share of aid packages, and they intimidated the NCOs. The situation so alarmed the French authorities that the War Ministry in Vichy became involved and asked the Scapini Mission to intervene. The majority of the rank-and-file soldiers in the commando belonged to a different ethnic group than the NCOs. The men were Toucouleur, a group that was considered insecure in its loyalty to France.¹³

German propaganda efforts also left their mark in Frontstalag 222. French services learned that a German officer speaking fluent Arabic had visited camps in the southwest of France, including Bayonne and Mont-de-Marsan, during the summer of 1941. This officer, Leutnant Krebs, had asked Moroccan prisoners for their addresses and told them that he would visit them soon in their homes. Krebs also told the prisoners that escaping made no sense because France would draft former prisoners into labor battalions (which was true) and because the German Reich would take over the French colonies after its final victory.¹⁴

French civilians were generally helpful to the prisoners in Frontstalag 222. A warm letter of Corporal Sanogo [Sanoko] Boa, a prisoner in Mont-de-Marsan, to his war godmother illustrates the supportive attitude of some civilians. Boa maintained contact with the family of his war godmother after his liberation in 1944.¹⁵ Some local citizens agreed to donate food and money for the prisoners.¹⁶ However, there were also some cases of open hostility. A man of confidence in one of the work commandos wrote to a POW official in Bayonne that a French truck driver habitually insulted the black soldiers by calling them "monkeys." The local official found the matter serious enough that he immediately forwarded the letter to the director of the French POW services in Paris.¹⁷

Some of the commandos with French colonial prisoners received French cadres in 1943, and this arrangement was kept in place even after the Allied invasion in Normandy. A Vichy French official even suggested an extension of French-led commandos in this area because French officers and NCOs who had formerly led commandos in the north had become available as the Germans replaced most French cadres in northern and central France with their own guards after D-Day.¹⁸

In late 1943, as the German army transferred British colonial prisoners from Italy to France, the commandos in Riondes-Landes and Morsenx received several hundred British

African prisoners, including some French West Africans who had fought in British uniforms. On November 25, 1943, the commando Rion-des-Landes held 637 recently arrived British African soldiers (252 Basuto, 102 Bacoan, 82 Venda, 53 Zulu, 48 Tshangani, 41 Xhosa, 22 Sudanese, and 25 French colonial soldiers who fought for the Free French in British uniform—8 from Senegal, 7 from Madagascar, and 10 French “colored” Cape Colonists). The prisoners performed forestry work eight hours per day. The camp had inadequate shower facilities and drafty barracks, and the prisoners considered the food rations too low, but a delivery of British Red Cross parcels was expected. The prisoners also complained that they had not received cigarettes in several weeks, prompting the ICRC inspectors to give them some of their own supplies. The prisoners stressed that the Germans treated them well, however.¹⁹

Only fragmentary evidence exists for the last months of the Frontstalag. In Castets, a guard shot and killed four prisoners on May 15, 1944, and the Scapini Mission requested an investigation by the Military Commander (*Militärbefehlshaber*). The outcome is unknown.²⁰ In the summer of 1944, a work commando belonging to Frontstalag 222 was deployed in Neuvy-Raillou (Indre) near Châteauroux in Central France. Why this commando existed hundreds of kilometers away from Bayonne and inside the formerly “free zone” of France, where the Germans generally did not maintain POW camps and commandos, is unclear. A protest note from Pierre Guion to the German Embassy in Paris pointed out in July 1944 that the 180 North Africans in this commando had not been paid since May and had also not received any mail.²¹ A few letters between North African prisoners in Frontstalag 222 and their families were intercepted by the Free French secret service in North Africa in May 1944, showing a depressed mood among prisoners worn down by a long and harsh captivity and worried about the infidelity of their wives.²²

German documents reveal that Frontstalag 222 remained an important camp even in the last phase of the German occupation of France. It housed 7,215 prisoners in September 1943 and 7,183 prisoners in October, making it the third largest Frontstalag in France after Frontstalag 194 in Nancy and Frontstalag 133 in Chartres at this time. This was significantly more than in earlier years: in July 1941, Frontstalag 222 had only had 2,617 prisoners, and this number had increased to 4,983 in April 1942 (with 1,629 West Africans, 1,227 Algerians, 499 Tunisians, 444 Madagascans, 162 Moroccans, 99 Martinicans, and 18 Indochinese), reflecting large-scale transfers of prisoners from camps further north.²³ The continued interest of the military commander in lumber production provided a strong economic rationale for increasing the number of prisoners in this part of France in 1942–1944.²⁴

In August 1944, with Allied troops approaching, the Germans gathered many prisoners from Frontstalag 222 in the camp of Buglose in preparation for a transfer to Germany. Allied troops were able to liberate these prisoners, however.

SOURCES Primary source information about Frontstalag 222 can be found in the following archival collections: AN, F9; AN, AJ 40/444; PAAA, R 40770; and SHD, 3 P 84.

FRONTSTAMMLAGER (FRONTSTALAG) 230

The Germans established Frontstalag 230 on July 20, 1940, and ordered its dissolution in September 1941 (it finished disbanding in November). The unit received field post number (*Feldpostnummer*) 20 054 between April 28 and September 24, 1940. The number was struck between February 15 and July 30, 1942.

Frontstalag 230 in Poitiers (map 1) is one of the best-known camps in France, in part because its most famous prisoner, Léopold Sédar Senghor, left a detailed account of his captivity there from October 1940 to the dissolution of the camp in 1941, and wrote the central section of his poem cycle *Hosties noires* (published in 1948) while there.¹ Senghor was camp secretary, a very desirable job that made him responsible for the card catalog of the prisoners; he was selected for this position after the camp commander saw him reading Plato.²

Little information exists about the camp's first months. In October 1940, German army documents reveal a major problem with prisoner escapes because of its proximity to the demarcation line (this problem persisted and likely influenced the German decision to close the camp).³ Escape was dangerous early on, when German frontline units guarded the camp: an unofficial French report claimed that 50 prisoners were killed during escape attempts in the first months. Several recaptured prisoners went to the camp hospital with bullet wounds.⁴ Senghor later confirmed that escapes were very common, particularly among the North African prisoners: "They are the kings of escape, and one has to admire them here without reticence." But escapes apparently became much less risky: Senghor mentions that groups of 20 prisoners would break out at night and flee. Only 1 in 20 prisoners was caught again.⁵

Senghor arrived in the camp approximately October 10, 1940, from a camp in Amiens (likely Frontstalag 171). He mentions that the first months were hard. The prisoners were housed in drafty, unheated hangars made of corrugated sheet

metal. Senghor was allowed to move to barracks in December, but the hangars were used until January 1941 for some newly arrived North African prisoners from camps in the region of Paris (mainly Frontstalag 111 and 112).⁶ The barracks into which most of the prisoners moved were not much of an improvement because of poor construction and lack of insulation; they remained cold throughout the winter even though the prisoners had enough coal for heat. Senghor found that the slightest rain turned the pathways in the camp into ankle-deep mud and that the latrines were in bad shape.

The food in the camp was bad and scarce—mostly rutabagas and half-rotten potatoes—as confirmed by an unofficial French report.⁷ The prisoners had no washbasins or showers. Clothing was generally not an issue, although the prisoners had no gloves or socks, leading to many cases of frostbite. The camp commander, Hauptmann Hahn, was harsh and strict; the prisoners gave him the nickname "*le Capitaine Achtung!*" because of his habit of yelling commands in German. He once ordered a guard to shoot at a West African prisoner who had stolen potatoes; the prisoner was killed. Senghor assumed that Hahn was Prussian, reflecting a common prejudice of French POWs that equated harshness with Prussians and laxity with Austrians. Ironically, some inhabitants of Poitiers remembered that the first commander was Austrian and named Lahn.⁸

According to Senghor, the situation improved significantly when a new commander replaced Hahn in February 1941, "a very *chic* [which could mean elegant, nice, or friendly] officer who asks us to be worthy of the French army and of our French fatherland." He calls the new commander "Lieutenant Bayle," but this is almost certainly a misspelling. A camp inspection report of July 17, 1941, mentions a Leutnant Paillet and a Major List as camp commanders (one may have been the Frontstalag commander and the other the commander of the camp in Poitiers), with the name Paillet, probably pronounced by the Germans more like Peile or Beile, having some phonetic resemblance to "Bayle." Under the new commander, the regime changed drastically. Paillet apparently announced after inspecting the camp that "this pigsty is not worthy of the French army" and ordered the construction of washbasins, toilets with running water, stone-paved roadways between the barracks, and exercise facilities. The prisoners themselves performed some of this work; for the more sophisticated jobs, Paillet hired companies from the town.

The food improved in quality and quantity. Senghor claims that "during the summer of 1941, we eat quite well for prisoners of war" and points out that those prisoners assigned to rural work commandos (approximately a third to half of the prisoners of Frontstalag 230) fared even better because they received lunch at the farmer's family table. Senghor reserved special praise for the French women who had agreed to serve as war godmothers (*marraines de guerre*) for many of the colonial soldiers, sending them extra packages and letters. Not incidentally, one of the later poems of *Hosties noires*, "Femmes de France" ("Women of France"), is dedicated to Senghor's own *marraine* and echoes his captivity report when he calls

the *marraines*, “the only support during days of overwhelming pressure, [d]ays of panic and despair” and concludes: “For them [the soldiers] you were mothers, for them you were sisters. Flames of France, flowers of France, bless you!”⁹

The camp inspections of the Scapini Mission from April 3 and July 17, 1941, confirm Senghor’s descriptions. The camp was situated in barracks that had once served as an artillery school and had housed an Algerian regiment before the war; around the camp, more barracks had recently been built (probably the ones Senghor mentioned and into which he was allowed to move from the hangar). The inspection report of April 3, by Dr. Bonnaud, points out that the ground was clay and flooded easily, confirming Senghor’s comment about the omnipresent mud. But Bonnaud noted that a construction company from the town had been contracted to build gutters and drainage pipes, and prisoners performed some of the manual labor related to the construction projects. The health situation was not very good in April: Since January 5, 48 sick prisoners had died, but the inspector noted that this mortality had to do with a group of prisoners who had arrived from a very bad camp (Frontstalag 231 in Airvault) already seriously ill. The camp hospital had 163 patients, of which 76 had been diagnosed with tuberculosis. The patients received good care.

The camp inspector noted that 30 “indigenous” prisoners were taking a German class and asked that French classes also be offered; one of the German students was Senghor, as a famous photo proves.¹⁰ The camp offered little distraction at this time. The exercise facilities mentioned by Senghor were not yet finished, and the camp lacked games and books. Several marabouts took care of the religious needs of the prisoners, who were predominantly Muslim. The German food rations were small, but the French Red Cross, coming from the unoccupied zone, brought additional food supplies, clothing, and cigarettes every 15 days (tobacco was considered an essential supply at the time even though the Geneva Convention did not require that the detaining power provide it to the prisoners).¹¹ Dr. Bonnaud found the main camp “mediocre” (in contrast to an outside work commando he visited and found “excellent”) but noted that significant improvements had been made or were in progress.¹²

The inspection report of July 17, by René Scapini, reflects the changes Senghor described: increased food rations, better shower and exercise facilities, and a much-improved health situation. The camp hospital now had only 10 patients, all with minor illnesses, and no prisoner had died since the preceding inspection. The camp had received a makeshift mosque, and it had opened a library. The prisoners were playing various sports but requested a soccer ball. They did not complain about the food and clothing but wished for more bread and new shoes. Their mood was fairly good, but the recent dismissal of almost all remaining white French prisoners in the Frontstalags had had a depressing effect on the remaining (colonial) prisoners. Some black prisoners feared being sent to Germany. Still, the report concluded: “Concerning life in the camp, the prisoners of war (POWs) are treated well, and they unanimously praise Major List and the

German Lieutenant Paillet for their sense of justice and for their understanding.”¹³

Outrage of colonial prisoners, especially people of color with French citizenship (like Senghor), was a widespread phenomenon in the Frontstalags after the dismissal of the “white” prisoners on July 3, 1941. Senghor, Tirolien, and Alcandre wrote a letter of complaint to Scapini on September 4, pointing out:

Called by France to help her, we, the colonial prisoners, have fulfilled our duty completely.

Having richly given our fatherland our blood and suffering, we had the right to hope that we would be liberated at the same time as our comrades from the metropole interned in France.

Some of us do indeed fulfill the conditions required for the liberation of the “metropolitans.”

We are long-standing French citizens, and some of us have lived in France for many years. They have their families and their interests here, and they work. Their work benefits the national collective.

At a time when France more than ever needs its people from overseas, we take the liberty, Mr. Ambassador, to draw your worthy attention to the painful situation experienced by certain colonial soldiers in comparison to their comrades from the metropole.¹⁴

What the letter writers did not know was that the discrimination inherent in the dismissal of July 3, 1941, was due to German, not French, decisions and that Scapini was constantly demanding the dismissal of all colonial prisoners held in France—to no avail.

Senghor’s account also dwells on some aspects that did not enter the inspection reports: the relations among the prisoners and German propaganda. On the first, he argues that the prisoners bonded well with other prisoners from the same colony, mentioning specifically the people from the French Antilles, Madagascar, Indochina, and West Africa. But he was very critical of certain prisoners: “Only the Arabs sow the seeds of discord (with the exception of the Moroccans). They seek to get the best jobs (in the administration, the kitchen, the best work commandos[,] etc.), and to that end they denigrate the other prisoners, especially the black intellectuals, whom they accuse of being Francophile and Germanophobic. . . . They even go so far as to make a secret war between each other: Tunisians against Algerians, and vice versa.”¹⁵

Senghor relates the tensions in the camp to German propaganda, which he claims was well organized by the “Gestapo” office at the camp command. (The Gestapo was not active in the camp, however, so Senghor may have meant either the German counterintelligence, the *Abwehr*, or the military secret police, the *Geheime Feldpolizei*). According to Senghor, German propaganda was directed exclusively at the Arabs; the Germans handed out Arabic newspapers, recruited spies among the prisoners, and supported Muslim religious

services. This propaganda had remarkable success: "The Arab 'intellectuals,' those who were a little educated, were the best agents of Germany. They would preach to their countrymen and denigrate France in front of the Germans." When the Germans asked for volunteers to fight against the Soviet Union, only Arabs signed up, again mostly the more educated.¹⁶

Senghor mentions that the Arab NCOs tended to beat the rank and file, giving a bad example to the German guards who imitated them until Paillet stopped the abuses. The violence of the Arab NCOs exacerbated the tensions between Arabs and West Africans; occasionally, Arabs would accuse the West Africans of being rebellious and denounce them to the Germans. In one case, a German guard intervening in a fight between an Arab and a West African severely wounded the West African soldier with a pistol shot.¹⁷

Senghor describes the Tunisians and Algerians as the most active collaborators and spies, together with one white prisoner and a French physician, Dr. René Dardy (who is mentioned in the inspection report of April 3, 1941, as a medic who should be dismissed; according to Senghor's report, he did obtain his release in May 1941). Dardy apparently told the German authorities to be suspicious of the intellectuals in the camp who all wanted to be liberated on the grounds of disease. Oddly, the unofficial French report about the camp also mentions this doctor and confirms that he treated many black prisoners as test subjects; the report also says that the prisoners believed the doctor to be Jewish and that he wanted to ingratiate himself with the Germans.¹⁸ Senghor also points out one particularly dangerous spy, the Tunisian soldier Mustapha Messaoudene, who denounced the Éboué brothers to the German camp authorities. The Éboué brothers were transferred to a different camp in late July 1941, probably as a consequence of the denunciation.¹⁹

Senghor reports that he stayed in Poitiers until early November 1941. He gave an intriguing reason for his transfer to another camp: in several interviews, he pointed out that he was sent to a reprisal camp in the Landes in November 1941 after having helped some Breton prisoners escape. Senghor most likely meant the camp of Saint-Médard-en-Jalles (Frontstalag 221), to which he was sent in early November.²⁰ This story, however, rests on insecure ground. According to all evidence, Senghor's transfer from Poitiers to Saint-Médard simply had to do with the consolidation of the camps, begun in the fall of 1941 and completed in April 1942. The dissolution of Frontstalag 230 and the transfer of the prisoners to another camp was not a punishment. All prisoners from Poitiers were sent to Saint-Médard.²¹

In retrospect, Senghor may have viewed his transfer from Poitiers to Frontstalag 221 in Saint-Médard as a punishment because the latter was in much worse shape. As he says in his captivity report: "We used to complain about the camp in Poitiers. In Bordeaux, we longed for Poitiers like for a paradise lost."²² The arrival in Saint-Médard of several thousand prisoners from Poitiers would certainly have exacerbated the conditions there; Frontstalag 230 had 3,062 prisoners in the

fall of 1941, predominantly "Senegalese" (2,017) and North Africans (917), and prisoners from Frontstalag 135 also arrived there at this time.²³

FRONTSTAMMLAGER (FRONTSTALAG) 231

The Wehrmacht established Frontstalag 231 on July 20, 1940, and disbanded the camp on March 14, 1941. The unit received field post number (*Feldpostnummer*) 21 260 between April 28 and September 24, 1940. The number was struck between February 15 and July 30, 1942.

Frontstalag 231 held French prisoners of war. It was headquartered for a short time in Parthenay and then in the small town of Airvault (both map 1). In Airvault, the camp was located in the barracks formerly occupied by two divisions of Polish volunteers in a forest south of the town. Very little is known about this camp except that the site in Airvault was so unsanitary that the Germans decided to close it in early 1941. The prisoners, mostly North Africans, were transferred to Frontstalag 230 in Poitiers and Frontstalag 232 in Luçon. Inspections of these two camps in April 1941 specifically mention the prisoners from Airvault, who occupied the infirmaries in large numbers.¹

NOTE

1. Inspection of Frontstalag 230 (Poitiers), April 3, 1941, by Dr. Bonnaud, and inspection of Frontstalag 232 (Luçon), April 4, 1941, by Dr. Bonnaud, AN, F9, 2356.

FRONTSTAMMLAGER (FRONTSTALAG) 232

The Wehrmacht established Frontstalag 232 on July 20, 1940, and ordered its dissolution on April 1, 1942. The unit received field post number (*Feldpostnummer*) 21 858 between April 28 and September 24, 1940. The number was struck between February 15 and July 30, 1942.

Situated in the lower Loire valley, not far from the Atlantic Coast, Frontstalag 232 existed first in Luçon and then moved to Savenay (both map 1), with some administrative offices being located in Nantes.

In July 1941, the Frontstalag held 2,008 prisoners, the vast majority (1,700) being North African. It was one of the smallest camps at that time, although occupancy increased when it absorbed Frontstalag 181 in Saumur in September or October 1941. A few months later, Frontstalag 232 was itself integrated into Frontstalag 133 in Rennes, which became the principal center for camps in western France. The camp site of Luçon was an important place for German propaganda efforts targeted at North African prisoners.

The earliest information on this camp comes from the report of a French officer cadet, Aspirant Lagout, who escaped from Luçon in early 1941. Lagout described Luçon as a major propaganda facility. It housed a large number of North African prisoners coming from the propaganda section of Stalag IIIA in Luckenwalde-Grossbeeren, near Berlin. From Luçon, these prisoners were sent to different camps in France to spread German propaganda. Lagout claimed that the colonial prisoners were very well treated in Luçon. The Germans told them that they had been the only ones who fought hard in May–June 1940 and that the French had essentially sent them to be massacred by ordering them to fight tanks with handguns. The Germans pointed out that the French army paid metropolitan soldiers much more than colonial soldiers. Lagout reported that he had a fight with North African prisoners who told him that the Germans, as colonial masters, would be more just than

Frontstalag 232 at Luçon/Savenay. Partial view of the POW camp, May, 1941.

COURTESY OF ICRC.

the French. Lagout also noted that German propaganda exploited antisemitic motives, but he did not elaborate on this. Lagout claimed that the propaganda was most successful among the officers and among men from Tunisia, whereas the Algerian and Moroccan rank-and-file soldiers seemed less impressed. Lagout warned the French authorities: "In any case, it seems that every colonial [*indigène*] coming from the camp of Luçon needs to be considered a priori as suspicious."¹

Another escaped prisoner confirmed this impression. He reported that German propaganda was relatively vague; it stressed mostly that Germany would win the war and soon occupy French North Africa and that France had not paid North Africans enough money for their service. Prisoners who went to propaganda meetings were rewarded with extra rations and were hired into the camp police. He noted that Tunisian prisoners were performing the Hitler salute, whereas Algerians were more reserved and Moroccans strongly hostile (two Moroccan soldiers threatened a German propaganda officer that they would cut his throat if he ever dared to come to Morocco).²

The first inspection by the Scapini Mission, by Dr. Bonnaud on April 4, 1941, said nothing about propaganda and indicated that the conditions in Luçon were worse than Lagout's letter had suggested. It is, of course, possible that major transfers of prisoners had occurred since Lagout's escape. Moreover, the Scapini Mission was not yet as concerned about German propaganda as it was later on, which may explain why Bonnaud remained silent about this subject.³ He did note that the North Africans in the main camp seemed rather depressed, although the mood was better among the prisoners in the commandos. Bonnaud also pointed out inequities in the prisoners' supplies. The fact that North Africans received more aid packages than the West Africans and Indochinese created much resentment among the ethnic groups in the camp and the commandos. Bonnaud suggested that the prisoners be tested for tuberculosis. Many of them had come from an unsanitary camp in Airvault that the Germans had dissolved, sending its prisoners to Frontstalags 230 in Poitiers and 232 in Luçon. Bonnaud observed that the West Africans and the Indochinese had organized informal classes for each other, and he asked that these efforts receive more support. The camp was under the command of an officer named Rohrscheidt and had 3,740 prisoners (498 French and 3,242 colonial). Of the 498 French prisoners, 429 were working in commandos; among the 3,242 colonial prisoners, 1,683 belonged to a commando.⁴

According to inspector Jean Detroyat, the German authorities had made all suggested improvements to the camp of Luçon by the end of July 1941, when he inspected the Frontstalag. Detroyat noticed, however, that the Germans for unknown reasons were abandoning the camp in Luçon and that most of its prisoners had already been transferred to Frontstalag 121 in Épinal and to a different campsite of Frontstalag 232 in Savenay. The Frontstalag at this time held predominantly Algerians and Tunisians (488 Algerians, 184 Tunisians, 45 West Africans, 42 Indochinese, 19 Frenchmen—all of them medical personnel—and 13 Moroccans). There were only 20 prisoners left in the former main camp in Luçon.⁵

Detroyat did have a chance to visit Savenay, the new headquarters of the Frontstalag. The camp was under the command of Major Gotthard von Münch (1877–1961) and occupied an old barracks complex that had been used by the American army in 1917 and the British army in 1939–1940. The camp held 584 prisoners (287 Algerians, 105 West Africans, 82 Martinicans, 50 Tunisians, 20 Moroccans, 19 Guadeloupans, 7 French Guianans, and 6 Réunion islanders in addition to 8 Frenchmen). Detroyat found the camp in a state of transition because of the recent large movements of prisoners, but he testified that the German authorities were very committed to improving the conditions. Detroyat bemoaned mostly the lack of classes offered to the prisoners, and he took note of requests for games and balls. He found the opportunities for religious services entirely satisfactory: the Muslim prisoners had a mosque, and the Christian prisoners were allowed to go to mass every Sunday. As elsewhere, Detroyat noted the disappointment of French citizens from the colonies who had been excluded from the dismissal of "white" French prisoners in the Frontstalags on July 3.⁶

That the prisoners respected commander von Münch is clear from a letter to him by the mufti of the camp, Brahim Dellil, dated September 8, 1941: "I have the honor to thank you with this letter in the name of my comrades, the prisoners. They are happy that they can now send packages and money they have earned through their work to their families. They are deeply touched by everything that you have done to alleviate their captivity. You should know that we will never forget your concern for us. When God will give us back our freedom, we will remember your leadership with much appreciation."⁷

Work commandos attached to Frontstalag 232 existed in the Vendée and Loire inférieure departments in July 1941. Most of them were small (20–40 prisoners) and in very good condition. The commandos worked predominantly on farms or public works projects for the town mayors (improvement and repairs of roads and bridges). One commando, in Rezé (Loire inférieure), was occasionally asked to work for the Wehrmacht; it had 32 Algerians and 6 Tunisians. Generally, civilians and town mayors appreciated the prisoners and helped them by offering extra supplies. The commando of Bourg-sous-la-Roche (Vendée; part of the town La-Roche-sur-Yon) was particularly well supplied: the seven local restaurants took turns in supplying the prisoners (17 Algerians) for a week, giving them a cold lunch packet every day and serving them dinner in the evening. The prisoners were repairing roads and bridges in the area. In Crossac (Loire inférieure), a large commando (240 Algerians, 55 Moroccans, 6 Martinicans, and 1 West African) worked for a turf company that took care of all the needs of the prisoners. Jean Desbons had few complaints except from the prisoners of color with French citizenship. A few commandos asked for Muslim prayer books. Others needed soccer balls.⁸

In November 1941, Dr. Bonnaud returned to the Frontstalag and visited Savenay, the newly integrated camp of Saumur,

and some work commandos. Savenay held 510 prisoners (164 Algerians, 119 West Africans, 97 Martinicans, 87 Tunisians, 28 Moroccans, 10 Indochinese, 2 Madagascans, and 3 French medics). Bonnaud noted that some prisoners were now working for the Wehrmacht. He complained that the Germans were relying too much on French Red Cross deliveries for the supply of the prisoners (the Geneva Convention of 1929 stipulated that the detaining power was responsible for supplying the prisoners), while making unnecessary difficulties for the Red Cross. For example, the Germans had forbidden the French Red Cross trucks to make direct deliveries to the work commandos; as a consequence, a truckload of 1,000 sweaters for the prisoners in the commandos was still stored in Savenay. Bonnaud also complained about the refusal of the German NCO in charge of the deliveries to share the packaging lists of the deliveries with the French man of confidence.⁹ Captain Koefer, the German liaison officer who accompanied Dr. Bonnaud, took note of the difficulties some commanders made for Red Cross deliveries to the work commandos and promised to remedy the situation.¹⁰

In Saumur, the camp in the cavalry school, formerly the headquarters of Frontstalag 181, still existed. Its commander was Oberleutnant Buchholz, and the camp housed 909 prisoners (265 Algerians, 246 Moroccans, 208 Tunisians, 92 West Africans, 31 Indochinese, 17 Antilleans, 9 Jews, 8 soldiers of mixed French and North African background, 4 Madagascans, 1 Pole, 1 Hindu from Pondicherry in India, and some prisoners whose background was not listed). Most prisoners were working in a variety of occupations outside the camp. They had a mosque, a theater, and a cinema inside the camp, but there was a shortage of films. The morale of the prisoners was poor due to the discriminatory dismissal policies, for which they blamed the French authorities. In addition to the prisoners from overseas who held French citizenship, the camp housed a number of men of color who were naturalized French citizens, married to French women, and who had lived in France for a long time. These prisoners were outraged because their citizenship was not taken into account in the release process. Some of them also requested being considered for dismissal on the basis of previous agreements (fathers of four indigent children; World War I veterans), which the German authorities applied to nonwhite prisoners only with great reluctance.¹¹ The French National Archives holds an application for dismissal from one of the Jewish prisoners in Saumur, Isidor Ayache from Algiers, who had four children and was poor. It appears that his case was approved.¹²

Bonnaud found the work commandos in good shape, although the prohibition of Red Cross deliveries to the commandos had created shortages in a few places. He visited some commandos not inspected before, such as a large commando in Angers (172 West Africans, 1 Martinican, and 1 Madagascan) working for the Wehrmacht under very good conditions. One commando in a quarry in Monnaie presented an embarrassment to Bonnaud because the commando was now supplied from French instead of German depots, and the prisoners' fare was far worse than before. Bonnaud made hectic telephone

calls to local authorities to avert a loss of French prestige. In Saint-Nazaire, a large work commando (151 Algerians, 49 Tunisians, 42 Moroccans, 3 Martinicans, and 1 West African) was loading and unloading goods in the harbor and at the train station. The very happy prisoners in this commando asked Bonnaud to convey their best wishes and sincere thanks to Marshal Pétain and Ambassador Scapini.¹³

There is no available information on the dissolution of Frontstalag 232. It was at first intended to continue operations during the consolidation of Frontstalags beginning in late 1941, but in April 1942 it was absorbed by Frontstalag 133 in Rennes.¹⁴

FRONTSTAMMLAGER (FRONTSTALAG) 240

The Wehrmacht established Frontstalag 240 on July 22, 1940, and disbanded the camp on March 26, 1941. The unit received field post number (*Feldpostnummer*) 00 251 between April 28 and September 24, 1940. This number was struck between January 27 and July 14, 1942.

This camp, located in Verdun (Quartier Niel) (map 2), served as an assembly and transit camp for French prisoners of war sent to permanent camps in Germany in the late summer and fall of 1940. The Frontstalag was renamed Dulag 240 and transferred to Poland in March 1941.¹

SOURCES Additional information about Frontstalag 240 can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierungseinrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 91.

FRONTSTAMMLAGER (FRONTSTALAG) 241

The Wehrmacht created Frontstalag 241 on July 22, 1940, and disbanded the camp on April 5, 1941. The unit received field post number (*Feldpostnummer*) 01 068 between April 28 and September 14, 1940. This number was struck between July 15, 1942, and January 24, 1943.

Frontstalag 241 held French prisoners of war. It was headquartered in Saint-Mihiel (map 2) and existed for only a short time before it was integrated into Frontstalag 194 in Châlons-sur-Marne. The Frontstalag included several subcamps, one of them in the small town of Lérouville, 15 kilometers (over 9 miles) south of Saint-Mihiel. Little is known about this Frontstalag, except for an incident that led to a trial in early 1941. On August 31, 1940, a severe brawl occurred between North African prisoners and prisoners from West Africa and Madagascar in the camp of Lérouville. The German guards tried to break up the fight and fired a warning shot that severely wounded one prisoner. When their admonitions failed to stop the brawl, the guards ordered all prisoners to return to their barracks, but four North African prisoners refused to obey. In April 1941, these four prisoners stood trial in Angoulême (Frontstalag 184)—where three of them had been transferred—for refusing to obey orders. The judge could not establish without a doubt that the accused prisoners had participated in the brawl but convicted them for disobedience. Their pretrial confinement, however, exceeded the length of punishment, and the accused prisoners therefore did not have to go to jail.¹

Frontstalag 241 in Saint-Mihiel was one of the camps visited by the American delegates Jefferson Patterson and Dr. Vance Murray in mid-September 1940. At the time of their visit, the camp had only metropolitan French prisoners, as the colonial soldiers had been sent to camps farther south, where the climate was more suitable for them. Patterson and Dr. Murray found the camp in good shape but noted that “it is believed, however, that this condition has existed for not more than 6 weeks, and that the camp from May to the beginning of August was greatly overcrowded with a distinctly inadequate food ration.” They also heard reports of brutality during the early weeks, when the Frontstalag was guarded by hardened frontline troops without any experience in camp management. As elsewhere, however, the installation of more experienced German commanders and guard units had made a big difference: “This situation had been recognized by the higher German officers in the occupied zone so these had [sic], some weeks before, caused the camp to be completely reorganized through introduction of a staff of older officers with experience in camp management. The original personnel, both officers and men, had been sent elsewhere. The camp was then organized along the lines of those in Germany, and overcrowding had ceased through transfer of colored troops to camps in southern France, and of white troops to the Reich.”²

Because of its location near the borders with Luxembourg and Germany, Frontstalag 241 had primarily functioned as a transit camp for the masses of French prisoners en route to Germany in the summer and fall of 1940 and was dissolved once the transfer was largely completed. A work commando (*Arbeitskommando*) with 34 prisoners, mostly West Africans, continued to perform agricultural work in Saint-Mihiel under the authority of Frontstalag 194.³

SOURCES Primary source information about Frontstalag 241 is located in AN, NACP, and PAAA.

HEIMKEHRERLAGER (HEILAG) ANNABURG

The Wehrmacht created Heilag Annaburg¹ (map 4e) at the end of March and beginning of April 1944 in Defense District (*Wehrkreis*) IV.² It was deployed in Annaburg (Wittenberg district in Saxony-Anhalt, Germany).

The Heilag was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

The camp's purpose was to confine, temporarily, wounded British and American prisoners who were eligible for release and repatriation. These prisoners arrived at the camp from other prisoner of war (POW) camps several weeks prior to repatriation.

The treatment of the prisoners and their conditions of confinement in the camp were satisfactory, by and large, and in compliance with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). In most instances, the prisoners considered the Annaburg camp to be superior to those from which they had come.³

The camp occupied a large stone building formerly used as a German officers' training school. As a Heilag, a number of changes and improvements had to be made. The site was altered to hold 800 sick and injured POWs. They were kept six to a room, with single beds for officers and bunk beds for enlisted men. The facilities were sufficient for the care of the prisoners. Each floor had its own mess hall, and the facilities offered adequate running water, latrines, showers, and rations. For recreation, the camp had a 2,000-volume library, a theater with musical instruments, and a small sports field. The canteen offered basic toiletries and beer.

Because the camp served primarily as a transition point before repatriation, the actual size of the camp fluctuated frequently, and the total number of prisoners who went through the camp is unknown. There were 369 British prisoners in the camp on May 1, 1944.⁴ In August, the camp was overfilled with prisoners, as over 1,000 were sent to the camp, which was 25 percent over capacity. This was a short-term situation, however, as the Germans were holding those POWs in advance of the exchange of American and British POWs for German POWs in Göteborg, Sweden, that month. By October 1944, the camp was virtually empty, save for a small contingent of 60 British prisoners. The numbers again exceeded 800 by the end of the year.

HEIMKEHRERLAGER (HEILAG) CHALON-SUR-SAÔNE

The Wehrmacht established Heilag Chalon-sur-Saône in Chalon-sur-Saône, France (map 2), sometime before April 1941. It was still in operation as of 1943. The camp received field post number (*Feldpostnummer*) 20 110 between July 19, 1941, and February 14, 1942; this number was struck between July 31, 1942, and February 9, 1943. The camp later received field post number 02 955T (the collective field post number for Dijon) between May 1 and October 19, 1942; this number was struck on March 25, 1944.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

HEIMKEHRERLAGER (HEILAG) COMPIÈGNE

The Wehrmacht established Heilag Compiègne (map 2) on July 25, 1941, using the personnel from Heilag V A. On March 1, 1944, the camp ceased to be an independent camp and became a part of Frontstalag 122.¹ The camp was subordinate to the Armed Forces Commander Northwest France (*Wehrmachtbefehlshaber Nordwestfrankreich*). It held field post numbers (*Feldpostnummer*) 40 152 and 10 624F. The camp held French prisoners of war (POWs) who were eligible for repatriation. The French POWs were transferred to this camp from various camps in Germany (Stalags I A, I B, XII D, and others) and were in the camp until the time of their actual release.² The conditions in the camp were satisfactory and basically in compliance with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). The camp administration and guard force treated the prisoners decently.

SOURCES Additional information about Heilag Compiègne can be found in the following publication: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), pp. 73, 175.

HEIMKEHRERLAGER (HEILAG) MONTWY

The Wehrmacht established Heilag Montwy (also known as Hohensalza-Montwy; map 4c) in the village of Montwy (today Mątwy, Inowrocław, Poland) on May 13, 1941. It closed on November 28, 1943.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

Dallas Michelbacher

The camp held Western Allied prisoners of war who were eligible for release and repatriation. The treatment of the prisoners and the conditions in the camp were satisfactory and in compliance with the Geneva Convention relative to the Treatment of Prisoners of War (1929). The number of prisoners who passed through the camp is not known.

HEIMKEHRERLAGER (HEILAG) ROUEN

The Wehrmacht established Heilag Rouen (map 1) on September 21, 1941, from Stalag 356. The camp was located in Rouen until March 3, 1942, when the Germans moved it to Compiègne and reorganized it as Heilag z.b.V. Compiègne (formerly Rouen). The camp was subordinate to the Military Commander of Northwest France (*Wehrmachtbefehlshaber Nordwestfrankreich*). The camp held British and New Zealander prisoners of war who were eligible for release and repatriation. The treatment of the prisoners and the conditions were satisfactory and in keeping with the Geneva Convention relative to the Treatment of Prisoners of War (1929). The exact number of prisoners who passed through the camp is unknown.

SOURCES Additional information about Heilag Rouen can be found in the following publications: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel* (Koblenz: self-published, 1986–1987), vol. 1: p. 49; vol. 2: p. 175; and Georg Tessin, *Verbände und Truppen der deutschen Wehrmacht und Waffen-SS im Zweiten Weltkrieg 1939–1945, Vol. 9: Die Landstreitkräfte 281–370* (Osnabrück: Biblio, 1974), p. 278.

HEIMKEHRERLAGER (HEILAG) V B

The Wehrmacht established Heilag V B (map 4f) on June 21, 1940, in Defense District (*Wehrkreis*) V and deployed it in Strasbourg. The camp was disbanded at the end of September 1940.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*).

Heilag V B held Western Allied prisoners of war who had been released from captivity and were awaiting transfer home. The treatment of the prisoners and the conditions in the camp were satisfactory and in keeping with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). The number of prisoners who passed through the camp is not known.

SOURCES Primary source material about Heilag V B is located in BArch B 162/790, fol. 49.

Additional information about Heilag V B can be found in the following publication: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 176.

HEIMKEHRERLAGER (HEILAG) V A

The Wehrmacht established Heilag V A (map 4f) on June 1, 1940, in Defense District (*Wehrkreis*) V. It was deployed in Konstanz. On July 25, 1941, the Germans disbanded the camp and transferred its personnel to the Heilag in Compiègne, in France.¹ The camp was under the control of the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*).

HEIMKEHRERLAGER (HEILAG) V C

The Wehrmacht established Heilag V C (map 4f) on July 5, 1940, and it remained in operation at least through the first week of April 1941. It was located in Offenburg, in Defense District (*Wehrkreis*) V. The camp was under the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis* V).

Heilag V C temporarily held French prisoners from Alsace and the Moselle valley region who were eligible for release from captivity.¹ No specific information on conditions in the camp is available and the number of prisoners who passed through the camp is also unknown.

SOURCES Primary source material about Heilag V C is located in StA Offenburg.

Additional information about Heilag V C can be found in the following publication: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 176.

HEIMKEHRERLAGER (HEILAG) VIII G

The Wehrmacht established Heilag VIII G (map 4e) sometime before September 1942 in Weidenau (today Vidnava, Czech Republic). The order for its closure was issued on September 22, 1942.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

HEIMKEHRERLAGER (HEILAG) VIII H

The Wehrmacht established Heilag VIII H (map 4e) sometime before September 1942 in Oberlangendorf (today Horní Dlouhá Loučka, Czech Republic). The order for its closure was issued on September 22, 1942.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

HEIMKEHRERLAGER (HEILAG) XVII A

The Wehrmacht established Heilag XVII A in April 1941 at the latest, at Laarstrasse 1 in Vienna (map 4f), in Defense District (*Wehrkreis*) XVII. The camp was subordinate to the Commander of Prisoners of War in Defense District XVII

(*Kommandeur der Kriegsgefangenen im Wehrkreis* XVII). On June 21, 1941, the camp was relocated to the town of Gänserndorf (4f), about 20 kilometers (12.4 miles) northeast of Vienna, where it was installed on the site of a former SA camp at Wienerstrasse 7. The camp held Yugoslavian prisoners of war (POWs) of German, Slovak, Slovene, Croatian, and Hungarian ancestry who were to be repatriated to Yugoslavia. This task was completed by July 1942.¹ The maximum population of the camp was 1,100 prisoners in December 1941, but this was an extreme outlier; the average population was just over 300 prisoners.²

There were two brief cases in which Heilag XVII A held prisoners of other nationalities. In October 1941, the camp held 108 Greek civilians who were to be repatriated to Greece. In August and September 1942, a work detail (*Arbeitskommando*) for Soviet POWs was housed at the camp.³

Heilag XVII A was dissolved on September 28, 1942. After that date, repatriation of prisoners from Defense District XVII was carried out via Stalag XVII A in Kaisersteinbruch.⁴

SOURCES Primary source information about Heilag XVII A is located in BA-MA (RH 48: 12 and RH 53: 17).

Additional information about Heilag XVII A can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 176; Gianfranco Mattiello, *Prisoners of War in Germany 1939–1945 (Camps, Nationalities, Monthly Population)* (Lodi: self-published, 2003), p. 304; and Hubert Speckner, *In der Gewalt des Feindes: Kriegsgefangenenlager in der “Ostmark” 1939 bis 1945* (Vienna: R. Oldenbourg, 2003), pp. 273–274. NB: Both Mattiello (2003) and Mattiello and Vogt (1987) incorrectly list the camp as “Heilag XVII—Gänsedorf [sic].”

HEIMKEHRERLAGER (HEILAG) ÖHRINGEN

Heilag Öhringen (map 4e) existed from January 16 until April 1941, in Defense District (*Wehrkreis*) VIII; it may have remained open longer. It was deployed in Öhringen (today Gliwice-Sośnica, Poland).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis* VIII). The unit received field post number (*Feldpostnummer*) 20 110 between September 25, 1940, and February 15, 1941. This number was struck between September 17, 1941, and February 14, 1942.

The camp held prisoners of war who were awaiting release and repatriation. The prisoners’ nationalities are not known

with certainty but likely included French and possibly British soldiers. No specific information on conditions in the camp is available. The exact number of prisoners who passed through the camp is likewise unknown.

SOURCES Primary source material about Heilag Öhringen is located in the State Archive in Wrocław (Poland) and BArch B 162/790: Lagerverzeichnis, Stand am 30.4.1941: Heilag z.b.V. z. Zt. Oehringen, in Chalon sur Saône eingesetzt; Lagerverzeichnis, Stand am 14.8.1941: Heilag z.b.V. Chalon sur Saône; Lagerverzeichnis, Stand am Mai 1943: Heilag z.b.V. Chalon sur Saône.

Additional information about Heilag Öhringen can be found in the following publication: Gianfranco Mattiello and Wolfgang Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 175.

MARINE DURCHGANGSLAGER (DULAG) GOTENHAFEN

The German Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) established Dulag Gotenhafen (aka Marinelager [Marlag] Gotenhafen) in June 1941, to hold captured naval servicemen. The camp was located in Gotenhafen (today Gdynia, Poland) (map 4c), although the exact location remains unknown. It may have been situated between Kielau (today Chyłonia) and Zissau (today Cisowa) or in the neighborhood of the Kriegsmarine harbor at Oxhöft (today Oksywie). The camp was subordinate to the Commander of Prisoners of War, Navy Senior Command, Baltic (*Kommandeur der Kriegsgefangenen, Marineoberkommando Ostsee*).¹

The following table shows the prisoner numbers for the 1943–1944 period and how many of those prisoners were assigned to work details:

Year	Month	French		Soviet Total	At work (Arbeitseinsatz)
		sailors	sailors		
1943	01-03 ²	53	58	111	53
	01-04 ³	50	59	109	50
	01-05 ⁴	46	58	104	104
	01-06 ⁵	40	58	98	40
	01-07 ⁶	33	?	?	?
	01-08 ⁷	33	75	108	108
	01-09 ⁸	33	75	108	108
	01-10 ⁹	33	75	108	108

1944	01-01 ¹⁰	33	75	108	108
	01-02 ¹¹	31	74	105	105
	01-04 ¹²	33	72	105	105
	01-05 ¹³	33	72	105	105
	01-06 ¹⁴	34	72	106	106
	01-07 ¹⁵	34	72	106	106
	01-09 ¹⁶	34	76	110	110
	01-10 ¹⁷	34	77	111	111

Prisoner numbers for the 1941–1942 period are lacking. No documents record the conditions in the camp. The French prisoners may have received better care than the Soviets, but that is conjecture. The Germans dissolved the camp in October 1944.

SOURCES Primary source material about Marine Dulag Gotenhafen is located in BA-MA (RM 6).

MARINELAGER MARINEINTERNIERTENLAGER (MARLAG MILAG) NORD

The Wehrmacht—specifically, the German navy (*Kriegsmarine*)—established Marlag Milag Nord on October 22, 1941. The compounds that comprised Marlag-Milag Nord represented a unique assemblage of prisoner of war (POW) and civilian internment camps. Over the course of its four-year history, the complex served variously as a Dulag, IIlag, Milag, Marlag, and Stalag. This multipurpose camp occupied a large area just outside Westertimke (map 4a), approximately 25 kilometers (15.7 miles) northeast of Bremen. The camp and its separate components were also known by other designations and variations of the official name, including Marlag Milag Westertimke, Marlag Westertimke, and Marlag Nord.

Although the camp would acquire additional duties and types of internees, it chiefly functioned as a Marlag for captured members of the Royal Navy and as a Milag for captured members of the British merchant navy. The camp complex operated under the authority of the Commanding Admiral, Naval Station North Sea (*Kommandierender Admiral der Marinestation der Nordsee*) and was redesignated the Naval High Command North Sea (*Marineoberkommando der Nordsee*) on February 1, 1943. The first camp commandant was Kapitän zur See Schuhr. He was replaced by Fregattenkapitän Schmidt. The deputy commandant was Korvettenkapitän Kogge, the counterintelligence (*Abwehr*) officer was Oberleutnant Schoof, and the physician was Stabsarzt Dr. Trautman.¹ Although the POW and internment camps fell under the same German administration, they functioned completely independently of each other, with no interactions among the prisoners.

The two camps together held a prisoner population that gradually rose from 1,340 British citizens in November 1941 to over 4,700 prisoners, mostly British but also including a small number of French, Americans, Serbians, and other nationalities, in January 1945.² The Marlag consisted of two compounds: Marlag O, for officers of the Royal Navy, and Marlag M, for other Royal Navy ranks. Though similar in size, the two complexes differed in population, as the officers' camp was generally much less crowded. POWs in Marlag O typically slept 8 to a room, while the same barracks in Marlag M held up to 20 men per room. A road divided the two compounds and barbed wire enclosed each. Though each had its own kitchens, storage facilities, sports grounds, and recreation areas, there was a significant degree of interaction among the prisoners in the two compounds. At times, overcrowding in Marlag M required some prisoners to move to Marlag O. Such possibilities did not exist in the other camps at Marlag-Milag Nord.

The larger Milag held members of the British merchant navy. This camp consisted of some 36 barracks, most of which held prisoners, plus kitchens and mess halls.³ The overall capacity was around 3,000. Men slept up to 20 per room. Prisoners had access to their own recreation facilities, which included a theater, sports field, and library. The prisoners from the merchant marine comprised a veritable cross section of British colonials. This ethnic diversity was reflected in the nature of the camp. As one international observer noted, "The Camp resembles a village; the huts are arranged tastefully, each one has an individual character which indicates the national characteristics of its occupants."⁴

The Milag prisoners occupied an unusual place in the German camp system, as their status was between that of POWs and civilian internees. The prisoners themselves continued to adhere to the rigid hierarchy that differentiated between officers and other ranks, yet German authorities neither created separate complexes nor allowed special treatment for the officers of the merchant navy. This created conflicts, as merchant navy officers requested benefits afforded Allied officers, while the German authorities insisted that they were nonmilitary prisoners and therefore had no right to be treated as officers.⁵

At the start of the war, the Kriegsmarine established a naval Durchgangslager (Dulag) in Wilhelmshaven, which it used for sorting and processing new POWs, before sending them on to the appropriate camps in other parts of Germany. In February 1942, the Germans moved that camp to the Marlag-Milag complex in Westertimke, to avoid bombing raids. Dulag Nord occupied a space between the Marlag and Milag complexes. As the name implied, it served primarily for the transfer of prisoners to other sites, so its population changed constantly.

In August 1943, the large population of Indians in the Milag, many of them native to the Bengal region, were transferred to a new compound within the Marlag Milag

Nord complex, known as the Indian Camp.⁶ This camp functioned as a completely separate Milag facility. Located several hundred meters away in a heavily wooded area, the camp was newly constructed and well built. While the prisoners initially complained of the lack of sun they received in this wooded area, they came to appreciate this insulation in the winter months.⁷ Of 473 prisoners in the Indian Camp in January 1944, 429 were Muslim, 41 Christian, 2 Buddhist, and 1 Hindu. As a result of the predominantly Muslim population, the camp's theater came to be used as a mosque. German authorities reportedly did not interfere with hourly calls to prayer and they accommodated requests for Qurans, as the camp came to have over 400 of them.⁸ Prisoners there also received separate rations to satisfy religious requirements.⁹

The camp continued to expand and incorporate different prisoner groups throughout the war. On September 2, 1944, Germans evacuated the civilian internment camp in Gironmagny, in northeast France, to a facility approximately 800 meters (half a mile) from the Milag in Westertimke. This Ilag fell under the administration of the Marlag-Milag Nord camp, though it too had its own facilities with no interaction with other compounds.¹⁰ In January 1945, Germans evacuated two compounds of Stalag Luft III in Sagan (today Żagan, Poland) and sent them to occupy hastily built barracks in the Marlag O compound. Most of the 1,926 new prisoners were officers. Although international observers regarded the German administration as sincere in its desire to improve conditions, little could be done with the limited resources at that point in the war, and the Stalag Luft prisoners endured worse conditions than those they had left behind in Sagan.¹¹

A robust cultural life developed in the camps, all of which eventually had their own theaters, recreation areas, and libraries. Most barracks had their own gardens, where prisoners grew various fruits and vegetables to augment rations or focused on flower gardens and lawns. Compounds offered different educational opportunities, most of which reflected the nautical backgrounds of the prisoners, with subjects including navigation and meteorology.¹²

The prisoner groups' views of the conditions within the camp varied. Compared with other camps for Western Allied prisoners (Stalags and Oflags), relations between prisoners and the German administration were better in the Marlag-Milag Nord complex, and the prisoners had more regular access to recreational opportunities and better medical care than in other camps. However, the conditions compared unfavorably to those in civilian internment camps, where the food supplies were more generous and the repatriation process was more transparent.

The camp fell into disarray in the closing days of the war. An international observer arrived on April 14, 1945, and noted surprise among the prisoners and administration alike that he had bothered coming to conduct a survey, as both sides expected the camp to be liberated soon. A few days earlier, on April 8, the German authorities had attempted an

evacuation of the camp toward Lübeck. The following morning, a group of Royal Air Force officers left with German guards, followed soon thereafter by Royal Navy prisoners. Quickly these evacuations were attended by a breakdown of order, as prisoners (apparently with the aid of certain German guards) escaped to the woods. Roll was not taken that morning and the international observer found that no one knew who was still in the camp, who had escaped, and who was on the march toward Lübeck. By that point, the front was just 32 kilometers (20 miles) away, and the camp was liberated on April 28.¹³

MARINELAGER MARINEINTERNIERTENLAGER (MARLAG MILAG) SANDBOSTEL

The Kriegsmarine established Marlag Milag Sandbostel in Sandbostel, Niedersachsen, Germany (map 4a), about 43 kilometers (26.7 miles) northeast of Bremen, in February 1941. This camp is sometimes referred to as Marlag X B, because it was located in Defense District (*Wehrkreis*) X. It was located within the larger complex of the Sandbostel prisoner of war (POW) camp, one of the largest such camps in Germany, which included the enlisted men's camp (Stalag X B), the officers' camp (Oflag X B), and a civilian internment camp (Ilag). The Marlag-Milag was located across from the officers' camp, in the southwest corner of the complex. The Marlag-Milag held British Royal Navy and Merchant Marine personnel captured during the naval battles in the North Sea and North Atlantic Ocean in 1940 and 1941, as well as some Royal Marines captured in France in 1940. Although the merchant mariners were technically civilians, the Germans treated them as POWs (as the British did with captured German merchant mariners).

The Marlag-Milag consisted of 18 residential barracks and 4 sanitary barracks, which contained the toilets and showers. It was separated from the other sections of the complex by a barbed wire fence; two rows of barbed wire along the western and southern perimeters separated it from the outside world.¹ The prisoners in the Marlag-Milag were strictly separated from those of other nationalities. As of November 21, 1941, there were 810 prisoners in the Marlag-Milag (out of a total of 38,129 in the entire Sandbostel complex).² Prisoners of other nationalities generally regarded the conditions in the Marlag-Milag to be much better than those in the other parts of the camp (one French prisoner referred to the British sailors as the "kings of the prison") because of the fact that German prisoners were also being held by the United Kingdom. The sailors received Red Cross packages (one per man) every week, a luxury not afforded to the other prisoners, and were not expected to work, as the other prisoners were. They were allowed to keep their uniforms after being captured rather than being assigned prison uniforms.³ At the end of 1941, the sailors were transferred to the newly constructed Marlag-Milag Nord in Westertimke, about 13 kilometers (8 miles) to the southwest. After their departure, the former Marlag-Milag had several different uses, housing French prisoners who were awaiting repatriation and, later, Soviet POWs and interned Italian military personnel.⁴

OFFIZIERLAGER (OFLAG) 6

The Wehrmacht established Oflag 6 (map 4e) on November 26, 1943, and dissolved it on November 8, 1944. It was located in Tost (today Toszek, Poland). The camp was under the jurisdiction of the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). The unit received the field post number (*Feldpostnummer*) 65 773 on October 26, 1943; the number was struck on December 1, 1944.

The camp held French officers and their orderlies whom the Germans had transferred from Oflag VIII F. On January 1, 1944, there were 1,044 prisoners (936 officers and 108 orderlies) in the camp.¹ Conditions in the camp were generally satisfactory. The treatment of prisoners mostly conformed to the standards of the 1929 Geneva Convention.

SOURCES Primary source material about Oflag 6 is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Oflag 6); and BArch B 162/17614–17615: Überprüfung des Oflag 6.

Additional information about Oflag 6 can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. OFFIZIERLAGER (OFLAG) 8

The Wehrmacht established Oflag 8 (map 4b) on May 11, 1943, in Frauenberg bei Lübben (Brandenburg). From September 1943, the camp was deployed in Wutzetz, now a part of Friesack. There were two branch camps (*Zweiglager*) at Zootzen-Damm: Damm I and Damm II. The Germans disbanded the camp in April 1945 as the Red Army approached.¹ The camp was subordinate to the Commander of Prisoners of

War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*).

From May 1943 to September 1944, Oflag 8 held Polish officers and orderlies (ranging in number from 55 to 86 of the former and 160 to 191 of the latter). In the fall of 1944, Greek, Bulgarian, and Romanian officers and orderlies arrived in the camp, bringing its total population to around 750.² The conditions were generally satisfactory and in compliance with the provisions of the 1929 Geneva Convention relative to the Treatment of Prisoners of War. Many of the prisoners worked in labor detachments on local farms.

SOURCES Primary source material about Oflag 8 is located in BA-MA (RW 6: 452); WASt Berlin (Stammtafel Oflag 8); and BArch B 162/27703: Ermittlungen gegen Angehörige des Oflag 8 in Lübben.

Additional information about Oflag 8 can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987); and Gianfranco Mattiello, *Prisoners of War in Germany 1939–1945 (Camps, Nationalities, Monthly Population)* (self-published, 2003), p. 221. OFFIZIERLAGER (OFLAG) 10

The Germans created Oflag 10 (map 4c) on December 1, 1943, in Defense District (*Wehrkreis*) XXI, on the site of the disbanded Stalag 391.¹ It was deployed in Montwy (today Mątwy, Poland). In the late summer of 1944, the Germans evacuated the inmates to the west; 350 prisoners were sent to other camps on August 30, 1944, and another 400 on September 7.² The Red Army liberated the camp on October 1. The camp was under the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*).

The camp held French commissioned and noncommissioned officers (NCOs). It held 1,009 prisoners (899 officers and 110 NCOs) on December 1, 1943, 815 prisoners (727 officers and 88 NCOs) on July 1, 1944,³ and 987 prisoners on July 15, 1944.⁴

By August 1944, the camp had 10 barracks for prisoners, with two washrooms, arranged in a large block. The storage facilities, kitchen, and mess hall were on the southern side of the camp complex. Prisoners had limited access to a long garden to the west. On the east side of the barracks was a large sports field for prisoners' use. Further east lay a series of

air-raid trenches.⁵ Conditions in the camp were generally decent and in accordance with the 1929 Geneva Convention relative to the Treatment of Prisoners of War. By all accounts, the camp staff and guards treated the prisoners properly.

SOURCES Primary source material about Oflag 10 is located in BA-MA (RW 6: 450) and WASt Berlin (Stammtafel Oflag 10).

OFFIZIERLAGER (OFLAG) 52

The Wehrmacht established Oflag 52 (map 4c) on April 15, 1941, in Defense District (*Wehrkreis*) II; it was later transferred to Defense District I. It was deployed to Ebenrode (formerly Stallupönen; today Nesterov, Kaliningrad oblast', Russia) on June 16, 1941. The Germans disbanded the camp on June 30, 1942.¹ The unit received the field post number (*Feldpostnummer*) 13 608 between February 1 and July 11, 1941. The number was struck between July 12, 1941, and January 26, 1942; the Germans probably struck the field post number because the camp had become stationary and was located within the borders of the Reich. The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

The camp held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. The camp was overcrowded, the prisoners were malnourished, sanitation was completely inadequate, and the prisoners did not receive proper medical care, leading to widespread starvation and disease and a high mortality rate. Abuse by the Germans exacerbated the prisoners' plight. As in other camps, the Germans screened newly arrived prisoners to "weed out" so-called undesirables (Jews and political

commissars), who were then shot in the woods near the camp. According to data from the Soviet Extraordinary Commission (ChGK), between 5,000 and 8,000 Soviet prisoners are said to have died at this camp; however, figures from the ChGK have often proven to be too high and should be treated accordingly.

SOURCES Primary source material about Oflag 52 is located in BA-MA (RW 6: 450–453) and WASt Berlin (Stammtafel Oflag 52).

Additional information about Oflag 52 can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Trans. Kathleen Luft

NOTE

1. Tessin, *Verbände und Truppen*, p. 182; Liste der Kriegsgefangenenlager (Stalag und Oflag) in den Wehrkreisen I–XXI 1939 bis 1945: BA-MA, RH 49/20; BA-MA, RH 49/5.

OFFIZIERLAGER (OFLAG) 53

The Germans created Oflag 53 (map 4c) on April 10, 1941, in Defense District (*Wehrkreis*) III, but it was soon transferred to Wehrkreis I. It was deployed near the village of Pogegen in East Prussia (today Pagėgiai, Lithuania). The Germans disbanded the camp in July 1942 and transferred the prisoners to other camps. The camp received the field post number (*Feldpostnummer*) 12 196 between February 1 and July 11, 1941; the number was struck between January 27 and July 14, 1942. The camp was under the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*). The camp commandant was Major Curt Petters.¹

Oflag 53 held Soviet prisoners of war (POWs). The camp was located near the rail line to Tilsit (today Sovetsk, Kaliningrad oblast', Russia). It covered a 6 hectare (almost 15 acre) area surrounded by barbed wire. Although the camp was officially an officers' camp, it held only enlisted men. Prisoners at first lived in burrows dug into the ground, which they later deepened, covered with grass, and turned into bunkers. They received two small cups of potato soup per day.² In mid-October 1941, the camp held 4,600 prisoners.³ During the course of the war, about 24,000 prisoners passed through the camp. Conditions were similar to those in other camps for Soviet POWs. Overcrowding and inadequate food and medical care led to malnutrition and disease, which produced a high mortality rate. Abuse by the German guards exacerbated the situation. During September 1941, 40–45 prisoners died each day; by November, this figure rose to about 150 per day. In 1941 and 1942, between 8,000 and 10,000 prisoners reportedly died in the camp.⁴

The Tilsit Gestapo carried out selections (*Aussonderungen*) of "undesirable" prisoners in the camp. Two officials and a translator assigned by the Wehrmacht, aided by prisoner informants, ferreted out Jews and political commissars. A Gestapo and Tilsit Security Service (*Sicherheitsdienst*, SD) detachment, under the command of SS-Sturmbannführer Böhme, shot these prisoners in the forest near the camp.⁵ An October 23, 1941, report from a Ministry of the Occupied Eastern Territories official named Weiss stated that 650 "Jews and commissars" from among the 4,600 prisoners in the camp had been shot as of October 12, 1941.⁶

OFFIZIELLAGER (OFLAG) 55 (V D)

The Wehrmacht established Oflag 55 (map 4f) in Offenburg, in Defense District (*Wehrkreis*) V, with an order

March 23, 1941, of the General Army Office (*Allgemeines Beeresamt*, AHA). The order initially just designated the duty station of the “Commandant Oflag 55 (V D).”¹ The process of getting the camp organized and open took some time in this case; it began on April 1, 1941, and was completed on May 1, 1942.

The camp retained the dual designation “Oflag 55 (V D)” until it was shut down. This approach was not a common practice. It is probably accounted for by the fact that this camp, when it was organized, was intended also for deployment outside the territory of the Reich. Evidence of that is provided by the allocation of a field post number (*Feldpostnummer*): 10 154, issued between February 1 and July 11, 1941, and canceled again between January 27 and July 14, 1942.² Deployment outside Reich territory never took place, however; the camp never left Defense District V.

The camp began operation in Offenburg, at a site in the part of town known as Holderstock. Wooden barracks served as housing for the prisoners. On March 12, 1942, the camp was transferred to Biberach an der Riss. In the process, it took over the former camp area of Oflag V B, which had already been moved to Schaulen (today Šiauliai, Lithuania). The accommodations for the prisoners there consisted of wooden barracks on the grounds of a former military barracks facility on Birkenhardstrasse (also called “Camp Lindele” by the local residents).

Throughout, the camp was subordinate to the Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) in Defense District V. Oberstleutnant z.V. Alfred Teubner was commandant of the camp from April 12, 1941, to May 15, 1942. He was succeeded by Oberstleutnant z.V. Karl Gebhard who served from May 16, 1942, until September 1942, when he was replaced by Oberst Count Vitzum von Eckstädt.³

To date, little is known about the guard force. On the basis of the size of the camp, however, one must assume that it was carried out by one company of a reserve battalion (*Landesschützenbataillon*).

Oflag 55 (V D) was a decidedly small camp, on average, holding only around 1,000 officers and 100 orderlies (enlisted personnel), according to the monthly reports of the Armed Forces High Command (OKW) to the International Committee of the Red Cross (ICRC).⁴ For the most part, the prisoners of war (POWs) were Yugoslav nationals (from 1941 to 1942). In August 1942, they were joined by approximately 80 French officers with 40 enlisted men as well as 15 Greek officers from Crete.

The majority of the Yugoslav officers were transferred in from Oflag XIII B on May 28, 1941. These were so-called anti-German POWs, whom the Germans separated from the other prisoners. Oflag XIII B had significant security problems due to openly expressed conflicts between Yugoslav groups with political differences. This transfer was an attempt to solve this problem.

Under the Geneva Convention, the officers were not required to work, and there were no work details in Oflag 55 (V

D). Activities in support of internal camp operations, however, were customary.

The treatment of the POWs was similar to that in other Oflags in the territory of the Reich. The French and Greeks were treated best, while the Yugoslavs were in a somewhat worse position. Only rarely did they receive support from relief organizations. A library was provided as a service. POWs made up an orchestra and also organized educational activities.

Here, too, visits were made by various delegations. The camp was visited by the ICRC on August 16, 1941, and February 23, 1942, and by the YMCA on August 14, 1941, October 2, 1941, October 26, 1941, and September 1, 1942. The YMCA gave priority to serving the POWs by supplying books, musical instruments, and the like. The ICRC examined the overall living conditions of the POWs and made a concluding assessment in each report. For the visit in Offenburg on February 23, 1942, the summary comment was "an excellent camp."

Medical care was provided at two levels. Treatment began first in the camp medical center, which was run, under German oversight, by prisoners who were physicians and by camp personnel. The more serious cases were referred to military hospitals outside the combat zone (with POW wards), in Freiburg and Rottenmünster. The civilian hospital in Offenburg also admitted POWs when necessary.

Oflag 55 (V D) had a subcamp (*Zweiglager*) in Wurzach, housed in the castle there and in barracks on the castle grounds. The branch camp was subordinate to the commandant of Oflag 55 (V D). Formerly, Oflag V C controlled this compound, but on June 5, 1942, by order of the General Army Office, Oflag 55 (V D) took it over, after Oflag V C moved to Lubny. The approximately 700 French prisoners (including officers and orderlies), whom the Germans then moved to Wurzach, played a special role. Thus, they do not appear in the reports of the OKW to the ICRC. Most of these men were Frenchmen from Corsica, whose drive for independence led them to view themselves primarily as Corsicans and only secondarily as Frenchmen. The Germans combined the Corsicans in the subcamp as Project Corsicans and hoped to use them later for the Germans' own political ends. Accordingly, this group received better-than-average treatment, which did not exactly delight the Vichy government.

After only four months, Project Corsicans came to an end, and the POWs were moved to the Rohrsen subcamp of Stalag X C. Camp operations ceased, and the Wurzach subcamp was shut down. On December 1, 1942, the Wurzach camp area was handed over to the Württemberg Ministry of the Interior, which then, on its own responsibility and with its own resources, operated Ilag V C. Wurzach was thereby removed from the Wehrmacht's sphere of responsibility.

At the main camp, all the prisoners were sent away at the beginning of September 1942. The camp now stood empty, but the commandant's office/headquarters was still in existence. British civilian internees from the Channel Islands were now brought to the camp. The military commandant's office thus ran a camp that functioned as an internment camp. This transitional situation, however, lasted only until

December 19, 1942, when the camp was closed by order of the General Army Office. The internees and the campgrounds were turned over to the Württemberg Ministry of the Interior, which then operated Ilag V B. As a result, Biberach an der Riss was removed from the Wehrmacht's sphere of responsibility.

OFFIZIERLAGER (OFLAG) 56

The Wehrmacht created Oflag 56 (map 4c) on April 20, 1941, in Defense District (*Wehrkreis*) VI, but was subsequently transferred to Defense District I.¹ The unit was then deployed to Prostken (today Prostki, Poland).² The Wehrmacht gave the order to disband the camp on June 5, 1942. It received the field post number (*Feldpostnummer*) 19 312 between February 16 and July 18, 1941, and the number was struck between February 15 and July 30, 1942. The camp was under the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

Although it was officially designated as an officers' camp, the camp actually held only enlisted men. Conditions in the camp were the same as in other camps for Soviet prisoners: severely overcrowded, with inadequate food and sanitation and a lack of proper medical care. This environment led to an extremely high mortality rate, which was exacerbated by deliberate abuse from the German guards. As a result, the prisoner population dwindled quickly from several thousand to a few hundred. On April 1, 1942, there were 278 prisoners in the camp; by June 1, only 198.³

As in other camps, the Germans screened newly arrived prisoners to separate out so-called undesirables (Jews and political commissars), who were then shot in the woods near the camp. The Białystok Gestapo carried out the prisoner selections, while the Schutzpolizei handled the executions. Squads from 1st Company of the 13th Reserve Police Battalion shot 111 selected prisoners on September 4, 1941, and another 141 on October 3.⁴

OFFIZIERLAGER (OFLAG) 57

The Germans established Oflag 57 (maps 4c and 4f) on April 7, 1941, in Defense District (*Wehrkreis*) VII. It was deployed to Murnau am Staffelsee. On May 24, 1941, the camp was transferred to Defense District I.¹ In the summer of 1941, the camp was stationed in the city of Scharfenwiese (today Ostrolęka, Poland).² In autumn 1941, the camp was redeployed to Białystok. The Germans dissolved the camp on May 25, 1942. The camp received the field post number (*Feldpostnummer*) 08 701 between February 1 and July 11, 1941; the number was struck between February 27 and July 14, 1942. The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

Although it was officially an officers' camp, Oflag 57 held primarily Soviet enlisted men and noncommissioned officers.

In Białystok, the camp occupied the former barracks of the Polish 10th Cavalry Regiment. Former stables functioned as barracks for the prisoners. Up to 600 men lived in a stable that had previously held 50–60 horses. The prisoners slept in the former horse stalls, in three-tiered bunks. There was no natural daylight in the stables (the windows were closed up or stuffed with rags), no heating or water, and no blankets or mattresses. In the winter of 1941 and 1942, the temperature in the lower bunks descended to -7°C (about 20°F). Part of the space in the stable was used as a room for the barrack police and commandant, another part as a punishment cell, and another as the so-called Sanitary Unit, which was used for the sick and disabled.

The prisoners were fed soup made of frozen rutabagas and frozen, unpeeled potatoes twice a day: 0.3–0.4 liters (10–13.5 fluid ounces) of this so-called soup were allocated in the morning and 0.6–0.7 liters (20.3–23.6 fluid ounces) were given during the day. In the morning and evening, the prisoners were given a half liter (2 cups) of ersatz tea. They were also given a daily allotment of 20–30 grams (0.7–1 ounce) of rotten cheese and 150–190 grams (5.3–6.7 ounces) of ersatz bread.

The systematic underfeeding, cold, filth, overcrowding, lack of bathing facilities or medical care, and placement of sick prisoners together with healthy prisoners led to general ill health, and an epidemic of typhus and typhoid in November 1941. The camp was put under “quarantine,” which simply meant that prisoners were not released from the barracks. Beatings and harassment by the German guards exacerbated the prisoners’ suffering. Mortality among the prisoners reached its peak in December 1941 and January 1942, when 80–100 prisoners were dying each day. The dead prisoners were buried in large trenches in the southwestern part of the camp. There were up to eight of these trenches and 500–1,000 corpses were buried in each one. Thus, it can be concluded that several thousand Soviet soldiers died in the camp.³ On February 1, 1942, there were 11,664 prisoners in the camp.⁴

The Gestapo in Białystok regularly carried out selections of “undesirable” prisoners (Jews and Communists) in the camp. Those selected were then shot near the camp. On October 14, 1941, by order of the Gestapo in Białystok, a team of the 1st Company of the 13th Reserve Police Battalion shot 134 selected prisoners (the majority of whom were Jewish) and on October 30, 1941, they shot another 166 prisoners.⁵

OFFIZIERLAGER (OFLAG) 58

The Wehrmacht formed Oflag 58 (maps 4e and 5) on April 8, 1941, in Defense District (*Wehrkreis*) VIII.¹ It was initially deployed in Neuhammer (today Nowa Kuźnia, Poland)² but was redeployed in Siedlce, in the Generalgouvernement, a few months later.³ On August 30, 1941, it was placed at the disposal of the Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) z.b.V. Lublin.⁴ On October 28, 1941, the Germans converted the camp into Stalag 366.⁵ The 991st Reserve Battalion (*Landesschützenbataillon*) guarded the camp. The camp received the field post number (*Feldpostnummer*) 08 529 between February 1 and July 11, 1941; the number was struck between July 12, 1941, and January 26, 1942.

Conditions in the camp were the same as in other camps that held Soviet prisoners of war. The camp was overcrowded, the food was inadequate, and sanitation and medical care were nonexistent. The result was an extremely high mortality rate, which abuse by the guards exacerbated. The Germans screened newly arrived prisoners to separate out “undesirables” (Jews and political commissars), who were shot by the guards or Security Service (*Sicherheitsdienst*, SD).⁶

OFFIZIERLAGER (OFLAG) 60

The Wehrmacht established Oflag 60 (map 4c) between April 15 and April 25, 1941, in Defense District (*Wehrkreis*) X, but it was later relocated to Defense District I. It was located near the village of Schirwindt (today Kutuzovo, Krasnoznamenskii raion, Kaliningradskaiia oblast', Russia). The Germans dissolved the camp on May 26, 1942. The camp received the field post number (*Feldpostnummer*) 08 551 between February 1 and July 11, 1941; the number was struck between January 27 and July 14, 1942. The camp commandant was first Oberstleutnant Baron von Vietinghoff and was later Major Oelrich. The counterintelligence (*Abwehr*) officer was Hauptmann Berhard Wessel.¹

Although the camp was officially designated as an officers' camp, it only held enlisted men. The first prisoners had already arrived in the camp by the end of June 1941. In total, approximately 25,000 people passed through the camp. The conditions were the same as those in other camps for Soviet prisoners of war. Overcrowding, inadequate food, and lack of proper medical care led to widespread malnutrition and disease. The German guards' abusive treatment exacerbated the prisoners' suffering. This environment caused extremely high mortality, especially in November 1941 and the winter of 1941 and 1942. In total, approximately 11,500 prisoners died in the camp.²

The Tilsit Gestapo led selections of “undesirable” prisoners in the camp, which were undertaken by two Gestapo officials and a translator assigned by the Wehrmacht (Emil

Staschik). With the help of prisoner informants, they discovered Jews and political commissars in the camp, who, with Kriminal-Sekretär Hans le Coutre in charge, were then executed by a Gestapo team, in the forest near Kudirkos Naumiestis.³

SOURCES Primary source material about Oflag 60 is located in BA-MA (RW 6: Allgemeines Wehrmachtaamt/Chef des Kriegsgefangenenwesens); GARF (file 7021-94-434); LCVA; and BArch B 162 (207 AR-Z 23/67 and 302 AR-Z 31/65).

OFFIZIERLAGER (OFLAG) 62 (XIII D)

The Wehrmacht formed Oflag 62 (map 4d) between April 15 and April 30, 1941, in Defense District (*Wehrkreis*) XIII. The camp deployed to Hammelburg, near Würzburg, and was subordinated to the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*). Between November 1 and November 15, 1942, the Germans converted the camp into Oflag XIII D in Nürnberg-Langwasser.¹

Oflag 62 held Soviet officers. The first prisoners arrived at the camp around July 20, 1941. As early as July 23 and 24, 1941, the first 1,200 prisoners were vaccinated to prevent an epidemic. On August 10, 1941, there were 4,753 prisoners in the camp. On December 1, 1941, there were 5,140, and on June 1, 1942, there were 5,850.² In November 1941, an epidemic of typhus broke out in the camp, and as a result the camp was in quarantine from December 1941 until April 1942 and did not accept any new prisoners.³

The most prominent prisoners were Lieutenant Generals Filipp Afanasevich Ershakov (d. 1942, Hammelburg), Ivan Muzychenko (d. 1944, Flossenbürg), and Dmitri Mikhailovich Karbyshev (d. 1945, Mauthausen); and Major Generals M. Potapov, Mikhail Timofeëvich Romanov (d. 1943, Hammelburg), V. Zusmanovich, G. Prokhorov, A. Presniakov, A. Kuleshov, and I. Nikitin.

The conditions in the camp, in comparison with those endured by Soviet prisoners of war in other camps, were decent. However, while the camp was deployed in Hammelburg, 488 prisoners died there: 81 between August and December 1941 (the vast majority in November and December 1941), and 407 between January and October 1942.⁴

In the fall of 1941, a Gestapo squad from Nürnberg-Fürth conducted a screening at the camp to weed out “undesirable” prisoners (Jews and political commissars); the prisoners

selected for execution were taken to the Dachau concentration camp.⁵ In total, approximately 1,100 prisoners were sent from the camp to Dachau for execution.⁶

SOURCES Primary source material about Oflag 62 is located in BA-MA (RW 6: 450–453); WASt Berlin (Stammtafel Oflag 62); and the Archives of the Schweinfurt Public Prosecutor’s Office (case 1aJs 275/70).

OFFIZIERLAGER (OFLAG) 63

The Germans formed Oflag 63 (map 4c) on April 8, 1941, in Defense District (*Wehrkreis*) XIII; shortly thereafter, it was transferred to Defense District I.¹ The camp was deployed to Fischborn (today Dłutowo, Poland).² It received the field post

number (*Feldpostnummer*) 10 587 between February 1 and July 11, 1941. On June 15, 1942, the camp was made a branch camp (*Zweiglager*) of Stalag I F Sudauen; its field post number was struck between January 27 and July 14. The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

Oflag 63 held Soviet prisoners of war (POWs). Although it was officially designated as an officers' camp, the camp actually held enlisted men. The conditions were similar to those in other camps for Soviet POWs. The food was inadequate, the camp was horribly overcrowded, and sanitation and medical care were almost nonexistent. The resulting malnutrition and disease led to a high mortality rate, and the number of prisoners in the camp dwindled quickly from several thousand men to several hundred. On February 1, 1942, 3,102 prisoners remained in the camp; on April 1, 1942, there were 838; on May 1, 1942, there were 106; and on June 1, 1942, there were 98 prisoners.³

As in other camps, the Germans screened new arrivals to separate out "undesirables" (Jews and political commissars), who were then shot near the camp. The Białystok Gestapo performed the selections and members of the Schutzpolizei carried out the shootings. For example, on September 4, 1941, a squad from 1st Company of the 13th Reserve Police Battalion shot 67 prisoners, and on October 3, 1941, they shot 51 more.⁴

SOURCES Primary source material about Oflag 63 is located in BA-MA (RW 6: 450–453); WASt Berlin (Stammtafel Oflag 63); GARF; and BArch B 162/30122–30123: Ermittlungen ZSt Dortmund 45 Js 16/70 gg. H. Errelis u.a. Angehörige der Stapostelle Allenstein wg. der Tötung russischer Kriegsgefangener aus den Offizierslagern (Oflag) 56 in Prostken und 63 in Fischborn/Ostpreussen am 4.9.1941.

OFFIZIERLAGER (OFLAG) 64

The Wehrmacht opened Oflag 64 (maps 4c and 4e) on March 6, 1943, in the town of Wahlstatt (today Legnickie Pole, Poland), in Defense District (*Wehrkreis*) VIII. On May 14, it moved to a site in the western part of Altburgund, in Defense District XXI (known as Schubin prior to 1941; today Szubin, Poland), where it took over the site of the former Oflag XXI B. Originally, the camp had been a boys' school, which the Germans expanded with the construction of additional barracks. The camp area was surrounded by two barbed wire fences and contained a large three-story stone building and three brick and concrete barracks. The enclosure also contained a theater, sports field, chapel, infirmary, canteen, huts for classes, and several unused barracks fenced off by barbed wire. On May 13, 1943, Oflag 64 also took over a subcamp (*Zweiglager*) at Montwy (today Mątwy, Poland); this facility was used only between the closure of Stalag 391 and the creation of Oflag 10 in late 1943. On September 15, 1943, Oflag 64 added a subcamp at Schokken (today Skoki, Poland).

Oflag 64 held a variety of prisoners, starting with 160 Yugoslav officers and 79 Soviet enlisted men in Wahlstatt. Those prisoners were transferred out at about the time of the move to Altburgund. After that, about 980 British soldiers (mostly enlisted men) and slightly over 200 American soldiers (mostly officers) arrived. By the end of 1943, most of the British had been transferred out, but there were now 316 American officers and 21 enlisted men, plus 194 Italian officers and 107 enlisted. The Germans kept the Italians in the subcamp at Schokken. The number of Italians remained fairly stable, while the number of Americans climbed steadily, finally reaching 1,272 officers and 135 enlisted men by January 1945.¹

Because the German rations were insufficient to sustain life, the prisoners subsisted primarily on Red Cross parcels. What bread the Germans did provide often caused stomach ulcers, which the camp's eight American medical officers treated. The Germans also provided no clothing, so the prisoners suffered considerably through the winter of 1944.

Toward the end of the war, overcrowding became a big problem in the camp. By March 1944, the Germans had established additional barracks and latrines, but these served only to ease, not resolve, the demands on the camp infrastructure. The population of American officers in the camp, for example, had grown from 336 in November to 402 in

Oflag 64 at Altburgund. Barracks with prisoners in foreground, July 1944.

COURTESY OF ICRC

March. Additional barracks failed to keep pace with the escalating prisoner population.²

Despite the overcrowding, overall health and conditions remained acceptable, particularly in contrast to the conditions in enlisted men's camps. The barracks remained relatively clean, few hygiene problems were reported, and overall health did not drop significantly. The low quality of the food during the late stages of war, particularly the lack of fresh produce, did result in widespread vitamin deficiencies, but medical officials did not view these problems as serious or particularly threatening.³

Reserve-Lazarett Wollstein functioned as the camp hospital for injured or ill prisoners of Oflag 64. The hospital consisted of several complexes and its capacity stood at around 200. Seven wooden buildings functioned as barracks, with the Soviet prisoners kept separate from other European and Allied forces. In addition, there was an isolation ward, washing facility, recreation building, kitchen, and storage room. Only the operating room was housed in a stone building. Due to the rather basic construction of the camp, it handled only minor surgeries, with more serious cases being moved to a larger military hospital.⁴ However, it seems that very few prisoners from Oflag 64 ever had to visit this facility.

While in the hospital, prisoners had access to weekly hot showers and generally better rations than those in the main camp. Prisoners pooled the Red Cross parcels and distributed them collectively. Although conditions were basic, prisoners found the facilities to be adequate overall, with sufficient food, medical attention, and heating.⁵

There was a strong sports program in Oflag 64 as well as interdenominational and Roman Catholic religious services, which the Germans allowed to take place without any interference. Prisoners also had opportunities to attend movies in town with regularity, provided they signed a form renouncing any attempts to escape. The camp theater held prisoner of war (POW)-produced shows, and in the cold winter months the facility took over chapel duties as well.

The American senior officer was Colonel Thomas D. Drake, who served in this capacity until repatriated on July 27, 1944. Colonel George V. Millett replaced Drake until Colonel Paul R. Goode arrived in camp on October 16. The executive officer was Colonel Millett, his assistant was Major K. Hanson, the welfare officer was Lieutenant Colonel John K. Waters (General George S. Patton's son-in-law), and the adjutant was Major Merle A. Meachum.

The German camp personnel consisted of approximately 100 men of the 813th Infantry (Grenadier) Regiment and four administrative officers. The commandant was Oberst Fritz Schneider, his deputy was Oberstleutnant Leuda, the security officer was Hauptmann G. Zimmermann, the welfare officer was Sonderführer W. Theissen, and the camp doctor was Dr. Pongratz.

Relations between the German captors and American prisoners remained proper and impersonal at first; in fact, Oflag 64 was considered to be an excellent camp, much better than many others that held American officers. However, when the camp became overcrowded in late 1944, relations strained considerably, and some incidents took place that showed a German tendency to provoke ill will in the camp. It seemed that the Germans wanted as many prisoners as possible under sentence.

During the summer of 1944, the Germans marched four American officers to the nearby town of Gneisen for medical treatment. The guards forbade the officers to walk on the pavement, insisting that they walk in the street. The Americans found this to be demeaning and resisted. In the end, the guards permitted the Americans to walk on the sidewalk, but they were charged with "Obstructing the Functions of the German Reich." The Americans were acquitted of the charge, but the Germans retried them in January 1945 and the Americans received a death sentence. It was never carried out, due to liberation by the Red Army. A similar incident took place between the German guards and a Lieutenant James R. Schmitz, this time over German propaganda posters about gangster warfare, which the Americans objected to. Schmitz and Lieutenant Colonel Schaefer were charged with the same thing and found guilty, but again, liberation prevented their executions.

The American POWs were worried that the SS would receive orders to execute them all. MIS-X, the secret American escape organization at Fort Hunt, Virginia, responded to secret coded letters from the X Organization in Oflag 64 and decided to plan a major prisoner raid. Thirty men volunteered from the 101st Airborne Division for a low-level jump to attack and secure the guard house. The plan called for converted B-17 bombers to land close to the camp and evacuate the prisoners. After all the plans were completed at the highest levels, the US Army scrapped them when a large German unit entered Schubin.

The American officers were never required to perform any unauthorized work in camp, but the enlisted prisoners were sent to work in a local sawmill. The prisoners' morale was high, especially after D-Day, June 6, 1944, and they produced

a camp journal, the *Oflag Item*, issued from November 1943 to January 1945. Theater, library, and sports activities improved morale as well and were supported heavily by the YMCA. The prisoners also availed themselves of the numerous textbooks to improve their knowledge about various subjects.

With the Red Army approaching from the east, and the Germans facing the reality of defeat, relations eased considerably. On January 21, 1945, the German commandant informed the senior American officer that the camp was to be evacuated immediately. The able-bodied men left quickly, and the Germans agreed to leave 86 sick behind in the hospital under senior officer supervision. The other 1,471 officers and enlisted men left on foot for the snowy, 345-mile hike to Brandenburg. On January 22, the first Russians appeared on the road near Oflag 64, and the Americans made evacuation plans with them. On January 28, the men left Schubin in Russian trucks for the town of Rembertów and arrived on January 31. On February 22, they left for Odessa, and on March 1, 1945, they boarded ships and airplanes for the trip home.

Of the 1,471 officers and men who left Oflag 64 on the long miserable march, only 423 officers and 67 men completed it to the end, at Oflag XIII B at Hammelburg. Of the rest, some escaped the march and returned to the Soviet lines; others fell out and may have been shot. The trip itself was hazardous: the weather was inclement, very cold and wet, rations were short except for barter with local farmers, and there were no shaving or washing facilities along the route at all. On March 6, 1945, the remaining officers and men on the march boarded a train at Parchim that arrived at Oflag XIII B on March 9. At Hammelburg, a camp full of Soviet POWs, they could at least rest, but their ordeal was not yet over.

OFFIZIERLAGER (OFLAG) 65

The Wehrmacht formed Oflag 65 (maps 4b and 4f) on May 26, 1942, from the staff of Oflag V C, which was located in the town of Wurzach (today Bad Wurzach).¹ Beginning in July 1942, the camp was deployed in Lubny (113 miles / 182 kilometers east-southeast of Kiev, in Ukraine), where it replaced Dulag 132.² On December 15, 1942, the camp was converted into *Legions-Sammellager Lubny* and used to train soldiers for the *Ost-Legionen*.³ On June 24, 1943, the prisoner of war (POW) camp was officially dissolved. On January 18, 1944, the camp was reestablished as Oflag 65, and, at some point after that, the camp deployed to Strasbourg, but information about the camp during this period is not available. At least from September 1944 to the end of January 1945, the camp was located in Barkenbrügge (later Barkniewko, Poland, about 4.75 miles / 7.7 kilometers west of Okonek).⁴

While it was deployed in Wurzach, Oflag 65 was under the authority of the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*). In the summer of 1942, the camp was under the Commander of the Rear Area of Army Group B (*Befehlshaber des rückwärtigen Heeresgebietes B*). In the fall of 1942, the camp was subordinate to the Commander of Prisoners of War of the Military Commander of Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ukraine*), and, subsequently, to the 162nd (Turkoman) Infantry Division. While deployed in Barkenbrügge, it was under the Commander of Prisoners of War in Defense District II.

While it was deployed in occupied Ukraine, Oflag 65 held Soviet POWs. During the deployment in Barkenbrügge, the camp held primarily Serbian officers. On October 1, 1944, there were 1,608 Serbian officers and 205 Soviet and Serbian orderlies in the camp. On January 1, 1945, there were 2,606 Serbian officers and 306 Soviet and Serbian orderlies.⁵

At the end of January 1945, as a result of the approach of the Red Army, the camp evacuated to the west via Oflag II D. The Red Army liberated the camp on January 31, 1945.

OFFIZIERLAGER (OFLAG) 66

The Germans established Oflag 66 (map 4a) on December 15, 1944, in Osnabrück-Eversheide, in Defense District (*Wehrkreis*) VI, but it was placed under the authority of the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*); there is no clear explanation for this anomaly in the existing sources on the camp.

Oflag 66 held imprisoned officers, mainly French and Belgian, with their orderlies. The maximum number of prisoners in the camp is listed in one source as 2,400;¹ however, another source states that the camp held 3,349 Yugoslav officers and 217 orderlies.² Conditions in the camp were satisfactory and generally in compliance with the 1929 Geneva Convention relative to the Treatment of Prisoners of War. Allied forces liberated the camp on April 5, 1945.

SOURCES Primary source material about Oflag 66 is located in BA-MA (RW 6: 452–453); WASt Berlin (Stammtafel Oflag 66); and StA Osnabrück.

Additional information about Oflag 66 can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*, vol. 2 (Koblenz: self-published, 1987), p. 24; and Gianfranco Mattiello, *Prisoners of War in Germany 1939–1945 (Camps, Nationalities, Monthly Population)* (Lodi: self-published, 2003), p. 223.

OFFIZIERLAGER (OFLAG) 67

The Wehrmacht established Oflag 67 (map 4b) in Defense District (*Wehrkreis*) II on January 20, 1944, from the staff of Stalag 371. It was deployed to Neubrandenburg.¹ The camp received the field post number (*Feldpostnummer*) 45 667 on January 24, 1944. On December 4, 1944, the camp ceased to be independent and became a branch of Stalag II A known as a “Teillager Oflag.”² The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*).

The camp held mainly Dutch officers with their orderlies, in addition to a small number of Soviet officers; soldiers of other nationalities, including French, Belgian, British, Polish, and Serbian, also passed through the camp.³ The table below shows the camp population on selected dates in 1944:⁴

Date	Dutch officer/ orderlies	Soviet officers	Total
March 1, 1944	1,516/336	200	2,052
April 1, 1944	1,527/337	201	2,065
May 1, 1944	1,532/340	201	2,073
June 1, 1944	1,542/354	193	2,089
August 1, 1944	1,290/357	130	1,777
September 1, 1944	1,302/365	130	1,797
October 1, 1944	1,320/360	130	1,810
November 1, 1944	1,321/372	150	1,843
December 1, 1944	1,332/372	169	1,863

The conditions for the officers were generally satisfactory and in accordance with the Geneva Convention relative to the Treatment of Prisoners of War (1929). However, the barracks were relatively primitive, and recreational activities were limited. Religious services were held regularly in the camp.⁵

Oflag 67 at Neubrandenburg. Orderlies (batmen) transporting soup, date unknown.

OFFIZIERLAGER (OFLAG) 68

The Wehrmacht established Oflag 68 (map 4c) on April 8, 1941, in Defense District (*Wehrkreis*) VIII. On May 24, 1941, it was moved to Defense District I.¹ The camp was located in the village of Krzywólka, about 1 kilometer (0.6 miles) northwest of Sudauen (today Suwałki, Poland).² On June 15, 1942, the camp was converted into Stalag I F Sudauen.³ Oflag 68 received the field post number (*Feldpostnummer*) 08 962 between February 1 and July 11, 1941. The number was struck between January 27 and July 14, 1942. The camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

Oflag 68 held Soviet prisoners of war. Although the camp was formally classified as an Oflag (an officers' camp), it actually functioned as a Stalag (enlisted men's camp). The camp

occupied an area of about 20 hectares (almost 50 acres). A barbed wire fence and guard towers were built to fortify the compound. When the first prisoners arrived, no barracks existed on the site, and the prisoners had to sleep in holes they dug in the ground; many prisoners died of exposure as a result. Barracks were not built in the camp until several months after it opened. The prisoners' food rations were also insufficient. They received about 200 grams (7 ounces) of bread and a liter (4 cups) of watery soup per day; with such minimal rations, starvation set in rapidly.⁴ Infectious diseases such as typhus and dysentery were also widespread in the camp. In addition to the terrible living conditions, the prisoners also suffered from deliberate abuse by the guards; for example, one witness recalled that a German soldier tasked with distributing bread to the prisoners repeatedly beat a man with his rifle butt for no reason.⁵

Witnesses reported that the population of the camp in the fall of 1941 was between 10,000 and 20,000, but malnutrition, disease, exposure, and exhaustion took a heavy toll on the prisoners and the population of the camp decreased drastically during the following winter. By February 1942, there were only 1,766 prisoners left in the camp.⁶

As in other camps, the Germans screened newly arrived prisoners to separate out “undesirables,” such as Jews and political commissars, who were then shot in the woods near the camp. The selections were conducted by personnel from the Sudauen Gestapo office and the executions were carried out by Schutzpolizei units.⁷ No official figures on the number of deaths in Oflag 68 are available from the ChGK or other sources, but it can be safely assumed based on reports from eyewitnesses (several of whom claimed to have seen bodies buried by the hundreds) and the above population statistics that thousands of prisoners died in the camp.

SOURCES Primary source material about Oflag 68 is located in BA-MA (RW 6: 450–453); WASt Berlin (Stammtafel Oflag 68); and BArch B 162/16382, 17618–17619.

OFFIZIERLAGER (OFLAG) 73

The Wehrmacht established Oflag 73 on January 29, 1944, from Stalag 333 in Beniaminów, in the Generalgouvernement. It remained in Beniaminów, 23 kilometers (14.5 miles) north-northeast of Warsaw, until April 1944. While it was deployed in Beniaminów, Oflag 73 had a subcamp (*Zweiglager*) in the Praga district of Warsaw and also had authority over a prisoner of war (POW) reserve hospital (*Kriegsgefangenen Reserve-Lazarett*) in Błonie. In April 1944, the headquarters (*Kommandantur*) of Oflag 73 was transferred to Nürnberg-Langwasser in Germany (map 4d).¹ In November 1944, the camp ceased to be an independent camp and was converted

into a branch of Stalag XIII D, known as Stalag XIII D/Teil-lager Oflag Nürnberg. On January 29, 1944, Oflag 73 received the field post number (*Feldpostnummer*) 14 231. The number was struck on September 11, 1944.

From January to April 1944, the camp was under the authority of the Commander of POWs in the Generalgouvernement of Poland. From April to November, it was subordinate to the Commander of POWs in Defense District (*Wehrkreis*) XIII.

From January to April 1944, the camp held Soviet and Italian prisoners (including officers), and thereafter it held only Italian officers and orderlies. In September 1944, a number of Romanian officers and orderlies also arrived in the camp, and, in October 1944, some Polish officers joined them. The Germans had captured the Polish officers during the Warsaw Uprising that fall. Within that group, the best-known individuals were the leader of the uprising, General Tadeusz Bór-Komorowski, and other officers including Tadeusz Pełczyński, Antoni Chrucielski, Albin Skroczyński, Kazimierz Sawicki, and Tadeusz Kossakowski, in addition to a field-grade officer, Colonel Kazimierz Iranek-Osmecki.² On February 5, 1945, the Polish prisoners were transferred to Oflag IV C.

The table that follows shows the number of prisoners in the camp on selected dates in 1944.³

Information on the conditions for Soviet prisoners is limited. Generally speaking, Soviet prisoners tended to fare the worst, although conditions were almost certainly not as bad in Oflag 73 as they had been in other camps in the period between 1941 and 1942. Nonetheless, as the end of the war approached, conditions in the camp probably deteriorated significantly.

OFFIZIERLAGER (OFLAG) 76

The Wehrmacht created Oflag 76 (map 5) on February 1, 1944, by reorganizing Stalag 328 in Lwów (German: Lemberg; today Lviv, Ukraine). The camp remained in Lemberg throughout its existence, with a subcamp (*Zweiglager*) in the town of Drogobych (today Drohobych, Ukraine), about 65 kilometers (40 miles) to the southwest. The camp was subordinate to the Commander of Prisoners of War in the Generalgouvernement Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*).

Oflag 76 held Soviet prisoners of war (POWs). By this time in the war, conditions had improved somewhat (and were certainly better than they had been in 1941 and 1942), but they were still harsher for Soviet POWs than for prisoners of other nationalities, and death rates were quite high. On May 9, 1944, the order was given to disband the camp.

SOURCES Primary source material about Oflag 76 is located in BA-MA (RW 6: 452–453), WASt Berlin (Stammtafel Oflag 76), GARF (files 7021-67-77, 7021-58-23), and DALO (file P 3-1-278).

OFFIZIERLAGER (OFLAG) 77

The Germans established Oflag 77 (map 5) on January 13, 1944, by restructuring Stalag 307.¹ The camp was located in the fortress in the city of Dęblin-Irena in the Generalgouvernement. The camp also had a subcamp (*Zweiglager*) in Zajezierze, 5 kilometers (3 miles) to the southwest.

The camp held Soviet officers. In April 1944, the camp held 1,282 prisoners. In June 1944, it held 2,131 prisoners.² The Wehrmacht disbanded Oflag 77 on August 19, 1944.

SOURCES Primary source material about Oflag 77 is located in BA-MA (RW 6/450) and WASt Berlin (Stammtafel Oflag 77).

Additional information about Oflag 77 can be found in the following publications: I. A. OFFIZIERLAGER (OFLAG) 78 [VII E]

The Wehrmacht established Oflag 78 (map 4f) on April 30, 1941, in Grossgmain, near Salzburg. Starting in August 1941, the camp deployed to Hohenfels, in Bavaria, where it received the additional designation of Oflag VII E.

The camp was subordinate to the Commander of Prisoners of War in Defense District VII (*Kommandeur der Kriegsgefangenen im Wehrkreis VII*). Oflag 78 received the field post number (*Feldpostnummer*) 13 799 between February 1 and July 11, 1941. The number was struck between January 27 and July 14, 1942.

Oflag 78 was used to hold officers from the Balkans. No information on the conditions in the camp is available. The Wehrmacht disbanded Oflag 78 on May 26, 1942.

SOURCES Primary source material about Oflag 78 is located in BA-MA (RW 6: 452–453; RH 49/5); WASt Berlin (Stammtafel Oflag 78); and BArch B 162/17765–17766: Überprüfung des Oflag 78.

OFFIZIERLAGER (OFLAG) 79

The Chief of Prisoners of War in the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) created Oflag 79 (map 4a) with the order OKW/Chef Kriegsgefangenen no. 2003/44, dated April 29, 1944, from the staff of

Oflag VIII F.¹ The camp was deployed in Querum, about 3 kilometers (1.86 miles) northeast of the city center of Braunschweig, in Defense District (*Wehrkreis*) XI. The camp functioned until April 12, 1945, when American troops liberated it. The camp was under the authority of the Commander of Prisoners of War in Defense District XI (*Kommandeur der Kriegsgefangenen im Wehrkreis XI*).

Oflag 79 held British officers and their orderlies, some of them captured during the abortive airborne attack on Arnhem. The camp was located in the former barracks of a German parachute regiment. The table below shows the number of prisoners in the camp in 1944:²

Date	Officers	Orderlies	Total
June 1	1,724	169	1,893
July 1	1,716	169	1,885
September 1	1,955	169	2,124
October 1	1,925	169	2,094
November 1	2,154	171	2,325
December 1	2,187	217	2,404

The conditions in the camp were generally satisfactory but grew worse as the war went on. At one point, an errant American bombing raid, apparently aimed at the neighboring Hermann Göring aircraft works, hit the camp. None of the prisoners was killed, but the camp kitchen was destroyed, and thereafter the quality of the food decreased markedly. Lieutenant Edmund Scrivener, who arrived in the fall of 1944, wrote:

The rations dealt out to us from our captors were a bare minimum; a few boiled potatoes a day and a small piece of black bread once a week. And once a week was enough; it tasted awful. However, [we received] a Red Cross parcel every week, which [was] about the size of a shoe box and contained all sorts of goodies like cigarettes, corned beef, dried milk, spam which made life bearable. But it couldn't last. By Christmas the country was in such a state that no trains from Switzerland, or lorries from Sweden could get through, and soon the number of parcels dwindled first to one a fortnight, then to one a month, and finally stopped completely. Life was no longer a joke and some astonishing trading went on.³

OFFIZIERLAGER (OFLAG) 80

The Wehrmacht established Oflag 80 (map 4b) on November 20, 1944, in Defense District (*Wehrkreis*) II, from the staff of Oflag II A. The camp was located in Prenzlau, Brandenburg.¹ The camp was under the command of the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*).

Oflag 80 held primarily Belgian officers and orderlies. There were about 3,000 total prisoners in the camp. Conditions for the prisoners were generally satisfactory and in keeping with the requirements of the Geneva Convention on the Treatment of Prisoners of War of 1929. On April 12, 1945, two stray Soviet bombs struck the camp, killing eight prisoners and wounding several more. The Red Army liberated the camp on April 28, 1945.

SOURCES Primary source material about Oflag 80 is located in BA-MA (RW 6: 452–453) and WASt Berlin (Stammtafel Oflag 80).

NOTE

1. Mattiello and Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen*, p. 5; Liste der Kriegsgefangenenlager (Stalag und Oflag) in den Wehrkreisen I–XXI 1939 bis 1945: BA-MA, RH 49/20.

OFFIZIERLAGER (OFLAG) 83

The Wehrmacht formed Oflag 83 (map 4a) on February 21, 1944 (by order of the Armed Forces High Command [OKW] Chef Kriegsgefangenen No. 158/44, dated January 7, 1944), on the former site of Stalag 329 in Wietzendorf, about 5 kilometers (3 miles) north of Hannover, in Defense District (*Wehrkreis*) X. The camp was under the authority of the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*).

Oberst Bernardi was the camp commandant, Hauptmann Deichsel served as the deputy commandant until the summer of 1944, Hauptmann Rörich was the counterintelligence (*Abwehr*) officer, and the camp officers (*Lageroffiziere*) were Hauptmann Leimberger (mentioned in some documents as Leimserger) until September 1944, and then Hauptmann Jahn. Hauptmann von Mollerius was in charge of postal and package services (search, censorship, and eventual seizing of goods), Hauptmann Girtler was the camp's chief doctor responsible for the infirmary, and Hauptmann Reinschmidt was in charge of the labor office.¹

The camp was reserved for Italian officers detained as "military prisoners" (the German term, meant to make the prisoners' plight seem milder) and not recognized as prisoners of war (POWs). The highest number of prisoners, reached in the spring 1945, was 6,000. A few days before liberation, 2,000 French officers sent from a hospital camp close to Nienburg arrived at Oflag 83 (the elderly Colonel Duluc was their spokesperson).

Because the Germans reserved Oflag 83 for Italian military prisoners for almost its entire existence, the camp did not come close to meeting the standards provided for by the Geneva Convention. The barracks were narrow, dark, and cramped (each little room of 9.4 by 17 meters [30.8 by 55.8 feet] accommodated 50–90 men) and consisted of disjointed concrete blocks unsuitable for repair after harsh winters. The floors consisted of blocks of reinforced concrete laid down directly onto the soil; they were in a very bad state of maintenance, similar to the roofs, which lacked attics and consisted of simple wooden planks.² Rooms were equipped with heaters but the supply of peat (used as fuel) was inadequate, and its distribution was even suspended during the fall and winter months of 1944.³ Problems with the cold were common for the captured officers, especially since many of them were wearing summer uniforms at the time of their capture; they never received warmer clothing and only had one blanket each.

The hygienic arrangements were primitive: shared bathrooms consisted of shacks with wooden platforms over

concrete pits. The sewage had to be loaded into open wagons with pumps and buckets. Bathrooms in the barracks, for use at night or during air raids, consisted of nothing more than holes above small wooden boxes. Liquid waste ran through open ditches to pits at the edge of camp, which was also the destination for solid waste.⁴ Not only did this arrangement create a disgusting and unhealthful atmosphere and add to infestations of vermin, but it also contaminated the camp's water supply, which came through pipes from only 8–12 meters (26.2–39.4 feet) below the surface. The water had to be boiled to be made potable. The food was also insufficient and of poor quality.⁵

The infirmary had at its disposal about 60 out of 100–120 beds received in January 1945 following the designation of new rooms for hospitalization purposes. There was no anteroom, so the officers had to wait for their visits in a line outside. Sanitary and surgical tools were virtually nonexistent; medications were limited to basic preparations administered by the German personnel and distributed in "weekly rations" irrespective of an illness's development.

Since the Germans did not recognize the Italian prisoners as POWs, the latter could not receive help from the International Red Cross or the Italian Red Cross (South). The Nazi authorities handled both postal and package services, and any new supplies of food, sanitation, or clothing had to arrive by means of Internees Assistance Services (SAI) or the Italian Red Cross (North).⁶ Detainees were allowed to receive letters and packages from their acquaintances or family but only if sent from territories under Nazi-Fascist control: the number of officers eligible for obtaining help and news from Italy was thus continuously diminishing with the advance of the Allied front. In terms of assistance lent by SAI, this was limited to the negligible average of 4–5 kilograms (8.8–11 pounds) of food per person (delivered in three different transports from the camp's foundation until liberation). It included no supplies of new clothing or basic essentials for living.⁷

The Italians were allowed to organize cultural activities. The camp's elderly Lieutenant Colonel Pietro Testa sought to take maximum advantage of this opportunity by giving practical lessons to the officers (such as lessons in hygiene that taught them how to protect against infectious diseases or infestations caused by lice) but, most importantly, to strengthen their will to remain in the camp and not collaborate with the Nazis and the Salò government (Italian Social Republic).⁸ The programs of the "Speaking Journal '83" (*Giornale Parlato '83*) conferences, combined with several officers' diaries, help us understand how *lecturae dantis*, along with the lectures on the *Risorgimento* and civil rights, served as a means not only for spending free time but also for bolstering resistance.⁹ Special spaces inside the camp were reserved for these activities: a building used as a rudimentary theater, a library that grew from an initial 150 books to around 2,000, and a chapel decorated with various ornaments that several officers had recovered.¹⁰ The activities and religious functions had to be approved (on the basis of a written program presented to the German command) and took place in the presence of censors;

using write-ups or personal diaries was not allowed but drawings could be used during performances. However, not a small number of officers managed to jot down and eventually hide notes, some of which are now available in their original form.¹¹

The Germans' treatment of the Italian military prisoners was generally brutal and arrogant, and at times criminal. They applied collective punishments, and the sentries fired on the prisoners repeatedly and for no good reason, wounding many gravely and, in one case, even killing an officer.¹² The camp was equipped with underground punishment cells that were devoid of heating and so small that one could neither stand nor sit, only "curl up sideways."¹³ Officers in confinement were given a single ration of bread daily, and forbidden to exercise or to practice religion, even during long-term punishments.¹⁴ The treatment of Italians further worsened after the Germans began attempting to civilianize them, that is, to strip them of their military status and to make them agree to work for the Reich. The pressure took the form of food ration cuts, collective punishments, maltreatment, beatings, threats, and psychological pressure. Opposing collaboration meant harsh incarceration and punishment camp for many Italian military prisoners. Testa recalls, in particular, the cases of Lieutenant Colonel Cesare De Palma sentenced to five months of harsh imprisonment for anti-German propaganda; Lieutenant Crucoli, sentenced at first to three months for hiding two radio receivers and, after his return to the camp, to an additional two months for anti-Nazi propaganda;¹⁵ and Major Viviano, Captain Carlo Radonich, Captain Enzo Masnada, and Major Giovan Battista Capurro, whom the Germans expelled from the camp as "undesirables" due to anti-Nazi propaganda. On September 12, 1944, a group of officers whom the Germans forced to work against their will forwarded, through Testa, a formal protest note to the camp's German command, in which they pointed out their right as officers not to work for an enemy nation, as stipulated in the Geneva Convention of 1929.¹⁶

Transfers of forced laborers continued. Many officers whom the Germans forced to leave Oflag 83 refused to work even when ordered to do so. At that point, the Gestapo intervened and sent those deemed "recalcitrant" to both penal camps (*Straflager*) and labor reeducation camps (*Arbeitserziehungslager*).¹⁷ Testa opposed the forced labor program with all his power. He even wrote to the camp's command and, through them, on to the OKW.¹⁸ Testa also attempted to make contact with the Allies and the International Red Cross: these two missions were entrusted to two Italian prisoners about to leave the camp: Enrico Adami and Ciro Ciompi. Capitano Adami, who fell sick and was to be moved to the hospital camp in Nienburg, left on December 10, 1944, carrying with him a report for the International Red Cross on hygienic and sanitary conditions in the camp. The outcome of this mission was released later in a statement after the liberation: Adami was never allowed to see representatives of the International Red Cross but managed to deliver a copy of the report to a French chaplain, as well as two soldiers (a Belgian

man and French woman) who eventually returned to their home countries to forward the letter to the Red Cross.¹⁹ The second mission was entrusted to the Second Lieutenant Ciompi: his plan was to leave Oflag 83 pretending to be a labor volunteer before reaching the Allied lines. Ciompi left the camp on January 12, 1945, but never managed to successfully accomplish his mission.²⁰ Dispatches of the officers as forced laborers came to an end in March 1945 when the war was practically over.

On April 13, 1945, the officers woke up to a semideserted camp; the majority of German personnel had left Oflag 83. On April 16, British Major Cooley arrived at the camp with his troops and proclaimed the camp liberated but left it unguarded; the following day, a group of SS in retreat set themselves up in the camp and regained control over it. On April 22, the Germans gave permission to both Italian and French prisoners capable of walking to cross the Allied lines during a specially negotiated armistice.²¹

SOURCES Primary source information about Oflag 83 is located in BA-MA (RW 6: 452–453), WASt Berlin (Stammtafel Oflag 83); and BArch B 162/6753 (Misshandlung und Gewaltanwendung gegenüber italienischen Kriegsgefangenen im Oflag 83 in Wietzenburg von September 1943 bis April 1945). The most complete document on life in Oflag 83 is perhaps the report prepared by Lieutenant Colonel Pietro Testa (Archivio Anei, Pietro Testa, Wietzendorf)—there is an edited version of the report: Pietro Testa, *Wietzendorf* (Rome: Centro Studi sulla Deportazione e l'Internamento, 1998). Other reports on the Oflag are present in the Historical Archives of the General Staff of the Army (I/3, b 163, 3); with respect to the work carried out by the SAI and the Northern Italian Red Cross, some information can be found in Asc Cri. Compared to the surveys carried out at the former Oflag regarding voluntary work or the officers obligation to work, in addition to the annexes to the Testa report, refer to Fondazione Michelletti, Documentary and memorial fund of the tournaments, Vittorio Emanuele Giuntella, original documents , b. 1, f. 01/6, sf. 3: "Disciplinary legal study on voluntary work," Wietzendorf. The Anei Archive preserves in the Diari fond a number of original and unpublished journals written by officers in the Oflag.

Additional information about Oflag 83 can be found in the following publications: Mario Avagliano and Marco Palmieri, "Gli Internati Militari Italiani," *Diari e lettere dai lager nazisti 1943–1945* (Milan: Einaudi, 2009); Enzo De Bernart, *Da Spaltato a Wietzendorf, 1943–1945: Storia degli internati militari italiani* (Milan: Mursia, 1973); Ugo Dragoni, *La scelta degli I.M.I: Militari italiani prigionieri in Germania (1943–1945)* (Florence: Le Lettere, 1996); G. OFFIZIERLAGER (OFLAG) II A

The Wehrmacht established Oflag II A (map 4b) on August 28, 1939, in Defense District (*Wehrkreis*) II and deployed it to Prenzlau, Brandenburg. On November 20, 1944, the camp was converted into Oflag 80.¹

The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis* II). The first commandant of the camp (until the beginning of June 1940) was Colonel Jesco von Puttkamer (1876–1959). The 5th Company of the 281st Reserve Battalion (*Landesschützenbataillon*) guarded the camp.²

The camp originally held Polish officers. At the end of March 1941, Belgian officers and noncommissioned officers (NCOs) replaced the Poles, who were transferred to Oflag II E in Neubrandenburg. Until July 22, 1943, the Belgian man of confidence was Lieutenant-generaal Edouard van den Berghen. His deputy was Lieutenant-generaal Alexis van der Veken.

The camp consisted of two parts, Camp A and Camp B. Camp A held roughly 2,700 officers, while Camp B held about 300 NCOs. Camp A consisted of seven three-story units

Oflag II A at Prenzlau. Prisoners gathering for roll call, February 1944.
Courtesy of ICRC.

(A-E), which included three residential units and a gymnasium. Camp B consisted of six halls, the guards' quarters, a garage, storage for preserved goods, workshops, and baggage storage. Two barbed wire fences surrounded the entire complex. Seven guard towers had also been established around the perimeter of the camp. A total of 36 soldiers guarded the camp during the day. At night, the number of guards in the towers was doubled, and guards patrolled the area between the fences.

Conditions for the officers were generally satisfactory and in accordance with the 1929 Geneva Convention on the Treatment of Prisoners of War. Housing varied by rank. Generals lived two to a room, colonels roomed by fours, majors by eights, and for the NCOs, it was 8, 16, or 34 people to a room, depending on the size of the room. The rooms were heated, and the beds had mattresses, pillows, and blankets. Each room had a table, chair, and stool. In every residential block, each floor had a bathroom and washroom. Cold water was provided every day at certain times, but hot showers were available only two to three times a month.

The camp had a chapel for religious services, a library with 6,000 books, a place for sports, a snack bar, a kitchen, two large canteens (generals and colonels ate separately) (in Block E), and a hospital (in Block D). Cultural and religious activities were an important part of the prisoners' lives. The Polish officers, for example, organized an orchestra, led by Navy chaplain Captain A. Olszewski; a choir, led by Lieutenant Józef Grzyb; and a theater troupe, led by Lieutenant Stanisław Wolicki (who, after the war, became the director of the Olsztyn Theater). Courses were available on a variety of subjects, including agriculture, law, mathematics, architecture, and foreign languages, and there was a pedagogical training course, taught by Lieutenant Colonel Stanisław Kwiatkowski. According to one prisoner, "under the difficult living conditions in the camp, cultural life was one of the most important aspects of the prisoners' community."³

Medical personnel during the Belgians' time in the camp included five Belgian doctors and some Belgian nurses under

the control of the German doctor. There was a distinct lack of some medical specialties in the camp; for 3,000 prisoners, for example, there was only one dentist.

The prisoners were able to send two postcards with 6 lines and two letters with 20 lines once a month. Every 10 days, they were able to receive one letter or one postcard. The prisoners were able to order German, Belgian, and French newspapers and books or magazines.⁴

OFFIZIERLAGER (OFLAG) II B

The Wehrmacht established Oflag II B (map 4b) on October 28, 1939, in Defense District (*Wehrkreis*) II, and deployed it to Arnswalde (today Choszczno, Poland).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis* II).

From November 1939 until May 1942, the camp held Polish officers. The first transport of 2,254 Polish prisoners

arrived at the camp on November 6, 1939. The number of prisoners in the camp remained relatively stable through May 1942.

The camp was located in the former barracks of the Polish 14th Infantry Regiment. Two rows of barbed wire fencing, 2.5 meters (about 8 feet) tall and 1.5 meters (5 feet) wide, surrounded the camp. Guard towers with machine guns and searchlights were located at each corner.

The Polish officers organized their own self-governance in the camp, led by an elder (*starosta*). The elder presented the interests of the prisoners to the German leadership in the camp. In turn, the elders were Colonels R. Kaleński, W. Tyczyński, and Witold Morawski. The camp elder established the cultural-educational commission, which dealt with the organization of cultural life, education, and science. In particular, the prisoners organized and ran different courses and hobby groups focused on teachers, engineers, farmers, economists, mathematicians, literary ideas, legal issues, and others. The prisoners also established a theater and three orchestras and even published their own magazine under the name “Behind Barbed Wire.” Religious life was handled by Catholic priests and an Evangelical minister, who held services each Sunday and conducted other religious activities, such as funerals. The camp had a library that included both religious and secular texts.

There was a resistance movement in the camp that concentrated on organizing escapes. One of the first escapes occurred on May 13, 1940, when 21 officers broke out.²

In May 1942, the Polish officers were transferred to Oflag II D in Gross-Born, and French prisoners arrived to take their place. A few Belgian and Yugoslav officers arrived later. The number of prisoners remained fairly stable at about 2,800. French officers also engaged in cultural and educational activities, published bulletins, and participated in resistance activities by organizing escapes.³ The Red Army liberated the camp on April 22, 1945, but most of the prisoners had already been evacuated to the west.

SOURCES Primary source material about Oflag II B is located in BA-MA (RW 6: 450); Deutsche Dienststelle (WAS) Berlin (Stammtafel Oflag II B); and BArch B 162/17367–17369 (Überprüfung des Oflag II B).

OFFIZIERLAGER (OFLAG) II C

The Wehrmacht established Oflag II C (map 4b) on May 21, 1940, in Defense District (Wehrkreis) II and deployed it in Woldenberg (today Dobiegiew, Poland).¹ The camp was under the authority of the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*).

Oflag II C held Polish officers and their orderlies. Among the inmates at the camp were a small number of officers from the Polish navy, 165 as of December 31, 1943.² It was a large camp, with 25 brick barracks, 13 in the West Camp (*Westlager*) and 12 in the East Camp (*Ostlager*); the naval officers resided in Barrack XV in the *Ostlager*. A barbed wire fence 2.5 meters (about 8 feet) high and 2 meters (6.6 feet) wide surrounded the campgrounds, which were about 25 hectares (62 acres) in area. Eight guard towers with machine guns, floodlights, and telephones stood around the perimeter. The first group of Polish prisoners (495 officers and 172 orderlies) arrived at the camp on May 28, 1940. By March 1941, the population had risen to approximately 6,200; it remained between 6,200 and 6,700 for the remainder of the war.³

The Polish officers organized their own form of self-administration in the camp. This self-administration was headed by an elder (*starosta*), whom the German camp commandant appointed. The leader represented the interests of the prisoners to the German camp leadership. The camp leaders were, in chronological order, Colonels Ignacy Misiąg, Stefan Biestek, Waclaw Szalewicz, and Waclaw Młodzianowski. Under the leader, there were heads of the eastern

and western sections of the camp, which in turn consisted of six battalions (about 1,000 persons in each battalion), each of which had four companies (with two companies in each barrack).

From June 1942 onward, an International Red Cross delegation stayed at the camp. Through the delegation, the prisoners began to receive food parcels. The delegation also intervened and assisted on February 5, 1943, when camp guards shot two officers and wounded six other persons. Because of the delegation's intervention, this incident resulted in the removal of the German camp commandant, Oberst Teubel, and the counterintelligence (*Abwehr*) officer, Hauptmann Doma, from their positions.⁴

The prisoners had access to a wide range of cultural activities in the camp, including a number of university-level courses taught by respected experts, an orchestra, and a theater group led by two professional directors.⁵ In the summer of 1944, the Germans granted the prisoners permission to stage an unofficial "POW Olympics" from July 23 to August 13, and an Olympic flag made from a bed sheet and pieces of colored scarves was raised. The event has been seen as an instance of the Olympic spirit transcending war.⁶

From July 1940 onward, an underground military organization operated in the camp. The organization was primarily concerned with organizing escapes. Initially, Colonel Ignacy Misiąg led the organization; from 1942 onward, Brigadier General Jan Chmurowicz took over that role. During the existence of the camp, the prisoners organized more than 20 individual and group escapes.⁷

On January 21, 1945 (or January 25 or 28; sources differ), as a result of the approach of the Red Army, the camp was evacuated to the west. The Red Army liberated the camp on January 29 and caught up with some of the prisoners shortly thereafter.

SOURCES Primary source material about Oflag II C is located in BA-MA (RW 6: 450–453; RH 53-2/16: Offizierslager II A-E); WASt Berlin (Stammtafel Oflag II C); and BArch B 162/15110: Erkennungsmarkenverzeichnisse Oflag II C and B 162/16204–16205: Tötungen polnischer Offiziere im Oflag II C in Woldenberg/Neumark zwischen Februar 1943 und Februar 1945.

OFFIZIERLAGER (OFLAG) II D

The Wehrmacht established Oflag II D (map 4b) on June 1, 1940, in Defense District (*Wehrkreis*) II from Stalag II E Gross Born.¹ The camp deployed to near Gross Born (today Borne Sulinowo, West Pomeranian Voivodeship, Poland). The camp was subordinate to the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*).

Until May 1942, the camp held French officers and orderlies as prisoners. In February 1941, there were 3,166 officers and 565 orderlies in the camp. In April 1942, there were 2,408 officers and 418 orderlies. From May 1942 onward, the camp held only Polish officers and orderlies. The following table shows the number of Polish prisoners in the camp from 1942 to 1945.²

Date	Officers	Orderlies	Total
June 1, 1942	2544	274	2818
July 1, 1944	4670	376	5046
January 1, 1945	5014	377	5391

The conditions in Oflag II D were generally satisfactory and in keeping with the 1929 Geneva Convention on the Treatment of Prisoners of War (POWs). The POWs lived in wooden barracks. Officers in the camp were divided into

battalions and companies. The Polish officers selected an elder (*starosta*), or leader, from their midst who represented the prisoners' interests with the German camp administration. Colonels Witold Morawski (until 1944) and Izidor Izdebski (from 1944 to 1945) took on the role of the *starosta*.

The Polish prisoners organized cultural and educational activities in the camp. A large stone building served as the prison chapel, theater, concert hall, and library, which was supplied with books by the YMCA and Red Cross. Religious services were conducted by Catholic priests and an Evangelical minister every Sunday. Other religious activities, including funerals, were also conducted by these clergymen.³ The prisoners organized plays, symphonies, choir performances and other such productions. In addition, courses and lectures were offered on a variety of topics, including economics, geography, and mathematics.⁴ A resistance movement organized escapes.

As the Red Army approached at the end of January 1945, the camp was evacuated to the west. This did not mark the end of the camp administration, which moved with the prisoners and remained in operation until the beginning of March.

OFFIZIERLAGER (OFLAG) II E

The Wehrmacht established Oflag II E (map 4b) on September 23, 1940, in Neubrandenburg, Germany, which was part of Defense District (*Wehrkreis*) II.¹ The Germans had placed Polish prisoners of war (POWs) of all ranks in Stalag II A. After a time, they separated the officers and placed them in garages in a nearby military base while Oflag II E was under construction. The camp complex was also referred to as "Lager Fünfeichen," after the former estate on which it was located (now within the city limits of Neubrandenburg).

Oflag II E was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*). The first commandant was Oberstleutnant Gärtner, an elderly former policeman and World War I veteran. His adjutant was Hauptmann Maurer. Gärtner was succeeded as commandant by Oberst Freiherr von Steinecker in the summer of 1942. The counterintelligence (*Abwehr*) officer in the camp was Hauptmann Georg Pawlas, the camp officer was Captain Walter Pockrandt, and the administrative group was headed by Oberzahlmeister Walter Moldenhauer.²

For nearly three years, Oflag II E held only Polish POWs: roughly 2,300–2,500 officers and 140–350 orderlies (the exception being March 1941, when there were 454 Belgian officers and 80 enlisted men in the camp). In the spring of 1944, a smaller number of Soviet and Dutch POWs replaced the Poles.³

Conditions in the camp were generally in keeping with the 1929 Geneva Convention on the Treatment of Prisoners of War. The prisoners were guarded by Landesschützen personnel. They lived in a collection of buildings including garages that had formerly belonged to a German armored division, as well as a group of wooden barracks about 1 kilometer (0.6 miles) away from the main camp. The prisoners in the "garage camp" lived in double bunk beds. Most of the cultural activities for Polish officers took place in the "garage camp." These activities included a choir, an orchestra, and a theater troupe; these groups remained intact after their members were transferred from Oflag II A in 1940. The orchestra and choir performed a program of classical symphonies, while the theater troupe performed popular Polish comedies of the interwar period. The prisoners also organized courses and

lectures in subjects such as mathematics, philosophy, economics, geography, and architecture. They also played sports and organized a “camp Olympics.”⁴

The Germans transferred the majority of the prisoners to other camps on February 29, 1944.⁵ Oflag II E was then redesignated Oflag 67.

SOURCES Primary source material about the Oflag II E is located in BArch B 162/27704 (copy at USHMM RG-14.101M. 2616.00000234-00000320); BA-MA (RW 6/450–453); and WASt Berlin (Stammtafel Oflag II E).

OFFIZIERLAGER (OFLAG) III A

The Wehrmacht created Oflag III A (map 4b) on November 3, 1939, in Defense District (*Wehrkreis*) III and deployed it in Luckenwalde. Until January 15, 1941, the camp was subordinate to Stalag III A, but after that it was an independent camp. On December 31, 1941, it was dissolved as an Oflag and became a part (*Teillager*) of Stalag III A.¹

The camp was subordinate to the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis* III).

The camp held British and Belgian officers. The administrators and guards treated the prisoners properly, and the conditions in the camp were satisfactory and in keeping with

Oflag III A at Luckenwalde. Visit by the ICRC delegate, Dr. Descœudres, 1941.

OFFIZIERLAGER (OFLAG) III B

The Wehrmacht established Oflag III B (map 4b) on June 21, 1940, in Defense District (*Wehrkreis*) III. From 1940 to 1941, the camp was deployed at Tiborlager (today Cibórz, Poland), about 15 kilometers (9 miles) southwest of Schwiebus (today Świebodzin, Poland). The Germans closed the camp with an

order dated February 7, 1942.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*).

The camp held imprisoned Belgian officers. The first transport of about 2,000 prisoners reached the camp on July 24, 1940. Among the officers were several generals, one of whom—Lieutenant General Vandenberghe—became the camp leader.² The German administrators and guards treated the prisoners properly, and the prisoners' conditions of confinement were satisfactory, by and large, and mainly in keeping with the Geneva Convention relative to the Treatment of Prisoners of War (1929).³ Cultural events were common. The prisoners organized a theater in the camp, and prisoners who were professors gave lectures on various branches of knowledge, in particular mathematics. Only one prisoner died in the camp, Lieutenant General Georges Deffontaine (on October 24, 1940). After the camp closed, the approximately 3,000 remaining prisoners were moved to Oflag II A in Prenzlau.⁴

OFFIZIERLAGER (OFLAG) III C

The Germans created Oflag III C (maps 4b and 4d) with an order dated July 10, 1940, in Defense District (*Wehrkreis*) III, and deployed it to Lübben (Spreewald). The camp had a branch (*Zweiglager*) in nearby Frauenberg. As of the fall of

1942, the camp was deployed at Hohenfels, Bavaria (Defense District XIII). On February 18, 1943, the Germans reorganized the camp as Stalag 383.

Initially, Oflag III C was subordinate to the Commander of Prisoners of War in Defense District III (*Kommandeur der Kriegsgefangenen im Wehrkreis III*). After the camp relocated to Hohenfels, it was under the Commander of Prisoners of War in Defense District XIII.

Oflag III C held officers from France, the British Empire (including Australia and New Zealand), Belgium, and the Netherlands.¹ The German administrators and guards treated the prisoners humanely, and the conditions in the camp were good, by and large, in keeping with the Geneva Convention relative to the Treatment of Prisoners of War (1929).² Red Cross parcels supplemented the rather meager rations, and the prisoners could also obtain some foodstuffs in the canteen.

The key challenge for the officers—prisoners who were not put to work because it was forbidden by the Geneva Convention—was combating boredom and depression. They could walk in the surrounding area in large groups, during which they tried to scrounge whatever food they could—fallen fruit, for example, or snails or mushrooms. Occasional escape attempts provided some excitement. The prisoners organized a variety of cultural and athletic activities. They took part in sports and created their own theater, bands (jazz, gypsy), a symphony orchestra, a chorus, and groups with various interests. The prisoners had a library available to them and could play cards or other parlor games. They could get local German papers and magazines and write letters home and even have their pictures taken.

OFFIZIERLAGER (OFLAG) IV A

The Wehrmacht established Oflag IV A (map 4e) in September 1939 then dissolved it on June 5, 1940. They reestablished it on August 31, 1940, and dissolved it again on November 20, 1941. The camp was located in the Hohnstein Castle in Hohnstein.¹ Oflag IV A was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).²

Oflag IV A's first inmates were Polish officers and orderlies (682 and 98, respectively, as of December 13, 1939), but the Germans soon transferred them to Oflag VII A.³ Later the camp held French officers and orderlies (126 and 68 on September 10, 1940) and a few Belgians. The conditions were satisfactory and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).

SOURCES Primary source information on Oflag IV A is located in BArch B 162/790.

OFFIZIERLAGER (OFLAG) IV B

The Wehrmacht established Oflag IV B on October 14, 1939, in Königstein, in Defense District (*Wehrkreis*) IV. The camp was located in the Königstein Fortress (*Festung Königstein*), just west of the town itself, about 48 kilometers (30 miles) southeast of Dresden along the Elbe River. Oflag IV B was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).¹

The Königstein Fortress, built in the late sixteenth and early seventeenth centuries and covering an area of 9.5 hectares (23.475 acres), had previously been used as a prisoner of war camp during both the Franco-Prussian War and World War I. During both world wars, it functioned as an officers'

camp (Oflag). The upper areas of the fortress were reserved for the higher-ranking officers, while the lower-ranking officers and orderlies were kept further down in the casemates. The orderlies slept 14 men to a room, with the high-ranking officers in much less cramped quarters. However, the prisoners (including the orderlies) enjoyed a relatively high level of freedom of movement within the camp and were able to interact with one another readily.² The commandant of the camp between February 1941 and April 1942 was Generalleutnant Friedrich Genthe.

The first prisoners to arrive at Oflag IV B were Polish officers captured during the German invasion of Poland in September 1939; among them were some of the highest-ranking Polish officers in German captivity. By December 1939, there were 213 Polish officers and 59 orderlies in the camp. In the spring of 1940, the Polish officers were transferred out to other camps and replaced by French officers. After that time, the camp's population consisted of predominantly French officers; however, small numbers of officers of a variety of other nationalities (including Belgian, British, Dutch, Greek, Italian, Norwegian, Polish, Serbian, Slovak, and Soviet) were intermittently present in the camp. After the departure of the Polish prisoners in 1940, Oflag IV B remained a very small camp, with the total population of prisoners and orderlies rarely exceeding 200.³ Oflag IV B held some of the highest-ranking Allied officers in German captivity—including French Generals Henri Giraud and René Prioux, and General Otto Ruge, the highest-ranking general in the Norwegian Army. Since officers could not be compelled to work under the Geneva Convention of 1929, there were no work details (*Arbeitskommandos*) attached to this camp, and the prisoners remained within the main camp.

Conditions in the camp were generally relatively good; housing was adequate and prisoners received sufficient food rations and medical care. A Red Cross report from November 16, 1944, noted that the prisoners had sufficient fuel for heating their quarters and that hygiene and food supplies were good but that some prisoners lacked sufficient clothing.⁴ The prisoners' recreation activities were somewhat limited by that time, and discipline was considered strict. As French orderly Michel Bernin noted in a September 1942 *LIFE* magazine article, written after his repatriation from the camp, the prisoners realized soon after their arrival in the camp that they were under constant surveillance through microphones placed throughout the camp by the Germans.⁵ Conditions became harsher after the famous escape of General Giraud—who lowered himself down from a window in the camp on a makeshift rope—on April 17, 1942.⁶

Despite the strict discipline in the camp, there were few reports of abuse by the German guards. One notable exception, however, was the murder of French general Gustave Mesny, who was shot in the back by SS men in Wehrmacht uniforms during a sham transfer to Oflag IV C in Colditz on January 19, 1945. Mesny was allegedly killed in retribution for the death of German general Fritz von Brodowski in French captivity on October 28, 1944.⁷ After Brodowski's death,

Generalfeldmarschall Wilhelm Keitel, the chief of the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW), declared “we can do that too!” (“So was können wir auch!”) and began drawing up a list of potential victims among the Allied officers in German captivity (ostensibly on a verbal order from Hitler).⁸ The direct order for the killing was given by SS-Oberführer Friedrich Panzinger on behalf of the head of the Reich Security Main Office (*Reichssicherheitshauptamt*), SS-Obergruppenführer Ernst Kaltenbrunner, on November 18, 1944.⁹

Oflag IV B was liberated by French forces on May 8, 1945. Some of the prisoners had been transferred to Oflag IV D in Elsterhorst prior to its liberation.¹⁰ Friedrich Panzinger was held in Soviet captivity from 1946 to 1956 and committed suicide in 1959 after being arrested and charged for his involvement in General Mesny’s murder.¹¹ In 1961, SS-Oberführer Hans Jüttner—who had already served four years in prison on war crimes charges—was also investigated by the Baden-Württemberg State Office of Criminal Investigation (*Landeskriminalamt Baden-Württemberg*) for his role in Mesny’s killing; however, the case was abandoned due to lack of evidence. Jüttner died in 1965.¹²

OFFIZIERLAGER (OFLAG) IV C

The Wehrmacht established Oflag IV C on October 10, 1939, in Colditz, in Defense District (*Wehrkreis*) IV. The camp was located inside the Colditz Castle (*Schloss Colditz*), which overlooks the town of Colditz. From November 1940 to May 1943, the camp also functioned as a special camp (*Sonderlager*) for officers from other Oflags who caused trouble by repeatedly violating camp rules or attempting to escape.¹ Oflag IV C was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

Oflag IV C was one of the most infamous prisoner of war (POW) camps in Nazi Germany. Colditz Castle was built in the eleventh century. Early in the Nazi era, between 1933 and 1934, it had been used for security confinement (*Sicherheitsverwahrung*) of political prisoners.² The outer courtyard of the castle held the administrative buildings, while the inner courtyard and the northern half of the castle itself housed the prisoners. In most of the camp’s buildings, the ground floors were used for administrative and practical functions (the camp kitchen, infirmary, etc.) while the upper floors were used as the prisoners’ quarters.³

The prisoners marched to the camp from the Colditz train station, located on the opposite side of the Mulde River; according to Oflag IV C’s duty officer, Hauptmann Reinhold Eggers, this march took about 15 minutes.⁴ Upon their arrival, they were “processed,” which included the confiscation of any money or civilian clothing they possessed; this step was particularly important during the camp’s time as a Sonderlager, due to its psychological effect.⁵ However, some of the activities that took place during the “processing” period were improper under the international laws regarding the treatment of POWs. Lieutenant Maurice C. Shannon, an American prisoner who arrived at the camp on March 5, 1945, was held by himself in a room for several hours and had all of his clothing confiscated; in addition, he was still recovering from a shrapnel wound to his leg and was not given medical attention for the wound during this time.⁶

Oflag IV C at Colditz Castle, after May 1945.

USHMM, COURTESY OF DOKUMENTATIONSARCHIV DES ÖSTERREICHISCHEN WIDERSTANDES, WS #63215.

The first commandant of Oflag IV C was Oberst Max Schmidt. Schmidt, in his late sixties, was considered an “old school” Prussian officer who was very demanding of his staff and required them to show deference to prisoners who outranked them. In June 1942, he was replaced by Oberst Edgar Gläsche. Gläsche was a stricter prisoner disciplinarian than Schmidt had been; however, he followed the requirements of the Geneva Conventions strictly and tolerated some rules violations (such as smoking during roll call). The final commandant was Oberstleutnant (later Oberst) Gerhard Prawitt, who succeeded Gläsche in February 1943. Prawitt was regarded as a martinet, who imposed harsh disciplinary measures on both the prisoners and his own personnel and strengthened the camp’s security by modernizing its defensive structures and installing new watchtowers to prevent escapes.⁷

The deputy commandant at Oflag IV C was Major Menz and the adjutant was Hauptmann Kunze.⁸ The first camp officer (*Lageroffizier*) was Hauptmann Paul Priem. He was succeeded by Hauptmann Hans Püpke. The final camp officer was Reinhold Eggers, who had previously served as the duty officer in the camp. While Priem and Püpke were generally well liked by the prisoners (Priem, in particular, being noted for his good sense of humor), Eggers was treated with more suspicion, although he still treated the prisoners decently.⁹ Eggers—a former schoolteacher—noted in his memoir of his service in the camp that he viewed himself as “a teacher dealing with a lot of naughty boys” and remarked that while the Polish and Dutch prisoners were generally well behaved, the French and British prisoners deliberately tried the guards’ patience; for example, Eggers recalled that during the winters, the prisoners frequently hit the guards with snowballs.¹⁰ The camp was guarded by personnel from the 4th Company of Reserve Battalion (*Landesschützenbataillon*) 395, which was commanded by Hauptmann Georg Thomann.¹¹

Oflag IV C held American, Belgian, British, Canadian, Dutch, French, Polish, and Serbian officers. Despite its

infamy, Oflag IV C was not a particularly large camp; its maximum population was 725 officers and 153 orderlies (batmen) in November 1941. The first prisoners to arrive in the camp were Polish officers captured during the German invasion of Poland in September 1939. As of December 19, 1939, there were 632 Polish officers and 101 orderlies in the camp.¹² However, during this period, the camp mainly functioned as a transit camp for Polish officers, and, shortly thereafter, they were transferred out to other camps.¹³ French officers were first brought to the camp in the spring of 1940, after the German campaign in Western Europe. Canadian RAF officers arrived at the camp from Oflag IX A/H in Spangenberg on November 6, 1940. The first British and Belgian officers arrived in the camp in early 1941, along with another (permanent) contingent of Polish officers. On November 7, 1941, six British captains—the so-called Laufen Six, who were to be central figures in future British escape attempts—arrived from Oflag VII C in Laufen.¹⁴ The first Dutch and Serbian prisoners were brought to the camp in the late summer of 1941. American officers were brought to the camp in the late summer of 1944.¹⁵

Several transfers of prisoners out of the camp occurred in 1943. In June, the Dutch officers were transferred to Stalag 371 in Stanislau (today Ivano-Frankivsk, Ukraine). During the first two weeks of July, the French and Belgian officers were sent to Oflag X C in Lübeck, and in August, the remaining Polish officers were sent to Oflag VI B in Warburg. By September 1943, only British officers remained in the camp. For the remainder of the war, Oflag IV C would hold only Anglo-American prisoners, aside from a small number of French generals who were brought to the camp in January 1945 from Oflag IV B in Königstein and a prominent Polish Home Army (*Armia Krajowa*) General, Tadeusz Komorowski.¹⁶

One unique feature of the prisoner population of Oflag IV C was the presence of several high-profile internees, mainly relatives of important political or military figures in Allied countries. These so-called celebrities (*Prominenten*) were viewed by the Germans as potential hostages who could be used to extract concessions from Allied leaders or be exchanged for prominent German prisoners. Because of their strategic importance, the guards were informed that they were to carefully ensure the security and safety of these prisoners and would face severe punishment if they were harmed. Among the celebrities was British reporter Giles Samuel Romilly, the nephew of British prime minister Winston Churchill.¹⁷ Others included the children of British nobility or military leaders, such as George Haig, the son of World War I general Douglas Haig.¹⁸ On May 2, 1945, the celebrities were evacuated to Stalag 317 (XVIII C) in Markt Pongau, Austria, where they faced execution before being spared by the orders of SS-Obergruppenführer und General der Waffen-SS Gottlob Berger.¹⁹

Conditions in Oflag IV C were mostly good, despite its notoriety, and the Germans generally treated the prisoners in

the camp according to the requirements of the Geneva Convention of 1929.²⁰ Nonetheless, since the camp also functioned as a Sonderlager for much of its existence, discipline was often stricter than in other Oflags. Early in the war, conditions were somewhat difficult, as the camp was overcrowded after the arrival of French prisoners in the spring of 1940, which also strained the camp's sanitary facilities. However, unlike many camps, Oflag IV C had running water and indoor toilets, showers, and washbasins. The prisoners' quarters had electric lights and stoves for heating and cooking, although the electric utilities were unreliable due to faulty wiring and the strain placed on the system by the number of prisoners using it simultaneously.²¹ The prisoners slept in rooms that were 15 meters by 30 meters (49 feet by 98 feet), and, in many cases, received very little sunlight during the day.²² Red Cross inspectors generally regarded the prisoners' food rations as adequate if not abundant (supplemented by Red Cross food parcels) and considered the medical care provided to be sufficient; as of March 1944, there were four doctors and two dentists for the approximately 200 prisoners in the camp at that time.²³ Late in the war, conditions declined again due to shortages of food and medical supplies throughout Germany, which affected almost every POW camp in the Reich.²⁴

The prisoners in Oflag IV C had access to some recreational and cultural activities within the camp. Religious services were provided by Catholic and Protestant ministers within the camp. The prisoners had a substantial library in the camp, described as "first-class" by a YMCA delegate who visited the camp in June 1943. The delegate also noted that the prisoners had organized educational courses on a wide variety of subjects and that there were theater productions in a room with a capacity of about 300 men, as well as a camp orchestra, which used instruments provided by the Red Cross and YMCA.²⁵ Nonetheless, the prisoners often found themselves bored due to the sheer amount of time they had on their hands; unlike enlisted men, officers could not be required to work under the Geneva Convention, so they remained in the camp at all times rather than being sent out in work details like most prisoners in the Stalags. The prisoners did not have enough space for most types of sporting activities and had to improvise physical activities suited to their close quarters. They also took their boredom out on the guards, a practice referred to among the prisoners as "goon-baiting."²⁶

Another favorite pastime of the prisoners, and the bane of the German commandants and guards, was planning and carrying out escape attempts. Although Colditz was intended to be a high-security camp that could safely confine troublemakers and attempted escapees from other camps, there were nonetheless a number of successful escapes from the camp (sources conflict on the precise number, but most cite a figure between 30 and 32).²⁷ After escape attempts mounted by members of each national group on their own failed early in the camp's existence, each group selected an "escape officer"

who would act as the liaison to the other groups, allowing them to coordinate their escapes. The first successful escape attempt was made by French Lieutenant Alain LeRay on April 11, 1941, who fled while the prisoners were returning from their exercise grounds.²⁸ After LeRay's escape, Oberst Schmidt tightened security in the camp with measures including random roll calls, additional guard patrols, and the installation of searchlights.²⁹ The "high water mark" for prisoner escapes was 1942, when 16 of 80 escape attempts were successful. From 1943 on, Oberst Prawitt's restrictive disciplinary measures made it more difficult for prisoners to escape.³⁰ One of the most ambitious escape plans was the so-called Colditz Cock, a two-seated glider that British prisoners constructed from bed sheets and scraps of wood and wire found around the camp; however, the war ended before they could use the glider.³¹

On March 2, 1944, Reichsführer-SS Heinrich Himmler authorized "Aktion K" ("K" for *Kugel*, "bullet"), under which all escaped POWs who were recaptured would be sent to Mauthausen concentration camp and executed. One of those executed under "Aktion K" was Canadian Lieutenant Bill Millar, who escaped from Oflag IV C on January 28, 1944, and was killed at Mauthausen in July 1944.³²

As American forces approached from the west in April 1945, Oberst Prawitt was ordered to prepare for the evacuation of the prisoners in Oflag IV C. However, the prisoner leadership convinced him to turn the camp over to them instead, which he did on April 16.³³ Oflag IV C was liberated by the 9th Armored Division of the American First Army on April 16, 1945.³⁴ Reinhold Eggers was arrested by the Soviet occupation forces in 1946. He was tried for war crimes, convicted, and sentenced to 10 years of hard labor in the NKVD penal camps in Sachsenhausen and Torgau; he was released in 1956 and often met with former captives from the camp until his death in 1974.³⁵

OFFIZIERLAGER (OFLAG) IV D

The Germans created Oflag IV D (map 4e) on June 5, 1940, in Defense District (*Wehrkreis*) IV and deployed it to Elsterhorst (today Nardt), near Hoyerswerda.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

Oflag IV D held Allied officers. The majority of the prisoners were French, but the camp population also included Belgians, Poles, and Serbians. The number of officers in the camp was at most 6,000.² On November 3, 1943, there were 4,000 officers and 400 orderlies in the camp, and, on July 15, 1944, there were only 2,506 French officers. On November 28, 1944, 5,000 officers were in the camp.³

The camp occupied an area of 25–30 hectares (62–74 acres) and consisted of 35 barracks. About 120–190 prisoners lived in each of the barracks, on plank beds, arranged in three tiers.⁴ The conditions in the camp were satisfactory and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).

The prisoners created their own theater in which they presented a thousand performances of about 80 different plays, for which they made more than 1,500 costumes.⁵ They also organized courses on a variety of historical, theological, scientific, and technical subjects and even had an archaeological society that carried out digs in the area.

There was a resistance movement in the camp, which mainly took the form of attempts to escape. A large-scale escape took place on the night of March 29–30, 1941, through a tunnel. Some 30 officers managed to get out.⁶

Reserve-Lazarett 742 was also located in Elsterhorst. The Germans evacuated many of the prisoners from Oflag IV D between February 17 and February 19, 1945, after the bombing of Dresden, leaving 600 sick officers and French officer-physicians in the camp. The marches took groups of around 800 prisoners each to various destinations, usually over 150 kilometers (93 miles) away, in terrible conditions. The Red Army liberated Oflag IV D on April 20, 1945.

SOURCES Primary source material about Oflag IV D is located in BA-MA (RW 6: 450–453) and WASt Berlin (Stammtafel Oflag IV D).

OFFIZIERLAGER (OFLAG) V A

On November 29, 1939, the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) ordered the formation of Oflag V A (map 4f) in Weinsberg, in Defense District (*Wehrkreis*) V, as the duty station of the “Commandant of Officer Prisoner of War Camp V A (Oflag V A).”¹ The camp compound was established in a former Landwehr training camp located in the am Mühlrain area of Weinsberg. The housing for the prisoners consisted of wooden and stone barracks.

Field post number (*Feldpostnummer*) 15 895 was assigned to Oflag V A before January 1, 1940.² This measure, which dates from the period before mobilization planning, seems, in retrospect, to have been unnecessary, as field post numbers were meant for units stationed outside the Reich proper. Until it was shut down, Oflag V A remained in Weinsberg. It never left the territory of the Reich, and its postal service functioned under the stated place name. The entire time, the camp was under the authority of the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen in Wehrkreis V*).

The commandant of the camp from March 28 to September 2, 1940, was Major Wegner. He was succeeded by Major Seeger, who served as commandant from September 3, 1940,

to January 15, 1941. He was followed by Oberstleutnant Baumgärtl, who held the position from July 15 to November 12, 1941. He was replaced by Oberstleutnant Comlicki, who remained at the camp until May 15, 1942, when he was succeeded by Oberstleutnant Alfred Teubner. The final known commandant of the camp was Oberstleutnant Neugebauer who took control on October 7, 1942.³ The camp was guarded by Reserve Battalion (*Landesschützenbataillon*) 970.

Oflag V A was a very small prisoner of war (POW) camp. From 1940 to the beginning of 1945, the prisoner strength averaged only around 1,000 officers and, at most, 200 orderlies (enlisted personnel).⁴ The first POWs arrived on June 10, 1940. They were Dutch officers, who stayed in the camp for only a few weeks. Their presence is not mentioned in the monthly reports of the OKW. This was evidently just a short stopover to break the journey to the camp that was their ultimate destination. On June 22, 1940, the first French POWs arrived, and, until October 1943, the camp was used solely for French POWs. From December 1943 onward, almost all of these officers were replaced with British officers. One Belgian and three Americans also were in the camp, in each case for only a few weeks.

There were no fixed work detachments in keeping with the Geneva Convention, though a few French officers voluntarily joined work units. More precise information on this sensitive subject, however, has not survived, as these officers were charged after the war, in France, with collaboration. Activities in support of internal camp operations, however, were customary.

The treatment of the POWs in the camp met the highest standard, and there was a reason for this. All the prisoners were nationals of Western countries, and because of this they received extensive support from relief organizations and certain concessions from the Germans. Beginning in mid-1944, the conditions became considerably worse, because the wartime circumstances permitted care packages to reach the camps only to a limited extent. As a result, the rations supplied by the Germans were all that was available to the prisoners. These rations did comply with the regulations, but the food was not to the prisoners' liking and, in the final analysis, was insufficient in quantity. In addition, the problems in postal service due to the interruption of communications with foreign countries substantially lowered morale in the camp.

The POWs had a library available, and they organized their own orchestra and had a theater group. There was a major focus on lectures and classes, known as “université libre” by the prisoners. They had workshops for handicrafts, equipped with the appropriate tools. POWs in the group who were members of the clergy held religious services on a regular basis. Several attempts to escape were made, but none of them ended in success. There were also high-profile prisoners in the camp, such as Jacques Georges (later president of UEFA, the Union of European Football Associations) and Guy Mollet (later French prime minister).

Oflag V A received numerous visits from delegations, which then produced corresponding reports. The International

Oflag V A at Weinsberg. Visit by the ICRC delegate, Dr. Roulet, November 1940.

COURTESY OF ICRC.

Committee of the Red Cross (ICRC) visited on November 4, 1940, November 11, 1940, March 12, 1941, August 23, 1941, February 5, 1942, June 7, 1944, and November 8, 1944. The YMCA visited in November 1940, December 3, 1940, and December 22, 1940. Finally, the Scapini Mission visited on July 17, 1941, August 22, 1941, and November 12, 1941.

The visit reports of the ICRC, in particular, covered the full range of living conditions. Each report also contained an overall evaluation. In the first years, it was judged to be an “excellent camp.”⁵ During this time, Weinsberg was regarded as a “model camp,” a showpiece for foreign delegations.

Medical care was provided to the prisoners at two levels. Treatment began first in the camp medical center, which was operated by physician prisoners and personnel under German supervision. More serious cases were referred to a military hospital outside the combat zone (with a POW ward), in Heilbronn.

The operations of the camp began to wind down in the spring of 1945. On March 31, 1945, the prisoners were evacuated by rail and transported to Stalag VII A in Moosburg and Oflag VII B in Eichstätt. On May 12, 1945, the now-empty camp compound was destroyed by an Allied air attack. The compound was liberated by American forces on April 13, 1945.

OFFIZIERLAGER (OFLAG) V B

The Germans established Oflag V B on August 28, 1940, in Defense District (*Wehrkreis*) V, and deployed it from 1940 to 1941 at Biberach an der Riss (map 4f).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*). It received field post number (*Feldpostnummer*) 16 510 between April 28 and September 14, 1940.

The camp held approximately 900 British officers. On October 14, 1941, the officers were moved to Oflag VI B in Warburg, and during the transfer Lieutenant Michael Sturton was shot while attempting to escape.² Generally speaking, however, the German administration and guards treated the prisoners humanely, and their conditions of confinement were satisfactory and basically in compliance with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).³ The prisoners had access to some cultural and recreational activities, including musical groups and a theater troupe.⁴

There was a resistance movement in the camp, which took the form of escapes or attempts to escape. One of the largest escapes took place on September 13, 1941, when 26 prisoners made their way through a tunnel dug underneath Barrack No. 6. Four of them managed to reach Switzerland (110 kilometers/68 miles from the camp). The remaining prisoners were recaptured.⁵

The Germans stopped using the camp in October 1941, possibly because of its proximity to Switzerland, but perhaps also as part of a larger prisoner of war (POW) camp reorganization that the Armed Forces High Command (*Oberkommando der Wehrmacht*) had ordered. Its grounds were used in

the winter of 1941–1942 to confine Soviet POWs from Stalag VA, and, starting in March 1942, the grounds were occupied by Oflag V D/Oflag 55.⁶ Officially, Oflag V B was not disbanded until April 17, 1942. Its field post number was struck between February 15 and July 30, 1942.

SOURCES Primary source material about Oflag V B is located in BA-MA (RW 6: 450–453; RH 53-5/18: Offizierslager V A-C); WASt Berlin (Stammtafel Oflag V B); BArch B 162/17651–17652: Überprüfung des Oflag V B; TNA (FO 916/17: Oflag IV E, V B, VI B, VII B, VII D; WO 311/989: Shooting of a British prisoner of war from Oflag V B, Biberach, at Biberach railway station, Germany, October 1941; WO 224/72: Oflag V B; WO/208/3307/26: Lt. Duncan's report; WO/208/3307/28: Cpt. O'Sullivan's report); and Städtische Archive Biberach. The successful escapes by Lt. Duncan and Cpt O'Sullivan were documented extensively at the time by British Intelligence. Lt. Duncan's report is in the file M.I.9/S/P.G.(G) 639 (subsequently released by the British National Archives under WO/208/3307/26) with a more extensive autobiographical account written up and published in the 1950s under the title of "Underground from Posen." Cpt O'Sullivan's report is in the file M.I.9/S/P.G.(G) 637 (subsequently released by TNA under WO/208/3307/28).

OFFIZIERLAGER (OFLAG) V C

The Wehrmacht established Oflag V C in Ulm, in Defense District (*Wehrkreis*) V, as a commandant's office/headquarters (*Kommandantur*) on August 30, 1940.¹ On September 1, 1940, the office was transferred to Wurzach (map 4f), and camp operations began there. The officer prisoners were housed in rooms of Castle Wurzach, and the noncommissioned officers (NCOs) or enlisted personnel were quartered in barracks on the castle grounds. The camp was under the authority of the Commander of Prisoners of War in Defense District V (*Kommandeur der Kriegsgefangenen im Wehrkreis V*).

Between April 28 and September 14, 1940, field post number (*Feldpostnummer*) 17 725 was issued for Oflag V C, and the number was canceled on September 5, 1944.² The reason the number was canceled was probably part of a plan to deploy this Oflag outside the territory of the Reich at a later time. Assignment of a field post number for the deployment period in Wurzach had no practical purpose, as mail service openly used the place name. After the transfer to Lubny and reorganization as Kommandantur Oflag 65, 17 725 continued to be used by Oflag 65 without this fact being noted in the Field Post Oversight and Survey Office (*Feldpostübersicht*).

Oberstleutnant August Langfeld served as commandant of the camp from January 15 to June 3, 1942. He was followed by Oberst z.V. Max Schmidt, who began his brief tenure on July 2, 1942. He was replaced shortly thereafter by the last known commandant, Oberst Gläsche, who served from July 14, 1942, to February 7, 1943.³ The Wurzach camp was guarded by units of Reserve Battalions (*Landesschützenbataillon*) 411 and 424.

On May 26, 1942, the General Army Office (*Allgemeines Heeresamt*, AHA) issued an order to reorganize the headquarters of Oflag V C as Oflag 65 and, in addition, to transfer it to Lubny. On June 4, 1942, Oflag V C ceased its operation as an independent Oflag and handed over the prisoners of war (POWs) and the camp compound to Oflag 55 (V D) for use as a subcamp. The formal conclusion of the shutdown process took place on June 27, 1942; at that time, the headquarters was already in Lubny.

Oflag V C was designed as a small camp for around 500 officers and 80 orderlies. These plans, however, were not accomplished with regard to either the size or the composition of the prisoner population. During the entire period from 1941 to 1942, the camp held approximately 100 officers and, on average, 460 NCOs and 80 enlisted personnel.⁴ These prisoners, without exception, were French POWs.

This unusual distribution of military ranks in an Oflag came about as follows: Oflag V C was the central assembly camp for all French prisoners from Corsica. The Germans, hoping to take advantage of the Corsicans' extremely strong desire to gain independence from France, attempted to use these prisoners for their own political purposes. Italy also laid claim to Corsica, however, and tried to gain influence there by sending its own propaganda groups to the camp. For these reasons, the officers and the enlisted men from Corsica were placed together in the same Oflag. The Germans tried to prevent contact between the two groups but never completely succeeded in doing so.

The treatment of the POWs was the very best. All the POWs were French nationals, who received substantial support from relief organizations. They also were granted concessions by the Germans. The POWs had a library available, and they organized their own orchestra and a theater ensemble. Workshops with tools for handicrafts were available to them. Prisoners who were members of the clergy held religious services on a regular basis.

There were several attempts to escape, but none was successful. A French NCO was shot by the German guards during one such attempt.

For officers, there were no work squads, as the terms of the Geneva Convention did not require them to work. Activities in support of internal camp operations were customary. The NCOs also had no work requirement, but it was permissible to use them for oversight there. "Voluntary" work was possible in principle and, under pressure from the Germans with the strong support of the Vichy government, was also accepted. The work squads were utilized for agricultural tasks in the region.⁵

Oflag V C was visited by several delegations, which then produced corresponding reports. It was visited by the International Committee of the Red Cross (ICRC) on July 16, 1941, September 19, 1941, February 26, 1942, March 11, 1942, and June 10, 1942, and by the Scapini Mission on July 16, 1941, August 26, 1941, and November 23, 1941.

The visit reports of the ICRC in particular dealt with the entire range of living conditions in the camp. The overall assessment provided in each case was generally positive, owing to the positive underlying conditions; the reports used the term "excellent camp."⁶

Medical care was provided first in the camp's medical center, which was run by prisoner physicians and personnel under German supervision. More serious cases were referred to a military hospital outside the combat zone (with a POW ward), in Heilbronn. After Oflag V C was transferred, all French POWs from Corsica were attached to Oflag 55 (V D) in the form of a subcamp.

OFFIZIERLAGER (OFLAG) VI A

The small town of Soest (map 4a), the site of Oflag VI A, is located in the central part of present-day Germany, on the eastern edge of the Ruhr region. With 25,000 inhabitants (as of 1939), Soest was the seat of government for the Soest kreis and the major town of the region known as the Soest Börde, one of Germany's most fertile agricultural areas. Soest was important to the wartime economy because it was home to one of the German railroad system's largest classification yards; a large transit camp for civilian forced laborers, operated by the regional employment office; and a factory belonging to the firm Akku Hagen, which manufactured batteries.

The prisoner of war (POW) camp was set up on Meiningser Weg, the road from Soest to Neheim, in a military barracks that was under construction at the time. Originally, the plan was to use the facility as a POW camp as early as the fall of 1939. In the end, Oflag VI A was not organized until June 1940, through a reorganization of Stalag VI E. It was guarded by Reserve Battalions (*Landesschützenbataillone*) XVI/VI (later renamed 466), XX/VI (later renamed 478), and 489.

The plan called for four buildings as housing for around 2,000 officers, aided by approximately 600 orderlies, and an

administration area (*Vorlager*), where the camp administration was located. From the end of 1943, the outbuildings provided space for a large work detachment of Soviet POWs. Organizationally, however, the work detachment was not part of Oflag VI A but rather of Stalag VI A (also in Soest), whose accommodations had been destroyed in a bombing raid. During the final phase of the war, the superior authority of the Oflag, the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*), was also located in these barracks.

In June 1940, when the first POWs—Belgian officers—arrived, the buildings scheduled to house them had not yet been completed. Some of the officers had to sleep in the garages where the Soviet POWs were later lodged. In November 1940, the expansion of the camp was finished, and the International Committee of the Red Cross (ICRC) assessed it as follows: “Magnificent camp, even according to the man of confidence [*Vertrauensmann*].”

The Germans also held Dutch officers in the camp. In July 1940, when the Belgians were moved to Oflag III B in Tibor (today Cibórz, Poland), the Dutch occupied the best quarters, so the French who had arrived in the meantime had to make do with what remained. In November 1940, the Dutch, too, left the camp. From then, until Oflag VI A was closed, it was considered a French camp, if one disregards the work detachment of Soviet POWs also housed there.

Because the group of French officers included men who had been highly qualified professionals in the civilian world, and because the officers had an abundance of free time, a lively cultural life soon developed, as in other Oflags, with support from their home country and the international aid organizations. The POWs could have newspapers and periodicals sent from their homeland; the library, with 25,000 volumes, was larger than the German city library in Soest at that time. Like other camps for officers, Oflag VI A had a camp university, a theater, an orchestra, a cabaret, a jazz band, and other activities.

Although the prisoners received reduced rations rather than the full portions of barracked soldiers—in violation of international law—they did not suffer want, because they received additional provisions from their home country. On average, every French POW got approximately 2.5 kilograms (5.5 pounds) of additional foodstuffs per month. Also, there were precious items such as cigarettes, which could be either used to bribe the guards or sold for cash.

In accordance with the agreements between the Vichy government and the German Reich, the Pétain movement was in charge of the camp at first. There was a *Cercle Pétain*, which also supplied the surrounding Stalags and work detachments with propaganda material. As the western Allies—and thus de Gaulle also—gained in military strength, the influence of the Pétain supporters diminished. Beginning in 1942, a de Gaulle movement arose. But there were other political movements as well, such as a Breton separatists' group and a

group with an antisemitic orientation. The extent to which this is related to the presence in the camp of one of the most prominent Jewish officers, Lieutenant Alain de Rothschild, is unknown.

In the POW camp system as a whole, the POW groups most inclined to try to escape were the British and the Dutch. Because there were very few British or Dutch prisoners in Soest, it is not surprising that only one sizable escape attempt took place. It occurred on May 8, 1941; of the 14 French participants, only 10 actually managed to get out of the camp before the attempted escape was discovered. The escape culminated in success for only 3 of the 10.

In accordance with the majority situation in the French population, the Catholic faith was the prevailing religion in the camp, and the prisoner population included a number of priests. As early as 1940, a chapel was set up in an attic room, decorated in the French national colors. In addition, there was a small Protestant community and a Masonic lodge.

As previously mentioned, in 1940 the camp initially won high praise from the ICRC inspectors. As time passed, however, the prisoner population increased from around 2,000 to twice that number. The food became worse and worse, and the length of the captivity was a strain on the prisoners' nerves. In 1942, inspectors described the relationship between the prisoners and the camp administration, highly praised at the outset, only as “strict and correct.” From the fall of 1943 onward, the heating and power supply no longer functioned properly. Beginning in the summer of 1944, postal service to the home country functioned only intermittently. In 1944, there was still recognition that the camp commandant was making an effort, but the overall condition of the camp was categorized as unacceptable. The situation became even more acute in the fall of 1944 and early 1945, when Oflags VI A and VI D also were moved to Soest. In total, there were approximately 5,000 French officers in the Soest camp.

Even though the living conditions deteriorated drastically as the war continued, the mortality rate remained low. There are 15 French prisoners buried in the camp cemetery. The greatest losses were caused by the Allied bombing raid on December 5, 1944, which was followed by other air raids, as well as strafing from low-flying Allied aircraft. On April 6, 1945, the camp was liberated by American troops, and the French POWs were repatriated within a few weeks.

OFFIZIERLAGER (OFLAG) VI B

The Germans created Oflag VI B (map 4a) on July 5, 1940, in Defense District (*Wehrkreis*) VI, by transferring Oflag XI B into this Defense District. The camp was located just southwest of the village of Dössel near Warburg (Nordrhein-Westfalen), about midway between Kassel and Paderborn.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*).

Oflag VI B originally held French and British officers. In September 1942, the British officers were moved to another camp and replaced by 1,077 Polish officers who were brought from Romania (where they had been interned in the Târgu Jiu camp in September 1939) and 1,500 officers brought from other camps in Germany. On October 1, 1944, the camp held 2,222 Polish officers and orderlies (batmen) and 15 Soviet officers.²

The conditions in Oflag VI B were satisfactory and generally in compliance with the provisions of the Geneva Convention on the Treatment of Prisoners of War (1929). The prisoners had access to religious services. French prisoners held a Catholic mass each Sunday during their time in the camp, while there were two Sunday services for Anglican prisoners and one for Presbyterians, and a mass for Catholic prisoners while British officers were interned there.³ The Polish prisoners held three Catholic masses every Sunday. The camp also had a large library, which held more than 5,800 books by August 1944, including 265 religious texts.⁴ The Polish prisoners also had musical and theater groups, and hundreds of prisoners participated in sports, including football, table tennis, boxing, and athletics.⁵ Some individual

Jewish prisoners (*palästinensische Gefangene*) in Oflag VI B received food parcels via the Portuguese Red Cross in 1942 and 1943.⁶

There was a resistance movement in the camp, and it primarily took the form of attempts to escape. For example, on August 30, 1942, in “Operation Olympia,” also known as the “Warburg Wire Job,” RAOC officer Major B. D. Skelton “Skelly” Ginn shorted out the perimeter floodlights, and 41 prisoners carrying four 3.7 meter (12-foot) scaling ladders made from bed slats rushed to the barbed-wire fence and clambered over. One ladder collapsed, so of the 41 prisoners involved, only 28 escaped, and only 3 of those made it home. On September 20, 1943, 47 Polish prisoners escaped through a tunnel. Four days later, 20 of those prisoners were caught, returned to the camp, and then transferred to the Buchenwald concentration camp, where they were shot. A few days later, 17 other prisoners were caught and sent to the Dortmund Gestapo, where they were killed.⁷

On September 27, 1944, British aircraft bombed the nearby railroad station, and in the course of the attack a few bombs struck the camp, killing 90 officers. In total, 141 prisoners died or were killed in the camp. The prisoners were buried in the cemetery in Dössel.⁸ American troops liberated the camp on April 1, 1945.

OFFIZIERLAGER (OFLAG) VI C

The Wehrmacht established Oflag VI C (map 4a) on July 15, 1940, in Defense District (*Wehrkreis*) VI. It deployed to Osnabrück-Eversheide (today a district of Osnabrück), where it occupied an existing Wehrmacht barracks complex on the Landwehrstrasse.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*).

Oflag VI C held Yugoslav (Serbian) officers and their orderlies for most of its existence, although some French prisoners were present early on. The prisoner population gradually grew from about 3,200 to a maximum of 4,855 in June 1944.² The German administrators and guards treated their

Oflag VI C at Eversheide. Camp barracks and food storage, November 1940.

COURTESY OF ICRC.

prisoners properly, and the conditions of confinement in the camp were generally satisfactory and in keeping with the main provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). Only toward the end of the war did the prisoners' situation become significantly worse.

Cultural and recreational activities were available to the prisoners in the camp. There were four Serbian Orthodox priests to lead services for the prisoners of that faith, who constituted the vast majority. The 60 Serbian Catholics and 5 Serbian Muslims in the camp were without religious leadership. Three theater groups performed a variety of shows, including traditional stage plays and musicals, along with a choir and an orchestra. Language courses were taught by the prisoners, and there was a camp library, which held around 5,300 books. Soccer, basketball, and handball were the primary sports played in the camp, and six teams, Triglav, Jugoslavija, Zlatibor, Sava, Skokki XXI, and Iskra, were formed. The prisoners also held table tennis and boxing competitions.³

In a separate part of the camp, there were 463 Jewish Serbian prisoners who, until 1944, could freely hold religious services in specially assigned premises, led by a rabbi who was a prisoner.⁴ Of the Jewish prisoners in the camp, at least 10 died.⁵ The administrators of the camp did not deal harshly with this group; the greatest danger for Jewish prisoners came from antisemitic Serbian officers, who, on March 21, 1943, for example, desecrated and plundered the prayer house.⁶

During an air raid on the camp by Allied aircraft on December 6, 1944, 116 Serbian prisoners perished, including a general and three colonels.⁷ On December 15, the Wehrmacht ordered the camp to be disbanded. Oflag 66 took over the facilities.

OFFIZIERLAGER (OFLAG) VI D

The Germans established Oflag VI D (map 4a) on July 10, 1940, in Defense District (*Wehrkreis*) VI, and deployed it in Münster. They issued the order to disband the camp on January 25, 1945, but its prisoners had been transferred to Oflag VI A in Soest in September 1944, at which time Oflag VI D had effectively ceased to function.

The camp was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*). There were six prisoner commanders over the course of the camp’s existence: Fouchon, Le Mouel, Fuchs, Cohade, Magne, and Meunier, all colonels.

The camp held almost entirely French officers and enlisted orderlies, with just a few Polish and Soviet prisoners arriving in the last month of the camp’s operation. The number of prisoners in the camp ranged from about 1,175 to nearly 2,600.¹

The conditions in the camp were satisfactory and generally in compliance with the Geneva Convention Relative to the Treatment of Prisoners of War (1929). The prisoners organized a theater as well as a university in which classes in various academic disciplines were held. There was also a library with up to 16,000 works.

Between 1941 and 1943, eight French officers died in the camp. They all held the rank of lieutenant: Georges Buffon, Raymond Anty, Roger de Montfort, Jean Lefevre, Gaston Tisserand, Auguste Gambet, Larcher, and Roger Febvret.

SOURCES Primary source material about Oflag VI D is located in BA-MA (RW 6: 450–451) and Deutsche Dienststelle (WASt) Berlin (Stammtafel Oflag VI D).

OFFIZIERLAGER (OFLAG) VI E

The Wehrmacht established Oflag VI E (map 4a) on September 10, 1940, in Defense District (*Wehrkreis*) VI. The camp deployed to Dorsten (today in Nordrhein-Westfalen, Germany).¹ While there, it was subordinate to the Commander of Prisoners of War in Defense District VI (*Kommandeur der Kriegsgefangenen im Wehrkreis VI*). On October 4, 1941, the camp was reorganized as an “Oflag with a Stalag’s tasks,” and subordinated to Security Division (*Sicherungsdivision*) 285, in the rear area of Army Group North (*Heeresgebiet Nord*) on the eastern front. On November 22, it was put under the control of Security Division 207.² It operated in Pleskau (today Pskov, Russia) for at least part of the time it was deployed to the east. Oflag VI E was reorganized as Stalag 372 on May 1, 1942.³

Oflag VI E was assigned the field post number (*Feldpostnummer*) 45 195 between July 30, 1941, and February 28, 1942. The number was struck between March 1 and September 7, 1942.

While deployed in Dorsten, the camp held between 1,000 and 1,200 Polish officers and orderlies. The German administrators and guards treated the Polish prisoners humanely. The conditions in the camp were generally satisfactory and in keeping with the main provisions of the Geneva Convention Relative to the Treatment of Prisoners of War (1929). The prisoners had access to cultural and recreational activities within the camp. Catholic, Evangelical, and Orthodox religious services were held on Sundays, led by Polish clergymen; funeral services were also held for prisoners who died in the camp. There was a camp library with both religious and secular texts.⁴ Educational courses were offered in a variety of subjects, both academic and religious. The Polish prisoners also had a small theater troupe and an orchestra, as well as several sports teams, which played table tennis, football, and other sports.⁵

While deployed in the occupied Soviet Union, the camp held Soviet prisoners. No records have come to light

pertaining to conditions in Oflag VI E in this period. However, unless they differed greatly from those in other camps during the period from November 1941 to May 1942, the prisoners must have suffered greatly and experienced a high death rate from executions, abuse, disease, exposure, and malnourishment.

SOURCES Primary source material about Oflag VI E is located in BA-MA (RW 6: 450–453; RH 53-6/19: Offizierslager VI A, B, C, D, E), and Deutsche Dienststelle (WAS) Berlin (Stammtafel Oflag VI E).

OFFIZIERLAGER (OFLAG) VII A

The Wehrmacht established Oflag VII A (map 4f) on September 25, 1939, in Defense District (*Wehrkreis*) VII and deployed it in Murnau am Staffelsee.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VII (*Kommandeur der Kriegsgefangenen im Wehrkreis VII*).

The first camp commandant was Oberst Dr. Frei. From December 1939 until November 1940, the camp commandant was Oberst Nikolaus von Schemmel (1873–1959). From February 1941 to June 1942, the commandant was Oberst Paul Freiherr von Troschke, from June 1942 to September 1944, Oberst Oster, and from September 8, 1944, to April 29, 1945, Generalmajor Alfred Petry (1894–1948). The camp officer (*Lageroffizier*) was Leutnant Diemmert, and the counterintelligence (*Abwehr*) officer was Leutnant Oleschko. Other officers were the Freisinger brothers and Rittmeister Haber.

The position of camp leader, a representative who was chosen from among the prisoners, was held in turn by

Oflag VII A at Murnau. General view of the camp with prisoners in the foreground, August 1944.

COURTESY OF ICRC.

General Tadeusz Piskor (October 6, 1939–November 11, 1939), General (generał brygady) Antoni Szylling (November 12, 1939–July 5, 1940), and Colonel (pułkownik) Józef Korycki (July 6, 1940–April 29, 1945).

The camp held Polish officers and orderlies (batmen). As early as October 1939, around 800 Polish officers were brought to the camp. In the following months, the number of prisoners grew quickly, reaching 2,000. On April 27, 1942, prisoners from the so-called Generals' Camp, Oflag VIII E, were transferred to Oflag VII A. In September 1942, there were already more than 4,000 prisoners in the camp. New prisoners from Poland (800 officers) were placed in the camp in October 1944, after the suppression of the uprising in Warsaw. On March 22, 1945, 381 additional prisoners were transferred from Oflag II C. On April 29, 1945, the camp held 5,457 prisoners, including 5,114 Poles.

From the very beginning, some of the prisoners were generals. Initially there were five generals in the camp. Later, quite a number of other generals came to this camp from the camp in Königstein. In total, 33 general officers passed through the camp, including the commander of the Polish Navy, Admiral Józef Unrug.

Conditions for the prisoners of war (POWs) were satisfactory, by and large, and basically in compliance with the provisions of the Geneva Convention on the Treatment of Prisoners of War (1929). The camp was considered a model camp, and conditions there were better than in other camps for Polish officers. The prisoners slept in concrete rather than wooden buildings. Food supply, however, was not much better, and the prisoners depended on Red Cross packages to supplement their diets. As one prisoner noted, the rations in the camp were "too little to live, too much to die."²

The camp contained a sports field measuring 25 meters by 35 meters (82 feet by 115 feet); the military exercise ground

in the camp was also used for recreational activities such as football and handball. The POWs also played volleyball, tennis, and table tennis and took part in boxing, swimming, and athletics.³ The prisoners also had access to a library with 25,000 books, an officers' mess, a snack bar, and a hospital. In the fall of 1940, the prisoners opened a theater, and, by early 1945, they had put on more than 700 shows. The POWs also organized an orchestra of 70 men and a chorus with more than 60 members; the orchestra gave a total of 53 concerts. The camp received 13 different German daily newspapers, 16 weeklies, and 10 monthlies. An educational and scientific institution was created in the camp, and the prisoners could do scholarly work; some even wrote doctoral dissertations. The prisoners' diet was satisfactory until 1944. Starting in the second half of 1944, food parcels from abroad almost stopped arriving and, as a result, the prisoners' diet deteriorated drastically. Famine broke out in the camp. Now it was necessary to pay 100 cigarettes for a loaf of bread in the camp. Because of the famine, the prisoners even ate all the cats in the camp.

Various sorts of restrictions were imposed on the Jewish officers in Oflag VII A. Around 100 Jewish officers were housed in the attic of Block B, and in this way a kind of camp ghetto was created. The remaining prisoners were forbidden to associate with the Jews, but they nonetheless violated this ban on a daily basis and supported their Jewish comrades in every possible way.

The prisoners created an underground organization in the camp, headed by General Zygmunt Podhorski. This organization established ties with Poles working in the surrounding area as well as with Warsaw and London. The organization even had its own man in the Gestapo in Murnau. The chief aim of the underground organization was ensuring the safety of the prisoners in the event of real danger. The organization also assisted the prisoners in their attempts to escape.⁴ American troops liberated the camp on April 29, 1945.⁵

OFFIZIERLAGER (OFLAG) VII B

The Wehrmacht established Oflag VII B (map 4f) on October 13, 1939, in Eichstätt, Bavaria. The camp occupied a former police training academy southeast of the town center. Oflag VII B was divided into an upper and lower camp along a small slope in a valley, with the Altmühl River bordering its southern edge. A rocky hill lay to the north and rolling wooded countryside to either side.

Initially, Oflag VII B held Polish prisoners of war (POWs) 1,145 officers and 225 orderlies, as of December 13, 1939. In May 1940, the Germans transferred all the Polish prisoners to Oflag VII A in Murnau and replaced them with just over 1,400 Belgian officers and orderlies. Their numbers gradually dwindled, and British and Commonwealth officers and orderlies arrived in the fall of 1942; their numbers started at about 1,645 officers and 376 enlisted and shrank to about 1,500 and 230. At its peak in April 1943, the camp held 1,954 prisoners. While numbers fluctuated to a degree, the average size remained near 1,500. The camp also held a small number of American POWs.¹

Although the facilities and sleeping quarters were well built, the camp itself suffered from chronic overcrowding. The ending of the shackling of prisoners in November 1943 eased some of the pressure, as the upper camp could be fully integrated into the lower camp. In early 1944, several new huts were constructed in the lower camp and even more were added during the summer. However, the camp for enlisted men, which held around 400 prisoners, received none of the benefits of these expansions. That sector remained overcrowded, and the facilities lacked electric lighting and proper sanitation.

From October 1942 until November 1943, prisoners in the upper camp at Eichstätt were kept handcuffed throughout the day, a result of a dispute between Germany, on the one hand, and Britain, Canada, and the United States, on the other. At its peak, German guards kept 321 officers and 60 privates shackled in this fashion. From the time these prisoners arrived at Oflag VII B, the camp isolated them in the upper camp, surrounded it with extra barbed wire fencing, and kept the prisoners shackled daily.

Initially, the camp guards were strict about shackling the prisoners. From 8:00 a.m. to 9:00 p.m., they remained handcuffed. Isolated from the rest of the camp, they were under constant surveillance to prevent any attempt to remove the bonds. As the months went on, however, the guards relaxed their oversight. Writing in March 1943, Major E. Booth entered into his journal: "The tying of my hands behind the back is a farce, this much will appear from the writing of the diary."² By the time the handcuffing stopped in November, even the International Red Cross noted that "local authorities appear to disapprove" of the orders. Guards merely left handcuffs in the cells, and prisoners wore them only twice daily for roll call to maintain appearances.³

One of the more notable escape attempts of the war came from British officers in Oflag VII B. In September 1942, a group of officers arrived at Eichstätt after recapture from an attempted escape from Oflag VI B in Warburg. By January 1943, Lieutenant Jock Hamilton-Baillie and Captain Frank Weldon had formed an escape committee and were at work on a tunnel north through the rocky hillside. Although German guards discovered soil and suspected that a tunnel was being built, they focused their search efforts on the southern border of the camp, assuming the rocky conditions of the north made tunneling impossible. During the night of June 3–4, 1943, 65 officers escaped through the tunnel and into the German countryside in small groups, with an intended target of reaching Switzerland. Eventually, the Germans recaptured all 65 but at the expense of substantial police and military investment. The escapees were then transferred to Oflag IV C at Colditz castle.⁴

The escape led to the revocation of a number of privileges for the remaining POWs at Eichstätt and a deterioration of morale in the camp. In addition to the ongoing manacling of prisoners in the upper camp, the Germans closed the theater, limited movement within the camp, and curtailed additional recreation opportunities. Several prisoners attempted suicide in the fall of 1943.⁵

Tensions subsided by the winter of 1943 when a new officer from the Foreign Office (*Auswärtiges Amt*) assumed control of recreational facilities. He organized daily walks outside the camp for the prisoners and regular visits to the cinema in town. Arranged in shifts, prisoners were able to take a three-hour walk through the nearby countryside once per fortnight and see a German film each month. Soon the theater was again operational, a well-stocked library and continued education courses allowed for study, hundreds of ice skates were on hand for winter hockey, and the YMCA provided materials for a camp newsletter.

German oversight remained strict and often punitive. From 1943 until liberation, the prisoners received only two-thirds rations, with the commandant claiming this was necessary due to the prisoners' wasting of food on full rations.⁶ On February 25, two prisoners were killed for leaving their barracks during an air raid. The German leadership insisted that during such raids, the prison becomes an active war zone and

any noncompliant prisoners would be treated as active combatants.⁷ Regarding this incident as “cold-blooded murder,” the prisoners collectively avoided guards as much as possible and refused to salute, often turning their backs on the German leadership.

With the US Army approaching, the German guards marched the remaining prisoners out of the camp on April 14, 1945. An American aircraft confused this column for German soldiers and opened fire, killing 14 British officers and wounding 46. The Americans liberated the camp itself on April 25.

OFFIZIERLAGER (OFLAG) VII C

The Wehrmacht established Oflag VII C (map 4f) on November 29, 1939, in Defense District (*Wehrkreis*) VII and deployed it to Laufen. On July 9, 1940, the camp was renamed Oflag VII C/H (*Hauptlager* or “main camp”) when the sub-camp, Oflag VII C/Z (*Zweiglager*), opened in Tittmoning; on January 31, 1941, its former name was restored. On January 28, 1942, the camp was reorganized as IIag VII and the imprisoned officers were transferred to Oflag VII B.

The camp was under the authority of the Commander of Prisoners of War in Defense District VII (*Kommandeur der Kriegsgefangenen im Wehrkreis VII*). The commandant of the camp was Oberstleutnant Dr. von Frey.

At first, the camp held Polish officers, but from mid-1940 on it held British officers and orderlies (batmen). The prisoners were housed in a five-story stone building, the former seat of the archbishopric of Salzburg. This building had a capacity of 500 prisoners but, for a brief period, housed

Oflag VII C at Laufen. View of camp buildings, March 1941.
COURTESY OF ICRC.

nearly 1,500. This situation required up to 90 men to live together in 13.6 meter by 7.6 meter (45 foot by 25 foot) rooms. Initially, there were no latrines or bathing or laundry facilities.¹ Food supplies were also poor. Meals consisted mostly of thin soup; sometimes small potatoes were added, but these were frequently rotten. Many men rapidly lost weight, some as much as 27 kilograms (60 pounds), and it was not uncommon for prisoners to faint from weakness.² However, as prisoners began to be moved out to other camps (including Oflag VII C/Z) and the population returned to a level closer to the camp’s intended capacity, conditions improved. By the spring of 1941, the population had shrunk to under 700. The prisoners had opportunities to read, write letters home, receive food parcels, and take part in sports and various types of arts.

However, the commandant of the camp, who hated the British, could be harsh toward the prisoners and permitted the guards to shoot to kill prisoners who were attempting to violate his rules.³ For example, Oberstleutnant Dr. von Frey ordered prisoners not to lean out the windows of the barracks, lest they be thought by the guards to be attempting to jump out and escape. In February 1941, a British prisoner named Lieutenant Deeds was shot and killed while standing at a window in his barrack. The guard who shot him claimed that he had been attempting to escape; however, the British man of confidence confirmed that Lieutenant Deeds was in fact not attempting to escape but had instead been standing at the window because he was sketching.⁴ The order to close the camp was issued on January 21, 1942.

OFFIZIERLAGER (OFLAG) VII D

The Wehrmacht established Oflag VII D (maps 4f and 5) on January 23, 1941, in Defense District (*Wehrkreis*) VII by redesignating Oflag VII C/Z. It was initially located in Tittmoning. On October 24, 1941, the camp moved to Stanislau (Polish: Stanisławów, today Ivano-Frankivs'k, Ukraine) in the Generalgouvernement. While located in Tittmoning, the camp was subordinate to the Commander of Prisoners of War in Defense District VII (*Kommandeur der Kriegsgefangenen im Wehrkreis VII*). During the deployment in Stanislau, the camp was subordinate to the Commander of Prisoners of War in the General Government of Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*).

During its time in the Generalgouvernement, Oflag VII D held the field post number (*Feldpostnummer*) 45 667, which it received between July 30, 1941, and February 28, 1942. The number was struck between March 1 and September 7, 1942.

The commandant of the camp during its time in Tittmoning and in Stanislau until February 1942 was Major Hermann Spruner von Mertz. He was replaced by Major (later Oberstleutnant) Wilhelm Schimmer (b. 1889 in Munich), who remained the commandant after the camp was converted into a Stalag. The deputy commandant was Alexander Faber du Faur. The counterintelligence (*Abwehr*) officer at Tittmoning was Oberleutnant Walther Klau; he was replaced after the relocation by Hauptmann Konrad von Kaas.¹

Oflag VII D held British prisoners of war (POWs) in both Tittmoning and Stanislau; while at Stanislau it also held Soviet POWs. The treatment of the British prisoners was satisfactory. The living conditions and treatment faced by the Soviet prisoners were significantly worse and the death rate among them was high. Sanitary conditions in the camp were poor; at least 25 men died of typhus in April 1942.² On April 17, 1942, the camp was repurposed as a camp for enlisted men and redesignated as Stalag 371.³ The British prisoners were transferred to other camps and only Soviet prisoners remained in the new Stalag.

SOURCES Primary source material about Oflag VII D is in BA-MA (RW 6: 450–453), Deutsche Dienststelle (WAS) Berlin (Stammtafel Oflag VII D), and BArch B 162/8314–8319: Ermittlungen gg. Angehörige des Stalag 371 (bis 17.4.1942: Oflag VII d) in Stanislau/Galizien.

OFFIZIERLAGER (OFLAG) VII C/Z

The Wehrmacht established Oflag VII C/Z (map 4f) on July 25, 1940, in the castle at Tittmoning. Oflag VII C/Z was a subcamp (*Zweiglager*) of Oflag VII C/H in Laufen, 18.7 kilometers (11.6 miles) to the southeast.

Oflag VII C/Z held British officers and their orderlies (batmen) whom the Germans transferred from Oflag VII C/H. The peak population was about 220. The conditions were satisfactory. Various kinds of sporting and artistic activities were available, and the prisoners received Red Cross parcels to supplement their rather meager rations. On February 1, 1941, the Wehrmacht redesignated the camp as Oflag VII D.

OFFIZIERLAGER (OFLAG) VIII A

The Wehrmacht established Oflag VIII A (map 4e) on December 14, 1939, in Kreuzburg (today Kluczbork, Poland) in Defense District (*Wehrkreis*) VIII.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

The first prisoners in Oflag VIII A were Polish officers who had been transferred from Dulag VIII B in Lamsdorf (today Łambinowice, Poland). In the first half of 1940, the camp held 810 prisoners. In 1941, the camp held only French prisoners. On September 10, 1940, Oflag VIII A held 604 officers and 91 orderlies. From there, the population gradually declined to 394 officers and 66 orderlies on January 1, 1942.² Little information exists on conditions in the camp. Generally speaking, the Germans treated Polish prisoners rather poorly and French prisoners relatively well.

The Germans disbanded Oflag VIII A on July 1, 1942.³ The officers confined in the camp were transferred to Oflag VIII F in Mährisch Trübau (today Moravská Třebová, Czech Republic).

SOURCES Primary source material about Oflag VIII A is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Oflag VIII A); and BArch B 162/17601–17603: Überprüfung des Oflag VIII A.

OFFIZIERLAGER (OFLAG) VIII B

The Wehrmacht established Oflag VIII B (map 4e) on December 15, 1939, in Silberberg (today Srebrna Góra, Poland), in Defense District (*Wehrkreis*) VIII.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). Oflag VIII B was briefly assigned a field post number (*Feldpostnummer*), 18 392, which was both issued and struck between July 19, 1941, and February 14, 1942.

Initially, Oflag VIII B was a punishment camp (*Straflager*), with a strict regime and living conditions that were worse than in other camps. In December 1940, it was transformed into a regular Oflag. The camp was located in the casemates of Frederican Fort Silberberg in the Sowie Mountains. The prisoners were almost exclusively Polish officers captured during the September Campaign.²

Some of the Silberberg fort buildings were adapted for the needs of the prisoners, including Fort Ostróg (Spitzberg), which from 1913 had been a youth hostel, and later Fort Wysoka Skałka (Hohenstein), which in the 1920s had been a school for police and from 1935 had been used by the Wehrmacht. The prisoners were probably also held in the main building in the fort, Donżon. There was also a camp in the town, in a factory building near the Srebrna Góra railway station. The Oflag's command office was also located in the town, in one of the apartments at 10 Letnia Street.³

The name of the first camp commander is not known. His successor was Major von Zerboni, a veteran of World War I. He lost a leg during a battle. The Polish prisoners gave him the nickname "Kuternoga" ("lame duck") and "Gräueltata" (from *Gräuelstaten* or acts of cruelty). He accused the prisoners of crimes he claimed had been committed against German soldiers in Bydgoszcz in 1939. The next commander of the camp, from May 1940, was Major Biess. The identity of the final commandant is unknown, but he was involved in the liquidation of Oflag VIII B. The permanent staff comprised several noncommissioned officers (NCOs), 1 officer, and 20 to 30 soldiers.⁴

Oflag VIII B held approximately 230 officers.⁵ The first prisoners arrived in January 1940. In the period from January 15 to June 12, 1940, 99 officers and NCOs were brought

to Fort Ostróg. In September, there were 140 inmates, including a Frenchman and 29 orderlies. On November 1, 1940, just about all the prisoners were taken to Oflag IV C in Colditz, except for five officers who remained for reasons that are unknown.⁶ On December 15, 1940, 183 officers and 41 convalescent soldiers from the September Campaign arrived. After the initial selection, they were quartered in Fort Ostróg and a factory building in the town.⁷ Turnover was substantial in the prisoner population. In January 1941, there were 218 officers and 52 orderlies, but, in the following two months, 33 officers were transported to other Oflags.⁸ In March 1941, 26 officers returned to Silberberg from Oflag IV C.⁹ According to the figures from May 1, 1941, there were 156 officers and 36 enlisted men in Oflag VIII B.¹⁰ On July 1, there was an action to clear the camp as a result of the invasion of the Soviet Union and the expected wave of Red Army prisoners of war.¹¹ From that point forward, the camp was not in use. It was formally liquidated by an order dated October 17, 1941.¹²

Among those imprisoned in Oflag VIII B were General Tadeusz Piskor, chief of the headquarters of the Polish army; Vice-Admiral Józef Unrug, head of the Coastal Defense in 1939; and Commander Stefan Frankowski, commander of the Polish fleet.¹³ In addition to these and other military officers, police officers and gendarmes were detained at Fort Wysoka Skałka. They were held at the camp from March to April 1940.¹⁴ There are three recorded deaths: Commander Stefan Frankowski, Lieutenant Olgierd Roman, and Lieutenant Aleksander Ciechanowski, all of whom died in the Langenbiel Hospital in present-day Bielawa.¹⁵

In Fort Ostróg, the officers were held in a building that was fenced off from the remainder of the camp by barbed wire. The older officers were lodged on higher floors, while the younger officers were in two oblong casemates with bunk beds. In each, there were 30 prisoners. In the quarters there was low light and stifling air, which had a negative impact on the prisoners' health. The prisoners' uniforms were covered with mildew. The camp had access to running water and once a week the prisoners were able to use the communal showers to wash. One of the areas housed a toilet. In front of the buildings was a 30-meter by 15-meter (98-feet by 49-feet) square on which roll call was held.¹⁶ The conditions in Fort Wysoka Skałka were decidedly better. The living areas were dry and well lit and the windows faced the fort's courtyard. There were no toilets, but it was equipped with a portable latrine.¹⁷ In the factory building in the town, where those convalescing were quartered, conditions were more difficult due to a lack of running water. The prisoners carried the water from the administration building. Initially, there were no beds. The sick were quartered on straw or wooden wool, temporarily spread across the concrete floor. The temperature never got above 8° Celsius (46° Fahrenheit).¹⁸ The meager food rations were supplemented with products from Red Cross or private parcels. Letters were handed out once a week after being censored.¹⁹

Officers were not required to work. Their day began at 7:00 a.m., after reveille, and ended at 9:00 p.m., after roll call. Roll calls occurred between three and five times a day.²⁰ One of the prisoners recalled that "each day we had a number of roll calls which were called by a whistle. . . . Between roll calls we tidied up our quarters, aired our clothes, some did exercises and walked around the yard. Admiral Unrug gave English lessons even though he only had available one tiny book . . . or he told about his journeys around the world which were part of his service in the navy."²¹ The prisoners had opportunities to read, and obtained German books and newspapers, including "Militärwochenblatt," which had a military theme.²² Prisoners also used their free time to learn foreign languages, including English.²³ Once a fortnight, the prisoners could participate in religious services, which were led by a German priest. The camp command prohibited confessions, however.²⁴

The prisoners in Oflag VIII B tried to escape on a regular basis.²⁵ The first, unsuccessful attempts took place in March 1940.²⁶ The fundamental problem was the lack of knowledge of the local topography and the location of the camp. On the night of May 5–6, 1940, a group of 10 officers, at that time one half of the officers at Fort Ostróg, started another escape attempt. Their initial plan was to reach Hungary and from there go on to France to join the Polish Armed Forces. Three prisoners, Felicjan Pawlak, Jan Gerstel, and Tadeusz Wesołowski, managed to escape from the camp and then followed a route from Hungary through Yugoslavia and Turkey to Palestine.²⁷ In retribution for the escape, the prisoners who remained in the camp were prohibited from praying together, the canteen was closed, and the number of roll calls was increased to five each day.²⁸

OFFIZIERLAGER (OFLAG) VIII C

The Wehrmacht established Oflag VIII C (map 4e) on May 20, 1940, in Juliusburg (today Dobroszyce, Poland), in Defense District (*Wehrkreis*) VIII.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

The first available population reports, from September and October 1940, show a few French officers and orderlies (17 total in October) and greater numbers of Belgian officers and orderlies (379 and 77, respectively). The number of Belgians varied over time, occasionally rising to nearly 600. A small number of Dutch prisoners (66–68) were in the camp from late 1940 until July 1941.²

The Germans set up the camp inside two-thirds of the Amalienstift monastery; the other third remained a Catholic orphanage, supervised by nuns. Little information exists about conditions in the camp, although the Germans generally treated Belgian and Dutch prisoners well. Some Dutch prisoners succeeded in escaping, which prompted the Germans to hold extra roll calls and cut back on Red Cross parcels and mail privileges.

One letter from a prisoner contained this list of items that could, or could not, be sent to prisoners:³

Letter from Lieutenant Raymond TASSIER to his wife, dated June 22, 1940

WARNING !

To prevent items that are subject to confiscation being sent to prisoners of war by their next of kin, here is a list of items that are allowed to be sent and one that is not allowed to be sent.

Items allowed to be sent:

Military clothing, footwear, linen, food of every kind, commodities and refreshments of all kinds;

Smoking and chewing tobacco, cigars, cigarettes, pipes, chewing gum, cosmetic articles / except those mentioned below;

fun games, playing cards, books.

Items that are not allowed to be sent:

Civilian clothes . . . , dressing gowns that can be used as civilian clothes to go out;
 bandages for unauthorized persons;
 weapons, weapon-like tools, large pocket knives, scissors (large), ammunition and explosive materials, solidified alcohol and alcoholic beverages;
 Ink, steel quills . . . pens, charcoal and tracing paper;
 Compasses, backpacks, maps, cameras, eyeglasses, magnifying glasses, electric lamps, lighters, wicks of all kinds, candles, alcohol, flammable materials, heaters;
 Spare parts for telephone and TSF / transmitters and receivers; pharmaceutical articles in any form, vaseline tubes, ammonia (solid or solution), hair lotions, toothpaste, perfumes, waxing cream, . . . chemicals, acids;
 Books and printed matter of a reprehensible or indecent character, foreign newspapers, atlases, or books with maps;
 paper cigar holders, notebooks, writing paper, postcards.
 Money and foreign currency.

The Germans disbanded the camp with an order dated September 4, 1942. The prisoners were transferred to Oflag X D in Hamburg-Fischbek and Oflag II A in Prenzlau.

SOURCES Primary source material about Oflag VIII C is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Oflag VIII C); and BArch B 162/17604–17605: Überprüfung des Oflag VIII C.

OFFIZIERLAGER (OFLAG) VIII E

The Germans established Oflag VIII E (map 4e) on July 23, 1940, in Defense District (*Wehrkreis*) VIII and deployed it to Johannisbrunn/Troppau (today Jánské Koupely, Czech Republic). The camp was disbanded on July 1, 1942.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

The commandant of Oflag VIII E was Oberst Hencker from October 29, 1940, to June 30, 1941. On July 1, 1941, he was succeeded by Generalmajor Johann Janusz (1882–1952), who remained in command until May 19, 1942. The camp, located in the former Spa Hotel in Johannisbrunn, held imprisoned officers and their batmen. The conditions were generally good and in keeping with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929). In total, 30 generals from Poland, 30 from France, 9 from the Netherlands, and 1 from Great Britain, as well as a colonel from Norway, passed through the camp.²

SOURCES Primary source material about Oflag VIII E is located in BA-MA (RW 6; RH 53-8/18) and WASt Berlin (Stammtafel Oflag VIII E).

Additional information about Oflag VIII E can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. OFFIZIERLAGER (OFLAG) VIII F

The Germans established Oflag VIII F (map 4e) on July 24, 1940, in Wahlstatt (today Legnickie Pole, Poland) near the city of Liegnitz (today Legnica) in Defense District (*Wehrkreis*) VIII.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). On July 1, 1942, Oflag VIII F was deployed to Mährisch Trübau (today Moravská Třebová, Czech Republic).² Until December 1, 1942, a so-called remaining detachment (*Restkommando*) was located in Wahlstatt.

Oflag VIII F at Mährisch Trübau. General view of the camp, December 1940.

COURTESY OF ICRC.

In Wahlstatt, Oflag VIII F occupied a former Benedictine abbey dedicated to Saint Hedwig of Silesia. The building had been a military school between 1840 and 1920, and the Nazis had used it as a "National Political Educational Institution" starting in 1934.

The camp mainly held French officers and their orderlies. The population ranged from about 650 to just over 1,000 in Wahlstatt and from 1,045 to about 2,120 in Mährisch Trübau. Small numbers of Yugoslav and Italian officers were in the camp for brief periods.³ No specific information on conditions in the camp is available, but the Germans generally treated French prisoners well. The Germans disbanded the camp with an order dated May 9, 1944.

SOURCES Primary source material about Oflag VIII F is located in BA-MA (RW 6: 450); WASt Berlin (Stammtafel Oflag VIII F); and BArch B 162/17607: Überprüfung des Oflag VIII F.

OFFIZIERLAGER (OFLAG) VIII G

The Wehrmacht established Oflag VIII G (map 4e) on July 5, 1940, in Defense District (*Wehrkreis*) VIII and deployed it to Weidenau (today Vidnava, Czech Republic). The camp was disbanded on September 22, 1942.¹ The camp was under the authority of the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*).

Oflag VIII G held British (1940–1941) and French (1940–1942) officers and batmen. It was a relatively small camp, with a population between 550 and 635 prisoners in 1941 and 1942.² Detailed information on conditions in this camp is unavailable, but the Germans normally treated British and French officers relatively well.

SOURCES Primary source material about Oflag VIII G is located in BA-MA (RW 6; RH 53-8/18); WASt Berlin (Stammtafel Oflag VIII G); and Special Collections of Stanford University Library, "Journals with photographs of French

OFFIZIERLAGER (OFLAG) VIII H

The Wehrmacht established Oflag VIII H (map 4e) on August 1, 1940, in Defense District (*Wehrkreis*) VIII and deployed it to Oberlangendorf (today Horní Dlouha Loučka, Czech Republic). The camp had one branch, Oflag VIII H/Z Eulenburg (today Sovinec, Czech Republic). The camp was disbanded on August 18, 1942.¹

Oflag VIII H was subordinate to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). The camp commandant was Oberstleutnant Hugo von Willamowitz-Möllendorf.² The commandant of the camp at Eulenburg was Oberst Donner-Grobois. The staff of the main camp consisted of 3 officers and 25 enlisted men. The camp was guarded by reserve (*Landesschützen*) personnel.

The camp held French, Belgian, and British (until 1941) officers and batmen. The camp in Eulenburg also held French officers. The population of the camp ranged from 430 to 720 prisoners in 1941 and 1942.³ Specific details on conditions in Oflag VIII H are not available, but the Germans generally treated Western officers well.

SOURCES Primary source material about Oflag VIII H is located in BArch B 162/27796 (copy at USHMM RG-14.101M.2619.00001003–00001047); BA-MA (RW 6; RH 53-8/18); and WASt Berlin (Stammtafel Oflag VIII H).

NOTES

1. Mattiello and Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen*, p. 13. Mattiello and Vogt and Tessin mistakenly give August 18, 1943, as the date of the camp's dissolution. In OKW/Kriegsgef. Org. (Id), Bestand an Kriegsgefangenen im Ost- u. Südostgebiet u. in Norwegen, 1942–1944, there is no mention of the camp after August 1942. The disbanding of the camp is mentioned in OKW/Chef Kriegsgefangenen, Organisationsbefehl No. 49: Überblick über Veränderungen in der Organisation des OKW/Chef Kriegsgef. v. Anfang Mai b. Mitte November 1942. In accordance with this order, the camp buildings were turned over to the Hitler Youth for elementary military training.

OFFIZIERLAGER (OFLAG) IX A

The Wehrmacht established Oflag IX A (map 4d) on October 2, 1939, in Defense District (*Wehrkreis*) IX, and deployed it in Spangenberg from 1939 to 1945. Starting on June 3, 1940,

Oflag IX A/Z at Rotenburg an der Fulda. Prisoners in the camp courtyard, March 1943.

COURTESY OF ICRC.

after Oflag IX C in Rotenburg an der Fulda became its sub-camp (*Zweiglager*), then designated Oflag IX A/Z, the original camp was known as Oflag IX A/H (*Hauptlager*).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District IX (*Kommandeur der Kriegsgefangenen im Wehrkreis IX*).

Oflag IX A/H consisted of an upper and lower camp. The upper camp occupied the picturesque Schloss Spangenberg, a castle dating to the fourteenth century. An American air raid destroyed the castle in 1945, just after the camp's evacuation. The lower camp was fenced off in the center of the small town of Elbersdorf. The subcamp at Rotenburg an der Fulda, Oflag IX A/Z, occupied the premises of a former girls' training school.² The buildings had earlier provided the background to iconic scenes in the late Weimar classic film, *Mädchen in Uniform*.³

Oflag IX A/H held British, French, American, Polish, Belgian, and Serbian officers and batmen.⁴ The British (mostly RAF personnel) constituted the largest group throughout, with an initial population of 225 officers and 48 batmen in September 1940, rising to 800 and 126, respectively, in November 1944. There were never more than about 50 French officers. The first 154 American officers arrived in March 1943; their numbers dropped to 19 three months later, then gradually grew to 170 by September 1944. The other nationalities were only present in small numbers. Oflag IX A/Z held about 450 Belgian officers and 60 batmen from September 1940 on. In early 1942, 217 French officers and 36 batmen arrived in the camp, followed, in late summer 1943, by 488 British officers and 67 batmen.

One unusual break occurred in the main camp's history. In October 1941, for reasons that are not entirely clear but may have had to do with a high number of escapes or with a more general reorganization of prisoner of war camps, the prisoner of war authorities in the Armed Forces High Command (*Oberkommando der Wehrmacht*, OKW) ordered the transfer of all the prisoners to Oflag VI B. Oflag IX A/H then sat

dormant until a new batch of prisoners arrived the following January.

The German administrators and guards treated the prisoners humanely, and the prisoners' conditions of confinement in the camp were satisfactory and in keeping with the provisions of the Geneva Convention on the Treatment of Prisoners of War (1929). The evacuation of prisoners from both camps began on March 29, 1945. In an effort to avoid the rapidly approaching American forces, the prisoners were to be marched for several days before being relocated by train to Bavaria. Due to the unexpected speed of American divisions and the slower speed of the prisoner convoys, these plans were amended repeatedly and ultimately aborted as Allied forces overtook and liberated the last of the prisoners by April 13.⁵

OFFIZIERLAGER (OFLAG) IX B

The Germans created Oflag IX B (map 4d) on November 7, 1939, in Defense District (*Wehrkreis*) IX, and deployed it to Weilburg. The camp was subordinate to the Commander of Prisoners of War in Defense District IX (*Kommandeur der Kriegsgefangenen im Wehrkreis IX*).

From 1939 to 1940, the camp first held about 650 Polish officers and orderlies (batmen). As of September 1940, it contained 777 Belgian officers and orderlies plus 47 French enlisted men. From that point, the population declined to 21 Belgian enlisted men in January 1941.¹

No information concerning conditions in this camp has come to light. For the Belgian and French prisoners, at least, the treatment was likely to have corresponded to the requirements of the Geneva Convention of 1929. The Germans began closing Oflag IX B on October 18, 1940, although some enlisted prisoners remained on the site, presumably doing work, until January 1941.

SOURCES Primary source material about Oflag IX B is located in BA-MA (RW 6: 450–451) and WASt Berlin (Stammatafel Oflag IX B).

OFFIZIERLAGER (OFLAG) IX C

The Wehrmacht established Oflag IX C (map 4d) on November 6, 1939, in Defense District (*Wehrkreis*) IX. It was located in the building of the Jakob-Grimm-Schule in Rotenburg an der Fulda.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District IX (*Kommandeur der Kriegsgefangenen im Wehrkreis IX*). Until its closing on June 3, 1940, Oflag IX C held Polish officers and orderlies (batmen).

SOURCES Primary source material about Oflag IX C is located in BA-MA (RW 6: 450–453) and WASt Berlin (Stammatafel Oflag IX C).

Additional information about Oflag IX C can be found in the following publications: Gianfranco Mattiello, *Prisoners of War in Germany 1939–1945 (Camps, Nationalities, Monthly Population)* (Lodi: self-published, 2003), p. 207; and Georg Tessin, *Verbände und Truppen der deutschen Wehrmacht und Waffen-SS im Zweiten Weltkrieg 1939–1945, Vol. 3: Die Landstreitkräfte 6–14* (Frankfurt/Main: Biblio, 1970), p. 150.

OFFIZIERLAGER (OFLAG) X A

The Wehrmacht established Oflag X A (map 4a) in the fall of 1939, in Itzehoe, in Defense District (*Wehrkreis*) X. In March 1941, it relocated to Sandbostel.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*). The camp commandant was Oberst von Fuchs.

Oflag X A held Polish officers and orderlies (batmen). On September 1, 1941, the camp held 1,853 officers and 213 batmen.² The Germans treated the prisoners decently and

Oflag X A at Itzehoe. Prisoners in the camp during a religious service with camp buildings in the background, October 1939.
COURTESY OF ICRC.

conditions were generally satisfactory and in keeping with the main provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).

The prisoners in the camp had some opportunities to partake in cultural and recreational activities. The camp had a library that held around 7,000 books as of September 1941. Several educational courses were available in subjects such as foreign languages, agriculture, and business. The prisoners took part in daily physical exercises after morning roll call, and a few were able to play sports like football, although these activities were limited by the lack of sporting equipment. No mass was held in the camp on Sundays, as there were no priests among the prisoners; an officer instead led the men in prayers on Sunday mornings, though they complained to visiting representatives of the Red Cross and YMCA about their wish for spiritual support.³

On April 17, 1942, the camp was reorganized as Stalag 362 and deployed to Slutsk, in occupied Belarus.⁴

SOURCES Primary source material about Oflag X A is located in BA-MA (RW 6: 450), WASt Berlin (Stammtafel Oflag X A), NARA (T 84, roll 463), USHMM, and BArch B 162/9259–9262.

OFFIZIERLAGER (OFLAG) X B

The Wehrmacht established Oflag X B (map 4a) in Nienburg in Defense District (*Wehrkreis*) X in September 1939. The camp was designed to accommodate 1,000 prisoners of war (POWs).

The first POWs arrived on October 9, 1939. These POWs came from both the Polish army and the Polish navy. At first, they were housed in buildings at the Mudra Barracks in Nienburg.

Beginning in December 1939, barracks made of stone and wood were constructed on the grounds of the Mudra Barracks, for the permanent camp area. The permanent camp area was occupied by the prisoners on April 1, 1940.

Until the end of the war, the camp remained in Nienburg. It was subordinate to the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*).

No field post number was assigned, since the camp never moved out of Germany.

The following officers served as commandant:¹

Major Willy Probst	until May 14, 1940
Oberst Jacob Wilhelm Klein	May 15, 1940–July 31, 1942
Oberst Pallmann	from September 25, 1942
Oberstleutnant Dr. Hermann Hagen	November 9, 1942–August 24, 1943
Oberst Richard Georgi	August 25, 1943–October 1944
Oberst Reim	from October 1944

A Reserve Battalion (*Landesschützenbataillon*) guarded the camp. Whether there was a connection with the Reserve Battalion responsible for the nearby Stalag X C is not documented.

On November 4, 1941, by order of Deputy Headquarters for Army Corps X (*Stellvertretende Generalkommando X Armeekorps*), Oflag X B detailed personnel for the organization of Stalag 370.² Oflag X B was a medium-sized camp with an average occupancy of 2,000 officers and 200 orderlies (NCOs and enlisted men).³ From September 1940, it functioned as a key camp for French POWs, who accounted for approximately 90 percent of the population. Additional nationalities were present in varying numbers, but no more than 100 prisoners

Oflag X B at Nienburg. Visit by ICRC delegate, date unknown.
COURTESY OF ICRC.

in each case: Poles, Belgians, British, Yugoslavs, Greeks, Cretans, Americans, and Italians.

There were no fixed work details (*Arbeitskommandos*), because, under the Geneva Convention, officers were not required to work. However, activities in support of internal camp operations were customary. Approximately 40 French officers worked voluntarily in a work detail (No. 1) in Hannover, 50 kilometers (31 miles) away, as craftsmen.

The POWs received the best treatment possible. The French, in particular, were supported by relief organizations, which provided them with considerable amounts of foodstuffs and material needs, and they obtained some concessions from the Germans. The officers not only wired money to their own families and French relief organizations but also assisted (French) POWs in other camps, especially those in the directly neighboring camp, Stalag X C.

A Masonic lodge was in existence among the prisoners. Catholic and Protestant clergymen from among the POWs held religious services on a regular basis. A library was available to the prisoners, and they formed an orchestra and a theater ensemble. A considerable number of classes were offered, including in some specialized fields, such as optics (directly supported by *École Supérieure des Opticiens de Paris*, E.S.O.P., Paris).

Political life and the attempt to come to terms with the defeat of France took up a good bit of the prisoners' attention. The "Pétain movement" of the Vichy government was a strong influence. The conflicts that arose in the process often had a negative effect on the communal life of the French officers.

Beginning in mid-1944, the situation of the prisoners clearly worsened, as a result of the failure of the relief parcels to appear and the disruption of postal traffic with France. There were some significant escape attempts from Stalag X B, including a tunnel originating in Barracks 7a. The attempts involved a total of around 300 officers, 21 of whom managed to reach their homeland. On February 4, 1945, Allied aircraft

bombed the camp, and, in the process, several barracks were destroyed, 99 prisoners killed, and 130 prisoners wounded, most of them severely.

Oflag X B received numerous visits from delegations, and these visit reports are known. US protecting power: August 2, 1940; Scapini Mission: July 29, 1940, December 29, 1940, April 24, 1941, June 1, 1941, January 7, 1942, March 4, 1942, July 15, 1942, August 8, 1943, February 7, 1944, June 16, 1944; ICRC: June 9, 1940, November 13, 1940, July 7, 1941, November 24, 1941, August 3, 1942, November 27, 1942, December 12, 1942, June 29, 1943, February 7, 1944, March 23, 1944, August 17, 1944, October 12, 1944, March 12, 1945, March 17, 1945; YMCA: December 1940; Brazilian Embassy: April 24, 1941. It has not been possible to determine what role the Brazilian Embassy played here. The overall assessments of Oflag X B contained in the visit reports are, in each case, uniformly positive. They range from "excellent in every respect"⁴ to "satisfactory," near the end of 1944.⁵

Medical treatment always began in the camp's medical clinic, which was operated by physicians and medical personnel from the group of POWs, under German supervision. The medical clinic was enlarged several times, and, in 1944, it received the German designation of *Kriegsgefangenenlazarett*, or "prisoner-of-war hospital," although the on-site conditions could by no means live up to such a claim. The serious cases were referred to general hospitals outside the combat zone (with POW wards) or to POW hospitals, such as those in Rottenburg, Sandbostel, Bremen, and Oldenburg.

Beginning in January 1945, Oflag X B admitted numerous groups of POWs who had been evacuated from other camps. On April 5, 1945, all POWs in the camp who were fit to march were evacuated, made to walk on foot in the direction of Wietzendorf. In many cases, their liberation took place in various locations along the route of the march. On April 9, 1945, the permanent camp area in Nienburg, with the POWs who remained behind, was liberated by British forces.

OFFIZIERLAGER (OFLAG) X C

The Wehrmacht established the headquarters of Oflag X C in September 1939; however, it apparently did not begin operation until the following year. In June 1940, the camp was deployed in Lübeck, in Defense District (*Wehrkreis*) X. Beginning in the fall of 1941, the camp was also used as a penal camp (*Straflager*; also referred to as a special camp or *Sonderlager*) for officers from other camps who had committed serious violations of camp rules or attempted to escape.¹ Oflag X C was subordinate to the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*).

Oflag X C was located in a former artillery barracks situated on a sandy area on the outskirts of Lübeck.² The camp initially made up of 16 wooden barracks, each of which consisted of 14 rooms of varying sizes. The smaller rooms, which had single beds, held between 3 and 10 prisoners, while the larger rooms held 16–18 men and had double bunk beds. In general, higher-ranking officers lived in smaller rooms. All prisoners had a straw mattress and two blankets. The rooms were generally sufficiently ventilated during the day but became stuffy at night because the prisoners were required to close the windows. The prisoners were deloused upon arrival and had access to bathing facilities in their barracks. They operated their own kitchen facilities, which were generally adequate. The camp infirmary treated only minor illnesses and injuries, since it only had one exam room and one surgery; more seriously ill prisoners were sent to the prisoner hospital in Sandbostel.³

The first commandant of the camp was Oberstleutnant von Wachmeister. In July 1941, he was replaced by Oberst von Fuchs, who remained at the camp until March 1943, when he was replaced by Oberstleutnant Janssen. The final

commandant was Oberst Berndt, who replaced Janssen in October 1943.⁴ The camp held American, Belgian, British and Commonwealth, French, Greek, Polish, Serbian, and Soviet officers. The first prisoners were French officers transferred to the camp in Lübeck from Oflag X A in Itzehoe in June 1940.⁵ As of September 10, 1940, there were 1,197 French officers, 355 French orderlies, and 1 Belgian orderly in the camp.⁶ The first Polish prisoners arrived in October 1940, although there was not a permanent Polish contingent in the camp until November 1941. The French officers were transferred out of the camp (mainly to Oflag X D in Hamburg-Fischbek) to make room for the Polish prisoners in the spring of 1941.⁷ The first Serbian officers arrived in June 1941 but were only present for a short time; a small but permanent population of Serbian prisoners arrived beginning in April 1942. British and American prisoners were first brought to the camp in August 1941: the British prisoners were mainly RAF soldiers transferred from Dulag Luft West in Oberursel and British army (including Australian and New Zealander) personnel captured in Greece, while the Americans were airmen from Stalag Luft 1 in Barth.⁸ The British and American prisoners were transferred to Oflag VI B in Warburg on October 7, 1941.⁹ There was one Soviet officer in the camp from June 1942 to October 1943. The camp reached its maximum population with 1,836 officers and 188 orderlies in February 1942.¹⁰

Although the Germans generally treated captured officers well and observed the provisions of the Geneva Convention of 1929, British officers living in Oflag X C reported that the conditions were often quite difficult. Their food rations consisted of 200–300 grams (7–10.6 ounces) of bread with a tablespoon of margarine or other fat and a tablespoon of potted meat or horsemeat every morning, with a tablespoon of ersatz jam or whey cheese once every two weeks at breakfast, and a bowl of cabbage soup and three or four

boiled potatoes at lunch and dinner, with a cup of mint tea at each meal and an occasional piece of blutwurst in the evening. The prisoners found these rations, which amounted to between 1,400 and 1,500 calories, insufficient for their dietary needs.¹¹ Many of the British and Commonwealth prisoners in the camp lost significant amounts of weight and were given double Red Cross rations after their arrival at Oflag VI B to help them regain weight.¹² In addition, the German Feldwebel who ran the kitchen often stole the prisoners' food rations to sell on the black market. Red Cross food parcels were only delivered intermittently, and the camp canteen was poorly stocked. The prisoners received 20 cigarettes per week.¹³

Medical care was provided in the camp (mainly by prisoner physicians), although it was often not sufficient due to shortages of both personnel and supplies.¹⁴ British army prisoners captured in southeastern Europe, who were frequently ill with dysentery and malaria when they arrived, were particularly badly affected by these shortcomings. Many prisoners lacked sufficient clothing, as the Germans took the prisoners' good British uniforms and replaced them with surplus French or Polish uniforms. The coal ration was very small—one and a half briquettes per room every two days—which meant that the prisoners' quarters were often not sufficiently heated. The camp became very crowded and the atmosphere in the camp was described as "spiritless." The prisoners' morale was made even worse by the camp commandant, an "old Prussian" who hated the British prisoners. However, in early October, shortly before their transfer to Oflag VI B, an American embassy official visited the prisoners, noted their complaints, and relayed them to Geneva, which resulted in increased food and cigarette rations and the delivery of Red Cross parcels, which were subsequently shipped to Warburg along with the prisoners. The prisoners were taken to Warburg in open cattle trucks, a trip that took 36 hours.¹⁵

The French officers at Oflag X C also reported that the conditions in the camp were difficult early in their captivity but improved somewhat over time. Some of the French prisoners were simply officers who had been captured by the Germans, but others were prisoners who had attempted to escape from other camps—such as Oflag IV C at Colditz—or were classified as "refractory" or "anti-German" (*deutschfeindlich*). Although Oflag X C was intended to be a place of stricter confinement for these prisoners, there were, nonetheless, escape attempts. Between January and May 1944, at least 14 prisoners escaped from the camp and were recaptured; 11 of these prisoners were deported to the Mauthausen concentration camp after they were recaptured. The prisoners engaged in clandestine political activities in the camp, forming a "popular front" of socialist, communist, and various other radical orientations.¹⁶

French officer Antony Sternberg was one of the prisoners who was transferred to Oflag X C from Oflag IV C. His group left Colditz late in the morning of May 28, 1942, and

arrived at Lübeck at noon the following day.¹⁷ Among the prisoners who were shipped to Oflag X C at this time was Captain Robert Blum, son of the former French Socialist prime minister Léon Blum (who was himself imprisoned at Buchenwald from 1943 to 1945). Blum was taken out of the regular barracks and kept in solitary confinement in a special barrack for prominent prisoners. One of the other prisoners who was held in this barrack was Lieutenant Iakov Dzhugashvili, Joseph Stalin's son, who later died at the Sachsenhausen concentration camp. According to Sternberg, Dzhugashvili received no letters or packages from outside the camp during his time there.¹⁸ Sternberg also recalled an incident in which a Polish officer who had gone out for a walk around the camp for exercise prior to reveille was shot by a German officer.¹⁹ Sternberg and most of the other French officers who were sent to Oflag X C from Oflag IV C remained there until the liberation of the camp.

Strict discipline was enforced on the prisoners who were sent to Oflag X C as punishment for their actions in other camps. The German officers in the camp were given orders to shoot without warning if the prisoners interacted with civilians outside the camp, threw objects through the fence, attempted to climb the fence or flee from the camp by other means, stole camp property, left their barracks without permission, or even stood too close to the camp gate. These prisoners were also required to wear an identification card with their photo around their neck, which was periodically inspected by the guards. The approximately 60 Jewish officers were kept separate from the other officers in a special barrack marked with a Star of David. The majority of the French doctors in the camp—who were not allowed to practice medicine—were Jewish. However, the Jewish prisoners were only kept separate from the other prisoners at night; they were able to interact freely with one another during the day.²⁰

Information about the cultural and recreational activities during the British and American officers' time in Oflag X C is limited. However, by March 1942, the remaining prisoners in the camp had begun to develop a cultural life within the camp. A YMCA delegate reported that the prisoners had organized educational courses on a variety of subjects and that there was a 20-man orchestra in the camp.²¹ One of the French officers in the camp, Lieutenant Fernand Braudel, was a historian who taught courses in the camp university and wrote a book, *La Méditerranée et le mond méditerranéen à l'époque de Philippe II* (*The Mediterranean and the Mediterranean World in the Period of Philip II*) while imprisoned there, receiving materials he needed for his research and sending chapters to Paris via the International Committee of the Red Cross.²² There was a Polish Catholic priest who conducted religious services in the camp. The prisoners also requested additional sports equipment.²³ By October 1942, the prisoners had built up a library in the camp that totaled 5,775 volumes and a number of sports had been organized, including lawn bowling, table tennis, and boxing.²⁴

Oflag X C was liberated by British forces on May 9, 1945.²⁵ The prisoners were gradually repatriated over the following weeks.²⁶

OFFIZIERLAGER (OFLAG) X D

The Wehrmacht established Oflag X D (map 4a) in April 1940, in Defense District (*Wehrkreis*) X. The camp was deployed in Hamburg-Fischbek.¹ British troops liberated the camp on May 3, 1945. The camp was subordinate to the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*).

Oflag X D held Allied officers. On June 22, 1943, Belgian officers were transferred into the camp from Oflag II A, and, on October 1, 1944, the camp held 1,594 Belgian officers.² The German administrators and guards treated the officers

Oflag X D at Fischbek. French POWs playing sports, July 1941.
COURTESY OF ICRC.

humanely, and the conditions in the camp were generally satisfactory and in compliance with the main provisions of the Geneva Convention on the Treatment of Prisoners of War (1929).³

In 1944, members of the Masonic organization Grand Orient of Belgium (*Grand Orient de Belgique*) established a Masonic lodge, *L'Obstinée* ("persevering, determined").⁴ The orator of this lodge was Jean Rey, who after the war became president of the European Commission, the highest executive body of the European Union, from 1967 to 1970.

OFFIZIERLAGER (OFLAG) XI A

The Wehrmacht established Oflag XI A (map 4a) on August 7, 1939, and deployed it to Osterode am Harz, in Defense District (*Wehrkreis*) XI. Beginning on September 9, 1941, the camp was located in Vladimir-Volynskii (today Volodymyr-Volynskyi, Ukraine).¹ On April 17, 1942, the camp was reorganized as Stalag 365.² The camp received the field post number (*Feldpostnummer*) 08 453 between July 12, 1941, and January 26, 1942. The number was struck between January 27 and July 14, 1942.

In Osterode, the camp was subordinate to the Commander of Prisoners of War in Defense District XI (*Kommandeur der Kriegsgefangenen im Wehrkreis XI*). In Vladimir-Volynskii, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ukraine*).

The camp commandants were, in chronological order: Oberst Friedrich Schönberg (until June 15, 1940), Oberst zur Verfügung August Schmidt Edler von Lusingen (from June 15, 1940, to February 10, 1941), and Oberst zur Verfügung von Alten (from February 10, 1941, to June 21, 1942). The deputy commandant of the camp was Major zur Verfügung

Stadie (as of May 29, 1941). The following officers are known to have been at the camp in 1941: Oberleutnant Duval and Oberleutnant Lössenhop (both counterintelligence, *Abwehr*), Zahlmeister Schwarting, Kriegsverwaltunginspektor Jahns, Telthörster, Bittins, Sieben, and Böttel.

While the camp was deployed in Osterode, it held Polish officers and orderlies. The conditions were generally satisfactory. The prisoners lived in heated barracks, furnished with two-tier plank beds; about 200 prisoners of war (POWs) lived in each barrack, 8–12 men in each room, while more senior officers lived three to five to a room. In each barrack, there were toilets and washbasins. With the permission of the camp administrators, prisoners organized four soccer teams, a volleyball team, a theater, foreign language courses, and music groups. The camp had a library with books provided by the prisoners' families and the Red Cross. Every officer, depending on his rank, received a certain amount of money each month in the form of so-called *Lagermark*; for example, a lieutenant received 72 marks. In exchange for this money, one could buy, in the camp store, beer, apples, toothpaste, eau de cologne, playing cards, and razor blades. Later, the beer and fruit disappeared, and the food became increasingly poor. Basically, it was rutabaga soup, in which it was hard to find any potatoes. However, the families of the prisoners could send food parcels to the camp, and the prisoners themselves could send money to their families, which they used to buy foodstuffs.

During the camp's deployment in Vladimir-Volynskii, it held Soviet POWs. There were two sections of the camp: one for officers (Oflag) and one for enlisted personnel (Stalag). On February 1, 1942, there were 7,000 POWs in the camp; on May 1, 1942, there were 6,000.³ Former POW Viktor Kolmakov described the conditions in the camp:

They brought us, a group of commanders who had been wounded, to the town of Vladimir-Volynskii, to a so-called "officers' camp." What is it like? A former military garrison, a few buildings surrounded with eight rows of barbed wire, which carried an electric current, and machine guns were set up at the corners. They brought us all to the camp naked and almost barefooted—the Germans had robbed us, taking not only our boots and outer clothing, but even our undergarments. People wrapped themselves in rags, pieces of sackcloth, tar paper, and the like. Freezing temperatures struck, and people began to die. They gave us no wood, the buildings were not heated, all the windows were broken, and we slept on the concrete floor without any straw. . . . On November 9, 1941, registration began; each commander was given a personal number on a tag hung on his chest. As if we were convicts, they marked our clothes, both outer clothing and underwear, with "SU" (Soviet Union) in red on the back, all along the spine; on our chest was a triangle, on the buttocks two triangles, and on the

registration card, besides biographical particulars, they wrote the personal ID number and put our fingerprints. Then each prisoner went up to the German and took off his trousers, and the German physician inspected his sexual organ to determine whether he was a Jew or a non-Jew. The Jews were separated and placed in a barn. They were given nothing to eat or drink, and then, in December 1941, 600 were shot. The undergarments of the dead men were removed and sold. At the same time, between 100 and 300 persons died of starvation each day. In short, of 12,000 prisoners in the fall of 1941, 700 remained by the spring of 1942. The hunger was such that we ate all the grass in the camp, belts, bones, horns, and hooves. We stripped the bark and leaves from the trees; we ate hay and boots, frying them beforehand. And this is what they fed us: in the morning, "bread" made of millet with sawdust, 100–150 grams [3.5–5.3 ounces] apiece; and for dinner, 1 liter [1 quart] of *balanda*, consisting of water and bran. Over the course of half a year, there was no bath. We were plagued by millions of lice, and there was an outbreak of typhus. No kind of care was provided to those who were ill; they were simply dragged into a semi-basement and laid there side by side on the floor; Soviet citizens died in filth. As a result of the typhus, in February the Germans carried out a "measure": they issued an order—a Russian prisoner is not supposed to come closer than 15 steps to a German; if he comes closer, he will be shot, and the Germans were shooting right and left. They established "walking and physical exercises." In the morning, in icy cold . . . we all were herded into the street naked and barefooted, and we began doing "physical exercises"—for three hours, until people were falling down in a dead faint, and their bare feet were frostbitten.⁴

Kolmakov's testimony is supplemented by the testimony of another POW, Yurii Sokolovskii:

On October 3, 1941, we arrived at Vladimir-Volynsk [*sic*]. Most of the people were so enfeebled that they could not get out of the train, could not walk. They herded us into a camp for prisoners of war. Here I spent 18 months. We received food once a day: soup—this was water with a few cabbage leaves or water with the nice smell of Soviet food concentrate, but of this concentrate there was so little that only its smell was noticeable in the soup. To get this soup, the entire camp of several thousand men was lined up, and the Germans served, under strict escort, one or two persons at a time. Bread was handed out in the form of a tinned loaf to be shared by 10

persons, but because POWs, who were starving since the very first days, stole bread twice, and therefore two or three tinned loaves were lacking, the entire camp population was punished, and the next day each tinned loaf was issued for sharing among not 10, but 20, persons, that is, 75 grams [2.65 ounces] apiece. This happened several times. . . . We did not work, with the exception of a few who served in the prisoners' kitchen or the German kitchen. In addition, every now and then work parties were assigned to lay in firewood. A daily inspection was carried out for the purpose of preventing escapes. During the inspections, people were taken out into the courtyard, in extreme icy cold . . . and were kept there for two to three hours, after which the only thing possible was to return to the barracks. This led to a great many cases of illness, particularly lung problems, which resulted in a large number of POWs with tuberculosis. During the inspections in the presence of the camp's German command personnel, who came into the camp once a day only for the duration of the inspection, corporal punishment was conducted. The Soviet officer at fault, who from their point of view had violated the internal order, was laid by six to eight *politsais* onto two little benches, which had been brought out in advance, and 25 fierce blows were administered. Moreover, this was always done in the presence of the entire POW camp and the German headquarters staff. The head of the police at the Vladimir-Volynsk camp initially was the well-known Major Dzhigasov. It was said of him that he had voluntarily gone over to the side of the Germans and handed over to them several artillery pieces. Then, after Dzhigasov left, the head of the police force was Bushuev. The last chief of police during my stay was Lieutenant Colonel Matveenok. From October to December 1941 the people in the camp became greatly enfeebled, and a typhus epidemic began to develop. Over the three months from November [he means October] to December, there was not a single hygienic measure, and therefore most officers had myriad lice. The main occupation of all the POWs was killing lice. As soon as daybreak came, they set to "work," which was interrupted by lining up for food distribution, and again went back to the same work: killing lice. At night, next to the dim electric lamp, dozens of people lined up and engaged in the very same pursuit. It is not surprising—for three months, there was not a single bath, and not once did we have a change of clothes. By the end of December the typhus epidemic was spreading, along with an epidemic of diarrhea related to lack of protein. These diseases affected hundreds of persons, the infirmary

expanded, and there were as many as a thousand persons in it; the other people, for whom the infirmary proper did not have enough room, lay in the consulting areas and received no medical care.⁵

In November and December 1941, Sonderführer E. Kumming from the Army High Command/Foreign Armies East Division (*Abteilung Fremde Heere Ost*) was at Vladimir-Volynskii. In his report on December 9, 1941, he noted that, in the camp,

the hunger is so great that cannibalism is occurring. Of 4,600 prisoners, 2,400 remained alive. Every day 150 persons die. The undersigned saw, on November 12, 1941, sick, starved Russians with protruding bones and an entire platoon on stretchers. Their bellies were carved open; at night the prisoners had fallen upon their comrades lying at death's door and torn out their kidneys and livers. As I was told by the officers and Wehrmacht employees in the officers' club in Vladimir, who were named above in Paragraph I, in the Vladimir Oflag people are now eating mice and rats, as well as potato peels. In one case, food leavings sprinkled with quicklime were pulled out of the garbage bin and eaten.

Kumming also recorded the shooting of 53 Jewish POWs on December 5, 1941. More Jews were supposed to be shot, but after an hour the execution was stopped, because "a) identified among the executed, after the event, was Armenian Senior Lieutenant Khachaturian, prisoner number 1258, who had been included in error; b) walking past by chance, Oberstabsarzt Greinwald stopped the execution with the remark that where there is no judge, there should be no executioner either."⁶

OFFIZIERLAGER (OFLAG) XI B

The Wehrmacht established Oflag XI B on September 20, 1939, in Braunschweig (map 4a), in Defense District (*Wehrkreis*) XI. The camp was located in the Leutnant-Müller-Kaserne.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XI (*Kommandeur der Kriegsgefangenen im Wehrkreis XI*). The commandant was Oberst Georg von Alten.

Oflag XI B held approximately 1,050 Polish officers and 130 enlisted orderlies, most of whom the Germans captured during the battles for Kraków and Warsaw. The total number of Poles who went through the camp in 1939 and 1940 was over 2,000. Most of them were reserve officers with a variety of civilian backgrounds, from industrial workers and salespeople to doctors and artists.

In contrast to the situation in many camps for Polish prisoners of war (POWs), the Germans treated the POWs in Oflag XI B in strict accordance with the provisions of the Geneva Convention of 1929. They did not have to work, and the Germans did not abuse them. Books and newspapers were available, and the prisoners took part in a variety of recreation activities, such as choir, lectures, theater productions, and sports. Each officer received a bottle of wine at Christmas.

The Germans disbanded Oflag XI B on June 24, 1940. Its staff was transferred to Dössel, where it was redesignated as Oflag VI B. The prisoners were transferred to Oflag II C in Woldenberg.

SOURCES Primary source material about Oflag XI B is located in BA-MA (RW 6: 450) and WASt Berlin (Stammtafel Oflag XI B).

OFFIZIERLAGER (OFLAG) XII A

The Wehrmacht established Oflag XII A on November 16, 1939, in Defense District (*Wehrkreis*) XII. The camp was located in Hadamar (map 4d), about 20 miles (32 kilometers) east-northeast of Koblenz. The camp was subordinate to the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*). Oflag XII A received field post number (*Feldpostnummer*) 06 088, issued between January 2 and April 27, 1940, and struck between January 27 and July 14, 1941. The commandant was Oberst Wilhelm Eilker and the counterintelligence (*Abwehr*) officer was Hauptmann Josef Brühl.¹ The prisoners were guarded by personnel from Reserve Battalion (*Landesschützenbataillon*) 765, commanded by Hauptmann Schilp.

Oflag XII A held mainly Polish officers. The prisoners were treated decently by the German administration and guards, and the conditions in the camp were satisfactory and in compliance with the provisions of the Geneva Convention relative to the Treatment of Prisoners of War (1929).² In accordance with the Geneva Convention, the officers in the camp were not required to work.

Some cultural and recreational activities were available to the prisoners. A Catholic priest held mass in an elongated meeting hall on the campgrounds; however, this hall only held a few hundred prisoners at a time. The camp library held over 3,000 volumes, of which more than 2,300 were in Polish. Educational courses were offered in foreign languages (German, French, and English), mathematics, and stenography. The camp had a prisoner orchestra and a jazz band. An open area of the campgrounds served as a football field, which was the primary sporting activity for the prisoners.³ There was a resistance movement in the camp, which mainly took the form of escape attempts. For example, in May 1941, a group of about 20 officers managed to break out of the prison; two of the escapees were killed and the remainder were later recaptured.⁴

The Germans transferred the prisoners to Oflag VI B and Oflag VII A on May 27, 1942.⁵ On June 20, 1942, the camp was redesignated Oflag XII B.

OFFIZIERLAGER (OFLAG) XII B

The Germans established Oflag XII B with an order dated July 25, 1940, in Defense District (*Wehrkreis*) XII. From 1940 to 1942, the camp was deployed at the citadel in Mainz (map 4d). In June 1942, the Germans transferred the camp to Hadamar (map 4d), about 32 kilometers (20 miles) east-northeast of Koblenz.¹ American troops liberated the camp on March 26 or 27, 1945. The camp was subordinate to the Commander of Prisoners of War in Defense District XII (*Kommandeur der Kriegsgefangenen im Wehrkreis XII*).

The camp held Belgian, French, and British officers. On October 1, 1944, there were 38 French and 380 British officers in the camp.² The German administrative personnel and guards treated the prisoners humanely and the conditions in the camp were generally satisfactory and in compliance with the main provisions of the Geneva Convention on the Treatment of Prisoners of War (1929).³

OFFIZIERLAGER (OFLAG) XIII A

The Wehrmacht established Oflag XIII A on August 9, 1940, in Nürnberg-Langwasser (see map 4d), in Defense District (*Wehrkreis*) XIII. It was located adjacent to Stalag XIII A. The camp was subordinate to the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*). It received field post number (*Feldpostnummer*) 45 738 between July 30, 1941, and February 28, 1942; the number was struck between March 1 and September 7, 1942.

Oflag XIII A was divided into three sections: the main camp and two subcamps, Unterlager A and Unterlager B. It held primarily French officers whom the Germans captured during the 1940 campaign in Western Europe, with small numbers of British, Belgian, Polish, and Serbian prisoners intermittently present. The camp population generally ranged between 12,000 and 15,000 prisoners, divided between the three sections of the camp.¹ The Germans disbanded the camp on May 3, 1942.

SOURCES Additional information about Oflag XIII A can be found in the following publication: Gianfranco Mattiello, *Prisoners of War in Germany 1939–1945 (Camps, Nationalities, Monthly Population)* (Lodi: self-published, 2003), pp. 213–214.

OFFIZIERLAGER (OFLAG) XIII B

The Wehrmacht created Oflag XIII B in March 1941, in Defense District (*Wehrkreis*) XIII. Until April 1943, the camp

was deployed in Nürnberg-Langwasser (map 4d), and, from April 1943 on, it was in Hammelburg (map 4d).¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*). The camp commandant (as of May 15, 1944) was Generalmajor Gunther von Goeckel (1889–1979). His deputy was Oberst Giese, the head of the Serbian block was Hauptmann Fuchs, and the head of the American block was Hauptmann Kempf. Company 3 of the 828th Reserve Battalion (*Landesschützenbataillon*) guarded the camp.²

Oflag XIII B comprised 126 barracks divided into seven blocks. There were watchtowers with floodlights and machine guns at each corner of the camp. The camp initially held Serbian officers. The first prisoners arrived on May 20, 1941. By October 1, 1944, there were 4,453 Serbian officers in the camp.³ In the period from January to March 1945, 1,291 American officers and 127 orderlies were brought to the camp.⁴ The leader among the prisoners in the camp was General Kalafatović; in each block, the highest-ranking officer assumed command.

The prisoners were treated humanely by the German guards, in keeping with the main provisions of the Geneva Convention on the Treatment of Prisoners of War (1929).⁵ However, conditions in the camp were still harsh. In particular, the prisoners' food rations were insufficient: approximately 300 grams (10.6 ounces) of bread, 300–500 grams (10.6–17.6 ounces) of potatoes, 5–10 grams (0.18–0.35 ounces) of ersatz coffee, 15–30 grams (0.53–1 ounce) of sugar, and 20 grams (0.71 ounces) of margarine per day.⁶ The food difficulties in the camp were mitigated somewhat by food packages from the Red Cross, which the prisoners began to receive in late 1941. The prisoners were required to stand for roll call (*Appell*) twice a day, at 8:45 a.m. and 5:30 p.m.

The prisoners had opportunities to participate in cultural and religious activities in the camp. An Orthodox chapel with an ornate altar was built in the camp, and three priests led religious services for the prisoners. There was a theater troupe, as well as a 36-man orchestra and an 80-man choir, led by the chaplain of the National Opera in Belgrade, Lieutenant Melošević. The theater (Barrack No. 78, which could hold 500), as well as the prisoner canteen, were located in Block V; a second theater was located in Block II.⁷ There were educational courses led by the prisoners on subjects such as mathematics, physics, architecture, and chemistry, though they struggled to obtain the necessary textbooks despite co-operation with the German authorities and the YMCA. At least three camp newspapers were published by the prisoners: *Novo Vreme*, *Obnova*, and *Kolo*. The prisoners participated in sports such as handball and boxing; twice a week, they were given access to the sporting ground of the German military exercise ground (*Truppenübungsplatz*).⁸

The camp was hit by wayward bombs from an American bombing raid on Nuremberg in early March 1943; the northern section of the camp, including the entrance and a total of 12 barracks in Blocks I, II, and III, was heavily damaged by fire.⁹ On March 27, 1945, Colonel Goode, the senior

American officer at Oflag XIII B, was notified that the camp was about to be evacuated by a force of American armored division. The Germans agreed to surrender the camp and with a white flag went to the main gate where they met elements of the 10th Armored Infantry Battalion and B Company of the 37th Tank Battalion, organized as Task Force Baum after its commander, Major Abe Baum. General George S. Patton had ordered the raid to release the prisoners (including his son-in-law, Lieutenant Colonel John K. Waters), and General Creighton Abrams selected the raiders. The raid began at the city of Aschaffenburg, a small town south of Frankfurt am Main, and drove east where the Task Force met a German force of mobile tank destroyers. After losing several lead vehicles, Major Baum ordered the surviving units to turn south toward Hammelburg. Arriving at the edge of the camp, Baum ordered his tanks and light infantry to charge.

Once inside the camp, Major Baum appeared to have won the day. The swastika came down, and a crude American flag rose. Then events turned sour. Lieutenant Colonel Waters was shot in the hip and hospitalized; 1,500 prisoners saw the tanks, nearly out of gas, and jumped on them for the easy ride back to American lines, while German combat engineers surrounded Task Force Baum. Firing Panzerfausts, the German attackers pulverized Task Force Baum and prevented it from removing any prisoners from Hammelburg. Major Baum surrendered his force of 53 vehicles and 294 men at the city of Reussenburg, and the American attackers became prisoners in the camp they came to liberate. General Patton remarked in his journal, "I know of no error I made except that of failing to send a combat command to Hammelburg."

When the Germans returned, they began to disperse the Oflag 64 and Oflag XIII B prisoners to other camps, and, on April 6, 1945, those still at Hammelburg were liberated by the 14th Armored Division of the American Seventh Army. Most of the others were marched to Stalag VII A in Moosburg, where the Americans liberated 30,000 Allied POWs on April 29.

OFFIZIERLAGER (OFLAG) XIII D

The Wehrmacht established Oflag XIII D on August 23, 1941, in Hammelburg (map 4d), in Defense District (*Wehrkreis*) XIII, from Oflag 62 (XIII D). It was located adjacent to Stalag XIII D. The camp was subordinate to the Commander of Prisoners of War in Defense District XIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XIII*).

Oflag XIII D held Soviet officers and orderlies, with small numbers of Serbian officers intermittently present. The camp population was generally between 5,000 and 6,000 prisoners; however, the population spiked to 15,677 in September 1942, before declining to fewer than 2,000 the following month, as prisoners were transferred to other camps in anticipation of the closure of the camp.¹ Little information is available on the conditions in the camp, but conditions in most camps for Soviet prisoners of war (POWs) were terrible, especially in the first year of the Nazi-Soviet war, with inadequate housing, food, and medical care; it is likely that this was the case in Oflag XIII D as well. Between November 1 and November 15, 1942, the camp was dissolved and incorporated into Stalag XIII D.

SOURCES Additional information about Oflag XIII D can be found in the following publication: Gianfranco Mattiello, *Prisoners of War in Germany 1939–1945 (Camps, Nationalities, Monthly Population)* (Lodi: self-published, 2002), pp. 215–216.

OFFIZIERLAGER (OFLAG) XVII A

The Wehrmacht established Oflag XVII A on June 15, 1940, on a site about 4.5 kilometers (2.8 miles) south of the town of Allentsteig (map 4f) in northeastern Austria, on the grounds of what is now the Allentsteig troop training area. Within a

Oflag XVII A at Allentsteig. General view of the camp, August 1940.
COURTESY OF ICRC.

few days, the camp had a population of 4,780 French officers, as well as 174 Polish and 2 Belgian officers (among the French, there were initially around 800 orderlies, who were permanently used for labor; from September 1942, their number was reduced to approximately 400). Departures due to repatriations were repeatedly offset by arrivals from other camps.

Oflag XVII A's staff consisted of 140 men in October 1943, plus 382 men of Company 2 of Reserve Battalion (*Landesschützenbataillon*) 893 as the guard battalion.¹ The camp commandants were the distinctly pro-French old Austrian Generalmajor z.V. Anton Unger and—in the wake of the “Great Escape”—from late 1943–early 1944, Generalmajor Hans Ehrenberg, a native of Saxony.

The mortality rate among the French officers was not high, although it began to increase toward the end of the war. The total number of French prisoners who met their death in the camp environment (including the military hospitals in Allentsteig, Gneixendorf/Krems, and Vienna) was probably 25 (in addition to approximately 10 Poles).²

At the start, the German supply system was not organized, and care packages were not yet arriving, so the prisoners suffered through a period of hunger that lasted until September 1940. After that, physical conditions began to improve. Already, though, two main, overlapping themes had emerged that would dominate the camp's history: relations with the German camp authorities, and tensions between factions within the camp.

As early as July 1940, the prisoners began to establish what became known as the “camp university.” Sanctioned ex post facto by the First Communiqué of the Minister of Education in the Vichy government, Jérôme Carcopino, dated September 11, 1941, the teaching and research operation was integrated into the French educational system but was hierarchically subordinate to the established universities. In 1944, the camp university had three sections: *Sciences* (natural sciences), *Lettres* (humanities), and *Droit* (law). Theological studies were conducted separately.

For a time, the university, which was anti-Vichy in sentiment, existed in competition with the “Légion du Maréchal” and then the “Centre Pétain,” two pro-Vichy organizations that familiarized the prisoner population with the new French ideology and supported Pétain’s policies. Naturally, the Germans supported those two groups; they attempted to gain the support of the French for a joint “New Europe” in line with Hitler’s policies by accommodating the POWs in their political, intellectual, artistic, and soon sports activities. This encouraged the development of a French camp command with a *Représentant général* at its head.

Because of the official policy of collaboration, the anti-Vichy “patriots” offered opposition both to the Germans and to Laval’s government in Vichy and its extreme advocates in the camp. The police force that the German commandant created, under Capitaine Georges Brécard, was termed, among other things, the “French Gestapo.”³ In April 1942, when the Pétainists, besides recruiting for the Legion of French Volunteers against Bolshevism and similar organizations, even began arranging for placement of “voluntary labor in Germany,” the “patriots” known as “Maffia” became active. Essentially, there were around 10 of them, including young Lieutenant Pierre Buchoud. The sometimes-violent efforts at persuasion made by their “raiding squads” were prosecuted by the Germans as “obstruction of the German war economy.” The camp physician, Dr. Lucien Raffalli, was found guilty on this charge and sentenced to two years in the Armed Forces Prison (*Wehrmachtgefängnis*) in Graudenz (today Grudziądz, Poland). His codefendant Lieutenant Bouillot was still in Graudenz at the end of the war.⁴ At the latest in 1944, the Maffia handed over the management of resistance activities to the representative of the French camp command, which had come into being in July 1942.

Gradually, the anti-Vichy forces came to dominate. Raymond Laporte established a *Cercle gaulliste* toward the end of 1942, and it soon gained access also to the French camp command. The *Cercle*'s members discussed the vision of a liberal France and allegedly prepared a draft of a French constitution on behalf of *Défense de la France*, a part of the French Resistance with a more intellectual and theoretical orientation.⁵ The university council was the moral authority in the camp, and to some extent it was also involved in the resistance and escape activities in the camp. Soon the key pro-Vichy figures were transferred out of the camp, and the pro-Vichy forces' influence was marginal thereafter.

Although the confiscations by the Wehrmacht and the procurement of teaching materials, consumable supplies, and research equipment caused the greatest difficulties, the camp university and its library, after overcoming the competing Centre Pétain (which was insignificant after the end of 1942) and integrating almost all the cultural facilities, influenced cultural and intellectual life in the camp and contributed decisively to rebuilding the morale of the French. Furthermore, the protests of members of the camp university as opponents of the Vichy regime had an effect on the German camp

command from the very outset and, for a time, prevented antisemitic measures in the camp.⁶ In the end, however, the approximately 150 Jews (including the biologist and embryologist Etienne Wolff) were transferred to the “ghetto” of Barracks 21.

Charitable activity (especially donation campaigns) and cultural life were extraordinarily intense. *Le Canard en . . . K.G.*, which was published from January 18, 1941, was perhaps the best edited and best illustrated of all the camp newspapers. The impression given of loyalty to Vichy was intended (at least later on) to deceive the German censors, so that faked identification papers, escape maps, and the like also could be produced in the print shop.⁷ The camp movie theater, encouraged by the Germans but financed by the French, was used primarily for German propaganda purposes. Secretly, the French filmed *Sous le Manteau*, a possibly unique documentation of life in a POW camp. There was a camp radio station, in addition to choruses, orchestras, at least one jazz band and 10 drama groups, and a large “open-air theater,” which was used also for religious services as well as a few authorized political ceremonies. These, like the numerous exhibitions, strengthened the internal cohesion of the French.

Relations with the German authorities varied over time. There was little tension at first, when the pro-Vichy elements held sway, but starting in the spring of 1942, a series of small-scale escapes, shootings by the guards, and a general trend toward resistance, which tensions between the factions exacerbated, created more hostility between the two sides. In 1943, after the Pétainists lost power, the atmosphere became calmer—but only temporarily. The resistance movement in the camp used this time to organize itself more thoroughly and eliminate competing structures.

Over the course of the camp’s history, the resistance engaged in a number of activities. These included the preservation of evidence through photos and film; destruction of German propaganda posters and posting of the resistance movement’s own important information; noisy protests; systematic bribery of Germans; provoking brawls; bold escapes; falsification of file cards and documents; “legally supported” utilization of the rights internationally guaranteed to the French; protests in cases that were no longer covered by the Geneva Convention and served only to keep the Germans “on the go”; and at the end of 1942 and beginning of 1943, removal of pro-German French officers from influential positions in the camp leadership.

The culmination of these efforts was the *Grande Évasion*, the French “Great Escape,” on the nights of September 18–19 and 19–20, 1943. Around 132 prisoners escaped, by way of a tunnel that some claimed should have been obvious to the guards, but an internal German investigation assigned no culpability to the guard force.⁸ The Germans recaptured all but 10–13 of the escapees, and proceeded to punish all the prisoners in the camp, collectively. The Germans placed the recaptured men under close arrest for 10–21 days, while civilians who had helped with the escape were severely punished

(18–30 months in prison).⁹ Ehrenberg, the new German camp commandant, created an additional “ring of defensive fortification” in April 1944, to protect against possible relief attacks or insurrections in the camp.

Some French officers suffered and died because of their Jewish background. Lieutenant Lantz perished in Auschwitz in March 1942, having been deported there after his repatriation or demobilization. A similar fate befell at least seven other French officers: Lieutenants Marx (Auschwitz), Cassagne (April 1945 in Neuengamme), Goudchaux (September 1944), Leborgne (during deportation), de Liocourt (May 1944 in Buchenwald), Henri Jonval (1945 during deportation), and Capitaine Dumesne (died returning from deportation). Paul Franck, however, took his own life to avoid deportation.¹⁰

Also worthy of mention are at least two other officers from Oflag XVII A who suffered for their (alleged) activities: Capitaine Levacher and Lieutenant Choné, who had allowed themselves to be “transformed” into “voluntary laborers” in Vienna, were arrested for espionage in October 1943 and sentenced to death in Torgau on December 8, 1943; in February 1945, their punishment was changed to forced labor.¹¹

In the summer of 1944, the Western Allies’ advance through France cut off communications and care packages, so conditions in the camp worsened considerably. The following winter, they became life threatening.

On April 17, 1945, the evacuation of the majority of the camp inmates began. They were forced to march in the direction of Braunau am Inn; only approximately 250 POWs who were absolutely unable to walk, as well as around 350 *réfractaires* (“refractory” prisoners), were permitted to stay behind in the camp (according to other sources, 840 men in total).¹²

During the march, around 800 totally exhausted men remained behind at an early stage, in the area of Gratzen (today Nové Hrady, Czech Republic). After liberating them, the Soviets sent the “Gratzener” on another march on May 16, this time in the direction of Odessa. Plucky leaders brought about a late return of the Gratzener via Gmünd.

The majority of Oflag XVII A made it all the way to the Kaplitz (today Kaplice)-Einsiedl (today Mníšek)-Unterhaid (today Dolní Dvořiště) area in the present-day Czech Republic. After the last Germans had vanished, the French raised the tricolor on the early morning of May 6, 1945, and proclaimed a sort of “French zone” between the Americans and the Red Army. A “corps of volunteer fighters” disarmed parts of the German Eighth Army, which was making its way toward the Americans, while Représentant général Gibert himself probably made the contact with Linz, from which the Americans airlifted these French POWs to France in a concerted effort beginning on May 10.

The men remaining in Edelbach took over the camp on May 8 and were liberated on May 9 by a unit of the Red Army, which, however, immediately moved on. American forces liberated Oflag XVII A on May 9–10, 1945. American trucks, under French leadership, picked up the prisoners still in Edelbach around May 16 and took them to Linz; they were then

taken by airlift to France around May 20. Scattered groups in some cases did not reach France until September 1945, in journeys that often were hazardous.

SOURCES The information about the Edelbach camp comes primarily from AN (F 9) and DMPA Caen (Mappe "Oflag XVII A, bes. Endberichte") but also from BA-MA (RH 53-17/187) and private archives; a camp chronicle in text format: Henri Natter and A. Refregier, *6000 à l'Oflag 17 A ou cinq ans de captivité au fil des jours* (Paris: Jacques Vautrain, 1946); and one in pictorial form: Marcel Corre, *Défense de photographier: Reportage photographique clandestine sur la vie d'un camp de prisonniers français* (Clermont-Ferrand: Montagne, 1954); contemporary letters (some of them secret letters); eyewitness accounts by French inmates and German-Austrian guards, as well as physical objects from the "Edelbach trunk," all now in the Kusternig Collection, Lower Austrian Regional Museum. Particularly valuable documents are the above-cited report on camp visits by the Armed Forces High Command in 1943, the final reports, statements of accounts, and morale reports, as well as the diaries of Armand Oldrà and those of Commandant Pierre Brusaut and François Ellenberger about the evacuation.

Fundamental references (in particular, regarding physical conditions and cultural life, the "camp university," and the "Great Escape," with extensive quotations) include: Andreas Kusternig, "Die 'Grosse Flucht' und die 'Lageruniversität.' Das Lager für kriegsgefangene französische Offiziere Oflag XVII A Edelbach," in *Heimat Allentsteig 1848–2002 mit Beiträgen zur Geschichte der Katastralgemeinden Bernschlag, Reinsbach, Thaua, Zwinzen*, ed. Ernst Bezemek (Allentsteig, 2002), pp. 271–317; and Andreas Kusternig, *La "Grande Evasion" et l'"Université du camp" de l'Oflag XVII A Edelbach*, trans. Henri Giraud and Bénédicte Guermonprez (Paris, 2002).

The resistance movement in the camp is treated in the greatest detail in Andreas Kusternig, "Zwischen 'Lageruniversität' und Widerstand: Französische kriegsgefangene Offiziere im Oflag XVII A Edelbach," in *Kriegsgefangene des Zweiten Weltkrieges: Gefangenannahme–Lagerleben–Rückkehr (Kriegsfolgenforschung 4)*, ed. Günter Bischof, Stefan Karner, and Barbara Stelzl-Marx (Vienna: Oldenbourg, 2005), pp. 352–397.

OFFIZIERLAGER (OFLAG) XVIII A

The Wehrmacht established Oflag XVIII A on October 16, 1939, in Lienz, in Defense District (*Wehrkreis*) XVIII. Sometime between June and August 1943, the camp was transferred to Wagrain, 212 kilometers (131 miles) to the east.¹ Oflag XVIII A was subordinate to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*).

Oflag XVIII A at Lienz. Camp entrance and guards, August 1940.
COURTESY OF ICRC.

Oflag XVIII A was first located in the Franz Josef Kaserne (barracks) in Grafenangen, a district in the northern part of the town of Lienz, in eastern Tyrol. There were about 30 barracks for the prisoners as well as several other barracks that served other functions, including a kitchen, an infirmary, and offices and quarters for the camp staff. The camp staff comprised 66 men, a relatively small number compared to the staff of most camps for enlisted men (Stalags).² The commandant of the camp was Oberst (later General) Plammer and his adjutant was Hauptmann Zuber. The paymaster (*Zahlmeister*) was Viktor Walter Glückstein.³

Oflag XVIII A originally held Polish officers who had been captured during the German invasion of Poland in September 1939. As of December 13, 1939, there were 600 Polish officers and 120 orderlies (batmen) in the camp.⁴ By the spring of 1941, all of the Polish officers had been transferred to other camps in the Reich. The first French prisoners arrived on August 17–18, 1940.⁵ While small numbers of British, Dutch, and Italian officers were intermittently present in the camp after August 1940, the camp population consisted almost entirely of French officers for the rest of its existence. The camp population was relatively stable throughout its operation, with a population generally between 800 and 1,000 French officers and 100 and 150 orderlies; the maximum population of the camp was 1,037 officers and 167 orderlies in October 1942.⁶

Conditions in Oflag XVIII A during its deployment in Lienz were generally regarded as good. The Germans generally observed the requirements of the Geneva Convention of 1929 in their treatment of French prisoners, and it seems that they did so in Oflag XVIII A. The International Committee of the Red Cross representatives who visited the camp in September 1940, shortly after the arrival of the first transports of French prisoners, gave a positive report about the prisoners' accommodations and indicated that the prisoners had told them that the Oflag was a significant improvement over the conditions in the Frontstalags in France from which they had arrived at Oflag XVIII A. The food rations in the camp were considered adequate, and while there was a shortage of clothing, this problem was ameliorated by the arrival of shipments of clothing from France.⁷ The prisoners worked hard to maintain morale within the camp, and there was a substantial Gaullist movement among the officers that encouraged an attitude of defiance toward their German captors. Morale was further improved when news of the Allied landings in North Africa and later in Normandy reached the prisoners.⁸

In the summer of 1943, the camp was relocated to Wagna, in Styria. The campsite in Wagna had been used as a prisoner of war camp during World War I, and, between September and mid-November 1942, the main camp of Stalag XVIII B had been located there. The Wagna camp consisted of a barracks with three rooms each, each room holding 20 men. There was also a canteen, an infirmary, and a theater. The camp population seems to have remained relatively constant after the transfer; however, records about this period of the camp's existence are limited. The Wehrmacht ordered the

dissolution of the camp on September 21, 1944; the prisoners were transferred to Oflag XI B in Braunschweig.⁹

SOURCES Primary source information about Oflag XVIII A is located in BA-MA and BArch B 162/27873 Überprüfung des Oflag XVIII A in Lienz (copies at USHMM, RG-14.101M.2622.00000648–00000707).

OFFIZIERLAGER (OFLAG) XVIII B

The Wehrmacht established Oflag XVIII B on October 19, 1939, in Wolfsberg (map 4f), in Defense District (*Wehrkreis*) XVIII. On April 25, 1940, the camp's staff was transferred to Woldenberg, in Pomerania, and redesignated as Oflag II C. However, Oflag XVIII B was reestablished on May 31, 1940.¹ Both iterations of the camp were subordinate to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*).

Oflag XVIII B was located in the former barracks of the III Bataillon, Gebirgsjägerregiment 139 in the Priel district of Wolfsberg.² It initially held Polish officers captured during the German invasion of Poland in September 1939. As of December 1939, there were 506 Polish officers and 117 orderlies (batmen) in the camp.³ In April 1940, the Polish prisoners were transferred to Woldenberg along with the original camp staff.⁴ After the camp was reestablished in May 1940, it held Belgian officers as well as small numbers of French officers on an intermittent basis. As of September 1940, there were 636

Oflag XVIII B at Wolfsberg. Camp buildings with prisoners in the foreground, August 1940.

COURTESY OF ICRC.

Belgian officers and 131 orderlies in the camp. By January 1941, the population had decreased to 549 Belgian officers and 107 orderlies.⁵

On March 1, 1941, Oflag XVIII B was converted into Stalag XVIII A. The Belgian officers were transferred to Oflag XVIII A in Lienz.⁶ The headquarters of Oflag XVIII B was officially dissolved on March 10, 1941.

SOURCES Additional information about Oflag XVIII B can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen. COURTESY OF ICRC.

XVIII. It was the first prisoner of war camp established in Defense District XVIII. The camp was closed on May 9, 1940, and the prisoners were transferred to Oflag II C in Woldenberg (today Dobiegiew, Poland). Oflag XVIII C was reestablished on July 2, 1940.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*).

The first prisoners in Oflag XVIII C were Polish officers whom the Germans captured during their invasion of Poland in September 1939. As of December 1939, there were 897 Polish officers and 220 Polish orderlies (batmen) in the camp.² The Polish prisoners were transferred to Oflag II C on May 30, 1940.³ After the camp was reestablished (under the same commandant, Oberstleutnant Bienbacher), 951 French officers and 100 orderlies were brought to the camp in three transports between July 9 and August 3, 1940.⁴ The camp reached its maximum population of 1,189 French officers and 149 orderlies in September 1940. By January 1941, the population had decreased to 669 French officers and 90 orderlies.⁵

Oflag XVIII C was closed on March 1, 1941. On May 1, 1941, the campsite was converted into Stalag XVIII B, with a new staff and new prisoners.⁶

SOURCES Additional information about Oflag XVIII C can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen. OFFIZIERLAGER (OFLAG) XXI A

The Wehrmacht established Oflag XXI A on September 1, 1940, in Schokken (today Skoki, Poland) (map 4c), in Defense District (*Wehrkreis*) XXI, from Stalag XXI B/Z.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*). Oflag XXI A received field post number (*Feldpostnummer*) 47 486 between July 30, 1941, and February 28, 1942. The number was struck between March 1 and September 7, 1942.

Oflag XXI A held French officers and orderlies (batmen). It was a small camp, with a maximum population of 467 (351 officers and 116 batmen) in February 1941.² Conditions in the camp were generally satisfactory and compliant with the Geneva Convention of 1929.

In October 1941, the camp headquarters redeployed to Bobruisk, in occupied Belarus, where it was subordinate to the 339th Infantry Division, the 203rd Guard Brigade, and the Prisoner of War District Commandant (*Kriegsgefangenen-Bezirkskommandant*) P.³ On May 2, 1942, the camp was redesignated as Stalag 373.⁴

SOURCES Primary source material about Oflag XXI A is located in BA-MA (RW 6: 450; RH 22: 225, 230, 231, 247, 248), WASt Berlin (Stammtafel Oflag XXI A, Stalag 373), and NARB.

OFFIZIERLAGER (OFLAG) XXI B

The Wehrmacht established Oflag XXI B on September 18, 1940, in Schubin (known as Altburgund from 1941–1945; today Szubin, Poland) (map 4c), in Defense District (*Wehrkreis*) XXI.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*). It was located in a boys' school, which had been expanded through the construction of additional barracks for the camp.

Oflag XXI B initially held French officers and orderlies, in numbers ranging from about 600 to nearly 1,500. Almost all of them were transferred out in September 1942, after which the largest group of prisoners were British officers and orderlies, numbering between 570 and 760. Eighteen American officers arrived in January 1943; their numbers grew to 126 by April 1.²

After the departure of the French prisoners, the Wehrmacht used Oflag XXI B as a special camp to hold problematic British officers. Many of the officers there had previously attempted to escape from other camps or had fallen afoul of disciplinary standards within their camps. The nature of these prisoners helps explain the high number of escape attempts from Oflag XXI B.³ In March 1943, for example, 35 prisoners from the camp carried out an escape attempt, although none of them successfully reached neutral territory.⁴

Prisoners also took advantage of frequent opportunities to disrupt regular functions in the camp. Men frequently

Oflag XXI B at Altburgund. French POWs cooking on a stove, September 1942.

COURTESY OF ICRC.

reported late to morning parades. Although such actions resulted in prisoners being sent to “the cooler” (the penal cells), they occurred with such frequency that the detention facilities became overwhelmed. Prisoners would have to report weeks later for punishment. When they were asked to give names, prisoners would provide aliases such as “M. Mouse” (i.e., Mickey Mouse) to further confuse and interrupt the Germans’ ability to operate the camp effectively.⁵

The culture within the camp reflected the variety of cultures within the British Empire and beyond. Prisoners exchanged ideas, traditions, and experiences from their own homes. A Canadian officer provided lectures on Inuit culture, a New Zealander gave a Maori dance, a South Pacific Islander described Fijian religion, and Americans sang country songs. While Anglican prisoners could attend services within the camp, the 60 British Catholic prisoners had no one to lead mass; in 1943, discussions were underway to allow them to travel to Stalag XXI D to attend religious services on Sundays. The camp had a library with about 1,600 books and a classroom and two study rooms that afforded the prisoners the chance to take part in educational courses. The camp also had a small theater group as well as an orchestra.⁶

Outdoor experiences were similarly varied, although opportunities to play sports were somewhat limited by a lack of equipment; during a visit by the YMCA in February 1943, the American and Canadian prisoners requested that baseball and softball equipment be sent to the camp. The prisoners did manage to set up a cricket pitch in the summer and a hockey rink in the winter. Captain Partridge also led physical exercises. Those with a more naturalist inclination took advantage of the camp’s surroundings. On one day in March 1943, the camp’s bird-watchers observed 34 different species of migrating birds in the camp’s vicinity.⁷

The Wehrmacht disbanded the camp in November 1943. The prisoners were transferred to Stalag Luft III. Oflag 64 took over the site.

OFFIZIERLAGER (OFLAG) XXI C

The Germans established Oflag XXI C on March 10, 1942, in Schokken (today Skoki, Poland) (map 4c). From December 1943 onward, the camp was deployed in Schildberg (today Os-trzeszów, Poland) (map 4c). The camp in Schildberg was located on the site of the former Stalag XXI A. On November 11, 1943, a subcamp (*Zweiglager*) was established in Grune (today Gronówko, Poland).¹ Oflag XXI C was subordinate to the Commander of Prisoners of War in Defense District XXI (*Kommandeur der Kriegsgefangenen im Wehrkreis XXI*). The

Oflag XXI C at Schildberg. General view of the camp, April 1943.
COURTESY OF ICRC.

first commander of the camp was Oberstleutnant Graf zu Solms (b. 1879). His successor, from March 1, 1944, to March 19, 1945, was Generalleutnant Peter Bielfeld (1888–1963).

Oflag XXI C held Allied officers and their orderlies. From the spring of 1942 until the middle of 1943, Serbian officers predominated in the camp. After the camp was moved from Schokken to Schildberg in the fall of 1943, the majority of the prisoners were Norwegian officers, who comprised about 65 percent of the total population. The majority of them were arrested in Norway in August 1943 and placed in the camp in September 1943. The subcamp in Grune held British and Dutch officers, with Italian military prisoners serving as orderlies.² The population of Oflag XXI C varied from a minimum of 482 prisoners in April 1942 to a maximum of 1,719 prisoners in January 1944.³

The conditions in the camp were generally satisfactory. The Norwegian officers had their own government and lived by military rules. In order to endure the hardship of captivity more easily, they organized a camp school. In addition to typical school subjects, training was provided in the areas of fertilization of agricultural land, hunting, fishing, swimming, chess and bridge, fundamentals of masonry, drawing, and several social sciences. Courses in engineering and law also existed. Dozens of lectures were given on topics such as building a house, metallurgy and electrical engineering, aluminum, use of technology in the shipbuilding industry, power plant operations, brewing plants, aviation engines, natural gas, oil, and gasoline. The Norwegian officers elected a leader, to represent their interests to the German authorities. Until July 1944, this leader was General Liljendhal and afterward their leader was General Otto Ruge. The subcamp in Grune was closed in January 1945 and the main camp was closed on March 19 of that year.

SAMMELLAGER PILLAU

The German Third Army (AOK 3) established Sammellager Pillau in Pillau, East Prussia (now Baltiysk, Kaliningrad Oblast, Russia) (see map 4c) in October 1939. The camp closed in November 1939. The navy may also have used the site, but documentary evidence is lacking.

SOURCES There is very little information on this camp, but what there is can be found in Witold Zurawski: "Niemieckie obozy dla jenców wojennych (1939–1945). VII. I Okręg Wojskowy Wehrmachtu - Królewiec (cz. I), (Deutsche Kriegsgefangenenlager (1939–1945). VII. Der Wehrkreis I Königsberg (Teil I)," in: *Historyczno-Badawczy Biuletyn Filatelistyczny* 28 no. 2, 86–94.

MANNSCHAFTSSTAMMLAGER (STALAG) 122

The Wehrmacht established Stalag 122 (map 2) in Compiègne, France, on March 8, 1944. The camp closed on September 14, 1944. An Italian Red Cross record from June 1944 suggests that Italian prisoners captured in southeastern France were sent to the camp, and the prisoners from this camp may have been subsequently deported to concentration camps, including Dachau and Mauthausen.¹

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

MANNSCHAFTSSTAMMLAGER (STALAG) 160

The Wehrmacht established Stalag 160 (map 2) in April 1941, possibly in Lunéville, Meurthe-et-Moselle, France, about 25.6 kilometers (16 miles) east-southeast of Nancy. The camp closed in September 1941.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

MANNSCHAFTSSTAMMLAGER (STALAG) 191

The Wehrmacht established Stalag 191 (map 2) in La Fère, France, about 65 kilometers (40 miles) northwest of Reims, in April 1941. The camp closed in September 1941.

SOURCES The only source available on this camp is to be found in Rüdiger Overmans, Reinhard Otto, and Wolfgang Vogt (eds.), *Das Kriegsgefangenenwesen der Wehrmacht* (forthcoming).

MANNSCHAFTSSTAMMLAGER (STALAG) 237

The Wehrmacht established Stalag 237 (map 5) from Stalag XVII B/Z (formerly Stalag XVII D) on November 5, 1941, in the Generalgouvernement.¹ The camp was located in Petrikau (today Piotrków Trybunalski, Poland). The camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander for the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Generalgouvernement Polen*). Stalag 237 was assigned field post number (*Feldpostnummer*) 41 235 between July 30, 1941, and March 11, 1942; the number was struck between March 12 and September 7, 1943.

The commandant of Stalag 237 was Major (later Oberstleutnant) Adolf Rengert, later the commandant of Stalag 371 in Stanislau (Stanisławów, today Ivano-Frankivsk, Ukraine). His deputy was Hauptmann Karl Flügel and his adjutants were Hauptmann Wilhelm Hoch and Hauptmann Karl Strolz. The camp officers (*Lageroffiziere*) were Hauptmann Alexander Beschorner and Hauptmann Paul Fournier. Hauptmann (later Major) Richard Grabner served as the counterintelligence (*Abwehr*) officer in the camp.² The camp doctors were Dr. Hans Schüpferling and Drs. Scharmacher and Schneider. The camp was guarded by personnel from the 1st and 3rd Companies of the 354th Reserve Battalion (*Landesschützenbataillon*).

Stalag 237 held Soviet prisoners of war (POWs). The camp was divided into two sections: Lager A, which held both Russian and Ukrainian prisoners, and Lager B, the “Quarantine Camp,” which held only Russians. On May 1, 1942, the camp contained 783 prisoners; on June 1, 1942, there were 3,628; and on August 1, 1942, there were 2,013.³ As was the case in other camps for Soviet POWs, living conditions in the camp were poor. The prisoners suffered as a result of overcrowding, malnutrition, lack of proper medical care, and abuse by the German guards, leading to a high mortality rate in the camp. Many prisoners who died of starvation or disease were buried in graves near the camp. Prisoners deemed fit for factory labor were transferred to the Reich to work.⁴ Other prisoners were forced to work in the vicinity of the camp; the camp’s labor detachments (*Arbeitskommandos*) were under the supervision of Hauptmann Karl Auer.⁵

Camp personnel directed by Hauptmann Grabner screened the new arrivals at the camp to identify “undesirable” prisoners,

such as Jews and political commissars, who were then shot near the camp by a 10-man Security Service (*Sicherheitsdienst*, SD) “task force” (*Einsatzkommando*) led by SS-Obersturmbannführer Hermann Altmann. In some cases, these prisoners were required to dig their own graves before they were shot. Some of the prisoners in the camp were given the opportunity to volunteer as auxiliaries (*Hilfswillige*, Hiwis), who were trained to be concentration camp guards at a school established for that purpose in Petrikau. These prisoners lived in Lager A. They were taken to the school every morning and returned to the camp in the evening. While this job was undesirable, it offered an opportunity to escape the terrible conditions in the camp and the high probability of death.

On September 2, 1942, the Germans ordered the camp to be renamed Stalag 397, and transferred it to Iasinovataia (today Iasynuvata, Ukraine), while the camp in Petrikau became a subcamp of Stalag 367 in Tschenstochau (today Częstochowa, Poland) and was redesignated Stalag 367/Z.⁶ Hermann Altmann was captured by the Soviets at the end of the war and held in various prisons in Poland until 1955, when he was sentenced to death for his participation in the execution of Soviet POWs. However, his sentence was commuted, and, in 1959, he was released from prison and allowed to return to Germany.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 301

The Wehrmacht established Stalag 301 on April 30, 1941, in Stablać, in Defense District (*Wehrkreis*) I (map 4c). From July 17 until August 21, 1941, the camp was located in Schieratz (map 5), and from August 21 until September 22, 1941, in Lublin. In late September 1941, the camp was transferred to Kovel' (map 9e), and in August 1942, it was relocated to Slavuta (map 9e). In November 1942, it moved from Slavuta to Shepetovka (map 9e), where it remained until the end of 1943. The camp had one subcamp (*Zweiglager*), which was established at Slavuta in late September 1941; in November 1942, the subcamp was transferred to Zaslav (today Iziaslav, Ukraine) (9e). The date of the camp's dissolution is uncertain; it was still in operation on August 19, 1944.¹ While located in Kovel', Slavuta, and Shepetovka, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*).

The camp commandant, beginning on May 2, 1941, was Oberstleutnant Walther Otto. He was followed by Oberstleutnant Dr. Wiegand from October 10, 1941; Oberst Lüders, from January 24, 1943; and, finally, Oberst Helmut von Uechtritz, from April 6, 1943, to July 25, 1944. The deputy camp commandants were Major Dr. Friedrich Voigt and Hauptmann Johannes Papke. They were replaced by Oberstleutnant Fritz Meurer on September 21, 1943. From March 17, 1944, until July 25, 1944, the position was filled by Oberstleutnant Paul Pini. The counterintelligence (*Abwehr*) officers were Hauptmann Karl Flick (who died on June 26, 1942) and Hauptmann Dr. Emil Pfau. The camp officer (*Lageroffizier*) was Hauptmann Friedrich Pohlenk as of December 11, 1941. As of November 1942, the camp was guarded by Company 3 of the 568th Reserve Battalion (*Landesschützenbataillon*).

Stalag 301 held Soviet prisoners of war (POWs). The maximum population of the camp was 33,139 in October 1942.² Approximately 12,000 prisoners are reported to have died at the camp in Kovel' from starvation, disease, and being shot.³

The Slavuta subcamp, also known as the major hospital (*Gross-Lazarett*) Slawuta offers a glimpse into the horrors that the Wehrmacht inflicted upon Soviet POWs.⁴ The camp consisted of a barbed-wire enclosure containing 10 three-story

stone buildings, located about 1.5 to 2 kilometers (0.9 to 1.2 miles) southeast of Slavuta. In six of the blocks, the Germans kept prisoners with wounds or illnesses. Three other blocks held prisoners to be shipped out or who were in work details.

There was constant turnover at the hospital, as prisoners died and new transports arrived. Many prisoners were dead upon arrival, because of the treatment that the transport guards meted out to them, on top of their medical conditions. A. I. Daniliuk, operator of a water tower located on the grounds of the former military camp, reported to the Investigative Commission that he saw "20 to 25 corpses tossed out of each car of an arriving train, and 800 to 900 corpses were left lying on the railroad branch line." Generally, the camp guards greeted groups of POWs at the gates of the hospital with blows from rifle butts and rubber truncheons, and then confiscated the new arrivals' leather footwear, warm clothing, and personal belongings.⁵

In the hospital, the prisoners lived in horribly overcrowded conditions. Many had to stand, closely pressed together; weary and exhausted, many fell to the floor and died. The German doctors often placed people suffering from typhus, tuberculosis, and dysentery with people who had minor and serious wounds, in the same block and the same ward. A. A. Kryshtop, a former POW and a Soviet physician, testified that "in a single block, there were people with typhus and tuberculosis, and the number of sick reached 1,800, while under normal conditions no more than 400 persons could have been placed there."⁶ The rooms were not cleaned. The patients remained for months on end in the underwear they were wearing when they were taken prisoner. They slept without any covering. Many were half-clothed or completely naked. The premises were unheated, and the primitive stoves made by the POWs themselves fell to pieces. No elementary medical processing of those entering the hospital was conducted. All these factors contributed to the spread of infectious diseases. In the hospital, no water was available for washing or even for drinking. As a result of the unsanitary conditions, lice infestation in the hospital assumed enormous proportions.

Former POW Maksim Ermakov recalled after the war: "In the barracks, one's breath was taken away by the unbearable odor of feces and decomposing corpses. At the entrance there stood a mobile commode made from a barrel with the top cut off, filled to overflowing with feces. Many of the wounded and sick could not get up because of exhaustion; they suffered from urinary incontinence, profuse dysentery, diarrhea related to a lack of protein, and swelling of the face and extremities. The unclean matter ran down from the upper plank beds to the lower ones."⁷

The daily rations consisted of *balanda*—a watery soup made from rotten, unpeeled potatoes, bran, and foxtail millet—and 250–300 grams (8.8–10.6 ounces) of ersatz bread, made partly of sawdust. Sometimes a "menu" of this kind included carrion: dead horses picked up from all over the region, but even this food was given out on an irregular basis in 1941 and 1942. There were times when, for five or six days, wounded POWs received no food at all. There were also

instances when the German guards, for amusement, threw beets and rotten potatoes into a crowd of POWs, and, when the POWs went for the food, the Germans and the Ukrainian police shot at them. Starvation reduced the prisoners to such a state that there were instances, confirmed by eyewitnesses, of cannibalism and use of rats as food.⁸

The bread substitute was baked with special flour sent from Germany. Forensic examination established "that the 'flour' consisted of chaff with a minute amount of flour, evidently formed from grains that accidentally fell into straw during threshing. Consumption of the 'bread' made from this flour resulted in starvation and alimentary dystrophy in the forms of cachexia and dropsy (starvation edema), and contributed to the spread of serious gastrointestinal diseases, usually fatal, among the Soviet POWs."⁹

Although the camp at Slavuta officially was called a Gross-Lazarett and its staff included a substantial number of medical personnel, the sick and wounded prisoners did not receive even basic medical care. No medications were issued to the sick and injured. Wounds were not treated surgically and not bandaged. Wounded limbs with bone damage were not immobilized. Even for the gravely wounded, no care was arranged. P. A. Molchanova, a former female POW and medical orderly, reported that "the large numbers of sick and wounded, concentrated in quarters next to us behind a partition made of boards, received no medical care of any kind. From their ward, day and night, we heard continuous prayers for help, pleas for someone to give them even a drop of water. The powerful stench of the festering and neglected wounds penetrated through the chinks between the boards."¹⁰

The guards exacerbated the terrible conditions. They beat the prisoners as they went to work and while distributing the rations to them. For the slightest infraction of the rules, the Germans would place sick and wounded men in bare concrete punishment cells and deny them water; many of the prisoners died there. As another form of punishment, exhausted prisoners had to run around the barracks; those who could not keep up were beaten senseless. Guards murdered prisoners for sheer amusement or for minor infractions.

The camp administration forced the sick and wounded POWs to do backbreaking physical labor despite their extreme exhaustion and weakness. The POWs carried heavy loads and moved the corpses of Soviet citizens who had died. POWs who were tired and dropped from exhaustion were killed on the spot by the guards. The route to and from work, according to Slavuta's Catholic priest, Father Milevskii, was marked with little grave mounds, like milestones.¹¹ According to Soviet Extraordinary State Commission (ChGK) materials, about 150,000 POWs perished in the camp in Slavuta between 1941 and 1943.¹² However, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly.

Despite the strictest measures on the part of the Germans, Soviet POWs managed individual and group escapes from the hospital, finding refuge in the homes of the local population of Slavuta and the surrounding localities. As a result, on

January 15, 1942, the Regional Commissar (*Gebietskommissar*) in Shepetovka, Regierungsrat Dr. Worbs, whose district included the town of Slavuta, issued a special directive warning the population that "for giving aid of any kind whatsoever to 'outsiders,' that is, to escaped POWs, the guilty will be shot. If those directly guilty are not found, then 10 hostages will be shot in each instance." The district authority of Slavuta, in turn, declared that "all prisoners of war who have voluntarily left the hospital are declared to be outside the law and are subject to being shot wherever they may be discovered."¹³ POWs who escaped and were caught, as well as the citizens who had given them aid, were arrested by the German Gendarmerie and Ukrainian police, beaten, and shot.¹⁴

From the second half of June until early August 1942, the camp in Slavuta was also used as a center for formation of Cossack military units. As a result of an order dated June 18, 1942, all POWs who were Cossacks by origin and regarded themselves as such had to be sent to Slavuta. By the end of the month, 5,826 prisoners had already been concentrated here, taken from various camps in the Ukraine (Vinnitsa, Kovel', Darnitsa, Belaia Tserkov', and others), and a decision was made to form a Cossack corps and set up a corresponding headquarters. As there was an acute shortage of senior and midlevel command personnel among the Cossacks, they began selecting former Red Army commanders for Cossack units, men who were not Cossacks. As a result, the Ataman Count Platov 1st Cossack Officer Cadet School was opened at the formation headquarters. In addition, there was a school for noncommission officers. The Cossack personnel were used primarily to form the 1st Ataman Regiment under the command of Oberstleutnant Freiherr von Wolff and a special half-squadron of Cossacks (*polusotnia*) intended to perform special tasks in the Soviet rear area. After testing of the increased fresh forces, formation of the 2nd Leibkosaken-Regiment and the 3rd Regiment of Don Cossacks began, followed by formation of the 4th and 5th Regiments of Kuban Cossacks and the 6th and 7th Combined Cossack Regiments. On August 6, 1942, the Cossack units that had been formed were transferred from the camp in Slavuta to Shepetovka to barracks specially set aside for them due to an outbreak of typhus at Slavuta.¹⁵

MANNSCHAFTSSTAMMLAGER (STALAG) 302 (II H)

The Wehrmacht established Stalag 302 (II H) (map 4b) in Defense District (*Wehrkreis*) II on August 14, 1941, from Frontstalag 302.¹ Initially, the camp was deployed in

Barkenbrügge (today Barkniewo, Poland), but, from early 1942 until September 1, 1943, it was located in Rederitz (today Nadarzyce, Poland) (both 4b), with a subcamp (*Zweiglager*) in Barkenbrügge (until mid-1943). The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommmandeur der Kriegsgefangenen im Wehrkreis II*).

Stalag 302 held Soviet prisoners of war (POWs). The maximum population was 5,000 prisoners.² The conditions were similar to those in other camps for Soviet POWs: housing, food supplies, and medical care were inadequate, leading to a high death rate from malnutrition and disease. The Gestapo carried out selections (*Aussonderungen*) to discover “undesirable” prisoners such as political commissars and Jews. In October 1941, 700 such prisoners were selected and sent to the Sachsenhausen concentration camp, where some were executed shortly after arrival and others were sent to forced labor.³ Stalag 302 was disbanded on September 1, 1943.

MANNSCHAFTSSTAMMLAGER (STALAG) 303

The Wehrmacht formed Stalag 303 (map 3) in April 1941, in Defense District (*Wehrkreis*) III.¹ From August 1941 on, the

camp was deployed in southern Norway, in the village of Jørstadmoen. The camp was subordinate to the Prisoner of War District Commandant (*Kriegsgefangenen-Bezirkskommandant*) under the Armed Forces Commander Norway (*Wehrmachtbefehlshaber Norwegen*). The camp received the field post number (*Feldpostnummer*) 12 941 between February 1 and July 11, 1941.

Stalag 303 primarily held Soviet prisoners of war (POWs). The camp held the following numbers of prisoners on these dates: February 1, 1942, 334; April 1, 1942, 3,200; June 1, 1942, 3,166; August 1, 1942, 5,659; September 1, 1942, 6,184; October 1, 1942, 6,132; November 1, 1942, 8,043.² On April 1, 1945, there were 12,510 prisoners in the camp, including 12,426 Soviet citizens, 76 Finns, 6 Poles, and 2 Serbians. Of the total number of prisoners, only 1,391 were in the main camp, while 10,904 were in 92 work details (*Arbeitskommandos*), and 215 were in other places, being transported or in military regional hospitals (*Ortslazaretten*).³ By the end of the war, Stalag 303 had 87 camps in southern Norway, according to German sources. The area that belonged to Stalag 303 stretched from Åseberg in the north to Oslo in the south and Bergen/Voss in the west.⁴

The conditions in Stalag 303 were harsh, especially during the early period of its existence. The prisoners were crammed together in a small area, the food was inadequate in both quantity and quality, there was little medical care, disease was rampant, and the guards were abusive, leading to a high death rate.⁵ Former prisoner Aleksandr Kiselev described the prisoners' living conditions in one of the camp's work detachments as follows:

Once a group of Nazis came to our camp [Stargard] and picked out 500 people, who were taken in trucks to Stettin. From there they were taken on cargo barges directly to Bergen. We reached Bergen in October 1943. At first we were settled in a small camp, where there were only a few barracks, and then we were moved to a big camp—Nygårdsmyren. In the camp, I lived near the exit, where the guards were located. I slept on the upper [second] tier of the bed; at the very top slept all the young prisoners; the elderly ones slept on the bottom tier. The bunks were covered not with straw but with dry seaweed. The head of the camp had his own informer in each barracks, people who could speak a bit of German. We took turns eating from small saucers, because there were few spoons, there were not enough of them. We ate three times a day. Starting in the morning, we drank cold tea. In the daytime there was soup made of rotten vegetables and rutabagas, and both the prisoners and the Germans called this soup "barbed wire." Some bread and tea for dinner, and 200 grams [7 ounces] of margarine for every 20 prisoners. In some barracks there were a few medications. Mainly, they all were sent to hospitals. We often were damp when we returned from work, but in each barracks there

was only one stove, and not everybody managed to get dry. As a result we went around in damp clothes the next day. Once a week we had a bath, and we tossed our dirty clothes into the heated room so they could get dry. We were not allowed to go outside to the toilet at night; we had to wait until the next day. In the barracks where I lived, there was no balalaika, but we often sang, and even put on concerts in the evenings. We walked to work in five rows, and often we picked up packets of food that local inhabitants had placed along the roadsides. I worked in a bunker where there were submarines. I worked together with Norwegians, and they shared their food with us and told us news from the front. I did various jobs: I carried bags, I unloaded freight cars. Many people, to avoid work, mutilated or injured themselves.

Prisoners worked on various projects of interest to the German military in the area around the camp, as well as for other German authorities, including Organisation Todt, often doing forestry or construction work in Lillehammer. In some cases, prisoners who worked in the labor companies and lived outside the camp could procure extra food and larger bread rations; however, they were also subject to mistreatment by the guards. In one instance of such mistreatment, two German soldiers escorted two prisoners to work at Saksenvik. The guards were distracted for a few minutes, and the prisoners took advantage of this and fled to a nearby house where they tried to find something to eat. The reaction of the guards was instantaneous. One of the prisoners fell to his knees and begged forgiveness, but the guard shot him in front of the local inhabitants. One of them tried to prevent the tragedy but was stopped by the second guard. Cases of such cruelty were common.⁶ Karl Heinrich Richter, who served in the 366th Security Battalion (*Sicherungsbataillon*) and worked as a guard at Stalag 303, reported that many of the guards inflicted severe beatings on the prisoners.⁷

Irina Skretting, who worked as a translator when the Norwegians took control of the camp in Jørstadmoen, later recalled: "I never saw worse conditions than in Jørstadmoen. What we saw in this camp is impossible to describe. Especially the barracks with men suffering from TB. They were practically isolated from everyone else, because the Germans, too, were mortally afraid of becoming infected. The prisoners lay on plank beds along the walls. They lay so close together that it was almost impossible to move off the plank beds. The sanitary conditions, too, were indescribable. It was hard to imagine that people could live in these barracks."⁸ At least 954 prisoners died in the camp, according to incomplete data, as a result of malnourishment, disease, exposure, and deliberate mistreatment and killings. In this camp, as in others, the Germans screened the prisoners to separate out "undesirables," such as Jews and political commissars, who were summarily executed.⁹

A total of 1,651 Soviet prisoners were registered to the so-called reinforcement service (*Ergänzungsdienst*) at Stalag 303.

These prisoners, who volunteered for service in the Wehrmacht, received the same food rations and facilities as German soldiers. The categorization of these prisoners is somewhat uncertain, but it is probably correct to assume that they were *Hilfswillige*. After the liberation in May 1945, these prisoners were, however, still considered POWs, not German soldiers, and were therefore repatriated to the Soviet Union, where they likely met harsh punishment.

The camp at Jørstadmoen was also used as a transit camp for Norwegian prisoners on their way to other camps in Norway. From April 1 to 12, 1942, 568 teachers from Polizeihäftlingslager Grini and 118 teachers from Hedmark and Oppland were detained at Jørstadmoen or "Jøssingmoen," as the camp also was called. These teachers had refused to join the Nazi teaching organization, the *Lærersambandet*. After nine days of internment at Jørstadmoen the teachers were sent on to prison camps in Kirkenes, in northern Norway.¹⁰ Only 11 of the teachers were released from captivity because they agreed to join the *Lærersambandet*. In November 1942, the teachers were sent back home after they had agreed to sign the agreement on a pro forma membership in the organization. The date on which Stalag 303 disbanded is unclear, but it probably operated until the German capitulation on May 8, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) 304 (IV H)

The Wehrmacht established Stalag 304 (maps 2, 4e, and 6) based on Stalag IV C on April 8, 1941, in Defense District (*Wehrkreis*) IV, in Wistritz (today Bystrice, Czech Republic) near the city of Teplitz-Schönau (today Teplice, Czech Republic). It deployed to a site southeast of the village of Zeithain, about 46 kilometers (29 miles) northwest of Dresden. From September 12, 1941, onward, the camp was designated Stalag 304 (IV H).¹ From the start, the Germans intended to use this camp to confine Soviet prisoners of war (POWs). The camp was subordinate to the Commander of Prisoners of War in Defense District IV (*Kommandeur der Kriegsgefangenen im Wehrkreis IV*).

The first camp commandant was Major Moritz (April 12–May 14, 1941). The next commandant, until January 29, 1942, was Oberstleutnant Alfred Wörlein. The camp adjutant was Captain Karl Zerbes. As of October 10, 1941, the camp staff included 20 officers, 18 civilian officials, 69 noncommissioned officers, and 149 enlisted men.

The first Soviet POWs arrived in the camp in July 1941. The following table lists the number of Soviet prisoners the camp held over the course of fourteen months.²

The prisoners arrived at the camp via a 2-kilometer (1.2-mile) march from their disembarkation point at Bahnhof Jacobsthal. In the first months, the prisoners lived outdoors, without barracks or tents to house them. The camp territory was an open field surrounded by a double barbed wire fence. The prisoners made their own dugouts to protect themselves from the bad weather. The construction of barracks, latrines,

Date	Number of prisoners
July 15, 1941	2,000
August 10, 1941	31,955
October 1, 1941	11,046
December 1, 1941	10,677
January 1, 1942	7,298
February 1, 1942	5,685
April 1, 1942	3,729
May 1, 1942	3,615
June 1, 1942	3,469
August 1, 1942	2,980
September 1, 1942	21,151

Stalag 304 (IV H) at Zeithain. Soviet POWs in the camp, date/source unknown.

kitchens, and wells began only when a sufficient number of prisoners became available for such work in the late summer and early fall—and only after the prisoners had built barracks for the guards, as well as other administrative buildings. The lack of wells and resulting water shortage forced the prisoners to drink water from puddles. The water supply situation contributed to a dysentery epidemic, as well as other diseases such as typhus and typhoid, in addition to numerous deaths caused directly by thirst.

The prisoners were also badly undernourished, as the *Oberkommando der Wehrmacht* (OKW) had little interest in feeding Soviet POWs adequately in this early period. Those men who were working received only 1,300 calories a day, while those who were not working received even less food, around 1,000 calories a day. The prisoners' rations consisted of ersatz coffee or tea in the morning, a thin soup of beets and (occasionally) potatoes at lunch, and about a third of a kilogram (11.5 ounces) of so-called Russian bread (*Russenbrot*), consisting of rye grist, sugar beet pulp, and straw meal, in the evening. These meager rations led the starving, emaciated prisoners to eat anything they could find, including grass, leaves, and poisonous mushrooms. By the winter of 1941, many of the men were too weak to even feed themselves, and death from starvation became commonplace.

A dysentery epidemic began soon after the arrival of the first prisoners in the camp in July 1941. In addition to the shortage of clean water, the lack of proper hygienic facilities and latrines promoted the spread of the disease, which infected as much as 20 percent of the camp's population between July and October 1941. Though the incidence of dysentery decreased with the arrival of winter, approximately a quarter of the cases of illness among the prisoners during the winter of 1941–1942 were due to dysentery.

The cramped conditions in the camp also contributed to an outbreak of typhus, which began in the late fall of 1941 and reached its peak during the winter. Despite the fact that the camp, unlike many camps for Soviet POWs, had delousing facilities, their capacity was inadequate to deal with the population of the overcrowded camp. Furthermore, the fact that

the men were unable to launder their clothing allowed lice to continue to spread. Even the camp's guards were not immune to the deadly disease spread by lice; as many as a quarter of the guards died of typhus that winter. The Germans placed the camp under quarantine from December 1941 until March 1942, because of the epidemic: the prisoners were sealed in. In total, about 7,000 prisoners died during that period, out of the 10,700 who were present at the start.³

By the time the OKW ordered the deployment of Russian POWs for forced labor on October 31, 1941, only a few of the prisoners at Zeithain were fit to work; most were too weakened by disease and starvation to perform manual labor. Those who were able to work were sent to unload goods at Bahnhof Jacobsthal and the camp's supply areas, do excavation work near the camp, assist in the warehouses at the nearby munitions depot, dig graves and bury dead bodies, and work on nearby farms.

In the fall of 1941 and winter of 1941–1942, a group of three men from the Dresden Gestapostelle conducted a selection, or "culling" (*Aussonderung*), of "undesirable" prisoners in the camp: "known functionaries of the [Soviet] State and Party," all political commissars and their deputies, and Jews. This team selected and sent no fewer than 1,000 prisoners to the Buchenwald concentration camp through Stalag IV B. The Germans murdered the prisoners immediately upon arrival, using the so-called neck-shot installation (*Genickschussanlage*); the corpses were burned in the crematorium afterward.⁴

As of September 1, 1942, the Zeithain site became a subcamp (*Zweiglager*) of Stalag IV B Mühlberg, with the designation Stalag IV B/Z. Stalag 304 moved to Loewen (2) in Belgium, with about 10,000 Soviet prisoners. From September 8, 1942, it was subordinate to the Military Commander in Belgium and Northern France (*Militärbefehlshaber Belgien und Nordfrankreich*).⁵ Right up to the liberation of Belgium in 1944, the commandant's office in Loewen managed work teams of Soviet POWs who were engaged in the coal industry in the area. Details of conditions in the camp during this period have not come to light.

On September 1, 1943, the camp held 9,931 Soviet POWs, including 111 officers, and 7 Serbian POWs; 9,033 prisoners were used for labor. On April 1, 1944, there were 10,327 Soviet POWs in the camp, including 17 officers; 10,250 were used for labor. On May 1, 1944, there were 10,301 POWs, and on June 1, 1944, there were 9,873 Soviet POWs (9,798 of whom performed labor) and 184 Belgian officers. On July 1, 1944, there were 7,016 Soviet POWs (6,929 of whom performed labor).⁶ In 1945, the camp deployed to Trieste, Italy.⁷

Because of its complicated history of moves and redesignations, Stalag 304 had a correspondingly complicated series of field post numbers (*Feldpostnummern*). The number 05 975 was assigned between May 1 and October 19, 1942, and struck between October 20, 1942, and January 9, 1943; 25 741 was both assigned and struck between July 31, 1942, and February 9, 1943; the longest-lasting number, 43 406 E, was assigned between October 20, 1942, and January 9, 1943, and struck on March 20, 1945; 07 667 was assigned on October 10, 1944, and struck on February 12, 1945.

The Chorun Commission, which studied the camp's history and the experiences of its prisoners estimated a death toll of 33,000 Soviet prisoners based on the number of bodies found in mass graves. The camp's death register only included the names of around 24,500 prisoners; however, the death toll could conceivably be as high as 40,000, as it is possible that many prisoners who died between mid-1942 and the end of 1943 were cremated, rather than buried in mass graves.

MANNSCHAFTSSTAMMLAGER (STALAG) 305

The Wehrmacht established Stalag 305 on April 27, 1941, in Ludwigsburg (map 4f), in Defense District (*Wehrkreis*) V. In August 1941, it was relocated to Reichshof (Polish: Rzeszów) (map 5) in the Generalgouvernement, and, in October 1941, it was moved again, to Kirovograd (today Kropyvnyts'kyi, Ukraine) (map 9f), where it replaced Dulag 171.¹ Stalag 305 received field post number (*Feldpostnummer*) 08 226 between February 1 and July 11, 1941. The number was struck between January 25 and July 31, 1943, then reissued on December 7, 1943, and struck for good on April 26, 1944. It is unclear exactly when the camp ceased operations. The last documented date when the camp was open was in March 1944. The last commander was not removed from the personnel roster until July, but there had been severe combat in the area that spring, and the camp may have been destroyed then.

While the camp was located in Kirovograd, it was subordinate first to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der*

Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine). After March 1943, the camp was under the authority of the Commander of Prisoners of War with the Rear Area Commander, Army Group South (*Kommandeur der Kriegsgefangenen beim Befehlshaber Heeresgebiet Süd*).

Oberstleutnant Werner Hiltrop was the camp commandant from October 1941 through September 1942. He was succeeded by Major Flecker, who served until December 15 of that year, when he was himself replaced by Oberstleutnant Hossenfelder. The final commandant, an officer named Scheffler, took over from Hossenfelder sometime in the fall of 1943. The adjutant was Hauptmann (later Major) Häberle; the counterintelligence (*Abwehr*) officers were Hauptmann Karl Kugler, Lieutenant Willi Gushurst, and Hauptmann Schmidt; and the camp officer (*Lageroffizier*) was named Kientz. There were three camp doctors: Dr. Kindervater, Dr. Guter, and Dr. Elsass. The camp staff consisted of a total of about 100 men.²

The main camp in Kirovograd was located partly in former barracks of the 43rd Regiment (Lager 1a) and partly in a former prison (Lager 1b).³ It had two subcamps (*Zweiglager*). One of them, at the Adabash railroad station was known as Lager 2. The commandant of Lager 2 from October 29, 1941, was Oberleutnant (later Hauptmann) Oskar Frank, and the camp officer was Oberleutnant Baron. The other subcamp, Lager 3, was located in the town of Pervomaisk (Mykolaïvs'ka oblast', Ukraine). Lager 2 consisted of a number of unheated wooden barracks and a former granary, surrounded by barbed wire. These barracks were meant to accommodate no more than 500 prisoners, but in fact they held 10–20 times that number of men.⁴

The camp was guarded by the 783rd Reserve Battalion (*Landesschützenbataillon*). Until October 1941, the battalion commander was Oberstleutnant Dr. Wiegand. Hauptmann Kirchhoff then assumed the duties of battalion commander until February 1942. The 1st Company, as well as the first and fourth platoons of 2nd Company, commanded by Hauptmann Georg Garbe, guarded the main camp in Kirovograd; the second and third platoons of 2nd Company guarded Lager 2, and 3rd Company guarded Lager 3.⁵

The main camp and subcamps held 22,200 prisoners of war (POWs) in February 1942; 20,200 in June 1942; 33,700 in October 1942; 16,800 in December 1942; and 13,500 in February 1943.⁶ The conditions in the camp were inhumane. The food ration consisted primarily of *balanda*, a thin soup made mostly of water with some potatoes, flour, and millet (or other grain). The balanda was cooked in metal barrels in unsanitary conditions. Each prisoner was issued 1–1.5 liters (4.2–6.3 cups) of balanda per day, and 6–15 prisoners had to share a kilogram (2.2 pounds) of low-quality bread. Because there were no eating utensils, the prisoners used tin cans that had held canned foods and other objects. The caloric value of these rations was quite low and did not exceed 1,300 calories per day. Suffering from constant hunger and brought to the point of despair, the prisoners tried to assuage their hunger by eating grass and leaves. There were also instances of

cannibalism. Conditions in the subcamps were just as bad as those in the main camp, and it is estimated that as many as 200–300 prisoners died every day in the subcamp in the winter of 1941–1942.⁷

The camp buildings were unheated and unlit, and an intolerable stench and filth prevailed. No material support was provided in the camp. The prisoners wore the clothing they were wearing when they fell into enemy hands. Such living conditions led to outbreaks of disease, especially typhoid fever and dysentery, and to extremely high mortality, to which the lack of medical care contributed. The onset of winter drove the death rate among the prisoners even higher, as most had practically nothing with which to ward off the cold.⁸

Selections (*Aussonderungen*) were conducted regularly in the camp, especially when new prisoner transports arrived, to separate out political commissars, Communist Party members, and Jews, who were subsequently executed. In the second half of November 1942, more than 100 such prisoners were selected in Lager 2. They were held for several days in three railroad cars and then shot on the order of the camp commandant. Feldwebel Otto Kempf, a platoon commander in 2nd Company, headed an execution squad of 20 men. Selections were also conducted in the main camp at Kirovograd and in Lager 3. Sometimes these shootings were carried out by the camp guards, and at other times the prisoners selected were handed over to the Security Service (*Sicherheitsdienst*, SD) to be shot.⁹ The SD carried out two massacres of Jewish civilians from Kirovograd near the camp; while the staff of the camp was undoubtedly aware of these incidents, the West German postwar investigation determined that the camp guard battalion did not participate in them.¹⁰

According to materials from the Soviet Extraordinary State Commission (ChGK), 54,000 POWs died in the Kirovohrads'ka oblast'.¹¹ However, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly. After the war, Georg Garbe and Otto Kempf were investigated for war crimes by the West German authorities. However, the investigation was ended on June 27, 1968, due to a lack of evidence.

MANNSCHAFTSSTAMMLAGER (STALAG) 306 (XVIII D)

The Wehrmacht established Stalag 306 with an order dated March 26, 1941, in Marburg an der Drau (today Maribor, Slovenia) (map 4f), in Defense District (*Wehrkreis*) XVIII. It began operation by June 1, 1941, at the latest. The camp was redesignated Stalag 306 (XVIII D) sometime before February 25, 1942. Stalag 306 was subordinate to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*). Stalag 306's field post number (*Feldpostnummer*), 20 199, was issued sometime between February 16 and July 18, 1941; the number was struck between February 15 and July 30, 1942.¹

Stalag 306 (XVIII D) was located on the site of an abandoned Yugoslavian Army barrack in Maribor. The prisoners' barracks were about 60 square meters (646 square feet) in area and divided into rooms that held 45 men each. An infirmary that treated minor illnesses and injuries was located near the entrance to the camp; more severe cases were transferred to the prisoner hospital (*Lazarett*) at Stalag XVIII B in Spittal an der Drau.² The first commandant of Stalag 306 was Major von der Marwitz, who was succeeded by Oberst Manfred Ulrich. The deputy commandant was Hauptmann Hermann Hüttenhain and the adjutant was Hauptmann Schug. The counterintelligence (*Abwehr*) officers were Hauptmann Heinrich Küpper and Hauptmann Hernekamp, and the camp officer (*Lageroffizier*) was Hauptmann Heinrich Gronheid.³

Stalag 306 (XVIII D) initially held Serbian prisoners of war (POWs) captured during the Axis invasion of Yugoslavia in April 1941 and British and Commonwealth prisoners captured during the Axis campaign in Greece (among them

4,500 New Zealanders).⁴ Stalag 306 became one of the primary camps for Australian and New Zealander (ANZAC) prisoners captured in Greece.⁵ As of June 1, 1941, there were 4,046 prisoners in the camp, of whom 3,838 were Serbian and 208 British.⁶ Most of the Serbian prisoners were transferred to other camps in August 1941 because Serbian POWs were not allowed to work in labor units in Wehrkreis XVIII at that time; however, the French and British prisoners were sent out to work.⁷ The first French prisoners were brought to the camp in August 1941, and they immediately became the largest group in the camp; of the 10,532 prisoners in the camp on September 1, 1941, 6,978 were French. After this point, most of the remaining prisoners in the camp were British, aside from a period between November 1941 and April 1942 when Soviet POWs were held here; the maximum number of Soviet prisoners was 5,192 in January 1942.⁸

Conditions experienced by the Serbian and Western Allied prisoners in Stalag 306 (XVIII D) were generally worse than those encountered by these groups in other German POW camps. While the Germans usually observed the requirements of the Geneva Convention of 1929 in their treatment of these prisoners, a Red Cross inspector who visited in October 1941 observed that the prisoners' quarters were inadequate and hygienic conditions were poor. British-Palestinian prisoners were forced to sleep on the floor of a granary with only straw for bedding. Between 400 and 500 men were crowded into this small building, which was infested with lice; it had previously been used by Yugoslav prisoners, many of whom had died. The inspectors regarded it as "by far the worst of the camps in [Wehrkreis] XVIII."⁹ The prisoners received a cup of ersatz coffee and bread in the morning, and soup and a piece of bread for lunch and dinner. As British-Palestinian prisoner Ralf Bogo recalled, when the prisoners were awoken by the Germans in the morning, the first 10 or 15 men out the door would be allowed to push the food transport wagons; in exchange for this work, they would receive an extra cup of soup.¹⁰

Despite the relatively difficult conditions, the prisoners in Stalag 306, particularly the French, were able to create a well-organized cultural life.¹¹ A YMCA delegate who visited the camp on November 7, 1941, reported that the prisoners had built up a library of about 2,600 books and that they partook in sports when possible despite the lack of equipment. Religious services for the Protestant and Catholic prisoners were provided by clergy in the camp, and these clergymen were also able to visit some of the work details (*Arbeitskommandos*) in the surrounding area.¹² The French prisoners published a camp newspaper called *Les Dix Huit Dés* (*The eighteen dice*).¹³

Soviet prisoners in Stalag 306 experienced the worst conditions and were treated in a manner that was inconsistent with the provisions of the Geneva Convention. The Soviet prisoners lived outdoors in a huge foundation pit in the courtyard of a school. A barbed wire fence with guard towers surrounded the perimeter of the pit. To provide some shelter from the bad weather, the prisoners used makeshift materials to construct something like a tent. Their quarters were

overcrowded and unsanitary and they received minimal food and medical care. Malnutrition and an epidemic of typhus led to a large number of deaths among the Soviet prisoners in the camp.¹⁴ In total, from the end of October 1941 until the end of March 1942, 1,863 Soviet prisoners died in the camp and were buried in the Franciscan cemetery in the Pobrežje district of Maribor.¹⁵

As in other camps for Soviet POWs, the Soviet prisoners in Stalag 306 (XVIII D) were subject to “weeding out” actions (*Aussonderungen*) in which the counterintelligence officer screened the prisoners to identify “undesirables,” such as Jews and political commissars, who were then executed; it is unclear where and by whom these executions were carried out at Stalag 306, but the testimony of witnesses at subsequent war crimes trials suggests that it did take place. In addition, on at least one occasion, the Germans executed a group of between 55 and 60 Yugoslav civilians accused of partisan activity near the camp on the orders of an SS officer named Lurker (first name and rank unknown).¹⁶

On August 1, 1942, Stalag 306 (XVIII D) was converted into a subcamp (*Zweiglager*) of Stalag XVIII B in Spittal an der Drau and was redesignated Stalag XVIII B/Z. The headquarters of Stalag 306 was officially dissolved on September 4, 1942. Stalag XVIII B/Z was dissolved on November 11, 1942; however, the camp was reopened in the spring of 1943 as a subcamp of Stalag XVIII A in Wolfsberg and redesignated Stalag XVIII A/Z.¹⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 307

The Germans established Stalag 307 (map 5) from Frontstalag 307 on April 19, 1941, in Moosburg, in Defense District (*Wehrkreis*) VII. From May until October 1941, the camp was deployed in the village of Kaliłów, near Biała Podlaska in the Generalgouvernement. From late October 1941 onward, the camp was deployed in the fortress of the town of Dęblin-Irena, also in the Generalgouvernement. On January 13, 1944, the Germans reorganized the camp as Oflag 77.¹ The camp’s field post number (*Feldpostnummer*) was 08 926, issued between February 1 and July 11, 1941.

Stalag 307 was subordinate to the Commander of Prisoners of War with the Armed Forces Commander in the Generalgouvernement of Poland (*Kommmandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber im Generalgouvernement Polen*). The camp commandant until November 1941 is reported to have been Hauptmann Reis; his replacement was Major Lasch. The deputy commandants were Major Hohenberger and Hauptmann Stiefenhofer, the counterintelligence (*Abwehr*) officer was Hauptmann Krach, and his deputy was Oberleutnant Klauss.

While deployed in Kaliłów, Stalag 307 held Soviet prisoners of war (POWs). The camp was a huge sand field fenced in

Stalag 307 at Dęblin-Irena. Soviet POWs behind a barbed wire fence, May 1942–June 1943.

USHMM, COURTESY OF IPN, WS #50256.

with barbed wire, with guards posted along the perimeter. This field was divided into 30–35 separate sections, also surrounded by barbed wire. These sections could each hold up to 4,000 people. For every four sections there was a temporary kitchen and a well. Two canvas tents served as a so-called hospital (*Lazarett*). The entire camp held about 140,000 people. The majority of the prisoners slept out in the open, though others dug holes in the sand with their hands and huddled in these holes. The prisoners were fed soup prepared from refuse of various kinds. To avoid starvation, the prisoners ate grass and wild plants. Such inhumane conditions led to widespread malnutrition, illness, and a high mortality rate.

These conditions motivated the prisoners to attempt mass escapes. One night in October 1941, prisoners from one section of the camp attempted to escape. They were forced to turn back, however, after being pinned to the ground by machine-gun fire and illuminated by searchlights. As punishment, every tenth prisoner was shot. In total, the Germans killed around 1,500 prisoners that night.² According to the Polish commission investigating Nazi crimes, during the time the camp was deployed in Kaliłów, approximately 13,000 prisoners died.³

While the camp was in Kaliłów, the Germans screened the prisoner population to separate out “undesirables,” such as Jews and political commissars. In July 1941, the Germans selected 5,000–6,000 “undesirables” and placed them in a separate section of the camp. From September 21 to September 28, 1941, they drove those prisoners into the forest in trucks, where the 2nd Company of the 306th Police Battalion shot them. Every day, the Germans delivered 600–800 prisoners to the execution site under the pretense that they were being transferred to a “winter camp.” Each evening, the top sergeant was to report to the battalion headquarters in Lublin, telling them how many “eggs had been seized,” that is, prisoners killed, that day. Thus, the action was known as “Chicken Farm.”⁴

During the deployment in Dęblin-Irena, the camp held Soviet POWs as well as French prisoners (in 1942) and Italian military prisoners (in 1943 and 1944). During this time, the

camp also functioned as a transit camp (*Durchgangslager*) for men capable of work (*Arbeitsfähige*) who were being transported back to the Reich for forced labor.⁵ The maximum population of the camp while it held Soviet POWs was 12,634 in January 1942; the maximum population of Italian military prisoners was 7,765 in January 1944.⁶ Two subcamps (*Zweiglager*) of Stalag 307 at Dęblin were located at Zarzecze (3,000–4,000 men) and Poniatowa (3,000 men). There was also a camp hospital at Dęblin.⁷

The conditions at the camp in Dęblin were similar to those in the camp in Kaliłów.⁸ The lack of food, in both quantity and quality, combined with severe overcrowding, poor hygiene, and a lack of proper medical care led to a high death rate from starvation and disease. During a massive typhus epidemic in the winter of 1941–1942, the mortality rate reached 2,000 prisoners per day.⁹ According to the Polish commission investigating Nazi crimes, around 80,000 people died in Stalag 307 in Dęblin in 1941 and 1942.¹⁰ After the liberation of the camp, former prisoner Vladimir Sovosko, who spent three months at Dęblin, testified that the camp was known to the prisoners as a “death camp.”¹¹

The commander of the 2nd Company of the 306th Police Battalion, Hauptmann der Polizei Günter Waltz, was sentenced to 13 years in prison by a court in Augsburg on April 2, 1965.¹² The battalion commander, Major der Polizei Dreier, died in 1949 before he could be brought to trial.

MANNSCHAFTSSTAMMLAGER (STALAG) 308 (VIII E)

The Wehrmacht established Stalag 308 (VIII E) (maps 4a and 4e) on April 8, 1941, in Defense District (*Wehrkreis*) VIII and deployed it to Neuhammer-West (today Świętoszów, Poland). At that point its designation was Stalag 308 (VIII E). In July 1942, it was deployed to Sumy under the designation Stalag 308. The Wehrmacht ordered the camp's dissolution on November 19, 1943, but reestablished it on December 15, 1944. At that time, it was located in Bathorn, Germany, in Defense District VI, but the camp still operated as Stalag 308. Records indicate two field post numbers (*Feldpostnummern*) assigned to this camp: 09 383 and 28 393.

While deployed in Neuhammer, the camp was subordinated to the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). While in Sumy, the camp was under the authority of the commander of the Army Group B Rear Area (*Befehlshaber des rückwärtigen Heeresgebietes B*, Berück B). During the deployment in Bathorn, the camp was subordinated to the Commander of Prisoners of War in Defense District VI.

Stalag 308 held Soviet prisoners of war (POWs). The first prisoners arrived in July 1941; by July 15, the camp held around 2,000 prisoners, and, by August 10, 1941, that number had risen to 30,000.¹ By the end of September 1941, more than 40,000 prisoners were registered in the camp. By the end

of October 1941, when the last group of prisoners arrived in the camp, there were more than 57,000 (the last-known prisoner registration number is 57,057). Between September and November 1941, however, the Germans moved some of the prisoners to other camps.²

The recollections of former POWs provide an insight into the conditions in the camp. Andrei Pogozhev remembers:

In the middle of a dense, centuries-old forest was a flat area of sandy earth surrounded by a wire mesh fence. The trees were almost right up against the fenced rectangle. In front of the double gates—the only entry—which were made from intricately twisted barbed wire, on both sides from the inside, forming a passageway, were arranged three cages in a row; they measured 2 x 2 meters [6.6 x 6.6 feet], and all were made from the same wire. These were punishment cells. Every one of them was filled. None were empty. Somehow some of the guilty had the strength to stand, staggering, shifting from foot to foot. Most were lying down, curled up, their sharp shoulder blades protruding [. . .]. Thousands of Soviet prisoners of war wandered aimlessly, alone and in groups, along this strip of land. . . . The second half of September 1941. In good weather, the days are warm, but the nights are terrible. There is no escape from the piercing, chilling cold. The only building inside this strip of land is the concrete latrine, which harbors several dozen prisoners from the cold, prisoners who sleep standing up, warming each other. In these incredibly crowded conditions, it is impossible to fall down, but death is certain for those who do. People seize their night-time place in the latrine during the day. The cold forced people to bury themselves in earth. The sandy soil can be easily worked. Small groups of 2 or 3 people who are willing dig holes as best they can, and sit pressed together in them. Those who have a coat or raincoat cover themselves on top. On a daily basis in the camp, there thus appeared bumpy, uneven areas with hundreds of pits, which often turned into graves for those who didn't manage to get out of them during the spontaneous swooping of the crazed crowd. Almost every day for entertainment, the camp officials had the guards throw a rutabaga over the fence into the crowd. It was thrown at different places and at different times. Having lost their minds from hunger and cold, thousands of people attacked the rutabaga. They rushed about the camp from one place to another. Dozens of bodies and hundreds of injured remained at the sites of such hard-to-imagine scuffles. Those who were not able to get out of their hole-shelters were trampled, and the hilly land turned into a flat field with arms, legs, and torsos sticking up. In spite of the constant danger of being buried alive, the cold forced people

Stalag 308 (VIII E) at Neuhammer-West. Soviet POWs begging for food behind a barbed wire fence, date/source unknown.³

to dig new shelters, which in a day or two would turn into graves again.³

Such inhumane conditions led to high mortality from starvation and illness. The total number of prisoners who perished in the camp is said to be more than 20,000.⁴ As a consequence of the high mortality rate and the transfers of prisoners to other camps, the number of prisoners in the camp dropped continuously. As of December 1, 1941, the camp held 14,916 Soviet prisoners; on January 1, 1942, 12,248; on February 1, 1942, 11,089 (as well as four British prisoners); on April 4, 1942, 7,999; on May 1, 1942, 8,264; and on June 1, 1942, 7,676.⁵

As in other camps, a Gestapo team from Breslau (today Wrocław) regularly sought out Communists and Jews from among the prisoners in Stalag 308. Those who were found were then sent away for execution. The Gestapo team arrived at the camp on August 5, 1941, at the latest. By the end of August, they had selected about 600 prisoners. This group went to the Auschwitz concentration camp for execution at the beginning of September, as the nearest concentration camp, Gross-Rosen, was not yet ready to carry out the liquidation of selected prisoners. Later, selected prisoners were sent to Gross-Rosen to be killed. From September to November 1941, around 1,400 POWs were killed in Gross-Rosen. Owing to a typhus epidemic, the Gestapo team did not carry out prisoner selections during the winter of 1941–1942. They resumed selections in the spring of 1942. In 1941 and 1942, a total of at least 1,800 prisoners from Stalag 308 were killed in Gross-Rosen.⁶

In June 1942, the camp in Neuhammer was transformed into a subcamp (*Zweiglager*) of Stalag VIII C in Sagan. The staff of Stalag 308 was redeployed to Sumy, where it took over Dulag 190. In August 1942, the staff of Stalag 308 had 16 officers, 11 officials, 60 noncommissioned officers, and 112 privates, a total of 199 people. The guard company had 3 officers and 300 of other ranks, 75 Germans and 228 Ukrainians.⁷ In Sumy, the camp was located in Secondary School No. 5 and in the former dormitory of a sugar refinery. More than 2,000 people died from starvation, cold, illness, and shooting in the camp during

its existence. In addition, during the evacuation of the camp from Sumy to Darnitsa, guards shot all those who were too weak or unable to go on, such that 1,500 people were killed along the road.⁸ The senior medical officer under the commander of the Army Group B rear area (*Leitender Sanitätsoffizier beim Befehlshaber des heeresgebiet*), who visited the camp on October 15–16, 1942, described the situation in the camp as follows:

October 15, [19]42, 1600 hours, arrival in Sumy.

Visited Stalag 308 in Sumy again. Reception camp still undergoing expansion. Crumbling buildings. . . . About 45 POWs needing to convalesce. But in the work parties, too, are a good many POWs who are not completely fit for work duties. It is suggested to the camp doctor that he determine which POWs are completely able to work, in order to get a clear picture of what manpower can be planned on in winter. If those who are capable of working only to a limited extent are asked to do heavy labor, they will lose the remainder of their ability to perform. Restoration of that ability will then be possible only with great difficulty. The POWs may be deployed for labor only with due regard for the camp doctor's assessment of their fitness for work. . . .

October 16, [19]42 . . .

The commandant and the camp doctor are told that the camp doctor must monitor the POWs' fitness for work (completely fit for use, fit for work to a limited extent, not fit for work), and that he is responsible for hygiene in the camp—nutrition, accommodations, latrines of a new kind—and for preventive measures for control of epidemic diseases. . . . A POW work squad receives precisely one fairly watery, almost cold soup at midday from the Stalag kitchen. A latrine, dreadful.⁹

The prisoners at the camp were captured from various locations in the Soviet Union, including Millerovo (Millerovskii raion, Rostovskaia oblast'), Ostrogozhsk, Kursk, and Stalingrad. Upon their arrival at the camp, they were searched for "literature and arms"; in fact, they were stripped of their boots, coats, hats, and warm clothing and robbed of any valuables in their possession.¹⁰ Many of the inmates were not POWs (perhaps as many as 10–15%) as the camp population also included boys as young as 15, women and girls, and men up to 65 years old. Most of the prisoners did not have beds and instead slept on the floor, sometimes with straw for bedding. Virtually all of the men had lice and as many as half were infected with typhus or dysentery.¹¹

The prisoners were fed 200–300 grams (7–10.6 ounces) of rye bread every day, along with a broth made with table scraps and spoiled food. They would stand outside, barefoot, as early as 4:00 a.m. in order to receive their meager bread ration. Those who were too weak to get up and get their rations were taken out by the guards, tossed into ditches on the banks of the Psäl River, and left to die. The guards

maintained order in the bread lines by beating the prisoners with truncheons and rifle butts. Local civilians were forbidden to give food to the prisoners; if they tried, both they and the prisoner were severely beaten in view of the other prisoners.¹²

Prisoners were frequently beaten for no reason whatsoever. One particularly vicious guard, Stabsfeldwebel Franz Hansel, beat a sick prisoner named Ivan Bondriagin to death; he was promoted to the rank of Stabsfeldwebel for his actions during the forced march of prisoners from Sumy to Darnitsa, when he shot numerous stragglers.¹³ Many of those who became sick at Sumy were taken to Luchansk Cemetery and left there to freeze to death. The bodies of more than 2,000 prisoners from Stalag 308 were discovered in Luchansk Cemetery.¹⁴

All prisoners who were ambulatory were taken to work in Sumy. Some prisoners took their time outside the camp as an opportunity to attempt to escape. Many were successful, including 150 in December 1942 alone.¹⁵ However, those that were caught were interrogated by an officer named Kinast and beaten severely by Feldwebel Herman Kurt. They were then sent to solitary confinement for 15 days, only infrequently receiving rations of bread and water; few survived this treatment.¹⁶

Because Soviet troops were nearing the town of Sumy on February 13, 1943, 3,800 prisoners were sent on foot to Darnitsa near Kiev,¹⁷ while prisoners who could not be transported remained in the town. On the road to Darnitsa on February 14, 1943, partisans came across the marching column of prisoners and freed 700 of them. Two Germans were killed, two were wounded, and two went missing. Ten Ukrainian Hiwis were killed as well.¹⁸

There are indirect indications that the camp (or a subcamp or work team) was located in Kursk in the fall of 1942. In the spring of 1943, the camp was in Gorodishche (today Horodyshche, Cherkas'ka oblast', Ukraine).¹⁹

There is no information regarding the deployment in Bathorn. The camp was liberated by Allied forces sometime between April 3 and April 6, 1945.

MANNSCHAFTSSTAMMLAGER (STALAG) 309

The Wehrmacht formed Stalag 309 (map 3) on April 10, 1941, in Defense District (*Wehrkreis*) IX.¹ From 1941 to 1944, the camp was located in Salla (known as Kuolajärvi until 1936), in northeastern Finland. In 1944, it was relocated to the village of Lakselv, in northern Norway. The camp was originally subordinate to the Army High Command Norway (*Armeoberkommando* [AOK] Norwegen). After the resumption of hostilities between Finland and the Soviet Union in June 1941, a separate command was created for Finland (*Befehlsstelle Finnland*); on January 14, 1942, this command was renamed AOK Lappland. After the German withdrawal from Finland in 1944, when the camp was relocated to Lakselv, AOK Lappland was folded back into AOK Norwegen, which was subsequently placed under the AOK of the 20th Mountain Army (*Gebirgs-Armee*). Throughout its existence, the camp was under the authority of Rear Area Command (Korück) 525. Stalag 309 received field post number (*Feldpostnummer*) 39 294 between February 28 and July 29, 1941. The number was struck on November 11, 1944.

The first commandant of Stalag 309 was Oberstleutnant Fritz Alexander Unger, who was replaced in August 1942 by Oberst Arthur Buchwiser.² The final commandant of the camp was Oberstleutnant Karl Schirmbach. The counterintelligence (*Abwehr*) officer in the camp was Hauptmann Friedrich Deinert, who was later replaced by Oberleutnant Karl Maleika, followed by Hauptmann Weiss (investigators were unable to determine whether "Weiss" referred to August Paulus Weiss or Erich Weiss, both of whom were Wehrmacht captains). The camp doctors were Stabsarzt Dr. Förster and Stabsarzt Dr. Siegert. The camp was guarded by personnel from the 9th Reserve Replacement Battalion (*Landesschützen-Ersatz-Bataillon*).³ They were assisted by a group of about 15 Belorussian prisoners (*Hilfswillige*, Hiwis) who volunteered to help the Germans in exchange for slightly better living conditions and food. The guards were supervised by Oberwachtmeister Friedrich Schmitz, who was later known as the "Hangman of Salla" for his role in the mistreatment and execution of prisoners.

Stalag 309 held Soviet prisoners of war (POWs). It had 10 subcamps (*Zweiglager*) in Allakurtti (today Alakurtti, Russia; an *Auffanglager* or "reception camp"), Vuojärvi, Rovajarvi, Korpijärvi, Kairala, Nurmi, Lampela, Seipäjärvi, Rovaniemi, and Ivalo. One former staff member estimated that there were about 1,000 prisoners in the main camp when he arrived in October 1941. Another estimated that there were about 2,000 prisoners in the main camp in April 1942.⁴ The population may have been as high as 5,000–6,000 prisoners at times, however, according to another witness. The camp at Salla occupied an area of about 500 meters by 200 meters (547 yards by 219 yards), which was divided into two sections. The first section held about 400–500 Ukrainian prisoners who were being trained as Hiwis, while the second held the remainder of the prisoners, most of whom were of Russian or Central Asian nationality.

As in other camps for Soviet POWs, conditions in Stalag 309 were very poor. The prisoners suffered from a high rate of

malnutrition and disease due to inadequate housing, poor food, lack of medical care, and poor sanitary conditions, as well as deliberate mistreatment by the guards.⁵ The prisoners were required to perform hard physical labor, such as cutting timber in the nearby forests. Prisoners in the subcamps were also forced to work. Sick prisoners were kept in a separate barrack, which also contained the delousing facilities. Little information is available about the conditions in the camp in Lakselv, although they were presumably similar to those in Salla.

Newly arrived prisoners were screened by camp personnel under the supervision of the counterintelligence officer to separate out "undesirable" prisoners (such as Jews and political commissars), who were subsequently executed by a 12-man Security Service (*Sicherheitsdienst*) commando.⁶ For example, shortly before Christmas 1941, between 25 and 30 political commissars were executed near the camp. Another such execution took place sometime in the summer of 1942. In some cases, these prisoners were not shot immediately but rather held in the camp for a time, in segregated barracks where conditions were even worse than those in the rest of the camp, before they were killed or sent elsewhere.⁷ It is possible that these selection (*Aussonderung*) actions also took place in the branch camps. During the latter part of 1941, 312 Soviet prisoners died at Stalag 309, a mortality rate of 11 percent.⁸ At least one act of open resistance in the camp was recorded: four Russian prisoners attacked and killed a German noncommissioned officer, a crime for which they were subsequently hanged.⁹

The camp was disbanded in mid-January 1945. The former staff members were captured on May 9, 1945, by British forces. They were later transferred to a French POW camp, where they were held until February 1947.¹⁰

MANNSCHAFTSSTAMMLAGER (STALAG) 310 (X D)

The Wehrmacht established Stalag X D on April 13, 1941, in Defense District (*Wehrkreis*) X. On June 19, 1941, the camp received the additional designation Stalag 310, to mark it as a camp for Soviet prisoners (*Russenlager*), and was deployed on the outskirts of the Munster Military Training Base (*Truppenübungsplatz Munster*) near Wietzendorf, Germany (map 4a).¹ It was also known as Stalag Munster or Lager Osterheide. The camp was subordinate to the Commander of Prisoners of War in Defense District X (*Kommandeur der Kriegsgefangenen im Wehrkreis X*). The camp received field post number (*Feldpostnummer*) 09 339 between February 1 and July 11, 1941, which was struck between January 27 and July 14, 1942. A second number, 07 465, was issued between January 27 and July 14, 1942, and struck on May 22, 1944.

The first camp commandant (from April 12, 1941, to February 27, 1942) was Oberstleutnant Paul Deichmann. The NSDAP Kreisleiter in Soltau requested that Deichmann be replaced because of his overly lenient treatment of the prisoners. Deichmann stated that “through good treatment and education it is possible to make the prisoners into good people.” He prohibited the beating of prisoners, promised to arrange a religious service for Catholic prisoners, and did not support the SS squad that screened prisoners in the camp to select “Jews and Asiatics.”²

Stalag 310 (X D) at Wietzendorf. Soviet prisoners stand among the underground holes that served as their only shelter, October 1941–February 1942.

USHMM, COURTESY OF STAATSANWALT BEIM LANDGERICHT HAMBURG, WS #01704.

The first Soviet prisoners of war (POWs) were sent to the camp in July 1941. At first there were no permanent structures in the camp, and the Soviet prisoners lived outdoors in a field, with barbed wire surrounding them. The prisoners dug burrows in the ground to shelter themselves from the elements. Later, they had to construct their own barracks. Overcrowding, malnutrition, disease, and deliberate abuse led to a high mortality rate. From November 1941 to February 1942, the camp was under quarantine because of a typhus epidemic, and perhaps more than 14,000 of the 18,000 prisoners there succumbed to the disease. In total, around 16,000 prisoners died in the camp and were buried nearby in mass graves.³ Many other prisoners were deployed to the camp’s large number of work details (*Arbeitskommandos*).⁴

In September and October 1941, a Gestapo team regularly conducted selections of “undesirable” prisoners, such as Jews and political commissars, in the camp. The selected prisoners were sent to the Sachsenhausen concentration camp, where they were shot. On September 2, 1941, 254 prisoners were sent to Sachsenhausen. On September 9, 223 more were sent; on September 24, another 203; on September 26, 193 more; and October 10, a further 151.⁵

On June 15, 1942, Stalag 310 began preparations for deployment to the occupied Soviet Union. On June 21, the camp staff received an additional 3 officers, 30 noncommissioned officers (NCOs), and 42 enlisted men.⁶ On July 14, the headquarters of Stalag 310 arrived in Konotop, where it took over the site of Dulag 192.⁷ While deployed in Konotop (9f), the camp had a subcamp (*Nebenlager*) in Glukhov (today Hlukhiv, Ukraine). During this time, the camp was subordinated to the Commander of Prisoners of War in Operations Area II (*Kommandeur der Kriegsgefangenen im Operationsgebiet II*).

From July 14 to September 25, 1942, the camp commandant was Oberst Kurt von der Goltz. His successor was Oberstleutnant Richard Ballas. The camp adjutant was Hauptmann der Reserve Gustav Bolland, the counterintelligence (*Abwehr*)

officer was Hauptmann Martin Richter, and the doctors were Dr. Walter Lange and Dr. Max Nebendahl. The commandant of the Glukhov subcamp was Hauptmann Erich Funke. He was succeeded by Hauptmann Franz Fertl.

In October 1942, the camp held 4,713 prisoners.⁸ The senior medical officer for the Commander of the Army Group B Rear Area (*Befehlshaber Heeresgebiet B*), who visited the camp on October 12 and 13, characterized the situation in the camp:

Inspection of POW Hospital I in Stalag 310. Clean, very tidy. Meat must be consumed as soon as possible. *Hrwi [Hilfsvillige]*, non-German volunteers in the German forces at the Eastern Front guards must be in better order. Patients look well-nourished. In the infectious-disease barracks, which are otherwise fair enough, there is no disinfection chamber in the typhus ward. . . . POW camp. No coats, no shoes. According to information from the administrative official, 1,000 coats have been allocated by the Bef.H.Geb.B [*Befehlshaber des Heeresgebiet B*]. Caucasians look worse than the other POWs. The POWs who work in the camp are well-nourished. Of the POWs allocated by Stalag 308 for bridge construction, 200 are not fit for labor deployment. Evening soup not cooked until thick enough. Upon questioning, POWs state that sometimes they receive a thin soup, at other times a thicker one. Discussion with the camp officers about fitness for work and measures to prevent epidemic disease. Camp commandant absent, away from camp. . . . Reception camp [*Auffanglager*]: earth huts. Entrance must still be protected against cold. A stove must be installed in each hut. The camp's delousing facility is good. Also the main camp (previously lacking windows and doors) and the defectors' camp [*Überläuferlager*]. Latrines in need of improvement. 1,100 POWs are ready to leave for Germany. Allegedly deloused, but not examined beforehand by the camp doctor. Camp doctor must examine every transport for danger of epidemic disease and issue a certificate. Camp doctor must inspect the POWs once a week to determine their fitness for work and weed out [the unfit], so that working capacity can be restored if at all possible. Although reference had been made yesterday afternoon to preservation of working capacity, the labor deployment officer nonetheless sent 70 men out to work who had been put into the unfit group, because I had not directly forbidden it. The camp commandant, now present, states his intention to arrange for what needs to be done. Discussed with camp commandant, as yesterday with the camp officers, the necessity of preserving the capacity for work, the measures for prevention of epidemic diseases, and the latrine construction. Rations order has not yet reached Stalag 310.⁹

In May 1943, the camp moved to the town of Zaporozh'e, where it remained until the fall of 1943. Subsequently the

camp was deployed in Nikopol', Dnepropetrovsk (today Dnipro, Ukraine), Novoukrainka, Pomoshnaia, Pervomais'k (Mykolayiv oblast'), and Balta. From there, it was sent to Przemyśl, where it was finally dissolved. As at the camp in Wietzendorf, selections of "undesirable" prisoners were also conducted during Stalag 310's deployment in the occupied Soviet Union. The selected prisoners were shot near the camp by the Security Service (*Sicherheitsdienst*) or camp guards.¹⁰ The order to dissolve the camp was issued on December 25, 1943, but the camp remained in operation until April 1944.¹¹

MANNSCHAFTSSTAMMLAGER (STALAG) 311 (XI C)

The Wehrmacht established Stalag 311 (map 4a) on May 20, 1941. On August 20, 1941, the camp deployed to Defense District (*Wehrkreis*) XI, near the village of Bergen-Belsen.¹ The Germans set up the camp to confine up to 20,000 Soviet prisoners of war (POWs). During the deployment in Defense District XI, the camp was also known as Stalag XI C. The camp was subordinate to the Commander of Prisoners of War in Defense District XI (*Kommandeur der Kriegsgefangenen im Wehrkreis XI*). The camp received field post number (*Feldpostnummer*) 09 555 between February 1 and July 11, 1941. The field post number was struck between January 27 and July 14, 1942, a year before the camp was disbanded, perhaps because it had become a permanent facility within the Reich.

The first transports of Soviet POWs (around 5,000 men) arrived on July 21 and 27, 1941, from Oflag 53 in Pogegen (today Pagėgiai, Lithuania) and Oflag 52 in Ebenrode (today Nesterov, Kaliningradskaya oblast', Russia). On August 2 and 5, around 3,000 more men arrived at the camp from Oflag 56 in Prostken (today Prostki, Poland). For the most part, these prisoners were Red Army men whom the Germans captured in the Baltic region and Belarus. The prisoners were housed under the open sky in an area surrounded by barbed wire fencing. The food ration consisted of a tenth of a loaf of bread per day, but the prisoners did not even receive this "norm" every day. The hunger these minimal rations induced caused prisoners to eat all the grass and the bark from several trees in the fenced-in zone within a few days. They drank water from puddles, which led to

a dysentery epidemic. In August 1941, the camp began to operate a hospital for sick and injured prisoners. The most widespread diagnosis was dysentery and general decline of strength (or exhaustion). From the autumn of 1941 onward, no fewer than 1,500 sick people passed through the hospital each month.

From October 4 through October 8, 1941, around 10,000 more prisoners arrived in the camp, including those from Stalag 333. The total number of prisoners now reached 18,000. On October 11, some of the prisoners were transferred to Stalag XI A and Stalag 321 (XI D). Around 10,000 able-bodied prisoners were also distributed into about 150 work teams. On October 24, a number of prisoners, recorded as officers, were transferred to Oflag XIII D, and another group of prisoners was handed over to the subunit, field post number 41 321. A new group of around 1,000 prisoners arrived at the camp on October 30. More prisoners were placed in the camp between November 8 and November 10. This final group was composed of around 1,000 men captured by the Germans at Viaz'ma and El'nia.

The registration number 21,109 is the last one known to have been assigned to a POW at Stalag 311. In the beginning of December 1941, a group of prisoners was transferred to Stalag XI A and Stalag XI B because of the rising threat of typhus. A group of prisoners from Stalag XI B was then placed in the camp. With the beginning of the typhus epidemic, the camp was closed for quarantine. According to the *Gedenkstätte Bergen-Belsen*, up until April 1942, around 14,000 prisoners died in the camp from typhus, starvation, or cold; the *Niedersächsische Landeszentrale für politische Bildung* states that as many as 18,000 prisoners died during this period.² On May 1, 1942, there were only 2,069 prisoners alive in the camp.³

Between August and October 1941, a Gestapo team from Hamburg conducted a selection of "undesirable" prisoners (Jews and Communists) in the camp, who were sent to be shot at the Sachsenhausen concentration camp; on October 10, for example, the Germans sent 300 such prisoners to Sachsenhausen.⁴ Once there, they were murdered in the "neck-shot installation" (*Genickschussanlage*), and their bodies were burned in the crematorium.

In early 1942, a resistance group known as the Hannover Committee (*Hannoveraner Komitee*) was formed by the Soviet prisoners in Stalag 311.⁵ On June 10, 1943, the camp was redesignated as a subcamp of Stalag XI B in Fallingbostel.⁶

MANNSCHAFTSSTAMMLAGER (STALAG) 312 (XX C)

The Wehrmacht formed Stalag 312 (XX C) on April 12, 1941, in the city of Limburg an der Lahn, in Defense District (*Wehrkreis*) XII. From June 1941 until June 1942, the camp deployed to the city of Thorn (today Toruń, Poland) (map 4c), near a ring of old forts to the south of the Vistula River.

Stalag 312 (XX C) received two field post numbers (*Feldpostnummern*). The first, 37 796, was issued between February 28 and July 29, 1941, and struck between July 30, 1941, and February 28, 1942. The second, 01 242, was assigned between January 27 and July 14, 1942, and struck on November 30, 1943.

Initially, the Germans sent Polish prisoners of war (POWs) from Stalag XX A to enclose areas near the southern forts, in the Stawki, Rudak, and Podgórze districts of Thorn and the nearby village of Glinki (German: Neu Glinke). The new camp was to hold Soviet POWs.¹ The first group of Soviet POWs, which numbered around 1,500, arrived at the camp on August 4, 1941. The second group of POWs came to the camp from Stalag 315 (II F) in Hammerstein (today Czarne, Poland) on August 25 and 27. The main contingent in the camp consisted of Red Army men whom the Germans captured in

August 1941 near the cities of Smolensk, Mogilev, Rogachev, Zhlobin, and Gomel'. In each transport, between 50 and 100 people died while being transferred.

There were never enough barracks for the number of prisoners in this very overcrowded camp. Some prisoners were forced to stay in the open, in dugouts they created by hand, or in makeshift shacks, regardless of the season. The camp occupied an area of approximately 36 hectares (89 acres). The premises were fenced by a double row of barbed wire entanglements with watchtowers, machine gun positions, and lights.

There is some uncertainty about the administrative history of the camp after its arrival in Thorn. It may have been under the command of Stalag XX A, which was also in Thorn, as indicated by transport reports and prisoner records kept by Stalag XX A headquarters, as well as by the economic and supply records of Stalag 312 under Stalag XX A. The daily orders of the commandant of Stalag XX A also contain the names of deceased and punished prisoners of Stalag 312.²

In the beginning of September 1941, a group of POWs were sent to work detachments (*Arbeitskommandos*) under Stalag XX B (Arbeitskommandos Oliva and Elbin) in Marienburg (today Malbork, Poland) and to work detachments under Stalag XX A (Arbeitskommando Langführ) for agricultural work. The final group of Soviet POWs sent to the camp arrived on November 17, from Stalag 324. Judging from the registration numbers of the POWs, the maximum number of prisoners in the camp was around 12,000. On December 16, 1941, a group of the POWs was transferred to Stalag II D in Stargard. On April 4 and April 7, 1942, two echelons of POWs arrived from Stalag 327. On April 24, 1942, a unit of POWs arrived from Oflag V B in Schaulen (today Šiauliai, Lithuania). The maximum known number of POWs at the last registration was 15,171. On May 1, 1942, the remaining POWs were transferred to Stalag XX A and Stalag XX B.³

The conditions in the camp were the same as in other camps for Soviet POWs. In addition to the terrible overcrowding, the food was inadequate in both quantity and quality, the prisoners suffered from exhaustion from overwork, infectious disease was endemic, and there was little medical care. All of these factors contributed to a high mortality rate. Additionally, the guards' brutality added to the prisoners' misery. According to the Polish commission investigating Nazi crimes, more than 14,000 Soviet POWs died in the camp between 1941 and 1942.⁴ The prisoners' burial site is in the forest west of Glinki.

As in other camps, a selection of “undesirable” POWs (Communists and Jews) occurred in Stalag 312. Under the orders of the camp commandant Oberst Dullnig, over 300 Red Army political commissars, other Communists, and Jews were shot.⁵

In June 1942, the Germans transferred the camp to Ukraine and until September 1943, it was deployed to the area of Stalino (today Donets'k, Ukraine) (9f).⁶ More exactly, the camp was located in the village of Khanzenkovo, near Makeevka (today Makiivka), for a long time. The main camp was located at mine No. 13, and three of its subcamps were located at mines numbered 21, 22, and one mine called Khrushchova. According to the Soviet Extraordinary State Commission

(ChGK), it is believed that upward of 10,000 people died from exhaustion, starvation, and illness at the camp; however, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly.⁷ In September 1943, the camp was sent to the city of Zaporozh'e (today Zapori-zhzhia, Ukraine) (9f). The camp commandant in this period was Oberst Georg Böhm, his deputies were Hauptmann Ande and Major Rogner, and the counterintelligence (*Abwehr*) officers were Hauptmann Tietz, Hauptmann Herbster, and Hauptmann Spiess.⁸ The date of Stalag 312 (XX C)'s dissolution is uncertain, but the camp was still in operation as of October 20, 1943.

MANNSCHAFTSSTAMMLAGER (STALAG) 313

The Wehrmacht established Stalag 313 on April 30, 1941. From October 1941, the camp was deployed in Vitebsk (map 9b). Stalag 313 received field post number (*Feldpostnummer*) 13 340 between February 1 and July 11, 1941. The number was struck between January 25 and July 31, 1942, renewed between March 24 and November 6, 1943, and struck again on May 17, 1944.

The camp was subordinate to the Armed Forces Commander Ostland (*Wehrmachtbefehlshaber Ostland*).¹ At various other times, the camp was subordinate to Security Division (*Sicherungsdivision*) 403, Security Brigade (*Sicherungsbrigade*) 201, the Fourth Armored Army, and, finally, the Commander of Prisoners of War in Operations Area III (*Kommandeur der Kriegsgefangenen im Operationsgebiet III*), from February 15, 1943. The camp was guarded by Company 1 of the 876th Reserve Battalion (*Landesschützenbataillon*).

The conditions in Stalag 313 were similar to those in other camps for Soviet prisoners of war (POWs). Especially during the first winter, the prisoners experienced severe overcrowding, food supplies that were inadequate in both quantity and quality, forced labor, a total lack of medical care, and no opportunities to wash themselves or their clothing. The resulting starvation, exhaustion, and disease, as well as deliberate abuse, led to a high mortality rate. Of 40,000 prisoners in the camp in the fall of 1941, by the spring of 1942 only 500 were still alive (equal to a death rate of between 150 and 160 prisoners a day).² According to the Soviet Extraordinary State Commission (ChGK), at least 76,000 prisoners died in the camp between 1941 and 1943; however, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly.³

The first camp commandant was Oberstleutnant von Coburg. From the end of February until May 1943, the camp commandant was Oberst Hans Dillmann. After the war, while being interrogated by the Soviet security agencies, he stated: "In the camp, I maintained a diet that was intended to lead and did lead to the prisoners' death from starvation. The infinitesimal food rations led to depletion of the organism, and the grueling work from sunup to sundown hastened [their] final destruction."⁴

Stalag 313 was also a transit camp for civilians whom the Germans suspected of rendering aid to the partisans. The Germans would first round up the civilians and then, after

examination by the Security Service (*Sicherheitsdienst*, SD), deport them from Stalag 313 to the concentration camps at Majdanek or Auschwitz. In March and April 1943, for example, up to 20,000 Soviet citizens, including a large number of women, elderly people, and children, whom the Germans had forcibly driven out of the villages of the Vitebsk and Gorodok raions in the Vitebsk oblast' were rounded up and sent to concentration camps. A witness, Elena Shakuro, stated:

In late March 1943, German soldiers herded our whole family and the inhabitants of the village of Khrapovichi into the Vitebsk POW camp. There were a great many civilians there, old men, women, and children. In the barracks where they put us, there was no floor, only three tiers of bare plank beds on wire frames, and the overcrowding and filth were terrible. Hunger was rampant, and there was a typhus epidemic. People were dying in huge numbers, 20 to 30 a day, from starvation, typhus, and slave labor. In April, 1943, our family was taken from the Vitebsk camp, in a transport of more than 1,000 people, to the Majdanek death camp.⁵

As in other camps, the Germans screened the prisoners in Stalag 313 to separate out "undesirables," such as Jews and political commissars, who were then executed near the camp by the guards or the SD. For example, in November 1941, Einsatzkommando 9 found and shot 207 Jews in the camp.⁶

On September 25, 1943, Army Group Center (*Heeresgruppe Mitte*) ordered the disbandment of the camp.⁷ Other records, however, show the camp still in operation as of April 30, 1944, so there is considerable uncertainty about the date of its dissolution.

MANNSCHAFTSSTAMMLAGER (STALAG) 315 (II F)

The Wehrmacht established Stalag 315 (II F) (maps 2, 4b, 4f, and 5) on April 12, 1941, in Defense District (*Wehrkreis*) V. In June 1941, the camp was transferred to Hammerstein (today Czarne, Poland) (4b), in Defense District II, where it was designated Stalag II F. In October 1941, the camp was relocated to Przemyśl (5), in the Generalgouvernement, and redesignated Stalag 315. The camp in Przemyśl had subcamps (*Zweiglager*) in Chyrów (today Khyriv, Ukraine) and Jarosław (today Jarosław, Poland).¹ The camp was redeployed to Villingen, Germany (4f) in November 1942, then to the Netherlands, and finally to Épinal, France (2), in January 1944. While deployed in Hammerstein, the camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*). While it was located in Przemyśl, the camp was subordinate to the Commander of Prisoners of War in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*). Stalag 315 received field post number (*Feldpostnummer*) 08 698 between February 1 and July 11, 1941.

The first commandant of the camp was Oberstleutnant Rudolf Marquardsen. On September 15, 1941, he was replaced by Major Botho von Aulock, who served for one month before being replaced by Oberstleutnant Friedrich Müller. He was

Stalag 315 at Épinal. Destruction seen from the main courtyard, June 26, 1944.

COURTESY OF ICRC

succeeded by Oberstleutnant von Briesen on May 30, 1942. The next commandant was Oberstleutnant Dr. Waldemar List, who took charge on December 17, 1942. He was replaced by the final commandant, Oberst Otto Lührsen, on July 15, 1943. The deputy commandant was Oberstleutnant Felix Hering from November 1 until December 16, 1941, when he was replaced by Major Ernst-Günther von Rouppert.² The first adjutant was Oberleutnant Florian Fürthner, who was later replaced by Hauptmann Heinrich Greim. The counter-intelligence (*Abwehr*) officer was Hauptmann Werner Wilhelm. The head of the camp administrative section was Stabszahlmeister Schrecke.³ While deployed in Przemyśl, the camp was guarded by personnel from the 310th and 765th Reserve Battalions (*Landesschützenbataillone*).⁴

Stalag II F held Polish, French, and Soviet prisoners of war (POWs), while Stalag 315 held only Soviet POWs. The population of Stalag II F was consistently between 5,000 and 6,000, while the camp in Przemyśl reached a maximum population of 8,500 prisoners in August 1942.⁵ Stalag 315 was located in the barracks of a former Polish army regiment. Conditions in the camp during both deployments were similar to those in other camps for Soviet POWs. The camp was overcrowded, food supplies and medical care were inadequate, and the prisoners were treated cruelly by the guards. The camp was temporarily quarantined in the winter of 1941 due to a typhus epidemic. Typhus continued to be a widespread problem in the camp in 1942, to the extent that even some of the German guards were infected.⁶ Some prisoners were assigned to work detachments (*Arbeitskommandos*) outside the camp.

In both Hammerstein and Przemyśl, the Germans conducted selections (*Aussonderungen*) of incoming prisoners to separate out “undesirables,” such as Jews and political commissars, who were deported to the Oranienburg concentration camp to be killed (while the camp was located in Hammerstein) or shot by the guards or Security Service (*Sicherheitsdienst*, SD) near the camp while it was in Przemyśl. One of the SD officers responsible for conducting these selections was Martin Mechow, who was investigated for murder by the district court in Munich in 1967; however, it was discovered that he had died in 1960.⁷

In late November 1942, the camp staff was transferred to Villingen, Germany.⁸ In 1943, the camp headquarters deployed to the Netherlands; little information is available about this deployment. It subsequently relocated to Épinal, in northeastern France, on January 13, 1944. The camp in Épinal was located in an old fortress and held Indian prisoners who had been housed in other camps in Italy and Germany. A few Indian prisoners from Frontstalags in France were also sent to Stalag 315, probably in an effort to keep prisoners of the same ethnic and religious groups together.

It is unclear why the Wehrmacht gave the designation of Stalag to a camp located in occupied France. It appears that Stalag 315 was specifically designed to accommodate the Indian prisoners who had come to Germany from Italy in the fall of 1943. On February 22, 1944, the camp held 2,581 British Indian prisoners (including 1,112 Hindus, 948 Muslims,

424 Sikhs, and 9 Christians). By March 16, when a member of the Swiss International Committee of the Red Cross (ICRC) delegation visited the camp, the population had increased to 3,031 (1,376 Hindus, 973 Muslims, 488 Sikhs, 138 Christians, and 56 POWs of unknown religion in the infirmary). The camp had taken in more prisoners from German Stalags as well as 42 Indians from Frontstalag 222. The camp commander was Oberst Otto Lührsen, and Sergeant Bhagat Ram served as the prisoners’ elected leader (man of confidence).

The conditions in the camp were poor. The commander claimed that the facility was dilapidated when he took it over and that repairs were underway. The inspectors of the ICRC and the Swiss government agreed that the commander was committed to improving the camp and that he treated the prisoners well. Nonetheless, the camp lacked adequate water supplies and food preparation facilities. The prisoners’ health was also poor, but the inspectors ascribed this to the harshness of the transfer in midwinter and not to the conditions inside the camp. Two prisoners had died in the camp, one of tuberculosis and the other of pneumonia. The inspectors reported that the camp infirmary, staffed by Indian orderlies under the command of two British medical officers, was in good shape.

There were no work detachments outside the camp as of March 1944; however, prisoners within the camp participated in the renovation of the facilities (although most of the non-commissioned officers asserted their right not to work under the Geneva Convention). The camp offered some forms of recreation. The prisoners were supplied with books and sporting goods by the YMCA. Sports facilities, including a soccer field, were not yet completed in March. The inspectors reported that the quantity and quality of the food was adequate. The Swiss delegate found the camp facilities “rather primitive” and bemoaned the poor lighting. As to the religious needs of the prisoners, both inspections noted that rooms and personnel for worship were available for all religious groups. Due to a shortage of cooking fuel, Sergeant Bhagat Ram wrote to the ICRC asking that the Indian food parcels be replaced by Canadian parcels; this was because the Indian parcels contained a great variety of ethnic foods adapted to the different prisoner groups, but they had to be cooked, whereas the food in the Canadian parcels was ready for consumption or needed only short reheating.⁹

Hostility among prisoner groups belonging to different religions and castes was a source of problems in the camp. Although the prejudices of the camp inspectors and the German camp commander about the alleged “oriental indifference” and immaturity of the Indian prisoners colored the inspection reports, many higher-caste prisoners apparently did not want to take care of their rooms, believing that this was the task of the lower-caste members, called “sweepers.” There was also much tension among ethnic and religious groups. All these conflicts inspired frequent acts of vandalism and sabotage. The ICRC inspector paraphrased the German commander in his report: “[The prisoners] behave like spoilt or badly-brought-up children.” The German commander

argued that these problems were typical for camps with Indian prisoners and claimed that the prisoners' attitudes prevented improvements to the camp conditions.¹⁰

During the bombing of May 11, 1944, the Hindu prisoners' barracks received a direct hit. As Bhagat Ram stated, "Bombs were coming like a stream and prisoners could find no way to hide themselves and were running like sheep from one corner to the other in the camp area." At least 40 prisoners were killed and 80 more were wounded. The chaos allowed approximately 700 prisoners to escape; many of them managed to cross into neutral Switzerland.¹¹ Soon after the bombing, Bhagat Ram wrote to the Swiss government, pleading with them to prevent the British from bombing the camp again. The Germans transferred some of the prisoners to other camps in northeastern France, mainly Frontstalag 194 in Nancy, but most surviving prisoners had to stay in the bombed ruins of the fort for several weeks.¹² The Germans apparently decided to reconstruct the camp with a reduced capacity of about 2,200 prisoners, but it was never completed.¹³ The remaining prisoners were probably transferred to Germany a few weeks later, possibly after a short stay in Frontstalag 194.

The headquarters of Stalag 315 was subordinated to IIlag Giromagny on June 13, 1944.¹⁴ Stalag 315's headquarters returned to Germany, where it was formally disbanded in Ludwigsburg on September 10, 1944.

MANNSCHAFTSSTAMMLAGER (STALAG) 316

The Wehrmacht established Stalag 316 from Frontstalag 316 on July 7, 1941, in Defense District (*Wehrkreis*) VI.¹ The camp first deployed to Siedlce (map 5). In January 1942, it was relocated to Volkovysk (4c), and from July 1942 until the end of February 1943, it was located in Białystok (4c). While Stalag 316 was located in Białystok, it had three subcamps (*Zweiglager*), which were located in Zambrów, Grodno, and Lososno. The camp was assigned field post number (*Feldpostnummer*) 20 780 between February 16 and July 18, 1941; the number was struck between February 15 and July 30, 1942.

During the deployment near Siedlce, the camp was subordinate to the Commander of Prisoners of War in the Generalgouvernement Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*). While deployed in Volkovysk and Białystok, the camp was under the authority of the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

The commandant of Stalag 316 from its establishment to September 1, 1941, was Major Rochel. On that date, he was replaced by Major Wiechowski, whose adjutant was Oberleutnant Prondsinski. At the end of 1941, Oberstleutnant Jansen was appointed camp commandant. His deputy was Major Spletstusaer. Initially, the camp was guarded by a reserve infantry battalion commanded by Major Sommer. In October,

it was replaced by a different battalion, commanded by Hauptmann Ai.²

Stalag 316 held Soviet prisoners of war (POWs). The construction of the camp began in late May 1941, when a depot for wire and lumber was set up near the village of Wola Suchożebrska, 10 kilometers (6 miles) north of Siedlce. These materials were used to build barracks for guards. In June 1941, German soldiers dug ditches and put up barbed wire around the grounds of the camp, which consisted of three parts: Camp A at the Podnieśno railroad station (with an area of 100 hectares [247 acres]), Camp B near the village of Wola Suchożebrska (1.5 by 2 kilometers [0.9 by 1.2 miles]), and Camp C (which was never used) near the village of Kisielany-Kuce. The first prisoners arrived at Camp A on June 23, 1941. They were transported by rail in special trains of 35–40 cars. Wounded prisoners were given no treatment and frequently died en route to the camp, and there were instances when the cars were not unloaded for two days or more. There were no barracks in the camp when the first prisoners arrived, and they were forced to sleep under the open sky or dig holes in the ground for shelter.³

Former prisoner Evgenii Sdunovich described the conditions in the camp in 1941 as follows:

This was a big, square section, measuring about 3 kilometers [under 2 miles], of a field where potatoes and, in some parts, rye grew; it was surrounded by barbed wire. All the prisoners were kept right on the ground, in the open. Later they made us dig pits as shelters, each holding about 50 people. Such a dug-out was nothing but a hole, because the Germans gave us no wood for covering the dugout, not even from the rain. There were no plank beds or anything of that kind. The people didn't even have an opportunity to sleep in these holes in the ground, because the size of the holes was not large, and 50 people were put in each of them. Under these conditions, people slept standing up, leaning against the wall of the pit or against each other. In the best case, they managed to sleep in a half-sitting position. The prisoners were given almost nothing to eat. Every evening, bread for the following day was handed out. The daily ration was 200 to 250 grams [7 to 8.8 ounces] of bread, with all kinds of things mixed into it. At the same time, they gave out a teaspoon (8–10 grams [about 0.3–0.35 ounces]) of artificial honey, but it was not fresh; it smelled like it was spoiled. The hot food was something resembling a soup, made of bran with horsemeat—it was distributed once a day. In the morning and evening, they gave us each a half-liter of boiling water. Drinking water was brought in twice a day—in the morning and evening. But this was done not so much to supply the prisoners as to entertain the guards, because there was so little water brought that the people, who were suffering from thirst, hurled themselves at

the water, creating a scuffle and coming to blows. This whole scene of monstrous violation of human dignity aroused idiotic guffaws from the German guards. The hungry people imprisoned in the camp ate raw potatoes, chewed on leafy tops of root vegetables, gnawed on yellow spikes of grain. It was forbidden to make fires in the camp. Thus the Germans gave us no opportunity to cook even a couple of tiny potatoes. Among the imprisoned Soviet POWs were many wounded, but there was no medical care, they didn't even get bandaging material, much less medications . . .⁴

The starving prisoners ate all the grass and roots on the grounds of Camps A and B; they eventually resorted to eating horse excrement and the flesh of dead prisoners. Twenty to thirty carts of dead prisoners were removed from the camp each day.⁵ Driven to despair by the inhumane conditions of confinement, the prisoners mounted large-scale rebellions three times, rushing en masse at the barbed wire fence and into machine-gun fire from the guards. In one of these rebellions, in mid-September 1941, the guards killed more than 600 prisoners.⁶

One witness, Stanislav Stoliazhevskii, wrote in his diary: "July 15: in the camp, it is hell. Today a train arrived; each of its 54 cars held 100 to 150 people. In the sweltering atmosphere and heat, the Russians strip naked. This did not help much, and several men who had succumbed were carried out of each car." By early August, the camp was overcrowded, which led to a water shortage, as there were only seven wells to accommodate the many thousands of prisoners. On the night of July 16–17, the first mass escape attempt took place. The prisoners knocked over two posts of the surrounding fence and fled. The guards opened fire with machine guns and threw grenades at the escaping prisoners. It is impossible to determine how many prisoners managed to escape and how many perished. Beginning in early morning, the remaining prisoners retrieved the bodies and buried them in a specially prepared cemetery in the woods a few hundred meters from the camp, on the other side of the railroad tracks. Stoliazhevskii described it in his diary:

on July 27, there are around 70,000 people in the camp. Hunger is becoming increasingly intense. They dig the last potato out of the ground. They pick up the tiniest kernel of grain. . . . The whole square in the camp is a bare earthen surface without a trace of green. All the voices are dominated by a cry of despair: "German, give me bread or kill me." July 28: the POWs think up more and more new methods of escape. I saw how they wrapped their hands in rags and, after banding together to form a large cluster, threw themselves at the barbed wire, climbing onto it like cats. This was the hardest obstacle to overcome. Next they had to run through an open field to the railroad tracks, whose embankment

protected them from bullets. Anyone who reached this spot had some chance of surviving. But that was not all: it was still half a kilometer [0.3 miles] from the railroad tracks to the life-saving forest. On August 22: the thirst for freedom is stronger than the fear of death. In recent days the POWs have changed their escape tactics. In the evening, when bread is being distributed, they start running in a circle, raising clouds of dust. The dust, dispersed by the wind, covers a large area with a curtain of darkness. Then, at an agreed-upon signal, the POWs rush across the field onto the barbed wire. The Germans then shoot blindly. If fortune smiles upon someone, he will survive. . . . On August 29, another mass escape attempt took place. This time the POWs launched an assault on the barbed wire from the side of the Siedlce-Sokołów highway. Those who managed to get out of the camp ran toward the highway and tried to reach the forest. At the edge of the forest, they came under mass fire from the Germans' weapons. Probably they all perished. September 2 is the next time the POWs throw themselves onto the barbed wire.

Another mass escape attempt occurred on September 16, when prisoners ran through the camp gates while carts were passing in and out. Initially, the Germans did not fire on the escaping prisoners because they feared killing the cart drivers; however, they opened fire a short time later, killing about 200 prisoners. In the late fall of 1941 there was another escape attempt. Prisoners launched attacks against the fences and against the kitchen. The guards opened fire with machine guns and shelled the fleeing prisoners with artillery. The prisoners were unable to overcome the second fence barrier and were recaptured. For four days, the remaining prisoners were given no food and water, the dressings of the wounded men were not changed, and the corpses were not removed.⁷ Although the Germans acted aggressively against those attempting to escape, many succeeded nonetheless; in August 1941, 4,000 prisoners escaped from the camp (3,400 from Camp A and 600 from Camp B).⁸

As in other camps for Soviet POWs, the prisoners were screened to separate out "undesirables," such as Jews and Communists, who were executed in an antitank ditch near the village of Tonkiele; at least 5,000 prisoners were shot there from September to December 1941.⁹ One of the largest mass shootings at this site took place from November 12–14, 1941.¹⁰ In total, from June 23, 1941, to January 1942, about 130,000 prisoners passed through the camp, of whom 45,000–50,000 died from hunger, disease, and shootings.¹¹

In January 1942, the camp was redeployed to Volkovysk, where it occupied the former barracks of a Polish regiment. On February 1, 1942, there were 5,414 prisoners in the camp; on April 1, there were 2,087; on May 1, there were 2,269 prisoners; and on June 1, 849.¹² As in the camp in Siedlce, the conditions were inhumane. The camp was overcrowded, and

poor sanitation led to epidemics of typhus, dysentery, and other diseases. January and February 1942 were especially difficult. In the spring of 1942, the conditions improved slightly: the bread ration was increased and baths and a hospital were opened. The improvement in the conditions was motivated by the Wehrmacht's increased need for prisoner labor (although conditions continued to be much worse for Soviet prisoners than for those of other nationalities).

From July 1942 onward, the camp was deployed in Białystok. In early July 1942, there were 6,230 prisoners in the camp, including 1,445 officers, with 2,203 of the prisoners working in the labor detachments.¹³ On August 1, 1942, the camp held 6,406 prisoners; on September 1, 1942, 4,458; on October 1, 1942, 3,982; on November 1, 1942, 2,567; on December 1, 1942, 2,393; on January 1, 1943, 2,103; and on February 1, 1943, 1,673.¹⁴ The conditions in the camp in Białystok were similar to those in the camps in Siedlce and Volkovysk. The camp was disbanded on February 20, 1943.¹⁵

MANNSCHAFTSSTAMMLAGER (STALAG) 317 (XVIII C)

The Wehrmacht established Stalag 317 (XVIII C) on April 7, 1941. The camp was located in Markt Pongau, in Defense District (*Wehrkreis*) XVIII (map 4f). Stalag 317 (XVIII C) had one subcamp (*Zweiglager*), designated Stalag 317 (XVIII C/Z), which was located in Landeck.¹ The camp was subordinate to the Commander of Prisoners of War in Defense District XVIII (*Kommandeur der Kriegsgefangenen im Wehrkreis XVIII*). Unusually, for a Stalag that remained in the Reich throughout its existence, Stalag 317 received a field post number (*Feldpostnummer*), 09 559, which was issued sometime between February 1 and April 11, 1941, and struck on February 7, 1942.

The first commandant of Stalag 317 was Oberst Dr. Ulrich Frey. His successor was Oberst Küchler, who was later replaced by Oberst Ried (or Reid). Oberst Ried was followed by Oberst Behrens. The final commandant of the camp was Oberst Otto Kadelke. The counterintelligence (*Abwehr*) officers were Hauptmann Josef Steinklauber and Hauptmann Erhard Storch. The court officer (*Gerichtsoffizier*) was Dr. Hermann Radauer.²

Stalag 317 (XVIII C) was divided into two eight-hectare (20 acre) sections: the North Camp (*Nordlager*) and the South Camp (*Südlager*), each of which contained between 25 and 30 barracks, which were 45–50 meters (148–164 feet) in length. Construction of the camp began in April 1941 and was completed in early September of that year; prior to the completion of the barracks, the prisoners slept in tents. The barracks were made of stone or wood and equipped with triple bunk beds for the prisoners and three heating stoves per barrack.³

The first prisoners in the camp were 1,081 French (including an officer and 34 civilians) who arrived in a transport from Frontstalags in France on May 22, 1941.⁴ French prisoners would remain the largest national group in the camp for most

Stalag 317 (XVIII C) at Markt Pongau. ICRC delegate Mr. Friedrich visits the camp, July 1942.

COURTESY OF ICRC.

of its operation. By June 1, there were also 1,529 Serbians, 19 Poles, and 2 Belgians in the camp. The Western Allied, Polish, and Serbian prisoners were kept in the Südlager. The first Soviet prisoners arrived at Stalag 317 in October 1941; as of November 1, 1941, there were 2,677 Soviets in the camp.⁵ The Soviet prisoners lived in the Nordlager, also referred to as the Russian camp (*Russennlager*). Beginning in September 1943, prisoners of other nationalities—including Dutch, British/Commonwealth, American, and Hungarian prisoners of war (POWs) and Italian military prisoners—were also present in the camp.⁶ Beginning in the fall of 1943, Stalag 317 also served as a transit camp for prisoners who were being transferred north from POW camps in Italy to other Stalags in the Reich.⁷

The population of Stalag 317 (XVIII C) was relatively constant, ranging from approximately 15,000–23,000 prisoners throughout the war. However, most of the prisoners registered in the camp (more than 70% and at times as high as 93%) were not housed in the main camp but were instead working in the numerous work details (*Arbeitskommandos*) that were subordinate to Stalag 317.⁸ Some of the prisoners from the Stalag were sent to a labor camp known as Lager Lüdensee, near Bludenz.⁹ While conditions in the work details generally met the requirements of the Geneva Convention, Red Cross delegates who visited Kommando L 21253 in Wöth-Rauris in October 1941 noted that the French prisoners lived in overcrowded and unsanitary conditions, did not receive sufficient food, and were mistreated by the commander of the detachment.¹⁰

Conditions for Western Allied and Serbian prisoners in Stalag 317 were generally decent. In most of their camps, the Germans usually treated these prisoners well and observed the requirements of the Geneva Convention of 1929, and that seems to have been the case in Stalag 317. However, prisoner Marcel Vuillamy wrote in late April 1943 that the prisoners' quarters were infested with vermin and that their food rations were inadequate. Nonetheless, the prisoners kept their spirits high and demonstrated defiance toward their German captors by singing French patriotic songs.¹¹

These prisoners had access to some cultural and recreational activities, including various sports, such as soccer, and a small orchestra and theater troupe that the prisoners formed.¹² However, gathering the entire orchestra together was difficult because of the wide distribution of the prisoners in the work details.¹³ There were Catholic and Protestant religious services, but the Serbian prisoners lacked an Orthodox priest and relied on a seminary student for their spiritual needs.¹⁴ The French prisoners published a monthly camp newspaper entitled *Le Stalag XVIII C: Vous Parle (Stalag XVIII C: you speak)*. Its content was mainly cultural in nature and included discussions of both the cultural activities undertaken in the camp and more general commentary on French cultural life; for example, the September–October 1944 issue of the newspaper included both a review of plays performed in the camp during the previous months and an essay on the music of French composer Hector Berlioz.¹⁵

By contrast, the Soviet POWs in the Nordlager were treated horribly, with complete disregard for the Geneva Convention. This section of the camp was severely overcrowded and hygienic conditions were abysmal. The prisoners received minimal food rations; many were so hungry that they resorted to eating grass and worms. The terrible living conditions and absence of medical care led to an outbreak of typhus during the winter of 1941–1942 that killed approximately 3,600 prisoners; it took careful efforts from the French doctors to prevent the spread of typhus to other segments of the prisoner population. Most of the Soviet prisoners who arrived in the camp during this early period died within weeks of their arrival.¹⁶ As in other camps, the Soviet prisoners were subject to selections (*Aussonderungen*) in which the counterintelligence officers and the court officer screened the prisoners to separate out “undesirables,” such as Jews and political commissars; those so identified were turned over to the Salzburg Gestapo, who executed them.¹⁷

Postwar war crimes investigations conducted by the United States revealed the excessive cruelty with which the Germans treated Soviet prisoners. A German officer named Leutnant Kraft was accused of handing 50 Soviet prisoners (including one woman) over to the Gestapo; these prisoners were subsequently executed (whether this was a selection operation or some other type of execution is unclear).¹⁸ Another German officer, Karl Ohnmais, became particularly notorious as the commander of the Golling labor camp, where about 500 Soviet prisoners from Stalag 317 (XVIII C) were held. The prisoners in this camp were forced to work 12–16 hours per day removing stones from a quarry and building and repairing railroad lines in the area. The prisoners’ food rations—a cup of ersatz coffee in the morning, half a liter of thin soup at lunch, and a piece of bread at dinner—were insufficient to sustain them given the difficulty of the labor they were performing. From April 9, 1945, until the liberation of the labor camp on May 4, these prisoners received no food at all from the Germans and their meals consisted mainly of a soup of grass boiled in water, which they prepared for themselves. The prisoners also received no medical care; a Russian doctor was present but was given no supplies with which to

treat the prisoners. As a result, 30–40 prisoners collapsed each day from exhaustion and malnutrition and many died.¹⁹

During the final months of the war, the conditions deteriorated significantly even for the Western Allied prisoners. Evacuations from other camps farther to the north and east to Stalag 317 (XVIII C) led to severe overcrowding—some 13,000 prisoners were crammed into the Südlager alone. Problems with the prisoners’ housing, such as leaky roofs, went unfixed because of a lack of supplies. Due to a shortage of fuel, the prisoners had to go into the forest and gather their own firewood. Food rations decreased and hygienic conditions were very bad; the water supply in the camp was so contaminated that the prisoners had to boil the water before it could be drunk. The deteriorating conditions allowed another outbreak of typhus to begin in May 1945, just before the camp was liberated.²⁰

As order broke down in the camp in early May 1945, a group of 300 prisoners attempted to raid a freight train stopped in Markt Pongau. As a result of this incident, the camp commandant met with the men of confidence for each prisoner group and it was decided that only certain prisoners would be allowed to leave the camp (with the commandant’s approval). Stalag 317 (XVIII C) was liberated by American forces—who had been sought out by prisoners permitted to leave the camp and look for them—on May 8, 1945, the day of the German capitulation.²¹ A war crimes investigation in 1967 did not result in any charges, as all of the camp’s commandants, as well as the counterintelligence officers and the court officer, had already died by that time.²²

MANNSCHAFTSSTAMMLAGER (STALAG) 318 (VIII F)

The Wehrmacht established Stalag 318 (VIII F) (map 4e) on April 8, 1941, in Defense District (*Wehrkreis*) VIII and deployed it in Lamsdorf (today Ląbinowice, Poland). Stalag 318 was located 1.5 kilometers (0.9 miles) northwest of the main camp at Lamsdorf, Stalag VIII B.¹ The camp was under the authority of the Commander of Prisoners of War in Defense District VIII (*Kommandeur der Kriegsgefangenen im Wehrkreis VIII*). Stalag 318 received field post number (*Feldpostnummer*) 09 911 between February 1 and July 11, 1941. The number was struck between July 12, 1941, and January 26, 1942; this date was well before the camp disbanded, probably because it had assumed permanent status at its location in Lamsdorf.

Stalag 318 was a camp for Soviet prisoners of war (POWs). The first prisoners arrived in late July 1941. In total, from the

fall of 1941 to the end of May 1943, 120,989 prisoners passed through the camp, of whom 28,376 were transferred to other camps in Defense District VIII, 15,348 were transferred to camps outside of Defense District VIII, and 34,841 were sent to labor detachments (*Arbeitskommandos*) outside of the camp.² The camp population ranged from a minimum of 4,081 in January 1942 to a maximum of 15,877 in March 1943.³

The conditions in the camp were horrible and in violation of the norms of international law regarding POWs. When the prisoners arrived, most were already in a state of severe exhaustion from the long journey to the camp. For the first months of its existence, there were no barracks. The prisoners had to dig burrows in the ground with sticks or their bare hands for shelter. In 1942, barracks were built in the camp, but the prisoners were given only bare wooden planks to sleep on. Sanitary conditions were appalling; the men were allowed a hot shower only once a month and cold water was severely rationed, preventing them from washing their clothes. From November 1941 through the spring of 1942, a typhus epidemic ravaged Stalag 318 and the mortality rate reached a very high level. Between December 1, 1941, and January 31, 1942, 2,270 prisoners died in the camp, mostly due to typhus; during this time, the camp was quarantined and prisoners were not allowed to enter or exit.

In addition to typhus and other diseases, starvation was rampant in the camp. The prisoners received only a cup of ersatz coffee, 200 grams (7 ounces) of poor-quality bread (made from field beets, a small amount of rye flour, and sawdust) and half a liter (2 cups) of rutabaga or potato soup per day.⁴ These rations were not sufficient to sustain life, leading some prisoners to resort to desperate measures to survive. After a September 6, 1941, visit to the camp, the Oppeln (Opole) Gestapo reported that they had discovered evidence of cannibalism among the prisoners. The Gestapo officers had found pieces of fresh meat that were clearly from a human body in a foxhole in the camp. When confronted about the meat, three prisoners confessed that they had cooked and eaten parts of the body of their dead comrade out of desperation for something to eat.⁵

After the quarantine of the camp ended, the prisoners were sent to work in work details. Some 60,000 Soviet prisoners were in work details subordinate to Stalag 318 (VIII F) by November 1943.⁶ Many of these prisoners were sent to work in metallurgy or in the coal mines in Upper Silesia, where conditions were very harsh; they were usually required to work 12 hours a day or longer and hardly received any food.

In 1941 and 1942, the Gestapo squad from Oppeln conducted selections (*Aussonderungen*) of the prisoners in the camp to eliminate "undesirables," such as Jews, political commissars, and other Communist Party members. They sent these prisoners to the Gross-Rosen concentration camp for execution.⁷

On June 24, 1943, Stalag 318 (VIII F) was absorbed by the main camp at Lamsdorf, Stalag VIII B, and became known as subcamp (*Teillager*) Stalag VIII B. On March 17, 1945, both the main camp and the subcamp were liberated by the Red Army; about 5,000 Soviet prisoners remained alive inside the camp. In July 1945, mass graves containing the bodies of thousands of Soviet prisoners were discovered near the

310 MANNSCHAFTSSTAMMLAGER (STALAG) 318 (VIII F)

villages of Klucznik and Szadurczyce. It is estimated that at least 40,000 Soviet POWs died in Stalag 318 (VIII F) and its associated labor detachments.⁸

MANNSCHAFTSSTAMMLAGER (STALAG) 319

The Wehrmacht established Stalag 319 (map 5) on April 8, 1941. From July 1941 to April 1944, the camp was deployed in Kulm (Polish: Chełm), in the Generalgouvernement, where it was divided into three parts: 319 A (Rampa Brzeska/Okszowska Street), 319 B (Wojsławicka/Partyzantów/Lwowska/Borek-Patelnia Street), and 319 C (Rampa Brzeska Street). From May to August 1944, the camp was deployed in Skiernewice, also in the Generalgouvernement. The disbandment of the camp was ordered on August 19, 1944. Stalag 319 received the field post number (*Feldpostnummer*) 18 754 between February 16 and July 18, 1941. The number was struck on September 21, 1944. While deployed in Poland, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber im Generalgouvernement Polen*).

Stalag 319 primarily held Soviet prisoners of war. The camp also held, in 1942 and 1943, French and British prisoners and, in late 1943, Italian military prisoners. On October 28, 1941, there were 72,163 prisoners in the camp, and on October 30, 1941, there were 63,267.¹ In November 1941, in section A alone, there were 21,507 prisoners, while section B held 28,277.² The maximum number of French prisoners in the camp was 1,144 in October 1942; the British prisoner population peaked the same month at 149, and the only Belgian prisoners (five) were recorded that month. The Italian prisoner population was 2,163 as of January 1944, the only date for which statistics on their numbers are available.³

Dug-outs, which served as living quarters for the Soviet POWs in Stalag 319 (ca. 1941).
USHMM, COURTESY OF IPN

The conditions for the Soviet prisoners in the camp were similar to those in other such camps. The prisoners faced severe overcrowding, forced labor, inadequate food and housing, and nonexistent medical care. Malnutrition, exhaustion, and disease, along with deliberate abuse, led to a high mortality rate. In 1941 and 1942, when conditions were at their worst, 80,129 prisoners are said to have perished, out of about 200,000 who passed through the camp, according to data from the Polish commission for investigation of Nazi crimes. About 400 of the Italian prisoners died of starvation and diseases in the camp in the winter of 1943–1944, and an equal number were killed by the Germans.⁴

The camp had subcamps in Włodawa, Żmudź, and Sawin. The subcamp in Włodawa existed from 1941 to 1944. In November 1941, it held 5,209 prisoners. More than 10,000 prisoners died in the camp. The subcamp in Żmudź was in existence from 1941 to 1943; 450 prisoners perished there.⁵

As in other camps, in the summer and fall of 1941, the Germans screened the Soviet prisoners to separate out “undesirables,” such as Jews and Communists, who were executed near the camp, probably in the Borek forest on the southeast side of town, where the Germans maintained a killing site for years.⁶ Before being shot, the prisoners had to dig their own graves. They lined up at the edge of the grave in groups of five and were then executed. About 4,000 Stalag 319 prisoners are believed to have been executed in this manner.

MANNSCHAFTSSTAMMLAGER (STALAG) 321 (XI D)

The Wehrmacht established Stalag 321 (map 4a) on April 28, 1941, near Oerbke, in Defense District (*Wehrkreis*) XI.¹ During its deployment in Defense District XI, it was also known as Stalag XI D. The camp was subordinate to the Commander of Prisoners of War in Defense District XI (*Kommandeur der Kriegsgefangenen im Wehrkreis XI*). Stalag 321 (XI D) received field post number (*Feldpostnummer*) 09 924 between February 1 and July 11, 1941. The number was struck between January 27 and July 14, 1942.

Stalag 321 (XI D) held Soviet prisoners of war (POWs). The Germans designed the camp to accommodate as many as 30,000 prisoners. The first transports arrived on July 14, 17, 24, and 30, 1941. By the end of July, the number of prisoners in the camp totaled about 8,000. Two subsequent groups of prisoners, around 4,000 in all, were brought to Oerbke on September 23 and 25, 1941. The last groups of prisoners arrived from Minsk on October 16 and 23, 1941 (the last known POW registration number is 22793). In the early days of the camp’s existence, there were no permanent structures, and the prisoners were kept outside in a field surrounded with barbed wire. To protect themselves from bad weather, they dug holes in the earth and made shelters from whatever materials came to hand. In November, there were approximately 14,000 prisoners in the camp. The construction of wooden barracks began at that time. On December 1, 1941, some of the prisoners were transferred or handed over for registration to Stalag XI B in Fallengostel. From November 1941 to February 1942, the camp was in quarantine because of a typhus epidemic. In this period, 12,000 men died of malnutrition, exposure, and disease.² On December 1, 1941, there were 10,797 prisoners in the camp. By January 1, 1942, the number had dropped to 5,688, and on February 1, 1942, only 1,119 prisoners remained.³

Between August and October 1941, a Gestapo team regularly screened the prisoners in the camp to separate out “undesirables,” such as Jews and Communists, who were sent to the Sachsenhausen concentration camp, where they were killed. On September 9, 1941, 30 prisoners were sent to Sachsenhausen for execution; on September 26, 1941, 7 were sent; and on October 7, 1941, 55 were sent.⁴ According to Emil Büge, a prisoner in Sachsenhausen who witnessed the unloading of the transports of Soviet prisoners from Oerbke, the men were already in very bad shape upon their arrival in

the camp. He noted that “all [were] very meager, starved soldiers . . . very ragged” and that most were shot shortly after arrival.⁵ The Germans disbanded Stalag 321 (XI D) with an order dated March 6, 1942, and the site became a subcamp (*Zweiglager*) of Stalag XI B in Fallingbostel.

MANNSCHAFTSSTAMMLAGER (STALAG) 322

The Wehrmacht formed Stalag 322 (maps 3 and 4b) from Frontstalag 322 on April 21, 1941, in Defense District (*Wehrkreis*) XII.¹ The camp was briefly deployed to Stettin (today Szczecin, Poland), then to Kaskinen and Rovaniemi in Finland, before being permanently moved to Elvenes, about 10 kilometers (6.2 miles) southeast of the town of Kirkenes in the Finnmark region of Norway, close to the present-day border with Russia. There were five subcamps (*Zweiglager*), which were located in Ivalo, Liinahamari, Parkkina, Kolosjoki, and Bjönevarten. Stalag 322 had a large number of labor detachments (*Arbeitskommandos*) that were deployed in the area

surrounding the camp. On January 10, 1945, the Germans liquidated the camp and merged it with Stalag 330 in Beisfjord. The camp was subordinate to the Mountain Corps Norway (*Gebirgskorps Norwegen*) and to the Armed Forces Commander Norway (*Wehrmachtbefehlshaber Norwegen*). Stalag 322 received field post number (*Feldpostnummer*) 45 575 between February 28 and July 29, 1941.

The first commandant of the camp, from April to November 1941, was Major Kurt Petroschky (1887–1945). Hauptmann d. Res. Dr. Richard Obendorf (1893–1968) took over as commandant on May 2, 1942. The counterintelligence (*Abwehr*) officer in the camp was Dr. Valentin Gerhard (b. 1894). The medical staff included Dr. Willy Keller and Dr. Sussen (1888–1947). The camp’s commandant and staff resided in a former schoolhouse, while the prisoners resided in wooden barracks. The camp had an infirmary (*Lazarett*), which was located in a smaller wooden barrack within the camp.²

Stalag 322 primarily held Soviet prisoners of war (POWs), most of whom had been captured during Operation Silver Fox (*Silberfuchs*), the failed German-Finnish attempt to take the Soviet port of Murmansk in 1941. It also held Serbian and Polish prisoners. According to witness testimony, the main camp held about 1,000 prisoners at a time. The conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners experienced severe overcrowding in substandard housing, food that was lacking in both quality and quantity, and inadequate medical care. Forced labor and abuse by the guards increased their suffering and contributed to a high mortality rate.³ About 2,300 out of the approximately 13,000 Soviet POWs who died in Norway (17.7%) died at Stalag 322 and its satellites in other parts of the Sør-Varanger municipality, about 720 of them in the main camp.⁴ As in other camps, the Germans screened the prisoners to separate out “undesirables,” such as Jews and political commissars, who were executed by the Security Service (*Sicherheitsdienst*).⁵

The camp also included 500–600 Norwegian political prisoners, many of whom were teachers. They, along with the POWs, were used as forced laborers on projects including the construction of a harbor at Elvenes and the construction of homes in Kirkines.⁶ Other prisoners were sent to work for the Wehrmacht, Luftwaffe, and Organisation Todt on tasks including road, railroad, and airfield construction and snow clearing. POW labor was also used for cutting and loading lumber and construction of supply and transport infrastructure in the Sør-Varanger municipality.⁷

MANNSCHAFTSSTAMMLAGER (STALAG) 323 (II G)

The Wehrmacht established Stalag 323 (maps 4b and 5) on April 17, 1941, in Defense District (*Wehrkreis*) II, near Gross Born (today Borne Sulinowo, Poland). It was initially designated Frontstalag 323. While it was located in Gross Born, it was simultaneously designated as Stalag II G and Stalag 323. The camp was subordinate to the Commander of Prisoners of War in Defense District II (*Kommandeur der Kriegsgefangenen im Wehrkreis II*). In November 1941, the camp was relocated to Chyrów (today Khyriv, Ukraine) in the Generalgouvernement, with subcamps (*Zweiglager*) in the villages of Nehrybka and Pikułice. At that time, the camp was subordinate to the Commander of Prisoners of War in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*). In mid-1942, it was relocated again to Tarnopol (today Ternopil', Ukraine). Stalag 323 received field post number (*Feldpostnummer*) 13 802 between February 1 and July 11, 1941. The number was struck on December 30, 1943.

The first commandant of the camp was Oberstleutnant Johann Soenke, who held the position from April 12, 1941, to February 12, 1942. He was succeeded by Oberstleutnant Kramer-Möllenbergs, who remained commandant until September 26, 1942. The adjutant was Hauptmann Helmut Frantz. The counterintelligence (*Abwehr*) officer was Hauptmann

Willi Schubert. The camp doctor was Stabsarzt Dr. Alois Berrhard Feldkamp. In Chyrów, the camp was guarded by personnel from Reserve Battalion (*Landesschützenbataillon*) 310, and in Tarnopol, it was guarded by the 2nd and 3rd Companies of Reserve Battalion 305.¹

The camp in Gross Born was located on the grounds of a military shooting range near the village of Westfalenhof (today Klomino, Poland). Initially there were no permanent buildings in the camp, and the Soviet prisoners of war (POWs) remained outdoors in a field surrounded with barbed wire; the prisoners later built the barracks and other structures in the camp themselves. While it was located in Gross Born, Stalag 323 held Soviet POWs. The first group of about 1,500 prisoners was brought to the camp on July 27, 1941. The second group, also numbering about 1,500, arrived on August 1, 1941. On September 15, 16, 21, 22, and 23, 1941, new groups of prisoners arrived. Because of inaccurate counts of prisoners, some prisoners were inadvertently numbered twice, resulting in prisoner registration numbers that exceeded the total number of prisoners who passed through the camp; around 11,500 prisoners passed through the camp, but the highest known prisoner number was 15576. On October 2, 4, and 9, 1941, some of the prisoners were transferred to Stalag II A in Neubrandenburg.²

The conditions in the camp were the same as those in other camps for Soviet POWs. Enormous overcrowding in a small area, food that was inadequate in both quality and quantity, and a lack of proper medical aid led to mass starvation and disease, which in turn produced a high death rate. Beatings and humiliation by the German guards only made matters worse. Between August and October 1941, a Gestapo team regularly screened the prisoners arriving in the camp to weed out "undesirables," such as political commissars and Jews. The selected prisoners were sent to the Sachsenhausen concentration camp, where they were shot. Known transports of prisoners to Sachsenhausen were sent on September 26, 1941 (654 prisoners); October 11, 1941 (600 prisoners, 63 of whom were dead on arrival); October 12, 1941 (two transports totaling 1,238 prisoners, of whom 22 were dead on arrival); and October 14, 1941 (565 prisoners).³

In November 1941, the camp was relocated to Chyrów. On December 31, 1941, the camp held 3,287 Soviet prisoners: 2,009 in the main camp, 577 in Nehrybka, and 701 in Pikułice.⁴ On April 1, 1942, there were 1,600 prisoners in the main camp, on May 1, there were 1,353, and on June 1, there were 820.⁵ The conditions of confinement of prisoners in the camp in Chyrów were similar to those in Gross Born and the mortality rate was high, especially in the winter of 1941–1942, when diseases such as typhus were prevalent. Two prisoners were shot while attempting to escape in the spring of 1942. In the second half of 1942, the camp was relocated to Tarnopol, where it held French POWs. On August 1, 1942, there were 4,718 prisoners in the camp, on September 1, there were 3,568, and on October 1, there were 4,000.⁶ At least 10 French prisoners perished in Stalag 323.⁷ The camp was dissolved on December 9, 1942.

MANNSCHAFTSSTAMMLAGER (STALAG) 324

The Wehrmacht established Stalag 324 on April 17, 1941, in Defense District (*Wehrkreis*) IV.¹ From July 1941 to the winter of 1941–1942, the camp deployed near Ostrów Mazowiecka (in the village of Grądy) (map 5) in the Generalgouvernement.² In January 1942, Stalag 324 was redeployed to Defense District I and took charge of a camp near the village of Lososno (5 kilometers/3.1 miles west of Grodno, *Bezirk Białystok*) (map 4c). It had a subcamp (*Zweiglager*) in Grodno. On September 20, 1942, the Germans disbanded the camp and used it for creating prisoner of war (POW) labor battalions 184 and 185.³ Stalag 324 received field post number (*Feldpostnummer*) 39 764 between February 28 and July 22, 1941. The number was struck between September 8, 1942, and March 11, 1943.

While deployed near Ostrów Mazowiecka, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber im Generalgouvernement Polen*). While deployed near Lososno, the camp was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen im Wehrkreis I*).

Stalag 324 camp held Soviet POWs. The conditions violated all standards of international law and the provisions of the Geneva Convention Relative to the Treatment of Prisoners of War. The camp was severely overcrowded, and there was no shelter. The food was grossly inadequate in both quality and quantity. There was no medical care. The guards were abusive. These conditions led to mass starvation, exhaustion, and disease, which in turn produced a very high mortality rate. For example, Alfred Mielke, a former Gestapo interpreter in Warsaw from 1939 to 1944, when questioned on May 18, 1946, said:

The camp was a bare field, 10 square kilometers [3.9 square miles] in size, enclosed with barbed wire. In the camp, out in the open, more than 94,000 persons were simultaneously confined. The POWs were confined in inhumane conditions. Hunger and cold resulted in a high mortality rate among the prisoners. Every day, between 200 and 300 people died. The POWs were literally starving; they ate various grasses, roots, and also the corpses of their comrades . . . I also know that near the POW camp itself, there were mass graves, in which more than 60,000 corpses of POWs were unearthed. Most of them died of starvation or disease, or were shot.⁴

During the deployment near Ostrów Mazowiecka, more than 100,000 prisoners are said to have passed through the camp, the vast majority of whom died; the prisoners who remained alive (about 13,000) were transferred to Stalag 333 in November 1941. In 1947, the Soviet-Polish commission for investigation of the Germans' crimes in the camp established that 41,592 persons were buried in the cemetery near the village of Grądy; however, casualty figures from the Soviet Extraordinary State Commission (ChGK) are often substantially exaggerated and should be treated accordingly.⁵ In this camp, as in other POW camps, the Germans conducted screenings and executions on a regular basis to eliminate “undesirable” prisoners (such as Jews and Communists).⁶ There was a resistance movement in the camp. Resistance mostly took the form of mass escape attempts. For example, in August 1941, 112 officers escaped.⁷

During the deployment in Lososno, the camp held on these dates the following numbers of prisoners: February 1, 1942, 9,962; April 1, 1942, 7,160; May 1, 1942, 5,745; June 1, 1942, 2,566.⁸ On July 1, 1942, there were 2,752 prisoners, of whom 2,188 were unable to work; only 20 prisoners were used as a labor force.⁹ On August 1, 1942, there were 2,533 prisoners in the camp, and on September 1, 1942, there were 1,314.¹⁰

The camp in Lososno occupied an area of about 50 hectares (124 acres), surrounded with barbed wire. In the camp, the prisoners dug 96 semidugouts, each measuring 6 by 25 meters and 3 meters high (about 20 by 82 by 10 feet). The Germans also kept POWs in the town of Grodno itself—in barracks on Krasnoarmeiskaia Street. The prisoners lacked medical services, and the basic living and hygienic conditions

were terrible. In the cold season, the prisoners were not supplied with warm clothing and the places where they lived were not heated. The food was not meant to sustain life, so the men suffered from extreme emaciation and exhaustion. There was also a shortage of drinking water. In addition, there was the backbreaking work that the prisoners had to do, as well as humiliation and torture inflicted by the camp guards. The death rate in the camp from starvation, cold, and disease (typhus, dysentery, etc.) was very high. Dead prisoners were buried in common graves, trenches measuring 33 by 6 meters and 2 meters deep (108 by 20 by 6.6 feet). After the war, 68 such graves were discovered.

As in other camps for Soviet prisoners, selections (*Aussonderungen*) were conducted at Lososno to identify “undesirables” such as Jews and political commissars, who were taken out of the camp for immediate execution. For example, in the spring of 1942, Police Reserve Battalion 13 executed 90 prisoners from Stalag 324.¹¹ According to the Soviet Extraordinary State Commission (ChGK) data, 18,000 Soviet POWs are said to have died in the camp in 1941 and 1942; again, the standard cautions about ChGK figures apply.¹²

MANNSCHAFTSSTAMMLAGER (STALAG) 325

The Wehrmacht established Stalag 325 on March 26, 1941, in Defense District (*Wehrkreis*) V.¹ Starting in July 1941, the camp was deployed to Zamość (75.5 kilometers [47 miles] southeast of Lublin) (map 5), in the Generalgouvernement Poland (*Generalgouvernement Polen*). As of April 1942, the camp was deployed to Rawa Ruska (today Rava-Rus'ka, Ukraine, 52 kilometers [32.5 miles] northwest of L'viv) (5) in Distrikt Galizien. From November 1942 until September 1943, the camp was located in Lwów (German: Lemberg; today L'viv, Ukraine) (5); from October 1943 to January 1944, it was in Stryj (today Stryi, Ukraine, 65 kilometers [40.5 miles] south of L'viv) (5), with a subcamp (*Zweiglager*) in Drohobycz (today Drohobych, Ukraine; Distrikt Galizien); and from February to July 1944, it was located in Szembie (Distrikt Kraków) (42 kilometers [26 miles] southwest of Rzeszów) (5), with a subcamp in Olchowce. The Germans disbanded the unit on September 14, 1944.²

Stalag 325 received field post number (*Feldpostnummer*) 08 499 between February 1 and July 11, 1941. The number was struck on October 10, 1944.

In the period of 1941–1944, the camp was subordinate to the Commander of Prisoners of War with the Commander of the Wehrmacht in Lublin (*Kommandeur der Kriegsgefangenen z.b.V., Lublin*).

The camp commandant was Major Anton Flecker, and the camp officers were Hauptmann Richard Müller, Rittmeister (Hauptmann) z.V. Edmund von Friedberg, Oberleutnant Wilhelm Fischer, and Oberleutnant Richard Pelzer. The camp doctor was Dr. Ernst Harlandt, and his assistants were Dr. Heinrich Nordegg and Dr. Bruno Kuhn. The administrative

portion of the camp was headed by Kriegsverwaltungsspektor Franz Bierbach, and he was assisted by Kriegsverwaltungsassistent Johann Brunner.³ The camp was guarded by personnel from Reserve Battalion (*Landesschützenbataillon*) 842.

While deployed in Zamość, the camp held Soviet POWs. In November 1941, there were 8,303 Soviet POWs in the camp.⁴ The conditions in which the POWs lived in the camp were the same as those in other camps for Soviet POWs: enormous overcrowding in a small area, inadequate quantities of foul food, lack of proper medical aid, and abuse by the German guards led to mass starvation and widespread disease, which in turn resulted in a staggering mortality rate.

Former Mladshii Leutenant P. Palii, who was in the camp from September 1941 to April 1942, reported that conditions in the camp were bearable at first. The camp was overcrowded, with 7,000 prisoners in a space designed for 2,000, but the housing and food were adequate. Soon, however, the conditions began to deteriorate; many of the details that follow come from Palii's account.⁵

The food became a major issue in short order. What little grain there was in the *balanda*, a thin soup, disappeared. The soup also contained unidentifiable bits of animal matter, mostly skin and cartilage, and the vegetables and potatoes—also present only in small quantities—were rotten. Soon even those supplies were used up, and the Germans began to thicken the soup with sugar beet pulp, indigestible cellulose leftovers from the milling process. The result was a ghastly, stinking mixture. Some prisoners could not bring themselves to eat it; those who did fell ill with a variety of gastrointestinal ailments. Hunger turned to outright starvation.

Tens of prisoners began to die every day, as typhus and other illnesses spread through the camp. The onset of winter increased the prisoners' suffering. Soon the camp population divided itself into groups: the "goners" (*dokhodiaga*), who lost all will to live; the "jackals" (*shakaly*), who would steal from anyone and eat anything; and a mass in the middle, who struggled to survive while maintaining some dignity. A few prisoners collaborated with the Germans, searching out Jews and Communists from among their compatriots and torturing them for information before handing them over, all in return for a little extra food. These victims were kept in even worse conditions than the other prisoners, before being carted off to be shot. The Zamość satellite office (*Aussenstelle*) of the Commander of the Security Police and the Security Service of the SS (*Kommandeur der Sicherheitspolizei und des SD*) helped with the selections and carried out the shootings.⁶ As a consequence of the inhumane conditions, there was a prisoner uprising in the camp in November 1941, during the suppression of which the camp guards carried out mass shootings.

In the spring of 1942, conditions began to improve a little. The Germans cleaned and disinfected the barracks and allowed the prisoners to wash. The rations improved somewhat in both quantity and quality. The death rate declined. In total, about 28,000 Soviet prisoners died in the camp at Zamość,

according to the Soviet Extraordinary State Commission (ChGK).⁷

During the deployment in Rawa Ruska, the camp held French and a small number of Belgian POWs, sent there as punishment for refusal to work or for attempted escape. Between April 1942 and January 1943, approximately 27 convoys brought 23,000 prisoners to the camp (among them, 312 Belgians). The first train arrived on April 13, 1942, after seven days' journey by rail, with 2,000 French and Belgian prisoners, squeezed 60 to a car in cattle wagons.

Conditions for the French POWs were not much better than they had been for Red Army soldiers in Zamość. At first the Germans locked their prisoners in an unfinished compound for Soviet POWs, 400 by 250 meters (437 by 273 yards), surrounded by barbed wire and watchtowers. The distraught French prisoners discovered the corpses of the last Soviet inmates and had to carry them to the main gate, where Jews from the nearby ghetto picked them up to take to a mass grave.

Stalag 325 included four barracks and four blocks of stables, in which the men slept on the floor or on three tiers of crude bunk platforms. Only the upper tier allowed the prisoners to get any light or to stand. There was neither straw nor blankets, and the latrines were open-air pits.

In the mornings, the Germans distributed a decoction of fir tree needles. At midday, the prisoners received thin millet soup, with peels and leaves. Supper consisted of a portion of bread, about 120–300 grams (4.2–10.6 ounces), with a little molasses. Total intake for the day was about 1,500 calories; in a few weeks, all the men each lost 15 kilograms (33 pounds) or more. Hunger became all-consuming; the men hunted for everything that was edible, including dandelions and herbs. Dysentery was endemic, as was typhus, from the ever-present lice. The camp's Jewish doctors did their best but lacked supplies and medicine. The death rate was correspondingly high.

Thirst was another major issue, because the camp had only a single faucet, which functioned only at intervals. At the height of the camp's existence, in about June 1942, there were endless lines to obtain a few drops of the invaluable liquid; this inspired the French nickname for the camp: *le camp de la goutte d'eau* (the camp of one drop of water).

Bad treatment and beatings were frequent, as were searches and endless roll calls. The prisoners particularly hated the "pelote," a series of punitive physical exercises that went on past the point of exhaustion.⁸

From the beginning, the Germans organized mixed work details (*Arbeitskommandos*) of POWs and Jews, outside of the camp. Teams of prisoners left during the day to work at construction sites, roads, woodlots, the train station, or a sawmill, under SS guard. The POW laborers were either drafted or volunteered—in the latter case, not because they wanted to work for the Germans, but because work often gave them the opportunity to get some extra food, either by stealing it or through contact with the local population. The locals were quite sympathetic toward the French and would barter food for whatever the prisoners could offer, despite the danger.

Stalag 325 was unique, in that its inmates saw the Holocaust being carried out in all but its final stage. The German killing center at Belzec was only 19 kilometers (12 miles) away. Every day, the POWs saw the trains for Belzec passing in front of the camp and heard the Jews' cries. When they asked where the Jews were being taken, their guards laughed and said, "*Direkt ins Gasraum*" (straight into the gas chamber).

The ghetto in Rawa Ruska, as well as others in the region, offered further opportunities to see Nazi ideology in action. Everything that took place there—the horrible conditions, the shootings, the roundups, the transports to Belzec—was impossible to miss, especially as the Germans made no effort to hide their activities. Prisoners in Rawa Ruska were witnesses to numerous executions of Jews, as reported by Maurice Cheneau, Jean Ranson, and Célestin Lavabre.⁹ In some places, the Germans went so far as to have POWs dig pits for the killings.¹⁰

In spite of their own miserable circumstances and the risk of punishment, the POWs did what they could to help the Jews. At the construction sites, they gave some of their meager rations to their Jewish coworkers. German attempts to identify Jews among the POWs got nowhere, as the prisoners used every trick they could to save their comrades from death.¹¹

In June 1942, the camp population reached its peak, at 12,000 prisoners, and the sanitary situation became intolerable. At this point, the Germans decided to open subcamps, scattered across a broad area, about 400 by 300 kilometers (249 by 186 miles), within the Generalgouvernement. The subcamps drained off prisoners to the extent that the main camp now held about 3,000 men. An exact count of such subcamps is not possible, due to the absence of documents, but scholars have identified about 40. Rawa Ruska remained the administrative center. The regime in the subcamps was, if anything, even harsher than in the main camp. There were no doctors, for example. The size of the subcamps varied between several dozen and 2,400 men each. The biggest of them, the Tarnopol (today Ternopil, Ukraine) camp with its annexes (Jeczierna, Olosko, Mielec, and Brody) was a real penal colony. Along with teams of Jews, the POWs had to lay road- and railbeds, the stone for which sometimes came from Jewish tombs, and to extract peat from swamps.

A feeling of abandonment added to the physical poverty of camp life, since Rawa Ruska was cut off from the world for three months. A spirit of resistance remained among the prisoners, however, even within a camp that was meant to break them; "*l'esprit de Rawa*" gave the men the strength to resist. The stunned Germans saw evidence of that spirit when the prisoners paraded for Bastille Day on July 14, 1942, inside of the Rawa Ruska camp, when they resisted the commander at the Minsk Mazowiecki camp, and when they refused to obey the commander in the Trembowla (today Terebovlia, Ukraine) subcamp.

Moreover, despite the deprivations and difficulties of their situation, held deep in enemy territory, many chose to

attempt escape. They knew that they risked death, and most did indeed fail and paid with their lives, although a few succeeded. The most noteworthy escape was that from the Zwierzyniec subcamp; that escape was one of the most audacious and involved a large number of fugitives. The prisoners dug a 20-meter (66-foot) long tunnel under barbed wire to a shed in the adjoining Jewish transit camp, which was unoccupied on certain days. There, passing from shed to shed in the night, the escaped prisoners had to go through a gap in the barbed wire fence and from there into the forest.¹² In spite of the obstacles, 92 prisoners escaped on August 13, 1942. Of those, two succeeded in reaching Hungary and two others got to Paris. Of the remaining 88, the Germans killed at least 14. The others were never seen again.

The prisoners named a leader within the camp, a "right-hand man" who maintained the dialogue between the prisoners and the Germans. They also created a police force that prevented thefts of food as well as other abuses on the part of some "black sheep." Given the diverse social, cultural, and political currents within the camp population, such tensions were no surprise.

On Sunday, August 16, 1942, the camp finally had a visit from the International Committee of the Red Cross (ICRC).¹³ The mission produced a damning report on the living conditions and related breaches of international agreements. Improvements followed soon thereafter, for example, in mail service. The ICRC also visited three subcamps, Lwów, Tarnopol, and Stryj. Much remained hidden from the ICRC representatives, and their estimate of 79 fatalities in the camp complex was much too low.

Some two months later, on October 28, 1942, confirmation arrived that the Germans would allow the first prisoners to have arrived in the camp to return to Stalags in Germany. The prisoners' joy at leaving Rawa Ruska was only restrained by the fact that they were going to other disciplinary Stalags. In November 1942, the Germans closed the camp in Rawa Ruska and moved Stalag 325, then holding approximately 3,000 men, to Lwów. During its deployment there, the camp was located at the citadel, which had previously served as the site of Stalag 328. Conditions for the prisoners did not change significantly, and the prisoners continued to witness the genocide of the Jews. In June 1943, they watched as the Germans liquidated the labor camp that held the last inhabitants of the former Lwów ghetto.

On September 29, 1943, Stalag 325 moved again, to the camp at Stryj, which had an execrable reputation. All the prisoners had heard of the high death rate at Stryj, where the rule was for one escaped prisoner, two prisoners will be shot.¹⁴

As 1943 drew to a close, the threat from the Soviet army increased. The staff dwindled, and the Wehrmacht transferred increasing numbers of prisoners to Germany.

While deployed in Szembie, the camp held mainly wounded prisoners and invalids. The Polish resistance movement made contact with the prisoners and helped them organize escapes. Between April and July 1944, around 200 POWs escaped from the camp. In mid-July 1944, the camp was evacuated;

only around 300 patients remained there.¹⁵ On September 14, 1944, the Germans closed the camp.

Because of the lack of proper documentation, the exact number of French and Belgian deaths in Stalag 325 is not known, and German authorities did not speak about missing prisoners. The official ICRC figure is too low. Senator André Méric, in his intervention in the French Senate, recalled Emile Légé's testimony at the Nuremberg trial, in which he counted 673 French dead in the pits of the Rawa Ruska and Lwów area.¹⁶ That number does not include those who died in the subcamps, in the work details, in the convoys, and while trying to escape.

MANNSCHAFTSSTAMMLAGER (STALAG) 326 (VI K)

The Wehrmacht created Stalag 326 (map 4a) on April 21, 1941, in Defense District (*Wehrkreis*) VI, initially as a Frontstalag (starting in May 1941, it became a Stalag).¹ The camp was located near the villages of Eselheide and Senne, 7 kilometers (4.3 miles) from the Hövelhof railroad station

(township of Stukenbrock, Nordrhein-Westfalen) and not far from the towns of Paderborn and Bielefeld. Because it was located in Defense District VI, it was also known as Stalag VI K. The Wehrmacht built the camp to hold Soviet prisoners of war (POWs). Not far away, to the southwest of the camp for Soviet prisoners, there was a separate compound for Polish, French, Yugoslav, Italian, Belgian, and Dutch POWs, which opened in 1942.

The camp commandant initially was Major von Padberg; on September 4, 1942, Oberst Eiler replaced him. Toward the end of the war, Oberst Berend took over. The counterintelligence (*Abwehr*) officer in the camp was Hauptmann Wendt.

The unit received field post number (*Feldpostnummer*) 21 006 between February 16 and July 18, 1941. The number was struck between February 15 and July 30, 1942, since by then the camp's status as a fixed camp in Germany was firm (field post numbers were for mobile units in the army's area of operations).

The first Soviet POWs arrived on July 10, 1941. By the end of July 1941, there were already about 12,000 Soviet prisoners in the camp.² These first arrivals experienced horrific conditions. Although the camp sat in the middle of Germany, there was no housing: the prisoner compound consisted of nothing more than an expanse of ground, lightly forested with pine trees, with barbed wire surrounding it. The prisoners had to live outdoors, sleeping on the bare ground. They were unprotected from wind, rain, and, as the autumn and winter came on, cold. Most of them did not even have an overcoat. In the daytime, it was still possible to somehow endure the bad weather, but at night the prisoners froze. In desperation, the prisoners cut down the pine trees and constructed shelters made of branches. When the trees ran out, the men dug burrows, using plates, spoons, or their bare hands. Living in such dugouts ended tragically for many, because at night, when there was rain, the sand often caved in onto the unfortunate men, burying them alive. In any case, such shelters did little to ward off the piercing dampness and cold. The camp administration did provide a limited number of tents but not nearly enough to house all the prisoners. Latrines, too, were in extremely short supply, and these few did not meet the simplest requirements.

Not until the winter of 1941–1942 did barracks construction begin, with the prisoners themselves providing the labor. Thus, over time, the prisoners got roofs over their heads, but on the whole their situation improved only slightly. Each barracks was intended for 140 prisoners, but, in reality, 400, 500, or 600 lived in each, and the roofs leaked. The prisoners did not receive any bedding, and instead slept on hard wooden plank beds in two or three tiers or on the earthen floor. Straw served as a floor covering. The barracks were dark, damp, and, in fall and winter, cold as well, as they were poorly heated. For each small stove, known as a *burzhuika*, two briquettes of coal were allocated for a 24-hour period, and even that amount was not provided every day. Such housing conditions did little to reduce the prisoners' horrendous mortality rate. Some prisoners simply froze to death in the barracks.

During the entire period of the camp's existence, no repair work was done on the barracks. There were no toilets in the barracks. The water situation, too, was dreadful. Hand pumps were indeed placed in every block, but the water came from the surface stratum, and it was muddy, with an unpleasant odor and taste. Drinking it was dangerous, as it caused intestinal illnesses, but there was no other water for the prisoners, although on the other side of the wire, in the German camp, there was plumbing with a clean water supply.

The prisoners' diet was very poor and low in caloric value. The 150–200 grams (5.3–7 ounces) of *Ersatzbrot*, or "substitute bread," that the prisoners received was not nutritional. The bread consisted of dry scraps of sugar beets with an admixture of sawdust. In addition to such "bread," the POWs were issued a coffee substitute and *balanda*—a watery soup that was difficult to eat, in part because of its characteristic stench. The *balanda* was prepared from unpeeled, half-rotten potatoes and fodder beets or only from rutabagas. Sometimes the rutabagas were mixed with cabbage or carrots. The rutabagas and potatoes were poorly washed and were cut up with an axe in a trough, as for livestock, and therefore the *balanda* always contained refuse, straw, and dirt. As early as July 1941, this "soup" was being brought in large barrels, each able to hold 20 liters (21 quarts) for 20 men. But the barrels were never filled up, so the prisoners never got more than 0.7 liter (1.5 pints) apiece. The daily ration totaled 800–850 calories. At the same time, the prisoners worked from early in the morning until late in the evening. The first prisoners, to keep from starving to death, ate tree bark, leaves, and grass, until those substitutes were all gone.

In the summer of 1941, there were not enough field kitchens to prepare the meager food for the multitude of prisoners. The prisoners themselves were forced to see to it that they had hot food. No tableware and cutlery were provided for the POWs, so these items became very valuable property, the loss of which threatened to result in death. The prisoners themselves made spoons and knives and carried them at all times, in the chest pockets of their high-collared tunics. Those who had helmets often remade them into cooking pots.

These inhumane living conditions, together with the diseases they promoted, were the main cause of the high death rate among the prisoners. Dysentery, typhus, and tuberculosis carried off thousands, as did simple starvation, exhaustion, and exposure to the elements.

The camp became very crowded again as of mid-1942, when new trains began arriving with Red Army servicemen captured during the German summer offensive. From June through August 1942, the number of prisoners increased from 3,000 to 21,000. The camp leadership placed the new POWs either in vacant spots in the barracks or in the tents. The increase in the number of prisoners was also connected with the fact that in the fall of 1942 the camp began to perform the function of a central reception camp for Soviet POWs who were to work in the mining industry of the Ruhrgebiet. Thus, the camp also acquired, in addition, the character of a sorting and distribution camp. From it, prisoners were sent to other

camps, most often to Stalag VI A in Hemer. The following table gives an idea of the prisoner population in 1941–1942:³

	Prisoners, in all	Soviet prisoners	Other prisoners	Prisoners in work teams
Dec. 1, 1941	5,428	5,428	—	1,916
Jan. 1, 1942	3,333	3,333	—	922
Feb. 1, 1942	1,924	1,924	—	798
April 1, 1942	1,540	1,540	—	605
May 1, 1942	1,181	1,181	—	977
June 1, 1942	3,030	3,030	—	767
Aug. 1, 1942	21,601	21,601	—	1,281
Sept. 1, 1942	13,591	13,591	—	2,329
Oct. 1, 1942	26,736	14,662	12,074	17,797
Nov. 1, 1942	43,138	31,132	12,006	18,993
Dec. 1, 1942	32,984	21,089	11,895	19,817

In the following years, especially in 1944, the number of prisoners in the camp increased even more. The rise in the prisoner population was explained by the fact that as of August 1944, POWs from camps in the east, which the Germans had closed, began arriving at Stalag 326. The highest number of Soviet prisoners in the camp was recorded on September 1, 1944: 31,638. In the following period, until January 1945, the number of prisoners fluctuated between 26,982 and 24,327.⁴ Altogether, by March 1, 1945, around 308,000 Soviet POWs had passed through the camp.⁵

In 1942–1943, as construction of barracks and other buildings went forward, the camp gradually took on a more regular form. A main street divided the camp, which was rectangular in shape, into two halves along a central axis. The camp consisted of four parts: the “German camp” (*Deutsches Lager*), which was the administrative sector; the so-called forward camp (*Vorlager*); the main camp; and the tent camp (*Zeltlager*).

The Vorlager contained the infirmary, workshop barracks (sewing workshop, locksmith’s shop, shoemaker’s shop, and an electrical repair shop), bathhouse, laundry, kitchen, warehouse, disinfection area, and a prison with solitary cells and punishment cells. The Vorlager also included six dormitory barracks for national minorities (Lithuanians, Estonians, Latvians, Ukrainians, and others), who, in accordance with instructions, were supposed to be quartered separately from the bulk of Russian POWs.

In the main camp, the construction of which was not completed until 1944, were 54 barracks and eight other large buildings. Each group of 3 barracks was separated from the others by additional barbed wire and constituted a single block. In all, there were 18 blocks. Each block had massive doors, which were closed at night, while Russian and Ukrainian police guarded them in the daytime. The blocks were

Stalag 326 (VI K) at Senne. View of the POW camp in Germany at liberation, April 1945.

USHMM, COURTESY OF NARA, WS #73454.

arranged in parallel: nine on one side, nine on the other. Some served special purposes. Block 16, for example, was a penal block, in which lived, for the most part, prisoners who had tried to escape or had come into conflict with the police. Block 3 held Soviet officers, whom the Germans isolated from the other prisoners. Block 9 was the counterintelligence block: in it, “selections” were conducted among Soviet POWs who were subject to being shipped to concentration camps. The remaining 15 blocks were eventually transformed into a transit camp (*Durchgangslager*; Dulag), where prisoners, in quarantine and having recovered their ability to work, were sorted, registered, and sent to other camps.

The entire camp, with the exception of the German camp, was fenced in by a thick, double row of barbed wire 3 meters (almost 10 feet) tall. In addition, between the rows was heaped a spiral of barbed wire, and along the entire perimeter of the fence was stretched more wire in a single line. At each corner and in the center of the camp there were guard towers. The camp was guarded day and night. The guard battalion on duty was armed with heavy machine guns. At night the camp was illuminated. Around the perimeter, soldiers from the guard force were on patrol, with one soldier every 100 meters (328 feet). The outer fence was electrically charged.

In the German camp were the commandant’s office, the guards’ barracks, and administrative and other facilities related to running the camp (clinic and hospital, counterintelligence section, food warehouse, laundry, post office, office with the card index of POWs, workforce deployment section, dining hall, and so on). The German personnel stayed outside the main camp; any contact with POWs outside of official duties was forbidden.

The guard force for the camp and work teams consisted of older soldiers (between 40 and 60 years of age), who were

members of reserve battalions (*Landesschützenbataillone*). These were soldiers who, because of their age or state of health, could not be called to the front. Among them were men who had recovered after being wounded and young soldiers who were already unfit for frontline service. The camp headquarters personnel, including the commandant, were even older; they included men who had fought in World War I.

The tent camp was an area measuring 400 by 100 meters (1,312 by 328 feet); it was located next to the main camp and served predominantly for housing prisoners who were to go through registration, examination, and disinfection and then go on to work in industry, mostly in mining. Great changes in the tent camp took place between August 1944 and March 1945: 10 barracks appeared, significantly larger in size than ordinary barracks. They were built for POWs who were being evacuated from camps in the east.

A group of no more than 1,200 prisoners occupied key positions within the camp. They included shoemakers, tailors, auto mechanics, locksmiths, electricians, clerks in the card index section, doctors, doctor's assistants, and medical orderlies. There was also a group of musicians, singers, and dancers, whom the Germans selected from the prisoner population. This group traveled around to other camps and gave concerts. The musicians simultaneously performed the function of informers. They took an interest in the prisoners' mood and conversations.⁶ For the purpose of maintaining order in the camp, the commandant's office created an auxiliary police force, composed for the most part of Ukrainian prisoners. Its members wore a special black uniform and were better fed than the other prisoners.

Starting in August 1941, the Münster Gestapo command conducted selections of "undesirable" prisoners (Jews and Communists) in the camp. The prisoners who were selected were sent to the Buchenwald concentration camp for execution. Some data indicate that 5,000–6,000 prisoners went to Buchenwald, of whom more than 1,000 were shot, while the others were used for forced labor.⁷ According to other data, 4,556 prisoners were taken to Buchenwald.⁸

American troops from the 2nd Armored Division liberated Stalag 326 on April 2, 1945; that evening, they turned it over to the 30th Infantry Division. On the day of its liberation, the camp held 9,000 prisoners, including 1,500 in the infirmary. The report of the US Army officer in charge gives a figure of 7,690 prisoners as of April 3.⁹

In postwar research on the history of the camp, different figures are given for the number of dead: 15,000, 30,000, 36,800, 40,000, 45,000, and finally, according to British sources, 70,000.¹⁰ In the lists of names of prisoners who died between July 1941 and August 1945, 17,158 individuals are recorded.¹¹ Not all of them, however, are likely to have been victims from that camp. An analysis of the lists of dead prisoners buried at Forellkrug allows us to compile the table below, showing the distribution of deceased prisoners by month and year for the period of 1941–1945:

SOURCES The Camp Archive: After the liberation of the camp in 1945, former POWs gathered up the surviving documents from the camp commandant's office and sent them to Moscow, to the Department of the Administrator of the Council of People's Commissars of the USSR for Matters of the Repatriation of Soviet Citizens. These documents consist of 19 files: pay sheets for the camp personnel groups; a list of transports that arrived at Camp 326 VI/K, as many as 211

MANNSCHAFTSSTAMMLAGER (STALAG) 327

The Wehrmacht established Stalag 327 (map 5) on May 5, 1941, in Defense District (*Wehrkreis*) XVII, using personnel

from Stalag XVII B. In July 1941, the camp was in Rymanov, about 92 miles (148 km) east-southeast of Kraków. Late that month it moved to Jaroslau (today Jarosław, Poland). In 1942, it was in Sanok, and, from December 1942 until August 1944, it was located in Przemyśl, where it replaced Stalag 315. While deployed in Przemyśl (map 5), subcamps were located in Sanok (Olchowce), Pikulice, Nehrybka, and Wolka Radunska. The camp at Pikulice was located in the former barracks of the Polish 10th Heavy Artillery Regiment, while the camp at Nehrybka was located in the old Soviet barracks.¹ Stalag 327 received field post number (*Feldpostnummer*) 08 971 between February 1 and July 11, 1941.

The camp was under the leadership, from July to December 1941, of the Commander of Prisoner of War District Kielce (*Kommandeur der Kriegsgefangenenbezirk Kielce*), and from December 1941, of the Commander of Prisoner of War District Kraków (*Kommandeur der Kriegsgefangenenbezirk Krakau*). The camp commandant was Oberst Starke, the deputy commandant was Major Becke, the adjutant was Hauptmann der Reserve Medlin, and the counterintelligence (*Abwehr*) officer was Hauptmann der Reserve von Kaas. The camp was guarded by two companies of the 820th Reserve Battalion (*Landesschützenbataillon*). The commander of this battalion was Major der Reserve Merdes.²

While it was deployed in Jaroslau and Sanok, Stalag 327 held Soviet prisoners of war (POWs). As of December 31, 1941, the camp at Jaroslau held 429 prisoners.³ The camp in Sanok held 906 prisoners in June 1942; 712, in July 1942; 7,340, in August 1942; 5,110, in September 1942; 2,521, in October 1942; and 4,232, in November 1942.⁴

While deployed in Przemyśl, the camp held Soviet and Dutch POWs as well as Italian military prisoners. Until the fall of 1943, it held only Soviet POWs. In late 1943, a small number of Dutch prisoners were temporarily brought to the camp; around the same time, the first transports of Italian prisoners (many of them officers) arrived. As of January 1, 1943, there were 3,102 Soviet prisoners in the camp; on June 1, 1943, 1,130. On October 1, 1943, there 1,796 Soviets, 2,176 Italians, and 309 Dutch; on January 1, 1944, 4,751 Soviets and 3,555 Italians; on June 1, 1944, 10,985 Soviets and 18 Italians; and on July 1, 1944, 5,028 Soviets.⁵

The conditions in Stalag 327 during its deployments in Jaroslau and Sanok were similar to those in other camps for Soviet POWs. The prisoners were not provided with adequate housing, food, or medical care, leading to widespread malnutrition and disease and a high mortality rate. In the winter of 1941–1942, the death rate reached 20 prisoners per day in Jaroslau; between 5,000 and 6,000 prisoners died there in nine months.⁶ In the subcamp in Olchowce, between 7,000 and 10,000 prisoners died.⁷ Conditions did not improve in Przemyśl: the Soviet POWs there were ravaged by a typhus epidemic in early 1943, again with high mortality.

While the Dutch prisoners were treated decently during their time in Stalag 327, the Italians fared no better than the Soviets, except for those who volunteered to collaborate with the Germans and were returned to the eastern front. For

those who remained in Stalag 327, conditions were dire. They received minimal food: soup made from grass and 100 grams (3.5 ounces) of bread per day, sometimes supplemented with cabbage, beets, or potatoes.⁸ These insufficient rations led to rapid weight loss; the prisoners were described by Polish eyewitnesses as looking like skeletons. Already weakened by malnourishment, they were almost defenseless against infectious diseases like tuberculosis. Furthermore, locals reported that mass killings of Italian prisoners were carried out by the Gestapo and SS in Przemyśl.⁹

Stalag 327 was evacuated in July 1944 as the Red Army approached from the east. Conditions during the evacuation were terrible. Almost no food was provided, and death rates reached 50 men per day.¹⁰ On August 7, the camp was ordered to be disbanded and reorganized as IIlag XVIII; it was officially closed on September 14, 1944.

In 1961, multiple mass graves containing the bodies of Soviet and Italian prisoners were unearthed in the area around Przemyśl and the subcamps. The bodies of at least 4,500 Italian prisoners were recovered from the graves near Nehrybka and Pikulice.¹¹ It is estimated that, during the course of the war and all of its deployments, more than 100,000 prisoners passed through Stalag 327.¹²

MANNSCHAFTSSTAMMLAGER (STALAG) 328

The Wehrmacht established Stalag 328 (map 5) from Front-stalag 328 on August 3, 1941, in Defense District (*Wehrkreis*) VI. Until January 1943, the camp was deployed in Lwów (German: Lemberg; today Lviv, Ukraine). In January 1943, it was relocated to Drohobycz (today Drohobych, Ukraine), where it remained until it returned to Lwów in November 1943, with a subcamp established in Tarnopol (today Ternopil', Ukraine). On February 1, 1944, Stalag 328 was converted into Oflag 76.¹ The camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber im Generalgouvernement Polen*). In 1942, the camp in Lwów was guarded by Reserve Battalion (*Landesschützenbataillon*) 620. The camp in Drohobycz was guarded by the 1st and 3rd Companies of Reserve Battalion 405. Stalag 328 received field post number (*Feldpostnummer*) 21 917 between February 16 and July 18, 1941.

In Lwów, the camp was located in the Citadel (*Zitadelle*), constructed between 1852 and 1856. The Citadel consisted of two large bastions, two small fortifications, and a central fortification. The forts were located at the corners of a rectangle, and the central fortification was in the middle. The entire complex was surrounded by a moat. In the interwar period, Polish military units were quartered in the Citadel. After the camp was chosen as the site of the Stalag, the Germans reinforced the camp's defenses by encircling it in addition with a system of small concrete pillboxes built on the slopes of the hill.

The camp itself consisted of the fortifications of the Citadel along with 3 three-story barracks and 14 other buildings. Four rows of barbed wire surrounded the camp. Inside the camp, there were many 100–200 square meter (1,076–2,153 square foot) cells, in which prisoners slept under the open sky;² these were primarily used for the Soviet prisoners, while the later-arriving French and Italian prisoners were quartered in the barracks. Even in the barracks, however, the rooms were not heated, so those prisoners were also exposed to freezing conditions during the winter months.

Stalag 328 primarily held Soviet prisoners of war (POWs). In addition to the Soviet POWs, in the fall of 1942, the Germans placed 778 French and 6 Belgian prisoners from Stalag 325 at Rawa Ruska in Stalag 328 as punishment for various infractions. From October 1943 onward, the camp also held Italian military internees, some of whom the Germans murdered in late October and early November of that year.³ The

maximum number of prisoners in the camp was 5,088 (2,647 Soviet and 2,441 Italian) in January 1944.⁴

The conditions at the camp were incredibly harsh, especially for Soviet POWs. According to their postwar testimony, the Germans created living conditions and a supply situation they knew would kill the inmates.⁵ The prisoners' rations were insufficient. At breakfast, they received two cups of ersatz coffee, which was actually brewed with sawdust, along with 100 grams (3.5 ounces) of bread, also largely composed of sawdust. Lunch consisted of a thin soup made from food scraps. In the evening, the prisoners received another portion of soup that was essentially nothing more than hot water. In "exceptional circumstances," they would receive an additional 50 grams (1.8 ounces) of poor-quality bread.⁶ The men were left so hungry that some resorted to hunting in piles of garbage for something to eat; the guards frequently beat or shot those who did so. Starvation was such a widespread problem that the guards had to make an addition to the camp rules to curtail cannibalism: "It is forbidden to cut pieces from or tear apart the bodies of prisoners."⁷ Many dying prisoners wrote inscriptions on the camp walls to inform the future liberators of the camp of their suffering. Such messages (as reported by liberating soldiers) included "whoever from the Red Army comes here can tell his brothers in arms that the Russians were excruciatingly starved" and "Glorious Russian Army, not only the people but the prisoners here who are condemned to starve await you. It is so hard to die."⁸

Despite the starvation rations and poor housing conditions, the men were expected to perform "hard physical labor" from morning to night.⁹ The German guards and Ukrainian volunteers (*Hiwis*) exacerbated the prisoners' suffering by treating them with unrelenting brutality. Those who could not work anymore due to exhaustion were beaten with rifle butts and rubber truncheons. According to Soviet survivors, the Germans deliberately induced epidemics of typhus and dysentery among the prisoners by sending those who were infected with these diseases to be quartered among the healthy men. Soviet prisoner Karel Vasilievich Peet, who was interned at Stalag 328, testified that killings of prisoners were commonplace. On one occasion, Peet watched a Hiwi, Andrei Iakushevich, beat a Soviet officer to death with a truncheon. Peet reported that many men were also shot within the camp or bound hand and foot and taken in trucks to a nearby forest to be shot.¹⁰ Those who were found to be part of the special forces, members of the Communist Party, or Jews (if they were not taken away by the Gestapo to be shot) were sent to the starvation cells in Block 8, where they were left for 17 days without food or water; anyone who survived this treatment was taken to the cemetery and shot, and the bodies burned. During the deployment in Lwów, there were regular screenings to separate out "undesirables," such as Jews and political commissars, who were then shot by the camp guards.¹¹

Disease was also rampant in the camp, both because of the horrible conditions and because of the actions of the camp personnel. Nikovor Grigorevich Goliuk, who was imprisoned

at Stalag 328 from July 1941 to April 1942, reported that between August and November 1941, 3,000 prisoners died from dysentery; the Germans made no effort to stop the spread of the disease.¹² In late 1942, 385 sick men from Rawa Ruska were brought to Stalag 328; their internment among the other prisoners resulted in an outbreak of typhus that killed 5,000 prisoners. The bodies of those who died in the camp were burned on open pyres. Former prisoner Mikhail Iakovlevich Sheptshinskii recalled at least eight such burnings during the winter of 1942 alone. He described the stench of burning flesh as being so strong that one could not breathe.¹³

According to the postliberation Soviet Extraordinary State Commission (ChGK) investigation, 284,000 prisoners passed through Stalag 328 in Lwów, of whom over 140,000 died, primarily from malnutrition and disease.¹⁴ In Drohobycz, an additional 10,800 prisoners are reported to have died.¹⁵ However, casualty figures from the ChGK are often significantly exaggerated and should be viewed accordingly.

SOURCES Primary source information about Stalag 328 is located in BA-MA (RW 6: Allgemeines Wehrmachtamt/Chef des Kriegsgefangenenwesens); GARF (7021-67-77; 7021-58-23); DALvO (P 3-1-278); TsDAHO; and BArch B 162/15550–15556 (Ermittlungen gg. J. Nalbach u. A. wg. des Verdachts der Aussonderung und Erschießung sogenannter untragbarer russischer Kriegsgefangener im Stalag 328 in Lemberg August 1941 bis Ende 1942).

MANNSCHAFTSSTAMMLAGER (STALAG) 329

The Wehrmacht established Stalag 329 (maps 4a and 4e) on April 8, 1941, in Defense District (*Wehrkreis*) XIII.¹ From June to August 1941, the camp was located in Zeithain, in Defense District IV.² At the end of August 1941, the camp was deployed to *Reichskommissariat Ukraine*, initially in Zhmerinka, and then from October 1941 until December 1943, in Vinnytsia. Stalag 329 had a subcamp (*Zweiglager*) in Zhmerinka and, from late July 1943 on, a subcamp in Gaisin. In January 1944, the headquarters of Stalag 329 returned to the Reich and was stationed in Wietzendorf (Defense District X). On February 21, 1944, the Germans converted the camp into Oflag 83.³ While it was located in Reichskommissariat Ukraine, Stalag 329 was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ukraine*). Stalag 329 received field post number (*Feldpostnummer*) 11 007 between February 1 and July 11, 1941. The number was struck between January 25 and July 31, 1943, issued again on November 30, 1943, and finally struck on April 11, 1944.

The camp commandant was Oberstleutnant von Rosenberg, the adjutant was Oberleutnant Lendbradel, and the camp officer (*Lageroffizier*) was Hauptmann Peters. In the fall of 1941, the 3rd Company of the 353rd Reserve Battalion (*Landesschützenbataillon*) guarded the camp;⁴ the 4th Company of the 466th Reserve Battalion succeeded them.⁵ As of the fall of 1943, the 212th Reserve Battalion, consisting of four companies, guarded the camp. The battalion commander was Oberstleutnant Hans Wulf. The commander of the 1st Company was Leutnant Anton Reischel, the commander of the 2nd Company was Oberleutnant Hans Fuchs, and the 3rd Company was led by Hauptmann Johann Winden.⁶

Stalag 329 held Soviet prisoners of war (POWs). Between February 1942 and September 1943, the prisoner population

ranged from a high of 19,379 to a low of 2,574.⁷ In Vinnitsa, the camp was located on the grounds of Military Post 2 (formerly occupied by a Soviet cavalry division), near an airfield. The conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners experienced overcrowding, forced labor, abuse by the guards, and inadequate food, clothing, shelter, and medical care. The prisoners were so badly starved that they attempted to sustain themselves by eating grass and leaves.⁸ Malnutrition, disease, and exhaustion led to a high mortality rate in the camp. As in other camps, the Germans screened newly arrived prisoners to separate out Jews and Communist Party members, who were then shot by the guards or Security Service (*Sicherheitsdienst*) near the camp.

The former deputy commander of the 3rd Platoon of the 3rd Company, of the 353rd Reserve Battalion, Albert Karl Backofen, who served as a duty officer in the camp (along with Feldwebels Schlessner, Zimmer, Richter, and Reuther), stated in an interrogation on April 17, 1946, that, in November 1941, 54 Jewish POWs from one transport were shot, followed by 60 additional Jews and Communists from another transport of 600 prisoners.⁹ However, it is possible that commandant von Rosenberg was unhappy about these shootings, as indicated in USSR Events Report No. 128, dated November 3, 1941: "The camp commandant in Vinnitsa, . . . sharply objected to the transfer of 362 Jewish POWs that was carried out by his deputy, and even brought judicial proceedings against his deputy and two other officers."¹⁰

It is difficult to determine the exact number of prisoners who perished in the camp at Vinnitsa. According to the Soviet Extraordinary State Commission (ChGK) materials, 12,000 prisoners of war died in Vinnitsa; however, ChGK casualty figures are often substantially exaggerated and should be viewed accordingly.¹¹ In 2008, eight mass graves were discovered. Each was 30 meters (98 feet) in length, 2 meters (6.6 feet) wide, and up to 3 meters (9.8 feet) deep. Seven of these were excavated, and the remains of 3,514 POWs were uncovered. According to estimates by experts, around 600 bodies are left in the final unexcavated grave. Eight more mass graves, each 45 meters (148 feet) long, 2 meters wide, and up to 3 meters deep were discovered on Chekhov Street in Vinnitsa. According to estimates made using a sampling method, inventorying the remains in a linear meter of the trench without exhuming them, around 7,200 persons were buried in an area of 3,500 square meters (37,674 square feet).

MANNSCHAFTSSTAMMLAGER (STALAG) 330

The Wehrmacht formed Stalag 330 (maps 3 and 4d) on April 8, 1941, in Hammelburg, in Defense District (*Wehrkreis*) XIII. On August 14, 1941, it was deployed to Alta, in northern Norway. In November 1944, it redeployed southward to Beisfjord, near Narvik.¹ The camp was subordinate to the Prisoner of War District Commandant under the Armed Forces Commander Norway (*Kriegsgefangenen-Bezirkskommandant beim Wehrmachtbefehlshaber Norwegen*). The camp was assigned field post number (*Feldpostnummer*) 11 839 between February 1 and July 11, 1941.

The first camp commandant was Major Oskar Wilcke (1879–1947). At the end of 1941, he was replaced by Major Arnold Paraquin (1882–1955). On April 7, 1943, Major Ernst Pabst (1891–1955) became camp commandant. He was replaced by Oberstleutnant Johann Stahmer on November 26, 1943. The last commandant was Oberst Karl Schirmbacher (1891–1946). The deputy commandants were Hauptmann

Fritz Kamm (from May 20, 1941), Major Wilhelm Schirp, and Hauptmann Erich de Wyl (from November 3, 1941). As of March 1942, the counterintelligence (*Abwehr*) officer was Hauptmann Mauer and his assistant was Oberleutnant Georg Martin.

The administrative group was headed by Oberzahlmeister Artur Funck; his assistants were Zahlmeister Heinz Tetzlaff and Zahlmeister Josef Schautz (from the end of November 1942). The camp adjutant was Hauptmann Eugen Kuther (from November 3, 1941). The labor deployment group (*Arbeitsseinsatz*) was headed by Hauptmann Josef Bachmann (from August 16, 1941). The first camp doctor was Stabsarzt Dr. Wilhelm Loe. He was replaced, effective November 26, 1943, by Stabsarzt Dr. Wilhelm Schmidt. The assistant camp doctor, as of November 3, 1941, was Unterarzt (later Oberarzt) Dr. Kurt Scheuermann. Other officers at the camp were Hauptmann Hans Grohsmann (from October 8, 1942), Hauptmann Paul Möge, Hauptmann Hans Johann Payer (until March 1942), and Hauptmann Adolf Seipel (from April 7, 1943). The medical staff operated an infirmary, with about 25 beds, which also contained the camp's delousing facility. The camp was guarded by the 884th Reserve Battalion (*Landesschützenbataillon*). The guards were quartered in barracks that were about 50 meters (164 feet) from the perimeter of the camp.

Stalag 330 primarily held Soviet prisoners of war (POWs). The maximum population of the camp was 9,737 men in November 1942.² Most of the POWs were assigned to labor details, of which there were 121 in April 1945. The prisoners built defensive installations, cleared snow, and performed roadwork and other similar tasks. The Germans forced the prisoners to work for 14 hours a day with almost no food and without taking breaks. The POWs were poorly dressed for the winter conditions in Norway. The poor living conditions and hard labor, combined with malnutrition and frequent outbreaks of diseases such as tuberculosis led to a high mortality rate; more than 1,000 people perished in the camp.³ According to a former guard, one or two prisoners died every day in 1941 and 1942.⁴ In this camp, as in others, the Germans screened the prisoners to separate out "undesirables," such as Jews and political commissars, who were executed near the camp by the Security Service (*Sicherheitsdienst*) or sent to concentration camps, such as Sachsenhausen, where they were killed.⁵ The guards were given orders to fire on anyone who attempted to escape and occasionally carried out executions of prisoners for various offenses in the camp. The camp was disbanded on May 8, 1945, after the capitulation of the Nazi government.

SOURCES Primary source material about Stalag 330 is located in BA-MA (RW 6) and BArch B 162/9024–9029 (copies at USHMM RG-14.101M.2790.00001011–00001767).

MANNSCHAFTSSTAMMLAGER (STALAG) 331 (I C)

The Wehrmacht established Stalag 331 (map 4c) on August 5, 1941, in Fischborn-Turosel, in Defense District (*Wehrkreis*) I, from Frontstalag 331. On December 10, 1941, the camp was redesignated Stalag I C.¹ In August 1941, the camp was deployed to the village of Macikai, near Šilutė (German: Heydekrug) in Lithuania. Stalag 331 was disbanded on September 4, 1942. It was subordinate to the Commander of Prisoners of War in Defense District I (*Kommandeur der Kriegsgefangenen in Wehrkreis* I) and was guarded by personnel from the 337th Reserve Battalion (*Landesschützenbataillon*).

Stalag 331 (I C) held Soviet prisoners of war (POWs). No detailed information on conditions in the camp is available; however, in general, conditions in camps for Soviet POWs were poor, with inadequate housing, food supplies, and medical care, and mortality rates for Soviet prisoners were high. As in other camps for Soviet prisoners, the Germans probably performed selections of the prisoners to separate out "undesirables," such as Jews and political commissars, who were executed near the camp by the guards or Security Service (*Sicherheitsdienst*).

SOURCES Primary source material about Stalag 331 (I C) is located in BA-MA (RW 6).

Additional information about Stalag 331 (I C) can be found in the following publications: G. Mattiello and W. Vogt, *Deutsche Kriegsgefangenen- und Internierten-Einrichtungen 1939–1945. Handbuch und Katalog: Lagergeschichte und Lagerzensurstempel*,

NOTE

1. Tessin, *Verbände und Truppen*, p. 183.

MANNSCHAFTSSTAMMLAGER (STALAG) 332

The Wehrmacht established Stalag 332 on April 15, 1941, in Defense District (*Wehrkreis*) II.¹ From October 1941 to May 1943, the camp deployed to Viljandi (German: Fellin) (map 9a), in Estonia.² While there, the camp had a subcamp (*Nebenlager*) in Põltsamaa (German: Oberpahlen). Records indicate that the camp was still in operation as of September 7, 1943; the date on which the Wehrmacht disbanded it is unknown.³ Stalag 332 received field post number (*Feldpostnummer*) 13 263 between July 12, 1941, and January 26, 1942. The number was struck on February 12, 1945.

Starting on August 17, 1941, the camp was subordinate to the Armed Forces Commander Ostland (*Wehrmachtbefehlshaber Ostland*). On October 17, 1941, it was reassigned to the 207th Security Division (*Sicherungsdivision*), which was in turn subordinate to the Army Group North Rear Area Command (*Befehlshaber des rückwärtigen Heeresgebiets Nord*).⁴ The camp commandant was Major Faust. The 2nd Company of the 275th Reserve Battalion (*Landesschützenbataillon*) guarded the camp.⁵

The conditions during the camp's deployment in Viljandi were similar to those in other camps for Soviet prisoners of war (POWs). Especially in the first year of the war, the Germans subjected the POWs to severe overcrowding, inadequate food, forced labor, lack of proper medical care, and physical abuse. Exhaustion, malnutrition, and disease led to a high death rate. According to a Soviet Extraordinary State Commission (ChGK) document from March 15, 1945: "Within the town limits of Viljandi were located two camps for prisoners of war. The prisoners' conditions of confinement were most horrible. Medical aid was absent, and the inmates were used for back-breaking physical labor. Soviet POWs died from exhaustion and beatings and also were shot. During the German occupation, around 10,000 persons died in the POW camps, and they were buried next to the camp at a place called Khundimiagi [sic], where there are nine common graves. On some of them are inscriptions carved on wooden crosses by the POWs themselves, with these figures: 1,600 persons, 1,864 persons."⁶ However, it should be noted that casualty figures from the ChGK are often substantially exaggerated and should, therefore, be viewed accordingly. As in other camps, the Germans screened the prisoner population to separate out Jews and Communists, who were then shot by the Security Service (*Sicherheitsdienst*, SD) or the guards near the camp.⁷

SOURCES Primary source material about Stalag 332 is located in BA-MA (RW 6); GARF (file 7021-97-19: Viljandi); and BArch B 162/21486–21487 (Überprüfung des Stalag 332 in Fellin [Estland] 1942/43).

MANNSCHAFTSSTAMMLAGER (STALAG) 333

The Germans established Stalag 333 (maps 4b and 5) on April 30, 1941, in Defense District (*Wehrkreis*) III in Luckenwalde, with staff from Stalag III A.¹ From November 1941 to September 1943, the camp was located in Komorowo, Poland (powiat ostrowski, województwo mazowieckie), in the Generalgouvernement, where it occupied the site of the former Stalag 324.² While deployed in Komorowo, the camp had subcamps (*Zweiglager*) in Beniaminów and in Małkinia Góra. As of September 1943, the main camp was relocated to Beniaminów, where it took over the former Stalag 368. While deployed in Beniaminów, the camp had a subcamp in the Rembertów district of Warsaw. The camp received the field post number (*Feldpostnummer*) 14 231 between February 1 and July 11, 1941. The number was struck on January 29, 1944.

The camp was subordinate to the Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) under the Commander of the Wehrmacht in the Generalgouvernement (*Kommandeur der Wehrmacht, Generalgouvernement*); this position was held by Generalleutnant Adolf Herrgott from April 7 to August 21, 1941, and by Generalmajor Paul Ritter von Wittas from August 22, 1941, to April 30, 1944.³

The first commandant of Stalag 333 in Komorowo was Major Anton-Johann Byczanski, who died of typhus in late 1941 or early 1942. His successor was Major Wegener, who was followed by Oberst (or possibly Oberstleutnant) Kühne, who remained the commandant after the camp relocated to Beniaminów. At some point after the relocation, Kühne was replaced by Hauptmann Dallmann. The deputy commandant was Hauptmann (later Major) Rudolf Bloch, who was succeeded by Hauptmann Willy Olivie. The adjutant was Hauptmann Heinrich Hoch. The camp staff was composed of about 70–100 men in total. The camp was guarded by personnel from Company 3 of the 268th Reserve Battalion (*Landesschützenbataillon*).⁴

The camp in Komorowo was built on the grounds of the former barracks of the Polish 18th Light Artillery Regiment. It held Soviet prisoners of war (POWs). While the camp was relatively small at first (estimates from witnesses suggest that there were about 4,000 prisoners in the camp in late 1941, of whom about 2,000 died in epidemics during the winter), its population swelled greatly in late 1942, after Stalag 324 was closed and the surviving prisoners (about 13,000) from that camp were transferred to Stalag 333. The prisoners lived in wood and stone buildings that had previously served as stables, and they slept on straw. In 1942 and 1943 the Polish Red Cross was allowed to supply the prisoners with food parcels. The prisoners were required to work in labor detachments (*Arbeitskommandos*), usually composed of about 100 men each, which were primarily employed in activities such as cutting timber. Based on information provided by the Supreme Command of the German Armed Forces, the International Committee of the Red Cross reported the following population and labor detachment statistics for the camp on these dates between 1942 and 1944:⁵

Date	Soviets (in labor detachments)	Italians	Total
June 1, 1942 (Komorowo)	3,935 (1,261)	—	3,935
October 1, 1942	18,084 (301)	—	18,084
January 1, 1943	18,171 (2,232)	—	18,171
June 1, 1943	7,540 (805)	—	7,540
October 1, 1943 (Beniaminów)	3,783	—	3,783
January 1, 1944	2,114	2,720	4,834
February 1, 1944	2,286	2,434	4,720

The large increase in population between June and October 1942 reflects the influx of prisoners from the former Stalag 324, while the discrepancy between the number of prisoners and the number working is indicative of the prisoners' condition. The conditions in the camp were the same as those in other camps for Soviet POWs. Overcrowded quarters (as many as 200 men to a block), food that was inadequate in both quality and quantity, and the lack of proper medical aid or hygienic facilities led to mass starvation and disease, which in turn produced a high mortality rate. The cruel treatment that the German guards handed out merely made the situation worse. In 1947, the Soviet-Polish War Crimes Investigative Commission found a mass grave containing around 24,000 prisoners who had perished in the camp at Komorowo, many of whom had died in the winter of 1941–1942 during a typhus epidemic.⁶ As in other camps for Soviet POWs, new arrivals at the camp were screened for "undesirables" (including Jews and political commissars), who were separated from the other prisoners and later shot by the Security Service (*Sicherheitsdienst*) near the camp.⁷

By order of the commander of the German troops in the Generalgouvernement on December 19, 1942, Stalag 333 took over supervision of the penal camp at Ostrów Mazowiecka. The penal camp held servicemen from the "Turkestan Eastern Legion" who had committed punishable acts or crimes.⁸ In September 1943, Stalag 333 was redeployed to the Warsaw suburb of Beniaminów. In January 1944, Italian military internees joined the Soviet prisoners. Conditions in Beniaminów were no better than those at Komorowo, with diseases such as typhus once again claiming many lives. Between 1,000 and 3,000 non-Russian Soviet prisoners from the camp in Beniaminów were recruited as Hilfswillige (Hiwis), who were trained to serve as guards in concentration camps.⁹ The Soviet Extraordinary State Commission (ChGK) reported that 10,000 prisoners died at Beniaminów (including totals from both Stalag 368 and Stalag 333); however, as with all figures reported by the ChGK, this estimate should be viewed with caution as it may be substantially exaggerated.¹⁰

On December 27, 1943, the order for the camp's dissolution was issued. On January 29, 1944, the camp staff was reassigned to Oflag 73.¹¹ One witness reported that the former deputy commandant of Stalag 333, Bloch, committed suicide after the war.¹²

MANNSCHAFTSSTAMMLAGER (STALAG) 334

The Wehrmacht established Stalag 334 on April 28, 1941, in Defense District (*Wehrkreis*) IV.¹ From the fall of 1941 until the end of 1943, a camp was located in the town of Belaia Tserkov' (today Bila Tserkva, Ukraine) (map 9e). Stalag 334 received field post number (*Feldpostnummer*) 39 531 between July 30, 1941, and February 28, 1942. The number was struck between September 8, 1942, and March 11, 1943.

Until October 20, 1941, the camp was subordinate to the Commander of the Rear Area of Army Group South (*Befehlshaber des Heeresgebiets Süd*). Beginning on October 20, 1941, the camp was under the command of the Commander of Prisoners of War of the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ukraine*).² As of March 1943, the camp was subordinate to the Commander of Prisoners of War of the

Commander of the Rear Area of Army Group South (*Kommandeur der Kriegsgefangenen beim Befehlshaber Heeresgebiet Süd*).

The commandant of the camp from the fall of 1941 to July 1943 was Oberstleutnant Johann Bremer and, from July to September 1943, Oberstleutnant Theodor Junker. The deputy commandant was Major Hans-Martin Luther. The camp adjutant was Hauptmann Johannes Beier; the counterintelligence (*Abwehr*) officer was Major Otto Mentzendorff and his deputy was Hauptmann Hans Straubel. The camp doctor was Dr. Hahndorff.³ As of the end of 1941, the camp was guarded by personnel from the 560th Reserve Battalion (*Landesschützenbataillon*).⁴ As of November 1942, the camp was guarded by Company 1 of the 778th Reserve Battalion.⁵

Stalag 334 held Soviet prisoners of war (POWs). The table shows the camp population on selected dates in 1942 and 1943.⁶

Date	Prisoners
February 1, 1942	10,700
June 1, 1942	25,400
October 1, 1942	12,800
December 1, 1942	12,300
February 1, 1943	11,000

The conditions in the camp were the same as those in other camps for Soviet POWs. Extreme overcrowding in a small area, food that was inadequate in both quantity and quality, exhaustion, disease, and the absence of proper medical care or hygienic facilities all led to a huge mortality rate.⁷ The local authority, with the permission of the German headquarters, attempted to help the prisoners. Thus, on November 15, 1941, Maikovskii, the town mayor, announced to the inhabitants that on Sundays, Wednesdays, and Fridays, starting on November 16, 1941, foodstuffs would be received to aid the prisoners; the products that could be passed on to them included baked bread, sugar, fats, boiled potatoes, porridge, cucumbers, cabbage, and the like. But these measures, of course, could not substantially improve the food situation of the prisoners, and hunger and disease continued to kill them.

It is impossible to establish the overall number of POWs who perished in the camp. According to data of the Soviet Extraordinary State Commission (ChGK), more than 20,000 prisoners died in Belaia Tserkov' in the period 1941–1943.⁸ However, casualty figures from the ChGK are often significantly inflated and should, therefore, be viewed accordingly.

As in other camps, the Germans screened the prisoners to identify Jews and Communists, whom detachments of Security Service (*Sicherheitsdienst*) personnel or guards then shot near the camp. In addition, from May 1942 to August 1943, by order of the camp leadership, approximately 300 prisoners were shot for attempted escape, rebellion, and theft.⁹

In 1969, the public prosecutor's office in Giessen began an investigation into the case of former members of the camp's

headquarters staff who were accused of having taken part in the selection of “undesirable” prisoners and in the shooting of prisoners. Because the suspects had died or could not be found, the investigation was dropped in 1974.¹⁰

MANNSCHAFTSSTAMMLAGER (STALAG) 335

The Wehrmacht established Stalag 335 (map 5) from the staff of Stalag V C on April 1, 1941, in Defense District (*Wehrkreis*) V. From September 22, 1941, to March 1942, the camp was located in Stryj (today Stryi, Ukraine), and from March to December 1942, it was located in Drohobycz (today Drohobych, Ukraine).¹ The camp was subordinate to the Commander of Prisoners of War in the Generalgouvernement of Poland (*Kommandeur der Kriegsgefangenen im Generalgouvernement Polen*).

The camp received field post number (*Feldpostnummer*) 09 048 between February 1 and July 11, 1941; the number was struck between July 15, 1942, and January 24, 1943.

The commandant of the camp was Major Willy Probst (1880–1955). His deputy was Major Karl Trieschmann (b. 1890). His adjutant was Oberleutnant Wilhelm Schweis (1903–1955). The first counterintelligence (*Abwehr*) officer was Amtsgerichtsrat Richard Sattelmayer (1882–1944), who was succeeded by Oberleutnant Johann Hostler (1889–1948). Personnel from the 4th Company of the 405th Reserve Battalion (*Landesschützenbataillon*) guarded the camp.²

Stalag 335 primarily held Soviet prisoners of war (POWs), although French and Belgian prisoners were also present later on. The camp had a maximum population of 6,801 Soviet prisoners in August 1942; as of September 1942, it held 1,548 Soviet, 2,255 French, and 58 Belgian prisoners. The conditions for Soviet POWs were similar to those in other camps. The prisoners faced overcrowding, malnourishment, and inadequate medical care, as well as mistreatment by the German guards. These terrible conditions produced a high mortality rate. One former member of the camp’s medical staff testified that the guards would identify any prisoners who they believed were too weak to be rehabilitated for work. Those prisoners were isolated and allowed to starve to death.³ Prisoners who were believed to be capable of working were sent to the Reich as forced laborers. As in other camps, the Germans screened the prisoners to separate out “undesirables,” such as Jews and political commissars, who were shot by a Security Service (*Sicherheitsdienst*) detachment led by Kriminalrat Block and his assistant Ernst Willy Morlock.⁴ The camp was disbanded on December 31, 1942.

MANNSCHAFTSSTAMMLAGER (STALAG) 336

The Wehrmacht established Stalag 336 from a Frontstalag on May 14, 1941, in Defense District (*Wehrkreis*) VI. From August 1941 to October 1943, the camp was located in Fort VI in Kauen (Lithuanian: Kaunas) (map 9b). Stalag 336 had a subcamp (*Zweiglager*) in Vilnius, which became Stalag 344 on September 9, 1941. It had a second subcamp in Šiauliai, which became Stalag 361 in February 1942.¹ Stalag 336 was disbanded on March 2, 1944.² The camp received field post number (*Feldpostnummer*) 22 515 between February 16 and July 18, 1942. That number was struck on August 27, 1943, but reissued on January 21, 1944, and struck again on March 29, 1944. There is also a record of another field post number, 47 133, issued between March 1 and September 7, 1942, and struck on February 25, 1944.

Beginning on July 25, 1941, the camp was subordinate to the Commander of Prisoners of War in the General District Lithuania (*Kommandeur der Kriegsgefangenen im Generalbezirk Litauen*), who was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ostland (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ostland*). The camp commandants, in chronological order, were Oberstleutnant Karl August Werdemann, Major Otto Grennebach, Oberstleutnant Karl Sieber (as of February 1943), and Major Schmidhammer. The camp was guarded by subunits of Reserve Battalion (*Landesschützenbataillon*) 530, which were assisted by Lithuanian police auxiliaries.

Stalag 336 held Soviet prisoners of war (POWs). It was a large camp, with a maximum population of 34,016 in February 1942.³ The camp was located in Fort VI, plus six subcamps in the city's suburbs, the largest of which was located near the airfield. A letter from prisoner F. Kozhedub, dated October 19, 1941, reveals the horrible conditions in the camp. Kozhedub, who had been in the camp for two weeks, reported that

I live outdoors in a pit, or cave, or in a cellar. As for food, each day we get 200 grams [7 ounces] of bread, half a liter [1 pint] of boiled cabbage, and half a liter of tea with mint. Everything is without salt, so that we don't swell up. Using sticks and wire whips, they force us to work, but they don't give us additional food. We have millions of lice. For two months I haven't shaved, washed, or changed clothes. As for my clothes, I have underwear, a shirt, an overcoat, a field cap, and low boots with puttees. The weather is

cold, and there's slush and mud. Every day 200 to 300 people die.⁴

After liberation in 1944, Kaunas resident Dmitrii Interesov testified that "several times I had a chance to talk with Russian POWs. They told me that they were living in the damp and gloomy dungeons of the fortress, but as even these quarters were far from sufficient, many were lying about right in the ditch of the fortress, out in the open. Their food consisted of raw beets, potato peelings, and other vegetable scraps."⁵

The inhumane conditions led to a high death rate. The monthly German summaries of the incidence of disease in Fort VI, where the infirmary for POWs was located, recorded that in the period from September 1941 to July 1942 alone, 22,000 POWs died in the infirmary.⁶ In the camp yard, the Soviet Extraordinary State Commission (ChGK) discovered 67 standardized graves, each measuring 5 by 2.5 meters (16 by 8 feet). A map of Cemetery No. 5 from the camp office attested that from October 1941 to November 1942, 7,533 persons were buried,⁷ while in total, as camp documents indicate, around 35,000 POWs died in the camp.⁸ Approximately 10,000 others died in the subcamp located near the airfield. Here the ChGK discovered 13 graves measuring 25 by 2 meters (82 by 6.6 feet) apiece, 5 graves measuring 12 by 2 meters (39 by 6.6 feet) apiece, and a grave measuring 15 by 15 meters (49 feet squared).⁹

Thousands more prisoners died in the various subcamps of Stalag 336. According to the ChGK, approximately 1,500 Ukrainian prisoners died at Fort VII in the winter of 1941–1942 alone. It should be noted that casualty reports from the ChGK are often significantly exaggerated, and these numbers should be viewed accordingly.

SOURCES Primary source material about Stalag 336 is located in BA-MA (RW 6: 450–452); GARF (7021-94-2); LCVA; and BArch B 162/1900–1904 (Ermittlungen gg. Angehörige des Stalag 336 [Kowno, Litauen] und Bewachungsmannschaften).

MANNSCHAFTSSTAMMLAGER (STALAG) 337

The Wehrmacht established Stalag 337 on April 17, 1941, in Defense District (*Wehrkreis*) VII; it was originally designated as a Frontstalag but was redesignated as Stalag 337 prior to its deployment.¹ From the fall of 1941 to the fall of 1943, the camp was deployed to a site near the rail station in Lesnaia (today Liasnaia, Baranavitski raen, Brëstskai voblasts', Belarus) (map 9b). A branch of the camp was set up in the central prison in Baranovichi.² Until April 1942, the camp also had a branch in Slutsk. In November 1943, the camp redeployed to Mantua, Italy (6), with subcamps in Florence and Gorizia.³ The camp received the field post number (*Feldpostnummer*) 09 896 between February 1 and July 11, 1941. The number was struck on August 26, 1943, issued again on October 5, and finally struck on May 25, 1944.

While deployed in Baranovichi, the camp was subordinated to the Commander of Prisoners of War in General District White Ruthenia (*Kommandeur der Kriegsgefangenen im Generalbezirk Weißruthenien*). During the deployment in Italy, the camp was under the authority of the Prisoner of War District Commandant K (*Kriegsgefangenen-Bezirkskommandant K*).

While it was deployed in Belarus, Stalag 337 held Soviet prisoners of war (POWs). The main camp at the Lesnaia rail station held about 50,000 prisoners, and about 20,000 were imprisoned in the subcamp in Baranovichi.⁴ As of November 1942, the camp was guarded by the 2nd Company of the 861st Reserve Battalion (*Landesschützenbataillon*). Gefreiter Leopold Bischof of Company 1, 28th Jäger-Regiment, 8th Jäger-Division, who was captured by the Red Army in early 1943, testified as follows regarding the conditions in the camp:

In Baranovichi, in the Polish hard-labor prison, were Russian prisoners of war, among whom there were many people from the civilian population. The available stone structures held a fraction of all the POWs, and a majority of the POWs were forced to live outdoors. Winter arrived, and with it rain, snow, and cold. The prisoners spent the nights outdoors. It was forbidden to start a fire. In this camp, I was the cook for a guard platoon and in the guard force from September 27 to October 22, 1941. Then, at my insistence, they transferred me back to the company, to Baranovichi. Therefore I was near the camp the entire time and always heard, involuntarily, from my

fellow soldiers about everything that happened in the camp. For example, in the period of time from October 6, 1941, to March 1942, approximately 3,500 people died, or rather, they were shot. The number of those shot evidently was more than a few thousand, and probably it will never be possible to determine the exact figure. On October 8, I was standing at the gate at my post for around three hours, and I happened to see eight Russian prisoners led into the camp for execution. As Unteroffizier Weber told me later, among those brought for execution was a tall, strong man who stood quietly at rifle-point. Floggings of POWs were carried out in the camp. Usually present during the flogging were the camp commandant, Oberleutnant Mahler, Unteroffizier Keller, and camp police. All the POWs were ordered to assemble in the small courtyard, and the big wooden gates were locked, so that no one could see anything from the outside. The "criminal" appeared, took off his belt, bared the upper part of his body, and lay on a short bench. Two policemen put leg irons on him so that he couldn't get up, and a third beat him with a rubber lash until the officer ordered the corporal punishment to come to an end. There was one German doctor for several camps. If someone went into the hospital, people thought he was unlikely to come back from there alive. On average, 80 people died each day from cold and typhus. This number increased when the cold weather started, and by mid-January it reached unbelievable proportions—320 deaths per day. Escaping from the camp was almost impossible, and nonetheless four Soviet officers managed to escape from this hell. The latrine was built so that the wall was half in the camp, half outside, to allow the toilets to be cleaned from the outside. The wall surrounding the camp was only 1 meter [3.3 feet] deep. All that was necessary was to squeeze under the wall through the mess of the toilet, because on the other side was freedom. The impossible happened: four officers, in temperatures of minus 35 degrees [Celsius, -31 degrees Fahrenheit], immersed themselves in human excrement, and then found salvation in the woods. We exchanged glances: "There's somebody with strong nerves." They made the prisoners quickly put together some barracks. These barracks could do no more than provide shelter from the rain. They had no floor, no stoves, no straw floor coverings. On the street it was freezing, minus 35 degrees, and the air in these barracks had the same temperature. And who could stay up for whole nights, moving around, in order to get a little warmer? After running around all night, people got weaker with every passing day, and all this while being poorly fed. In the end, one fine night a person lies down and never wakes up again . . .⁵

Many prisoners perished en route to the camp. For example, in November 1941, although the weather was already quite cold, the prisoners were brought to the camp in open-top freight cars, wearing summer uniforms. Those who were frostbitten, exhausted, or unable to walk were beaten with sticks and shot. In the evening the Germans brought peasant carts and took the dead and those who were incapacitated but still alive to a ditch near Lesnaia station. The carts traveled back and forth until 1:00 a.m. In the words of I. M. Shchepko, who was called upon to help transport the bodies, "When all was quiet, I went over to the ditch, it was lightly covered with soil, and from it were heard terrible groans and howls."⁶

Between March 1942 and August 1943, the prisoners were screened to separate out "undesirables" (Jews and Communists), who were then either shot or murdered in a gas van. In August 1942, 720 officers were apparently killed in the gas van for refusing to serve in the Wehrmacht formations for Soviet prisoners.⁷

In total, according to Soviet Extraordinary State Commission (ChGK) data, 75,000 persons are believed to have died in the camp. As many as 31,000 prisoners were buried in a series of 21 pits located about 290 meters (951 feet) from Lesnaia station, and some 44,000 more prisoners were buried in 60 additional pits in the vicinity of the station.⁸ However, casualty figures from the ChGK are often significantly exaggerated and should be viewed accordingly.

In November 1943, Stalag 337 redeployed to Mantua. When it first opened there, the conditions were primitive. Limited dormitory space was available, beds consisted of little more than wooden planks, latrines were adequate in number but unsanitary, and there was no kitchen. Food was brought from town twice daily. Work was underway on a new section of the camp across town, which the Germans intended for Western Allied prisoners. The camp was dissolved in February 1944.

MANNSCHAFTSSTAMMLAGER (STALAG) 338

The Wehrmacht established Stalag 338 on April 8, 1941, in Katscher (today Kietrz, Poland) (map 4e). In July 1941, it deployed to occupied Ukraine. From October 1941 to November 1943, the camp was located in Krivoi Rog (today Kryvyi Rih, Ukraine) (9g), where it replaced Dulag 162. As the Red Army pushed westward in November 1943, the camp moved to Voznesens'k (9g), and then to Reni (9g), where it was disbanded on May 15, 1944.¹ Initially, the camp was subordinated to the Commander of Prisoners of War with the Armed Forces Commander, Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ukraine*). As of March 1943, the camp was subordinated to the Commander of Prisoners of War with the Commander of the Army Group South Rear Area (*Kommandeur der Kriegsgefangenen beim Befehlshaber des Heeresgebiets Süd*).

The camp commandants were Oberstleutnant Hans Rath (from June 12, 1941, to April 8, 1942; d. 1951), Oberstleutnant Gert von Krane (from September 5, 1942; d. 1962), and Oberstleutnant Werner Bertram (from November 19, 1943). The adjutants were Hauptmann Franz Solf (from August 5, 1941), Hauptmann Alfons Frei (from February 24, 1942), and Hauptmann Bruno Heymann (until October 26, 1942). The counterintelligence (*Abwehr*) officers were Oberleutnant Werner Lorenz (from July 23, 1941) and Hauptmann Otto Richter (from April 6, 1942). The camp officers were Major Paul Krimmling and Major Kabacher (from June 24, 1943). The camp physicians were Dr. Helmut Przemeck (from April 6, 1942), Dr. Kauf, and Dr. Neugebauer (or Neubauer).

While the camp was deployed in Katscher, it held Polish and French prisoners of war (POWs). It was guarded by the 875th Reserve Battalion (*Landesschützenbataillon*). During the deployment in Krivoi Rog, the camp held Soviet prisoners and was guarded by the 2nd Company of the 303rd Reserve Battalion and a company of Russian volunteers (*Hilfswillige*), led by Leutnant Karl Brühn (MIA 1944). The commander of the camp guards was Hauptmann Karn.² The camp population in Krivoi Rog varied from a minimum of 5,219 prisoners in May 1942 to a maximum of 23,977 prisoners in September 1942.³

The conditions in the camp were similar to those in other camps for Soviet POWs. Overcrowding, malnutrition, inadequate medical care, and deliberate abuse by the guards led to an extremely high mortality rate.⁴ As in other camps, selections (*Aussonderungen*) were conducted to separate out Jews and political commissars, who were then executed by the camp guards or a Security Service (*Sicherheitsdienst*) detachment. It is impossible to establish the number of prisoners who died in the camp with certainty. According to the Soviet Extraordinary State Commission (ChGK) materials, incomplete data indicate that at least 800 prisoners died in Krivoi Rog, but this figure is probably a low-end estimate.⁵

In 1968, the public prosecutor's office in Stuttgart opened an investigation of former members of Stalag 338. The chief defendants were Werner Bertram and Erwin Lorenz, who were accused of participating in the selections; however, the investigation was closed in 1969 due to lack of evidence.⁶

MANNSCHAFTSSTAMMLAGER (STALAG) 339

The Wehrmacht established Stalag 339 on April 10, 1941, in Defense District (*Wehrkreis*) IX.¹ From October 1941 to March 1943, the camp was deployed in the village of Darnitsa, near Kiev (map 9e); the camp was also referred to as Prisoner of War Camp Kiev-East (*Kriegsgefangenenlager Kiew-Ost*) during this time. From April until August 1943, the camp was located in Berdichev (today Berdychiv, Ukraine) (9e). In August 1943, the camp in Berdichev was disbanded, and its headquarters was redeployed in September 1943 to Trieste (6). From February 1944 on, the camp was located in Mantua (6); on May 24, 1944, it was redesignated Dulag 339.² Stalag 339 received field post number (*Feldpostnummer*) 46 895 between July 30, 1941, and February 28, 1942. The number was struck on September 8, 1942, then reissued on October 5, 1943, and finally struck on June 5, 1944.

As of August 22, 1941, the camp was under the authority of the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). Beginning on September 23, 1943, it was subordinate to Army Group (*Heeresgruppe*) B, and then, as of November 21, 1943, to Army Group (*Heeresgruppe*) C.³

Stalag 339 held Soviet prisoners of war (POWs). The camp reached a maximum population of 14,906 prisoners in September 1942.⁴ The camp was located in a former Red Army barracks on the outskirts of Darnitsa, on the left bank of the Dnieper River, 12 kilometers (7.5 miles) from Kiev, where the railroad lines linking Kiev with Moscow and Khar’kov converge. It was located in a wooded area near the crossing of the Kiev highway and the railroad lines, bounded on the north and east by a dense forest. The camp was very large, about 1.5 kilometers by 1 kilometer (0.9 miles by 0.6 miles). The entire camp area was enclosed with three or four rows of barbed wire, 3.5 meters (11.5 feet) tall. A similar network of wire partitioned the camp into several sections. The perimeter of the camp was guarded by armed German sentries with dogs, while the guards inside the camp were Ukrainian policemen.

The statements of numerous witnesses, eyewitnesses, and former POWs indicate that unrestrained and arbitrary cruelty prevailed in the camp. The work regimen, tortures, complete deprivation of food for extended periods, exposure to the elements, and other unhealthy conditions led to severe exhaustion, widespread disease, and a high mortality rate. As Jewish-Soviet prisoner Ilia Furmanov recalls, the prisoners

slept on long bunks, which resembled shelves and were so crowded that the men had to lie back-to-back down the entire length of the bunks.⁵ They were fed one can of a thin soup called *balanda*, which consisted of little more than water with bits of sweet onion, twice a day; the terrible quality of the food caused widespread gastrointestinal illnesses. Although some prisoners who had watches, rings, or other valuables were able to use them to purchase additional food from the guards, some other prisoners became so desperately hungry that they resorted to eating the flesh of their dead comrades.

A subcamp was located on the grounds of a former automotive repair workshop. Barbed wire surrounded this camp and divided it into sections of various sizes. A small building comprised the “infirmary” for the prisoners, which provided no medical aid of any kind. The sick and wounded suffered terribly: their wounds were not dressed, what dressings had already been applied became soaked with pus, and the wounds were often infested by maggots. The mortality rate in the subcamp was high.⁶

The former POW Aleksandr Shugai, who was in the camp for an entire year, beginning on January 18, 1942, described the conditions as follows:

Personally, upon arrival at the camp I was confined in a separate barracks. In the same barracks with me were 3,000 POWs. Over the course of a five-day stay in this barracks, the POWs received nothing to eat, and during this time 300 to 500 persons died of cold and starvation right before my eyes. Then, after five days had elapsed, the POWs were separated—the Russians separately and the Ukrainians separately. As a Russian, I remained in the barracks among the Russians, and after the sorting, over the course of three days, the Russians again received no food, and as a result about 500 POWs died of starvation.

After eight days, on the ninth day I and all the prisoners who were in the barracks with me were released into the general camp, and only on day nine did we get something to eat: a thin soup known as *balanda*, which was made from millet bran and beet and potato peelings. This food was in a watery state, and they distributed it in half-liter portions to each prisoner once a day. There were instances when this food was not given out to all the POWs, but in order of sequence, by barracks, so that for two days and more one had to go without anything to eat at all. But if one of the prisoners, while at work, got potatoes for himself and brought them into camp—and to boil the potatoes, a fire had to be lit—then the fascist butchers, once they spotted the fire, without any warning would toss grenades into the fire, and as a result of this, dozens of people would die.

I also saw how, during the distribution of food to the POWs, a group of fascist butchers used to gather near the kitchen and brutally beat the POWs, especially those individuals whom they suspected of

being a commanding officer or a political worker. They beat them with rubber sticks, rifle butts, iron rods, and the like. I can’t tell you the names of these butchers, because I have no idea what they are. The POWs, from drinking the above-mentioned *balanda*, developed *en masse* dysentery and other gastrointestinal ailments, which contributed to the large mortality rate.

In addition, I’ll state this too: at the Darnitsa camp, there was at all times a Gestapo detachment, whose members herded all the POWs out of the barracks every day and made them sit on the ground and take off their headgear. They made some POWs take off their overcoats, too, and in this way they later discerned the Red Army commanders and political workers, as well as individuals of Jewish nationality. Every day they selected 100 to 150 people and sent them into a separate barracks. There, by means of torture and beatings, they found out more and ultimately exposed individuals in the categories I mentioned previously, and then SS men came to the camp from Kiev and shot these prisoners. There were frequent instances when gendarmes came to the camp from Kiev, and with their weapons out, they would walk through the barracks and shoot individual POWs there in the barracks without any grounds, without any reason for suspicion at all.

I also saw prisoners, several dozen at a time, taken from the camp and shot in the pine woods near the camp. During the time I was in the camp, between 1,000 and 1,500 people were shot, primarily commanding officers, political workers, members of the [Communist Party], and Komsomol members.

From conversations with POWs who were in the camp with me, I know that 60,000 to 70,000 prisoners died in the Darnitsa camp. For burying the dead, a group of between 25 and 30 persons was always selected, and they were specially made to sing songs, in particular the Soviet song “Katiusha.” They forced them to sing on the way to the pits and back, and those who refused to sing were denied food and in addition were subjected to beatings and other tortures.⁷

Shugai added that the Germans singled out Jewish officers and female prisoners for especially sadistic forms of torture and humiliation, which were carried out in sight of the other prisoners. According to the statements of Grigorii Peresada, who worked in the camp as a stoker,

the Soviet POWs managed to get for themselves various kinds of carrion to eat (dead horses, dogs, cats, and the like), and in addition they gathered bones and other refuse from the garbage pits, and all this they cooked in pots and ate, and they managed

to do it even though they knew they would be beaten for it. There were repeated instances when POWs who remained alive cut off the arms, legs, and even other body parts of prisoners who had starved to death and used all this as food for themselves, managing all this in great fear and with beatings as a result.⁸

Gustav Getroi, a Jew from Lwów who entered the camp as early as October 1941 and, as a former doctor, was assigned to the infirmary, recalled that

over the course of a month, I personally, as well as the wounded POWs who were in the infirmary, received food rations once a day, consisting of soup made of frozen beets. I, as the physician, and the wounded POWs received no other foodstuffs. Then they began making *balanda*, which was prepared from unpeeled potatoes, which, moreover, were not washed and were put into the cauldron along with the soil. Into these potatoes was stirred a little flour of some sort, and the *balanda* prepared in this way was distributed to be eaten once a day, and only every other day besides; that is, one day they gave out the soup made from frozen beets, and the next day, the *balanda*.

From eating such food, the Soviet POWs in the infirmary became weakened, and as a result they died at an enormous rate, 100 to 120 per day. In addition, the wounded POWs in the infirmary were completely naked, with no shirts and underpants; they wrapped themselves up only with quilts, and no footwear of any kind was issued for their feet. At the same time, they put wounded POWs onto the bare floor in the infirmary, with no sheets and pillows of any kind. The situation that was created for wounded POWs in the way described above continued from October 10, 1941, to March 1942 and gave rise to widespread infestation with lice, and as a result of the cold temperatures, hunger, and lice, a typhus epidemic broke out.

In the period from December 1941 to March 1942 alone, 50,000 to 60,000 persons died in the infirmary and in the camp for Soviet POWs. All this is known to me personally from statistics that were specially kept in the infirmary. In the infirmary itself, as many as 20,000 POWs died. The dead were buried in pits, each holding 500 to 1,000 corpses, that were dug near the infirmary, about 30 to 50 meters [98 to 164 feet] from it. As an eyewitness, I can personally point out all these sites. I also personally witnessed one of the Nazi butchers' methods of atrocious humiliation of wounded POWs in the infirmary, which was practiced there at the order of the head doctor at the camp: physical exercise. Despite exhaustion from hunger and fatigue from

wounds, all the POWs, even those who could barely walk, were compelled to do physical exercise. All this, however, was nothing more than a means of definitively exhausting the patients, which accelerated and increased the death rate of the POWs.⁹

Systematic shootings increased the number of victims in the camp. In late 1943, the Soviet Extraordinary State Commission (ChGK) discovered four 72 square meter (775 square feet) mass graves and one 36 square meter (338 square feet) grave in the pine forest north of the camp. According to the testimonies of witnesses and eyewitnesses, these pits contained the bodies of more than 500 Jewish prisoners and about 1,500 Red Army officers, political commissars, and other "undesirables," whom the Germans separated from the other prisoners and shot between October 1941 to March 1942.¹⁰ Ilia Furmanov, who managed to hide his religious affiliation and thus avoid the same fate, recalls that other groups of prisoners were also included in these shooting operations; many Muslim prisoners, including Tatars and men from the Central Asian republics, were shot along with the Jews because they were also circumcised.¹¹

The ChGK concluded that more than 68,000 persons had perished in the camp at Darnitsa, based on forensic examination of the exhumed corpses and the number of bodies found in the mass graves and the surrounding areas.¹² However, the figures reported by the ChGK have proven in many cases to be greatly exaggerated and should thus be viewed accordingly.

MANNSCHAFTSSTAMMLAGER (STALAG) 340

The Wehrmacht established Stalag 340 on April 15, 1941, in Defense District (*Wehrkreis*) X. From August 1941 to the beginning of 1944, the camp was located in Dünaburg (today Daugavpils, Latvia) (map 9b). Beginning in November 1942, the camp had a subcamp (*Zweiglager*) in Rositten (today Rēzekne, Latvia).¹ Beginning on July 25, 1941, the camp was subordinated to the Commander of Prisoners of War in the General District Latvia (*Kommander der Kriegsgefangenen Lettland*) and the Prisoner of War District Commandant H (*Kriegsgefangenen-Bezirkskommandant H*), which was subsequently subordinated to the Commander of Prisoners of War with the Armed Forces Commander Ostland (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ostland*). From November 20, 1943, until its dissolution, the camp was under the authority of the Commander of Prisoners of War in Operations Area IV (*Kommandeur der Kriegsgefangenen im Operationsgebiet IV*).

Stalag 340 received field post number (*Feldpostnummer*) 10 622 between February 1 and July 11, 1941. The number was struck on August 26, 1943, renewed on January 21, 1944, and struck again for good on April 29, 1944.

The camp commandant was Major Hoeffner, and his deputy was Hauptmann Hugo Meyer, who was later replaced by Hauptmann Missin. The camp adjutant, until December 1942, was Hauptmann Martens, who was replaced by Hauptmann Daniel. As of November 1942, the camp was guarded by the 2nd Company of the 876th Reserve Battalion (*Landesschützenbataillon*); the guard force also included Latvian police. The subcamp in Rositten was guarded by the 2nd Company of the 981st Reserve Battalion.²

Stalag 340 held Soviet prisoners of war (POWs), including both enlisted men and officers. At first, the prisoners were held in the powder magazines of an old fortress in Dünaburg. In the fall of 1941, when the number of prisoners grew, they were forced to live outdoors on the grounds of the fortress.

The prisoners spent part of the winter of 1941–1942 in holes they dug in the ground, which sheltered them from neither the cold nor the snow. Finally, in early 1942, barracks were built on the esplanade of the fortress. The central camp comprised 125 barracks. Subcamps were located in the former depot at the Daugavpils-2 station, in old stables on Aglonas and Vilianu Streets, on Vidus Street, in the buildings of a pot factory, and at other sites.³

Many prisoners died en route to the camp from hunger, thirst, or exposure to the heat or cold. For example, a railroad watchman named S. Iu. Orbidan told the Soviet Extraordinary State Commission (ChGK) after the liberation of the town in 1944 that

in July 1941, the first special train with Soviet POWs reached the small junction at kilometer 214. A second train arrived right after the first. In each car, there were 70 to 80 people. The cars were tightly closed. When the cars were opened, the POWs greedily gulped the air with open mouths. When getting out of the cars, many of them collapsed from exhaustion. Right there, next to my linesman's cabin, the Germans shot those who couldn't walk. Out of each train, they tossed 400 to 500 corpses. The prisoners said that for 5 or 6 days, on the journey, they had been given neither food nor water.

Another witness, T. K. Usenko, told the commission that "in November 1941, I was on duty at the Most station as a switchman and saw them drive a train consisting of more than 30 cars up to kilometer 217. As it turned out, there was not one person alive in the cars. No fewer than 1,500 dead people were unloaded from this train; they all were dressed only in underwear. The corpses lay around for about a week near the tracks."⁴

Even after the barracks were in place, the conditions in the camp were inhumane. The barracks were not heated and the roof tiles rotted, allowing rainwater to leak through. The inmates were malnourished, subjected to torture and humiliation, and forced to perform hard labor. Epidemics were common in the camp because of the unhygienic conditions and lack of proper medical care. In the winter of 1941–1942, during a typhus epidemic, the mortality rate in the camp reached 900 men per day. To combat the epidemic, the camp leadership resorted to mass shootings: if three to four prisoners in one barrack fell ill, the Germans would shoot the entire population of that barrack.⁵

According to German statistics, the camp held 15,595 prisoners in June 1942 (after many thousands had died during the preceding winter or been transported to Germany for forced labor), and there were 886 prisoners doing agricultural labor outside the camp limits.⁶ Typhus epidemics recurred throughout 1942; for example, on August 5, 1942, 1,594 cases of typhus were recorded in the camp.⁷

The camp was well guarded and laid out so that escape was very difficult. Escape attempts were carried out only during

work outside the camp, with only a few of these attempts succeeding. Many prisoners who survived owed their lives to a prisoner named A. Gibradze, a Red Army surgeon. While working in the camp infirmary, he eased the suffering of the wounded, and he also delayed information about those who had died in order to obtain three or four additional days of rations for them to supplement the diets of the weakest prisoners. His operating room was also the meeting place for the resistance movement in the camp, which organized escape attempts. As in other camps for Soviet POWs, new arrivals were screened to separate out Jews and Communists, who were then shot near the camp by the guards or Security Service (*Sicherheitsdienst*).⁸

The date of the camp's dissolution is unknown; it was still in operation as of April 14, 1944, but must have been disbanded or evacuated before July 27, 1944, when the Red Army liberated the city. A ChGK investigation in late 1944 established that more than 124,000 prisoners died in Stalag 340; however, casualty figures from the ChGK are often significantly exaggerated and should be viewed accordingly.⁹

MANNSCHAFTSSTAMMLAGER (STALAG) 341 (XI E)

The Wehrmacht established Stalag 341 from Frontstalag 341 on April 2, 1941, in Altengrabow (map 4a), in Defense District (*Wehrkreis*) XI; it was also known as Stalag XI E.¹ In September 1941, the camp deployed to Slutsk (9b), in occupied Belarus. In November 1941, the camp was relocated to Mogilev (9b).² From September 11, 1941, the camp was subordinate to the Armed Forces Commander Ostland (*Wehrmachtbefehlshaber Ostland*), and as of November 15, 1941, it was subordinate to Security Division (*Sicherungsdivision*) 286 and the Commander of Prisoners of War in Operations Area III (*Kommandeur der Kriegsgefangenen im Operationsgebiet III*).³ Stalag 341 received field post number (*Feldpostnummer*) 10 916 between February 1 and July 11, 1941. The number was struck on November 8, 1943.

The first commandant of the camp was Major Edgar Hugo Nikolaus Graf von Luckner. He was succeeded as commandant by Major Erich Viktor Nichelski on March 25, 1942. On May 31, 1942, Oberst Wilhelm Senff took over the position of commandant. He was succeeded on August 5, 1942, by Major Herbert Tiedemann. The final commandant of the camp was Oberst Rudolf Burger, who took over on November 7, 1942. The deputy commandant was Hauptmann Günter Försterling and the adjutants were Leutnant Ewald Meyer and Leutnant Richard Becker.⁴ The counterintelligence (*Abwehr*) officers were Hauptmann Georg Duchrow and Hauptmann Heinrich Stuhlmann. The labor detachments (*Arbeitseinsatz*) were commanded by Hauptmann Johannes Osterhagen. The camp doctors were Oberarzt Dr. Otto Dörr, Unterarzt Dr. Karl Ditzmann, Dr. Gustav Ahne, and Dr. Walter Piontek; however, much of the care in the camp infirmary (*Lazarett*) was provided by a Russian doctor (who himself died of typhus in 1942) and Russian medical personnel.⁵ The camp was guarded by personnel from Company 1 of Reserve Battalion (*Landesschützenbataillon*) 861, who were assisted by a group of Soviet volunteers (*Hiwis*).⁶ The camp staff and guards were quartered in a former Red Army barracks near the camp.

Stalag 341 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. The camp was severely overcrowded and the prisoners received minimal rations and medical care, leading to widespread death from exhaustion, malnutrition, and diseases, particularly typhus, which ravaged the camp in the winter of 1941–1942. The atrocious conditions were exacerbated by deliberate mistreatment by the guards. The prisoners were required to perform hard labor in the area around the camp. As in other camps, newly arrived prisoners were screened to separate out "undesirables," such as Jews and political commissars, who were executed in the woods near the camp by Security

Service (*Sicherheitsdienst*) personnel. In September and October 1941, around 200 prisoners of Mongolian ethnicity were also executed, as they were considered “racially inferior elements” (*Rassisch minderwertige Elemente*).⁷ According to Soviet Extraordinary State Commission (ChGK) data, as many as 70,000 prisoners were confined in the camp, and, by the beginning of 1942, around 40,000 already had died; however, casualty figures from the ChGK are often significantly inflated and should be viewed accordingly.⁸ The camp was still in operation as of October 6, 1943; its date of dissolution is unknown.

MANNSCHAFTSSTAMMLAGER (STALAG) 342

The Wehrmacht established Stalag 342 on April 28, 1941, in Defense District (*Wehrkreis*) XII.¹ In September 1941, the

camp deployed to Molodechno (map 9b), where it took over the site of the former Dulag 112. As of April 1942, a subcamp (*Zweiglager*) was located in Glubokoe (today Hlybokae, Belarus) (9b). The camp received field post number (*Feldpostnummer*) 38 581 between February 28 and July 29, 1941; the number was struck on November 12, 1943.²

The first commandant of Stalag 342 was Major Herman Rode, who died of typhus on November 20, 1941. He was succeeded by Oberstleutnant Gerhard Simon. The final commandant was Oberstleutnant Hugo von der Marwitz, who took over on February 24, 1943. The camp adjutants were Hauptmann Berthold Jörger and Hauptmann Eduard Enders, the latter of whom was also responsible for the camp’s forced labor units (*Arbeitseinsatz*). The counterintelligence (*Abwehr*) officer was Hauptmann Wilhelm Buss. The camp officer (*Lageroffizier*) was Hauptmann Arthur Meyn. The camp doctors were Dr. Walter Görlitz and Dr. Gerhard Senft. The chief of supply was Zahlmeister Karl Fraenkel.³ The camp’s senior NCO was Hauptfeldwebel Rudolf Grimm.⁴ The camp was guarded by personnel from the 3rd Company of the 531st Reserve Battalion (*Landesschützenbataillon*).⁵

Stalag 342 held Soviet prisoners of war (POWs). The conditions in the camp were similar to those in other camps for Soviet POWs. The camp was badly overcrowded and the prisoners’ rations and medical care were insufficient, leading to epidemics of diseases, such as typhus, and to starvation so severe that some prisoners resorted to cannibalism. These awful conditions, combined with deliberate mistreatment by the guards, produced a high death rate. For example, in mid-November 1941, the camp held 20,000 prisoners; on February 1, 1942, there were only 4,406 prisoners.⁶ As in other camps for Soviet POWs, new arrivals in the camp were screened to separate out “undesirables,” such as Jews and political commissars, who were executed by a Security Service (*Sicherheitsdienst*) unit near the camp; this unit, along with Lithuanian volunteers, also participated in the execution of Jewish civilians in Molodechno.⁷ In total, 33,150 prisoners are said to have died at Molodechno from 1941 to 1943, according to the Soviet Extraordinary State Commission (ChGK).⁸ While ChGK casualty figures are often inflated, even German post-war investigations estimated that the death rate in the camp may have been as high as 150 prisoners per day.⁹ The camp was disbanded on May 10, 1943.

MANNSCHAFTSSTAMMLAGER (STALAG) 343

The Wehrmacht activated Stalag 343 (map 4b) on May 15, 1941, in Fürstenberg an der Oder, in Defense District (*Wehrkreis*) III. In September 1941, Stalag 343 was deployed to Alytus, Lithuania (9b), where it remained until October 1942. From November to December 1942, it was deployed in Bobruisk (9b), in present-day Belarus. While it was located in Alytus, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ostland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ostland*). The camp received field post number (*Feldpostnummer*) 14 886 between February 1 and July 11, 1941. The number was struck on October 16, 1943.

Initially, the camp commandant was Major Rosencrantz. From August to mid-October 1942, Major Erich Klein held the position. The deputy commandant was Hauptmann Ewerth. Until January 1, 1942, when the 2nd Company of the 319th Reserve Battalion took over, the 3rd Company of the 530th Reserve Battalion (*Landesschützenbataillon*), as well as members of the 5th Battalion of the Lithuanian Auxiliary Police, guarded the camp.¹

The camp population gradually declined from a peak of 28,000 in October 1941 to 3,624 in October 1942.² In that

month, 3,000 prisoners were transferred to other camps and another 1,000 were sent to Germany for forced labor.³ The camp consisted of six former Red Army barracks and wooden stables inside a barbed wire enclosure. As in other camps for Soviet prisoners of war (POWs), overcrowding in a small area, inadequate quantities of unhealthy food, lack of proper medical care, and abuse by the guards led to a high death rate.⁴ The prisoners were brought to the camp in open-air wagons from transit camps in the Soviet Union; many prisoners died from starvation or exposure to the elements before they ever reached the camp. Jewish-Soviet prisoner Leib Pillersdorf, who was brought to the camp in late October 1941, recalled that the new arrivals were forced to sleep under the open air for the first night in the camp; anyone who picked his head up was immediately shot by the guards.⁵ The conditions within the barracks were little better. The men slept on the cold cement floor and their quarters were overrun with lice. There were also no sanitary facilities present, leading to the rapid spread of gastrointestinal diseases.

By the time they arrived in the camp, the men were so desperate for food that they resorted to eating grass to survive. Pillersdorf recalls that men jumped out of the soup line their first morning in the camp to snatch blades of grass out of the ground; the Germans shot many of those who did so and those who were not killed were denied their soup ration for the day.⁶ In any case, the soup was almost entirely water with a few sugar beets added and of little nutritional value. In addition to the soup, the prisoners received 1 kilogram (2.2 pounds) of so-called Russian bread (*Russenbrot*) per every 10 men; the bread consisted mainly of sawdust and straw flour and was frequently covered in mold. Sometimes, the prisoner responsible for dividing the bread among a group of 10 men would simply run away with the bread, since many of his fellow prisoners were too weak to chase after him; when such incidents occurred, it was not uncommon for 5 of the 10 men thus deprived of their bread ration to die that day.

The horrible sanitary conditions in the camp facilitated the outbreak of diseases among the already weakened prisoners. In the winter of 1941–1942, diseases like typhus, dysentery, and cholera were rampant and killed thousands of prisoners. The prisoners died at such a rapid rate that the bodies were collected into large piles to be taken away and buried by Lithuanian peasants. In the fall of 1941, 60–80 persons died each day in the camp, and in the winter, the daily death toll was as high as 300.⁷ In October 1941 alone, 1,000 prisoners starved to death in a 20-day period.⁸ By 1942, the Germans had decided to use the Soviet prisoners for forced labor in the surrounding area and the food supply improved to some extent.

According to Soviet Extraordinary State Commission (ChGK) documents, 30,000–40,000 prisoners are said to have died in the camp; Soviet authorities discovered 16,150 corpses in 126 mass graves; however, casualty figures from the ChGK are often substantially exaggerated and should be viewed accordingly.⁹ Following the testimony from former prisoner Aleksandr Klimovich, who was in the camp from the

end of October 1941 to August 1942, by February 1942, 14,500 prisoners starved to death in the camp, 2,000 died of illness, and the Germans shot about 500 more. From February to August 1942, 1,000 additional prisoners died of various causes. Finally, in the northern part of the camp, 2,500 prisoners were buried, giving a final death toll of 20,000.¹⁰ In late October–early November 1942, the Germans liquidated the camp in Alytus and turned its grounds over to Stalag 336 Kaunas for use as a reserve camp.¹¹

MANNSCHAFTSSTAMMLAGER (STALAG) 344

The Wehrmacht established Stalag 344 on April 28, 1941, in Defense District (*Wehrkreis*) IV.¹ On August 17, 1941, the headquarters was sent to Wilna (today Vilnius, Lithuania) (map 9b), and on September 8, 1941, it took over the former site of Stalag 336.² Stalag 344 remained in Wilna until September 1943. From December 1943 to January 1945, the camp was deployed in Lamsdorf (today Łambinowice, Poland) (4e), taking over the site of the former Stalag VIII B.³ While located in Wilna, the camp was subordinate to the Commander of Prisoners of War with the Military Commander Ostland (*Kommandeur der Kriegsgefangenen beim Wehrmachtsbefehlshaber Ostland*). While deployed in Lamsdorf, the camp was subordinated to the Commander of

Prisoners of War in Defense District (*Kommandeur der Kriegsgefangenen Wehrkreis*) VIII. Stalag 344 received field post number (*Feldpostnummer*) 46 190 between July 30, 1941, and February 28, 1942. The number was struck between March 12 and September 7, 1943.

Until January 1942, the camp commandant was Major (later Oberstleutnant) Erich Chiliau; starting in January 1942, the commandant was Oberstleutnant Josef Messner. From the end of 1944 on, the commandant was Oberst George Braxator, and his deputy was Oberstleutnant Ernst Grosser.⁴ In the autumn and winter of 1941 the camp was guarded by personnel from the 319th, 778th, and 894th Reserve Battalions (*Landesschützenbataillone*).⁵

The camp at Wilna held Soviet prisoners of war (POWs). On February 1, 1942, there were 6,856 prisoners in the camp; on April 1, 1942, 7,735; on May 1, 1942, 8,179; on June 1, 1942, 7,790; on August 1, 1942, 7,090; on September 1, 1942 (after more than 1,500 prisoners were moved), 5,385; on October 1, 1942, 6,144; on November 1, 1942, 8,085; and on December 1, 1942, 8,371.⁶ The conditions were similar to those in other camps for Soviet POWs. Overcrowding, insufficient food, inadequate medical care, and deliberate abuse by the guards led to a high mortality rate, especially in the winter of 1941–1942. For example, on December 20, 1941, of the 7,300 prisoners in the camp, 1,200 were suffering from typhus and the death rate averaged 50 men per day.⁷

On December 24, 1941, 1,500 prisoners were selected for forced labor in Germany.⁸ After the onset of the typhus epidemic, their transfer to Stalag IX A in Ziegenhain was regarded as extremely urgent, but it was delayed by more than a month because the Commander of Prisoners of War in Riga had not given the proper orders. By January 21, 1942, 500 of the men selected had died, and the prisoners who had not fallen ill were sent to Kaunas and placed in quarantine.⁹ On April 21, 1942, the Germans sent 1,100 additional prisoners from Stalag 344 to Stalag IX B in Wegscheide.¹⁰

In Stalag 344, as in other camps, the Gestapo regularly screened the prisoners to identify Jews and Communists, who were then shot in the Paneriai Forest. According to the card index of the Wilna Gestapo, shootings of "undesirable" prisoners took place on October 2, 21, and 28, and November 19, 1941; and February 11, March 11 and 28, April 9 and 24, and July 15, 1942.¹¹ In total, according to Soviet Extraordinary State Commission (ChGK) documents, around 5,000 prisoners died in the camp between 1941 and 1943; although casualty figures from the ChGK are often substantially exaggerated, the death rate in the camp in the winter of 1941–1942 suggests that this number is probably accurate.¹²

Stalag 344 had a subcamp at Naujoji Vilnia, headed by Hauptmann Leyser. This camp was guarded by the 771st Reserve Battalion, along with more than 100 Lithuanian police.¹³ Adam Gul'binskii, who worked in the camp as a bricklayer from 1941 to 1944, described the conditions in the camp:

On approximately November 15, the first shipment of Russian POWs arrived, numbering about 1,000

persons. From this time on, the camp was systematically replenished with new shipments of prisoners, who were brought by rail in special trains, each consisting of 30 to 40 cars. The camp was very large in size. According to prisoners' descriptions, it held more than 200,000 people. From 1941 to the beginning of 1943, the death rate from starvation was as high as 200 persons per day. There were individual days when more than 500 persons died. I often saw prisoners, carry corpses, laid on sticks, out of the camp and throw them into pits, which had been dug 300 meters [984 feet] from the camp. I must say that the pits had a very large capacity—as many as 800 people.¹⁴

Witness Kazimir Pluts, a worker at the camp from the moment of its organization until the day of the Germans' retreat, offered this testimony:

While working at the camp from 1941 until the end of its existence, by the nature of the work I performed I had constant access to the camp location. All this time I observed the life of the POWs inside the camp. In the barracks where the POWs were kept, there were not even any plank beds at first, they slept right on the ground and on boards. There was no bedding in the camp until the end of its existence. The barracks were made of boards, and in winter it was cold in them, although the POWs had no warm clothing. In summer the prisoners' main food was vegetation [weeds, grass]. They were allocated 150 grams [5.3 ounces] of bread per day, but it was not always issued. There were stoppages, when no bread at all was handed out for four days. Because of the intolerable conditions for human life in the camp, there were many prisoners who could not even walk. They were exceedingly emaciated. Nevertheless, the Germans forced the prisoners to work—they made them dig ditches, dismantle brick houses that had been ruined, build roads, etc. Owing to great exhaustion, people were physically unable to work, and there were instances when prisoners simply collapsed, but no medical aid was provided to such people. As a result of all the above-mentioned back-breaking conditions, the death rate for prisoners hovered in the range of 150 people per day. The corpses of the deceased initially were thrown into the cellar, where they were undressed, and then they were taken on stretchers and carts to the cemetery that was specially set up near the camp, where they were tossed into previously dug pits.

According to ChGK documents, more than 60,000 prisoners perished in Naujoji Vilnia.¹⁵ At the same time, a report dated May 25, 1945, gives a figure of 13,000 dead prisoners,¹⁶ while the memorial stone at the site of the prisoners' burial in

Naujoji Vilnia reads: "At this site are buried approximately 4,500 Soviet prisoners of war, tortured to death by the German fascists in 1941–1943." In another subcamp of Stalag 344 near Bezdony (Wilna region), according to ChGK documents, 25,000 prisoners perished; the standard cautions about ChGK casualty figures should be applied here as well.¹⁷

While Stalag 344 was deployed in Lamsdorf, it held prisoners of war of various nationalities. For example, on January 3, 1944, there were 49,065 prisoners in the camp, including 22,799 Soviets, 21,772 British, 2,003 French, 1,358 Serbs, 1,063 Italians, and 70 Poles.¹⁸ On October 1, 1944, the camp held 52,020 prisoners, including 28,821 Soviets, 19,227 British, 2,325 French, 955 Serbs, 537 Italians, 108 Americans, and 47 Poles.¹⁹ In late October 1944, 56,954 prisoners were confined in the camp. The increase in the number of prisoners resulted from the arrival of 5,789 Poles, captured during the suppression of the Warsaw Uprising. Of the latter group, 5,001 were transferred to other camps (including Stalag XVIII C in Markt Pongau, Stalag IV B in Mühlberg, and Stalag X B in Sandbostel) as early as October and November 1944.²⁰ The camp population increased further still in November 1944, as Slovak prisoners captured during the Slovak National Uprising were brought to Lamsdorf.

The Western Allied prisoners in the camp were generally treated decently. An International Red Cross delegation visited the 152 American prisoners in the camp on May 4, 1944, and noted overall good conditions. Though there was some overcrowding, the site of the camp was described as well situated. Prisoners had regular access to a newly constructed laundry facility, played sports regularly on the camp fields, and held religious services as desired. Work detachments remained difficult but were not regarded as unsafe or imperiling the lives of the American prisoners. Indeed, the overall state of health and medical condition of the camp was described as "very good." Such favorable conditions stood in contrast not only to the situation facing Soviet prisoners in the same camp but indeed to the situation facing many prisoners in German Stalags in the final year of the war.²¹

The Slovaks, meanwhile, did not receive such decent treatment. When the first Slovak prisoners arrived in November 1944, they were taken to the former Russian camp (*Russenlager*), where they slept in tents or under the open sky. Once they were moved into barracks, they faced severe overcrowding; buildings measuring 15 meters by 7 meters (49 feet by 23 feet) held as many as 160 men each. The food supply for Slovak prisoners was entirely insufficient; they received a sixth of a loaf of bread, 3 to 5 small potatoes, a small piece of sausage, and a small amount of margarine, sugar, or marmalade each day. Like the Soviet and Italian prisoners, the Slovaks did not receive packages from the Red Cross and were dependent on packages sent from home to supplement their diets; however, delivery of these packages was often delayed in the last months of the war, and their most desirable contents were often stolen by the guards.²²

The treatment of the Soviet prisoners was even more inhumane and led to large numbers of deaths by starvation and

disease, such as tuberculosis. In July 1944, more than 4,000 such prisoners were placed in an isolated area of the camp, where 500–600 of them died each day.²³

Stapostelle Kattowitz (Katowice) regularly conducted screenings in the camp to separate out “undesirable” prisoners, who were transferred to Auschwitz. A total of 572 prisoners from Stalag 344 were sent to the Auschwitz concentration camp: on November 15, 1943, 75 prisoners; December 12, 1943, 55; January 13, 1944, 73; February 24, 1944, 119; February 26, 1944, 66; May 20, 1944, 31; July 7, 1944, 44; and August 5, 1944, 109.²⁴

The evacuation of the camp was ordered on January 20, 1945, as a result of the approach of the Red Army. The evacuation marches began on January 23, 1945. According to the testimony of former camp guard and cook Otto Rösler, who prepared food for the German guards escorting the prisoners on the evacuation march, the prisoners were forced to cross the entirety of the Sudetenland with little to no rest. Their march ended at Bindlach, where they were put on trains and taken to Stalag XIII D in Nürnberg-Langwasser.²⁵

After the evacuation, around 3,000 sick Soviet prisoners remained in the camp. Heavy frost, as well as lack of food, led to a sharp increase in the number of deaths—there were as many as 100–150 every day. Some prisoners were shot. When the Red Army liberated the camp on March 26, 1945, only about 500 Soviet prisoners remained alive there.²⁶

MANNSCHAFTSSTAMMLAGER (STALAG) 345

The Wehrmacht established Stalag 345 on April 15, 1941, in Defense District (*Wehrkreis*) V.¹ From August 24, 1941, to December 1943, it deployed to the Bobrinskaia railroad station in the town of Smela (today Smila, Ukraine) (map 9f).² In December 1943, it was relocated to Zagreb (7). Starting on August 16, 1941, the camp was subordinate to the Commander of Prisoners of War (*Kommandeur der Kriegsgefangenen*) with the Armed Forces Commander in *Reichskommissariat Ukraine*. As of March 16, 1943, it was subordinate to the Commander of Prisoners of War in Operations Area II, and from December 13, 1943, on, to the Commander of Prisoners of War with the Commander of Army Group F.³

Stalag 345 received field post number (*Feldpostnummer*) 09708 between February 1 and July 11, 1941. The number was struck between January 25 and July 31, 1943, renewed on November 20, 1943, and struck for good on March 14, 1944.

The first commandant of the camp was Oberstleutnant Gustav Henckel. His successor was Oberst Achim Reymann, who became commandant on February 4, 1943. On May 13, 1943, Major Ludwig Händler took over as commandant and held the position until the dissolution of the camp the following year. The deputy commandants were Major Georg Reichel and Major Max Kemmetmüller. The adjutants were Hauptmann Josef Kropp, Hauptmann Carl Dirrmann, and Hauptmann Karl Kiderlen. The counterintelligence (*Abwehr*) officers were Hauptmann Friedrich Calwer, Hauptmann Ludwig Kloth, and Hauptmann Harry Weiss. Feldwebel Karl Dillmann was responsible for the camp's labor detachments (*Arbeitskommandos*). The camp doctors were Dr. Paul Grundler, Dr. Otto Kromer, Dr. Karl Süss, Dr. Richard Vogel, and Dr. Gerhard Wolter.⁴ The camp was guarded by personnel from Company 1 of Reserve Battalion (*Landesschützenbataillon*) 783, who were assisted by Russian *Hilfswillige*—prisoners who volunteered to serve as guards in order to escape the terrible conditions in the camp.⁵

While it was deployed in Smela, Stalag 345 held Soviet prisoners of war (POWs). The population varied from a minimum of 2,605 in February 1942 to a maximum of 18,871 in

February 1943.⁶ The conditions in Stalag 345 were similar to those in other camps for Soviet POWs. The camp was severely overcrowded and the prisoners were severely underfed, leading to widespread death from starvation. Although the camp was designated as a hospital for wounded POWs, almost no medical care was provided, resulting in a high death rate due to both untreated combat wounds and epidemics. Deliberate abuse by the guards exacerbated the awful living conditions. Upon arrival in the camp, prisoners were screened by the counterintelligence officers and guards to separate out "undesirables," such as Jews and political commissars, who were executed by the Security Service (*Sicherheitsdienst*) near the camp; Jewish civilians from Smela were also executed near the camp on multiple occasions.⁷ At least one prisoner was hanged in the camp after he allegedly killed a guard while attempting to escape.⁸

Former prisoner A. E. Sukhinin, who was in the camp from October 1942 to May 1943, described the conditions:

To this camp they brought the wounded, to deliberately let them die. In winter the buildings were not heated in any way, and we were warmed only by the heat of our bodies. We slept on bare boards, covered with nothing: they took away all our clothing and footwear and left us only our underwear. We slept in a ball, thrusting our arms into the neckband of our shirt with our palms under our arms, and pressing our knees up toward our chins—that was the best way to conserve heat. The food they gave us was not enough to sustain life. I tried not even to move unless necessary, and not to speak.⁹

In December 1943, Stalag 345 relocated to Zagreb, Croatia. Little information is available about the prisoners or the conditions in the camp during this deployment. The date on which the camp was disbanded is unknown; it was still in operation as of June 5, 1944.

MANNSCHAFTSSTAMMLAGER (STALAG) 346

The Wehrmacht established Stalag 346 on April 30, 1941, in Defense District (*Wehrkreis*) VI.¹ From October 1941 to February 20, 1943, the camp was located in Kremenchug (map 9f), in Ukraine, and then in Starokonstantinov (9e). The camp was disbanded on August 12, 1943.² Stalag 346 received field post number (*Feldpostnummer*) 22 797 between February 16 and July 18, 1941. The number was struck between July 31, 1942, and February 9, 1943.

At first the camp was subordinate to the Commander of Prisoners of War with the Commander of the Army Group South Rear Area (*Kommandeur der Kriegsgefangenen beim Befehlshaber des Heeresgebiet Süd*). From June 1942, the camp was subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ukraine (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ukraine*). Starting in March 1943, the camp was again under the Commander of the Army Group South Rear Area, and from mid-1943, when the camp was redeployed to Starokonstantinov, it was subordinate once again to the Commander of Prisoners of War of the Armed Forces Commander Ukraine.

The first camp commandant was Major Hucklenbroich (until January 24, 1942), who was succeeded by Major Pohlenk. The deputy commandant was Major Rudloff, the camp adjutant was Hauptmann Hamacher, and the camp officer (*Lageroffizier*) was Hauptmann Seidel. The head of the camp administrative section was Oberzahlmeister Rudolf Prinzenberg, the head of labor deployment was Hauptmann Wätzmann, and the counterintelligence (*Abwehr*) officers were Hauptmann Günster (until February 9, 1942) and

Oberleutnant Ernst Stage. Until the spring of 1942, the camp doctor was Unterarzt Dr. Orland, and his assistant was Hilfsarzt Dr. Hermann Schülke; Orland was succeeded by Oberarzt Dr. Lohr and Stabsarzt Dr. Redlin. In 1941 and early 1942, the camp was guarded by the 4th Company of the 560th Reserve Battalion (*Landesschützenbataillon*). The company commander was Hauptmann Steffal, and his deputy was Oberleutnant Halm. In late 1942 and 1943, the camp was guarded by the 2nd Company of the 842nd Reserve Battalion. A unit of Russian volunteers (*Hilfswillige*) assisted the German guards.

Stalag 346 held Soviet prisoners of war (POWs). The camp population as of December 20, 1941, was 22,776 prisoners;³ at the end of January 1942, it was 15,761; at the end of February 1942, it was 14,012; at the end of March, it was 13,943; and at the end of April, it was 11,581.⁴ On June 1, 1942, there were 7,000 prisoners in the camp; on August 1, 8,820; on September 1, 21,852; on October 1, 21,709; on November 1, 7,915; on December 1, there were 5,845. On January 1, 1943, there were 7,120; and on February 1, there were 8,067.⁵ Beginning on May 15, 1942, the camp also was used as an assembly camp for Muslim prisoners who had volunteered for or been conscripted into the “Eastern Legions.”⁶

The camp began operation in October 1941, when about 20,000 prisoners from an overcrowded transit camp in Khorol’ (Dulag 160) were sent to Kremenchug. On the way, the guards shot prisoners who were unable to walk due to exhaustion.⁷ The prisoners lived in the former barracks of the Soviet 12th Battalion (Lager A) and in a mirror factory (Lager B); the prisoners at the latter location were involved in the construction of a wooden bridge over the Dnieper River.⁸

Because the barracks could not hold all the prisoners, many prisoners were forced to sleep outside. To accommodate the prisoners, the internal area of the camp was divided into 10 blocks, each of which was enclosed by barbed wire. The barracks were not heated, even in winter. Newly arrived prisoners were given no food for several days, and the food rations they eventually received were inadequate. In October and November 1941, the prisoners’ rations consisted of a thin soup called *balanda*, made of flour and grain husks. Each prisoner received half a liter (one pint) of *balanda*, which caused constipation and upset stomach. Starting in December 1941, the *balanda* was made from burnt rye, resulting in a black, oil-like substance. Later, the prisoners’ *balanda* ration was “supplemented” with 150–200 grams (5.3–7 ounces) per day of ersatz bread.⁹

The malnutrition induced by these inadequate rations, along with severe overcrowding and lack of medical care, led to a high mortality rate in the camp. For example, according to the report of the Army Group South Rear Area commander dated December 21, 1941, 50 prisoners were dying in the camp each day, mainly of typhus.¹⁰ According to a similar report dated January 31, 1942, 110 prisoners were dying in the camp each day, mainly of typhus, at a time when the camp population was 15,761 men.¹¹ In February 1942, 1,367 prisoners died, and in March, there were 862 deaths.¹² In total, from

December 1941 to the end of April 1942, around 8,000 prisoners died in Stalag 346.

Prisoners were also subject to severe mistreatment at the hands of camp personnel. For example, one prisoner recalled the camp doctor, Dr. Orland, severely abusing a prisoner; the doctor “beat him, twisted his arms, put out his eye with a pen, broke his tibia, then ordered [a guard] to shoot him.”¹³ The conditions in the forced labor units were also harsh. Prisoner V. G. Khordzhe, who worked on the wooden bridge with the other men from Camp B, reported that of the 1,500 men working there, 700 died within a period of two months. Some of them were beaten to death by the Germans at the work site.¹⁴

As in other camps, newly arrived prisoners were screened to separate out Jews and Communists, who then were shot near the camp by a Security Service (*Sicherheitsdienst*) detachment or by the camp guards.¹⁵ According to the Soviet Extraordinary State Commission (ChGK), more than 37,000 prisoners died in Stalag 346 in Kremenchug. Near Lager A, 11 mass graves, which contained the bodies of about 30,000 prisoners, were found after the town was liberated. Four additional mass graves were found near Lager B, in which about 2,000 prisoners were buried. About 5,000 additional POWs were buried in the area of Peschanaia Hill, on the northeastern edge of town.¹⁶ However, it should be noted that casualty figures from the ChGK are often significantly inflated and should be viewed accordingly. Little information is available about Stalag 346 during its brief deployment in Starokonstantinov, although it can be safely assumed that conditions were similar to those in the camp in Kremenchug.

MANNSCHAFTSSTAMMLAGER (STALAG) 347

The Wehrmacht established Stalag 347 on April 4, 1941, in Defense District (*Wehrkreis*) VII. From August 1941 to October 1942, the camp was deployed in Rēzekne, Latvia (German: Rositten) (map 9b). From the fall of 1941 until the spring of 1942, the camp had a subcamp (*Nebenlager*) in Valga

(German: Walk). The camp was subordinate to the Commander of Prisoners of War in the General District Latvia (*Kommandeur der Kriegsgefangenen im Generalbezirk Lettland*) or Prisoner of War District Commandant H (*Kriegsgefangenen-Bezirkskommandant H*), which was, in turn, subordinate to the Commander of Prisoners of War with the Armed Forces Commander Ostland (*Kommandeur der Kriegsgefangenen beim Wehrmachtbefehlshaber Ostland*).

Stalag 347 received field post number (*Feldpostnummer*) 10 998 between February 1 and July 11, 1941. That number was struck between January 25 and July 31, 1943. A second number, 47 133, was issued between July 30, 1941, and February 28, 1942, and struck between March 1 and September 7, 1942.

The camp commandant was Major Ritter von Keliander. His deputy was Hauptmann Danzeisen. The counterintelligence (*Abwehr*) personnel included Leutnant von Klefmann and Leutnant Steinacker, a noncommissioned officer named Bremschmidt, Private Karl Strickle, a translator named Pirog, and Private Karl Eisel.¹

Stalag 347 occupied a group of old quarantine barracks (some of which were built before World War I) in the north-eastern part of Rēzekne. Two rows of barbed wire and a series of guard towers surrounded the barracks. The camp held Soviet prisoners of war (POWs). According to estimates by former prisoners, in the winter of 1941–1942, there were 30,000–40,000 prisoners in the camp. After the “Pomeranian Commission” took 6,000 prisoners away to Germany in early 1942,² and after large numbers died of starvation and typhus, there were only 3,633 prisoners in the camp on June 25, 1942.³ Hundreds of prisoners were in labor detachments (*Arbeitskommandos*) outside the camp, working on roads, in forestry, and in agriculture. In July 1942, according to German statistics, 611 prisoners were working outside of the camp in the Rēzekne district.⁴ According to official reports, the camp population declined from 13,227 prisoners in February 1942 to 2,323 prisoners in October 1942.⁵

The conditions in the camp were similar to those in other camps for Soviet POWs. The prisoners did not receive adequate food or medical care, and starvation and disease were widespread. Barrack No. 6 was referred to as the “death barracks” by the prisoners. It had a capacity of 700 men, but several thousand were crowded into it, men who had already lost their strength and were at death’s door. Those who could no longer rise for the morning inspection were taken to “Barracks Zero,” a low brick building that previously served as a storehouse with five-tiered plank beds.⁶ Barrack No. 20 was a detention facility for Communists, Komsomol members, political workers, and Jews, along with prisoners who had tried to escape or were suspected of resistance. From the detention facility and the punishment barracks, prisoners often were led to the corporal punishment area, a square fenced in with two rows of barbed wire, across from the camp headquarters. The prisoners were then forced down onto their hands and knees, beaten with clubs and rods, and left to freeze to death.⁷

There was a hospital in the camp, set up in an old stable. From October 1941 to April 1943, prisoner I. E. Egorov

worked as a doctor in the hospital. According to his testimony, “in February 1942, 18 patients froze to death in a single night and 46 got frostbitten hands and feet” in the unheated hospital. Medical supplies were limited. Those suffering from typhus were treated with the urine of patients who had recovered. The head of the hospital, German medical orderly Karl Eisel, frequently shot patients with the justification that they were going to die soon anyway.⁸ According to data from the registration book in the camp hospital, 17,764 prisoners died there, some in the typhus epidemic that began in November 1941 and lasted throughout 1942, others from other diseases or injuries, and still others from exhaustion or beatings.⁹ In addition, many thousands perished without ever entering the hospital. As in other camps, prisoners were screened to separate out Jews and Communists, who then were shot near the camp by the Security Service (*Sicherheitsdienst*) or camp guards.¹⁰ As many as 35,000 prisoners may have died in Stalag 347, most of whom were buried in mass graves outside the camp.

Anna Mikhailovskaia, a 14-year-old resident of Rēzekne, recorded her impressions of Stalag 347 in her diary:

October 13, 1941. The first snow fell today. It was so beautiful in the morning, but very cold. It was even colder to stand in line for bread. But then the unfortunate hungry prisoners are freezing, of course. Mama came from school and told such horrors that I couldn’t bear to even write about this. In the quarantine barracks, 13 prisoners ate human flesh. All 13 were shot. Today they found 40 people dead on the plank beds. . . . October 21. Yesterday 150 died. Today a prisoner came to our house—a student at Leningrad University. . . . He asked questions about the neighborhood. He acknowledged that he is planning to run away. We gave him the last loaf of bread we had in the house. . . . November 16, 1941. Yesterday there was firing in the Ancupan Hills, and this morning, once again, they shot 22 political workers. There is no end to the rivers of blood. . . . The prisoners are dying as in the days of the plague. The barracks aren’t heated. Every day they carry out 300–400 corpses.¹¹

On November 23, 1942, the camp ceased to be an independent camp and was converted into a subcamp of Stalag 340 in Dünaburg (today Daugavpils).
